LL_I2C_SetSMBusTimeoutB

Function name

__STATIC_INLINE void LL_I2C_SetSMBusTimeoutB (I2C_TypeDef * I2Cx, uint32_t TimeoutB)

Function description

Configure the SMBus Extended Cumulative Clock TimeoutB (Master or Slave mode).

Parameters

- **I2Cx:** I2C Instance.
- **TimeoutB:** This parameter must be a value between Min_Data=0 and Max_Data=0xFFF.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- These bits can only be programmed when TimeoutB is disabled.

Reference Manual to LL API cross reference:

- TIMEOUTR TIMEOUTB LL_I2C_SetSMBusTimeoutB

LL_I2C_GetSMBusTimeoutB

Function name

__STATIC_INLINE uint32_t LL_I2C_GetSMBusTimeoutB (const I2C_TypeDef * I2Cx)

Function description

Get the SMBus Extended Cumulative Clock TimeoutB setting.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0 and Max_Data=0xFFF

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- TIMEOUTR TIMEOUTB LL_I2C_GetSMBusTimeoutB

LL_I2C_EnableSMBusTimeout

Function name

__STATIC_INLINE void LL_I2C_EnableSMBusTimeout (I2C_TypeDef * I2Cx, uint32_t ClockTimeout)

Function description

Enable the SMBus Clock Timeout.

Parameters

- **I2Cx:** I2C Instance.
- **ClockTimeout:** This parameter can be one of the following values:
  – LL_I2C_SMBUS_TIMEOUTA
  – LL_I2C_SMBUS_TIMEOUTB
  – LL_I2C_SMBUS_ALL_TIMEOUT

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- TIMEOUTR TIMOUTEN LL_I2C_EnableSMBusTimeout
- TIMEOUTR TEXTEN LL_I2C_EnableSMBusTimeout

LL_I2C_DisableSMBusTimeout

Function name

__STATIC_INLINE void LL_I2C_DisableSMBusTimeout (I2C_TypeDef * I2Cx, uint32_t ClockTimeout)

Function description

Disable the SMBus Clock Timeout.

Parameters

- **I2Cx:** I2C Instance.
- **ClockTimeout:** This parameter can be one of the following values:
  – LL_I2C_SMBUS_TIMEOUTA
  – LL_I2C_SMBUS_TIMEOUTB
  – LL_I2C_SMBUS_ALL_TIMEOUT

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- TIMEOUTR TIMOUTEN LL_I2C_DisableSMBusTimeout
- TIMEOUTR TEXTEN LL_I2C_DisableSMBusTimeout

LL_I2C_IsEnabledSMBusTimeout

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledSMBusTimeout (const I2C_TypeDef * I2Cx, uint32_t ClockTimeout)

Function description

Check if the SMBus Clock Timeout is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.
- **ClockTimeout:** This parameter can be one of the following values:
  – LL_I2C_SMBUS_TIMEOUTA
  – LL_I2C_SMBUS_TIMEOUTB
  – LL_I2C_SMBUS_ALL_TIMEOUT

Return values

- **State:** of bit (1 or 0).

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- TIMEOUTR TIMOUTEN LL_I2C_IsEnabledSMBusTimeout
- TIMEOUTR TEXTEN LL_I2C_IsEnabledSMBusTimeout

LL_I2C_EnableIT_TX

Function name

__STATIC_INLINE void LL_I2C_EnableIT_TX (I2C_TypeDef * I2Cx)

Function description

Enable TXIS interrupt.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TXIE LL_I2C_EnableIT_TX

LL_I2C_DisableIT_TX

Function name

__STATIC_INLINE void LL_I2C_DisableIT_TX (I2C_TypeDef * I2Cx)

Function description

Disable TXIS interrupt.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TXIE LL_I2C_DisableIT_TX

LL_I2C_IsEnabledIT_TX

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledIT_TX (const I2C_TypeDef * I2Cx)

Function description

Check if the TXIS Interrupt is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 TXIE LL_I2C_IsEnabledIT_TX

LL_I2C_EnableIT_RX

Function name

__STATIC_INLINE void LL_I2C_EnableIT_RX (I2C_TypeDef * I2Cx)

Function description

Enable RXNE interrupt.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RXIE LL_I2C_EnableIT_RX

LL_I2C_DisableIT_RX

Function name

__STATIC_INLINE void LL_I2C_DisableIT_RX (I2C_TypeDef * I2Cx)

Function description

Disable RXNE interrupt.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RXIE LL_I2C_DisableIT_RX

LL_I2C_IsEnabledIT_RX

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledIT_RX (const I2C_TypeDef * I2Cx)

Function description

Check if the RXNE Interrupt is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 RXIE LL_I2C_IsEnabledIT_RX

LL_I2C_EnableIT_ADDR

Function name

__STATIC_INLINE void LL_I2C_EnableIT_ADDR (I2C_TypeDef * I2Cx)

Function description

Enable Address match interrupt (slave mode only).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 ADDRIE LL_I2C_EnableIT_ADDR

LL_I2C_DisableIT_ADDR

Function name

__STATIC_INLINE void LL_I2C_DisableIT_ADDR (I2C_TypeDef * I2Cx)

Function description

Disable Address match interrupt (slave mode only).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 ADDRIE LL_I2C_DisableIT_ADDR

LL_I2C_IsEnabledIT_ADDR

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledIT_ADDR (const I2C_TypeDef * I2Cx)

Function description

Check if Address match interrupt is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 ADDRIE LL_I2C_IsEnabledIT_ADDR

LL_I2C_EnableIT_NACK

Function name

__STATIC_INLINE void LL_I2C_EnableIT_NACK (I2C_TypeDef * I2Cx)

Function description

Enable Not acknowledge received interrupt.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 NACKIE LL_I2C_EnableIT_NACK

LL_I2C_DisableIT_NACK

Function name

__STATIC_INLINE void LL_I2C_DisableIT_NACK (I2C_TypeDef * I2Cx)

Function description

Disable Not acknowledge received interrupt.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 NACKIE LL_I2C_DisableIT_NACK

LL_I2C_IsEnabledIT_NACK

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledIT_NACK (const I2C_TypeDef * I2Cx)

Function description

Check if Not acknowledge received interrupt is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 NACKIE LL_I2C_IsEnabledIT_NACK

LL_I2C_EnableIT_STOP

Function name

__STATIC_INLINE void LL_I2C_EnableIT_STOP (I2C_TypeDef * I2Cx)

Function description

Enable STOP detection interrupt.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 STOPIE LL_I2C_EnableIT_STOP

LL_I2C_DisableIT_STOP

Function name

__STATIC_INLINE void LL_I2C_DisableIT_STOP (I2C_TypeDef * I2Cx)

Function description

Disable STOP detection interrupt.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 STOPIE LL_I2C_DisableIT_STOP

LL_I2C_IsEnabledIT_STOP

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledIT_STOP (const I2C_TypeDef * I2Cx)

Function description

Check if STOP detection interrupt is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 STOPIE LL_I2C_IsEnabledIT_STOP

LL_I2C_EnableIT_TC

Function name

__STATIC_INLINE void LL_I2C_EnableIT_TC (I2C_TypeDef * I2Cx)

Function description

Enable Transfer Complete interrupt.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- Any of these events will generate interrupt : Transfer Complete (TC) Transfer Complete Reload (TCR)

Reference Manual to LL API cross reference:

- CR1 TCIE LL_I2C_EnableIT_TC

LL_I2C_DisableIT_TC

Function name

__STATIC_INLINE void LL_I2C_DisableIT_TC (I2C_TypeDef * I2Cx)

Function description

Disable Transfer Complete interrupt.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- Any of these events will generate interrupt : Transfer Complete (TC) Transfer Complete Reload (TCR)

Reference Manual to LL API cross reference:

- CR1 TCIE LL_I2C_DisableIT_TC

LL_I2C_IsEnabledIT_TC

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledIT_TC (const I2C_TypeDef * I2Cx)

Function description

Check if Transfer Complete interrupt is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 TCIE LL_I2C_IsEnabledIT_TC

LL_I2C_EnableIT_ERR

Function name

__STATIC_INLINE void LL_I2C_EnableIT_ERR (I2C_TypeDef * I2Cx)

Function description

Enable Error interrupts.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- Any of these errors will generate interrupt : Arbitration Loss (ARLO) Bus Error detection (BERR) Overrun/Underrun (OVR) SMBus Timeout detection (TIMEOUT) SMBus PEC error detection (PECERR) SMBus Alert pin event detection (ALERT)

Reference Manual to LL API cross reference:

- CR1 ERRIE LL_I2C_EnableIT_ERR

LL_I2C_DisableIT_ERR

Function name

__STATIC_INLINE void LL_I2C_DisableIT_ERR (I2C_TypeDef * I2Cx)

Function description

Disable Error interrupts.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- Any of these errors will generate interrupt : Arbitration Loss (ARLO) Bus Error detection (BERR) Overrun/Underrun (OVR) SMBus Timeout detection (TIMEOUT) SMBus PEC error detection (PECERR) SMBus Alert pin event detection (ALERT)

Reference Manual to LL API cross reference:

- CR1 ERRIE LL_I2C_DisableIT_ERR

LL_I2C_IsEnabledIT_ERR

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledIT_ERR (const I2C_TypeDef * I2Cx)

Function description

Check if Error interrupts are enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 ERRIE LL_I2C_IsEnabledIT_ERR

LL_I2C_IsActiveFlag_TXE

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_TXE (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of Transmit data register empty flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: When next data is written in Transmit data register. SET: When Transmit data register is empty.

Reference Manual to LL API cross reference:

- ISR TXE LL_I2C_IsActiveFlag_TXE

LL_I2C_IsActiveFlag_TXIS

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_TXIS (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of Transmit interrupt flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: When next data is written in Transmit data register. SET: When Transmit data register is empty.

Reference Manual to LL API cross reference:

- ISR TXIS LL_I2C_IsActiveFlag_TXIS

LL_I2C_IsActiveFlag_RXNE

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_RXNE (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of Receive data register not empty flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: When Receive data register is read. SET: When the received data is copied in Receive data register.

Reference Manual to LL API cross reference:

- ISR RXNE LL_I2C_IsActiveFlag_RXNE

LL_I2C_IsActiveFlag_ADDR

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_ADDR (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of Address matched flag (slave mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: Clear default value. SET: When the received slave address matched with one of the enabled slave address.

Reference Manual to LL API cross reference:

- ISR ADDR LL_I2C_IsActiveFlag_ADDR

LL_I2C_IsActiveFlag_NACK

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_NACK (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of Not Acknowledge received flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: Clear default value. SET: When a NACK is received after a byte transmission.

Reference Manual to LL API cross reference:

- ISR NACKF LL_I2C_IsActiveFlag_NACK

LL_I2C_IsActiveFlag_STOP

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_STOP (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of Stop detection flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: Clear default value. SET: When a Stop condition is detected.

Reference Manual to LL API cross reference:

- ISR STOPF LL_I2C_IsActiveFlag_STOP

LL_I2C_IsActiveFlag_TC

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_TC (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of Transfer complete flag (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: Clear default value. SET: When RELOAD=0, AUTOEND=0 and NBYTES date have been transferred.

Reference Manual to LL API cross reference:

- ISR TC LL_I2C_IsActiveFlag_TC

LL_I2C_IsActiveFlag_TCR

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_TCR (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of Transfer complete flag (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: Clear default value. SET: When RELOAD=1 and NBYTES date have been transferred.

Reference Manual to LL API cross reference:

- ISR TCR LL_I2C_IsActiveFlag_TCR

LL_I2C_IsActiveFlag_BERR

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_BERR (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of Bus error flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: Clear default value. SET: When a misplaced Start or Stop condition is detected.

Reference Manual to LL API cross reference:

- ISR BERR LL_I2C_IsActiveFlag_BERR

LL_I2C_IsActiveFlag_ARLO

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_ARLO (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of Arbitration lost flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: Clear default value. SET: When arbitration lost.

Reference Manual to LL API cross reference:

- ISR ARLO LL_I2C_IsActiveFlag_ARLO

LL_I2C_IsActiveFlag_OVR

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_OVR (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of Overrun/Underrun flag (slave mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: Clear default value. SET: When an overrun/underrun error occurs (Clock Stretching Disabled).

Reference Manual to LL API cross reference:

- ISR OVR LL_I2C_IsActiveFlag_OVR

LL_I2C_IsActiveSMBusFlag_PECERR

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveSMBusFlag_PECERR (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of SMBus PEC error flag in reception.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- RESET: Clear default value. SET: When the received PEC does not match with the PEC register content.

Reference Manual to LL API cross reference:

- ISR PECERR LL_I2C_IsActiveSMBusFlag_PECERR

LL_I2C_IsActiveSMBusFlag_TIMEOUT

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveSMBusFlag_TIMEOUT (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of SMBus Timeout detection flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- RESET: Clear default value. SET: When a timeout or extended clock timeout occurs.

Reference Manual to LL API cross reference:

- ISR TIMEOUT LL_I2C_IsActiveSMBusFlag_TIMEOUT

LL_I2C_IsActiveSMBusFlag_ALERT

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveSMBusFlag_ALERT (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of SMBus alert flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- RESET: Clear default value. SET: When SMBus host configuration, SMBus alert enabled and a falling edge event occurs on SMBA pin.

Reference Manual to LL API cross reference:

- ISR ALERT LL_I2C_IsActiveSMBusFlag_ALERT

LL_I2C_IsActiveFlag_BUSY

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_BUSY (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of Bus Busy flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: Clear default value. SET: When a Start condition is detected.

Reference Manual to LL API cross reference:

- ISR BUSY LL_I2C_IsActiveFlag_BUSY

LL_I2C_ClearFlag_ADDR

Function name

__STATIC_INLINE void LL_I2C_ClearFlag_ADDR (I2C_TypeDef * I2Cx)

Function description

Clear Address Matched flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR ADDRCF LL_I2C_ClearFlag_ADDR

LL_I2C_ClearFlag_NACK

Function name

__STATIC_INLINE void LL_I2C_ClearFlag_NACK (I2C_TypeDef * I2Cx)

Function description

Clear Not Acknowledge flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR NACKCF LL_I2C_ClearFlag_NACK

LL_I2C_ClearFlag_STOP

Function name

__STATIC_INLINE void LL_I2C_ClearFlag_STOP (I2C_TypeDef * I2Cx)

Function description

Clear Stop detection flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR STOPCF LL_I2C_ClearFlag_STOP

LL_I2C_ClearFlag_TXE

Function name

__STATIC_INLINE void LL_I2C_ClearFlag_TXE (I2C_TypeDef * I2Cx)

Function description

Clear Transmit data register empty flag (TXE).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- This bit can be clear by software in order to flush the transmit data register (TXDR).

Reference Manual to LL API cross reference:

- ISR TXE LL_I2C_ClearFlag_TXE

LL_I2C_ClearFlag_BERR

Function name

__STATIC_INLINE void LL_I2C_ClearFlag_BERR (I2C_TypeDef * I2Cx)

Function description

Clear Bus error flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR BERRCF LL_I2C_ClearFlag_BERR

LL_I2C_ClearFlag_ARLO

Function name

__STATIC_INLINE void LL_I2C_ClearFlag_ARLO (I2C_TypeDef * I2Cx)

Function description

Clear Arbitration lost flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR ARLOCF LL_I2C_ClearFlag_ARLO

LL_I2C_ClearFlag_OVR

Function name

__STATIC_INLINE void LL_I2C_ClearFlag_OVR (I2C_TypeDef * I2Cx)

Function description

Clear Overrun/Underrun flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR OVRCF LL_I2C_ClearFlag_OVR

LL_I2C_ClearSMBusFlag_PECERR

Function name

__STATIC_INLINE void LL_I2C_ClearSMBusFlag_PECERR (I2C_TypeDef * I2Cx)

Function description

Clear SMBus PEC error flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- ICR PECCF LL_I2C_ClearSMBusFlag_PECERR

LL_I2C_ClearSMBusFlag_TIMEOUT

Function name

__STATIC_INLINE void LL_I2C_ClearSMBusFlag_TIMEOUT (I2C_TypeDef * I2Cx)

Function description

Clear SMBus Timeout detection flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- ICR TIMOUTCF LL_I2C_ClearSMBusFlag_TIMEOUT

LL_I2C_ClearSMBusFlag_ALERT

Function name

__STATIC_INLINE void LL_I2C_ClearSMBusFlag_ALERT (I2C_TypeDef * I2Cx)

Function description

Clear SMBus Alert flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- ICR ALERTCF LL_I2C_ClearSMBusFlag_ALERT

LL_I2C_EnableAutoEndMode

Function name

__STATIC_INLINE void LL_I2C_EnableAutoEndMode (I2C_TypeDef * I2Cx)

Function description

Enable automatic STOP condition generation (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- Automatic end mode : a STOP condition is automatically sent when NBYTES data are transferred. This bit has no effect in slave mode or when RELOAD bit is set.

Reference Manual to LL API cross reference:

- CR2 AUTOEND LL_I2C_EnableAutoEndMode

LL_I2C_DisableAutoEndMode

Function name

__STATIC_INLINE void LL_I2C_DisableAutoEndMode (I2C_TypeDef * I2Cx)

Function description

Disable automatic STOP condition generation (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- Software end mode : TC flag is set when NBYTES data are transferre, stretching SCL low.

Reference Manual to LL API cross reference:

- CR2 AUTOEND LL_I2C_DisableAutoEndMode

LL_I2C_IsEnabledAutoEndMode

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledAutoEndMode (const I2C_TypeDef * I2Cx)

Function description

Check if automatic STOP condition is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR2 AUTOEND LL_I2C_IsEnabledAutoEndMode

LL_I2C_EnableReloadMode

Function name

__STATIC_INLINE void LL_I2C_EnableReloadMode (I2C_TypeDef * I2Cx)

Function description

Enable reload mode (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The transfer is not completed after the NBYTES data transfer, NBYTES will be reloaded when TCR flag is set.

Reference Manual to LL API cross reference:

- CR2 RELOAD LL_I2C_EnableReloadMode

LL_I2C_DisableReloadMode

Function name

__STATIC_INLINE void LL_I2C_DisableReloadMode (I2C_TypeDef * I2Cx)

Function description

Disable reload mode (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The transfer is completed after the NBYTES data transfer(STOP or RESTART will follow).

Reference Manual to LL API cross reference:

- CR2 RELOAD LL_I2C_DisableReloadMode

LL_I2C_IsEnabledReloadMode

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledReloadMode (const I2C_TypeDef * I2Cx)

Function description

Check if reload mode is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR2 RELOAD LL_I2C_IsEnabledReloadMode

LL_I2C_SetTransferSize

Function name

__STATIC_INLINE void LL_I2C_SetTransferSize (I2C_TypeDef * I2Cx, uint32_t TransferSize)

Function description

Configure the number of bytes for transfer.

Parameters

- **I2Cx:** I2C Instance.
- **TransferSize:** This parameter must be a value between Min_Data=0x00 and Max_Data=0xFF.

Return values

- **None:**

Notes

- Changing these bits when START bit is set is not allowed.

Reference Manual to LL API cross reference:

- CR2 NBYTES LL_I2C_SetTransferSize

LL_I2C_GetTransferSize

Function name

__STATIC_INLINE uint32_t LL_I2C_GetTransferSize (const I2C_TypeDef * I2Cx)

Function description

Get the number of bytes configured for transfer.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0x0 and Max_Data=0xFF

Reference Manual to LL API cross reference:

- CR2 NBYTES LL_I2C_GetTransferSize

LL_I2C_AcknowledgeNextData

Function name

__STATIC_INLINE void LL_I2C_AcknowledgeNextData (I2C_TypeDef * I2Cx, uint32_t TypeAcknowledge)

Function description

Prepare the generation of a ACKnowledge or Non ACKnowledge condition after the address receive match code or next received byte.

Parameters

- **I2Cx:** I2C Instance.
- **TypeAcknowledge:** This parameter can be one of the following values:
  – LL_I2C_ACK
  – LL_I2C_NACK

Return values

- **None:**

Notes

- Usage in Slave mode only.

Reference Manual to LL API cross reference:

- CR2 NACK LL_I2C_AcknowledgeNextData

LL_I2C_GenerateStartCondition

Function name

__STATIC_INLINE void LL_I2C_GenerateStartCondition (I2C_TypeDef * I2Cx)

Function description

Generate a START or RESTART condition.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The START bit can be set even if bus is BUSY or I2C is in slave mode. This action has no effect when RELOAD is set.

Reference Manual to LL API cross reference:

- CR2 START LL_I2C_GenerateStartCondition

LL_I2C_GenerateStopCondition

Function name

__STATIC_INLINE void LL_I2C_GenerateStopCondition (I2C_TypeDef * I2Cx)

Function description

Generate a STOP condition after the current byte transfer (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 STOP LL_I2C_GenerateStopCondition

LL_I2C_EnableAuto10BitRead

Function name

__STATIC_INLINE void LL_I2C_EnableAuto10BitRead (I2C_TypeDef * I2Cx)

Function description

Enable automatic RESTART Read request condition for 10bit address header (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The master sends the complete 10bit slave address read sequence : Start + 2 bytes 10bit address in Write direction + Restart + first 7 bits of 10bit address in Read direction.

Reference Manual to LL API cross reference:

- CR2 HEAD10R LL_I2C_EnableAuto10BitRead

LL_I2C_DisableAuto10BitRead

Function name

__STATIC_INLINE void LL_I2C_DisableAuto10BitRead (I2C_TypeDef * I2Cx)

Function description

Disable automatic RESTART Read request condition for 10bit address header (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The master only sends the first 7 bits of 10bit address in Read direction.

Reference Manual to LL API cross reference:

- CR2 HEAD10R LL_I2C_DisableAuto10BitRead

LL_I2C_IsEnabledAuto10BitRead

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledAuto10BitRead (const I2C_TypeDef * I2Cx)

Function description

Check if automatic RESTART Read request condition for 10bit address header is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR2 HEAD10R LL_I2C_IsEnabledAuto10BitRead

LL_I2C_SetTransferRequest

Function name

__STATIC_INLINE void LL_I2C_SetTransferRequest (I2C_TypeDef * I2Cx, uint32_t TransferRequest)

Function description

Configure the transfer direction (master mode).

Parameters

- **I2Cx:** I2C Instance.
- **TransferRequest:** This parameter can be one of the following values:
  – LL_I2C_REQUEST_WRITE
  – LL_I2C_REQUEST_READ

Return values

- **None:**

Notes

- Changing these bits when START bit is set is not allowed.

Reference Manual to LL API cross reference:

- CR2 RD_WRN LL_I2C_SetTransferRequest

LL_I2C_GetTransferRequest

Function name

__STATIC_INLINE uint32_t LL_I2C_GetTransferRequest (const I2C_TypeDef * I2Cx)

Function description

Get the transfer direction requested (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Returned:** value can be one of the following values:
  – LL_I2C_REQUEST_WRITE
  – LL_I2C_REQUEST_READ

Reference Manual to LL API cross reference:

- CR2 RD_WRN LL_I2C_GetTransferRequest

LL_I2C_SetSlaveAddr

Function name

__STATIC_INLINE void LL_I2C_SetSlaveAddr (I2C_TypeDef * I2Cx, uint32_t SlaveAddr)

Function description

Configure the slave address for transfer (master mode).

Parameters

- **I2Cx:** I2C Instance.
- **SlaveAddr:** This parameter must be a value between Min_Data=0x00 and Max_Data=0x3F.

Return values

- **None:**

Notes

- Changing these bits when START bit is set is not allowed.

Reference Manual to LL API cross reference:

- CR2 SADD LL_I2C_SetSlaveAddr

LL_I2C_GetSlaveAddr

Function name

__STATIC_INLINE uint32_t LL_I2C_GetSlaveAddr (const I2C_TypeDef * I2Cx)

Function description

Get the slave address programmed for transfer.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0x0 and Max_Data=0x3F

Reference Manual to LL API cross reference:

- CR2 SADD LL_I2C_GetSlaveAddr

LL_I2C_HandleTransfer

Function name

__STATIC_INLINE void LL_I2C_HandleTransfer (I2C_TypeDef * I2Cx, uint32_t SlaveAddr, uint32_t SlaveAddrSize, uint32_t TransferSize, uint32_t EndMode, uint32_t Request)

Function description

Handles I2Cx communication when starting transfer or during transfer (TC or TCR flag are set).

Parameters

- **I2Cx:** I2C Instance.
- **SlaveAddr:** Specifies the slave address to be programmed.
- **SlaveAddrSize:** This parameter can be one of the following values:
  – LL_I2C_ADDRSLAVE_7BIT
  – LL_I2C_ADDRSLAVE_10BIT
- **TransferSize:** Specifies the number of bytes to be programmed. This parameter must be a value between Min_Data=0 and Max_Data=255.
- **EndMode:** This parameter can be one of the following values:
  – LL_I2C_MODE_RELOAD
  – LL_I2C_MODE_AUTOEND
  – LL_I2C_MODE_SOFTEND
  – LL_I2C_MODE_SMBUS_RELOAD
  – LL_I2C_MODE_SMBUS_AUTOEND_NO_PEC
  – LL_I2C_MODE_SMBUS_SOFTEND_NO_PEC
  – LL_I2C_MODE_SMBUS_AUTOEND_WITH_PEC
  – LL_I2C_MODE_SMBUS_SOFTEND_WITH_PEC
- **Request:** This parameter can be one of the following values:
  – LL_I2C_GENERATE_NOSTARTSTOP
  – LL_I2C_GENERATE_STOP
  – LL_I2C_GENERATE_START_READ
  – LL_I2C_GENERATE_START_WRITE
  – LL_I2C_GENERATE_RESTART_7BIT_READ
  – LL_I2C_GENERATE_RESTART_7BIT_WRITE
  – LL_I2C_GENERATE_RESTART_10BIT_READ
  – LL_I2C_GENERATE_RESTART_10BIT_WRITE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 SADD LL_I2C_HandleTransfer
- CR2 ADD10 LL_I2C_HandleTransfer
- CR2 RD_WRN LL_I2C_HandleTransfer
- CR2 START LL_I2C_HandleTransfer
- CR2 STOP LL_I2C_HandleTransfer
- CR2 RELOAD LL_I2C_HandleTransfer
- CR2 NBYTES LL_I2C_HandleTransfer
- CR2 AUTOEND LL_I2C_HandleTransfer
- CR2 HEAD10R LL_I2C_HandleTransfer

LL_I2C_GetTransferDirection

Function name

__STATIC_INLINE uint32_t LL_I2C_GetTransferDirection (const I2C_TypeDef * I2Cx)

Function description

Indicate the value of transfer direction (slave mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Returned:** value can be one of the following values:
  – LL_I2C_DIRECTION_WRITE
  – LL_I2C_DIRECTION_READ

Notes

- RESET: Write transfer, Slave enters in receiver mode. SET: Read transfer, Slave enters in transmitter mode.

Reference Manual to LL API cross reference:

- ISR DIR LL_I2C_GetTransferDirection

LL_I2C_GetAddressMatchCode

Function name

__STATIC_INLINE uint32_t LL_I2C_GetAddressMatchCode (const I2C_TypeDef * I2Cx)

Function description

Return the slave matched address.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x3F

Reference Manual to LL API cross reference:

- ISR ADDCODE LL_I2C_GetAddressMatchCode

LL_I2C_EnableSMBusPECCompare

Function name

__STATIC_INLINE void LL_I2C_EnableSMBusPECCompare (I2C_TypeDef * I2Cx)

Function description

Enable internal comparison of the SMBus Packet Error byte (transmission or reception mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- This feature is cleared by hardware when the PEC byte is transferred, or when a STOP condition or an Address Matched is received. This bit has no effect when RELOAD bit is set. This bit has no effect in device mode when SBC bit is not set.

Reference Manual to LL API cross reference:

- CR2 PECBYTE LL_I2C_EnableSMBusPECCompare

LL_I2C_IsEnabledSMBusPECCompare

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledSMBusPECCompare (const I2C_TypeDef * I2Cx)

Function description

Check if the SMBus Packet Error byte internal comparison is requested or not.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- CR2 PECBYTE LL_I2C_IsEnabledSMBusPECCompare

LL_I2C_GetSMBusPEC

Function name

__STATIC_INLINE uint32_t LL_I2C_GetSMBusPEC (const I2C_TypeDef * I2Cx)

Function description

Get the SMBus Packet Error byte calculated.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0xFF

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- PECR PEC LL_I2C_GetSMBusPEC

LL_I2C_ReceiveData8

Function name

__STATIC_INLINE uint8_t LL_I2C_ReceiveData8 (const I2C_TypeDef * I2Cx)

Function description

Read Receive Data register.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0xFF

Reference Manual to LL API cross reference:

- RXDR RXDATA LL_I2C_ReceiveData8

LL_I2C_TransmitData8

Function name

__STATIC_INLINE void LL_I2C_TransmitData8 (I2C_TypeDef * I2Cx, uint8_t Data)

Function description

Write in Transmit Data Register .

Parameters

- **I2Cx:** I2C Instance.
- **Data:** Value between Min_Data=0x00 and Max_Data=0xFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TXDR TXDATA LL_I2C_TransmitData8

LL_I2C_Enable_SelectedTrigger

Function name

__STATIC_INLINE void LL_I2C_Enable_SelectedTrigger (I2C_TypeDef * I2Cx)

Function description

Enable Selected Trigger.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGEN LL_I2C_Enable_SelectedTrigger

LL_I2C_Disable_SelectedTrigger

Function name

__STATIC_INLINE void LL_I2C_Disable_SelectedTrigger (I2C_TypeDef * I2Cx)

Function description

Disable Selected Trigger.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGEN LL_I2C_Disable_SelectedTrigger

LL_I2C_IsEnabled_SelectedTrigger

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabled_SelectedTrigger (const I2C_TypeDef * I2Cx)

Function description

Indicate if selected Trigger is disabled or enabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- AUTOCR TRIGEN LL_I2C_IsEnabled_SelectedTrigger

LL_I2C_SetTriggerPolarity

Function name

__STATIC_INLINE void LL_I2C_SetTriggerPolarity (I2C_TypeDef * I2Cx, uint32_t Polarity)

Function description

Set the trigger polarity.

Parameters

- **I2Cx:** I2C Instance.
- **Polarity:** This parameter can be one of the following values:
  - LL_I2C_TRIG_POLARITY_RISING
  - LL_I2C_TRIG_POLARITY_FALLING

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGPOL LL_I2C_SetTriggerPolarity

LL_I2C_GetTriggerPolarity

Function name

__STATIC_INLINE uint32_t LL_I2C_GetTriggerPolarity (const I2C_TypeDef * I2Cx)

Function description

Get the trigger polarity.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I2C_TRIG_POLARITY_RISING
  - LL_I2C_TRIG_POLARITY_FALLING

Reference Manual to LL API cross reference:

- AUTOCR TRIGPOL LL_I2C_GetTriggerPolarity

LL_I2C_SetSelectedTrigger

Function name

__STATIC_INLINE void LL_I2C_SetSelectedTrigger (I2C_TypeDef * I2Cx, uint32_t Trigger)

Function description

Set the selected trigger.

