Features

- Bluetooth v4.1 compliant
  - Supports master and slave modes
  - Multiple roles supported simultaneously
- Embedded Bluetooth low energy protocol stack
  - GAP, GATT, SM, L2CAP, LL, RFPHY
- Bluetooth low energy profiles provided separately
- Bluetooth radio performance:
  - Embedded ST BlueNRG-MS
  - Tx power: + 4 dBm
  - Rx sensitivity: -88 dBm
  - Provides up to 92 dB link budget with excellent link reliability
- Host interface
  - SPI, IRQ, and RESET
  - On-field stack upgrading available via SPI
- AES security co-processor
- Certifications:
  - CE qualified
  - FCC, IC modular approval certified
  - BT SIG qualified
- On-board chip antenna

- Operating supply voltage: from 1.7 to 3.6 V
- Operating temperature range: -40 °C to 85 °C

Applications

- Watches
- Fitness, wellness and sports
- Consumer medical
- Security/proximity
- Remote control
- Home and industrial automation
- Assisted living
- Mobile phone peripherals
- PC peripherals

Description

The SPBTLE-RF0 is an easy to use Bluetooth® Low Energy network processor module, compliant with Bluetooth v4.1. The SPBTLE-RF0 module supports multiple roles simultaneously, and can act at the same time as Bluetooth Low Energy master and slave device.

The entire Bluetooth Low Energy stack and protocols are embedded into SPBTLE-RF0 module. The external host application processor, where the application resides, is connected to the SPBTLE-RF0 module through a standard SPI interface.

The SPBTLE-RF0 module provides a complete RF platform in a tiny form factor. Radio, antenna and high frequency oscillators are integrated to offer a certified solution to optimize the time to market of the final applications.

The SPBTLE-RF0 can be powered directly with a pair of AAA batteries or any power source from 1.7 to 3.6 V.

1 General description

The SPBTLE-RF0 is a Bluetooth Low Energy network processor module compliant with Bluetooth® v4.1.

The SPBTLE-RF0 module integrates the BlueNRG-MS BT radio controller with an on-board power-optimized Bluetooth stack.

It supports:
- Both master and slave roles
- GAP: central, peripheral, observer or broadcaster roles
- ATT/GATT: client and server
- SM: privacy, authentication and authorization
- L2CAP

The BlueNRG-MS radio embeds nonvolatile Flash memory which allows on-field stack upgrading.

In accordance with Bluetooth specification v4.1, the SPBTLE-RF0 module supports:
- Multiple simultaneous roles
- Simultaneous advertising and scanning
- Acting as slave for up to two masters simultaneously
- Privacy V1.1
- Low duty cycle directed advertising
- Connection parameter request procedure
- LE Ping
- 32 bits UUIDs
- L2CAP connection oriented channels

Both standard and proprietary Bluetooth low energy profiles, as well as a wide set of examples are available for the SPBTLE-RF0 from the ST website.

The external host application processor where the application resides is interfaced with the SPBTLE-RF0 module through an application controller interface protocol based on a standard SPI interface.

With the SPBTLE-RF0 module, developers can enable wireless connectivity in electronic devices without requiring any RF experience or expertise for integration into the final product. The SPBTLE-RF0 module provides a complete RF platform in a tiny form factor (13.5 x 11.5 x 2 mm) and, being a certified solution, optimizes the time to market of the final applications.

The SPBTLE-RF0 module allows applications to meet the tight peak current requirements when using standard coin cell batteries. SPBTLE-RF0 can be powered directly from a standard 3 V coin cell battery, a pair of AAA batteries or any power source from 1.7 to 3.6 V.

ST may update the FW provided with the modules at any time. ST recommends that users regularly check for documentation and the current FW version available at www.st.com/bluemodules.

3 Software development

The SPBTLE-RF0 module embeds the BlueNRG-MS application processor. Refer to the BlueNRG-MS web page (http://www.st.com/en/wireless-connectivity/bluenrg-ms.html) to access:

- BlueNRG-MS datasheet
- development kit
- application notes
- user manuals
- tools and software
- design note and tips

For module firmware updates (BlueNRG-MS Bluetooth Stack), take into account the SPBTLE-RF0-specific configuration (see the block diagram) to select the proper binary file from the BlueNRG-MS Development Kit (STSW-BLUNRG-DK).

