

## ST25 software development kit

Data brief

### Features

- Software library to be used in Java™ applications
  - Can be run on any platform supporting JVM (Windows®, Android™, Linux® and macOS®)
  - Supports the entire ST25 portfolio of NFC/RFID and dynamic tags (ISO15693, ISO14443, NFC Forum Type 4 and 5)
  - Caches tag information (useful when the RF field is OFF)
- Delivered with example applications available for quick startup
- Provides reference implementations on
  - FEIG Electronic MR101/102 and FEIG LR1002 readers
  - ST discovery kits based on CR95HF and ST25R3911B devices

### Description

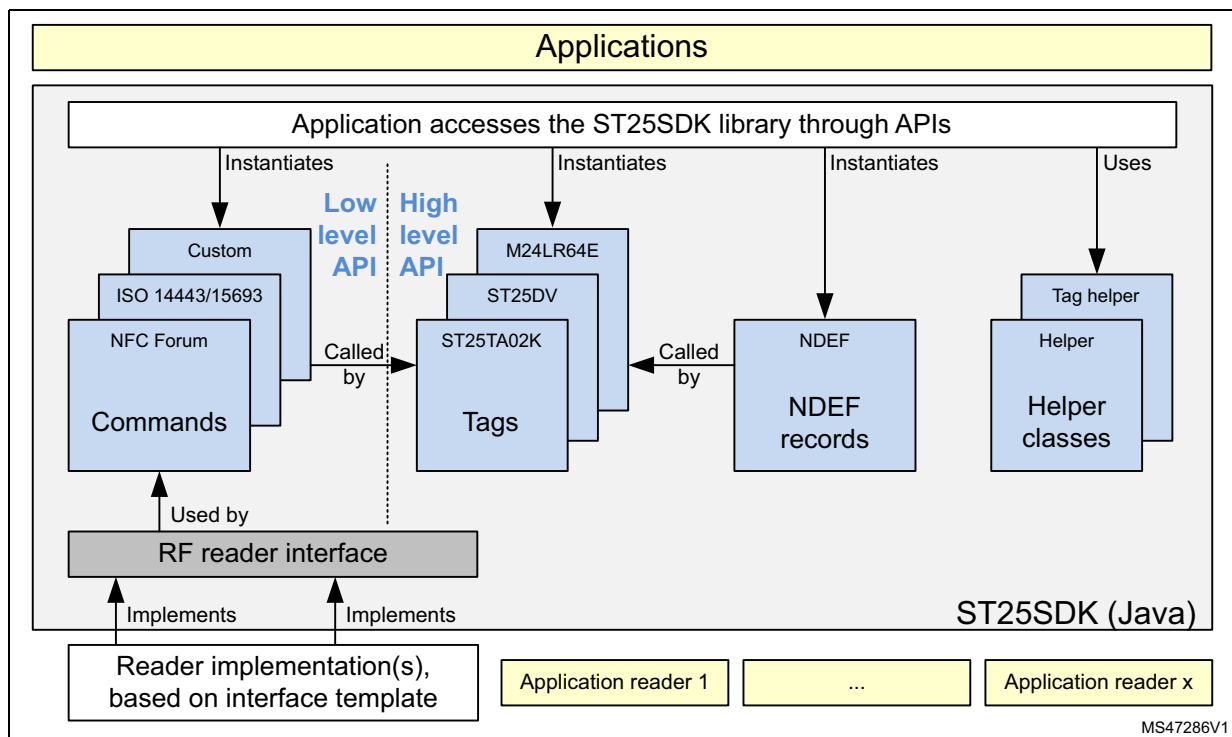

The ST25 software development kit (ST25SDK) provides a rich and comprehensive library to interact with ST25 tags and dynamic tags.

It contains all the necessary classes and abstractions to help the user to develop mobile or desktop Java™ applications.

Thanks to ST25SDK.jar's API, user solutions can be brought to the market faster with low level NFC Forum/ISO commands and a tag abstraction level that supports all ST-specific features.

Addressing a wide range of applications (from mobile tag-centric to industrial / commercial multi-tag), the ST25SDK reduces development overhead and lets the user focus on the application.

The ST25SDK documentation includes code examples and reference material.
