

## ST25DV-I2C CryptoDemo Android application

### Product status link

[STSW-ST25003](#)

## Features

- Encryption of all NFC bidirectional communications between an Android™ phone and an STM32 microcontroller
- Fast communications over NFC, using ST25DV fast transfer mode
- AES and ECC cryptography
- Mutual authentication between the Android phone and the STM32 microcontroller
- Establishment of a unique AES session key
- Encryption can be used to retrieve data, set device settings or update the firmware securely

## Description

The ST25DV-I2C CryptoDemo Android application shows how to establish a secure transfer channel over NFC, between an STM32 microcontroller and an Android smartphone. It uses the fast transfer mode (FTM) feature of the ST25DV-I2C NFC Tag.

The items available for this demonstration are: this Android application ([STSW-ST25003](#)), the firmware ([STSW-ST25DV003](#)), a user manual (UM2575), and application note (AN5323). An [ST25DV-I2C-DISCO](#) board is required to run the demonstration.

This demonstration establishes a secure transfer channel by using cryptography to perform mutual authentication and to encrypt the communications over NFC. This secure transfer channel is used during the demonstration to securely send and retrieve data, perform the device settings, and upload new firmware.

Only the granted user may communicate with the STM32 microcontroller to perform these operations. All the communications are encrypted between the microcontroller and the Android phone in both ways, so that the user can configure the product or retrieve data securely.

# 1 License

STSW-ST25003 is delivered under software license agreement [SLA0052](#).

The software components provided in this package come with different license schemes as shown in [Table 1](#).

**Table 1. Software component license agreements**

Software component	License type	License details
Graphview	Apache License, Version 2.0	<a href="https://github.com">https://github.com</a> <sup>(1)</sup>
HKDF		
TIMBER		
Conscript		
commons-lang		<a href="https://mvnrepository.com">https://mvnrepository.com</a> <sup>(2)</sup>

1. Search for the component in the *Git repository*.
2. Search for the proper version of the component in the *MVN repository*.

STSW-ST25003 runs with a 32-bit microcontroller based on the Arm® Cortex®-M4 CPU with FPU high-performance microcontroller.

*Note:* Arm is a registered trademark of Arm Limited (or its subsidiaries) in the US and/or elsewhere.
