Features

- Features boost section
  - 4.5 V to 36 V input voltage range
  - internal power MOSFET
  - internal +5 V LDO for device supply
  - up to 36 V output voltage
  - constant frequency peak current-mode control
  - 250 kHz to 1 MHz adjustable switching frequency
  - external sync for multi-device application
  - pulse-skip power saving mode at light load
  - programmable soft-start
  - programmable OVP protection
  - single ceramic output capacitor
  - non-latched thermal shutdown
- Features backlight driver section
  - six rows with 85 mA maximum current capability (adjustable)
  - up to 10 white LEDs per row
  - rows disable option
  - less than 10 µs minimum dimming time
  - ±2.0% current matching between rows
  - LED failure (open and short circuit) detection
- RoHS compliant

Description

This demonstration board is based on the LED7707 and implements a high efficiency monolithic boost converter and six controlled current generators (rows) specifically designed to supply LEDs arrays used in the backlight of LCD panels.

The device can manage an output voltage up to 36 V (i.e. ten white-LEDs per row).
