

## The STUSB4761 NVM customization tool (via I<sup>2</sup>C)

### Features

- Open source code
- HW set-up: NUCLEO-F072RB (STM32F072RB Nucleo-64 development board)
- C code compilers supported:
  - IAR 8.x
  - Keil  $\mu$ Vision 5.x
  - GNU Arm embedded toolchain

### Description

The **STSW-STUSB006** is a software library enabling the STUSB4761 non-volatile-memory customization via I<sup>2</sup>C. Open source software is available to speed-up the process or migrate to different environments.

A graphical user interface (GUI) is used to manually customize the STUSB4761 parameters (STSW-STUSB005). Once frozen, the non-volatile-memory settings can be dumped by the GUI into an output file (STUSB-NVM.h). The **STSW-STUSB006** library provides all the necessary software structures and functions to load automatically the file into the NVM from the IC using I<sup>2</sup>C port.