Parameters

- **I2Cx:** I2C Instance.
- **Trigger:** This parameter can be one of the following values:
  - LL_I2C_GRP1_GPDMA_CH0_TCF_TRG
  - LL_I2C_GRP1_GPDMA_CH1_TCF_TRG
  - LL_I2C_GRP1_GPDMA_CH2_TCF_TRG
  - LL_I2C_GRP1_GPDMA_CH3_TCF_TRG
  - LL_I2C_GRP1_EXTI5_TRG
  - LL_I2C_GRP1_EXTI9_TRG
  - LL_I2C_GRP1_LPTIM1_CH1_TRG
  - LL_I2C_GRP1_LPTIM2_CH1_TRG
  - LL_I2C_GRP1_COMP1_TRG
  - LL_I2C_GRP1_COMP2_TRG
  - LL_I2C_GRP1_RTC_ALRA_TRG
  - LL_I2C_GRP1_RTC_WUT_TRG
  - LL_I2C_GRP2_LPDMA_CH0_TCF_TRG
  - LL_I2C_GRP2_LPDMA_CH1_TCF_TRG
  - LL_I2C_GRP2_LPDMA_CH2_TCF_TRG
  - LL_I2C_GRP2_LPDMA_CH3_TCF_TRG
  - LL_I2C_GRP2_EXTI5_TRG
  - LL_I2C_GRP2_EXTI8_TRG
  - LL_I2C_GRP2_LPTIM1_CH1_TRG
  - LL_I2C_GRP2_LPTIM3_CH1_TRG
  - LL_I2C_GRP2_COMP1_TRG
  - LL_I2C_GRP2_COMP2_TRG
  - LL_I2C_GRP2_RTC_ALRA_TRG
  - LL_I2C_GRP2_RTC_WUT_TRG

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGSEL LL_I2C_SetSelectedTrigger

LL_I2C_GetSelectedTrigger

Function name

__STATIC_INLINE uint32_t LL_I2C_GetSelectedTrigger (const I2C_TypeDef * I2Cx)

Function description

Get the selected trigger.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I2C_GRP1_GPDMA_CH0_TCF_TRG
  - LL_I2C_GRP1_GPDMA_CH1_TCF_TRG
  - LL_I2C_GRP1_GPDMA_CH2_TCF_TRG
  - LL_I2C_GRP1_GPDMA_CH3_TCF_TRG
  - LL_I2C_GRP1_EXTI5_TRG
  - LL_I2C_GRP1_EXTI9_TRG
  - LL_I2C_GRP1_LPTIM1_CH1_TRG
  - LL_I2C_GRP1_LPTIM2_CH1_TRG
  - LL_I2C_GRP1_COMP1_TRG
  - LL_I2C_GRP1_COMP2_TRG
  - LL_I2C_GRP1_RTC_ALRA_TRG
  - LL_I2C_GRP1_RTC_WUT_TRG

  - LL_I2C_GRP2_LPDMA_CH1_TCF_TRG
  - LL_I2C_GRP2_LPDMA_CH2_TCF_TRG
  - LL_I2C_GRP2_LPDMA_CH3_TCF_TRG
  - LL_I2C_GRP2_EXTI5_TRG
  - LL_I2C_GRP2_EXTI8_TRG
  - LL_I2C_GRP2_LPTIM1_CH1_TRG
  - LL_I2C_GRP2_LPTIM3_CH1_TRG
  - LL_I2C_GRP2_COMP1_TRG
  - LL_I2C_GRP2_COMP2_TRG
  - LL_I2C_GRP2_RTC_ALRA_TRG
  - LL_I2C_GRP2_RTC_WUT_TRG

Reference Manual to LL API cross reference:

- AUTOCR TRIGSEL LL_I2C_GetSelectedTrigger

LL_I2C_Init

Function name

ErrorStatus LL_I2C_Init (I2C_TypeDef * I2Cx, const LL_I2C_InitTypeDef * I2C_InitStruct)

Function description

Initialize the I2C registers according to the specified parameters in I2C_InitStruct.

Parameters

- **I2Cx:** I2C Instance.
- **I2C_InitStruct:** pointer to a LL_I2C_InitTypeDef structure.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: I2C registers are initialized
  - ERROR: Not applicable

LL_I2C_DeInit

Function name

ErrorStatus LL_I2C_DeInit (const I2C_TypeDef * I2Cx)

Function description

De-initialize the I2C registers to their default reset values.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **An:** ErrorStatus enumeration value:
  – SUCCESS: I2C registers are de-initialized
  – ERROR: I2C registers are not de-initialized

LL_I2C_StructInit

Function name

void LL_I2C_StructInit (LL_I2C_InitTypeDef * I2C_InitStruct)

Function description

Set each LL_I2C_InitTypeDef field to default value.

Parameters

- **I2C_InitStruct:** Pointer to a LL_I2C_InitTypeDef structure.

Return values

- **None:**

105.3 I2C Firmware driver defines

The following section lists the various define and macros of the module.

105.3.1 I2C

I2C

Master Addressing Mode

LL_I2C_ADDRESSING_MODE_7BIT

Master operates in 7-bit addressing mode.

LL_I2C_ADDRESSING_MODE_10BIT

Master operates in 10-bit addressing mode.

Slave Address Length

LL_I2C_ADDRSLAVE_7BIT

Slave Address in 7-bit.

LL_I2C_ADDRSLAVE_10BIT

Slave Address in 10-bit.

Analog Filter Selection

LL_I2C_ANALOGFILTER_ENABLE

Analog filter is enabled.

LL_I2C_ANALOGFILTER_DISABLE

Analog filter is disabled.

Autonomous Trigger Polarity

LL_I2C_TRIG_POLARITY_RISING

I2C triggered on rising edge

LL_I2C_TRIG_POLARITY_FALLING

I2C triggered on falling edge

Autonomous Trigger selection

LL_I2C_TRIG_GRP1

Trigger Group for I2C1, I2C2, I2C4, I2C5, I2C6 (depends on Product)

LL_I2C_TRIG_GRP2

Trigger Group for I2C3

LL_I2C_GRP1_GPDMA_CH0_TCF_TRG

HW Trigger signal is GPDMA_CH0_TRG

LL_I2C_GRP1_GPDMA_CH1_TCF_TRG

HW Trigger signal is GPDMA_CH1_TRG

LL_I2C_GRP1_GPDMA_CH2_TCF_TRG

HW Trigger signal is GPDMA_CH2_TRG

LL_I2C_GRP1_GPDMA_CH3_TCF_TRG

HW Trigger signal is GPDMA_CH3_TRG

LL_I2C_GRP1_EXTI5_TRG

HW Trigger signal is EXTI5_TRG

LL_I2C_GRP1_EXTI9_TRG

HW Trigger signal is EXTI9_TRG

LL_I2C_GRP1_LPTIM1_CH1_TRG

HW Trigger signal is LPTIM1_CH1_TRG

LL_I2C_GRP1_LPTIM2_CH1_TRG

HW Trigger signal is LPTIM2_CH1_TRG

LL_I2C_GRP1_COMP1_TRG

HW Trigger signal is COMP1_TRG

LL_I2C_GRP1_COMP2_TRG

HW Trigger signal is COMP2_TRG

LL_I2C_GRP1_RTC_ALRA_TRG

HW Trigger signal is RTC_ALRA_TRG

LL_I2C_GRP1_RTC_WUT_TRG

HW Trigger signal is RTC_WUT_TRG

LL_I2C_GRP2_LPDMA_CH0_TCF_TRG

HW Trigger signal is LPDMA_CH0_TRG

LL_I2C_GRP2_LPDMA_CH1_TCF_TRG

HW Trigger signal is LPDMA_CH1_TRG

LL_I2C_GRP2_LPDMA_CH2_TCF_TRG

HW Trigger signal is LPDMA_CH2_TRG

LL_I2C_GRP2_LPDMA_CH3_TCF_TRG

HW Trigger signal is LPDMA_CH3_TRG

LL_I2C_GRP2_EXTI5_TRG

HW Trigger signal is EXTI5_TRG

LL_I2C_GRP2_EXTI8_TRG

HW Trigger signal is EXTI8_TRG

LL_I2C_GRP2_LPTIM1_CH1_TRG

HW Trigger signal is LPTIM1_CH1_TRG

LL_I2C_GRP2_LPTIM3_CH1_TRG

HW Trigger signal is LPTIM3_CH1_TRG

LL_I2C_GRP2_COMP1_TRG

HW Trigger signal is COMP1_TRG

LL_I2C_GRP2_COMP2_TRG

HW Trigger signal is COMP2_TRG

LL_I2C_GRP2_RTC_ALRA_TRG

HW Trigger signal is RTC_ALRA_TRG

LL_I2C_GRP2_RTC_WUT_TRG

HW Trigger signal is RTC_WUT_TRG

Clear Flags Defines

LL_I2C_ICR_ADDRCF

Address Matched flag

LL_I2C_ICR_NACKCF

Not Acknowledge flag

LL_I2C_ICR_STOPCF

Stop detection flag

LL_I2C_ICR_BERRCF

Bus error flag

LL_I2C_ICR_ARLOCF

Arbitration Lost flag

LL_I2C_ICR_OVRCF

Overrun/Underrun flag

LL_I2C_ICR_PECCF

PEC error flag

LL_I2C_ICR_TIMOUTCF

Timeout detection flag

LL_I2C_ICR_ALERTCF

Alert flag

Read Write Direction

LL_I2C_DIRECTION_WRITE

Write transfer request by master, slave enters receiver mode.

LL_I2C_DIRECTION_READ

Read transfer request by master, slave enters transmitter mode.

DMA Register Data

LL_I2C_DMA_REG_DATA_TRANSMIT

Get address of data register used for transmission

LL_I2C_DMA_REG_DATA_RECEIVE

Get address of data register used for reception

Start And Stop Generation

LL_I2C_GENERATE_NOSTARTSTOP

Don't Generate Stop and Start condition.

LL_I2C_GENERATE_STOP

Generate Stop condition (Size should be set to 0).

LL_I2C_GENERATE_START_READ

Generate Start for read request.

LL_I2C_GENERATE_START_WRITE

Generate Start for write request.

LL_I2C_GENERATE_RESTART_7BIT_READ

Generate Restart for read request, slave 7Bit address.

LL_I2C_GENERATE_RESTART_7BIT_WRITE

Generate Restart for write request, slave 7Bit address.

LL_I2C_GENERATE_RESTART_10BIT_READ

Generate Restart for read request, slave 10Bit address.

LL_I2C_GENERATE_RESTART_10BIT_WRITE

Generate Restart for write request, slave 10Bit address.

Get Flags Defines

LL_I2C_ISR_TXE

Transmit data register empty

LL_I2C_ISR_TXIS

Transmit interrupt status

LL_I2C_ISR_RXNE

Receive data register not empty

LL_I2C_ISR_ADDR

Address matched (slave mode)

LL_I2C_ISR_NACKF

Not Acknowledge received flag

LL_I2C_ISR_STOPF

Stop detection flag

LL_I2C_ISR_TC

Transfer Complete (master mode)

LL_I2C_ISR_TCR

Transfer Complete Reload

LL_I2C_ISR_BERR

Bus error

LL_I2C_ISR_ARLO

Arbitration lost

LL_I2C_ISR_OVR

Overrun/Underrun (slave mode)

LL_I2C_ISR_PECERR

PEC Error in reception (SMBus mode)

LL_I2C_ISR_TIMEOUT

Timeout detection flag (SMBus mode)

LL_I2C_ISR_ALERT

SMBus alert (SMBus mode)

LL_I2C_ISR_BUSY

Bus busy

Acknowledge Generation

LL_I2C_ACK

ACK is sent after current received byte.

LL_I2C_NACK

NACK is sent after current received byte.

IT Defines

LL_I2C_CR1_TXIE

TX Interrupt enable

LL_I2C_CR1_RXIE

RX Interrupt enable

LL_I2C_CR1_ADDRIE

Address match Interrupt enable (slave only)

LL_I2C_CR1_NACKIE

Not acknowledge received Interrupt enable

LL_I2C_CR1_STOPIE

STOP detection Interrupt enable

LL_I2C_CR1_TCIE

Transfer Complete interrupt enable

LL_I2C_CR1_ERRIE

Error interrupts enable

Transfer End Mode

LL_I2C_MODE_RELOAD

Enable I2C Reload mode.

LL_I2C_MODE_AUTOEND

Enable I2C Automatic end mode with no HW PEC comparison.

LL_I2C_MODE_SOFTEND

Enable I2C Software end mode with no HW PEC comparison.

LL_I2C_MODE_SMBUS_RELOAD

Enable SMBUS Automatic end mode with HW PEC comparison.

LL_I2C_MODE_SMBUS_AUTOEND_NO_PEC

Enable SMBUS Automatic end mode with HW PEC comparison.

LL_I2C_MODE_SMBUS_SOFTEND_NO_PEC

Enable SMBUS Software end mode with HW PEC comparison.

LL_I2C_MODE_SMBUS_AUTOEND_WITH_PEC

Enable SMBUS Automatic end mode with HW PEC comparison.

LL_I2C_MODE_SMBUS_SOFTEND_WITH_PEC

Enable SMBUS Software end mode with HW PEC comparison.

Own Address 1 Length

LL_I2C_OWNADDRESS1_7BIT

Own address 1 is a 7-bit address.

LL_I2C_OWNADDRESS1_10BIT

Own address 1 is a 10-bit address.

Own Address 2 Masks

LL_I2C_OWNADDRESS2_NOMASK

Own Address2 No mask.

LL_I2C_OWNADDRESS2_MASK01

Only Address2 bits[7:2] are compared.

LL_I2C_OWNADDRESS2_MASK02

Only Address2 bits[7:3] are compared.

LL_I2C_OWNADDRESS2_MASK03

Only Address2 bits[7:4] are compared.

LL_I2C_OWNADDRESS2_MASK04

Only Address2 bits[7:5] are compared.

LL_I2C_OWNADDRESS2_MASK05

Only Address2 bits[7:6] are compared.

LL_I2C_OWNADDRESS2_MASK06

Only Address2 bits[7] are compared.

LL_I2C_OWNADDRESS2_MASK07

No comparison is done. All Address2 are acknowledged.

Peripheral Mode

LL_I2C_MODE_I2C

I2C Master or Slave mode

LL_I2C_MODE_SMBUS_HOST

SMBus Host address acknowledge

LL_I2C_MODE_SMBUS_DEVICE

SMBus Device default mode (Default address not acknowledge)

LL_I2C_MODE_SMBUS_DEVICE_ARP

SMBus Device Default address acknowledge

Transfer Request Direction

LL_I2C_REQUEST_WRITE

Master request a write transfer.

LL_I2C_REQUEST_READ

Master request a read transfer.

SMBus TimeoutA Mode SCL SDA Timeout

LL_I2C_SMBUS_TIMEOUTA_MODE_SCL_LOW

TimeoutA is used to detect SCL low level timeout.

LL_I2C_SMBUS_TIMEOUTA_MODE_SDA_SCL_HIGH

TimeoutA is used to detect both SCL and SDA high level timeout.

SMBus Timeout Selection

LL_I2C_SMBUS_TIMEOUTA

TimeoutA enable bit

LL_I2C_SMBUS_TIMEOUTB

TimeoutB (extended clock) enable bit

LL_I2C_SMBUS_ALL_TIMEOUT

TimeoutA and TimeoutB (extended clock) enable bits

Convert SDA SCL timings

__LL_I2C_CONVERT_TIMINGS

Description:

- Configure the SDA setup, hold time and the SCL high, low period.

Parameters:

- __PRESCALER__: This parameter must be a value between Min_Data=0 and Max_Data=0xF.
- __SETUP_TIME__: This parameter must be a value between Min_Data=0 and Max_Data=0xF. (tscldel = (SCLDEL+1)xtpresc)
- __HOLD_TIME__: This parameter must be a value between Min_Data=0 and Max_Data=0xF. (tsdadel = SDADELxtpresc)
- __SCLH_PERIOD__: This parameter must be a value between Min_Data=0 and Max_Data=0xFF. (tsclh = (SCLH+1)xtpresc)
- __SCLL_PERIOD__: This parameter must be a value between Min_Data=0 and Max_Data=0xFF. (tscll = (SCLL+1)xtpresc)

Return value:

- Value: between Min_Data=0 and Max_Data=0xFFFFFFFF

Common Write and read registers Macros

LL_I2C_WriteReg

Description:

- Write a value in I2C register.

Parameters:

- __INSTANCE__: I2C Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_I2C_ReadReg

Description:

- Read a value in I2C register.

Parameters:

- __INSTANCE__: I2C Instance
- __REG__: Register to be read

Return value:

- Register: value

106 LL ICACHE Generic Driver

106.1 ICACHE Firmware driver registers structures

106.1.1 LL_ICACHE_RegionTypeDef

LL_ICACHE_RegionTypeDef is defined in the stm32u5xx_ll_icache.h

Data Fields

- ***uint32_t BaseAddress***
- ***uint32_t RemapAddress***
- ***uint32_t Size***
- ***uint32_t TrafficRoute***
- ***uint32_t OutputBurstType***

Field Documentation

- ***uint32_t LL_ICACHE_RegionTypeDef::BaseAddress***
  Configures the C-AHB base address to be remapped
- ***uint32_t LL_ICACHE_RegionTypeDef::RemapAddress***
  Configures the remap address to be remapped
- ***uint32_t LL_ICACHE_RegionTypeDef::Size***
  Configures the region size. This parameter can be a value of ***ICACHE_LL_EC_Region_Size***
- ***uint32_t LL_ICACHE_RegionTypeDef::TrafficRoute***
  Selects the traffic route. This parameter can be a value of ***ICACHE_LL_EC_Traffic_Route***
- ***uint32_t LL_ICACHE_RegionTypeDef::OutputBurstType***
  Selects the output burst type. This parameter can be a value of ***ICACHE_LL_EC_Output_Burst_Type***

106.2 ICACHE Firmware driver API description

The following section lists the various functions of the ICACHE library.

106.2.1 Detailed description of functions

LL_ICACHE_Enable

Function name

__STATIC_INLINE void LL_ICACHE_Enable (void)

Function description

Enable the ICACHE.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR EN LL_ICACHE_Enable

LL_ICACHE_Disable

Function name

__STATIC_INLINE void LL_ICACHE_Disable (void)

Function description

Disable the ICACHE.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR EN LL_ICACHE_Disable

LL_ICACHE_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_ICACHE_IsEnabled (void)

Function description

Return if ICACHE is enabled or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR EN LL_ICACHE_IsEnabled

LL_ICACHE_SetMode

Function name

__STATIC_INLINE void LL_ICACHE_SetMode (uint32_t Mode)

Function description

Select the ICACHE operating mode.

Parameters

- **Mode:** This parameter can be one of the following values:
  - LL_ICACHE_1WAY
  - LL_ICACHE_2WAYS

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR WAYSEL LL_ICACHE_SetMode

LL_ICACHE_GetMode

Function name

__STATIC_INLINE uint32_t LL_ICACHE_GetMode (void)

Function description

Get the selected ICACHE operating mode.

Return values

- **Returned:** value can be one of the following values:
  - LL_ICACHE_1WAY
  - LL_ICACHE_2WAYS

Reference Manual to LL API cross reference:

- CR WAYSEL LL_ICACHE_GetMode

LL_ICACHE_Invalidate

Function name

__STATIC_INLINE void LL_ICACHE_Invalidate (void)

Function description

Invalidate the ICACHE.

Return values

- **None:**

Notes

- Until the BSYEND flag is set, the cache is bypassed.

Reference Manual to LL API cross reference:

- CR CACHEINV LL_ICACHE_Invalidate

LL_ICACHE_EnableMonitors

Function name

__STATIC_INLINE void LL_ICACHE_EnableMonitors (uint32_t Monitors)

Function description

Enable the hit/miss monitor(s).

Parameters

- **Monitors:** This parameter can be one or a combination of the following values:
  - LL_ICACHE_MONITOR_HIT
  - LL_ICACHE_MONITOR_MISS
  - LL_ICACHE_MONITOR_ALL

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HITMEN LL_ICACHE_EnableMonitors
- CR MISSMEN LL_ICACHE_EnableMonitors

LL_ICACHE_DisableMonitors

Function name

__STATIC_INLINE void LL_ICACHE_DisableMonitors (uint32_t Monitors)

Function description

Disable the hit/miss monitor(s).

Parameters

- **Monitors:** This parameter can be one or a combination of the following values:
  - LL_ICACHE_MONITOR_HIT
  - LL_ICACHE_MONITOR_MISS
  - LL_ICACHE_MONITOR_ALL

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HITMEN LL_ICACHE_DisableMonitors
- CR MISSMEN LL_ICACHE_DisableMonitors

LL_ICACHE_IsEnabledMonitors

Function name

__STATIC_INLINE uint32_t LL_ICACHE_IsEnabledMonitors (uint32_t Monitors)

Function description

Check if the monitor(s) is(are) enabled or disabled.

Parameters

- **Monitors:** This parameter can be one or a combination of the following values:
  - LL_ICACHE_MONITOR_HIT
  - LL_ICACHE_MONITOR_MISS
  - LL_ICACHE_MONITOR_ALL

Return values

- **State:** of parameter value (1 or 0).

Reference Manual to LL API cross reference:

- CR HITMEN LL_ICACHE_IsEnabledMonitors
- CR MISSMEN LL_ICACHE_IsEnabledMonitors

LL_ICACHE_ResetMonitors

Function name

__STATIC_INLINE void LL_ICACHE_ResetMonitors (uint32_t Monitors)

Function description

Reset the hit/miss monitor(s).

Parameters

- **Monitors:** This parameter can be one or a combination of the following values:
  - LL_ICACHE_MONITOR_HIT
  - LL_ICACHE_MONITOR_MISS
  - LL_ICACHE_MONITOR_ALL

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HITMRST LL_ICACHE_ResetMonitors
- CR MISSMRST LL_ICACHE_ResetMonitors

LL_ICACHE_GetHitMonitor

Function name

__STATIC_INLINE uint32_t LL_ICACHE_GetHitMonitor (void)

Function description

Get the Hit monitor.

Return values

- **Value:** between Min_Data=0 and Max_Data=0xFFFFFFFF

Notes

- Upon reaching the 32-bit maximum value, hit monitor does not wrap.

Reference Manual to LL API cross reference:

- HMONR HITMON LL_ICACHE_GetHitMonitor

LL_ICACHE_GetMissMonitor

Function name

__STATIC_INLINE uint32_t LL_ICACHE_GetMissMonitor (void)

Function description

Get the Miss monitor.

Return values

- **Value:** between Min_Data=0 and Max_Data=0xFFFF

Notes

- Upon reaching the 16-bit maximum value, miss monitor does not wrap.

Reference Manual to LL API cross reference:

- MMONR MISSMON LL_ICACHE_GetMissMonitor

LL_ICACHE_EnableIT_BSYEND

Function name

__STATIC_INLINE void LL_ICACHE_EnableIT_BSYEND (void)

Function description

Enable BSYEND interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER BSYENDIE LL_ICACHE_EnableIT_BSYEND

LL_ICACHE_DisableIT_BSYEND

Function name

__STATIC_INLINE void LL_ICACHE_DisableIT_BSYEND (void)

Function description

Disable BSYEND interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER BSYENDIE LL_ICACHE_DisableIT_BSYEND

LL_ICACHE_IsEnabledIT_BSYEND

Function name

__STATIC_INLINE uint32_t LL_ICACHE_IsEnabledIT_BSYEND (void)

Function description

Check if the BSYEND Interrupt is enabled or disabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER BSYENDIE LL_ICACHE_IsEnabledIT_BSYEND

LL_ICACHE_EnableIT_ERR

Function name

__STATIC_INLINE void LL_ICACHE_EnableIT_ERR (void)

Function description

Enable ERR interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER ERRIE LL_ICACHE_EnableIT_ERR

LL_ICACHE_DisableIT_ERR

Function name

__STATIC_INLINE void LL_ICACHE_DisableIT_ERR (void)

Function description

Disable ERR interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER ERRIE LL_ICACHE_DisableIT_ERR

LL_ICACHE_IsEnabledIT_ERR

Function name

__STATIC_INLINE uint32_t LL_ICACHE_IsEnabledIT_ERR (void)

Function description

Check if the ERR Interrupt is enabled or disabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER ERRIE LL_ICACHE_IsEnabledIT_ERR

LL_ICACHE_IsActiveFlag_BUSY

Function name

__STATIC_INLINE uint32_t LL_ICACHE_IsActiveFlag_BUSY (void)

Function description

Indicate the status of an ongoing operation flag.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR BUSYF LL_ICACHE_IsActiveFlag_BUSY

LL_ICACHE_IsActiveFlag_BSYEND

Function name

__STATIC_INLINE uint32_t LL_ICACHE_IsActiveFlag_BSYEND (void)

Function description

Indicate the status of an operation end flag.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR BSYEND LL_ICACHE_IsActiveFlag_BSYEND

LL_ICACHE_IsActiveFlag_ERR

Function name

__STATIC_INLINE uint32_t LL_ICACHE_IsActiveFlag_ERR (void)

Function description

Indicate the status of an error flag.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR ERRF LL_ICACHE_IsActiveFlag_ERR

LL_ICACHE_ClearFlag_BSYEND

Function name

__STATIC_INLINE void LL_ICACHE_ClearFlag_BSYEND (void)

Function description

Clear busy end of operation flag.

Return values

- **None:**

Reference Manual to LL API cross reference:

- FCR CBSYENDF LL_ICACHE_ClearFlag_BSYEND

LL_ICACHE_ClearFlag_ERR

Function name

__STATIC_INLINE void LL_ICACHE_ClearFlag_ERR (void)

Function description

Clear error flag.

Return values

- **None:**

Reference Manual to LL API cross reference:

- FCR ERRF LL_ICACHE_ClearFlag_ERR

LL_ICACHE_EnableRegion

Function name

__STATIC_INLINE void LL_ICACHE_EnableRegion (uint32_t Region)

Function description

Enable the remapped memory region.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_ICACHE_REGION_0
  - LL_ICACHE_REGION_1
  - LL_ICACHE_REGION_2
  - LL_ICACHE_REGION_3

Return values

- **None:**

Notes

- The region must have been already configured.

Reference Manual to LL API cross reference:

- CRRx REN LL_ICACHE_EnableRegion

LL_ICACHE_DisableRegion

Function name

__STATIC_INLINE void LL_ICACHE_DisableRegion (uint32_t Region)

Function description

Disable the remapped memory region.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_ICACHE_REGION_0
  - LL_ICACHE_REGION_1
  - LL_ICACHE_REGION_2
  - LL_ICACHE_REGION_3

Return values

- **None:**

Reference Manual to LL API cross reference:

- CRRx REN LL_ICACHE_DisableRegion

LL_ICACHE_IsEnabledRegion

Function name

__STATIC_INLINE uint32_t LL_ICACHE_IsEnabledRegion (uint32_t Region)

Function description

Return if remapped memory region is enabled or not.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_ICACHE_REGION_0
  - LL_ICACHE_REGION_1
  - LL_ICACHE_REGION_2
  - LL_ICACHE_REGION_3

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CRRx REN LL_ICACHE_IsEnabledRegion

LL_ICACHE_SetRegionBaseAddress

Function name

__STATIC_INLINE void LL_ICACHE_SetRegionBaseAddress (uint32_t Region, uint32_t Address)

Function description

Select the memory remapped region base address.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_ICACHE_REGION_0
  - LL_ICACHE_REGION_1
  - LL_ICACHE_REGION_2
  - LL_ICACHE_REGION_3
- **Address:** Alias address in the Code region

Return values

- **None:**

Notes

- The useful bits depends on RSIZE as described in the Reference Manual.

Reference Manual to LL API cross reference:

- CRRx BASEADDR LL_ICACHE_SetRegionBaseAddress

LL_ICACHE_GetRegionBaseAddress

Function name

__STATIC_INLINE uint32_t LL_ICACHE_GetRegionBaseAddress (uint32_t Region)

Function description

Get the memory remapped region base address.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_ICACHE_REGION_0
  - LL_ICACHE_REGION_1
  - LL_ICACHE_REGION_2
  - LL_ICACHE_REGION_3

Return values

- **Address:** Alias address in the Code region

Notes

- The base address is the alias in the Code region.
- The useful bits depends on RSIZE as described in the Reference Manual.

Reference Manual to LL API cross reference:

- CRRx BASEADDR LL_ICACHE_GetRegionBaseAddress

LL_ICACHE_SetRegionRemapAddress

Function name

__STATIC_INLINE void LL_ICACHE_SetRegionRemapAddress (uint32_t Region, uint32_t Address)

Function description

Select the memory remapped region address.

Parameters

- **Region:** This parameter can be one of the following values:
  – LL_ICACHE_REGION_0
  – LL_ICACHE_REGION_1
  – LL_ICACHE_REGION_2
  – LL_ICACHE_REGION_3
- **Address:** Memory address to remap

Return values

- **None:**

Notes

- The useful bits depends on RSIZE as described in the Reference Manual.

Reference Manual to LL API cross reference:

- CRRx REMAPADDR LL_ICACHE_SetRegionRemapAddress

LL_ICACHE_GetRegionRemapAddress

Function name

__STATIC_INLINE uint32_t LL_ICACHE_GetRegionRemapAddress (uint32_t Region)

Function description

Get the memory remapped region address.

Parameters

- **Region:** This parameter can be one of the following values:
  – LL_ICACHE_REGION_0
  – LL_ICACHE_REGION_1
  – LL_ICACHE_REGION_2
  – LL_ICACHE_REGION_3

Return values

- **Address:** Remapped memory address

Notes

- The useful bits depends on RSIZE as described in the Reference Manual.

Reference Manual to LL API cross reference:

- CRRx REMAPADDR LL_ICACHE_GetRegionRemapAddress

LL_ICACHE_SetRegionSize

Function name

__STATIC_INLINE void LL_ICACHE_SetRegionSize (uint32_t Region, uint32_t Size)

Function description

Select the memory remapped region size.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_ICACHE_REGION_0
  - LL_ICACHE_REGION_1
  - LL_ICACHE_REGION_2
  - LL_ICACHE_REGION_3
- **Size:** This parameter can be one of the following values:
  - LL_ICACHE_REGIONSIZE_2MB
  - LL_ICACHE_REGIONSIZE_4MB
  - LL_ICACHE_REGIONSIZE_8MB
  - LL_ICACHE_REGIONSIZE_16MB
  - LL_ICACHE_REGIONSIZE_32MB
  - LL_ICACHE_REGIONSIZE_64MB
  - LL_ICACHE_REGIONSIZE_128MB

Return values

- **None:**

Reference Manual to LL API cross reference:

- CRRx RSIZE LL_ICACHE_SetRegionSize

LL_ICACHE_GetRegionSize

Function name

__STATIC_INLINE uint32_t LL_ICACHE_GetRegionSize (uint32_t Region)

Function description

Get the selected the memory remapped region size.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_ICACHE_REGION_0
  - LL_ICACHE_REGION_1
  - LL_ICACHE_REGION_2
  - LL_ICACHE_REGION_3

Return values

- **Returned:** value can be one of the following values:
  - LL_ICACHE_REGIONSIZE_2MB
  - LL_ICACHE_REGIONSIZE_4MB
  - LL_ICACHE_REGIONSIZE_8MB
  - LL_ICACHE_REGIONSIZE_16MB
  - LL_ICACHE_REGIONSIZE_32MB
  - LL_ICACHE_REGIONSIZE_64MB
  - LL_ICACHE_REGIONSIZE_128MB

Reference Manual to LL API cross reference:

- CRRx RSIZE LL_ICACHE_GetRegionSize

LL_ICACHE_SetRegionOutputBurstType

Function name

__STATIC_INLINE void LL_ICACHE_SetRegionOutputBurstType (uint32_t Region, uint32_t Type)

Function description

Select the memory remapped region output burst type.

Parameters

- **Region:** This parameter can be one of the following values:
  – LL_ICACHE_REGION_0
  – LL_ICACHE_REGION_1
  – LL_ICACHE_REGION_2
  – LL_ICACHE_REGION_3
- **Type:** This parameter can be one of the following values:
  – LL_ICACHE_OUTPUT_BURST_WRAP
  – LL_ICACHE_OUTPUT_BURST_INCR

Return values

- **None:**

Reference Manual to LL API cross reference:

- CRRx HBURST LL_ICACHE_SetRegionOutputBurstType

LL_ICACHE_GetRegionOutputBurstType

Function name

__STATIC_INLINE uint32_t LL_ICACHE_GetRegionOutputBurstType (uint32_t Region)

Function description

Get the selected the memory remapped region output burst type.

Parameters

- **Region:** This parameter can be one of the following values:
  – LL_ICACHE_REGION_0
  – LL_ICACHE_REGION_1
  – LL_ICACHE_REGION_2
  – LL_ICACHE_REGION_3

Return values

- **Returned:** value can be one of the following values:
  – LL_ICACHE_OUTPUT_BURST_WRAP
  – LL_ICACHE_OUTPUT_BURST_INCR

Reference Manual to LL API cross reference:

- CRRx HBURST LL_ICACHE_GetRegionOutputBurstType

LL_ICACHE_SetRegionMasterPort

Function name

__STATIC_INLINE void LL_ICACHE_SetRegionMasterPort (uint32_t Region, uint32_t Port)

Function description

Select the memory remapped region cache master port.

Parameters

- **Region:** This parameter can be one of the following values:
  – LL_ICACHE_REGION_0
  – LL_ICACHE_REGION_1
  – LL_ICACHE_REGION_2
  – LL_ICACHE_REGION_3
- **Port:** This parameter can be one of the following values:
  – LL_ICACHE_MASTER1_PORT
  – LL_ICACHE_MASTER2_PORT

Return values

- **None:**

Reference Manual to LL API cross reference:

- CRRx MSTSEL LL_ICACHE_SetRegionMasterPort

LL_ICACHE_GetRegionMasterPort

Function name

__STATIC_INLINE uint32_t LL_ICACHE_GetRegionMasterPort (uint32_t Region)

Function description

Get the selected the memory remapped region cache master port.

Parameters

- **Region:** This parameter can be one of the following values:
  – LL_ICACHE_REGION_0
  – LL_ICACHE_REGION_1
  – LL_ICACHE_REGION_2
  – LL_ICACHE_REGION_3

Return values

- **Returned:** value can be one of the following values:
  – LL_ICACHE_MASTER1_PORT
  – LL_ICACHE_MASTER2_PORT

Reference Manual to LL API cross reference:

- CRRx MSTSEL LL_ICACHE_GetRegionMasterPort

LL_ICACHE_ConfigRegion

Function name

void LL_ICACHE_ConfigRegion (uint32_t Region, const LL_ICACHE_RegionTypeDef *const pICACHE_RegionStruct)

Function description

Configure and enable the memory remapped region.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_ICACHE_REGION_0
  - LL_ICACHE_REGION_1
  - LL_ICACHE_REGION_2
  - LL_ICACHE_REGION_3
- **pICACHE_RegionStruct:** pointer to a LL_ICACHE_RegionTypeDef structure.

