

# Simplifying edge AI deployment in sensor-to-cloud solutions

Discover the ST AloT Craft online tool

# Streamline in-sensor AI programming in IoT nodes

**Create your full node-to-cloud solutions with ST AIoT Craft**

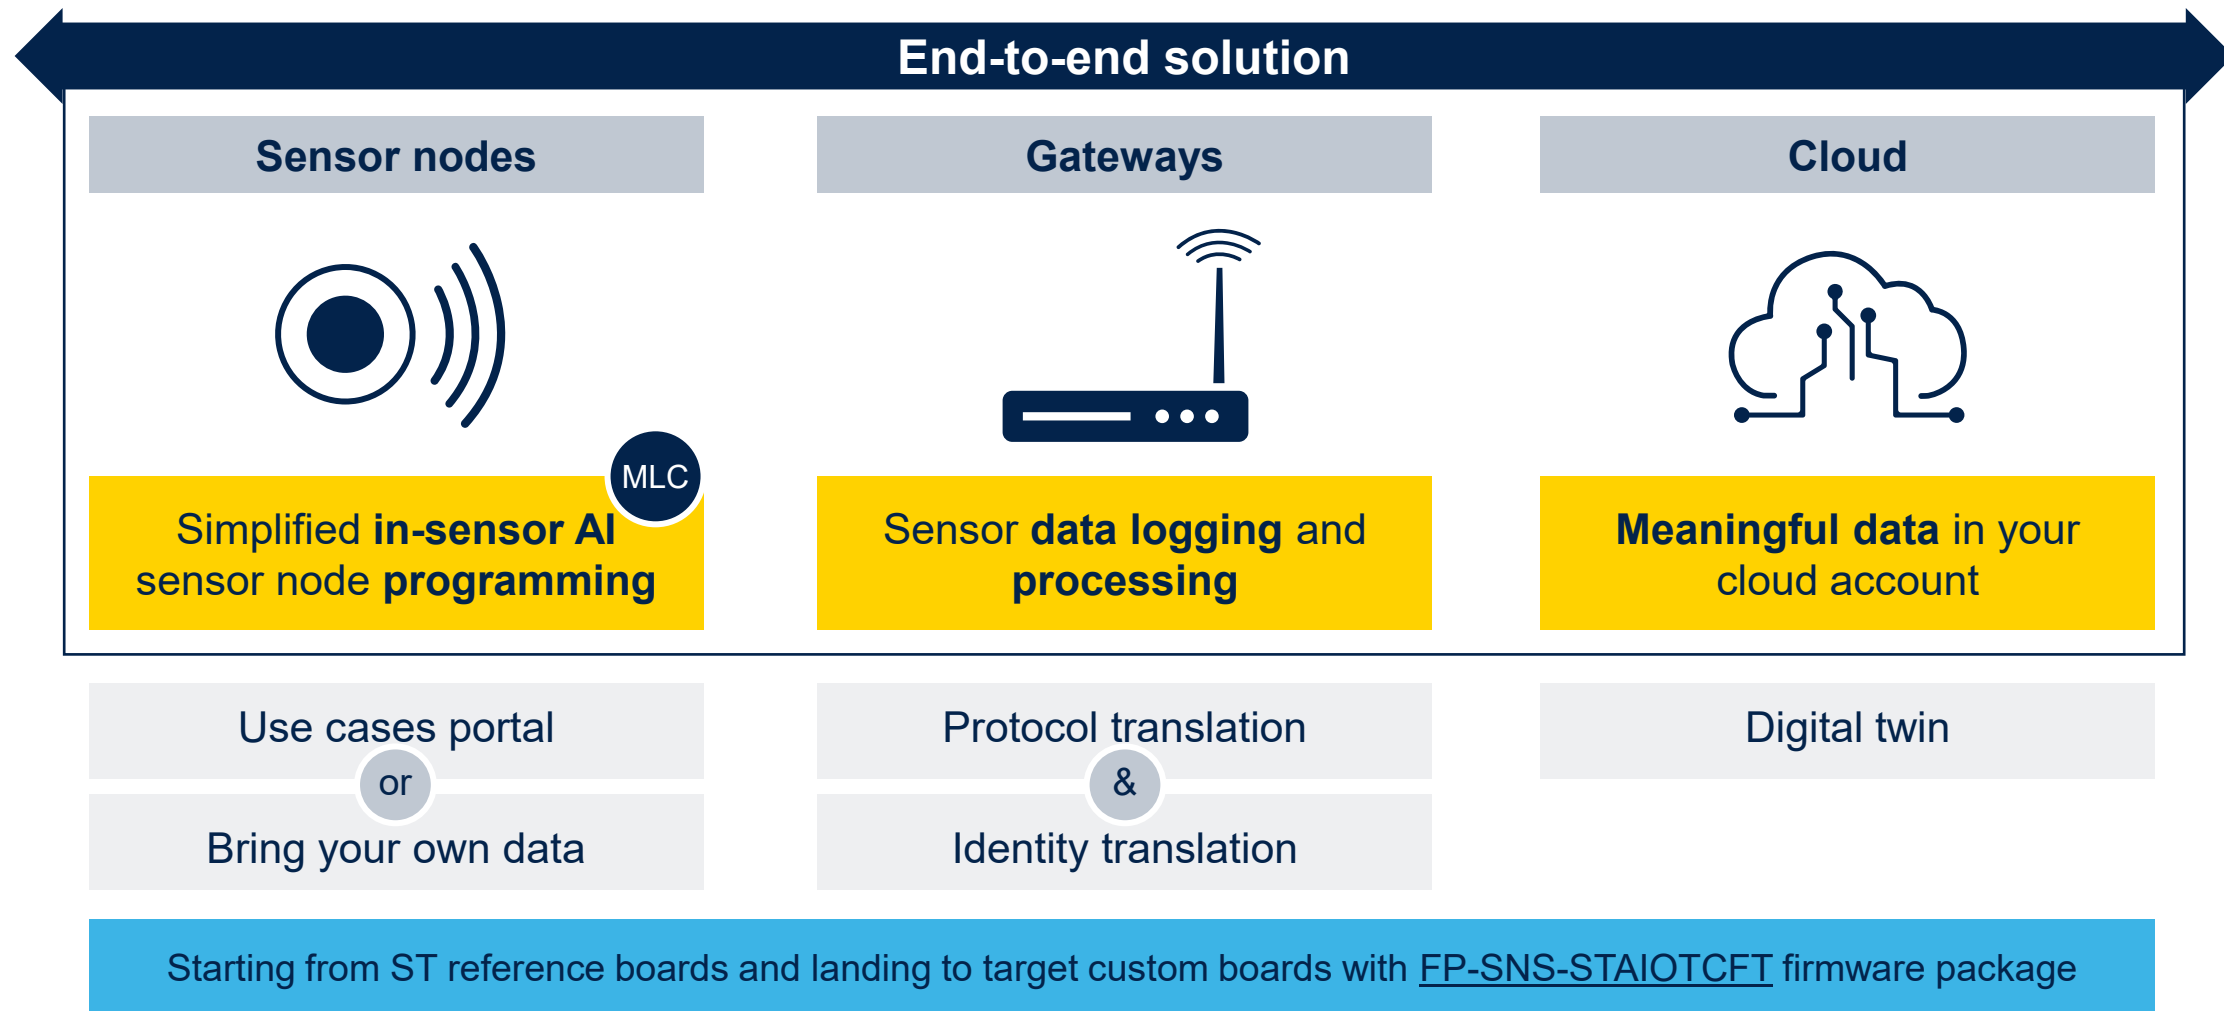

**A secure, user-friendly online platform for in-sensor AI\* programming**

**One tool offering multiple functionalities for developing AI-enabled IoT projects**

**Providing examples for reuse and/or customization**

**Simplifying collaboration between AI specialists and software engineers**

# ST AIoT Craft is a cloud-based tool for AI specialists and software development engineers

# ST AIoT Craft: the easy experience in 3 steps

## 1. Create dataset

Connect your board, log your dataset and push it on cloud.

