

Dynamic NFC/RFID tag IC software expansion for STM32Cube

Applications & demonstrations	X-CUBE-NFC7
Middleware	NDEF Lib
Hardware Abstraction	STM32Cube Hardware Abstraction Layer (HAL)
Hardware	STM32 Nucleo expansion board X-NUCLEO-NFC07A1 (Connect)
	STM32 Nucleo development board

Features

- Complete middleware to build applications using the [ST25DV64KC](#) dynamic NFC/RFID tag IC
- Easy portability across different MCU families, thanks to [STM32Cube](#)
- Sample applications to:
 - Enable energy harvesting
 - Activate GPO interrupt
 - Activate low power down
 - Set I²C protection
 - Use [ST25DV64KC](#) mailbox
 - Write URI NDEF
- Free, user-friendly license terms
- Sample implementation available on the [X-NUCLEO-NFC07A1](#) expansion board, plugged into a [NUCLEO-F401RE](#), [NUCLEO-L053R8](#), or [NUCLEO-L476RG](#) development board
- Package compatible with [STM32CubeMX](#): it can be downloaded from and installed directly into [STM32CubeMX](#)

Description

The [X-CUBE-NFC7](#) software expansion for [STM32Cube](#) provides a complete middleware for STM32 to build applications using the [ST25DV64KC](#) dynamic NFC/RFID tag IC.

The software is based on [STM32Cube](#) technology and expands [STM32Cube](#)-based packages. It is built on top of [STM32Cube](#) software technology to ease portability across different STM32 microcontrollers.

The software comes with sample implementations of the drivers running on the [X-NUCLEO-NFC07A1](#) expansion board plugged on top of a [NUCLEO-F401RE](#), [NUCLEO-L053R8](#), or [NUCLEO-L476RG](#) development board.

Product summary	
Dynamic NFC/RFID tag IC software expansion for STM32Cube	X-CUBE-NFC7
Dynamic NFC/RFID tag IC expansion board based on ST25DV64KC for STM32 Nucleo	X-NUCLEO-NFC07A1
Dynamic NFC/RFID tag IC with 64-Kbit EEPROM and fast transfer mode capability	ST25DV64KC-IE6S3
Applications	NFC

1 Detailed description

1.1 What is STM32Cube?

STM32Cube is a combination of a full set of PC software tools and embedded software blocks running on STM32 microcontrollers and microprocessors:

- [STM32CubeMX](#) configuration tool for any STM32 device; it generates initialization C code for Cortex-M cores and the Linux device tree source for Cortex-A cores
- [STM32CubeIDE](#) integrated development environment based on open-source solutions like Eclipse or the GNU C/C++ toolchain, including compilation reporting features and advanced debug features
- [STM32CubeProgrammer](#) programming tool that provides an easy-to-use and efficient environment for reading, writing and verifying devices and external memories via a wide variety of available communication media (JTAG, SWD, UART, USB DFU, I2C, SPI, CAN, etc.)
- STM32CubeMonitor family of tools ([STM32CubeMonRF](#), [STM32CubeMonUCPD](#), [STM32CubeMonPwr](#)) to help developers customize their applications in real-time
- [STM32Cube MCU and MPU packages](#) specific to each STM32 series with drivers (HAL, low-layer, etc.), middleware, and lots of example code used in a wide variety of real-world use cases
- [STM32Cube expansion packages](#) for application-oriented solutions.

1.2 How does this software complement STM32Cube?

The proposed software is based on the STM32CubeHAL, which is the hardware abstraction layer for the STM32 microcontroller.

The package extends [STM32Cube](#) by providing a board support package (BSP) for the [X-NUCLEO-NFC07A1](#) expansion board for [STM32 Nucleo](#). It also provides some middleware components for the NDEF application drivers and the PC software communication library.

The drivers abstract low-level details of the hardware and allow the middleware components and applications to access the NDEF data in a hardware-independent manner. They also allow performing the communication with a PC software through the USB link.

The package also includes some examples that the developers can use to start experimenting with the code. The examples were developed to allow the user to activate the [ST25DV64KC](#) features.

The project includes the following examples:

- Enable energy harvesting
- Activate GPO interrupt
- Activate LPD
- Set I²C protection
- Use ST25DVxxKC mailbox
- Write URI NDEF
