MEMS and Sensors
Smart Motion tracking, IoT and enhanced user experience
The one-stop MEMS and Sensors supplier

For your MEMS needs, ST provides a complete solution

ST has shipped more than 10 billion micro-electromechanical sensors and has one of the industry’s most extensive MEMS portfolio including accelerometers, gyroscopes, digital compasses, inertial modules, MEMS microphones, and environmental sensors including pressure, temperature and humidity.

- A unique sensor portfolio, from discrete to fully-integrated solutions, to meet all design needs
- High-volume manufacturing capacity to provide cost-competitive solutions, fast time-to-market and security of supply
- High-performance sensor fusion to improve the accuracy of multi-axis sensor systems in order to enable new emerging and highly-demanding applications, such as indoor navigation and location-based services such as IoT, indoor navigation and location-based services
- High-quality products, already tested in different application fields, including mobile, portable, gaming, consumer, automotive and health care segments
- Multiple sites dedicated to MEMS, with full in-house dual sourcing, guaranteeing 100% security of supply

ST’s leadership continues with a strong commitment to Sustainable Technology, delivering motion MEMS products with decreasing environmental impact, generation after generation, providing improved life quality by bringing environmental and social benefits to end users.

COMPLETE SOLUTION
- Large sensor portfolio
- Integrated HW + SW solutions
- 100% security of supply
- Scalability of solutions
- Quality is a must for ST
- ST is MEMS market leader
- STM32 Open Development Environment support
All portable devices become easy-to-use and fun

CONSUMER APPLIANCES

- Smartphones and tablets (AXL, GYRO, MAG, PS, RH, IMU, Microphones)
  - Motion tracking for gesture-based user interfaces
  - Electronic compasses
  - Location-based services
  - Heading and navigation
  - Relative humidity sensing
- Gaming devices (AXL, GYRO, MAG)
  - Accurate detection of orientation and angular rate
- Remote control (AXL, GYRO, MAG, Microphones)
  - Gesture recognition and pointing (3D mouse)
- Notebooks and ultrabooks (AXL, GYRO, MAG, TS)
  - Sensor hub
  - Hard-disk protection
  - Lid closure
  - Orientation
- Cameras (DSC/DVD) (AXL, GYRO)
  - OIS and user interfaces

AXL: accelerometer
GYRO: gyroscope
MAG: magnetometer
PS: pressure sensor
TS: temperature sensor
RH: humidity sensor
OIS: optical image stabilization
IMU: inertial module unit
Sensors for improving your fitness workout

**FITNESS AND WELLNESS APPLICATIONS**

- Athlete performance monitoring
  - Movement recognition through shoes and wearable sensors (AXL, IMU)
  - Golf and tennis swing detection (AXL, GYRO, MAG)
  - Body tracking recognition (AXL, GYRO, MAG)
- Watches, personal navigation devices (PND) and pedometers (AXL, GYRO, MAG, PS, IMU)
  - Map orientation
  - Heading and navigation
  - Power-saving using auto-wake-up functionality
  - Taps (display activation)
- Treadmills and barbells (AXL)
  - Tilting angle and shock detection during steps
- Step detection
- Pedometer
- Step counter

AXL: accelerometer  
GYRO: gyroscope  
MAG: magnetometer  
PS: pressure sensor  
TS: temperature sensor  
RH: humidity sensor  
IMU: inertial module unit
Sensors in your home/Smart appliances

Devices offer enhanced user interfaces helping to decrease energy consumption

HOME APPLIANCES

- Home alarm systems and car garages (AXL, MAG, Microphones)
  - Vibration and shock detection
  - Detection of door open/close position
- White goods (AXL, GYRO, PS, RH, IMU, TS, IMU)
  - Control of basket rotation (washing machines)
  - Power consumption optimization
  - Vibration detection for noise reduction and maintenance
  - Detection of door open/close position
  - Fluid column pressure measurement
- Smart home automation control (TS, RH)
  - Heating, ventilation and air conditioning (HVAC, PS)
  - Relative humidity level monitoring and weather stations
  - Incubators, refrigerator crispers and storage
  - Respiratory equipment/humidifiers
- Electric, gas/water meters (AXL, MAG)
  - Tilting, vibration and shock detection
  - Anti-tamper mechanisms
- Home environment monitoring (TS, RH, PS)
  - Ambient temperature and relative humidity monitoring