In particular the SPBTLE-RF0 module is configured with:

- 32 MHz crystal oscillator
- 32 KHz Ring Oscillator
- Internal LDO (SMPS Off)

From the prebuilt image files provided for the BlueNRG-MS Development Kit, only the files with “32MHz”, “RO32K”, and “SMPS_OFF” in the file name are suitable for the SPBTLE-RF0.

For example only the ifr_3v1_003_mode02-32MHz-RO32K_SMPS_OFF.dat file is suitable for the SPBTLE-RF0.

When used with the BlueNRG-GUI, the IFR configuration settings should reflect those pictured below.

Figure 2: IFR configuration for SPBTLE-RF0
4 Software architecture

The SPBTLE-RF0 module has been designed to work with an external Host processor connected via SPI.

Figure 3: SPBTLE-RF0 application block diagram
5 Hardware specifications

General conditions \((V_{IN} = 3.3 \text{ V} \text{ and } 25 \degree \text{C})\)

5.3 Mechanical dimensions

Figure 13: SPBTLE-RF0 module mechanical dimensions
Figure 14: Recommend land pattern top view

RECOMMENDED LAND PATTERN TOP VIEW
6 Hardware design

SPBTLE-RF0 module supports SPI hardware interfaces.

- All unused pins should be left floating; do not ground
- All GND pins must be well grounded
- The area around the module should be free of any ground planes, power planes, trace routings, or metal for 6 mm from the module antenna position, in all directions.
- Traces should not be routed underneath the module
- Reset pin must be kept low until Vin is stable

6.1 Reflow soldering

The SPBTLE-RF0 is a high temperature strength surface mount Bluetooth® module supplied on an 11-pin, 4-layer PCB. The recommended final assembly reflow profiles are indicated below.

The soldering phase must be executed with care: pay special attention to the set up of the peak temperature to avoid undesired melting.

Below are some soldering profile recommendations.

7 Regulatory compliance

7.1 FCC certification

This module has been tested and found to comply with the FCC part 15 rules. These limits are designed to provide reasonable protection against harmful interference in approved installations. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference may not occur in a particular installation. This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. this device must accept any interference received, including interference that may cause undesired operation.

Modifications or changes to this equipment not expressly approved by STMicroelectronics may render void the user’s authority to operate this equipment.

Modular approval

FCC ID: S9NSPBTLERF

In accordance with FCC part 15, the SPBTLE-RF0 is listed as a modular transmitter device.

This module is evaluated for stand-alone use only. Finished products incorporating multiple transmitters must comply with collocation and RF exposure requirements in accordance with FCC multi-transmitter product procedures. Collocated transmitters operating in portable RF Exposure conditions (e.g. < 20 cm from persons including but not limited to body worn and hand held devices) may require separate approval.

7.1.1 Labeling instructions

When integrating the SPBTLE-RF0 into the final product, the OEM must ensure that the FCC labeling requirements are satisfied. A statement must be included on the exterior of the final product which indicates the product includes a certified module. The label should state the following (or similar wording that conveys the same meaning):

Contains FCC ID: S9NSPBTLERF

OR

This product contains FCC ID: S9NSPBTLERF

The OEM must include the following statements on the exterior of the final product unless the product is too small (e.g. less than 4 x 4 inches):

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- this device may not cause harmful interference, and
- this device must accept any interference received, including any interference that may cause undesired operation.
### Product manual instructions

This section applies to OEM final products containing the SPBTLE-RF0 module, subject to FCC compliance. The final product manual must contain the following statement (or a similar statement that conveys the same meaning):

> Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. (Part. 15.21)

In the case where an OEM seeks Class B (residential) limits for the final product, the following statement must be included in the final product manual:

> This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna
- Increase the separation between the equipment and receiver
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected
- Consult the dealer or an experienced radio/TV technician for help

In the case where an OEM seeks the lesser category of a Class A digital device for the final product, the following statement must be included in the final product manual:

> This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his expense.