Return values

- **None:**

Notes

- The Instruction Cache and corresponding region must be disabled.

106.3 ICACHE Firmware driver defines

The following section lists the various define and macros of the module.

106.3.1 ICACHE

ICACHE

Clear Flags Defines

LL_ICACHE_FCR_CBSYENDF

Busy end flag

LL_ICACHE_FCR_CERRF

Cache error flag

Get Flags Defines

LL_ICACHE_SR_BUSYF

Busy flag

LL_ICACHE_SR_BSYENDF

Busy end flag

LL_ICACHE_SR_ERRF

Cache error flag

IT Defines

LL_ICACHE_IER_BSYENDIE

Busy end interrupt

LL_ICACHE_IER_ERRIE

Cache error interrupt

Monitor type

LL_ICACHE_MONITOR_HIT

Hit monitor counter

LL_ICACHE_MONITOR_MISS

Miss monitor counter

LL_ICACHE_MONITOR_ALL

All monitors counters

Remapped Output burst type

LL_ICACHE_OUTPUT_BURST_WRAP

WRAP

LL_ICACHE_OUTPUT_BURST_INCR

INCR

Remapped Region number

LL_ICACHE_REGION_0

Region 0

LL_ICACHE_REGION_1

Region 1

LL_ICACHE_REGION_2

Region 2

LL_ICACHE_REGION_3

Region 3

Remapped Region size

LL_ICACHE_REGIONSIZE_2MB

Region size 2MB

LL_ICACHE_REGIONSIZE_4MB

Region size 4MB

LL_ICACHE_REGIONSIZE_8MB

Region size 8MB

LL_ICACHE_REGIONSIZE_16MB

Region size 16MB

LL_ICACHE_REGIONSIZE_32MB

Region size 32MB

LL_ICACHE_REGIONSIZE_64MB

Region size 64MB

LL_ICACHE_REGIONSIZE_128MB

Region size 128MB

Remapped Traffic route

LL_ICACHE_MASTER1_PORT

Master1 port

LL_ICACHE_MASTER2_PORT

Master2 port

Ways selection

LL_ICACHE_1WAY

1-way cache (direct mapped cache)

LL_ICACHE_2WAYS

2-ways set associative cache (default)

Common write and read registers Macros

LL_ICACHE_WriteReg

Description:

- Write a value in ICACHE register.

Parameters:

- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_ICACHE_ReadReg

Description:

- Read a value in ICACHE register.

Parameters:

- __REG__: Register to be read

Return value:

- Register: value

107 LL IWDG Generic Driver

107.1 IWDG Firmware driver API description

The following section lists the various functions of the IWDG library.

107.1.1 Detailed description of functions

LL_IWDG_Enable

Function name

__STATIC_INLINE void LL_IWDG_Enable (IWDG_TypeDef * IWDGx)

Function description

Start the Independent Watchdog.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **None:**

Notes

- Except if the hardware watchdog option is selected

Reference Manual to LL API cross reference:

- KR KEY LL_IWDG_Enable

LL_IWDG_ReloadCounter

Function name

__STATIC_INLINE void LL_IWDG_ReloadCounter (IWDG_TypeDef * IWDGx)

Function description

Reloads IWDG counter with value defined in the reload register.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- KR KEY LL_IWDG_ReloadCounter

LL_IWDG_EnableWriteAccess

Function name

__STATIC_INLINE void LL_IWDG_EnableWriteAccess (IWDG_TypeDef * IWDGx)

Function description

Enable write access to IWDG_PR, IWDG_RLR and IWDG_WINR registers.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- KR KEY LL_IWDG_EnableWriteAccess

LL_IWDG_DisableWriteAccess

Function name

__STATIC_INLINE void LL_IWDG_DisableWriteAccess (IWDG_TypeDef * IWDGx)

Function description

Disable write access to IWDG_PR, IWDG_RLR and IWDG_WINR registers.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- KR KEY LL_IWDG_DisableWriteAccess

LL_IWDG_SetPrescaler

Function name

__STATIC_INLINE void LL_IWDG_SetPrescaler (IWDG_TypeDef * IWDGx, uint32_t Prescaler)

Function description

Select the prescaler of the IWDG.

Parameters

- **IWDGx:** IWDG Instance
- **Prescaler:** This parameter can be one of the following values:
  – LL_IWDG_PRESCALER_4
  – LL_IWDG_PRESCALER_8
  – LL_IWDG_PRESCALER_16
  – LL_IWDG_PRESCALER_32
  – LL_IWDG_PRESCALER_64
  – LL_IWDG_PRESCALER_128
  – LL_IWDG_PRESCALER_256
  – LL_IWDG_PRESCALER_512
  – LL_IWDG_PRESCALER_1024

Return values

- **None:**

Reference Manual to LL API cross reference:

- PR PR LL_IWDG_SetPrescaler

LL_IWDG_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_IWDG_GetPrescaler (const IWDG_TypeDef * IWDGx)

Function description

Get the selected prescaler of the IWDG.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_IWDG_PRESCALER_4
  - LL_IWDG_PRESCALER_8
  - LL_IWDG_PRESCALER_16
  - LL_IWDG_PRESCALER_32
  - LL_IWDG_PRESCALER_64
  - LL_IWDG_PRESCALER_128
  - LL_IWDG_PRESCALER_256
  - LL_IWDG_PRESCALER_512
  - LL_IWDG_PRESCALER_1024

Reference Manual to LL API cross reference:

- PR PR LL_IWDG_GetPrescaler

LL_IWDG_SetReloadCounter

Function name

__STATIC_INLINE void LL_IWDG_SetReloadCounter (IWDG_TypeDef * IWDGx, uint32_t Counter)

Function description

Specify the IWDG down-counter reload value.

Parameters

- **IWDGx:** IWDG Instance
- **Counter:** Value between Min_Data=0 and Max_Data=0x0FFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- RLR RL LL_IWDG_SetReloadCounter

LL_IWDG_GetReloadCounter

Function name

__STATIC_INLINE uint32_t LL_IWDG_GetReloadCounter (const IWDG_TypeDef * IWDGx)

Function description

Get the specified IWDG down-counter reload value.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **Value:** between Min_Data=0 and Max_Data=0x0FFF

Reference Manual to LL API cross reference:

- RLR RL LL_IWDG_GetReloadCounter

LL_IWDG_SetWindow

Function name

__STATIC_INLINE void LL_IWDG_SetWindow (IWDG_TypeDef * IWDGx, uint32_t Window)

Function description

Specify high limit of the window value to be compared to the down-counter.

Parameters

- **IWDGx:** IWDG Instance
- **Window:** Value between Min_Data=0 and Max_Data=0x0FFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- WINR WIN LL_IWDG_SetWindow

LL_IWDG_GetWindow

Function name

__STATIC_INLINE uint32_t LL_IWDG_GetWindow (const IWDG_TypeDef * IWDGx)

Function description

Get the high limit of the window value specified.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **Value:** between Min_Data=0 and Max_Data=0x0FFF

Reference Manual to LL API cross reference:

- WINR WIN LL_IWDG_GetWindow

LL_IWDG_SetEwiTime

Function name

__STATIC_INLINE void LL_IWDG_SetEwiTime (IWDG_TypeDef * IWDGx, uint32_t Time)

Function description

Specify comparator value that will be used to trig Early Wakeup interrupt.

Parameters

- **IWDGx:** IWDG Instance
- **Time:** Value between Min_Data=0 and Max_Data=0x0FFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- EWCR EWIT LL_IWDG_SetEwiTime

LL_IWDG_GetEwiTime

Function name

__STATIC_INLINE uint32_t LL_IWDG_GetEwiTime (const IWDG_TypeDef * IWDGx)

Function description

Get the Early Wakeup interrupt comparator value.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **Value:** between Min_Data=0 and Max_Data=0x0FFF

Reference Manual to LL API cross reference:

- EWCR EWIT LL_IWDG_GetEwiTime

LL_IWDG_EnableIT_EWI

Function name

__STATIC_INLINE void LL_IWDG_EnableIT_EWI (IWDG_TypeDef * IWDGx)

Function description

Enable Early wakeup interrupt.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EWCR EWIE LL_IWDG_EnableIT_EWI

LL_IWDG_DisableIT_EWI

Function name

__STATIC_INLINE void LL_IWDG_DisableIT_EWI (IWDG_TypeDef * IWDGx)

Function description

Disable Early wakeup interrupt.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EWCR EWIE LL_IWDG_DisableIT_EWI

LL_IWDG_IsEnabledIT_EWI

Function name

__STATIC_INLINE uint32_t LL_IWDG_IsEnabledIT_EWI (const IWDG_TypeDef * IWDGx)

Function description

Indicates whether Early wakeup interrupt is enable.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EWCR EWIE LL_IWDG_IsEnabledIT_EWI

LL_IWDG_IsActiveFlag_PVU

Function name

__STATIC_INLINE uint32_t LL_IWDG_IsActiveFlag_PVU (const IWDG_TypeDef * IWDGx)

Function description

Check if flag Prescaler Value Update is set or not.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR PVU LL_IWDG_IsActiveFlag_PVU

LL_IWDG_IsActiveFlag_RVU

Function name

__STATIC_INLINE uint32_t LL_IWDG_IsActiveFlag_RVU (const IWDG_TypeDef * IWDGx)

Function description

Check if flag Reload Value Update is set or not.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR RVU LL_IWDG_IsActiveFlag_RVU

LL_IWDG_IsActiveFlag_WVU

Function name

__STATIC_INLINE uint32_t LL_IWDG_IsActiveFlag_WVU (const IWDG_TypeDef * IWDGx)

Function description

Check if flag Window Value Update is set or not.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR WVU LL_IWDG_IsActiveFlag_WVU

LL_IWDG_IsActiveFlag_EWU

Function name

__STATIC_INLINE uint32_t LL_IWDG_IsActiveFlag_EWU (const IWDG_TypeDef * IWDGx)

Function description

Check if flag EWI Value Update is set or not.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR EVU LL_IWDG_IsActiveFlag_EWU

LL_IWDG_IsReady

Function name

__STATIC_INLINE uint32_t LL_IWDG_IsReady (const IWDG_TypeDef * IWDGx)

Function description

Check if all flags Prescaler, Reload, Window & Early Interrupt Value Update are reset or not.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **State:** of bits (1 or 0).

Reference Manual to LL API cross reference:

- SR PVU LL_IWDG_IsReady
- SR RVU LL_IWDG_IsReady
- SR WVU LL_IWDG_IsReady
- SR EWU LL_IWDG_IsReady

LL_IWDG_IsActiveFlag_EWIF

Function name

__STATIC_INLINE uint32_t LL_IWDG_IsActiveFlag_EWIF (const IWDG_TypeDef * IWDGx)

Function description

Check if Early Wakeup interrupt flag is set or not.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR EWIF LL_IWDG_IsActiveFlag_EWIF

LL_IWDG_ClearFlag_EWIF

Function name

__STATIC_INLINE void LL_IWDG_ClearFlag_EWIF (IWDG_TypeDef * IWDGx)

Function description

Clear the Early Wakeup interrupt flag.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EWCR EWIC LL_IWDG_ClearFlag_EWIF

Common Write and read registers Macros

LL_IWDG_WriteReg

Description:

- Write a value in IWDG register.

Parameters:

- __INSTANCE__: IWDG Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_IWDG_ReadReg

Description:

- Read a value in IWDG register.

Parameters:

- __INSTANCE__: IWDG Instance
- __REG__: Register to be read

Return value:

- Register: value

108 LL LPGPIO Generic Driver

108.1 LPGPIO Firmware driver registers structures

108.1.1 LL_LPGPIO_InitTypeDef

LL_LPGPIO_InitTypeDef is defined in the stm32u5xx_ll_lpgpio.h

Data Fields

- ***uint32_t Pin***
- ***uint32_t Mode***

Field Documentation

- ***uint32_t LL_LPGPIO_InitTypeDef::Pin***
  Specifies the LPGPIO pins to be configured. This parameter can be any value of ***LPGPIO_LL_EC_PIN***
- ***uint32_t LL_LPGPIO_InitTypeDef::Mode***
  Specifies the operating mode for the selected pins. This parameter can be a value of ***LPGPIO_LL_EC_MODE***.

108.2 LPGPIO Firmware driver API description

The following section lists the various functions of the LPGPIO library.

108.2.1 Detailed description of functions

LL_LPGPIO_SetPinMode

Function name

__STATIC_INLINE void LL_LPGPIO_SetPinMode (GPIO_TypeDef * LPGPIOx, uint32_t Pin, uint32_t Mode)

Function description

Configure lpgpio mode for a dedicated pin on dedicated port.

Parameters

- **LPGPIOx:** LPGPIO Port
- **Pin:** This parameter can be one of the following values:
  - LL_LPGPIO_PIN_0
  - LL_LPGPIO_PIN_1
  - LL_LPGPIO_PIN_2
  - LL_LPGPIO_PIN_3
  - LL_LPGPIO_PIN_4
  - LL_LPGPIO_PIN_5
  - LL_LPGPIO_PIN_6
  - LL_LPGPIO_PIN_7
  - LL_LPGPIO_PIN_8
  - LL_LPGPIO_PIN_9
  - LL_LPGPIO_PIN_10
  - LL_LPGPIO_PIN_11
  - LL_LPGPIO_PIN_12
  - LL_LPGPIO_PIN_13
  - LL_LPGPIO_PIN_14
  - LL_LPGPIO_PIN_15
- **Mode:** This parameter can be one of the following values:
  - LL_LPGPIO_MODE_INPUT
  - LL_LPGPIO_MODE_OUTPUT

Return values

- **None:**

Notes

- I/O mode can be Input mode, General purpose output, Alternate function mode or Analog.
- Warning: only one pin can be passed as parameter.

Reference Manual to LL API cross reference:

- MODER MODEy LL_LPGPIO_SetPinMode

LL_LPGPIO_GetPinMode

Function name

__STATIC_INLINE uint32_t LL_LPGPIO_GetPinMode (const GPIO_TypeDef * LPGPIOx, uint32_t Pin)

Function description

Return lpgpio mode for a dedicated pin on dedicated port.

Parameters

- **LPGPIOx:** LPGPIO Port
- **Pin:** This parameter can be one of the following values:
  – LL_LPGPIO_PIN_0
  – LL_LPGPIO_PIN_1
  – LL_LPGPIO_PIN_2
  – LL_LPGPIO_PIN_3
  – LL_LPGPIO_PIN_4
  – LL_LPGPIO_PIN_5
  – LL_LPGPIO_PIN_6
  – LL_LPGPIO_PIN_7
  – LL_LPGPIO_PIN_8
  – LL_LPGPIO_PIN_9
  – LL_LPGPIO_PIN_10
  – LL_LPGPIO_PIN_11
  – LL_LPGPIO_PIN_12
  – LL_LPGPIO_PIN_13
  – LL_LPGPIO_PIN_14
  – LL_LPGPIO_PIN_15

Return values

- **Returned:** value can be one of the following values:
  – LL_LPGPIO_MODE_INPUT
  – LL_LPGPIO_MODE_OUTPUT

Notes

- I/O mode can be Input mode, General purpose output, Alternate function mode or Analog.
- Warning: only one pin can be passed as parameter.

Reference Manual to LL API cross reference:

- MODER MODEy LL_LPGPIO_GetPinMode

LL_LPGPIO_ReadInputPort

Function name

__STATIC_INLINE uint32_t LL_LPGPIO_ReadInputPort (const GPIO_TypeDef * LPGPIOx)

Function description

Return full input data register value for a dedicated port.

Parameters

- **LPGPIOx:** LPGPIO Port

Return values

- **Input:** data register value of port

Reference Manual to LL API cross reference:

- IDR IDy LL_LPGPIO_ReadInputPort

LL_LPGPIO_IsInputPinSet

Function name

__STATIC_INLINE uint32_t LL_LPGPIO_IsInputPinSet (const GPIO_TypeDef * LPGPIOx, uint32_t PinMask)

Function description

Return if input data level for several pins of dedicated port is high or low.

Parameters

- **LPGPIOx:** LPGPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  - LL_LPGPIO_PIN_0
  - LL_LPGPIO_PIN_1
  - LL_LPGPIO_PIN_2
  - LL_LPGPIO_PIN_3
  - LL_LPGPIO_PIN_4
  - LL_LPGPIO_PIN_5
  - LL_LPGPIO_PIN_6
  - LL_LPGPIO_PIN_7
  - LL_LPGPIO_PIN_8
  - LL_LPGPIO_PIN_9
  - LL_LPGPIO_PIN_10
  - LL_LPGPIO_PIN_11
  - LL_LPGPIO_PIN_12
  - LL_LPGPIO_PIN_13
  - LL_LPGPIO_PIN_14
  - LL_LPGPIO_PIN_15
  - LL_LPGPIO_PIN_ALL

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IDR IDy LL_LPGPIO_IsInputPinSet

LL_LPGPIO_WriteOutputPort

Function name

__STATIC_INLINE void LL_LPGPIO_WriteOutputPort (GPIO_TypeDef * LPGPIOx, uint32_t PortValue)

Function description

Write output data register for the port.

Parameters

- **LPGPIOx:** LPGPIO Port
- **PortValue:** Level value for each pin of the port Value between 0 and 0xFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- ODR ODy LL_LPGPIO_WriteOutputPort

LL_LPGPIO_ReadOutputPort

Function name

__STATIC_INLINE uint32_t LL_LPGPIO_ReadOutputPort (const GPIO_TypeDef * LPGPIOx)

Function description

Return full output data register value for a dedicated port.

Parameters

- **LPGPIOx:** LPGPIO Port

Return values

- **Output:** data register value of port

Reference Manual to LL API cross reference:

- ODR ODy LL_LPGPIO_ReadOutputPort

LL_LPGPIO_IsOutputPinSet

Function name

__STATIC_INLINE uint32_t LL_LPGPIO_IsOutputPinSet (const GPIO_TypeDef * LPGPIOx, uint32_t PinMask)

Function description

Return if input data level for several pins of dedicated port is high or low.

Parameters

- **LPGPIOx:** LPGPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  – LL_LPGPIO_PIN_0
  – LL_LPGPIO_PIN_1
  – LL_LPGPIO_PIN_2
  – LL_LPGPIO_PIN_3
  – LL_LPGPIO_PIN_4
  – LL_LPGPIO_PIN_5
  – LL_LPGPIO_PIN_6
  – LL_LPGPIO_PIN_7
  – LL_LPGPIO_PIN_8
  – LL_LPGPIO_PIN_9
  – LL_LPGPIO_PIN_10
  – LL_LPGPIO_PIN_11
  – LL_LPGPIO_PIN_12
  – LL_LPGPIO_PIN_13
  – LL_LPGPIO_PIN_14
  – LL_LPGPIO_PIN_15
  – LL_LPGPIO_PIN_ALL

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ODR ODy LL_LPGPIO_IsOutputPinSet

LL_LPGPIO_SetOutputPin

Function name

__STATIC_INLINE void LL_LPGPIO_SetOutputPin (GPIO_TypeDef * LPGPIOx, uint32_t PinMask)

Function description

Set several pins to high level on dedicated gpio port.

Parameters

- **LPGPIOx:** LPGPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  - LL_LPGPIO_PIN_0
  - LL_LPGPIO_PIN_1
  - LL_LPGPIO_PIN_2
  - LL_LPGPIO_PIN_3
  - LL_LPGPIO_PIN_4
  - LL_LPGPIO_PIN_5
  - LL_LPGPIO_PIN_6
  - LL_LPGPIO_PIN_7
  - LL_LPGPIO_PIN_8
  - LL_LPGPIO_PIN_9
  - LL_LPGPIO_PIN_10
  - LL_LPGPIO_PIN_11
  - LL_LPGPIO_PIN_12
  - LL_LPGPIO_PIN_13
  - LL_LPGPIO_PIN_14
  - LL_LPGPIO_PIN_15
  - LL_LPGPIO_PIN_ALL

Return values

- **None:**

Reference Manual to LL API cross reference:

- BSRR BSy LL_LPGPIO_SetOutputPin

LL_LPGPIO_ResetOutputPin

Function name

__STATIC_INLINE void LL_LPGPIO_ResetOutputPin (GPIO_TypeDef * LPGPIOx, uint32_t PinMask)

Function description

Set several pins to low level on dedicated gpio port.

Parameters

- **LPGPIOx:** LPGPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  – LL_LPGPIO_PIN_0
  – LL_LPGPIO_PIN_1
  – LL_LPGPIO_PIN_2
  – LL_LPGPIO_PIN_3
  – LL_LPGPIO_PIN_4
  – LL_LPGPIO_PIN_5
  – LL_LPGPIO_PIN_6
  – LL_LPGPIO_PIN_7
  – LL_LPGPIO_PIN_8
  – LL_LPGPIO_PIN_9
  – LL_LPGPIO_PIN_10
  – LL_LPGPIO_PIN_11
  – LL_LPGPIO_PIN_12
  – LL_LPGPIO_PIN_13
  – LL_LPGPIO_PIN_14
  – LL_LPGPIO_PIN_15
  – LL_LPGPIO_PIN_ALL

Return values

- **None:**

Reference Manual to LL API cross reference:

- BRR BRy LL_LPGPIO_ResetOutputPin

LL_LPGPIO_TogglePin

Function name

__STATIC_INLINE void LL_LPGPIO_TogglePin (GPIO_TypeDef * LPGPIOx, uint32_t PinMask)

Function description

Toggle data value for several pin of dedicated port.

Parameters

- **LPGPIOx:** LPGPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  - LL_LPGPIO_PIN_0
  - LL_LPGPIO_PIN_1
  - LL_LPGPIO_PIN_2
  - LL_LPGPIO_PIN_3
  - LL_LPGPIO_PIN_4
  - LL_LPGPIO_PIN_5
  - LL_LPGPIO_PIN_6
  - LL_LPGPIO_PIN_7
  - LL_LPGPIO_PIN_8
  - LL_LPGPIO_PIN_9
  - LL_LPGPIO_PIN_10
  - LL_LPGPIO_PIN_11
  - LL_LPGPIO_PIN_12
  - LL_LPGPIO_PIN_13
  - LL_LPGPIO_PIN_14
  - LL_LPGPIO_PIN_15
  - LL_LPGPIO_PIN_ALL

Return values

- **None:**

Reference Manual to LL API cross reference:

- ODR ODy LL_LPGPIO_TogglePin

LL_LPGPIO_DeInit

Function name

ErrorStatus LL_LPGPIO_DeInit (const GPIO_TypeDef * LPGPIOx)

Function description

De-initialize LPGPIO registers (Registers restored to their default values).

Parameters

- **LPGPIOx:** LPGPIO Port

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: LPGPIO registers are de-initialized
  - ERROR: Wrong LPGPIO Port

LL_LPGPIO_Init

Function name

ErrorStatus LL_LPGPIO_Init (GPIO_TypeDef * LPGPIOx, const LL_LPGPIO_InitTypeDef *const LPGPIO_InitStruct)

Function description

Initialize LPGPIO registers according to the specified parameters in LPGPIO_InitStruct.

Parameters

- **LPGPIOx:** LPGPIO Port
- **LPGPIO_InitStruct:** pointer to a LL_LPGPIO_InitTypeDef structure that contains the configuration information for the specified LPGPIO peripheral.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: LPGPIO registers are initialized according to LPGPIO_InitStruct content
  - ERROR: Not applicable

LL_LPGPIO_StructInit

Function name

void LL_LPGPIO_StructInit (LL_LPGPIO_InitTypeDef * LPGPIO_InitStruct)

Function description

Set each LL_LPGPIO_InitTypeDef field to default value.

Parameters

- **LPGPIO_InitStruct:** pointer to a LL_LPGPIO_InitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

LL_LPGPIO_WriteReg

Description:

- Write a value in LPGPIO register.

Parameters:

- __INSTANCE__: LPGPIO Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_LPGPIO_ReadReg

Description:

- Read a value in LPGPIO register.

Parameters:

- __INSTANCE__: LPGPIO Instance
- __REG__: Register to be read

Return value:

- Register: value

109 LL LPTIM Generic Driver

109.1 LPTIM Firmware driver registers structures

109.1.1 LL_LPTIM_InitTypeDef

LL_LPTIM_InitTypeDef is defined in the stm32u5xx_ll_lptim.h

Data Fields

- ***uint32_t ClockSource***
- ***uint32_t Prescaler***
- ***uint32_t Waveform***

Field Documentation

- ***uint32_t LL_LPTIM_InitTypeDef::ClockSource***
  Specifies the source of the clock used by the LPTIM instance. This parameter can be a value of *LPTIM_LL_EC_CLK_SOURCE*.This feature can be modified afterwards using unitary function **LL_LPTIM_SetClockSource()**.
- ***uint32_t LL_LPTIM_InitTypeDef::Prescaler***
  Specifies the prescaler division ratio. This parameter can be a value of *LPTIM_LL_EC_PRESCALER*.This feature can be modified afterwards using using unitary function **LL_LPTIM_SetPrescaler()**.
- ***uint32_t LL_LPTIM_InitTypeDef::Waveform***
  Specifies the waveform shape. This parameter can be a value of *LPTIM_LL_EC_OUTPUT_WAVEFORM*.This feature can be modified afterwards using unitary function **LL_LPTIM_SetWaveform()**.

109.2 LPTIM Firmware driver API description

The following section lists the various functions of the LPTIM library.

109.2.1 Detailed description of functions

LL_LPTIM_DeInit

Function name

ErrorStatus LL_LPTIM_DeInit (const LPTIM_TypeDef * LPTIMx)

Function description

Set LPTIMx registers to their reset values.

Parameters

- **LPTIMx:** LP Timer instance

Return values

- **An:** ErrorStatus enumeration value:
  – SUCCESS: LPTIMx registers are de-initialized
  – ERROR: invalid LPTIMx instance

LL_LPTIM_StructInit

Function name

void LL_LPTIM_StructInit (LL_LPTIM_InitTypeDef * LPTIM_InitStruct)

Function description

Set each fields of the LPTIM_InitStruct structure to its default value.

Parameters

- **LPTIM_InitStruct:** pointer to a LL_LPTIM_InitTypeDef structure

Return values

- **None:**

LL_LPTIM_Init

Function name

ErrorStatus LL_LPTIM_Init (LPTIM_TypeDef * LPTIMx, const LL_LPTIM_InitTypeDef * LPTIM_InitStruct)

Function description

Configure the LPTIMx peripheral according to the specified parameters.

Parameters

- **LPTIMx:** LP Timer Instance
- **LPTIM_InitStruct:** pointer to a LL_LPTIM_InitTypeDef structure

Return values

- **An:** ErrorStatus enumeration value:
  – SUCCESS: LPTIMx instance has been initialized
  – ERROR: LPTIMx instance hasn't been initialized

Notes

- LL_LPTIM_Init can only be called when the LPTIM instance is disabled.
- LPTIMx can be disabled using unitary function LL_LPTIM_Disable().

LL_LPTIM_Enable

Function name

__STATIC_INLINE void LL_LPTIM_Enable (LPTIM_TypeDef * LPTIMx)

Function description

Enable the LPTIM instance.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Notes

- After setting the ENABLE bit, a delay of two counter clock is needed before the LPTIM instance is actually enabled.

Reference Manual to LL API cross reference:

- CR ENABLE LL_LPTIM_Enable

LL_LPTIM_Disable

Function name

__STATIC_INLINE void LL_LPTIM_Disable (LPTIM_TypeDef * LPTIMx)

Function description

Disable the LPTIM instance.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR ENABLE LL_LPTIM_Disable

LL_LPTIM_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabled (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the LPTIM instance is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR ENABLE LL_LPTIM_IsEnabled

LL_LPTIM_StartCounter

Function name

__STATIC_INLINE void LL_LPTIM_StartCounter (LPTIM_TypeDef * LPTIMx, uint32_t OperatingMode)

Function description

Starts the LPTIM counter in the desired mode.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **OperatingMode:** This parameter can be one of the following values:
  - LL_LPTIM_OPERATING_MODE_CONTINUOUS
  - LL_LPTIM_OPERATING_MODE_ONESHOT

Return values

- **None:**

Notes

- LPTIM instance must be enabled before starting the counter.
- It is possible to change on the fly from One Shot mode to Continuous mode.

Reference Manual to LL API cross reference:

- CR CNTSTRT LL_LPTIM_StartCounter
- CR SNGSTRT LL_LPTIM_StartCounter

LL_LPTIM_EnableResetAfterRead

Function name

__STATIC_INLINE void LL_LPTIM_EnableResetAfterRead (LPTIM_TypeDef * LPTIMx)

Function description

Enable reset after read.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Notes

- After calling this function any read access to LPTIM_CNT register will asynchronously reset the LPTIM_CNT register content.

Reference Manual to LL API cross reference:

- CR RSTARE LL_LPTIM_EnableResetAfterRead

LL_LPTIM_DisableResetAfterRead

Function name

__STATIC_INLINE void LL_LPTIM_DisableResetAfterRead (LPTIM_TypeDef * LPTIMx)

Function description

Disable reset after read.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RSTARE LL_LPTIM_DisableResetAfterRead

LL_LPTIM_IsEnabledResetAfterRead

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledResetAfterRead (const LPTIM_TypeDef * LPTIMx)

Function description

Indicate whether the reset after read feature is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR RSTARE LL_LPTIM_IsEnabledResetAfterRead

LL_LPTIM_ResetCounter

Function name

__STATIC_INLINE void LL_LPTIM_ResetCounter (LPTIM_TypeDef * LPTIMx)

Function description

Reset of the LPTIM_CNT counter register (synchronous).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Notes

- Due to the synchronous nature of this reset, it only takes place after a synchronization delay of 3 LPTIM core clock cycles (LPTIM core clock may be different from APB clock).
- COUNTRST is automatically cleared by hardware

Reference Manual to LL API cross reference:

- CR COUNTRST LL_LPTIM_ResetCounter
-

LL_LPTIM_SetUpdateMode

Function name

__STATIC_INLINE void LL_LPTIM_SetUpdateMode (LPTIM_TypeDef * LPTIMx, uint32_t UpdateMode)

Function description

Set the LPTIM registers update mode (enable/disable register preload)

Parameters

- **LPTIMx:** Low-Power Timer instance
- **UpdateMode:** This parameter can be one of the following values:
  – LL_LPTIM_UPDATE_MODE_IMMEDIATE
  – LL_LPTIM_UPDATE_MODE_ENDOFPERIOD

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.

Reference Manual to LL API cross reference:

- CFGR PRELOAD LL_LPTIM_SetUpdateMode

LL_LPTIM_GetUpdateMode

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetUpdateMode (const LPTIM_TypeDef * LPTIMx)

Function description

Get the LPTIM registers update mode.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  – LL_LPTIM_UPDATE_MODE_IMMEDIATE
  – LL_LPTIM_UPDATE_MODE_ENDOFPERIOD

Reference Manual to LL API cross reference:

- CFGR PRELOAD LL_LPTIM_GetUpdateMode

LL_LPTIM_SetAutoReload

Function name

__STATIC_INLINE void LL_LPTIM_SetAutoReload (LPTIM_TypeDef * LPTIMx, uint32_t AutoReload)

Function description

Set the auto reload value.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **AutoReload:** Value between Min_Data=0x0001 and Max_Data=0xFFFF

Return values

- **None:**

Notes

- The LPTIMx_ARR register content must only be modified when the LPTIM is enabled
- After a write to the LPTIMx_ARR register a new write operation to the same register can only be performed when the previous write operation is completed. Any successive write before the ARROK flag is set, will lead to unpredictable results.
- autoreload value be strictly greater than the compare value.

Reference Manual to LL API cross reference:

- ARR ARR LL_LPTIM_SetAutoReload

LL_LPTIM_GetAutoReload

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetAutoReload (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual auto reload value.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **AutoReload:** Value between Min_Data=0x0001 and Max_Data=0xFFFF

Reference Manual to LL API cross reference:

- ARR ARR LL_LPTIM_GetAutoReload

LL_LPTIM_SetRepetition

Function name

__STATIC_INLINE void LL_LPTIM_SetRepetition (LPTIM_TypeDef * LPTIMx, uint32_t Repetition)

Function description

Set the repetition value.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **Repetition:** Value between Min_Data=0x00 and Max_Data=0xFF

Return values

- **None:**

Notes

- The LPTIMx_RCR register content must only be modified when the LPTIM is enabled

Reference Manual to LL API cross reference:

- RCR REP LL_LPTIM_SetRepetition

LL_LPTIM_GetRepetition

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetRepetition (const LPTIM_TypeDef * LPTIMx)

Function description

Get the repetition value.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Repetition:** Value between Min_Data=0x00 and Max_Data=0xFF

Reference Manual to LL API cross reference:

- RCR REP LL_LPTIM_GetRepetition

LL_LPTIM_CC_EnableChannel

Function name

__STATIC_INLINE void LL_LPTIM_CC_EnableChannel (LPTIM_TypeDef * LPTIMx, uint32_t Channel)

Function description

Enable capture/compare channel.

