

**How to Connect to AWS IoT Core using Amazon FreeRTOS for
Embedded Devices
Hands-on Workshop using STM32L4 Discovery Kit IoT Node**

Wednesday June 26, 2:00 – 5:00

Presenter: STMicroelectronics Team

- This hands-on workshop will use an STM32L4 Discovery Kit IoT Node to demonstrate how to use Amazon FreeRTOS to securely connect a constrained, low-power embedded device to AWS cloud services like AWS IoT Core and enable you to start exploring your own innovative ideas! The kit features an array of sensors and Wi-Fi to showcase the cloud connectivity features.
- This a working session. Participants will need their own laptop running Windows 7 or later, or macOS. Note that administrator rights are needed for software and driver installation. ST will provide the required eval board and the companion software.
- SPACE IS LIMITED FOR THIS SESSION – FIRST COME, FIRST SEATED. Must be present and stay for training to receive the free kit.