For safer cars and easier navigation

AUTOMOTIVE

- Telematics
  - E-Calls (AXL)
  - Black boxes and crash detection (AXL)
  - Fleet tracking (AXL, GYRO, IMU)
  - Driver’s behavior tracking (AXL, GYRO, IMU)
  - Key fobs (AXL)

- Security
  - Car alarms and anti-theft systems (AXL)
  - Tilt detection (AXL)

- Navigation
  - 3D navigation (AXL, GYRO, IMU)
  - Dead reckoning (AXL, GYRO, IMU)

- Safety
  - SRS with rollover detection (AXL, GYRO, IMU)
  - Hill-start assist, head safety light leveling and braking assistance (AXL)
  - Vehicle dynamics, stability control (AXL, GYRO, IMU)
  - Electronic suspensions (AXL, GYRO, IMU)
  - Tire pressure monitoring systems (AXL)
  - Smart tires (AXL)

AXL: accelerometer
GYRO: gyroscope
MAG: magnetometer
TS: temperature sensor
RH: humidity sensor
IMU: Inertial Module Unit
For industrial applications

**INDUSTRIAL**
- Robotics and automation (AXL, GYRO, IMU)
- Inertial navigation and wheel encoder position accuracy
- Self-balancing robots
- Condition monitoring of transportation and industrial equipment (high-g AXL, RH, TS)
- Vibration and rotational speed monitoring
- Asset and parcel tracking and monitoring (High-g AXL, GYRO, TS)
- Shock detection and logging
- Building and structure monitoring (AXL)
- Vibration and tilt monitoring
- Seismic exploration and geophones (AXL)
- Vibration monitoring
- Drills (AXL, GYRO, IMU)
- Safety and chuck rotation monitoring
- Tilt detection

AXL: accelerometer  
GYRO: gyroscope  
MAG: magnetometer  
TS: temperature sensor  
RH: humidity sensor  
IMU: Inertial Module Unit
For advanced medical applications

**MEDICAL**

- Implantable medical devices (AXL)
  - Pacemakers, defibrillators and neuro-stimulators
- Concussion detection in sports (high g AXL)
  - Helmets, patches and mouth guards
- Motion detection and body motion reconstruction (AXL, GYRO, MAG, PS, IMU)
  - Man-down and personal emergency response systems (PERS)
  - Rehabilitation and training
  - Improved straight line motion and tilt detection for safety
- Instrument guidance in surgery (AXL, GYRO, IMU)
- Healthcare mobility aids including wheelchairs and scooters (AXL, GYRO, PS, IMU)

AXL: accelerometer
GYRO: gyroscope
MAG: magnetometer
PS: pressure sensor
TS: temperature sensor
RH: humidity sensor
DIS: optical image stabilization
IMU: Inertial Module Unit
Smart motion features with ultra-low power consumption

ST’s state-of-the-art MEMS accelerometers include analog and digital sensors featuring up to ±400g acceleration full scale and from 1.62 to 3.6 V supply voltage. Accelerometers have advanced power-saving features that make them suitable for ultra-low-power applications. These features include low-power mode, auto wake-up function and a FIFO buffer that can be used to store data, thus reducing the host processor loading and system power consumption. The small size and embedded features of ST’s accelerometers make them an ideal choice for handheld portable applications and where long battery life is required. The ST accelerometers can be applied in Industrial applications too and in the portfolio are present also Automotive grade MEMS accelerometers qualified according to AEC-Q100.

**BENEFITS**

- High performance
- Small footprint for ultra-compact solutions
- Low power consumption and ultra-low-power operating modes that allow advanced power saving and smart sleep-to-wake-up functions
- Practical and easy-to-use built-in features
- Embedded state machines enable custom motion recognition reducing system complexity
- Pinout compatibility
- FIFO

Superior accuracy and stability over time and temperature

ST’s innovatively-designed sensors with different combinations of analog and digital outputs provide high performance. Our gyroscopes offer superior stability over time and temperature, with a rate noise density up to 0.011 dps/√Hz. This guarantees the level of accuracy required by the most advanced motion-based applications.