Parameters

- **LPTIMx:** LPTimer instance
- **Channel:** This parameter can be one of the following values:
  - LL_LPTIM_CHANNEL_CH1
  - LL_LPTIM_CHANNEL_CH2

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCMR1 CC1E LL_LPTIM_CC_EnableChannel
- CCMR1 CC2E LL_LPTIM_CC_EnableChannel

LL_LPTIM_CC_DisableChannel

Function name

__STATIC_INLINE void LL_LPTIM_CC_DisableChannel (LPTIM_TypeDef * LPTIMx, uint32_t Channel)

Function description

Disable capture/compare channel.

Parameters

- **LPTIMx:** LPTimer instance
- **Channel:** This parameter can be one of the following values:
  - LL_LPTIM_CHANNEL_CH1
  - LL_LPTIM_CHANNEL_CH2

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCMR1 CC1E LL_LPTIM_CC_DisableChannel
- CCMR1 CC2E LL_LPTIM_CC_DisableChannel

LL_LPTIM_CC_IsEnabledChannel

Function name

__STATIC_INLINE uint32_t LL_LPTIM_CC_IsEnabledChannel (const LPTIM_TypeDef * LPTIMx, uint32_t Channel)

Function description

Indicate whether channel is enabled.

Parameters

- **LPTIMx:** LPTimer instance
- **Channel:** This parameter can be one of the following values:
  - LL_LPTIM_CHANNEL_CH1
  - LL_LPTIM_CHANNEL_CH2

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CCMR1 CC1E LL_LPTIM_CC_IsEnabledChannel
- CCMR1 CC2E LL_LPTIM_CC_IsEnabledChannel

LL_LPTIM_OC_SetCompareCH1

Function name

__STATIC_INLINE void LL_LPTIM_OC_SetCompareCH1 (LPTIM_TypeDef * LPTIMx, uint32_t CompareValue)

Function description

Set the compare value.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **CompareValue:** Value between Min_Data=0x00 and Max_Data=0xFFFF

Return values

- **None:**

Notes

- After a write to the LPTIMx_CCR1 register a new write operation to the same register can only be performed when the previous write operation is completed. Any successive write before the CMP1OK flag is set, will lead to unpredictable results.

Reference Manual to LL API cross reference:

- CCR1 CCR1 LL_LPTIM_OC_SetCompareCH1

LL_LPTIM_OC_GetCompareCH1

Function name

__STATIC_INLINE uint32_t LL_LPTIM_OC_GetCompareCH1 (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual compare value.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **CompareValue:** Value between Min_Data=0x00 and Max_Data=0xFFFF

Reference Manual to LL API cross reference:

- CCR1 CCR1 LL_LPTIM_OC_GetCompareCH1

LL_LPTIM_OC_SetCompareCH2

Function name

__STATIC_INLINE void LL_LPTIM_OC_SetCompareCH2 (LPTIM_TypeDef * LPTIMx, uint32_t CompareValue)

Function description

Set the compare value.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **CompareValue:** Value between Min_Data=0x00 and Max_Data=0xFFFF

Return values

- **None:**

Notes

- After a write to the LPTIMx_CCR2 register a new write operation to the same register can only be performed when the previous write operation is completed. Any successive write before the CMP2OK flag is set, will lead to unpredictable results.

Reference Manual to LL API cross reference:

- CCR2 CCR2 LL_LPTIM_OC_SetCompareCH2

LL_LPTIM_OC_GetCompareCH2

Function name

__STATIC_INLINE uint32_t LL_LPTIM_OC_GetCompareCH2 (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual compare value.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **CompareValue:** Value between Min_Data=0x00 and Max_Data=0xFFFF

Reference Manual to LL API cross reference:

- CCR2 CCR2 LL_LPTIM_OC_GetCompareCH2

LL_LPTIM_GetCounter

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetCounter (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual counter value.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Counter:** value

Notes

- When the LPTIM instance is running with an asynchronous clock, reading the LPTIMx_CNT register may return unreliable values. So in this case it is necessary to perform two consecutive read accesses and verify that the two returned values are identical.

Reference Manual to LL API cross reference:

- CNT CNT LL_LPTIM_GetCounter

LL_LPTIM_SetCounterMode

Function name

__STATIC_INLINE void LL_LPTIM_SetCounterMode (LPTIM_TypeDef * LPTIMx, uint32_t CounterMode)

Function description

Set the counter mode (selection of the LPTIM counter clock source).

Parameters

- **LPTIMx:** Low-Power Timer instance
- **CounterMode:** This parameter can be one of the following values:
  – LL_LPTIM_COUNTER_MODE_INTERNAL
  – LL_LPTIM_COUNTER_MODE_EXTERNAL

Return values

- **None:**

Notes

- The counter mode can be set only when the LPTIM instance is disabled.

Reference Manual to LL API cross reference:

- CFGR COUNTMODE LL_LPTIM_SetCounterMode

LL_LPTIM_GetCounterMode

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetCounterMode (const LPTIM_TypeDef * LPTIMx)

Function description

Get the counter mode.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  – LL_LPTIM_COUNTER_MODE_INTERNAL
  – LL_LPTIM_COUNTER_MODE_EXTERNAL

Reference Manual to LL API cross reference:

- CFGR COUNTMODE LL_LPTIM_GetCounterMode

LL_LPTIM_SetWaveform

Function name

__STATIC_INLINE void LL_LPTIM_SetWaveform (LPTIM_TypeDef * LPTIMx, uint32_t Waveform)

Function description

Set waveform shape.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **Waveform:** This parameter can be one of the following values:
  - LL_LPTIM_OUTPUT_WAVEFORM_PWM
  - LL_LPTIM_OUTPUT_WAVEFORM_SETONCE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR WAVE LL_LPTIM_SetWaveform

LL_LPTIM_GetWaveform

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetWaveform (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual waveform shape.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_OUTPUT_WAVEFORM_PWM
  - LL_LPTIM_OUTPUT_WAVEFORM_SETONCE

Reference Manual to LL API cross reference:

- CFGR WAVE LL_LPTIM_GetWaveform

LL_LPTIM_OC_SetPolarity

Function name

__STATIC_INLINE void LL_LPTIM_OC_SetPolarity (LPTIM_TypeDef * LPTIMx, uint32_t Channel, uint32_t Polarity)

Function description

Set the polarity of an output channel.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_LPTIM_CHANNEL_CH1
  - LL_LPTIM_CHANNEL_CH2
- **Polarity:** This parameter can be one of the following values:
  - LL_LPTIM_OUTPUT_POLARITY_REGULAR
  - LL_LPTIM_OUTPUT_POLARITY_INVERSE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCMR1 CC1P LL_LPTIM_OC_SetPolarity
-
- CCMR1 CC2P LL_LPTIM_OC_SetPolarity
-

LL_LPTIM_OC_GetPolarity

Function name

__STATIC_INLINE uint32_t LL_LPTIM_OC_GetPolarity (const LPTIM_TypeDef * LPTIMx, uint32_t Channel)

Function description

Get the polarity of an output channel.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_LPTIM_CHANNEL_CH1
  - LL_LPTIM_CHANNEL_CH2

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_OUTPUT_POLARITY_REGULAR
  - LL_LPTIM_OUTPUT_POLARITY_INVERSE

Reference Manual to LL API cross reference:

- CCMR1 CC1P LL_LPTIM_OC_GetPolarity
-
- CCMR1 CC2P LL_LPTIM_OC_GetPolarity
-

LL_LPTIM_SetPrescaler

Function name

__STATIC_INLINE void LL_LPTIM_SetPrescaler (LPTIM_TypeDef * LPTIMx, uint32_t Prescaler)

Function description

Set actual prescaler division ratio.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **Prescaler:** This parameter can be one of the following values:
  – LL_LPTIM_PRESCALER_DIV1
  – LL_LPTIM_PRESCALER_DIV2
  – LL_LPTIM_PRESCALER_DIV4
  – LL_LPTIM_PRESCALER_DIV8
  – LL_LPTIM_PRESCALER_DIV16
  – LL_LPTIM_PRESCALER_DIV32
  – LL_LPTIM_PRESCALER_DIV64
  – LL_LPTIM_PRESCALER_DIV128

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.
- When the LPTIM is configured to be clocked by an internal clock source and the LPTIM counter is configured to be updated by active edges detected on the LPTIM external Input1, the internal clock provided to the LPTIM must be not be prescaled.

Reference Manual to LL API cross reference:

- CFGR PRESC LL_LPTIM_SetPrescaler

LL_LPTIM_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetPrescaler (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual prescaler division ratio.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  – LL_LPTIM_PRESCALER_DIV1
  – LL_LPTIM_PRESCALER_DIV2
  – LL_LPTIM_PRESCALER_DIV4
  – LL_LPTIM_PRESCALER_DIV8
  – LL_LPTIM_PRESCALER_DIV16

LL_LPTIM_EnableTimeout

Function name

__STATIC_INLINE void LL_LPTIM_EnableTimeout (LPTIM_TypeDef * LPTIMx)

Function description

Enable the timeout function.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.
- The first trigger event will start the timer, any successive trigger event will reset the counter and the timer will restart.
- The timeout value corresponds to the compare value; if no trigger occurs within the expected time frame, the MCU is waked-up by the compare match event.

Reference Manual to LL API cross reference:

- CFGR TIMOUT LL_LPTIM_EnableTimeout

LL_LPTIM_DisableTimeout

Function name

__STATIC_INLINE void LL_LPTIM_DisableTimeout (LPTIM_TypeDef * LPTIMx)

Function description

Disable the timeout function.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.
- A trigger event arriving when the timer is already started will be ignored.

Reference Manual to LL API cross reference:

- CFGR TIMOUT LL_LPTIM_DisableTimeout

LL_LPTIM_IsEnabledTimeout

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledTimeout (const LPTIM_TypeDef * LPTIMx)

Function description

Indicate whether the timeout function is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CFGR TIMOUT LL_LPTIM_IsEnabledTimeout

LL_LPTIM_TrigSw

Function name

__STATIC_INLINE void LL_LPTIM_TrigSw (LPTIM_TypeDef * LPTIMx)

Function description

Start the LPTIM counter.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.

Reference Manual to LL API cross reference:

- CFGR TRIGEN LL_LPTIM_TrigSw

LL_LPTIM_ConfigTrigger

Function name

__STATIC_INLINE void LL_LPTIM_ConfigTrigger (LPTIM_TypeDef * LPTIMx, uint32_t Source, uint32_t Filter, uint32_t Polarity)

Function description

Configure the external trigger used as a trigger event for the LPTIM.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **Source:** This parameter can be one of the following values:
  - LL_LPTIM_TRIG_SOURCE_GPIO
  - LL_LPTIM_TRIG_SOURCE_RTCALARMA
  - LL_LPTIM_TRIG_SOURCE_RTCALARMB
  - LL_LPTIM_TRIG_SOURCE_RTCTAMP1
  - LL_LPTIM_TRIG_SOURCE_RTCTAMP2
  - LL_LPTIM_TRIG_SOURCE_RTCTAMP3
  - LL_LPTIM_TRIG_SOURCE_COMP1
  - LL_LPTIM_TRIG_SOURCE_COMP2 (*)
  - LL_LPTIM_TRIG_SOURCE_LPDMA_CH0_TCF
  - LL_LPTIM_TRIG_SOURCE_LPDMA_CH1_TCF
  - LL_LPTIM_TRIG_SOURCE_LPDMA_CH2_TCF
  - LL_LPTIM_TRIG_SOURCE_GPDMA_CH0_TCF
  - LL_LPTIM_TRIG_SOURCE_GPDMA_CH4_TCF

  (*) Value not defined in all devices.
-
- **Filter:** This parameter can be one of the following values:
  - LL_LPTIM_TRIG_FILTER_NONE
  - LL_LPTIM_TRIG_FILTER_2
  - LL_LPTIM_TRIG_FILTER_4
  - LL_LPTIM_TRIG_FILTER_8
- **Polarity:** This parameter can be one of the following values:
  - LL_LPTIM_TRIG_POLARITY_RISING
  - LL_LPTIM_TRIG_POLARITY_FALLING
  - LL_LPTIM_TRIG_POLARITY_RISING_FALLING

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.
- An internal clock source must be present when a digital filter is required for the trigger.

Reference Manual to LL API cross reference:

- CFGR TRIGSEL LL_LPTIM_ConfigTrigger
- CFGR TRGFLT LL_LPTIM_ConfigTrigger
- CFGR TRIGEN LL_LPTIM_ConfigTrigger

LL_LPTIM_GetTriggerSource

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetTriggerSource (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual external trigger source.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_TRIG_SOURCE_GPIO
  - LL_LPTIM_TRIG_SOURCE_RTCALARMA
  - LL_LPTIM_TRIG_SOURCE_RTCALARMB
  - LL_LPTIM_TRIG_SOURCE_RTCTAMP1
  - LL_LPTIM_TRIG_SOURCE_RTCTAMP2
  - LL_LPTIM_TRIG_SOURCE_RTCTAMP3
  - LL_LPTIM_TRIG_SOURCE_COMP1
  - LL_LPTIM_TRIG_SOURCE_COMP2 (*)
  - LL_LPTIM_TRIG_SOURCE_LPDMA_CH0_TCF
  - LL_LPTIM_TRIG_SOURCE_LPDMA_CH1_TCF
  - LL_LPTIM_TRIG_SOURCE_LPDMA_CH2_TCF
  - LL_LPTIM_TRIG_SOURCE_GPDMA_CH0_TCF
  - LL_LPTIM_TRIG_SOURCE_GPDMA_CH4_TCF

Reference Manual to LL API cross reference:

- CFGR TRIGSEL LL_LPTIM_GetTriggerSource

LL_LPTIM_GetTriggerFilter

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetTriggerFilter (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual external trigger filter.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_TRIG_FILTER_NONE
  - LL_LPTIM_TRIG_FILTER_2
  - LL_LPTIM_TRIG_FILTER_4
  - LL_LPTIM_TRIG_FILTER_8

Reference Manual to LL API cross reference:

- CFGR TRGFLT LL_LPTIM_GetTriggerFilter

LL_LPTIM_GetTriggerPolarity

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetTriggerPolarity (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual external trigger polarity.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_TRIG_POLARITY_RISING
  - LL_LPTIM_TRIG_POLARITY_FALLING
  - LL_LPTIM_TRIG_POLARITY_RISING_FALLING

Reference Manual to LL API cross reference:

- CFGR TRIGEN LL_LPTIM_GetTriggerPolarity

LL_LPTIM_SetClockSource

Function name

__STATIC_INLINE void LL_LPTIM_SetClockSource (LPTIM_TypeDef * LPTIMx, uint32_t ClockSource)

Function description

Set the source of the clock used by the LPTIM instance.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **ClockSource:** This parameter can be one of the following values:
  - LL_LPTIM_CLK_SOURCE_INTERNAL
  - LL_LPTIM_CLK_SOURCE_EXTERNAL

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.

Reference Manual to LL API cross reference:

- CFGR CKSEL LL_LPTIM_SetClockSource

LL_LPTIM_GetClockSource

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetClockSource (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual LPTIM instance clock source.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_CLK_SOURCE_INTERNAL
  - LL_LPTIM_CLK_SOURCE_EXTERNAL

Reference Manual to LL API cross reference:

- CFGR CKSEL LL_LPTIM_GetClockSource

LL_LPTIM_ConfigClock

Function name

__STATIC_INLINE void LL_LPTIM_ConfigClock (LPTIM_TypeDef * LPTIMx, uint32_t ClockFilter, uint32_t ClockPolarity)

Function description

Configure the active edge or edges used by the counter when the LPTIM is clocked by an external clock source.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **ClockFilter:** This parameter can be one of the following values:
  – LL_LPTIM_CLK_FILTER_NONE
  – LL_LPTIM_CLK_FILTER_2
  – LL_LPTIM_CLK_FILTER_4
  – LL_LPTIM_CLK_FILTER_8
- **ClockPolarity:** This parameter can be one of the following values:
  – LL_LPTIM_CLK_POLARITY_RISING
  – LL_LPTIM_CLK_POLARITY_FALLING
  – LL_LPTIM_CLK_POLARITY_RISING_FALLING

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.
- When both external clock signal edges are considered active ones, the LPTIM must also be clocked by an internal clock source with a frequency equal to at least four times the external clock frequency.
- An internal clock source must be present when a digital filter is required for external clock.

Reference Manual to LL API cross reference:

- CFGR CKFLT LL_LPTIM_ConfigClock
- CFGR CKPOL LL_LPTIM_ConfigClock

LL_LPTIM_GetClockPolarity

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetClockPolarity (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual clock polarity.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  – LL_LPTIM_CLK_POLARITY_RISING
  – LL_LPTIM_CLK_POLARITY_FALLING
  – LL_LPTIM_CLK_POLARITY_RISING_FALLING

Reference Manual to LL API cross reference:

- CFGR CKPOL LL_LPTIM_GetClockPolarity

LL_LPTIM_GetClockFilter

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetClockFilter (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual clock digital filter.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  – LL_LPTIM_CLK_FILTER_NONE
  – LL_LPTIM_CLK_FILTER_2
  – LL_LPTIM_CLK_FILTER_4
  – LL_LPTIM_CLK_FILTER_8

Reference Manual to LL API cross reference:

- CFGR CKFLT LL_LPTIM_GetClockFilter

LL_LPTIM_SetEncoderMode

Function name

__STATIC_INLINE void LL_LPTIM_SetEncoderMode (LPTIM_TypeDef * LPTIMx, uint32_t EncoderMode)

Function description

Configure the encoder mode.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **EncoderMode:** This parameter can be one of the following values:
  – LL_LPTIM_ENCODER_MODE_RISING
  – LL_LPTIM_ENCODER_MODE_FALLING
  – LL_LPTIM_ENCODER_MODE_RISING_FALLING

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.

Reference Manual to LL API cross reference:

- CFGR CKPOL LL_LPTIM_SetEncoderMode

LL_LPTIM_GetEncoderMode

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetEncoderMode (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual encoder mode.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  – LL_LPTIM_ENCODER_MODE_RISING
  – LL_LPTIM_ENCODER_MODE_FALLING
  – LL_LPTIM_ENCODER_MODE_RISING_FALLING

Reference Manual to LL API cross reference:

- CFGR CKPOL LL_LPTIM_GetEncoderMode

LL_LPTIM_EnableEncoderMode

Function name

__STATIC_INLINE void LL_LPTIM_EnableEncoderMode (LPTIM_TypeDef * LPTIMx)

Function description

Enable the encoder mode.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.
- In this mode the LPTIM instance must be clocked by an internal clock source. Also, the prescaler division ratio must be equal to 1.
- LPTIM instance must be configured in continuous mode prior enabling the encoder mode.

Reference Manual to LL API cross reference:

- CFGR ENC LL_LPTIM_EnableEncoderMode

LL_LPTIM_DisableEncoderMode

Function name

__STATIC_INLINE void LL_LPTIM_DisableEncoderMode (LPTIM_TypeDef * LPTIMx)

Function description

Disable the encoder mode.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.

Reference Manual to LL API cross reference:

- CFGR ENC LL_LPTIM_DisableEncoderMode

LL_LPTIM_IsEnabledEncoderMode

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledEncoderMode (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the LPTIM operates in encoder mode.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CFGR ENC LL_LPTIM_IsEnabledEncoderMode

LL_LPTIM_ClearFlag_CC1

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_CC1 (LPTIM_TypeDef * LPTIMx)

Function description

Clear the compare match flag for channel 1 (CC1CF)

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CC1CF LL_LPTIM_ClearFlag_CC1

LL_LPTIM_IsActiveFlag_CC1

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_CC1 (const LPTIM_TypeDef * LPTIMx)

Function description

Inform application whether a capture/compare interrupt has occurred for channel 1.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR CC1IF LL_LPTIM_IsActiveFlag_CC1

LL_LPTIM_ClearFlag_CC2

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_CC2 (LPTIM_TypeDef * LPTIMx)

Function description

Clear the compare match flag for channel 2 (CC2CF)

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CC2CF LL_LPTIM_ClearFlag_CC2

LL_LPTIM_IsActiveFlag_CC2

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_CC2 (const LPTIM_TypeDef * LPTIMx)

Function description

Inform application whether a capture/compare interrupt has occurred for channel 2.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR CC2IF LL_LPTIM_IsActiveFlag_CC2

LL_LPTIM_ClearFlag_CC1O

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_CC1O (LPTIM_TypeDef * LPTIMx)

Function description

Clear the Capture/Compare 1 over-capture flag for channel 1 (CC1OCF)

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CC1OCF LL_LPTIM_ClearFlag_CC1O

LL_LPTIM_IsActiveFlag_CC1O

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_CC1O (const LPTIM_TypeDef * LPTIMx)

Function description

Inform application whether a Capture/Compare 1 over-capture has occurred for channel 1.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR CC1OF LL_LPTIM_IsActiveFlag_CC1O

LL_LPTIM_ClearFlag_CC2O

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_CC2O (LPTIM_TypeDef * LPTIMx)

Function description

Clear the Capture/Compare 2 over-capture flag for channel 2 (CC2OCF)

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CC2OCF LL_LPTIM_ClearFlag_CC2O

LL_LPTIM_IsActiveFlag_CC2O

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_CC2O (const LPTIM_TypeDef * LPTIMx)

Function description

Inform application whether a Capture/Compare 2 over-capture has occurred for channel 2.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR CC2OF LL_LPTIM_IsActiveFlag_CC2O

LL_LPTIM_ClearFlag_ARRM

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_ARRM (LPTIM_TypeDef * LPTIMx)

Function description

Clear the autoreload match flag (ARRMCF)

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR ARRMCF LL_LPTIM_ClearFlag_ARRM

LL_LPTIM_IsActiveFlag_ARRM

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_ARRM (const LPTIM_TypeDef * LPTIMx)

Function description

Inform application whether a autoreload match interrupt has occurred.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR ARRM LL_LPTIM_IsActiveFlag_ARRM

LL_LPTIM_ClearFlag_EXTTRIG

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_EXTTRIG (LPTIM_TypeDef * LPTIMx)

Function description

Clear the external trigger valid edge flag(EXTTRIGCF).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR EXTTRIGCF LL_LPTIM_ClearFlag_EXTTRIG

LL_LPTIM_IsActiveFlag_EXTTRIG

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_EXTTRIG (const LPTIM_TypeDef * LPTIMx)

Function description

Inform application whether a valid edge on the selected external trigger input has occurred.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR EXTTRIG LL_LPTIM_IsActiveFlag_EXTTRIG

LL_LPTIM_ClearFlag_CMP1OK

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_CMP1OK (LPTIM_TypeDef * LPTIMx)

Function description

Clear the compare register update interrupt flag (CMP1OKCF).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CMP1OKCF LL_LPTIM_ClearFlag_CMP1OK

LL_LPTIM_IsActiveFlag_CMP1OK

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_CMP1OK (const LPTIM_TypeDef * LPTIMx)

Function description

Informs application whether the APB bus write operation to the LPTIMx_CCR1 register has been successfully completed.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR CMP1OK LL_LPTIM_IsActiveFlag_CMP1OK

LL_LPTIM_ClearFlag_CMP2OK

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_CMP2OK (LPTIM_TypeDef * LPTIMx)

Function description

Clear the compare register update interrupt flag (CMP2OKCF).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CMP2OKCF LL_LPTIM_ClearFlag_CMP2OK

LL_LPTIM_IsActiveFlag_CMP2OK

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_CMP2OK (const LPTIM_TypeDef * LPTIMx)

Function description

Informs application whether the APB bus write operation to the LPTIMx_CCR2 register has been successfully completed.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR CMP2OK LL_LPTIM_IsActiveFlag_CMP2OK

LL_LPTIM_ClearFlag_DIEROK

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_DIEROK (LPTIM_TypeDef * LPTIMx)

Function description

Clear the interrupt register update interrupt flag (DIEROKCF).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR DIEROKCF LL_LPTIM_ClearFlag_DIEROK

LL_LPTIM_IsActiveFlag_DIEROK

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_DIEROK (const LPTIM_TypeDef * LPTIMx)

Function description

Informs application whether the APB bus write operation to the LPTIMx_DIER register has been successfully completed.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR DIEROK LL_LPTIM_IsActiveFlag_DIEROK

LL_LPTIM_ClearFlag_ARROK

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_ARROK (LPTIM_TypeDef * LPTIMx)

Function description

Clear the autoreload register update interrupt flag (ARROKCF).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR ARROKCF LL_LPTIM_ClearFlag_ARROK

LL_LPTIM_IsActiveFlag_ARROK

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_ARROK (const LPTIM_TypeDef * LPTIMx)

Function description

Informs application whether the APB bus write operation to the LPTIMx_ARR register has been successfully completed.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR ARROK LL_LPTIM_IsActiveFlag_ARROK

LL_LPTIM_ClearFlag_UP

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_UP (LPTIM_TypeDef * LPTIMx)

Function description

Clear the counter direction change to up interrupt flag (UPCF).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR UPCF LL_LPTIM_ClearFlag_UP

LL_LPTIM_IsActiveFlag_UP

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_UP (const LPTIM_TypeDef * LPTIMx)

Function description

Informs the application whether the counter direction has changed from down to up (when the LPTIM instance operates in encoder mode).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR UP LL_LPTIM_IsActiveFlag_UP

LL_LPTIM_ClearFlag_DOWN

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_DOWN (LPTIM_TypeDef * LPTIMx)

Function description

Clear the counter direction change to down interrupt flag (DOWNCF).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR DOWNCF LL_LPTIM_ClearFlag_DOWN

LL_LPTIM_IsActiveFlag_DOWN

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_DOWN (const LPTIM_TypeDef * LPTIMx)

Function description

Informs the application whether the counter direction has changed from up to down (when the LPTIM instance operates in encoder mode).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR DOWN LL_LPTIM_IsActiveFlag_DOWN

LL_LPTIM_ClearFlag_REPOK

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_REPOK (LPTIM_TypeDef * LPTIMx)

Function description

Clear the repetition register update interrupt flag (REPOKCF).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR REPOKCF LL_LPTIM_ClearFlag_REPOK

LL_LPTIM_IsActiveFlag_REPOK

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_REPOK (const LPTIM_TypeDef * LPTIMx)

Function description

Informs application whether the APB bus write operation to the LPTIMx_RCR register has been successfully completed; If so, a new one can be initiated.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR REPOK LL_LPTIM_IsActiveFlag_REPOK

LL_LPTIM_ClearFlag_UE

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_UE (LPTIM_TypeDef * LPTIMx)

Function description

Clear the update event flag (UECF).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR UECF LL_LPTIM_ClearFlag_UE

LL_LPTIM_IsActiveFlag_UE

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_UE (const LPTIM_TypeDef * LPTIMx)

Function description

Informs application whether the LPTIMx update event has occurred.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR UE LL_LPTIM_IsActiveFlag_UE

LL_LPTIM_EnableIT_CC1

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_CC1 (LPTIM_TypeDef * LPTIMx)

Function description

Enable capture/compare 1 interrupt (CC1IE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC1IE LL_LPTIM_EnableIT_CC1

LL_LPTIM_DisableIT_CC1

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_CC1 (LPTIM_TypeDef * LPTIMx)

Function description

Disable capture/compare 1 interrupt (CC1IE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC1IE LL_LPTIM_DisableIT_CC1

LL_LPTIM_IsEnabledIT_CC1

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_CC1 (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the capture/compare 1 interrupt (CC1IE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC1IE LL_LPTIM_IsEnabledIT_CC1

LL_LPTIM_EnableIT_CC2

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_CC2 (LPTIM_TypeDef * LPTIMx)

Function description

Enable capture/compare 1 interrupt (CC2IE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC2IE LL_LPTIM_EnableIT_CC2

LL_LPTIM_DisableIT_CC2

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_CC2 (LPTIM_TypeDef * LPTIMx)

Function description

Disable capture/compare 2 interrupt (CC2IE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC2IE LL_LPTIM_DisableIT_CC2

LL_LPTIM_IsEnabledIT_CC2

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_CC2 (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the capture/compare 2 interrupt (CC2IE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC2IE LL_LPTIM_IsEnabledIT_CC2

LL_LPTIM_EnableIT_CC1O

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_CC1O (LPTIM_TypeDef * LPTIMx)

Function description

Enable capture/compare 1 over-capture interrupt (CC1OIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC1OIE LL_LPTIM_EnableIT_CC1O

LL_LPTIM_DisableIT_CC1O

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_CC1O (LPTIM_TypeDef * LPTIMx)

Function description

Disable capture/compare 1 over-capture interrupt (CC1OIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC1OIE LL_LPTIM_DisableIT_CC1O

LL_LPTIM_IsEnabledIT_CC1O

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_CC1O (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the capture/compare 1 over-capture interrupt (CC1OIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC1OIE LL_LPTIM_IsEnabledIT_CC1O

LL_LPTIM_EnableIT_CC2O

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_CC2O (LPTIM_TypeDef * LPTIMx)

Function description

Enable capture/compare 1 over-capture interrupt (CC2OIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC2OIE LL_LPTIM_EnableIT_CC2O

LL_LPTIM_DisableIT_CC2O

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_CC2O (LPTIM_TypeDef * LPTIMx)

Function description

Disable capture/compare 1 over-capture interrupt (CC2OIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC2OIE LL_LPTIM_DisableIT_CC2O

LL_LPTIM_IsEnabledIT_CC2O

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_CC2O (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the capture/compare 2 over-capture interrupt (CC2OIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC2OIE LL_LPTIM_IsEnabledIT_CC2O

LL_LPTIM_EnableIT_ARRM

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_ARRM (LPTIM_TypeDef * LPTIMx)

Function description

Enable autoreload match interrupt (ARRMIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER ARRMIE LL_LPTIM_EnableIT_ARRM

LL_LPTIM_DisableIT_ARRM

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_ARRM (LPTIM_TypeDef * LPTIMx)

Function description

Disable autoreload match interrupt (ARRMIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER ARRMIE LL_LPTIM_DisableIT_ARRM

LL_LPTIM_IsEnabledIT_ARRM

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_ARRM (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the autoreload match interrupt (ARRMIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER ARRMIE LL_LPTIM_IsEnabledIT_ARRM

LL_LPTIM_EnableIT_EXTTRIG

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_EXTTRIG (LPTIM_TypeDef * LPTIMx)

Function description

Enable external trigger valid edge interrupt (EXTTRIGIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER EXTTRIGIE LL_LPTIM_EnableIT_EXTTRIG

LL_LPTIM_DisableIT_EXTTRIG

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_EXTTRIG (LPTIM_TypeDef * LPTIMx)

Function description

Disable external trigger valid edge interrupt (EXTTRIGIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER EXTTRIGIE LL_LPTIM_DisableIT_EXTTRIG

LL_LPTIM_IsEnabledIT_EXTTRIG

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_EXTTRIG (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates external trigger valid edge interrupt (EXTTRIGIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER EXTTRIGIE LL_LPTIM_IsEnabledIT_EXTTRIG

LL_LPTIM_EnableIT_CMP1OK

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_CMP1OK (LPTIM_TypeDef * LPTIMx)

Function description

Enable compare register write completed interrupt (CMP1OKIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER CMP1OKIE LL_LPTIM_EnableIT_CMP1OK

LL_LPTIM_DisableIT_CMP1OK

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_CMP1OK (LPTIM_TypeDef * LPTIMx)

Function description

Disable compare register write completed interrupt (CMP1OKIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER CMPO1KIE LL_LPTIM_DisableIT_CMP1OK

LL_LPTIM_IsEnabledIT_CMP1OK

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_CMP1OK (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the compare register write completed interrupt (CMP1OKIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER CMP1OKIE LL_LPTIM_IsEnabledIT_CMP1OK

LL_LPTIM_EnableIT_CMP2OK

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_CMP2OK (LPTIM_TypeDef * LPTIMx)

Function description

Enable compare register write completed interrupt (CMP2OKIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER CMP2OKIE LL_LPTIM_EnableIT_CMP2OK

LL_LPTIM_DisableIT_CMP2OK

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_CMP2OK (LPTIM_TypeDef * LPTIMx)

Function description

Disable compare register write completed interrupt (CMP2OKIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER CMP2OKIE LL_LPTIM_DisableIT_CMP2OK

LL_LPTIM_IsEnabledIT_CMP2OK

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_CMP2OK (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the compare register write completed interrupt (CMP2OKIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER CMP2OKIE LL_LPTIM_IsEnabledIT_CMP2OK

LL_LPTIM_EnableIT_ARROK

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_ARROK (LPTIM_TypeDef * LPTIMx)

Function description

Enable autoreload register write completed interrupt (ARROKIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER ARROKIE LL_LPTIM_EnableIT_ARROK

LL_LPTIM_DisableIT_ARROK

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_ARROK (LPTIM_TypeDef * LPTIMx)

Function description

Disable autoreload register write completed interrupt (ARROKIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER ARROKIE LL_LPTIM_DisableIT_ARROK

LL_LPTIM_IsEnabledIT_ARROK

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_ARROK (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the autoreload register write completed interrupt (ARROKIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit(1 or 0).

