# Banking & ID solutions

# Smartcards market applications

## A strong expertise in Smartcard Industry

### Banking

- Banking cards
- Biometry
- dCVV
- Wearables

### Identity

- (National) eID
- ePassport
- eSignature
- eDriving License
- eHealthcare
- eTachograph

### Transport

- Calypso®

### PayTV

# A full range of banking solutions

## Contact, dual Interface ICs and system-on-chip solutions

### ST31 Secure MCU

- Dual core 32-bit ARM SC000 CPU
- Multiprotocol (ISO7816, ISO14443 A/B, ISO18092, VHBR)
- EMVCo® & Common Criteria-certified

### STPay ST Secure Payment solution

- Ready-to-use proven banking offer
- Multiple International & Domestic Payment schemes supported
- Contact and dual IF offers
- Widely used by > 40 customers worldwide
- Advanced EMV portfolio for innovative cards: BSOC / dCVV

### STPay

Inlays

Applications

Operating system

ST31 Secure MCU

# STPay ST Secure payment solution

A hand holding a credit card over a payment terminal. The terminal is a handheld device with a screen and a keypad. The card is being held over the terminal's antenna. The background is blurred, showing a person's arm and hand.

**A ready-to-use banking solution**

**>3 Bu** delivered for >10 years

**10+** payment schemes certified

**40+** customers on 5 continents

- 40 nm Flash technology
- Best-in-class RF and low-power performance
- Improved user experience
- Wide range of packaging solutions
- Calypso & MIFARE® technologies supported
- Multiple end applications (cards, wearables)

# STeID Secure identity solutions

Open Java Card™ solution  
for single and multi-applications identity cards

Native solutions developed in cooperation with  
Masktech GmbH (Germany)

**Based on ST31 Secure Hardware Microcontroller**

High performance dual core 32-bit ARM SC000 + Dedicated cryptographic engines

Common Criteria Certified

Data retention >25 years, Erase/Write cycling > 500K cycles

# STeID

## Secure identity solutions

### Application Targets

(National) eID, eResidence permit, eHealthcare  
eSignature (SSCD, QSCD  eIDAS )

ePassport

eDriving license, eTachograph

# Biometric system-on-card (BSoC)

## Market

- Estimated biometrics payment cards TAM 37 Mu in 2028 (ABI)
- Expected Market deployment in 2024
- Multiple application segments supported (banking, ID, Health, Access control)

## A combined solution

## Solution

- Enhanced secure & easy to use
- Unicity granted (Not transferable, Not duplicable)
- Suitable for PIN-less operations  
Toll gate, health cards, contactless transactions
- Usable in conjunction with PIN code
- Easy to use  
Multiplatform technology, nothing to remember

# Biometric system-on-card: key challenges

## New technology, better performance, state-of-the-art product

### Market maturity

- User acceptance
- Card cost

### Card lifecycle

- Strongly depends on daily transactions amount (unpredictable) and power management type

### System interoperability & security

- Components isolation
- Agnosticism vs. technology choices

### Card manufacturing

- Size and thickness (ISO 0.76 mm)
- Flexibility (ISO / CQM compliancy for resistance to mechanical stresses)
- Lamination

### Technical requirements

- Transaction performances
- Power management (without battery or super capacity when RF)
- Standardization

### Performance

- From Capture to Verification / enrollment in 1 sec (Match-on card)

# Secure smartcard takeaways

Based on ST31, using an innovative 40 nm Flash technology

STPay, a complete and proven worldwide secure payment solution

ST biometric system-on-card solutions, the leading edge of technology

STeID, trusted identity for everyone

# Our technology starts with You