These 3-axis gyroscopes have a single sensing structure for motion measurement along all three orthogonal axes, while other solutions on the market rely on two or three independent structures. ST’s solution eliminates any interference between the axes that inherently degrades the output signal, thus increasing the accuracy and reliability of motion-controlled functionalities.

ST’s gyroscopes measure angular rate with a large full-scale range to meet the requirements of different applications, ranging from gesture recognition and image stabilization, to indoor and personal navigation and OIS applications. ST’s angular rate sensors are already used in mobile phones, tablets, 3D pointers, game consoles, digital cameras and many other devices.

The ST gyroscopes are the right choice to be implemented in a wide range of Industrial applications; also available are Automotive grade MEMS gyroscopes qualified according to AEC-Q100.
BENEFITS

- Wide full-scale range (from ±65 to ±2000 dps) for optical image stabilization and smart user interfaces
- High performance combined with low power consumption to address demanding applications and extend battery life
- Embedded FIFO for smart data storage and power saving
- Fast start-up for high responsiveness and system efficiency

Digital compasses

Accurate compass heading in any condition

ST’s digital compasses include combo solutions, with accelerometer and magnetic sensor integrated in a single LGA package and standalone magnetometers, to give the possibility of designing a solution locating the magnetic sensor in the suitable position of printed circuit board (PCB).

Accurately detecting the direction and magnitude of external magnetic fields and using accelerometer measurements for tilt compensation, ST’s digital compasses ensure very accurate compass heading even when the portable device is inclined.

ST’s LSM303AGR combines high performance, low power accelerometer and magnetometer with high dynamic range (+/-49 gauss) with temperature offset compensation. LSM303AGR includes embedded self-test and smart power functionalities to minimize current consumption. The LSM303AGR is board and software compatible with the latest generation of accelerometers, thus offering maximum design flexibility.

**BENEFITS**

- Superior sensing precision combined with low power consumption
- Wide magnetic range with high sensitivity magnetic-scale range
- Ultra low magnetic offset and low noise
- Compact package footprint, pinout compatible with 2x2 accelerometer
- Ultra low magnetic parameter changes with thermal drift
- New possibilities for advanced navigation and location-based services in ever portable consumer devices

Automotive inertial module: 3D accelerometer and 3D gyroscope

The ASM330LXH inertial module unit (IMU) addresses non-safety automotive applications such as vehicle tracking systems, rate-activated functions, inertial navigation assistance and telematics units. The ASM330LXH is a system-in-package featuring both a 3D digital accelerometer and a 3D digital gyroscope. It has a user-selectable full scale acceleration range of ±2/±4/±8/±16 g and an angular rate range of ±125/±245/±500/±1000/±2000 dps. The ASM330LXH has two operating modes enabling the accelerometer and gyroscope sensors to be either activated at the same ODR or the accelerometer can be enabled while the gyroscope is powered down.

- Battery saving (ignition off)
Collect humidity, atmospheric pressure and temperature accurate data for environmental awareness

STMicroelectronics offers a full kit of environmental sensors, including pressure, humidity and temperature sensors. These sensors rely on dedicated mechanical structures that guarantee the best performance even in challenging environmental conditions. They are adopted in many wearable devices to monitor health and for fitness programs, in smart home or other industrial applications to monitor weather conditions and guarantee good equipment safety.

### PRESSURE SENSOR

ST’s absolute digital output barometer integrates ST’s consolidated pressure sensor with the new fully molded package to further improve robustness, reliability and moisture resistance while reducing package thickness.

HUMIDITY AND TEMPERATURE SENSOR

The HTS221 is an ultra-compact sensor that measures relative humidity and temperature. Housed in a tiny but robust HLGA package (2 x 2 x 0.9 mm), the HTS221 is suitable for wearable and portable devices and all applications where comfort, health and safety might be negatively impacted by humidity and temperature variations.

Benefits
- Ultra-small footprint
- Low-power consumption to address wearable devices
- Allows customized calibration for best design flexibility
- Humidity accuracy: ± 3.5% rH, 20 to +80% rH
- Temperature accuracy: ± 0.5 °C, 15 to +40 °C

ST’s temperature sensors temperature sensors include both analog and digital temperature sensor ICs. Both types are suitable for use in a wide range of applications, such as industrial, consumer, medical and computer market segments. The analog temperature sensors feature low power consumption and good linearity, and can operate over a temperature range as wide as -55 to +130 °C. The digital temperature sensors feature low power consumption, up to 12-bit resolution and can operate over a temperature range as wide as -55 to +125 °C.

