Introduction

This release note is updated periodically to keep abreast of STM32CubeIDE evolution, problems and limitations. Check the STMicroelectronics support website at www.st.com/stm32softwaretools for the latest version. For the latest release summary, refer to Table 1.

Customer support

For more information or help concerning STM32CubeIDE, contact the nearest STMicroelectronics sales office. For a complete list of STMicroelectronics offices and distributors, refer to the www.st.com webpage.

Software updates

Software updates and all the latest documentation can be downloaded from the STMicroelectronics support webpage at www.st.com/stm32softwaretools.
1 General information

1.1 Overview

STM32CubeIDE is an integrated development environment (IDE) based on the ECLIPSE™ framework. It is aimed at users developing embedded software in C/C++ for the STMicroelectronics STM32 products. It uses an enhanced GNU tool chain for STM32, based on GNU Arm Embedded. It has an integrated version of STM32CubeMX and MCUFinder, which allows easy project configuration as well as the generation of the corresponding initialization C code through a step-by-step process. Furthermore, STM32CubeIDE integrates the command-line version of STM32CubeProgrammer (STM32CubeProg) for Flash memory handling while using the ST-LINK GDB server. This allows the STM32 device programming through debug interfaces (JTAG and SWD).

STM32CubeIDE is based on the following technology, with STMicroelectronics-specific enhancements:

- ECLIPSE™ 2019-03 and CDT version 9.7.0
- GNU Tools for STM32, based on GNU Tools for Arm Embedded Processors 7-2018-q2-update 7.3.1 20180622 (release) [ARM/embedded-7-branch revision 261907]
- GNU gdb (GNU Tools for STM32 7-2018-q2-update.20190328-1800) 8.1.0.20180315-git
- GNU Tools for Arm Embedded Processors 7-2018-q2-update 7.3.1 20180622 (release) [ARM/embedded-7-branch revision 261907]
- GNU gdb (GNU Tools for Arm Embedded Processors 7-2018-q2-update) 8.1.0.20180315-git
- AdoptOpenJDK Runtime Environment (build 1.8.0_202, 64-bit)
- ST-LINK_gdbserver 5.2.2, supporting ST-LINK/V2 and STLINK-V3
- OpenOCD 0.10.0+dev00021-g524e8c8

Windows® specific build tools:
- BusyBox v1.31.0.st_20191513-1013_longpath_windows: mkdir.exe, rm.exe, echo.exe
- make-4.2.1_st_20190702-0924: make.exe

Linux® specific build tools:
- make-4.2.1_st_20190702-0924: make.exe

macOS® specific build tools:
- make-4.2.1_st_20190702-0924: make.exe

STM32CubeIDE supports STM32 32-bit products based on the Arm® Cortex® processor.

Note: • ECLIPSE is a registered trademark of the Eclipse foundation.
• macOS® is a trademark of Apple Inc. registered in the U.S. and other countries.
• Arm is a registered trademark of Arm Limited (or its subsidiaries) in the US and/or elsewhere.

1.2 Host PC system requirements

Supported operating systems and architectures
- Windows® 7, 8, and 10: 64 bits (x64)
- Linux® (tested on Ubuntu® LTS 14.04, LTS 16.04, LTS 18.04, and Fedora® 29, 64 bits)
- macOS® 10.12 (Sierra), 10.14 (Mojave)

Note: • Ubuntu® is a registered trademark of Canonical Ltd.
• Fedora® is a trademark of Red Hat, Inc.

1.3 Setup procedure

Refer to the STM32CubeIDE installation guide (UM2563) and STM32CubeIDE quick start guide (UM2553) available at www.st.com.
1.4 Licensing

STM32CubeIDE is delivered under the Mix Ultimate Liberty+OSS+3rd-party V1 software license agreement (SLA0048).

The open-source and third-party software components used in the development of STM32CubeIDE and their licenses are listed in a zip file available from the product page in STMicroelectronics www.st.com web site. Table 2 provides the description of the licenses of additional components in STM32CubeIDE.

