## Description

ST25SDK is a software development kit providing a rich and comprehensive library to interact with ST25 tags and dynamic tags. ST25SDK contains all the necessary classes and abstractions to help the user in the development of mobile or desktop Java™ applications.

Thanks to ST25SDK.jar APIs, user solutions can be brought to market faster with low level NFC Forum / ISO commands and a tag abstraction level that supports all ST25-specific features.

Addressing a wide range of applications (from mobile tag-centric to industrial / commercial multi-tag solutions), ST25SDK reduces development overhead and lets the user focus on the application.

ST25SDK documentation includes code examples and reference material.