On cloud no code training

Collect data with your board

Upload collected dataset on cloud

Prepare the dataset for training step

Dataset examples

or

Bring your own data

## 2. Train ML model

Train ML decision tree on collected dataset in the cloud.

On cloud no code training

Check out in cloud dataset

Configure and start in cloud training

Trained ML model stored in cloud

Model examples

or

Model from scratch

## 3. Deploy IoT system

Setup your cloud connected IoT system and monitor model inference result.

End-to-end solution

Sensor nodes

Gateways

Cloud

Simplified in-sensor AI programming

Sensor data logging and processing

Meaningful data in your cloud account

Use cases portal

Protocol translation

Digital twin

or

&

Bring your own data

Identity translation

# Test, validate, and develop your IoT application leveraging in-sensor AI

## Accelerate

- Discover ready-to-use application examples with **Flash&run** and **AutoML for in-sensor AI programming** (machine learning core technology)
- **Quickly create decision tree algorithms** on the IoT node for expert machine learning engineers to support use case clarification
- **Build datasets among users** for a robust AI algorithm
- Save time and easily access the online tool as it requires **no installation**

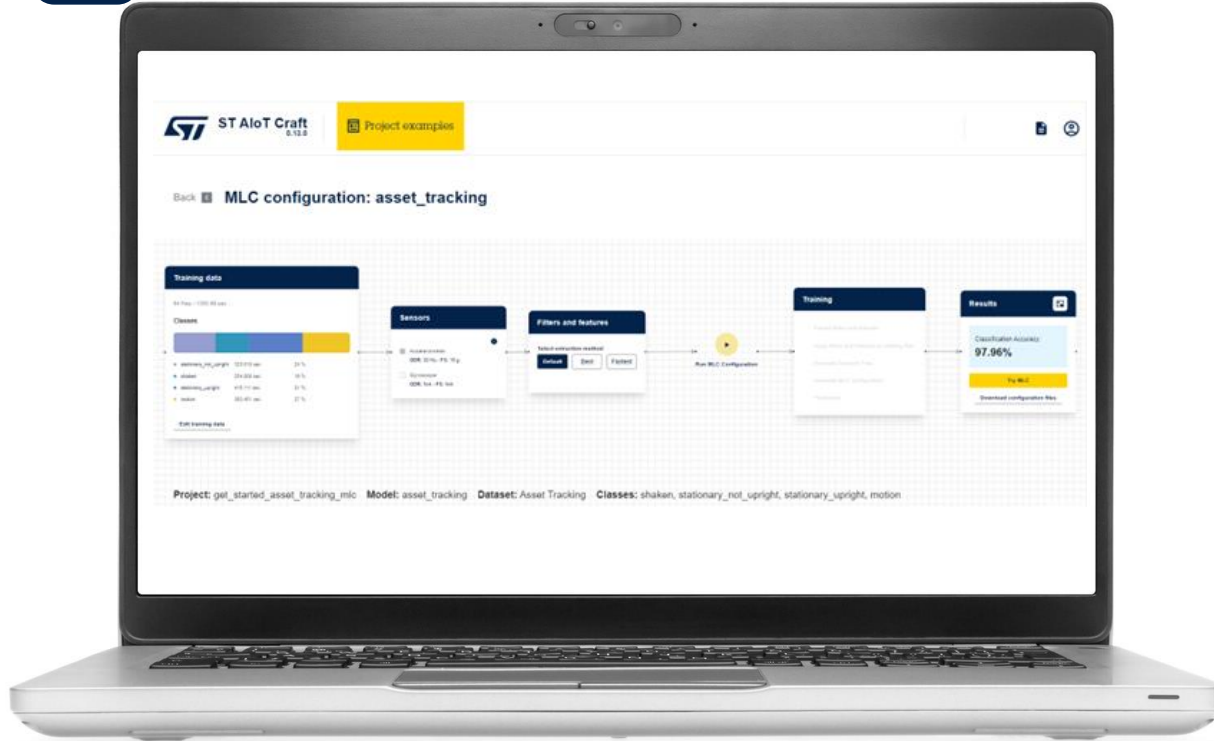

## Scale up

- **Develop your AI application and provision your IoT node** with a single tool. Save time with seamless installation and configuration.
- Adapt or reuse existing case studies to fit **application needs**.
- **IoT system flexibility**: connectivity extension with Bluetooth Low Energy and firmware package for custom boards
- **Share your models and datasets across projects** for multiple users

**Advanced security features** based on the latest security mechanisms, including encryption, identity and access management, and threat detection.

# The key ingredients for IoT project development with ST AIoT Craft

ST reference IoT boards, gateway, cloud, and mobile application

In-sensor AI technology (machine learning core)

Integrated ST software tools and hardware

Dataset and project privacy

[staiotcraft.st.com](https://staiotcraft.st.com)

# ST AloT Craft 1.2 version

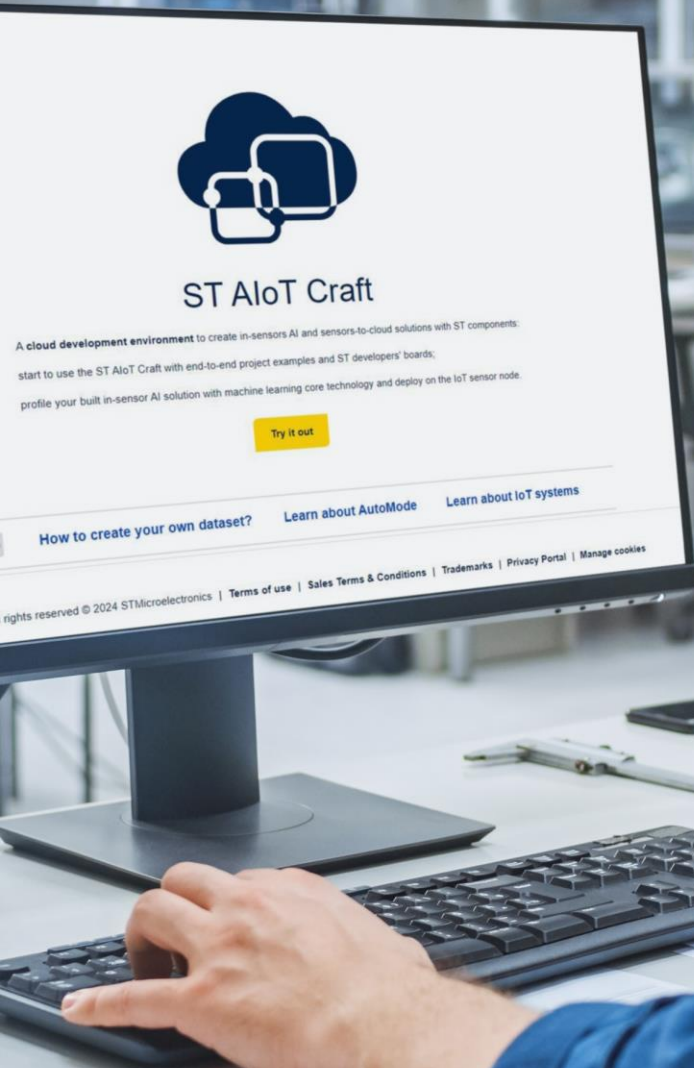

## What's new?

**Sharing among users**  
projects and data sets

**New MEMS sensor supported**  
LSM6DSV80X and LSM6DSV320X IMUs

**IoT system flexibility**  
BLE connectivity, firmware package for easy project porting to custom boards

**Quick learning** with dedicated course

# Pick up use cases from Edge AI case studies