Reference Manual to LL API cross reference:

- DIER ARROKIE LL_LPTIM_IsEnabledIT_ARROK

LL_LPTIM_EnableIT_UP

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_UP (LPTIM_TypeDef * LPTIMx)

Function description

Enable direction change to up interrupt (UPIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER UPIE LL_LPTIM_EnableIT_UP

LL_LPTIM_DisableIT_UP

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_UP (LPTIM_TypeDef * LPTIMx)

Function description

Disable direction change to up interrupt (UPIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER UPIE LL_LPTIM_DisableIT_UP

LL_LPTIM_IsEnabledIT_UP

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_UP (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the direction change to up interrupt (UPIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit(1 or 0).

Reference Manual to LL API cross reference:

- DIER UPIE LL_LPTIM_IsEnabledIT_UP

LL_LPTIM_EnableIT_DOWN

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_DOWN (LPTIM_TypeDef * LPTIMx)

Function description

Enable direction change to down interrupt (DOWNIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER DOWNIE LL_LPTIM_EnableIT_DOWN

LL_LPTIM_DisableIT_DOWN

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_DOWN (LPTIM_TypeDef * LPTIMx)

Function description

Disable direction change to down interrupt (DOWNIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER DOWNIE LL_LPTIM_DisableIT_DOWN

LL_LPTIM_IsEnabledIT_DOWN

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_DOWN (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the direction change to down interrupt (DOWNIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit(1 or 0).

Reference Manual to LL API cross reference:

- DIER DOWNIE LL_LPTIM_IsEnabledIT_DOWN

LL_LPTIM_EnableIT_REPOK

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_REPOK (LPTIM_TypeDef * LPTIMx)

Function description

Enable repetition register update successfully completed interrupt (REPOKIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER REPOKIE LL_LPTIM_EnableIT_REPOK

LL_LPTIM_DisableIT_REPOK

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_REPOK (LPTIM_TypeDef * LPTIMx)

Function description

Disable repetition register update successfully completed interrupt (REPOKIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER REPOKIE LL_LPTIM_DisableIT_REPOK

LL_LPTIM_IsEnabledIT_REPOK

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_REPOK (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the repetition register update successfully completed interrupt (REPOKIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit(1 or 0).

Reference Manual to LL API cross reference:

- DIER REPOKIE LL_LPTIM_IsEnabledIT_REPOK

LL_LPTIM_EnableIT_UE

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_UE (LPTIM_TypeDef * LPTIMx)

Function description

Enable update event interrupt (UEIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER UEIE LL_LPTIM_EnableIT_UE

LL_LPTIM_DisableIT_UE

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_UE (LPTIM_TypeDef * LPTIMx)

Function description

Disable update event interrupt (UEIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER UEIE LL_LPTIM_DisableIT_UE

LL_LPTIM_IsEnabledIT_UE

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_UE (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the update event interrupt (UEIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance @ retval State of bit(1 or 0).

Reference Manual to LL API cross reference:

- DIER UEIE LL_LPTIM_IsEnabledIT_UE

LL_LPTIM_EnableDMAReq_UPDATE

Function name

__STATIC_INLINE void LL_LPTIM_EnableDMAReq_UPDATE (LPTIM_TypeDef * LPTIMx)

Function description

Enable update DMA request.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER UEDE LL_LPTIM_EnableDMAReq_UPDATE

LL_LPTIM_DisableDMAReq_UPDATE

Function name

__STATIC_INLINE void LL_LPTIM_DisableDMAReq_UPDATE (LPTIM_TypeDef * LPTIMx)

Function description

Disable update DMA request.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER UEDE LL_LPTIM_DisableDMAReq_UPDATE

LL_LPTIM_IsEnabledDMAReq_UPDATE

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledDMAReq_UPDATE (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the update DMA request is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER UEDE LL_LPTIM_IsEnabledDMAReq_UPDATE

LL_LPTIM_EnableDMAReq_CC1

Function name

__STATIC_INLINE void LL_LPTIM_EnableDMAReq_CC1 (LPTIM_TypeDef * LPTIMx)

Function description

Enable capture/compare 1 DMA request (CC1DE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC1DE LL_LPTIM_EnableDMAReq_CC1

LL_LPTIM_DisableDMAReq_CC1

Function name

__STATIC_INLINE void LL_LPTIM_DisableDMAReq_CC1 (LPTIM_TypeDef * LPTIMx)

Function description

Disable capture/compare 1 DMA request (CC1DE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC1DE LL_LPTIM_DisableDMAReq_CC1

LL_LPTIM_IsEnabledDMAReq_CC1

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledDMAReq_CC1 (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the capture/compare 1 DMA request (CC1DE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC1DE LL_LPTIM_IsEnabledDMAReq_CC1

LL_LPTIM_EnableDMAReq_CC2

Function name

__STATIC_INLINE void LL_LPTIM_EnableDMAReq_CC2 (LPTIM_TypeDef * LPTIMx)

Function description

Enable capture/compare 2 DMA request (CC2DE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC2DE LL_LPTIM_EnableDMAReq_CC2

LL_LPTIM_DisableDMAReq_CC2

Function name

__STATIC_INLINE void LL_LPTIM_DisableDMAReq_CC2 (LPTIM_TypeDef * LPTIMx)

Function description

Disable capture/compare 2 DMA request (CC2DE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC2DE LL_LPTIM_DisableDMAReq_CC2

LL_LPTIM_IsEnabledDMAReq_CC2

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledDMAReq_CC2 (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the capture/compare 2 DMA request (CC2DE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC2DE LL_LPTIM_IsEnabledDMAReq_CC2

109.3 LPTIM Firmware driver defines

The following section lists the various define and macros of the module.

109.3.1 LPTIM

LPTIM

Input1 Source

LL_LPTIM_INPUT1_SRC_GPIO

For LPTIM1, LPTIM2, LPTIM3 and LPTIM4

LL_LPTIM_INPUT1_SRC_COMP1

For LPTIM1, LPTIM2, LPTIM3 and LPTIM4

LL_LPTIM_INPUT1_SRC_COMP2

For LPTIM1 and LPTIM2

Input2 Source

LL_LPTIM_INPUT2_SRC_GPIO
For LPTIM1 and LPTIM2

LL_LPTIM_INPUT2_SRC_COMP2
For LPTIM1 and LPTIM2

LPTIM1 Input Ch1 Remap

LL_LPTIM_LPTIM1_IC1_RMP_GPIO
IC1 connected to GPIO

LL_LPTIM_LPTIM1_IC1_RMP_COMP1
IC1 connected to COMP1

LL_LPTIM_LPTIM1_IC1_RMP_COMP2
IC1 connected to COMP2

LPTIM1 Input Ch2 Remap

LL_LPTIM_LPTIM1_IC2_RMP_GPIO
IC2 connected to GPIO

LL_LPTIM_LPTIM1_IC2_RMP_LSI
IC2 connected to LSI

LL_LPTIM_LPTIM1_IC2_RMP_LSE
IC2 connected to LSE

LPTIM2 Input Ch1 Remap

LL_LPTIM_LPTIM2_IC1_RMP_GPIO
IC1 connected to GPIO

LL_LPTIM_LPTIM2_IC1_RMP_COMP1
IC1 connected to COMP1

LL_LPTIM_LPTIM2_IC1_RMP_COMP2
IC1 connected to COMP2

LPTIM2 Input Ch2 Remap

LL_LPTIM_LPTIM2_IC2_RMP_GPIO
IC2 connected to GPIO

LL_LPTIM_LPTIM2_IC2_RMP_HSI
IC2 connected to HSI

LL_LPTIM_LPTIM2_IC2_RMP_MSIS_1024
IC2 connected to MSIS/1024

LL_LPTIM_LPTIM2_IC2_RMP_MSIS_4
IC2 connected to MSIS/4

LPTIM3 Input Ch1 Remap

LL_LPTIM_LPTIM3_IC1_RMP_GPIO
IC1 connected to GPIO

LL_LPTIM_LPTIM3_IC1_RMP_COMP1

IC1 connected to COMP1

LL_LPTIM_LPTIM3_IC1_RMP_COMP2

IC1 connected to COMP2

Clock Filter

LL_LPTIM_CLK_FILTER_NONE

Any external clock signal level change is considered as a valid transition

LL_LPTIM_CLK_FILTER_2

External clock signal level change must be stable for at least 2 clock periods before it is considered as valid transition

LL_LPTIM_CLK_FILTER_4

External clock signal level change must be stable for at least 4 clock periods before it is considered as valid transition

LL_LPTIM_CLK_FILTER_8

External clock signal level change must be stable for at least 8 clock periods before it is considered as valid transition

Clock Polarity

LL_LPTIM_CLK_POLARITY_RISING

The rising edge is the active edge used for counting

LL_LPTIM_CLK_POLARITY_FALLING

The falling edge is the active edge used for counting

LL_LPTIM_CLK_POLARITY_RISING_FALLING

Both edges are active edges

Clock Source

LL_LPTIM_CLK_SOURCE_INTERNAL

LPTIM is clocked by internal clock source (APB clock or any of the embedded oscillators)

LL_LPTIM_CLK_SOURCE_EXTERNAL

LPTIM is clocked by an external clock source through the LPTIM external Input1

Counter Mode

LL_LPTIM_COUNTER_MODE_INTERNAL

The counter is incremented following each internal clock pulse

LL_LPTIM_COUNTER_MODE_EXTERNAL

The counter is incremented following each valid clock pulse on the LPTIM external Input1

Encoder Mode

LL_LPTIM_ENCODER_MODE_RISING

The rising edge is the active edge used for counting

LL_LPTIM_ENCODER_MODE_FALLING

The falling edge is the active edge used for counting

LL_LPTIM_ENCODER_MODE_RISING_FALLING

Both edges are active edges

Get Flags Defines

LL_LPTIM_ISR_CMP1OK

Compare register 1 update OK

LL_LPTIM_ISR_CMP2OK

Compare register 2 update OK

LL_LPTIM_ISR_CC1IF

Capture/Compare 1 interrupt flag

LL_LPTIM_ISR_CC2IF

Capture/Compare 2 interrupt flag

LL_LPTIM_ISR_CC1OF

Capture/Compare 1 over-capture flag

LL_LPTIM_ISR_CC2OF

Capture/Compare 2 over-capture flag

LL_LPTIM_ISR_DIEROK

Interrupt enable register update OK

LL_LPTIM_ISR_ARRM

Autoreload match

LL_LPTIM_ISR_EXTTRIG

External trigger edge event

LL_LPTIM_ISR_ARROK

Autoreload register update OK

LL_LPTIM_ISR_UP

Counter direction change down to up

LL_LPTIM_ISR_DOWN

Counter direction change up to down

LL_LPTIM_ISR_UE

Update event

LL_LPTIM_ISR_REPOK

Repetition register update OK

IT Defines

LL_LPTIM_DIER_CMP1OKIE

Compare register 1 update OK

LL_LPTIM_DIER_CMP2OKIE

Compare register 2 update OK

LL_LPTIM_DIER_CC1IFIE

Capture/Compare 1 interrupt flag

LL_LPTIM_DIER_CC2IFIE

Capture/Compare 2 interrupt flag

LL_LPTIM_DIER_CC1OFIE

Capture/Compare 1 over-capture flag

LL_LPTIM_DIER_CC2OFIE

Capture/Compare 2 over-capture flag

LL_LPTIM_DIER_ARRMIE

Autoreload match

LL_LPTIM_DIER_EXTTRIGIE

External trigger edge event

LL_LPTIM_DIER_ARROKIE

Autoreload register update OK

LL_LPTIM_DIER_UPIE

Counter direction change down to up

LL_LPTIM_DIER_DOWNIE

Counter direction change up to down

LL_LPTIM_DIER_UEIE

Update event

LL_LPTIM_DIER_REPOKIE

Repetition register update OK

Input Capture Filter

LL_LPTIM_ICFLT_CLOCK_DIV1

any external input capture signal level change is considered as a valid transition

LL_LPTIM_ICFLT_CLOCK_DIV2

external input capture signal level change must be stable for at least 2 clock periods before it is considered as valid transition

LL_LPTIM_ICFLT_CLOCK_DIV4

external input capture signal level change must be stable for at least 4 clock periods before it is considered as valid transition

LL_LPTIM_ICFLT_CLOCK_DIV8

external input capture signal level change must be stable for at least 8 clock periods before it is considered as valid transition

Input Capture Polarity

LL_LPTIM_ICPOLARITY_RISING

Capture/Compare input rising polarity

LL_LPTIM_ICPOLARITY_FALLING

Capture/Compare input falling polarity

LL_LPTIM_ICPOLARITY_RISING_FALLING

Capture/Compare input rising and falling polarities

Input Capture Prescaler

LL_LPTIM_ICPSC_DIV1

Capture performed each time an edge is detected on the capture input

LL_LPTIM_ICPSC_DIV2

Capture performed once every 2 events

LL_LPTIM_ICPSC_DIV4

Capture performed once every 4 events

LL_LPTIM_ICPSC_DIV8

Capture performed once every 8 events

Input Capture selection

LL_LPTIM_CCMODE_OUTPUT_PWM

Select PWM mode

LL_LPTIM_CCMODE_INPUTCAPTURE

Select Input Capture mode

Operating Mode

LL_LPTIM_OPERATING_MODE_CONTINUOUS

LP Timer starts in continuous mode

LL_LPTIM_OPERATING_MODE_ONESHOT

LP Tilmer starts in single mode

Output Polarity

LL_LPTIM_OUTPUT_POLARITY_REGULAR

The LPTIM output reflects the compare results between LPTIMx_ARR and LPTIMx_CCRx registers

LL_LPTIM_OUTPUT_POLARITY_INVERSE

The LPTIM output reflects the inverse of the compare results between LPTIMx_ARR and LPTIMx_CCx registers

Output Waveform Type

LL_LPTIM_OUTPUT_WAVEFORM_PWM

LPTIM generates either a PWM waveform or a One pulse waveform depending on chosen operating mode CONTINUOUS or SINGLE

LL_LPTIM_OUTPUT_WAVEFORM_SETONCE

LPTIM generates a Set Once waveform

Prescaler Value

LL_LPTIM_PRESCALER_DIV1

Prescaler division factor is set to 1

LL_LPTIM_PRESCALER_DIV2

Prescaler division factor is set to 2

LL_LPTIM_PRESCALER_DIV4

Prescaler division factor is set to 4

LL_LPTIM_PRESCALER_DIV8

Prescaler division factor is set to 8

LL_LPTIM_PRESCALER_DIV16

Prescaler division factor is set to 16

LL_LPTIM_PRESCALER_DIV32

Prescaler division factor is set to 32

LL_LPTIM_PRESCALER_DIV64

Prescaler division factor is set to 64

LL_LPTIM_PRESCALER_DIV128

Prescaler division factor is set to 128

Trigger Filter

LL_LPTIM_TRIG_FILTER_NONE

Any trigger active level change is considered as a valid trigger

LL_LPTIM_TRIG_FILTER_2

Trigger active level change must be stable for at least 2 clock periods before it is considered as valid trigger

LL_LPTIM_TRIG_FILTER_4

Trigger active level change must be stable for at least 4 clock periods before it is considered as valid trigger

LL_LPTIM_TRIG_FILTER_8

Trigger active level change must be stable for at least 8 clock periods before it is considered as valid trigger

Trigger Polarity

LL_LPTIM_TRIG_POLARITY_RISING

LPTIM counter starts when a rising edge is detected

LL_LPTIM_TRIG_POLARITY_FALLING

LPTIM counter starts when a falling edge is detected

LL_LPTIM_TRIG_POLARITY_RISING_FALLING

LPTIM counter starts when a rising or a falling edge is detected

Trigger Source

LL_LPTIM_TRIG_SOURCE_GPIO

External input trigger is connected to TIMx_ETR input

LL_LPTIM_TRIG_SOURCE_RTCALARMA

External input trigger is connected to RTC Alarm A

LL_LPTIM_TRIG_SOURCE_RTCALARMB

External input trigger is connected to RTC Alarm B

LL_LPTIM_TRIG_SOURCE_RTCTAMP1

External input trigger is connected to RTC Tamper 1

LL_LPTIM_TRIG_SOURCE_RTCTAMP2

External input trigger is connected to RTC Tamper 2

LL_LPTIM_TRIG_SOURCE_RTCTAMP3

External input trigger is connected to RTC Tamper 3

LL_LPTIM_TRIG_SOURCE_COMP1

External input trigger is connected to COMP1 output

LL_LPTIM_TRIG_SOURCE_COMP2

External input trigger is connected to COMP2 output

LL_LPTIM_TRIG_SOURCE_LPDMA_CH0_TCF

External input trigger is connected to LPDMA CH0 transfer complete

LL_LPTIM_TRIG_SOURCE_LPDMA_CH1_TCF

External input trigger is connected to LPDMA CH1 transfer complete

LL_LPTIM_TRIG_SOURCE_LPDMA_CH2_TCF

External input trigger is connected to LPDMA CH2 transfer complete

LL_LPTIM_TRIG_SOURCE_GPDMA_CH0_TCF

External input trigger is connected to GPDMA CH0 transfer complete

LL_LPTIM_TRIG_SOURCE_GPDMA_CH4_TCF

External input trigger is connected to GPDMA CH4 transfer complete

Update Mode

LL_LPTIM_UPDATE_MODE_IMMEDIATE

Preload is disabled: registers are updated after each APB bus write access

LL_LPTIM_UPDATE_MODE_ENDOFPERIOD

preload is enabled: registers are updated at the end of the current LPTIM period

Common Write and read registers Macros

LL_LPTIM_WriteReg

Description:

- Write a value in LPTIM register.

Parameters:

- __INSTANCE__: LPTIM Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_LPTIM_ReadReg

Description:

- Read a value in LPTIM register.

Parameters:

- __INSTANCE__: LPTIM Instance
- __REG__: Register to be read

Return value:

- Register: value

LL_LPTIM_IC_GET_OFFSET

Description:

- LPTimer Input Capture Get Offset(in counter step unit)

Parameters:

- __PSC__: This parameter can be one of the following values:
  - LL_LPTIM_PRESCALER_DIV1
  - LL_LPTIM_PRESCALER_DIV2
  - LL_LPTIM_PRESCALER_DIV4
  - LL_LPTIM_PRESCALER_DIV8
  - LL_LPTIM_PRESCALER_DIV16
  - LL_LPTIM_PRESCALER_DIV32
  - LL_LPTIM_PRESCALER_DIV64
  - LL_LPTIM_PRESCALER_DIV128
- __FLT__: This parameter can be one of the following values:
  - LL_LPTIM_ICFLT_CLOCK_DIV1
  - LL_LPTIM_ICFLT_CLOCK_DIV2
  - LL_LPTIM_ICFLT_CLOCK_DIV4
  - LL_LPTIM_ICFLT_CLOCK_DIV8

Return value:

- offset: value

Notes:

- The real capture value corresponding to the input capture trigger can be calculated using the formula hereafter : Real capture value = captured(LPTIM_CCRx) - offset The Offset value is depending on the glitch filter value for the channel and the value of the prescaler for the kernel clock. Please check Errata Sheet V1_8 for more details under "variable latency on input capture channel" section.

110 LL LPUART Generic Driver

110.1 LPUART Firmware driver registers structures

110.1.1 LL_LPUART_InitTypeDef

LL_LPUART_InitTypeDef is defined in the stm32u5xx_ll_lpuart.h

Data Fields

- ***uint32_t PrescalerValue***
- ***uint32_t BaudRate***
- ***uint32_t DataWidth***
- ***uint32_t StopBits***
- ***uint32_t Parity***
- ***uint32_t TransferDirection***
- ***uint32_t HardwareFlowControl***

Field Documentation

- ***uint32_t LL_LPUART_InitTypeDef::PrescalerValue***
  Specifies the Prescaler to compute the communication baud rate. This parameter can be a value of ***LPUART_LL_EC_PRESCALER***.This feature can be modified afterwards using unitary function **LL_LPUART_SetPrescaler()**.
- ***uint32_t LL_LPUART_InitTypeDef::BaudRate***
  This field defines expected LPUART communication baud rate.This feature can be modified afterwards using unitary function **LL_LPUART_SetBaudRate()**.
- ***uint32_t LL_LPUART_InitTypeDef::DataWidth***
  Specifies the number of data bits transmitted or received in a frame. This parameter can be a value of ***LPUART_LL_EC_DATAWIDTH***.This feature can be modified afterwards using unitary function **LL_LPUART_SetDataWidth()**.
- ***uint32_t LL_LPUART_InitTypeDef::StopBits***
  Specifies the number of stop bits transmitted. This parameter can be a value of ***LPUART_LL_EC_STOPBITS***.This feature can be modified afterwards using unitary function **LL_LPUART_SetStopBitsLength()**.
- ***uint32_t LL_LPUART_InitTypeDef::Parity***
  Specifies the parity mode. This parameter can be a value of ***LPUART_LL_EC_PARITY***.This feature can be modified afterwards using unitary function **LL_LPUART_SetParity()**.
- ***uint32_t LL_LPUART_InitTypeDef::TransferDirection***
  Specifies whether the Receive and/or Transmit mode is enabled or disabled. This parameter can be a value of ***LPUART_LL_EC_DIRECTION***.This feature can be modified afterwards using unitary function **LL_LPUART_SetTransferDirection()**.
- ***uint32_t LL_LPUART_InitTypeDef::HardwareFlowControl***
  Specifies whether the hardware flow control mode is enabled or disabled. This parameter can be a value of ***LPUART_LL_EC_HWCONTROL***.This feature can be modified afterwards using unitary function **LL_LPUART_SetHWFlowCtrl()**.

110.2 LPUART Firmware driver API description

The following section lists the various functions of the LPUART library.

110.2.1 Detailed description of functions

LL_LPUART_Enable

Function name

__STATIC_INLINE void LL_LPUART_Enable (USART_TypeDef * LPUARTx)

Function description

LPUART Enable.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 UE LL_LPUART_Enable

LL_LPUART_Disable

Function name

__STATIC_INLINE void LL_LPUART_Disable (USART_TypeDef * LPUARTx)

Function description

LPUART Disable.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Notes

- When LPUART is disabled, LPUART prescalers and outputs are stopped immediately, and current operations are discarded. The configuration of the LPUART is kept, but all the status flags, in the LPUARTx_ISR are set to their default values.
- In order to go into low-power mode without generating errors on the line, the TE bit must be reset before and the software must wait for the TC bit in the LPUART_ISR to be set before resetting the UE bit. The DMA requests are also reset when UE = 0 so the DMA channel must be disabled before resetting the UE bit.

Reference Manual to LL API cross reference:

- CR1 UE LL_LPUART_Disable

LL_LPUART_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabled (const USART_TypeDef * LPUARTx)

Function description

Indicate if LPUART is enabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 UE LL_LPUART_IsEnabled

LL_LPUART_EnableFIFO

Function name

__STATIC_INLINE void LL_LPUART_EnableFIFO (USART_TypeDef * LPUARTx)

Function description

FIFO Mode Enable.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 FIFOEN LL_LPUART_EnableFIFO

LL_LPUART_DisableFIFO

Function name

__STATIC_INLINE void LL_LPUART_DisableFIFO (USART_TypeDef * LPUARTx)

Function description

FIFO Mode Disable.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 FIFOEN LL_LPUART_DisableFIFO

LL_LPUART_IsEnabledFIFO

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledFIFO (const USART_TypeDef * LPUARTx)

Function description

Indicate if FIFO Mode is enabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 FIFOEN LL_LPUART_IsEnabledFIFO

LL_LPUART_SetTXFIFOThreshold

Function name

__STATIC_INLINE void LL_LPUART_SetTXFIFOThreshold (USART_TypeDef * LPUARTx, uint32_t Threshold)

Function description

Configure TX FIFO Threshold.

Parameters

- **LPUARTx:** LPUART Instance
- **Threshold:** This parameter can be one of the following values:
  - LL_LPUART_FIFOTHRESHOLD_1_8
  - LL_LPUART_FIFOTHRESHOLD_1_4
  - LL_LPUART_FIFOTHRESHOLD_1_2
  - LL_LPUART_FIFOTHRESHOLD_3_4
  - LL_LPUART_FIFOTHRESHOLD_7_8
  - LL_LPUART_FIFOTHRESHOLD_8_8

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 TXFTCFG LL_LPUART_SetTXFIFOThreshold

LL_LPUART_GetTXFIFOThreshold

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetTXFIFOThreshold (const USART_TypeDef * LPUARTx)

Function description

Return TX FIFO Threshold Configuration.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_FIFOTHRESHOLD_1_8
  - LL_LPUART_FIFOTHRESHOLD_1_4
  - LL_LPUART_FIFOTHRESHOLD_1_2
  - LL_LPUART_FIFOTHRESHOLD_3_4
  - LL_LPUART_FIFOTHRESHOLD_7_8
  - LL_LPUART_FIFOTHRESHOLD_8_8

Reference Manual to LL API cross reference:

- CR3 TXFTCFG LL_LPUART_GetTXFIFOThreshold

LL_LPUART_SetRXFIFOThreshold

Function name

__STATIC_INLINE void LL_LPUART_SetRXFIFOThreshold (USART_TypeDef * LPUARTx, uint32_t Threshold)

Function description

Configure RX FIFO Threshold.

Parameters

- **LPUARTx:** LPUART Instance
- **Threshold:** This parameter can be one of the following values:
  – LL_LPUART_FIFOTHRESHOLD_1_8
  – LL_LPUART_FIFOTHRESHOLD_1_4
  – LL_LPUART_FIFOTHRESHOLD_1_2
  – LL_LPUART_FIFOTHRESHOLD_3_4
  – LL_LPUART_FIFOTHRESHOLD_7_8
  – LL_LPUART_FIFOTHRESHOLD_8_8

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 RXFTCFG LL_LPUART_SetRXFIFOThreshold

LL_LPUART_GetRXFIFOThreshold

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetRXFIFOThreshold (const USART_TypeDef * LPUARTx)

Function description

Return RX FIFO Threshold Configuration.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_LPUART_FIFOTHRESHOLD_1_8
  – LL_LPUART_FIFOTHRESHOLD_1_4
  – LL_LPUART_FIFOTHRESHOLD_1_2
  – LL_LPUART_FIFOTHRESHOLD_3_4
  – LL_LPUART_FIFOTHRESHOLD_7_8
  – LL_LPUART_FIFOTHRESHOLD_8_8

Reference Manual to LL API cross reference:

- CR3 RXFTCFG LL_LPUART_GetRXFIFOThreshold

LL_LPUART_ConfigFIFOsThreshold

Function name

__STATIC_INLINE void LL_LPUART_ConfigFIFOsThreshold (USART_TypeDef * LPUARTx, uint32_t TXThreshold, uint32_t RXThreshold)

Function description

Configure TX and RX FIFOs Threshold.

Parameters

- **LPUARTx:** LPUART Instance
- **TXThreshold:** This parameter can be one of the following values:
  – LL_LPUART_FIFOTHRESHOLD_1_8
  – LL_LPUART_FIFOTHRESHOLD_1_4
  – LL_LPUART_FIFOTHRESHOLD_1_2
  – LL_LPUART_FIFOTHRESHOLD_3_4
  – LL_LPUART_FIFOTHRESHOLD_7_8
  – LL_LPUART_FIFOTHRESHOLD_8_8
- **RXThreshold:** This parameter can be one of the following values:
  – LL_LPUART_FIFOTHRESHOLD_1_8
  – LL_LPUART_FIFOTHRESHOLD_1_4
  – LL_LPUART_FIFOTHRESHOLD_1_2
  – LL_LPUART_FIFOTHRESHOLD_3_4
  – LL_LPUART_FIFOTHRESHOLD_7_8
  – LL_LPUART_FIFOTHRESHOLD_8_8

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 TXFTCFG LL_LPUART_ConfigFIFOsThreshold
- CR3 RXFTCFG LL_LPUART_ConfigFIFOsThreshold

LL_LPUART_EnableInStopMode

Function name

__STATIC_INLINE void LL_LPUART_EnableInStopMode (USART_TypeDef * LPUARTx)

Function description

LPUART enabled in STOP Mode.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Notes

- When this function is enabled, LPUART is able to wake up the MCU from Stop mode, provided that LPUART clock selection is HSI or LSE in RCC.

Reference Manual to LL API cross reference:

- CR1 UESM LL_LPUART_EnableInStopMode

LL_LPUART_DisableInStopMode

Function name

__STATIC_INLINE void LL_LPUART_DisableInStopMode (USART_TypeDef * LPUARTx)

Function description

LPUART disabled in STOP Mode.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Notes

- When this function is disabled, LPUART is not able to wake up the MCU from Stop mode

Reference Manual to LL API cross reference:

- CR1 UESM LL_LPUART_DisableInStopMode

LL_LPUART_IsEnabledInStopMode

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledInStopMode (const USART_TypeDef * LPUARTx)

Function description

Indicate if LPUART is enabled in STOP Mode (able to wake up MCU from Stop mode or not)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 UESM LL_LPUART_IsEnabledInStopMode

LL_LPUART_EnableDirectionRx

Function name

__STATIC_INLINE void LL_LPUART_EnableDirectionRx (USART_TypeDef * LPUARTx)

Function description

Receiver Enable (Receiver is enabled and begins searching for a start bit)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RE LL_LPUART_EnableDirectionRx

LL_LPUART_DisableDirectionRx

Function name

__STATIC_INLINE void LL_LPUART_DisableDirectionRx (USART_TypeDef * LPUARTx)

Function description

Receiver Disable.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RE LL_LPUART_DisableDirectionRx

LL_LPUART_EnableDirectionTx

Function name

__STATIC_INLINE void LL_LPUART_EnableDirectionTx (USART_TypeDef * LPUARTx)

Function description

Transmitter Enable.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TE LL_LPUART_EnableDirectionTx

LL_LPUART_DisableDirectionTx

Function name

__STATIC_INLINE void LL_LPUART_DisableDirectionTx (USART_TypeDef * LPUARTx)

Function description

Transmitter Disable.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TE LL_LPUART_DisableDirectionTx

LL_LPUART_SetTransferDirection

Function name

__STATIC_INLINE void LL_LPUART_SetTransferDirection (USART_TypeDef * LPUARTx, uint32_t TransferDirection)

Function description

Configure simultaneously enabled/disabled states of Transmitter and Receiver.

Parameters

- **LPUARTx:** LPUART Instance
- **TransferDirection:** This parameter can be one of the following values:
  - LL_LPUART_DIRECTION_NONE
  - LL_LPUART_DIRECTION_RX
  - LL_LPUART_DIRECTION_TX
  - LL_LPUART_DIRECTION_TX_RX

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RE LL_LPUART_SetTransferDirection
- CR1 TE LL_LPUART_SetTransferDirection

LL_LPUART_GetTransferDirection

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetTransferDirection (const USART_TypeDef * LPUARTx)

Function description

Return enabled/disabled states of Transmitter and Receiver.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_LPUART_DIRECTION_NONE
  – LL_LPUART_DIRECTION_RX
  – LL_LPUART_DIRECTION_TX
  – LL_LPUART_DIRECTION_TX_RX

Reference Manual to LL API cross reference:

- CR1 RE LL_LPUART_GetTransferDirection
- CR1 TE LL_LPUART_GetTransferDirection

LL_LPUART_SetParity

Function name

__STATIC_INLINE void LL_LPUART_SetParity (USART_TypeDef * LPUARTx, uint32_t Parity)

Function description

Configure Parity (enabled/disabled and parity mode if enabled)

Parameters

- **LPUARTx:** LPUART Instance
- **Parity:** This parameter can be one of the following values:
  – LL_LPUART_PARITY_NONE
  – LL_LPUART_PARITY_EVEN
  – LL_LPUART_PARITY_ODD

Return values

- **None:**

Notes

- This function selects if hardware parity control (generation and detection) is enabled or disabled. When the parity control is enabled (Odd or Even), computed parity bit is inserted at the MSB position (depending on data width) and parity is checked on the received data.

Reference Manual to LL API cross reference:

- CR1 PS LL_LPUART_SetParity
- CR1 PCE LL_LPUART_SetParity

LL_LPUART_GetParity

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetParity (const USART_TypeDef * LPUARTx)

Function description

Return Parity configuration (enabled/disabled and parity mode if enabled)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_PARITY_NONE
  - LL_LPUART_PARITY_EVEN
  - LL_LPUART_PARITY_ODD

Reference Manual to LL API cross reference:

- CR1 PS LL_LPUART_GetParity
- CR1 PCE LL_LPUART_GetParity

LL_LPUART_SetWakeUpMethod

Function name

__STATIC_INLINE void LL_LPUART_SetWakeUpMethod (USART_TypeDef * LPUARTx, uint32_t Method)

Function description

Set Receiver Wake Up method from Mute mode.

