STM32WB WIRELESS SERIES

Bluetooth 5.0 & IEEE 802.15.4

Deliver best-in-class IoT solutions with built-in key storage, OTA firmware updates and protocol concurrency control

A wireless dual-core brain
The STM32WB series is a dual-core, multi-protocol and ultra-low-power 2.4 GHz MCU system-on-chip. It supports Bluetooth® 5.0 as well as IEEE 802.15.4 protocols (in Single and Concurrent modes) covering a wide spectrum of IoT application needs.

Based on ST’s best-in-class, ultra-low-power MCU with wide peripheral set, the STM32WB series reduces development time, BOM cost, and extends application battery life. STM32WB inspires innovation.

Bluetooth® 5.0 & IEEE 802.15.4
The STM32WB SoC offers multi-protocol stacks including Bluetooth® 5.0, OpenThread and ZigBee® 3.0 as well as standardized IEEE 802.15.4 protocols in Concurrent mode for best-in-class RF performance and dedicated core to radio activity provides SW flexibility and better user experience.

IP Protection
STM32WB devices offer device integrity and industrial IP protection features to meet manufacturers’ increasing demand for brand protection.

Note* Features availability or characteristics depend on STM32WB reference
STM32WB55 BLOCK DIAGRAM

**Control**
- Power supply: 1.7 to 3.6 V
- DC/DC + LDO
- POR/POR/PVD/BOR
- Xtal oscillators: 32 MHz (RF), 32.769 kHz (LSE)
- Internal RC oscillators: 32 kHz + 4 ~ 48 MHz + 16 MHz (HSI) + 48 MHz ± 1% acc. over V and T°(C)
- POR/PDR/PVD
- RTC/AWU/CSS
- PLL/FLL
- SysTick timer
- 2 watchdogs (WWDG/IWDG)
- 72 GPIOs
- Cyclic redundancy check
- Voltage scaling (2 modes)

**Analog**
- 2 x ULP comparators
- 1 x 12-bit ADC
- SAR: 4.25 Msps
- Temperature sensor

**STM32WB PORTFOLIO**

- Flash memory / RAM size (bytes)
  - 1 M / 256 K
  - 512 K / 256 K
  - 266 K / 256 K

**HARDWARE TOOLS**

This STM32 Nucleo pack is the most cost-effective way to quickly get started developing STM32WB-based prototypes.

**EMBEDDED SOFTWARE**

The STM32CubeWB package includes the STM32Cube hardware abstraction layer (HAL) and low-layer (LL) APIs peripheral drivers, a consistent set of middleware components (RTOS, USB, FatFS and STM32 touch sensing), as well as Bluetooth 5.0, OpenThread and ZigBee 3.0 connectivity stacks. All embedded software components come with a full set of examples running on STMicroelectronics boards.

**SOFTWARE TOOLS**

STM32CubeMX
Enables faster development thanks to its MCU pinout and clock configurator, power consumption calculator and code generation tools.

STM32CubeIDE
Is an Eclipse-based IDE which integrates the features of the STM32CubeMX configuration tool.

STM32CubeMonRF
Is a development tool dedicated to wireless connectivity which helps reduce time-to-market by enabling radio testing and beaconing.

STM32CubeProg
Is an all-in-one software tool for programming STM32 devices which can be easily used to interact with the memory of the STM32WB, including secure programming of the RF stacks.

**STM32WBx0 VALUE LINE**

Extending our portfolio, the STM32WB50 Value Line focuses on the essentials and offers a feature-optimized solution to help developers meet the design requirements of cost-sensitive industrial and consumer IoT applications.

The STM32WB55 Nucleo pack is a useful tool to quickly get you started with the STM32WB50 microcontrollers.
