
Achieving 32-bit timer resolution with software expansion for Standard Peripheral Library

Data brief

Features

- 32-bit input capture mode example using link system
- Two 32-bit output capture mode examples using link system
 - Active mode
 - Toggle mode
- Microcontrollers covered: STM32F1 Series

Description

The STSW-STM32009 embedded software package is an expansion of the Standard Peripheral Library.

This firmware provides application use cases for the general-purpose-timer peripherals embedded in the STM32 microcontrollers.

The timers in microcontrollers can be linked together internally for timer synchronization or chaining purposes.

The STSW-STM32009 describes how to use the link system to achieve the 32-bit resolution with two 16-bit timers.

For more details refer to *Achieving 32-bit timer resolution with software expansion for STM32Cube and Standard Peripheral Library* application note (AN2592).

Ordering information

STSW-STM32009 is available for free download from the www.st.com web site.