MEMS analog and digital microphones

Crystal-clear audio quality with the size, cost and volume production of MEMS sensors

Microphones based on MEMS technology offer an excellent audio quality. They are less susceptible to mechanical vibrations, temperature variations and electromagnetic interference compared to traditional electret microphones. The MEMS process makes these microphones the ideal stereo solution wherever two perfectly matched microphones are required.

**BENEFITS OF MEMS MICROPHONES**
- Enhanced performance
- High stability of sensitivity after reflow
- Very stable unit-to-unit performance
- Consolidated micromachining technology
- New applications enabled: stereo capture, noise cancellation, beam forming
- High shock resistance

**TARGETED APPLICATIONS**
- Mobile phones
- Laptops
- Phablets
- Smartphones
- Digital cameras and camcorders
- Gaming
- Portable media players
- Hands-free devices
- Tablets
- Hearing aids
- Headsets

Open Development Environment

The STM32 Open Development Environment (STM32 ODE) is an open, flexible, easy and affordable way to develop innovative devices and applications based on the STM32 32-bit microcontroller family combined with other state-of-the-art ST components connected via expansion boards. It enables fast prototyping with leading-edge components that can quickly be transformed into final designs.

The STM32 ODE is made up of four elements:

- **STM32 Nucleo development boards.** A comprehensive range of affordable development boards for all STM32 microcontroller series, with unlimited unified expansion capability, and with integrated debugger/programmer.

- **STM32 Nucleo expansion boards.** Boards with additional functionality to add sense, control, connectivity, power, audio or other functions as needed. The expansion boards are plugged on top of the STM32 Nucleo development boards. More complex functionalities can be achieved by stacking the expansion boards.

- **STM32Cube software.** A set of free-of-charge tools and embedded software bricks to enable fast and easy development on the STM32, including a Hardware Abstraction Layer, middleware and the STM32CubeMX PC-based configurator and code generator.

- **STM32Cube expansion software.** Expansion software provided free of charge for use with STM32 Nucleo expansion boards and compatible with the STM32Cube software framework.

The STM32 Open Development Environment is compatible with a number of IDEs including IAR EWARM, Keil MDK, mbed and GCC-based environments.
FOCUS ON THE NEW NUCLEO EXPANSION BOARD FOR SENSORS

The X-NUCLEO-IKS01A1 is a MEMS inertial and environmental sensor evaluation board system. It is compatible with the Arduino UNO R3 connector layout, and is designed around STMicroelectronics’ LSM6DS0 3-axis accelerometer + 3-axis gyroscope, the LIS3MDL 3-axis magnetometer, the HTS221 humidity sensor and the LPS25HB pressure sensor.

The board can also be used to evaluate the new LSM6DS3, evolution of LSM6DS0, by connecting the STEVAL-MKI160V1 DIL24 adapter.

The X-NUCLEO-IKS01A1 interfaces with the STM32 microcontroller via the I2C pin, and it is possible to change the default I2C port.

OPEN SOFTWARE EXPANSION

The Open Software Expansion development suite (“OpenSoftwareX”) offers drivers, middleware and application software to jump start your STM32 design with ST products like MEMS, Bluetooth low energy, sensors, etc. It enables fast prototyping using the STM32 Open Development Environment with leading-edge components that can quickly be transformed into final designs.

The Open Software Expansion environment is made up of several free libraries, such as:

- **Open.MEMS:**
  - Sensor fusion library for STM32 platform osxMotionFX
  - Sensor carrying position for STM32 platform osxMotionCP
  - Sensor activity recognition for STM32 platform osxMotionAR
  - Sensor gesture recognition for STM32 platform osxMotionGR

- **Open.RF:** BlueNRG Bluetooth Low Energy library for the most commonly-used BT smart profiles

- **Open.Audio:**
  - Real-time beam forming for STM32 platform
  - Real-time sound source localization for STM32 platform
  - Real-time echo cancellation for STM32 platform
  - Bluetooth Low Energy and microphones for STM32 platform

**Open.MEMS**

Open.MEMS libraries combine data from several sensors achieving the high level of accuracy required by portable and wearable devices and other emerging applications, such as IoT.

