### Description

The STUSB1600 is a generic IC designed in 20 V technology, addressing USB Type-C™ port management both on host and/or device sides and is suited for a broad range of applications. It is fully compatible with the USB Type-C cable and connector specifications (rev 1.1)

The STUSB1600 is able to handle all functions from Type-C attach detection, plug orientation detection, host-to-device connection, V<sub>CONN</sub> support, V<sub>BUS</sub> configuration and so on.

Additionally, the STUSB1600 provides support for dead-battery operation and is fully customizable (thanks to an integrated non-volatile memory).

# 1 General description

The STUSB1600's major role is:

1. Detect the connection between two USB ports (attach detection)
2. Resolve cable orientation and twist connections to establish USB data routing (mux control)
3. Establish a valid host-to-device connection
4. Discover and configure  $V_{BUS}$ : Type-C Medium or High current mode
5. Configure  $V_{CONN}$ .

Additional features:

- I<sup>2</sup>C interface
- Dead-battery support
- Non-volatile default startup configuration (user-defined parameters)
- $V_{BUS}$  voltage monitoring
- High-voltage protection on interface pins
- $V_{CONN}$  protections:
  - Soft-start to limit inrush current
  - Constant current mode overcurrent protection
  - Adjustable current limit
  - Thermal protection
  - Undervoltage and overvoltage protections
  - Reverse-current and reverse-voltage protections
  - Fault blanking