1.5 Cross-selector data disclaimer

The information presented in the cross-reference tool is intended to help the users narrow their search of STMicroelectronics products based on similarity to other available products. The information is based on data published by other semiconductor manufacturers and might contain errors. STMicroelectronics provides the information “as is” and does not make any representations or warranties as to its accuracy or suitability for any particular purpose. STMicroelectronics recommends that the users make their purchase decision based on their review of STMicroelectronics datasheets and other product documentation. Any pricing information is an estimate for budgetary purposes only.
STM32CubeIDE v1.0.2 release information

2.1 New feature

STM32CubeMX v5.3.0 integration.

2.2 Fixed issues

Table 3. Main issues fixed in STM32CubeIDE v1.0.2

<table>
<thead>
<tr>
<th>ID</th>
<th>Summary</th>
</tr>
</thead>
<tbody>
<tr>
<td>56619</td>
<td>Conditional breakpoints do not work. Fixed in ST-LINK and J-Link provided that Live expressions is enabled.</td>
</tr>
<tr>
<td>61897</td>
<td>On macOS®, the ioc editor does not show the Peripheral categories frame on the left side by default.</td>
</tr>
<tr>
<td>62712</td>
<td>Opening one ioc file and trying to open a second ioc file while the first one loads causes the IDE to crash.</td>
</tr>
<tr>
<td>65141</td>
<td>The uninstaller sometimes does not work on non-English Windows® installations.</td>
</tr>
<tr>
<td>65335</td>
<td>The font size menu is not available for ioc editor content.</td>
</tr>
<tr>
<td>65452</td>
<td>Changing from HAL to LL driver or vice versa in the ioc editor does not save the ioc file.</td>
</tr>
<tr>
<td>65458</td>
<td>The USE_HAL_DRIVER symbol is not properly removed when switching from HAL to LL driver, which can cause build failure.</td>
</tr>
<tr>
<td>66049</td>
<td>TeamSynchronizing perspective remains hidden after Git™ is installed.</td>
</tr>
<tr>
<td>67089</td>
<td>Creating a C project after having created a C++ project results in C++ nature set in all future projects in the active workspace.</td>
</tr>
<tr>
<td>67458</td>
<td>The -u_printf_float in [MCU Settings] generates a warning about being disabled despite being enabled.</td>
</tr>
<tr>
<td>67679</td>
<td>AI software pack projects are not generated properly.</td>
</tr>
</tbody>
</table>

2.3 Known problems and limitations

- The [Run] button is not yet implemented and is therefore hidden from the toolbar menu and Run menu.
- The creation of static libraries with the option add libraries as reference leads to the unintended generation of the Drivers folder.
- The USE_HAL_DRIVER symbol is not properly removed when switching from HAL to LL driver, which can cause build failure.
- Creating BOARD projects with Code generator options == add necessary library files as reference.. and Initialise all peripherals with default settings can cause build errors if BOARD depends on the USB library.
- The user cannot change [Application Structure] from Basic to Advanced or vice versa without losing user code.
- Importing the ioc file created by stand-alone STM32CubeMX is not fully supported.
- Editor hyperlinks sometimes jump to declaration instead of definition.
- It is not possible to open an SW4STM32 or TrueSTUDIO® workspace with STM32CubeIDE. Refer to Migration guide from TrueSTUDIO® to STM32CubeIDE (UM2578) and Migration guide from System Workbench to STM32CubeIDE (UM2579).
- The [Help] [Data refresher] can be invoked several times without pop-up dialog.
- Some Linux® installers install a few packages before the license agreement has been accepted.
- The macOS® installer displays incompatible version dialog when installing the stlink-server package. This can safely be ignored.
- Some STM32CubeMX pop-up dialogs are not opened in front of the STM32CubeIDE workbench on all OS.
- On macOS®, the ioc editor does not show the Peripheral categories frame on the left side by default.
- STM32CubeIDE does not support switching from one MCU to another once the project is created.
- Anti-virus tools may be sensitive to STM32CubeIDE and bundled exe files despite the addition of vendor certificates since it is not yet deployed widely.
- STM32CubeIDE SWV selecting large amounts of data to copy to the clipboard may crash STM32CubeIDE.
- Conditional breakpoints do not work with OpenOCD.
- The project importer for SW4STM32 cannot import all settings in projects from very old versions (older than 2.0).
- The Generate code operation re-includes excluded files in folders that are created by STM32CubeMX.
- Having a space or non-ascii character in the project/workspace path or installation path is not fully supported.
- Updating field [HCLK] in tab Clock Configuration is difficult.
- When creating an empty project, the FPU is enabled in the build settings but the project is generated without a SystemInit function to initialize the FPU at run-time.
- In the STM32CubeMX .ioc editor under [Project Manager]>[Code Generator], there is a [settings] button that is not yet implemented.
- Importing a project from an earlier version into the current one will hang STM32CubeIDE when opening the .ioc editor. This only affects macOS®.
- Some radio or check buttons in the debugger tab have unexpected rendering on any Ubuntu® 14.04.
3 Previous release information

