

STM32Cube embedded software for STM32F1 series including HAL, low-layer drivers and STM32F1-dedicated middleware

Data brief

Features

- Consistent and complete embedded software offer that frees the user from dependency issues
- Maximized portability between all STM32 series supported by STM32Cube
- More than 120 examples for easy understanding
- High quality HAL using CodeSonar® static analysis tool
- High quality low-layer APIs (LL) using CodeSonar® static analysis tool
- STM32F1-dedicated middleware: USB Device, FatFS, RTOS, Graphics and touch sensing library
- Free user-friendly license terms
- Update mechanism that can be enabled by the user to be notified of new releases

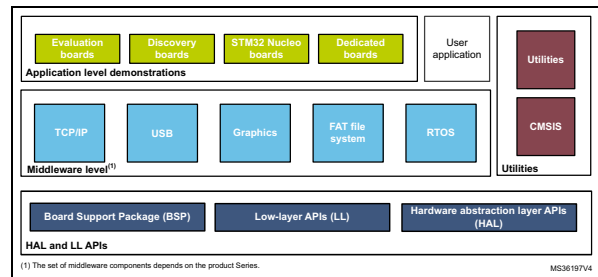

Description

STM32Cube™ is an STMicroelectronics original initiative to make developers' lives easier by reducing development effort, time and cost. STM32Cube covers the STM32 portfolio.

STM32Cube includes the STM32CubeMX graphical software configuration tool that allows generation of C initialization code using graphical wizards.

It also comprises the STM32CubeF1 platform composed of the STM32Cube HAL and the low-layer (LL) APIs, plus a consistent set of middleware components (RTOS, USB, FS, graphics and TCP/IP). All embedded software utilities come with a full set of examples running on STMicroelectronics boards.

The STM32Cube HAL is an STM32 embedded software stack that ensures maximized portability across STM32 portfolio, while the LL APIs make

up a fast, light-weight, expert-oriented layer which is closer to the hardware than the HAL. HAL and LL APIs can be used simultaneously with a few restrictions.

Both HAL and LL APIs are production-ready and have been developed in compliance with MISRA-C guidelines and ISO/TS 16949. On top of that, ST specific validation processes add a deeper-level qualification.

STM32CubeF1 gathers in one single package all the generic embedded software components required to develop an application on STM32F1 microcontrollers. Following STM32Cube initiative, this set of components is highly portable, not only within STM32F1 series but also to other STM32 series. In addition, low-layer APIs provide an alternative, high-performance, low-footprint solution to the STM32CubeL4 HAL at the cost of portability and simplicity.

STM32CubeF1 is fully compatible with STM32CubeMX code generator that allows generating initialization code. The package includes a low level hardware abstraction layer (HAL) that covers the microcontroller hardware, together with an extensive set of examples running on STMicroelectronics boards. HAL and LL APIs are available in open-source BSD license for user convenience.

STM32CubeF1 package

The STM32CubeF1 package also contains a set of middleware components with the corresponding examples. They come in very permissive license terms:

- CMSIS-RTOS implementation with FreeRTOS open source solution
- TCP/IP stack based on open source LwIP solution
- FAT File system based on open source FatFs solution
- STemWin, a professional graphical stack solution available in binary format and based on our partner solution SEGGER emWin
- Full USB Host and Device stack supporting many classes.

A set of application projects implementing all these middleware components is also provided in the STM32CubeF1 package.

Ordering Information

STM32CubeF1 is available for free download from <http://www.st.com/stm32cube>.

Revision history

Table 1. Document revision history

Date	Revision	Changes
09-Jan-2015	1	Initial release.
23-Jun-2017	2	Cover page: – moved list of middleware components from document title to list of features. – added low-layer APIs (LL) to features list – updated STM32CubeF1 firmware component block diagram. – updated description In Section : STM32CubeF1 package , removed last sentence. Normalized term 'low-layer' (hyphen and lower case).

IMPORTANT NOTICE – PLEASE READ CAREFULLY

STMicroelectronics NV and its subsidiaries ("ST") reserve the right to make changes, corrections, enhancements, modifications, and improvements to ST products and/or to this document at any time without notice. Purchasers should obtain the latest relevant information on ST products before placing orders. ST products are sold pursuant to ST's terms and conditions of sale in place at the time of order acknowledgement.

Purchasers are solely responsible for the choice, selection, and use of ST products and ST assumes no liability for application assistance or the design of Purchasers' products.

No license, express or implied, to any intellectual property right is granted by ST herein.

Resale of ST products with provisions different from the information set forth herein shall void any warranty granted by ST for such product.