Parameters

- **LPUARTx:** LPUART Instance
- **Method:** This parameter can be one of the following values:
  - LL_LPUART_WAKEUP_IDLELINE
  - LL_LPUART_WAKEUP_ADDRESSMARK

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 WAKE LL_LPUART_SetWakeUpMethod

LL_LPUART_GetWakeUpMethod

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetWakeUpMethod (const USART_TypeDef * LPUARTx)

Function description

Return Receiver Wake Up method from Mute mode.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_WAKEUP_IDLELINE
  - LL_LPUART_WAKEUP_ADDRESSMARK

Reference Manual to LL API cross reference:

- CR1 WAKE LL_LPUART_GetWakeUpMethod

LL_LPUART_SetDataWidth

Function name

__STATIC_INLINE void LL_LPUART_SetDataWidth (USART_TypeDef * LPUARTx, uint32_t DataWidth)

Function description

Set Word length (nb of data bits, excluding start and stop bits)

Parameters

- **LPUARTx:** LPUART Instance
- **DataWidth:** This parameter can be one of the following values:
  - LL_LPUART_DATAWIDTH_7B
  - LL_LPUART_DATAWIDTH_8B
  - LL_LPUART_DATAWIDTH_9B

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 M LL_LPUART_SetDataWidth

LL_LPUART_GetDataWidth

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetDataWidth (const USART_TypeDef * LPUARTx)

Function description

Return Word length (i.e.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_DATAWIDTH_7B
  - LL_LPUART_DATAWIDTH_8B
  - LL_LPUART_DATAWIDTH_9B

Reference Manual to LL API cross reference:

- CR1 M LL_LPUART_GetDataWidth

LL_LPUART_EnableMuteMode

Function name

__STATIC_INLINE void LL_LPUART_EnableMuteMode (USART_TypeDef * LPUARTx)

Function description

Allow switch between Mute Mode and Active mode.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 MME LL_LPUART_EnableMuteMode

LL_LPUART_DisableMuteMode

Function name

__STATIC_INLINE void LL_LPUART_DisableMuteMode (USART_TypeDef * LPUARTx)

Function description

Prevent Mute Mode use.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 MME LL_LPUART_DisableMuteMode

LL_LPUART_IsEnabledMuteMode

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledMuteMode (const USART_TypeDef * LPUARTx)

Function description

Indicate if switch between Mute Mode and Active mode is allowed.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 MME LL_LPUART_IsEnabledMuteMode

LL_LPUART_SetPrescaler

Function name

__STATIC_INLINE void LL_LPUART_SetPrescaler (USART_TypeDef * LPUARTx, uint32_t PrescalerValue)

Function description

Configure Clock source prescaler for baudrate generator and oversampling.

Parameters

- **LPUARTx:** LPUART Instance
- **PrescalerValue:** This parameter can be one of the following values:
  – LL_LPUART_PRESCALER_DIV1
  – LL_LPUART_PRESCALER_DIV2
  – LL_LPUART_PRESCALER_DIV4
  – LL_LPUART_PRESCALER_DIV6
  – LL_LPUART_PRESCALER_DIV8
  – LL_LPUART_PRESCALER_DIV10
  – LL_LPUART_PRESCALER_DIV12
  – LL_LPUART_PRESCALER_DIV16
  – LL_LPUART_PRESCALER_DIV32
  – LL_LPUART_PRESCALER_DIV64
  – LL_LPUART_PRESCALER_DIV128
  – LL_LPUART_PRESCALER_DIV256

Return values

- **None:**

Reference Manual to LL API cross reference:

- PRESC PRESCALER LL_LPUART_SetPrescaler

LL_LPUART_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetPrescaler (const USART_TypeDef * LPUARTx)

Function description

Retrieve the Clock source prescaler for baudrate generator and oversampling.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_LPUART_PRESCALER_DIV1
  – LL_LPUART_PRESCALER_DIV2
  – LL_LPUART_PRESCALER_DIV4
  – LL_LPUART_PRESCALER_DIV6
  – LL_LPUART_PRESCALER_DIV8
  – LL_LPUART_PRESCALER_DIV10
  – LL_LPUART_PRESCALER_DIV12
  – LL_LPUART_PRESCALER_DIV16
  – LL_LPUART_PRESCALER_DIV32
  – LL_LPUART_PRESCALER_DIV64
  – LL_LPUART_PRESCALER_DIV128
  – LL_LPUART_PRESCALER_DIV256

Reference Manual to LL API cross reference:

- PRESC PRESCALER LL_LPUART_GetPrescaler

LL_LPUART_SetStopBitsLength

Function name

__STATIC_INLINE void LL_LPUART_SetStopBitsLength (USART_TypeDef * LPUARTx, uint32_t StopBits)

Function description

Set the length of the stop bits.

Parameters

- **LPUARTx:** LPUART Instance
- **StopBits:** This parameter can be one of the following values:
  – LL_LPUART_STOPBITS_1
  – LL_LPUART_STOPBITS_2

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 STOP LL_LPUART_SetStopBitsLength

LL_LPUART_GetStopBitsLength

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetStopBitsLength (const USART_TypeDef * LPUARTx)

Function description

Retrieve the length of the stop bits.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_LPUART_STOPBITS_1
  – LL_LPUART_STOPBITS_2

Reference Manual to LL API cross reference:

- CR2 STOP LL_LPUART_GetStopBitsLength

LL_LPUART_ConfigCharacter

Function name

__STATIC_INLINE void LL_LPUART_ConfigCharacter (USART_TypeDef * LPUARTx, uint32_t DataWidth, uint32_t Parity, uint32_t StopBits)

Function description

Configure Character frame format (Datawidth, Parity control, Stop Bits)

Parameters

- **LPUARTx:** LPUART Instance
- **DataWidth:** This parameter can be one of the following values:
  - LL_LPUART_DATAWIDTH_7B
  - LL_LPUART_DATAWIDTH_8B
  - LL_LPUART_DATAWIDTH_9B
- **Parity:** This parameter can be one of the following values:
  - LL_LPUART_PARITY_NONE
  - LL_LPUART_PARITY_EVEN
  - LL_LPUART_PARITY_ODD
- **StopBits:** This parameter can be one of the following values:
  - LL_LPUART_STOPBITS_1
  - LL_LPUART_STOPBITS_2

Return values

- **None:**

Notes

- Call of this function is equivalent to following function call sequence : Data Width configuration using LL_LPUART_SetDataWidth() functionParity Control and mode configuration using LL_LPUART_SetParity() functionStop bits configuration using LL_LPUART_SetStopBitsLength() function

Reference Manual to LL API cross reference:

- CR1 PS LL_LPUART_ConfigCharacter
- CR1 PCE LL_LPUART_ConfigCharacter
- CR1 M LL_LPUART_ConfigCharacter
- CR2 STOP LL_LPUART_ConfigCharacter

LL_LPUART_SetTXRXSwap

Function name

__STATIC_INLINE void LL_LPUART_SetTXRXSwap (USART_TypeDef * LPUARTx, uint32_t SwapConfig)

Function description

Configure TX/RX pins swapping setting.

Parameters

- **LPUARTx:** LPUART Instance
- **SwapConfig:** This parameter can be one of the following values:
  - LL_LPUART_TXRX_STANDARD
  - LL_LPUART_TXRX_SWAPPED

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 SWAP LL_LPUART_SetTXRXSwap

LL_LPUART_GetTXRXSwap

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetTXRXSwap (const USART_TypeDef * LPUARTx)

Function description

Retrieve TX/RX pins swapping configuration.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_LPUART_TXRX_STANDARD
  – LL_LPUART_TXRX_SWAPPED

Reference Manual to LL API cross reference:

- CR2 SWAP LL_LPUART_GetTXRXSwap

LL_LPUART_SetRXPinLevel

Function name

__STATIC_INLINE void LL_LPUART_SetRXPinLevel (USART_TypeDef * LPUARTx, uint32_t PinInvMethod)

Function description

Configure RX pin active level logic.

Parameters

- **LPUARTx:** LPUART Instance
- **PinInvMethod:** This parameter can be one of the following values:
  – LL_LPUART_RXPIN_LEVEL_STANDARD
  – LL_LPUART_RXPIN_LEVEL_INVERTED

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 RXINV LL_LPUART_SetRXPinLevel

LL_LPUART_GetRXPinLevel

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetRXPinLevel (const USART_TypeDef * LPUARTx)

Function description

Retrieve RX pin active level logic configuration.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_LPUART_RXPIN_LEVEL_STANDARD
  – LL_LPUART_RXPIN_LEVEL_INVERTED

Reference Manual to LL API cross reference:

- CR2 RXINV LL_LPUART_GetRXPinLevel

LL_LPUART_SetTXPinLevel

Function name

__STATIC_INLINE void LL_LPUART_SetTXPinLevel (USART_TypeDef * LPUARTx, uint32_t PinInvMethod)

Function description

Configure TX pin active level logic.

Parameters

- **LPUARTx:** LPUART Instance
- **PinInvMethod:** This parameter can be one of the following values:
  – LL_LPUART_TXPIN_LEVEL_STANDARD
  – LL_LPUART_TXPIN_LEVEL_INVERTED

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 TXINV LL_LPUART_SetTXPinLevel

LL_LPUART_GetTXPinLevel

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetTXPinLevel (const USART_TypeDef * LPUARTx)

Function description

Retrieve TX pin active level logic configuration.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_LPUART_TXPIN_LEVEL_STANDARD
  – LL_LPUART_TXPIN_LEVEL_INVERTED

Reference Manual to LL API cross reference:

- CR2 TXINV LL_LPUART_GetTXPinLevel

LL_LPUART_SetBinaryDataLogic

Function name

__STATIC_INLINE void LL_LPUART_SetBinaryDataLogic (USART_TypeDef * LPUARTx, uint32_t DataLogic)

Function description

Configure Binary data logic.

Parameters

- **LPUARTx:** LPUART Instance
- **DataLogic:** This parameter can be one of the following values:
  – LL_LPUART_BINARY_LOGIC_POSITIVE
  – LL_LPUART_BINARY_LOGIC_NEGATIVE

Return values

- **None:**

Notes

- Allow to define how Logical data from the data register are send/received : either in positive/direct logic (1=H, 0=L) or in negative/inverse logic (1=L, 0=H)

Reference Manual to LL API cross reference:

- CR2 DATAINV LL_LPUART_SetBinaryDataLogic

LL_LPUART_GetBinaryDataLogic

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetBinaryDataLogic (const USART_TypeDef * LPUARTx)

Function description

Retrieve Binary data configuration.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_LPUART_BINARY_LOGIC_POSITIVE
  – LL_LPUART_BINARY_LOGIC_NEGATIVE

Reference Manual to LL API cross reference:

- CR2 DATAINV LL_LPUART_GetBinaryDataLogic

LL_LPUART_SetTransferBitOrder

Function name

__STATIC_INLINE void LL_LPUART_SetTransferBitOrder (USART_TypeDef * LPUARTx, uint32_t BitOrder)

Function description

Configure transfer bit order (either Less or Most Significant Bit First)

Parameters

- **LPUARTx:** LPUART Instance
- **BitOrder:** This parameter can be one of the following values:
  – LL_LPUART_BITORDER_LSBFIRST
  – LL_LPUART_BITORDER_MSBFIRST

Return values

- **None:**

Notes

- MSB First means data is transmitted/received with the MSB first, following the start bit. LSB First means data is transmitted/received with data bit 0 first, following the start bit.

Reference Manual to LL API cross reference:

- CR2 MSBFIRST LL_LPUART_SetTransferBitOrder

LL_LPUART_GetTransferBitOrder

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetTransferBitOrder (const USART_TypeDef * LPUARTx)

Function description

Return transfer bit order (either Less or Most Significant Bit First)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_LPUART_BITORDER_LSBFIRST
  – LL_LPUART_BITORDER_MSBFIRST

Notes

- MSB First means data is transmitted/received with the MSB first, following the start bit. LSB First means data is transmitted/received with data bit 0 first, following the start bit.

Reference Manual to LL API cross reference:

- CR2 MSBFIRST LL_LPUART_GetTransferBitOrder

LL_LPUART_ConfigNodeAddress

Function name

__STATIC_INLINE void LL_LPUART_ConfigNodeAddress (USART_TypeDef * LPUARTx, uint32_t AddressLen, uint32_t NodeAddress)

Function description

Set Address of the LPUART node.

Parameters

- **LPUARTx:** LPUART Instance
- **AddressLen:** This parameter can be one of the following values:
  – LL_LPUART_ADDRESS_DETECT_4B
  – LL_LPUART_ADDRESS_DETECT_7B
- **NodeAddress:** 4 or 7 bit Address of the LPUART node.

Return values

- **None:**

Notes

- This is used in multiprocessor communication during Mute mode or Stop mode, for wake up with address mark detection.
- 4bits address node is used when 4-bit Address Detection is selected in ADDM7. (b7-b4 should be set to 0) 8bits address node is used when 7-bit Address Detection is selected in ADDM7. (This is used in multiprocessor communication during Mute mode or Stop mode, for wake up with 7-bit address mark detection. The MSB of the character sent by the transmitter should be equal to 1. It may also be used for character detection during normal reception, Mute mode inactive (for example, end of block detection in ModBus protocol). In this case, the whole received character (8-bit) is compared to the ADD[7:0] value and CMF flag is set on match)

Reference Manual to LL API cross reference:

- CR2 ADD LL_LPUART_ConfigNodeAddress
- CR2 ADDM7 LL_LPUART_ConfigNodeAddress

LL_LPUART_GetNodeAddress

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetNodeAddress (const USART_TypeDef * LPUARTx)

Function description

Return 8 bit Address of the LPUART node as set in ADD field of CR2.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Address:** of the LPUART node (Value between Min_Data=0 and Max_Data=255)

Notes

- If 4-bit Address Detection is selected in ADDM7, only 4bits (b3-b0) of returned value are relevant (b31-b4 are not relevant) If 7-bit Address Detection is selected in ADDM7, only 8bits (b7-b0) of returned value are relevant (b31-b8 are not relevant)

Reference Manual to LL API cross reference:

- CR2 ADD LL_LPUART_GetNodeAddress

LL_LPUART_GetNodeAddressLen

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetNodeAddressLen (const USART_TypeDef * LPUARTx)

Function description

Return Length of Node Address used in Address Detection mode (7-bit or 4-bit)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_ADDRESS_DETECT_4B
  - LL_LPUART_ADDRESS_DETECT_7B

Reference Manual to LL API cross reference:

- CR2 ADDM7 LL_LPUART_GetNodeAddressLen

LL_LPUART_EnableRTSHWFlowCtrl

Function name

__STATIC_INLINE void LL_LPUART_EnableRTSHWFlowCtrl (USART_TypeDef * LPUARTx)

Function description

Enable RTS HW Flow Control.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 RTSE LL_LPUART_EnableRTSHWFlowCtrl

LL_LPUART_DisableRTSHWFlowCtrl

Function name

__STATIC_INLINE void LL_LPUART_DisableRTSHWFlowCtrl (USART_TypeDef * LPUARTx)

Function description

Disable RTS HW Flow Control.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 RTSE LL_LPUART_DisableRTSHWFlowCtrl

LL_LPUART_EnableCTSHWFlowCtrl

Function name

__STATIC_INLINE void LL_LPUART_EnableCTSHWFlowCtrl (USART_TypeDef * LPUARTx)

Function description

Enable CTS HW Flow Control.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 CTSE LL_LPUART_EnableCTSHWFlowCtrl

LL_LPUART_DisableCTSHWFlowCtrl

Function name

__STATIC_INLINE void LL_LPUART_DisableCTSHWFlowCtrl (USART_TypeDef * LPUARTx)

Function description

Disable CTS HW Flow Control.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 CTSE LL_LPUART_DisableCTSHWFlowCtrl

LL_LPUART_SetHWFlowCtrl

Function name

__STATIC_INLINE void LL_LPUART_SetHWFlowCtrl (USART_TypeDef * LPUARTx, uint32_t HardwareFlowControl)

Function description

Configure HW Flow Control mode (both CTS and RTS)

Parameters

- **LPUARTx:** LPUART Instance
- **HardwareFlowControl:** This parameter can be one of the following values:
  – LL_LPUART_HWCONTROL_NONE
  – LL_LPUART_HWCONTROL_RTS
  – LL_LPUART_HWCONTROL_CTS
  – LL_LPUART_HWCONTROL_RTS_CTS

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 RTSE LL_LPUART_SetHWFlowCtrl
- CR3 CTSE LL_LPUART_SetHWFlowCtrl

LL_LPUART_GetHWFlowCtrl

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetHWFlowCtrl (const USART_TypeDef * LPUARTx)

Function description

Return HW Flow Control configuration (both CTS and RTS)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_LPUART_HWCONTROL_NONE
  – LL_LPUART_HWCONTROL_RTS
  – LL_LPUART_HWCONTROL_CTS
  – LL_LPUART_HWCONTROL_RTS_CTS

Reference Manual to LL API cross reference:

- CR3 RTSE LL_LPUART_GetHWFlowCtrl
- CR3 CTSE LL_LPUART_GetHWFlowCtrl

LL_LPUART_EnableOverrunDetect

Function name

__STATIC_INLINE void LL_LPUART_EnableOverrunDetect (USART_TypeDef * LPUARTx)

Function description

Enable Overrun detection.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 OVRDIS LL_LPUART_EnableOverrunDetect

LL_LPUART_DisableOverrunDetect

Function name

__STATIC_INLINE void LL_LPUART_DisableOverrunDetect (USART_TypeDef * LPUARTx)

Function description

Disable Overrun detection.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 OVRDIS LL_LPUART_DisableOverrunDetect

LL_LPUART_IsEnabledOverrunDetect

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledOverrunDetect (const USART_TypeDef * LPUARTx)

Function description

Indicate if Overrun detection is enabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 OVRDIS LL_LPUART_IsEnabledOverrunDetect

LL_LPUART_SetBaudRate

Function name

__STATIC_INLINE void LL_LPUART_SetBaudRate (USART_TypeDef * LPUARTx, uint32_t PeriphClk, uint32_t PrescalerValue, uint32_t BaudRate)

Function description

Configure LPUART BRR register for achieving expected Baud Rate value.

Parameters

- **LPUARTx:** LPUART Instance
- **PeriphClk:** Peripheral Clock
- **PrescalerValue:** This parameter can be one of the following values:
  - LL_LPUART_PRESCALER_DIV1
  - LL_LPUART_PRESCALER_DIV2
  - LL_LPUART_PRESCALER_DIV4
  - LL_LPUART_PRESCALER_DIV6
  - LL_LPUART_PRESCALER_DIV8
  - LL_LPUART_PRESCALER_DIV10
  - LL_LPUART_PRESCALER_DIV12
  - LL_LPUART_PRESCALER_DIV16
  - LL_LPUART_PRESCALER_DIV32
  - LL_LPUART_PRESCALER_DIV64
  - LL_LPUART_PRESCALER_DIV128
  - LL_LPUART_PRESCALER_DIV256
- **BaudRate:** Baud Rate

Return values

- **None:**

Notes

- Compute and set LPUARTDIV value in BRR Register (full BRR content) according to used Peripheral Clock and expected Baud Rate values
- Peripheral clock and Baud Rate values provided as function parameters should be valid (Baud rate value ! = 0).
- Provided that LPUARTx_BRR must be > = 0x300 and LPUART_BRR is 20-bit, a care should be taken when generating high baud rates using high PeriphClk values. PeriphClk must be in the range [3 x BaudRate, 4096 x BaudRate].

Reference Manual to LL API cross reference:

- BRR BRR LL_LPUART_SetBaudRate

LL_LPUART_GetBaudRate

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetBaudRate (const USART_TypeDef * LPUARTx, uint32_t PeriphClk, uint32_t PrescalerValue)

Function description

Return current Baud Rate value, according to LPUARTDIV present in BRR register (full BRR content), and to used Peripheral Clock values.

Parameters

- **LPUARTx:** LPUART Instance
- **PeriphClk:** Peripheral Clock
- **PrescalerValue:** This parameter can be one of the following values:
  – LL_LPUART_PRESCALER_DIV1
  – LL_LPUART_PRESCALER_DIV2
  – LL_LPUART_PRESCALER_DIV4
  – LL_LPUART_PRESCALER_DIV6
  – LL_LPUART_PRESCALER_DIV8
  – LL_LPUART_PRESCALER_DIV10
  – LL_LPUART_PRESCALER_DIV12
  – LL_LPUART_PRESCALER_DIV16
  – LL_LPUART_PRESCALER_DIV32
  – LL_LPUART_PRESCALER_DIV64
  – LL_LPUART_PRESCALER_DIV128
  – LL_LPUART_PRESCALER_DIV256

Return values

- **Baud:** Rate

Notes

- In case of non-initialized or invalid value stored in BRR register, value 0 will be returned.

Reference Manual to LL API cross reference:

- BRR BRR LL_LPUART_GetBaudRate

LL_LPUART_EnableHalfDuplex

Function name

__STATIC_INLINE void LL_LPUART_EnableHalfDuplex (USART_TypeDef * LPUARTx)

Function description

Enable Single Wire Half-Duplex mode.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 HDSEL LL_LPUART_EnableHalfDuplex

LL_LPUART_DisableHalfDuplex

Function name

__STATIC_INLINE void LL_LPUART_DisableHalfDuplex (USART_TypeDef * LPUARTx)

Function description

Disable Single Wire Half-Duplex mode.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 HDSEL LL_LPUART_DisableHalfDuplex

LL_LPUART_IsEnabledHalfDuplex

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledHalfDuplex (const USART_TypeDef * LPUARTx)

Function description

Indicate if Single Wire Half-Duplex mode is enabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 HDSEL LL_LPUART_IsEnabledHalfDuplex

LL_LPUART_SetDEDeassertionTime

Function name

__STATIC_INLINE void LL_LPUART_SetDEDeassertionTime (USART_TypeDef * LPUARTx, uint32_t Time)

Function description

Set DEDT (Driver Enable De-Assertion Time), Time value expressed on 5 bits ([4:0] bits).

Parameters

- **LPUARTx:** LPUART Instance
- **Time:** Value between Min_Data=0 and Max_Data=31

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 DEDT LL_LPUART_SetDEDeassertionTime

LL_LPUART_GetDEDeassertionTime

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetDEDeassertionTime (const USART_TypeDef * LPUARTx)

Function description

Return DEDT (Driver Enable De-Assertion Time)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Time:** value expressed on 5 bits ([4:0] bits) : c

Reference Manual to LL API cross reference:

- CR1 DEDT LL_LPUART_GetDEDeassertionTime

LL_LPUART_SetDEAssertionTime

Function name

__STATIC_INLINE void LL_LPUART_SetDEAssertionTime (USART_TypeDef * LPUARTx, uint32_t Time)

Function description

Set DEAT (Driver Enable Assertion Time), Time value expressed on 5 bits ([4:0] bits).

Parameters

- **LPUARTx:** LPUART Instance
- **Time:** Value between Min_Data=0 and Max_Data=31

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 DEAT LL_LPUART_SetDEAssertionTime

LL_LPUART_GetDEAssertionTime

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetDEAssertionTime (const USART_TypeDef * LPUARTx)

Function description

Return DEAT (Driver Enable Assertion Time)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Time:** value expressed on 5 bits ([4:0] bits) : Time Value between Min_Data=0 and Max_Data=31

Reference Manual to LL API cross reference:

- CR1 DEAT LL_LPUART_GetDEAssertionTime

LL_LPUART_EnableDEMode

Function name

__STATIC_INLINE void LL_LPUART_EnableDEMode (USART_TypeDef * LPUARTx)

Function description

Enable Driver Enable (DE) Mode.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DEM LL_LPUART_EnableDEMode

LL_LPUART_DisableDEMode

Function name

__STATIC_INLINE void LL_LPUART_DisableDEMode (USART_TypeDef * LPUARTx)

Function description

Disable Driver Enable (DE) Mode.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DEM LL_LPUART_DisableDEMode

LL_LPUART_IsEnabledDEMode

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledDEMode (const USART_TypeDef * LPUARTx)

Function description

Indicate if Driver Enable (DE) Mode is enabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 DEM LL_LPUART_IsEnabledDEMode

LL_LPUART_SetDESignalPolarity

Function name

__STATIC_INLINE void LL_LPUART_SetDESignalPolarity (USART_TypeDef * LPUARTx, uint32_t Polarity)

Function description

Select Driver Enable Polarity.

Parameters

- **LPUARTx:** LPUART Instance
- **Polarity:** This parameter can be one of the following values:
  – LL_LPUART_DE_POLARITY_HIGH
  – LL_LPUART_DE_POLARITY_LOW

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DEP LL_LPUART_SetDESignalPolarity

LL_LPUART_GetDESignalPolarity

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetDESignalPolarity (const USART_TypeDef * LPUARTx)

Function description

Return Driver Enable Polarity.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_LPUART_DE_POLARITY_HIGH
  – LL_LPUART_DE_POLARITY_LOW

Reference Manual to LL API cross reference:

- CR3 DEP LL_LPUART_GetDESignalPolarity

LL_LPUART_IsActiveFlag_PE

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_PE (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Parity Error Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR PE LL_LPUART_IsActiveFlag_PE

LL_LPUART_IsActiveFlag_FE

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_FE (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Framing Error Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR FE LL_LPUART_IsActiveFlag_FE

LL_LPUART_IsActiveFlag_NE

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_NE (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Noise error detected Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR NE LL_LPUART_IsActiveFlag_NE

LL_LPUART_IsActiveFlag_ORE

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_ORE (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART OverRun Error Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR ORE LL_LPUART_IsActiveFlag_ORE

LL_LPUART_IsActiveFlag_IDLE

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_IDLE (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART IDLE line detected Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR IDLE LL_LPUART_IsActiveFlag_IDLE

LL_LPUART_IsActiveFlag_RXNE_RXFNE

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_RXNE_RXFNE (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Read Data Register or LPUART RX FIFO Not Empty Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR RXNE_RXFNE LL_LPUART_IsActiveFlag_RXNE_RXFNE

LL_LPUART_IsActiveFlag_TC

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_TC (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Transmission Complete Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TC LL_LPUART_IsActiveFlag_TC

LL_LPUART_IsActiveFlag_TXE_TXFNF

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_TXE_TXFNF (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Transmit Data Register Empty or LPUART TX FIFO Not Full Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TXE_TXFNF LL_LPUART_IsActiveFlag_TXE_TXFNF

LL_LPUART_IsActiveFlag_nCTS

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_nCTS (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART CTS interrupt Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR CTSIF LL_LPUART_IsActiveFlag_nCTS

LL_LPUART_IsActiveFlag_CTS

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_CTS (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART CTS Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR CTS LL_LPUART_IsActiveFlag_CTS

LL_LPUART_IsActiveFlag_BUSY

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_BUSY (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Busy Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR BUSY LL_LPUART_IsActiveFlag_BUSY

LL_LPUART_IsActiveFlag_CM

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_CM (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Character Match Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR CMF LL_LPUART_IsActiveFlag_CM

LL_LPUART_IsActiveFlag_SBK

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_SBK (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Send Break Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR SBKF LL_LPUART_IsActiveFlag_SBK

LL_LPUART_IsActiveFlag_RWU

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_RWU (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Receive Wake Up from mute mode Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR RWU LL_LPUART_IsActiveFlag_RWU

LL_LPUART_IsActiveFlag_TEACK

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_TEACK (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Transmit Enable Acknowledge Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TEACK LL_LPUART_IsActiveFlag_TEACK

LL_LPUART_IsActiveFlag_REACK

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_REACK (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Receive Enable Acknowledge Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR REACK LL_LPUART_IsActiveFlag_REACK

LL_LPUART_IsActiveFlag_TXFE

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_TXFE (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART TX FIFO Empty Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TXFE LL_LPUART_IsActiveFlag_TXFE

LL_LPUART_IsActiveFlag_RXFF

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_RXFF (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART RX FIFO Full Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR RXFF LL_LPUART_IsActiveFlag_RXFF

LL_LPUART_IsActiveFlag_TXFT

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_TXFT (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART TX FIFO Threshold Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TXFT LL_LPUART_IsActiveFlag_TXFT

LL_LPUART_IsActiveFlag_RXFT

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_RXFT (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART RX FIFO Threshold Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR RXFT LL_LPUART_IsActiveFlag_RXFT

LL_LPUART_ClearFlag_PE

Function name

__STATIC_INLINE void LL_LPUART_ClearFlag_PE (USART_TypeDef * LPUARTx)

Function description

Clear Parity Error Flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR PECF LL_LPUART_ClearFlag_PE

LL_LPUART_ClearFlag_FE

Function name

__STATIC_INLINE void LL_LPUART_ClearFlag_FE (USART_TypeDef * LPUARTx)

Function description

Clear Framing Error Flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR FECF LL_LPUART_ClearFlag_FE

LL_LPUART_ClearFlag_NE

Function name

__STATIC_INLINE void LL_LPUART_ClearFlag_NE (USART_TypeDef * LPUARTx)

Function description

Clear Noise detected Flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR NECF LL_LPUART_ClearFlag_NE

LL_LPUART_ClearFlag_ORE

Function name

__STATIC_INLINE void LL_LPUART_ClearFlag_ORE (USART_TypeDef * LPUARTx)

Function description

Clear OverRun Error Flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR ORECF LL_LPUART_ClearFlag_ORE

LL_LPUART_ClearFlag_IDLE

Function name

__STATIC_INLINE void LL_LPUART_ClearFlag_IDLE (USART_TypeDef * LPUARTx)

Function description

Clear IDLE line detected Flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR IDLECF LL_LPUART_ClearFlag_IDLE

LL_LPUART_ClearFlag_TC

Function name

__STATIC_INLINE void LL_LPUART_ClearFlag_TC (USART_TypeDef * LPUARTx)

Function description

Clear Transmission Complete Flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR TCCF LL_LPUART_ClearFlag_TC

LL_LPUART_ClearFlag_nCTS

Function name

__STATIC_INLINE void LL_LPUART_ClearFlag_nCTS (USART_TypeDef * LPUARTx)

Function description

Clear CTS Interrupt Flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CTSCF LL_LPUART_ClearFlag_nCTS

LL_LPUART_ClearFlag_CM

Function name

__STATIC_INLINE void LL_LPUART_ClearFlag_CM (USART_TypeDef * LPUARTx)

Function description

Clear Character Match Flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CMCF LL_LPUART_ClearFlag_CM

LL_LPUART_EnableIT_IDLE

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_IDLE (USART_TypeDef * LPUARTx)

Function description

Enable IDLE Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 IDLEIE LL_LPUART_EnableIT_IDLE

LL_LPUART_EnableIT_RXNE_RXFNE

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_RXNE_RXFNE (USART_TypeDef * LPUARTx)

Function description

Enable RX Not Empty and RX FIFO Not Empty Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RXNEIE_RXFNEIE LL_LPUART_EnableIT_RXNE_RXFNE

LL_LPUART_EnableIT_TC

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_TC (USART_TypeDef * LPUARTx)

Function description

Enable Transmission Complete Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TCIE LL_LPUART_EnableIT_TC

LL_LPUART_EnableIT_TXE_TXFNF

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_TXE_TXFNF (USART_TypeDef * LPUARTx)

Function description

Enable TX Empty and TX FIFO Not Full Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TXEIE_TXFNFIE LL_LPUART_EnableIT_TXE_TXFNF

LL_LPUART_EnableIT_PE

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_PE (USART_TypeDef * LPUARTx)

Function description

Enable Parity Error Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 PEIE LL_LPUART_EnableIT_PE

LL_LPUART_EnableIT_CM

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_CM (USART_TypeDef * LPUARTx)

Function description

Enable Character Match Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CMIE LL_LPUART_EnableIT_CM

LL_LPUART_EnableIT_TXFE

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_TXFE (USART_TypeDef * LPUARTx)

Function description

Enable TX FIFO Empty Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TXFEIE LL_LPUART_EnableIT_TXFE

LL_LPUART_EnableIT_RXFF

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_RXFF (USART_TypeDef * LPUARTx)

Function description

Enable RX FIFO Full Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RXFFIE LL_LPUART_EnableIT_RXFF

LL_LPUART_EnableIT_ERROR

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_ERROR (USART_TypeDef * LPUARTx)

Function description

Enable Error Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Notes

- When set, Error Interrupt Enable Bit is enabling interrupt generation in case of a framing error, overrun error or noise flag (FE=1 or ORE=1 or NF=1 in the LPUARTx_ISR register). 0: Interrupt is inhibited1: An interrupt is generated when FE=1 or ORE=1 or NF=1 in the LPUARTx_ISR register.