For more information refer to Test Report No. AR16-0006125-01 performed in accordance with:

7.2 IC certification

The SPBTLE-RF0 module has been tested and found compliant with the IC RSS-210 rules. These limits are designed to provide reasonable protection against harmful interference in approved installations. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference may not occur in a particular installation. This device complies with RSS-210 of the IC rules. Operation is subject to the following two conditions:

- this device may not cause harmful interference and
- this device must accept any interference received, including interference that may cause undesired operation

Modifications or changes to this equipment not expressly approved by STMicroelectronics may render void the user’s authority to operate this equipment.

Modular approval

IC: 8976C-SPBTLERF

In accordance with IC RSS-210, the SPBTLE-RF0 is listed as a modular transmitter device. This module is evaluated for stand-alone use only. Finished products incorporating multiple transmitters must comply with colocation and RF exposure requirements in accordance with IC multi-transmitter product procedures. Collocated transmitters operating in portable RF Exposure conditions (e.g. < 20 cm from persons including but not limited to body worn and hand held devices) may require separate approval.

7.2.1 Labelling instructions

When integrating the SPBTLE-RF0 into the final product, the OEM must ensure that the IC labeling requirements are satisfied. A statement must be included on the exterior of the final product which indicates that the product includes a certified module. The label should state the following (or similar wording that conveys the same meaning):

Contains IC: 8976C-SPBTLERF

OR

This product contains IC: 8976C-SPBTLERF

The OEM must include the following statements on the exterior of the final product unless the product is too small (e.g. less than 4 x 4 inches):

This device complies with RSS-210 of the IC Rules. Operation is subject to the following two conditions:

- this device may not cause harmful interference and
- this device must accept any interference received, including any interference that may cause undesired operation
7.2.2 Product manual instructions

This section applies to OEM final products containing the SPBTLE-RF0 module, subject to IC compliance. The final product manual must contain the following statement (or a similar statement that conveys the same meaning):

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. (RSS-210)

In the case where an OEM seeks Class B (residential) limits for the final product, the following statement must be included in the final product manual:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to RSS-210 of the IC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna
- Increase the separation between the equipment and receiver
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected
- Consult the dealer or an experienced radio/TV technician for help

In the case where an OEM seeks the lesser category of a Class A digital device for the final product, the following statement must be included in the final product manual:

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to RSS-210 of the IC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his expense.

For more information refer to Test Report No. AR16-0006125-02 performed in accordance with:

- INDUSTRY CANADA Spectrum Management and Telecommunications Radio Standards Specification
- RSS-210:210 Licence-exempt Radiocommunication Devices (All Frequency Bands): Category I Equipment
7.3 CE certification for SPBTLE-RF0 module

The SPBTLE-RF0 module has been certified according to the following standards:

- EN 62479:2010
- ETSI EN 301 489-1 V1.9.2:2011
- ETSI EN 301 489-1 V1.8.1
- ETSI EN 301 489-17 V3.1.1 (2017-02)
- ETSI EN 300 328 V2.1.1 (2016:11)

The module is CE certified:

![Figure 16: CE certified](image)

7.4 Bluetooth certification

The module with embedded stack and profile has been qualified in accordance with the Bluetooth Special Interest Group (BT SIG) qualification rules:

- Declaration ID: D028766
- Qualified design ID: 71984
- Product type: End Product
- Core spec version: 4.1
- Product description: Bluetooth Low Energy v4.1 module

SPBTLE-RF0 module listing information can be found at:

https://www.bluetooth.org/tpg/QLI_viewQDL.cfm?qid=28766

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK® packages, depending on their level of environmental compliance. ECOPACK® specifications, grade definitions and product status are available at: www.st.com. ECOPACK® is an ST trademark.
10 Traceability

Each module is univocally identified by serial number stored in a 2D data matrix laser marked on the bottom side of the module itself.

The serial number has the following format:

<table>
<thead>
<tr>
<th>Letter</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>WW</td>
<td>Week</td>
</tr>
<tr>
<td>YY</td>
<td>Year</td>
</tr>
<tr>
<td>D</td>
<td>Product ID family</td>
</tr>
<tr>
<td>FF</td>
<td>Production panel coordinate identification</td>
</tr>
<tr>
<td>NNN</td>
<td>Progressive serial number</td>
</tr>
</tbody>
</table>

Each module bulk is identified by a bulk ID.

BULK ID and module 2D data matrix are linked by a reciprocal traceability link.

The module 2D data matrix traces the lot number of any raw material used.