3.1 STM32CubeIDE v1.0.1 release information

3.1.1 New feature
STM32CubeMX v5.2.1 integration including latest MCUFinder evolution.

3.1.2 Fixed issues

Table 4. Main issues fixed in STM32CubeIDE v1.0.1

<table>
<thead>
<tr>
<th>ID</th>
<th>Summary</th>
</tr>
</thead>
<tbody>
<tr>
<td>59230</td>
<td>X-CUBE-AI links properly.</td>
</tr>
<tr>
<td>65403</td>
<td>On Windows®: BusyBox sh.exe pwd command fixed.</td>
</tr>
<tr>
<td>65897</td>
<td></td>
</tr>
<tr>
<td>67661</td>
<td></td>
</tr>
<tr>
<td>66212</td>
<td>Fixed loss of source files upon regeneration of code with dependencies on STM32Cube Expansion Packages.</td>
</tr>
<tr>
<td>66986</td>
<td>Integrated STM32CubeMX 5.2.1 supporting latest .ioc file format.</td>
</tr>
<tr>
<td>67014</td>
<td>Fixed project nature warning message when importing SW4STM32 projects.</td>
</tr>
<tr>
<td>67155</td>
<td>Fixed _estack value on newly generated projects to be correctly aligned.</td>
</tr>
<tr>
<td>67664</td>
<td>Removed shortcut to non-existing readme.txt from Windows® start menu.</td>
</tr>
</tbody>
</table>

3.2 STM32CubeIDE v1.0.0 release information

3.2.1 Features
- Integration of STM32CubeMX that provides services for:
  - STM32 microcontroller selection
  - Pinout, clock, IP, and middleware configuration
  - Project creation and generation of the initialization code
- Based on ECLIPSE™/CDT, with support of ECLIPSE™ add-ons
- GNU C/C++ for Arm® toolchain and GDB debugger:
  - GNU Arm Embedded
  - GNU tools for STM32, with enhancements compared to the standard toolchain
- Additional advanced features including:
  - Build Analyzer view
  - Static Stack Analyzer view
  - CPU core, IP register, and memory views
  - Live Expressions view
  - System analysis and real-time tracing views (SWV)
  - Fault Analyzer view
  - ITM software tracing
  - SFR view
- Support of STMicroelectronics ST-LINK/V2 and STLINK-V3:
  - ST-LINK_gdbserver 5.2.2
  - OpenOCD 0.10.0+dev00021-g524e8c8
• Support of SEGGER J-Link
  – SEGGER J-Link gdbserver v6.44c
• Import of projects from Atollic® TrueSTUDIO® and AC6 System Workbench for STM32