Reference Manual to LL API cross reference:

- CR3 EIE LL_LPUART_EnableIT_ERROR

LL_LPUART_EnableIT_CTS

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_CTS (USART_TypeDef * LPUARTx)

Function description

Enable CTS Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 CTSIE LL_LPUART_EnableIT_CTS

LL_LPUART_EnableIT_TXFT

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_TXFT (USART_TypeDef * LPUARTx)

Function description

Enable TX FIFO Threshold Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 TXFTIE LL_LPUART_EnableIT_TXFT

LL_LPUART_EnableIT_RXFT

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_RXFT (USART_TypeDef * LPUARTx)

Function description

Enable RX FIFO Threshold Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 RXFTIE LL_LPUART_EnableIT_RXFT

LL_LPUART_DisableIT_IDLE

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_IDLE (USART_TypeDef * LPUARTx)

Function description

Disable IDLE Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 IDLEIE LL_LPUART_DisableIT_IDLE

LL_LPUART_DisableIT_RXNE_RXFNE

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_RXNE_RXFNE (USART_TypeDef * LPUARTx)

Function description

Disable RX Not Empty and RX FIFO Not Empty Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RXNEIE_RXFNEIE LL_LPUART_DisableIT_RXNE_RXFNE

LL_LPUART_DisableIT_TC

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_TC (USART_TypeDef * LPUARTx)

Function description

Disable Transmission Complete Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TCIE LL_LPUART_DisableIT_TC

LL_LPUART_DisableIT_TXE_TXFNF

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_TXE_TXFNF (USART_TypeDef * LPUARTx)

Function description

Disable TX Empty and TX FIFO Not Full Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TXEIE_TXFNFIE LL_LPUART_DisableIT_TXE_TXFNF

LL_LPUART_DisableIT_PE

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_PE (USART_TypeDef * LPUARTx)

Function description

Disable Parity Error Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 PEIE LL_LPUART_DisableIT_PE

LL_LPUART_DisableIT_CM

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_CM (USART_TypeDef * LPUARTx)

Function description

Disable Character Match Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CMIE LL_LPUART_DisableIT_CM

LL_LPUART_DisableIT_TXFE

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_TXFE (USART_TypeDef * LPUARTx)

Function description

Disable TX FIFO Empty Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TXFEIE LL_LPUART_DisableIT_TXFE

LL_LPUART_DisableIT_RXFF

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_RXFF (USART_TypeDef * LPUARTx)

Function description

Disable RX FIFO Full Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RXFFIE LL_LPUART_DisableIT_RXFF

LL_LPUART_DisableIT_ERROR

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_ERROR (USART_TypeDef * LPUARTx)

Function description

Disable Error Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Notes

- When set, Error Interrupt Enable Bit is enabling interrupt generation in case of a framing error, overrun error or noise flag (FE=1 or ORE=1 or NF=1 in the LPUARTx_ISR register). 0: Interrupt is inhibited1: An interrupt is generated when FE=1 or ORE=1 or NF=1 in the LPUARTx_ISR register.

Reference Manual to LL API cross reference:

- CR3 EIE LL_LPUART_DisableIT_ERROR

LL_LPUART_DisableIT_CTS

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_CTS (USART_TypeDef * LPUARTx)

Function description

Disable CTS Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 CTSIE LL_LPUART_DisableIT_CTS

LL_LPUART_DisableIT_TXFT

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_TXFT (USART_TypeDef * LPUARTx)

Function description

Disable TX FIFO Threshold Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 TXFTIE LL_LPUART_DisableIT_TXFT

LL_LPUART_DisableIT_RXFT

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_RXFT (USART_TypeDef * LPUARTx)

Function description

Disable RX FIFO Threshold Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 RXFTIE LL_LPUART_DisableIT_RXFT

LL_LPUART_IsEnabledIT_IDLE

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledIT_IDLE (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART IDLE Interrupt source is enabled or disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 IDLEIE LL_LPUART_IsEnabledIT_IDLE

LL_LPUART_IsEnabledIT_RXNE_RXFNE

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledIT_RXNE_RXFNE (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART RX Not Empty and LPUART RX FIFO Not Empty Interrupt is enabled or disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 RXNEIE_RXFNEIE LL_LPUART_IsEnabledIT_RXNE_RXFNE

LL_LPUART_IsEnabledIT_TC

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledIT_TC (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Transmission Complete Interrupt is enabled or disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 TCIE LL_LPUART_IsEnabledIT_TC

LL_LPUART_IsEnabledIT_TXE_TXFNF

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledIT_TXE_TXFNF (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART TX Empty and LPUART TX FIFO Not Full Interrupt is enabled or disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 TXEIE_TXFNFIE LL_LPUART_IsEnabledIT_TXE_TXFNF

LL_LPUART_IsEnabledIT_PE

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledIT_PE (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Parity Error Interrupt is enabled or disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 PEIE LL_LPUART_IsEnabledIT_PE

LL_LPUART_IsEnabledIT_CM

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledIT_CM (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Character Match Interrupt is enabled or disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 CMIE LL_LPUART_IsEnabledIT_CM

LL_LPUART_IsEnabledIT_TXFE

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledIT_TXFE (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART TX FIFO Empty Interrupt is enabled or disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 TXFEIE LL_LPUART_IsEnabledIT_TXFE

LL_LPUART_IsEnabledIT_RXFF

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledIT_RXFF (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART RX FIFO Full Interrupt is enabled or disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 RXFFIE LL_LPUART_IsEnabledIT_RXFF

LL_LPUART_IsEnabledIT_ERROR

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledIT_ERROR (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Error Interrupt is enabled or disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 EIE LL_LPUART_IsEnabledIT_ERROR

LL_LPUART_IsEnabledIT_CTS

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledIT_CTS (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART CTS Interrupt is enabled or disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 CTSIE LL_LPUART_IsEnabledIT_CTS

LL_LPUART_IsEnabledIT_TXFT

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledIT_TXFT (const USART_TypeDef * LPUARTx)

Function description

Check if LPUART TX FIFO Threshold Interrupt is enabled or disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 TXFTIE LL_LPUART_IsEnabledIT_TXFT

LL_LPUART_IsEnabledIT_RXFT

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledIT_RXFT (const USART_TypeDef * LPUARTx)

Function description

Check if LPUART RX FIFO Threshold Interrupt is enabled or disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 RXFTIE LL_LPUART_IsEnabledIT_RXFT

LL_LPUART_EnableDMAReq_RX

Function name

__STATIC_INLINE void LL_LPUART_EnableDMAReq_RX (USART_TypeDef * LPUARTx)

Function description

Enable DMA Mode for reception.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DMAR LL_LPUART_EnableDMAReq_RX

LL_LPUART_DisableDMAReq_RX

Function name

__STATIC_INLINE void LL_LPUART_DisableDMAReq_RX (USART_TypeDef * LPUARTx)

Function description

Disable DMA Mode for reception.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DMAR LL_LPUART_DisableDMAReq_RX

LL_LPUART_IsEnabledDMAReq_RX

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledDMAReq_RX (const USART_TypeDef * LPUARTx)

Function description

Check if DMA Mode is enabled for reception.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 DMAR LL_LPUART_IsEnabledDMAReq_RX

LL_LPUART_EnableDMAReq_TX

Function name

__STATIC_INLINE void LL_LPUART_EnableDMAReq_TX (USART_TypeDef * LPUARTx)

Function description

Enable DMA Mode for transmission.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DMAT LL_LPUART_EnableDMAReq_TX

LL_LPUART_DisableDMAReq_TX

Function name

__STATIC_INLINE void LL_LPUART_DisableDMAReq_TX (USART_TypeDef * LPUARTx)

Function description

Disable DMA Mode for transmission.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DMAT LL_LPUART_DisableDMAReq_TX

LL_LPUART_IsEnabledDMAReq_TX

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledDMAReq_TX (const USART_TypeDef * LPUARTx)

Function description

Check if DMA Mode is enabled for transmission.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 DMAT LL_LPUART_IsEnabledDMAReq_TX

LL_LPUART_EnableDMADeactOnRxErr

Function name

__STATIC_INLINE void LL_LPUART_EnableDMADeactOnRxErr (USART_TypeDef * LPUARTx)

Function description

Enable DMA Disabling on Reception Error.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DDRE LL_LPUART_EnableDMADeactOnRxErr

LL_LPUART_DisableDMADeactOnRxErr

Function name

__STATIC_INLINE void LL_LPUART_DisableDMADeactOnRxErr (USART_TypeDef * LPUARTx)

Function description

Disable DMA Disabling on Reception Error.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DDRE LL_LPUART_DisableDMADeactOnRxErr

LL_LPUART_IsEnabledDMADeactOnRxErr

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledDMADeactOnRxErr (const USART_TypeDef * LPUARTx)

Function description

Indicate if DMA Disabling on Reception Error is disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 DDRE LL_LPUART_IsEnabledDMADeactOnRxErr

LL_LPUART_DMA_GetRegAddr

Function name

__STATIC_INLINE uint32_t LL_LPUART_DMA_GetRegAddr (const USART_TypeDef * LPUARTx, uint32_t Direction)

Function description

Get the LPUART data register address used for DMA transfer.

Parameters

- **LPUARTx:** LPUART Instance
- **Direction:** This parameter can be one of the following values:
  – LL_LPUART_DMA_REG_DATA_TRANSMIT
  – LL_LPUART_DMA_REG_DATA_RECEIVE

Return values

- **Address:** of data register

Reference Manual to LL API cross reference:

- RDR RDR LL_LPUART_DMA_GetRegAddr
-
- TDR TDR LL_LPUART_DMA_GetRegAddr

LL_LPUART_ReceiveData8

Function name

__STATIC_INLINE uint8_t LL_LPUART_ReceiveData8 (const USART_TypeDef * LPUARTx)

Function description

Read Receiver Data register (Receive Data value, 8 bits)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Time:** Value between Min_Data=0x00 and Max_Data=0xFF

Reference Manual to LL API cross reference:

- RDR RDR LL_LPUART_ReceiveData8

LL_LPUART_ReceiveData9

Function name

__STATIC_INLINE uint16_t LL_LPUART_ReceiveData9 (const USART_TypeDef * LPUARTx)

Function description

Read Receiver Data register (Receive Data value, 9 bits)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Time:** Value between Min_Data=0x00 and Max_Data=0x1FF

Reference Manual to LL API cross reference:

- RDR RDR LL_LPUART_ReceiveData9

LL_LPUART_TransmitData8

Function name

__STATIC_INLINE void LL_LPUART_TransmitData8 (USART_TypeDef * LPUARTx, uint8_t Value)

Function description

Write in Transmitter Data Register (Transmit Data value, 8 bits)

Parameters

- **LPUARTx:** LPUART Instance
- **Value:** between Min_Data=0x00 and Max_Data=0xFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TDR TDR LL_LPUART_TransmitData8

LL_LPUART_TransmitData9

Function name

__STATIC_INLINE void LL_LPUART_TransmitData9 (USART_TypeDef * LPUARTx, uint16_t Value)

Function description

Write in Transmitter Data Register (Transmit Data value, 9 bits)

Parameters

- **LPUARTx:** LPUART Instance
- **Value:** between Min_Data=0x00 and Max_Data=0x1FF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TDR TDR LL_LPUART_TransmitData9

LL_LPUART_RequestBreakSending

Function name

__STATIC_INLINE void LL_LPUART_RequestBreakSending (USART_TypeDef * LPUARTx)

Function description

Request Break sending.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RQR SBKRQ LL_LPUART_RequestBreakSending

LL_LPUART_RequestEnterMuteMode

Function name

__STATIC_INLINE void LL_LPUART_RequestEnterMuteMode (USART_TypeDef * LPUARTx)

Function description

Put LPUART in mute mode and set the RWU flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RQR MMRQ LL_LPUART_RequestEnterMuteMode

LL_LPUART_RequestRxDataFlush

Function name

__STATIC_INLINE void LL_LPUART_RequestRxDataFlush (USART_TypeDef * LPUARTx)

Function description

Request a Receive Data and FIFO flush.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Notes

- Allows to discard the received data without reading them, and avoid an overrun condition.

Reference Manual to LL API cross reference:

- RQR RXFRQ LL_LPUART_RequestRxDataFlush

LL_LPUART_RequestTxDataFlush

Function name

__STATIC_INLINE void LL_LPUART_RequestTxDataFlush (USART_TypeDef * LPUARTx)

Function description

Request a Transmit data FIFO flush.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Notes

- TXFRQ bit is set to flush the whole FIFO when FIFO mode is enabled. This also sets the flag TXFE (TXFIFO empty bit in the LPUART_ISR register).
- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- RQR TXFRQ LL_LPUART_RequestTxDataFlush

LL_LPUART_Enable_SelectedTrigger

Function name

__STATIC_INLINE void LL_LPUART_Enable_SelectedTrigger (USART_TypeDef * LPUARTx)

Function description

Enable Selected Trigger.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGEN LL_LPUART_Enable_SelectedTrigger

LL_LPUART_Disable_SelectedTrigger

Function name

__STATIC_INLINE void LL_LPUART_Disable_SelectedTrigger (USART_TypeDef * LPUARTx)

Function description

Disable Selected Trigger.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGEN LL_LPUART_Disable_SelectedTrigger

LL_LPUART_IsEnabled_SelectedTrigger

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabled_SelectedTrigger (const USART_TypeDef * LPUARTx)

Function description

Indicate if selected Trigger is disabled or enabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- AUTOCR TRIGEN LL_LPUART_IsEnabled_SelectedTrigger

LL_LPUART_Enable_AutonomousSendIdleFrame

Function name

__STATIC_INLINE void LL_LPUART_Enable_AutonomousSendIdleFrame (USART_TypeDef * LPUARTx)

Function description

Enable Autonomous Send Idle Frame feature.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR IDLEDIS LL_LPUART_Enable_AutonomousSendIdleFrame

LL_LPUART_Disable_AutonomousSendIdleFrame

Function name

__STATIC_INLINE void LL_LPUART_Disable_AutonomousSendIdleFrame (USART_TypeDef * LPUARTx)

Function description

Disable Autonomous Send Idle Frame feature.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR IDLEDIS LL_LPUART_Disable_AutonomousSendIdleFrame

LL_LPUART_IsEnabled_AutonomousSendIdleFrame

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabled_AutonomousSendIdleFrame (const USART_TypeDef * LPUARTx)

Function description

Indicate if Autonomous send Idle Frame feature is disabled or enabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- AUTOCR IDLEDIS LL_LPUART_IsEnabled_AutonomousSendIdleFrame

LL_LPUART_SetNbTxData

Function name

__STATIC_INLINE void LL_LPUART_SetNbTxData (USART_TypeDef * LPUARTx, uint32_t Nbdata)

Function description

Configure the Number of transferred data in bytes.

Parameters

- **LPUARTx:** LPUART Instance
- **Nbdata:** This parameter can be a value between 0 and 0xFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TDN LL_LPUART_SetNbTxData

LL_LPUART_GetNbTxData

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetNbTxData (const USART_TypeDef * LPUARTx)

Function description

Retrieve the Number of transferred data in bytes.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be a value between 0 and 0xFFFF

Reference Manual to LL API cross reference:

- AUTOCR TDN LL_LPUART_GetNbTxData

LL_LPUART_SetTriggerPolarity

Function name

__STATIC_INLINE void LL_LPUART_SetTriggerPolarity (USART_TypeDef * LPUARTx, uint32_t Polarity)

Function description

Set the trigger polarity.

Parameters

- **LPUARTx:** LPUART Instance
- **Polarity:** This parameter can be one of the following values:
  – LL_LPUART_TRIG_POLARITY_RISING
  – LL_LPUART_TRIG_POLARITY_FALLING

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGPOL LL_LPUART_SetTriggerPolarity

LL_LPUART_GetTriggerPolarity

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetTriggerPolarity (const USART_TypeDef * LPUARTx)

Function description

Get the trigger polarity.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_LPUART_TRIG_POLARITY_RISING
  – LL_LPUART_TRIG_POLARITY_FALLING

Reference Manual to LL API cross reference:

- AUTOCR TRIGPOL LL_LPUART_GetTriggerPolarity

LL_LPUART_SetSelectedTrigger

Function name

__STATIC_INLINE void LL_LPUART_SetSelectedTrigger (USART_TypeDef * LPUARTx, uint32_t Trigger)

Function description

Set the selected trigger.

Parameters

- **LPUARTx:** LPUART Instance
- **Trigger:** This parameter can be one of the following values:
  – LL_LPUART_LPDMA1_CH0_TCF_TRG
  – LL_LPUART_LPDMA1_CH1_TCF_TRG
  – LL_LPUART_LPDMA1_CH2_TCF_TRG
  – LL_LPUART_LPDMA1_CH3_TCF_TRG
  – LL_LPUART_EXTI_LINE6_TRG
  – LL_LPUART_EXTI_LINE8_TRG
  – LL_LPUART_LPTIM1_OUT_TRG
  – LL_LPUART_LPTIM3_OUT_TRG
  – LL_LPUART_COMP1_OUT_TRG
  – LL_LPUART_COMP2_OUT_TRG
  – LL_LPUART_RTC_ALRA_TRG
  – LL_LPUART_RTC_WUT_TRG

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGSEL LL_LPUART_SetSelectedTrigger

LL_LPUART_GetSelectedTrigger

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetSelectedTrigger (const USART_TypeDef * LPUARTx)

Function description

Get the selected trigger.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_LPUART_LPDMA1_CH0_TCF_TRG
  – LL_LPUART_LPDMA1_CH1_TCF_TRG
  – LL_LPUART_LPDMA1_CH2_TCF_TRG
  – LL_LPUART_LPDMA1_CH3_TCF_TRG
  – LL_LPUART_EXTI_LINE6_TRG
  – LL_LPUART_EXTI_LINE8_TRG
  – LL_LPUART_LPTIM1_OUT_TRG
  – LL_LPUART_LPTIM3_OUT_TRG
  – LL_LPUART_COMP1_OUT_TRG
  – LL_LPUART_COMP2_OUT_TRG
  – LL_LPUART_RTC_ALRA_TRG
  – LL_LPUART_RTC_WUT_TRG

Reference Manual to LL API cross reference:

- AUTOCR TRIGSEL LL_LPUART_GetSelectedTrigger

LL_LPUART_DeInit

Function name

ErrorStatus LL_LPUART_DeInit (const USART_TypeDef * LPUARTx)

Function description

De-initialize LPUART registers (Registers restored to their default values).

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: LPUART registers are de-initialized
  - ERROR: not applicable

LL_LPUART_Init

Function name

ErrorStatus LL_LPUART_Init (USART_TypeDef * LPUARTx, const LL_LPUART_InitTypeDef * LPUART_InitStruct)

Function description

Initialize LPUART registers according to the specified parameters in LPUART_InitStruct.

Parameters

- **LPUARTx:** LPUART Instance
- **LPUART_InitStruct:** pointer to a LL_LPUART_InitTypeDef structure that contains the configuration information for the specified LPUART peripheral.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: LPUART registers are initialized according to LPUART_InitStruct content
  - ERROR: Problem occurred during LPUART Registers initialization

Notes

- As some bits in LPUART configuration registers can only be written when the LPUART is disabled (USART_CR1_UE bit =0), LPUART Peripheral should be in disabled state prior calling this function. Otherwise, ERROR result will be returned.
- Baud rate value stored in LPUART_InitStruct BaudRate field, should be valid (different from 0).

LL_LPUART_StructInit

Function name

void LL_LPUART_StructInit (LL_LPUART_InitTypeDef * LPUART_InitStruct)

Function description

Set each LL_LPUART_InitTypeDef field to default value.

Parameters

- **LPUART_InitStruct:** pointer to a LL_LPUART_InitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

110.3 LPUART Firmware driver defines

The following section lists the various define and macros of the module.

110.3.1 LPUART

LPUART

Address Length Detection

LL_LPUART_ADDRESS_DETECT_4B

4-bit address detection method selected

LL_LPUART_ADDRESS_DETECT_7B

7-bit address detection (in 8-bit data mode) method selected

Autonomous Trigger Polarity

LL_LPUART_TRIG_POLARITY_RISING

LPUART triggered on rising edge

LL_LPUART_TRIG_POLARITY_FALLING

LPUART triggered on falling edge

Autonomous Trigger selection

LL_LPUART_LPDMA1_CH0_TCF_TRG

LPUART LPDMA1 channel0 Internal Trigger

LL_LPUART_LPDMA1_CH1_TCF_TRG

LPUART LPDMA1 channel1 Internal Trigger

LL_LPUART_LPDMA1_CH2_TCF_TRG

LPUART LPDMA1 channel2 Internal Trigger

LL_LPUART_LPDMA1_CH3_TCF_TRG

LPUART LPDMA1 channel3 Internal Trigger

LL_LPUART_EXTI_LINE6_TRG

LPUART EXTI line 6 Internal Trigger

LL_LPUART_EXTI_LINE8_TRG

LPUART EXTI line 8 Internal Trigger

LL_LPUART_LPTIM1_OUT_TRG

LPUART LPTIM1 out Internal Trigger

LL_LPUART_LPTIM3_OUT_TRG

LPUART LPTIM3 out Internal Trigger

LL_LPUART_COMP1_OUT_TRG

LPUART COMP1 out Internal Trigger

LL_LPUART_COMP2_OUT_TRG

LPUART COMP2 out Internal Trigger

LL_LPUART_RTC_ALRA_TRG

LPUART RTC alarm Internal Trigger

LL_LPUART_RTC_WUT_TRG

LPUART RTC wakeup Internal Trigger

Binary Data Inversion

LL_LPUART_BINARY_LOGIC_POSITIVE

Logical data from the data register are send/received in positive/direct logic. (1=H, 0=L)

LL_LPUART_BINARY_LOGIC_NEGATIVE

Logical data from the data register are send/received in negative/inverse logic. (1=L, 0=H). The parity bit is also inverted.

Bit Order

LL_LPUART_BITORDER_LSBFIRST

data is transmitted/received with data bit 0 first, following the start bit

LL_LPUART_BITORDER_MSBFIRST

data is transmitted/received with the MSB first, following the start bit

Clear Flags Defines

LL_LPUART_ICR_PECF

Parity error clear flag

LL_LPUART_ICR_FECF

Framing error clear flag

LL_LPUART_ICR_NCF

Noise error detected clear flag

LL_LPUART_ICR_ORECF

Overrun error clear flag

LL_LPUART_ICR_IDLECF

Idle line detected clear flag

LL_LPUART_ICR_TCCF

Transmission complete clear flag

LL_LPUART_ICR_CTSCF

CTS clear flag

LL_LPUART_ICR_CMCF

Character match clear flag

Datawidth

LL_LPUART_DATAWIDTH_7B

7 bits word length : Start bit, 7 data bits, n stop bits

LL_LPUART_DATAWIDTH_8B

8 bits word length : Start bit, 8 data bits, n stop bits

LL_LPUART_DATAWIDTH_9B

9 bits word length : Start bit, 9 data bits, n stop bits

Driver Enable Polarity

LL_LPUART_DE_POLARITY_HIGH

DE signal is active high

LL_LPUART_DE_POLARITY_LOW

DE signal is active low

Direction

LL_LPUART_DIRECTION_NONE

Transmitter and Receiver are disabled

LL_LPUART_DIRECTION_RX

Transmitter is disabled and Receiver is enabled

LL_LPUART_DIRECTION_TX

Transmitter is enabled and Receiver is disabled

LL_LPUART_DIRECTION_TX_RX

Transmitter and Receiver are enabled

DMA Register Data

LL_LPUART_DMA_REG_DATA_TRANSMIT

Get address of data register used for transmission

LL_LPUART_DMA_REG_DATA_RECEIVE

Get address of data register used for reception

FIFO Threshold

LL_LPUART_FIFOTHRESHOLD_1_8

FIFO reaches 1/8 of its depth

LL_LPUART_FIFOTHRESHOLD_1_4

FIFO reaches 1/4 of its depth

LL_LPUART_FIFOTHRESHOLD_1_2

FIFO reaches 1/2 of its depth

LL_LPUART_FIFOTHRESHOLD_3_4

FIFO reaches 3/4 of its depth

LL_LPUART_FIFOTHRESHOLD_7_8

FIFO reaches 7/8 of its depth

LL_LPUART_FIFOTHRESHOLD_8_8

FIFO becomes empty for TX and full for RX

Get Flags Defines

LL_LPUART_ISR_PE

Parity error flag

LL_LPUART_ISR_FE

Framing error flag

LL_LPUART_ISR_NE

Noise detected flag

LL_LPUART_ISR_ORE

Overrun error flag

LL_LPUART_ISR_IDLE

Idle line detected flag

LL_LPUART_ISR_RXNE_RXFNE

Read data register or RX FIFO not empty flag

LL_LPUART_ISR_TC

Transmission complete flag

LL_LPUART_ISR_TXE_TXFNF

Transmit data register empty or TX FIFO Not Full flag

LL_LPUART_ISR_CTSIF

CTS interrupt flag

LL_LPUART_ISR_CTS

CTS flag

LL_LPUART_ISR_BUSY

Busy flag

LL_LPUART_ISR_CMF

Character match flag

LL_LPUART_ISR_SBKF

Send break flag

LL_LPUART_ISR_RWU

Receiver wakeup from Mute mode flag

LL_LPUART_ISR_TEACK

Transmit enable acknowledge flag

LL_LPUART_ISR_REACK

Receive enable acknowledge flag

LL_LPUART_ISR_TXFE

TX FIFO empty flag

LL_LPUART_ISR_RXFF

RX FIFO full flag

LL_LPUART_ISR_RXFT

RX FIFO threshold flag

LL_LPUART_ISR_TXFT

TX FIFO threshold flag

Hardware Control

LL_LPUART_HWCONTROL_NONE

CTS and RTS hardware flow control disabled

LL_LPUART_HWCONTROL_RTS

RTS output enabled, data is only requested when there is space in the receive buffer

LL_LPUART_HWCONTROL_CTS

CTS mode enabled, data is only transmitted when the nCTS input is asserted (tied to 0)

LL_LPUART_HWCONTROL_RTS_CTS

CTS and RTS hardware flow control enabled

IT Defines

LL_LPUART_CR1_IDLEIE

IDLE interrupt enable

LL_LPUART_CR1_RXNEIE_RXFNEIE

Read data register and RXFIFO not empty interrupt enable

LL_LPUART_CR1_TCIE

Transmission complete interrupt enable

LL_LPUART_CR1_TXEIE_TXFNFIE

Transmit data register empty and TX FIFO not full interrupt enable

LL_LPUART_CR1_PEIE

Parity error

LL_LPUART_CR1_CMIE

Character match interrupt enable

LL_LPUART_CR1_TXFEIE

TX FIFO empty interrupt enable

LL_LPUART_CR1_RXFFIE

RX FIFO full interrupt enable

LL_LPUART_CR3_EIE

Error interrupt enable

LL_LPUART_CR3_CTSIE

CTS interrupt enable

LL_LPUART_CR3_TXFTIE

TX FIFO threshold interrupt enable

LL_LPUART_CR3_RXFTIE

RX FIFO threshold interrupt enable

Parity Control

LL_LPUART_PARITY_NONE

Parity control disabled

LL_LPUART_PARITY_EVEN

Parity control enabled and Even Parity is selected

LL_LPUART_PARITY_ODD

Parity control enabled and Odd Parity is selected

Clock Source Prescaler

LL_LPUART_PRESCALER_DIV1

Input clock not divided

LL_LPUART_PRESCALER_DIV2

Input clock divided by 2

LL_LPUART_PRESCALER_DIV4

Input clock divided by 4

LL_LPUART_PRESCALER_DIV6

Input clock divided by 6

LL_LPUART_PRESCALER_DIV8

Input clock divided by 8

LL_LPUART_PRESCALER_DIV10

Input clock divided by 10

LL_LPUART_PRESCALER_DIV12

Input clock divided by 12

LL_LPUART_PRESCALER_DIV16

Input clock divided by 16

LL_LPUART_PRESCALER_DIV32

Input clock divided by 32

LL_LPUART_PRESCALER_DIV64

Input clock divided by 64

LL_LPUART_PRESCALER_DIV128

Input clock divided by 128

LL_LPUART_PRESCALER_DIV256

Input clock divided by 256

RX Pin Active Level Inversion

LL_LPUART_RXPIN_LEVEL_STANDARD

RX pin signal works using the standard logic levels

LL_LPUART_RXPIN_LEVEL_INVERTED

RX pin signal values are inverted.

Stop Bits

LL_LPUART_STOPBITS_1

1 stop bit

LL_LPUART_STOPBITS_2

2 stop bits

TX Pin Active Level Inversion

LL_LPUART_TXPIN_LEVEL_STANDARD

TX pin signal works using the standard logic levels

LL_LPUART_TXPIN_LEVEL_INVERTED

TX pin signal values are inverted.

TX RX Pins Swap

LL_LPUART_TXRX_STANDARD

TX/RX pins are used as defined in standard pinout

LL_LPUART_TXRX_SWAPPED

TX and RX pins functions are swapped.

Wakeup

LL_LPUART_WAKEUP_IDLELINE

LPUART wake up from Mute mode on Idle Line

LL_LPUART_WAKEUP_ADDRESSMARK

LPUART wake up from Mute mode on Address Mark

FLAG_Management

LL_LPUART_IsActiveFlag_RXNE

LL_LPUART_IsActiveFlag_TXE

IT_Management

LL_LPUART_EnableIT_RXNE

LL_LPUART_EnableIT_TXE

LL_LPUART_DisableIT_RXNE

LL_LPUART_DisableIT_TXE

LL_LPUART_IsEnabledIT_RXNE

LL_LPUART_IsEnabledIT_TXE

Helper Macros

__LL_LPUART_DIV

Description:

- Compute LPUARTDIV value according to Peripheral Clock and expected Baud Rate (20-bit value of LPUARTDIV is returned)

Parameters:

- __PERIPHCLK__: Peripheral Clock frequency used for LPUART Instance
- __PRESCALER__: This parameter can be one of the following values:
  - LL_LPUART_PRESCALER_DIV1
  - LL_LPUART_PRESCALER_DIV2
  - LL_LPUART_PRESCALER_DIV4
  - LL_LPUART_PRESCALER_DIV6
  - LL_LPUART_PRESCALER_DIV8
  - LL_LPUART_PRESCALER_DIV10
  - LL_LPUART_PRESCALER_DIV12
  - LL_LPUART_PRESCALER_DIV16
  - LL_LPUART_PRESCALER_DIV32
  - LL_LPUART_PRESCALER_DIV64
  - LL_LPUART_PRESCALER_DIV128
  - LL_LPUART_PRESCALER_DIV256
- __BAUDRATE__: Baud Rate value to achieve

Return value:

- LPUARTDIV: value to be used for BRR register filling

Common Write and read registers Macros

LL_LPUART_WriteReg

Description:

- Write a value in LPUART register.

Parameters:

- __INSTANCE__: LPUART Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_LPUART_ReadReg

Description:

- Read a value in LPUART register.

Parameters:

- __INSTANCE__: LPUART Instance
- __REG__: Register to be read

Return value:

- Register: value

111 LL OPAMP Generic Driver

111.1 OPAMP Firmware driver registers structures

111.1.1 LL_OPAMP_InitTypeDef

LL_OPAMP_InitTypeDef is defined in the stm32u5xx_ll_opamp.h

Data Fields

- ***uint32_t PowerMode***
- ***uint32_t FunctionalMode***
- ***uint32_t InputNonInverting***
- ***uint32_t InputInverting***

Field Documentation

- ***uint32_t LL_OPAMP_InitTypeDef::PowerMode***
  Set the power mode Normal or Low-Power and the speed mode Normal or High. This parameter can be a value of ***OPAMP_LL_EC_POWERMODE*** This feature can be modified afterwards using unitary function **LL_OPAMP_SetPowerMode()**.
- ***uint32_t LL_OPAMP_InitTypeDef::FunctionalMode***
  Set OPAMP functional mode by setting internal connections: OPAMP operation in standalone, follower, ... This parameter can be a value of ***OPAMP_LL_EC_FUNCTIONAL_MODE***
  Note:
  – If OPAMP is configured in mode PGA, the gain can be configured using function **LL_OPAMP_SetPGAGain()**. This feature can be modified afterwards using unitary function **LL_OPAMP_SetFunctionalMode()**.
- ***uint32_t LL_OPAMP_InitTypeDef::InputNonInverting***
  Set OPAMP input non-inverting connection. This parameter can be a value of ***OPAMP_LL_EC_INPUT_NONINVERTING*** This feature can be modified afterwards using unitary function **LL_OPAMP_SetInputNonInverting()**.
- ***uint32_t LL_OPAMP_InitTypeDef::InputInverting***
  Set OPAMP inverting input connection. This parameter can be a value of ***OPAMP_LL_EC_INPUT_INVERTING***
  Note:
  – OPAMP inverting input is used with OPAMP in mode standalone or PGA with external capacitors for filtering circuit. Otherwise (OPAMP in mode follower), OPAMP inverting input is not used (not connected to GPIO pin), this parameter is discarded. This feature can be modified afterwards using unitary function **LL_OPAMP_SetInputInverting()**.

