

Graphical user interface for the STUSB4500

Features

- Access to the STUSB non-volatile-memory
- Read and write any I²C register address
- Device dashboard
- Operating system required: Microsoft Windows

Description

The **STSW-STUSB002** is a free graphical interface (GUI) aimed at customizing seamlessly the STUSB devices through direct access to non-volatile-memory (NVM).

The tool allows NVM area to be read, configured and written without dedicated software skills, thanks to a graphical interface.

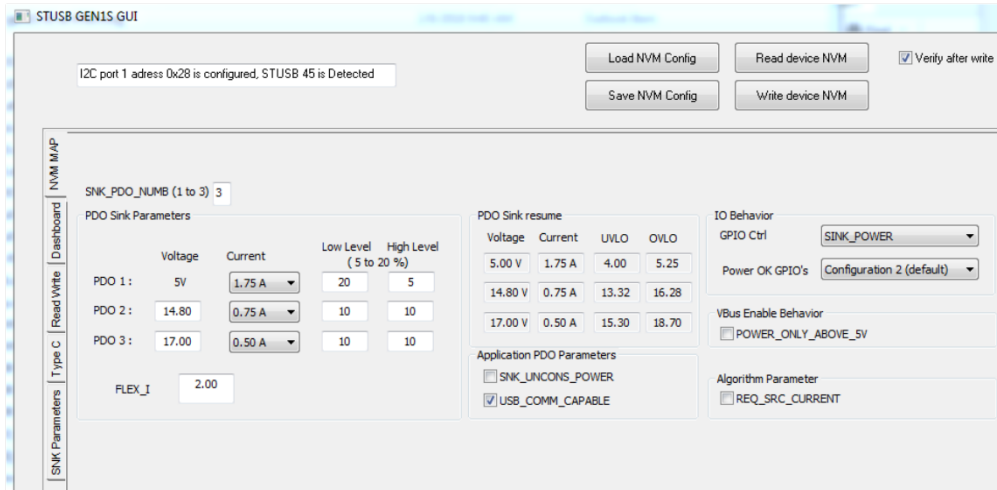

The utility also provides a basic panel to read and write I²C registers at any device address and any register address, as well as a device dashboard.

The software can be used with the evaluation boards from the STUSB devices stacked on a **NUCLEO-F072RB** controller board. The device selection is done automatically at power-up, as far as the Nucleo is flashed and configured in order to act as a USB to I²C bridge (.bin included).