The osxMotionFX library is the evolution of iNEMO Engine Pro sensor fusion algorithm and API, ported to the STM32 Open Development Environment. Like its predecessor, the osxMotionFX is filtering and predictive software that uses advanced algorithms to integrate and read real-time outputs from multiple sensors, achieving accurate position information, independently of environmental conditions. The fusion of real-time motion-sensor data is set to significantly improve user experience by increasing accuracy, resolution, stability and response time in advanced motion-based applications in the consumer, computer, industrial and medical fields. The osxMotionFX sensor fusion library is designed for use in combination with the STM32F4 Nucleo development boards (NUCLEO-F401RE, F411 and F476). When installed on your PC, Open.MEMS libraries must be activated through a licensing wizard tool (included into the osxMotionFX software package).

Additional sensor fusion libraries are also available:

- The osxMotionAR provides real-time information on user activity (stationary, walking, fast walking, biking, or driving)
- The osxMotionCP provides real-time information regarding the position
- The osxMotionGR provides real-time information on phone-related gestures such as wake up, glance and pick up

**BENEFITS**

- Licensing wizard tool makes it easier to quickly get started evaluating your sensor fusion design
MULTI-SENSOR, BLUETOOTH APPLICATION DEVELOPMENT PLATFORM

The BLUEMICROSYSTEM1 framework uses Bluetooth Low Energy, inertial (e.g. motion MEMS) and environmental (e.g. humidity, pressure, temperature) sensors. It enables fusing together and transmitting real-time sensor data to a smartphone (Android- or iOS-based) via Bluetooth. BLUEMICROSYSTEM1 provides an implementation example for the STM32F4 Nucleo platform equipped with the MEMS and environmental sensor expansion board (X-NUCLEO-IKS01A1) and the Bluetooth low energy expansion board (X-NUCLEO-IDB04A1).

BLUEMICROSYSTEM1 is suitable for all applications and markets, including IoT and wearables, that need to effectively sense, process and transmit valuable information with very low power consumption and high performance.

DESIGN SUPPORT FOR NON-SAFETY AUTOMOTIVE AND INDUSTRIAL SENSORS

With an extensive expertise in sensor integration and the development of new applications, ST can assist customers in their design-in phase. ST’s evaluation kits and firmware allows a real-time evaluation of sensor performance in customer applications.

ST offers a complete evaluation solution including:

- A full set of DIL24 MEMS non-safety automotive and industrial adapters supporting fast prototyping
- eMotion motherboard compatible with all adapters and based on an STM32 microcontroller
- UNICO graphic user interface for direct and real-time access to the sensor outputs and configuration registers.
## Motherboard

ST MEMS motherboard is based on the high-performance STM32F103 32-bit ARM Cortex™-M3 MCU interfaces: USB connector and JTAG/SWD for debugging. DFU-compatible for USB microprocessor firmware updates. Compatible with all ST MEMS adapters.

ONLINE SUPPORT
For technical support or questions about product availability, pricing, where-to-buy, or other related issues, go to www.st.com/onlinesupport.
ST’s Sustainable Technology Program provides a single, consistent framework for all the different programs that we implement to reduce the impact of our products on the environment and improve quality of life for the end user. The program includes three main domains:

- Compliance with legislation and with customers’ requirements
- Eco-design to measure and take into account during the design phase the environmental impact of our products
- Responsible products which identify innovative products that provide clear environmental and social benefits to society

ST’s motion MEMS products within sustainable technology

- All motion MEMS products are ECOPACK® compliant
- Improvements in our manufacturing technologies and product design have reduced our products’ carbon footprint by up to 44% and water footprint up to 43.(1)
- Products identified as socially responsible:
  - H3LIS331DL is suited for concussion detection (3-STAR rating(2))
  - AIS328DQ and A3G4250D are accelerometers and gyroscopes used for navigation and telematics (2-STAR rating(2))
  - LIS2DH12 and LSM303C are recommended for fitness monitoring applications (1-STAR rating(2))