111.2 OPAMP Firmware driver API description

The following section lists the various functions of the OPAMP library.

111.2.1 Detailed description of functions

LL_OPAMP_SetCommonPowerRange

Function name

__STATIC_INLINE void LL_OPAMP_SetCommonPowerRange (OPAMP_Common_TypeDef * OPAMPxy_COMMON, uint32_t PowerRange)

Function description

Set OPAMP power range.

Parameters

- **OPAMPxy_COMMON:** OPAMP common instance
- **PowerRange:** This parameter can be one of the following values:
  – LL_OPAMP_POWERSUPPLY_RANGE_LOW
  – LL_OPAMP_POWERSUPPLY_RANGE_HIGH

Return values

- **None:**

Notes

- The OPAMP power range applies to several OPAMP instances (if several OPAMP instances available on the selected device). It is mandatory to set already the power range to high for performance purpose.
- On this STM32 series, setting of this feature is conditioned to OPAMP state: All OPAMP instances of the OPAMP common group must be disabled. This check can be done with function LL_OPAMP_IsEnabled() for each OPAMP instance.
- LL_OPAMP_POWERSUPPLY_RANGE_HIGH parameter is highly recommended for performance purpose.

Reference Manual to LL API cross reference:

- CSR OPARANGE LL_OPAMP_SetCommonPowerRange

LL_OPAMP_GetCommonPowerRange

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetCommonPowerRange (const OPAMP_Common_TypeDef * OPAMPxy_COMMON)

Function description

Get OPAMP power range.

Parameters

- **OPAMPxy_COMMON:** OPAMP common instance

Return values

- **Returned:** value can be one of the following values:
  – LL_OPAMP_POWERSUPPLY_RANGE_LOW
  – LL_OPAMP_POWERSUPPLY_RANGE_HIGH

Notes

- The OPAMP power range applies to several OPAMP instances (if several OPAMP instances available on the selected device).

Reference Manual to LL API cross reference:

- CSR OPARANGE LL_OPAMP_GetCommonPowerRange

LL_OPAMP_SetPowerMode

Function name

__STATIC_INLINE void LL_OPAMP_SetPowerMode (OPAMP_TypeDef * OPAMPx, uint32_t PowerMode)

Function description

Set OPAMP power mode.

Parameters

- **OPAMPx:** OPAMP instance
- **PowerMode:** This parameter can be one of the following values:
  - LL_OPAMP_POWERMODE_NORMALPOWER_NORMALSPEED
  - LL_OPAMP_POWERMODE_LOWPOWER_NORMALSPEED
  - LL_OPAMP_POWERMODE_NORMALPOWER_HIGHSPEED
  - LL_OPAMP_POWERMODE_LOWPOWER_HIGHSPEED

Return values

- **None:**

Notes

- The OPAMP must be disabled to change this configuration.

Reference Manual to LL API cross reference:

- CSR OPALPM LL_OPAMP_SetPowerMode

LL_OPAMP_GetPowerMode

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetPowerMode (const OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP power mode.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **Returned:** value can be one of the following values:
  - LL_OPAMP_POWERMODE_NORMALPOWER_NORMALSPEED
  - LL_OPAMP_POWERMODE_LOWPOWER_NORMALSPEED
  - LL_OPAMP_POWERMODE_NORMALPOWER_HIGHSPEED
  - LL_OPAMP_POWERMODE_LOWPOWER_HIGHSPEED

Reference Manual to LL API cross reference:

- CSR OPALPM & HSM LL_OPAMP_GetPowerMode

LL_OPAMP_SetMode

Function name

__STATIC_INLINE void LL_OPAMP_SetMode (OPAMP_TypeDef * OPAMPx, uint32_t Mode)

Function description

Set OPAMP mode calibration or functional.

Parameters

- **OPAMPx:** OPAMP instance
- **Mode:** This parameter can be one of the following values:
  - LL_OPAMP_MODE_FUNCTIONAL
  - LL_OPAMP_MODE_CALIBRATION

Return values

- **None:**

Notes

- OPAMP mode corresponds to functional or calibration mode: functional mode: OPAMP operation in standalone, follower, ... Set functional mode using function LL_OPAMP_SetFunctionalMode().calibration mode: offset calibration of the selected transistors differential pair NMOS or PMOS.
- On this STM32 series, during calibration, OPAMP functional mode must be set to standalone or follower mode (in order to open internal connections to resistors of PGA mode). Refer to function LL_OPAMP_SetFunctionalMode().

Reference Manual to LL API cross reference:

- CSR CALON LL_OPAMP_SetMode

LL_OPAMP_GetMode

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetMode (const OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP mode calibration or functional.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **Returned:** value can be one of the following values:
  – LL_OPAMP_MODE_FUNCTIONAL
  – LL_OPAMP_MODE_CALIBRATION

Notes

- OPAMP mode corresponds to functional or calibration mode: functional mode: OPAMP operation in standalone, follower, ... Set functional mode using function LL_OPAMP_SetFunctionalMode().calibration mode: offset calibration of the selected transistors differential pair NMOS or PMOS.

Reference Manual to LL API cross reference:

- CSR CALON LL_OPAMP_GetMode

LL_OPAMP_SetFunctionalMode

Function name

__STATIC_INLINE void LL_OPAMP_SetFunctionalMode (OPAMP_TypeDef * OPAMPx, uint32_t FunctionalMode)

Function description

Set OPAMP functional mode by setting internal connections.

Parameters

- **OPAMPx:** OPAMP instance
- **FunctionalMode:** This parameter can be one of the following values:
  – LL_OPAMP_MODE_STANDALONE
  – LL_OPAMP_MODE_FOLLOWER
  – LL_OPAMP_MODE_PGA

Return values

- **None:**

Notes

- This function reset bit of calibration mode to ensure to be in functional mode, in order to have OPAMP parameters (inputs selection, ...) set with the corresponding OPAMP mode to be effective.

Reference Manual to LL API cross reference:

- CSR OPAMODE LL_OPAMP_SetFunctionalMode

LL_OPAMP_GetFunctionalMode

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetFunctionalMode (const OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP functional mode from setting of internal connections.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **Returned:** value can be one of the following values:
  – LL_OPAMP_MODE_STANDALONE
  – LL_OPAMP_MODE_FOLLOWER
  – LL_OPAMP_MODE_PGA

Reference Manual to LL API cross reference:

- CSR OPAMODE LL_OPAMP_GetFunctionalMode

LL_OPAMP_SetPGAGain

Function name

__STATIC_INLINE void LL_OPAMP_SetPGAGain (OPAMP_TypeDef * OPAMPx, uint32_t PGAGain)

Function description

Set OPAMP PGA gain.

Parameters

- **OPAMPx:** OPAMP instance
- **PGAGain:** This parameter can be one of the following values:
  – LL_OPAMP_PGA_GAIN_2
  – LL_OPAMP_PGA_GAIN_4
  – LL_OPAMP_PGA_GAIN_8
  – LL_OPAMP_PGA_GAIN_16

Return values

- **None:**

Notes

- Preliminarily, OPAMP must be set in mode PGA using function LL_OPAMP_SetFunctionalMode().

Reference Manual to LL API cross reference:

- CSR PGGAIN LL_OPAMP_SetPGAGain

LL_OPAMP_GetPGAGain

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetPGAGain (const OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP PGA gain.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **Returned:** value can be one of the following values:
  - LL_OPAMP_PGA_GAIN_2
  - LL_OPAMP_PGA_GAIN_4
  - LL_OPAMP_PGA_GAIN_8
  - LL_OPAMP_PGA_GAIN_16

Notes

- Preliminarily, OPAMP must be set in mode PGA using function LL_OPAMP_SetFunctionalMode().

Reference Manual to LL API cross reference:

- CSR PGGAIN LL_OPAMP_GetPGAGain

LL_OPAMP_SetInputNonInverting

Function name

__STATIC_INLINE void LL_OPAMP_SetInputNonInverting (OPAMP_TypeDef * OPAMPx, uint32_t InputNonInverting)

Function description

Set OPAMP non-inverting input connection.

Parameters

- **OPAMPx:** OPAMP instance
- **InputNonInverting:** This parameter can be one of the following values:
  - LL_OPAMP_INPUT_NONINVERT_IO0
  - LL_OPAMP_INPUT_NONINV_DAC1_CH1

Return values

- **None:**

Reference Manual to LL API cross reference:

- CSR VPSEL LL_OPAMP_SetInputNonInverting

LL_OPAMP_GetInputNonInverting

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetInputNonInverting (const OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP non-inverting input connection.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **Returned:** value can be one of the following values:
  - LL_OPAMP_INPUT_NONINVERT_IO0
  - LL_OPAMP_INPUT_NONINV_DAC1_CH1

Reference Manual to LL API cross reference:

- CSR VPSEL LL_OPAMP_GetInputNonInverting

LL_OPAMP_SetInputInverting

Function name

__STATIC_INLINE void LL_OPAMP_SetInputInverting (OPAMP_TypeDef * OPAMPx, uint32_t InputInverting)

Function description

Set OPAMP inverting input connection.

Parameters

- **OPAMPx:** OPAMP instance
- **InputInverting:** This parameter can be one of the following values:
  – LL_OPAMP_INPUT_INVERT_IO0
  – LL_OPAMP_INPUT_INVERT_IO1
  – LL_OPAMP_INPUT_INVERT_CONNECT_NO

Return values

- **None:**

Notes

- OPAMP inverting input is used with OPAMP in mode standalone or PGA with external capacitors for filtering circuit. Otherwise (OPAMP in mode follower), OPAMP inverting input is not used (not connected to GPIO pin).

Reference Manual to LL API cross reference:

- CSR VMSEL LL_OPAMP_SetInputInverting

LL_OPAMP_GetInputInverting

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetInputInverting (const OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP inverting input connection.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **Returned:** value can be one of the following values:
  – LL_OPAMP_INPUT_INVERT_IO0
  – LL_OPAMP_INPUT_INVERT_IO1
  – LL_OPAMP_INPUT_INVERT_CONNECT_NO

Reference Manual to LL API cross reference:

- CSR VMSEL LL_OPAMP_GetInputInverting

LL_OPAMP_SetNonInvertingInput

Function name

__STATIC_INLINE void LL_OPAMP_SetNonInvertingInput (OPAMP_TypeDef * OPAMPx, uint32_t NonInvertingInput)

Function description

LL_OPAMP_SetInvertingInput

Function name

__STATIC_INLINE void LL_OPAMP_SetInvertingInput (OPAMP_TypeDef * OPAMPx, uint32_t InvertingInput)

Function description

LL_OPAMP_SetTrimmingMode

Function name

__STATIC_INLINE void LL_OPAMP_SetTrimmingMode (OPAMP_TypeDef * OPAMPx, uint32_t TrimmingMode)

Function description

Set OPAMP trimming mode.

Parameters

- **OPAMPx:** OPAMP instance
- **TrimmingMode:** This parameter can be one of the following values:
  – LL_OPAMP_TRIMMING_FACTORY
  – LL_OPAMP_TRIMMING_USER

Return values

- **None:**

Reference Manual to LL API cross reference:

- CSR USERTRIM LL_OPAMP_SetTrimmingMode

LL_OPAMP_GetTrimmingMode

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetTrimmingMode (const OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP trimming mode.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **Returned:** value can be one of the following values:
  – LL_OPAMP_TRIMMING_FACTORY
  – LL_OPAMP_TRIMMING_USER

Reference Manual to LL API cross reference:

- CSR USERTRIM LL_OPAMP_GetTrimmingMode

LL_OPAMP_SetCalibrationSelection

Function name

__STATIC_INLINE void LL_OPAMP_SetCalibrationSelection (OPAMP_TypeDef * OPAMPx, uint32_t TransistorsDiffPair)

Function description

Set OPAMP offset to calibrate the selected transistors differential pair NMOS or PMOS.

Parameters

- **OPAMPx:** OPAMP instance
- **TransistorsDiffPair:** This parameter can be one of the following values:
  - LL_OPAMP_TRIMMING_NMOS
  - LL_OPAMP_TRIMMING_PMOS

Return values

- **None:**

Notes

- Preliminarily, OPAMP must be set in mode calibration using function LL_OPAMP_SetMode().

Reference Manual to LL API cross reference:

- CSR CALSEL LL_OPAMP_SetCalibrationSelection

LL_OPAMP_GetCalibrationSelection

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetCalibrationSelection (const OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP offset to calibrate the selected transistors differential pair NMOS or PMOS.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **Returned:** value can be one of the following values:
  - LL_OPAMP_TRIMMING_NMOS
  - LL_OPAMP_TRIMMING_PMOS

Notes

- Preliminarily, OPAMP must be set in mode calibration using function LL_OPAMP_SetMode().

Reference Manual to LL API cross reference:

- CSR CALSEL LL_OPAMP_GetCalibrationSelection

LL_OPAMP_IsCalibrationOutputSet

Function name

__STATIC_INLINE uint32_t LL_OPAMP_IsCalibrationOutputSet (const OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP calibration result of toggling output.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **State:** of bit (1 or 0).

Notes

- This functions returns: 0 if OPAMP calibration output is reset 1 if OPAMP calibration output is set

Reference Manual to LL API cross reference:

- CSR CALOUT LL_OPAMP_IsCalibrationOutputSet

LL_OPAMP_SetTrimmingValue

Function name

__STATIC_INLINE void LL_OPAMP_SetTrimmingValue (OPAMP_TypeDef * OPAMPx, uint32_t PowerMode, uint32_t TransistorsDiffPair, uint32_t TrimmingValue)

Function description

Set OPAMP trimming factor for the selected transistors differential pair NMOS or PMOS, corresponding to the selected power mode.

Parameters

- **OPAMPx:** OPAMP instance
- **PowerMode:** This parameter can be one of the following values:
  - LL_OPAMP_POWERMODE_NORMALPOWER_NORMALSPEED
  - LL_OPAMP_POWERMODE_LOWPOWER_NORMALSPEED
  - LL_OPAMP_POWERMODE_NORMALPOWER_HIGHSPEED
  - LL_OPAMP_POWERMODE_LOWPOWER_HIGHSPEED
- **TransistorsDiffPair:** This parameter can be one of the following values:
  - LL_OPAMP_TRIMMING_NMOS
  - LL_OPAMP_TRIMMING_PMOS
- **TrimmingValue:** 0x00...0x1F

Return values

- **None:**

Reference Manual to LL API cross reference:

- OTR TRIMOFFSETN LL_OPAMP_SetTrimmingValue
- OTR TRIMOFFSETP LL_OPAMP_SetTrimmingValue
- LPOTR TRIMLPOFFSETN LL_OPAMP_SetTrimmingValue
- LPOTR TRIMLPOFFSETP LL_OPAMP_SetTrimmingValue

LL_OPAMP_GetTrimmingValue

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetTrimmingValue (const OPAMP_TypeDef * OPAMPx, uint32_t PowerMode, uint32_t TransistorsDiffPair)

Function description

Get OPAMP trimming factor for the selected transistors differential pair NMOS or PMOS, corresponding to the selected power mode.

Parameters

- **OPAMPx:** OPAMP instance
- **PowerMode:** This parameter can be one of the following values:
  - LL_OPAMP_POWERMODE_NORMALPOWER_NORMALSPEED
  - LL_OPAMP_POWERMODE_LOWPOWER_NORMALSPEED
  - LL_OPAMP_POWERMODE_NORMALPOWER_HIGHSPEED
  - LL_OPAMP_POWERMODE_LOWPOWER_HIGHSPEED
- **TransistorsDiffPair:** This parameter can be one of the following values:
  - LL_OPAMP_TRIMMING_NMOS
  - LL_OPAMP_TRIMMING_PMOS

Return values

- **0x0...0x1F:**

Reference Manual to LL API cross reference:

- OTR TRIMOFFSETN LL_OPAMP_GetTrimmingValue
- OTR TRIMOFFSETP LL_OPAMP_GetTrimmingValue
- LPOTR TRIMLPOFFSETN LL_OPAMP_GetTrimmingValue
- LPOTR TRIMLPOFFSETP LL_OPAMP_GetTrimmingValue

LL_OPAMP_Enable

Function name

__STATIC_INLINE void LL_OPAMP_Enable (OPAMP_TypeDef * OPAMPx)

Function description

Enable OPAMP instance.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **None:**

Notes

- After enable from off state, OPAMP requires a delay to fulfill wake up time specification. Refer to device datasheet, parameter "tWAKEUP".

Reference Manual to LL API cross reference:

- CSR OPAMPXEN LL_OPAMP_Enable

LL_OPAMP_Disable

Function name

__STATIC_INLINE void LL_OPAMP_Disable (OPAMP_TypeDef * OPAMPx)

Function description

Disable OPAMP instance.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CSR OPAMPXEN LL_OPAMP_Disable

LL_OPAMP_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_OPAMP_IsEnabled (const OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP instance enable state (0: OPAMP is disabled, 1: OPAMP is enabled)

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR OPAMPXEN LL_OPAMP_IsEnabled

LL_OPAMP_DeInit

Function name

ErrorStatus LL_OPAMP_DeInit (OPAMP_TypeDef * OPAMPx)

Function description

De-initialize registers of the selected OPAMP instance to their default reset values.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **An:** ErrorStatus enumeration value:
  – SUCCESS: OPAMP registers are de-initialized
  – ERROR: OPAMP registers are not de-initialized

LL_OPAMP_Init

Function name

ErrorStatus LL_OPAMP_Init (OPAMP_TypeDef * OPAMPx, const LL_OPAMP_InitTypeDef * OPAMP_InitStruct)

Function description

Initialize some features of OPAMP instance.

Parameters

- **OPAMPx:** OPAMP instance
- **OPAMP_InitStruct:** Pointer to a LL_OPAMP_InitTypeDef structure

Return values

- **An:** ErrorStatus enumeration value:
  – SUCCESS: OPAMP registers are initialized
  – ERROR: OPAMP registers are not initialized

Notes

- This function reset bit of calibration mode to ensure to be in functional mode, in order to have OPAMP parameters (inputs selection, ...) set with the corresponding OPAMP mode to be effective.
- This function configures features of the selected OPAMP instance. Some features are also available at scope OPAMP common instance (common to several OPAMP instances).

LL_OPAMP_StructInit

Function name

void LL_OPAMP_StructInit (LL_OPAMP_InitTypeDef * OPAMP_InitStruct)

Function description

Set each LL_OPAMP_InitTypeDef field to default value.

Parameters

- **OPAMP_InitStruct:** pointer to a LL_OPAMP_InitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

111.3 OPAMP Firmware driver defines

The following section lists the various define and macros of the module.

111.3.1 OPAMP

OPAMP

OPAMP functional mode

LL_OPAMP_MODE_STANDALONE

OPAMP functional mode, OPAMP operation in standalone

LL_OPAMP_MODE_FOLLOWER

OPAMP functional mode, OPAMP operation in follower

LL_OPAMP_MODE_PGA

OPAMP functional mode, OPAMP operation in PGA

Definitions of OPAMP hardware constraints delays

LL_OPAMP_DELAY_STARTUP_US

Delay for OPAMP startup time

OPAMP input inverting

LL_OPAMP_INPUT_INVERT_IO0

OPAMP inverting input connected to GPIO pin (valid also in PGA mode for filtering). Note: OPAMP inverting input is used with OPAMP in mode standalone or PGA with external capacitors for filtering circuit. Otherwise (OPAMP in mode follower), OPAMP inverting input is not used (not connected to GPIO pin).

LL_OPAMP_INPUT_INVERT_IO1

OPAMP inverting input (low leakage input) connected to GPIO pin (available only on package BGA132). Note: OPAMP inverting input is used with OPAMP in mode standalone or PGA with external capacitors for filtering circuit. Otherwise (OPAMP in mode follower), OPAMP inverting input is not used (not connected to GPIO pin).

LL_OPAMP_INPUT_INVERT_CONNECT_NO

OPAMP inverting input not externally connected (intended for OPAMP in mode follower or PGA without external capacitors for filtering)

OPAMP inputs legacy literals name

LL_OPAMP_NONINVERTINGINPUT_IO0

LL_OPAMP_NONINVERTINGINPUT_DAC_CH

LL_OPAMP_INVERTINGINPUT_IO0

LL_OPAMP_INVERTINGINPUT_IO1

LL_OPAMP_INVERTINGINPUT_CONNECT_NO

LL_OPAMP_INPUT_NONINVERT_DAC1_CH1

OPAMP input non-inverting

LL_OPAMP_INPUT_NONINVERT_IO0

OPAMP non inverting input connected to GPIO pin (pin PA0 for OPAMP1, pin PA6 for OPAMP2)

LL_OPAMP_INPUT_NONINV_DAC1_CH1

OPAMP non inverting input connected to DAC1 channel output(channel1 for OPAMP1, channel2 for OPAMP2)

OPAMP mode calibration or functional.

LL_OPAMP_MODE_FUNCTIONAL

OPAMP functional mode

LL_OPAMP_MODE_CALIBRATION

OPAMP calibration mode

OPAMP PGA gain (relevant when OPAMP is in functional mode PGA)

LL_OPAMP_PGA_GAIN_2

OPAMP PGA gain 2

LL_OPAMP_PGA_GAIN_4

OPAMP PGA gain 4

LL_OPAMP_PGA_GAIN_8

OPAMP PGA gain 8

LL_OPAMP_PGA_GAIN_16

OPAMP PGA gain 16

OPAMP power mode

LL_OPAMP_POWERMODE_NORMALPOWER_NORMALSPEED

OPAMP power mode normal speed normal

LL_OPAMP_POWERMODE_LOWPOWER_NORMALSPEED

OPAMP power mode low-power speed normal

LL_OPAMP_POWERMODE_NORMALPOWER_HIGHSPEED

OPAMP power mode normal speed high

LL_OPAMP_POWERMODE_LOWPOWER_HIGHSPEED

OPAMP power mode low-power speed high

OPAMP power supply range

LL_OPAMP_POWERSUPPLY_RANGE_LOW

Power supply range low

LL_OPAMP_POWERSUPPLY_RANGE_HIGH

Power supply range high - recommended for performance purpose

OPAMP trimming mode

LL_OPAMP_TRIMMING_FACTORY

OPAMP trimming factors set to factory values

LL_OPAMP_TRIMMING_USER

OPAMP trimming factors set to user values

OPAMP trimming of transistors differential pair NMOS or PMOS

LL_OPAMP_TRIMMING_NMOS

OPAMP trimming of transistors differential pair NMOS

LL_OPAMP_TRIMMING_PMOS

OPAMP trimming of transistors differential pair PMOS

OPAMP helper macro

__LL_OPAMP_COMMON_INSTANCE

Description:
- Helper macro to select the OPAMP common instance to which is belonging the selected OPAMP instance.

Parameters:
- __OPAMPx__: OPAMP instance

Return value:
- OPAMP: common instance

Notes:
- OPAMP common register instance can be used to set parameters common to several OPAMP instances. Refer to functions having argument "OPAMPxy_COMMON" as parameter.

__LL_OPAMP_IS_ENABLED_ALL_COMMON_INSTANCE

Description:
- Helper macro to check if all OPAMP instances sharing the same OPAMP common instance are disabled.

Return value:
- 0: All OPAMP instances sharing the same OPAMP common instance are disabled. 1: At least one OPAMP instance sharing the same OPAMP common instance is enabled

Notes:
- This check is required by functions with setting conditioned to OPAMP state: All OPAMP instances of the OPAMP common group must be disabled. Refer to functions having argument "OPAMPxy_COMMON" as parameter.

Common write and read registers macro

LL_OPAMP_WriteReg

Description:
- Write a value in OPAMP register.

Parameters:
- __INSTANCE__: OPAMP Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:
- None

LL_OPAMP_ReadReg

Description:
- Read a value in OPAMP register.

Parameters:
- __INSTANCE__: OPAMP Instance
- __REG__: Register to be read

Return value:
- Register: value

112 LL PKA Generic Driver

112.1 PKA Firmware driver registers structures

112.1.1 LL_PKA_InitTypeDef

LL_PKA_InitTypeDef is defined in the stm32u5xx_ll_pka.h

Data Fields

- ***uint32_t Mode***

Field Documentation

- ***uint32_t LL_PKA_InitTypeDef::Mode***
  Specifies the PKA operation mode. This parameter can be a value of ***PKA_LL_EC_MODE***.This feature can be modified afterwards using unitary function **LL_PKA_SetMode()**.

112.2 PKA Firmware driver API description

The following section lists the various functions of the PKA library.

112.2.1 Detailed description of functions

LL_PKA_Config

Function name

__STATIC_INLINE void LL_PKA_Config (PKA_TypeDef * PKAx, uint32_t Mode)

Function description

Configure PKA peripheral.

Parameters

- **PKAx:** PKA Instance.
- **Mode:** This parameter can be one of the following values:
  - LL_PKA_MODE_MONTGOMERY_PARAM
  - LL_PKA_MODE_MODULAR_EXP
  - LL_PKA_MODE_ECDSA_SIGNATURE
  - LL_PKA_MODE_ECDSA_VERIFICATION
  - LL_PKA_MODE_POINT_CHECK
  - LL_PKA_MODE_RSA_CRT_EXP
  - LL_PKA_MODE_MODULAR_INV
  - LL_PKA_MODE_ARITHMETIC_ADD
  - LL_PKA_MODE_ARITHMETIC_SUB
  - LL_PKA_MODE_ARITHMETIC_MUL
  - LL_PKA_MODE_COMPARISON
  - LL_PKA_MODE_MODULAR_REDUC
  - LL_PKA_MODE_MODULAR_ADD
  - LL_PKA_MODE_MODULAR_SUB
  - LL_PKA_MODE_MONTGOMERY_MUL
  - LL_PKA_MODE_MODULAR_EXP_PROTECT
  - LL_PKA_MODE_DOUBLE_BASE_LADDER
  - LL_PKA_MODE_ECC_PROJECTIVE_AFF
  - LL_PKA_MODE_ECC_COMPLETE_ADD
  - LL_PKA_MODE_ECC_MUL
  - LL_PKA_MODE_MODULAR_EXP_FAST

Reference Manual to LL API cross reference:

- CR MODE LL_PKA_Config

LL_PKA_Enable

Function name

__STATIC_INLINE void LL_PKA_Enable (PKA_TypeDef * PKAx)

Function description

Enable PKA peripheral.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR EN LL_PKA_Enable

LL_PKA_Disable

Function name

__STATIC_INLINE void LL_PKA_Disable (PKA_TypeDef * PKAx)

Function description

Disable PKA peripheral.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR EN LL_PKA_Disable

LL_PKA_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_PKA_IsEnabled (const PKA_TypeDef * PKAx)

Function description

Check if the PKA peripheral is enabled or disabled.

Parameters

- **PKAx:** PKA Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR EN LL_PKA_IsEnabled

LL_PKA_SetMode

Function name

__STATIC_INLINE void LL_PKA_SetMode (PKA_TypeDef * PKAx, uint32_t Mode)

Function description

Set PKA operating mode.

Parameters

- **PKAx:** PKA Instance.
- **Mode:** This parameter can be one of the following values:
  – LL_PKA_MODE_MONTGOMERY_PARAM
  – LL_PKA_MODE_MODULAR_EXP
  – LL_PKA_MODE_ECDSA_SIGNATURE
  – LL_PKA_MODE_ECDSA_VERIFICATION
  – LL_PKA_MODE_POINT_CHECK
  – LL_PKA_MODE_RSA_CRT_EXP
  – LL_PKA_MODE_MODULAR_INV
  – LL_PKA_MODE_ARITHMETIC_ADD
  – LL_PKA_MODE_ARITHMETIC_SUB
  – LL_PKA_MODE_ARITHMETIC_MUL
  – LL_PKA_MODE_COMPARISON
  – LL_PKA_MODE_MODULAR_REDUC
  – LL_PKA_MODE_MODULAR_ADD
  – LL_PKA_MODE_MODULAR_SUB
  – LL_PKA_MODE_MONTGOMERY_MUL
  – LL_PKA_MODE_MODULAR_EXP_PROTECT
  – LL_PKA_MODE_DOUBLE_BASE_LADDER
  – LL_PKA_MODE_ECC_PROJECTIVE_AFF
  – LL_PKA_MODE_ECC_COMPLETE_ADD
  – LL_PKA_MODE_ECC_MUL
  – LL_PKA_MODE_MODULAR_EXP_FAST

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR MODE LL_PKA_SetMode

LL_PKA_GetMode

Function name

__STATIC_INLINE uint32_t LL_PKA_GetMode (const PKA_TypeDef * PKAx)

Function description

Get PKA operating mode.

Parameters

- **PKAx:** PKA Instance.

Return values

- **Returned:** value can be one of the following values:
  – LL_PKA_MODE_MONTGOMERY_PARAM
  – LL_PKA_MODE_MODULAR_EXP
  – LL_PKA_MODE_ECDSA_SIGNATURE
  – LL_PKA_MODE_ECDSA_VERIFICATION
  – LL_PKA_MODE_POINT_CHECK
  – LL_PKA_MODE_RSA_CRT_EXP
  – LL_PKA_MODE_MODULAR_INV
  – LL_PKA_MODE_ARITHMETIC_ADD
  – LL_PKA_MODE_ARITHMETIC_SUB
  – LL_PKA_MODE_ARITHMETIC_MUL
  – LL_PKA_MODE_COMPARISON
  – LL_PKA_MODE_MODULAR_REDUC
  – LL_PKA_MODE_MODULAR_ADD
  – LL_PKA_MODE_MODULAR_SUB
  – LL_PKA_MODE_MONTGOMERY_MUL
  – LL_PKA_MODE_MODULAR_EXP_PROTECT
  – LL_PKA_MODE_DOUBLE_BASE_LADDER
  – LL_PKA_MODE_ECC_PROJECTIVE_AFF
  – LL_PKA_MODE_ECC_COMPLETE_ADD
  – LL_PKA_MODE_ECC_MUL
  – LL_PKA_MODE_MODULAR_EXP_FAST

Reference Manual to LL API cross reference:

- CR MODE LL_PKA_GetMode

LL_PKA_Start

Function name

__STATIC_INLINE void LL_PKA_Start (PKA_TypeDef * PKAx)

Function description

Start the operation selected using LL_PKA_SetMode.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR START LL_PKA_Start

LL_PKA_EnableIT_ADDRERR

Function name

__STATIC_INLINE void LL_PKA_EnableIT_ADDRERR (PKA_TypeDef * PKAx)

Function description

Enable address error interrupt.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR ADDRERRIE LL_PKA_EnableIT_ADDRERR

LL_PKA_EnableIT_RAMERR

Function name

__STATIC_INLINE void LL_PKA_EnableIT_RAMERR (PKA_TypeDef * PKAx)

Function description

Enable RAM error interrupt.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RAMERRIE LL_PKA_EnableIT_RAMERR

LL_PKA_EnableIT_OPERR

Function name

__STATIC_INLINE void LL_PKA_EnableIT_OPERR (PKA_TypeDef * PKAx)

Function description

Enable OPERATION error interrupt.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR OPERRIE LL_PKA_EnableIT_OPERR

LL_PKA_EnableIT_PROCEND

Function name

__STATIC_INLINE void LL_PKA_EnableIT_PROCEND (PKA_TypeDef * PKAx)

Function description

Enable end of operation interrupt.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR PROCENDIE LL_PKA_EnableIT_PROCEND

LL_PKA_DisableIT_ADDERR

Function name

__STATIC_INLINE void LL_PKA_DisableIT_ADDERR (PKA_TypeDef * PKAx)

Function description

Disable address error interrupt.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR ADDRERRIE LL_PKA_DisableIT_ADDERR

LL_PKA_DisableIT_RAMERR

Function name

__STATIC_INLINE void LL_PKA_DisableIT_RAMERR (PKA_TypeDef * PKAx)

Function description

Disable RAM error interrupt.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RAMERRIE LL_PKA_DisableIT_RAMERR

LL_PKA_DisableIT_PROCEND

Function name

__STATIC_INLINE void LL_PKA_DisableIT_PROCEND (PKA_TypeDef * PKAx)

Function description

Disable End of operation interrupt.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR PROCENDIE LL_PKA_DisableIT_PROCEND

LL_PKA_DisableIT_OPERR

Function name

__STATIC_INLINE void LL_PKA_DisableIT_OPERR (PKA_TypeDef * PKAx)

Function description

Disable OPERATION error interrupt.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR OPERRIE LL_PKA_EnableIT_OPERR

LL_PKA_IsEnabledIT_ADDRERR

Function name

__STATIC_INLINE uint32_t LL_PKA_IsEnabledIT_ADDRERR (const PKA_TypeDef * PKAx)

Function description

Check if address error interrupt is enabled.

Parameters

- **PKAx:** PKA Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR ADDRERRIE LL_PKA_IsEnabledIT_ADDRERR

LL_PKA_IsEnabledIT_RAMERR

Function name

__STATIC_INLINE uint32_t LL_PKA_IsEnabledIT_RAMERR (const PKA_TypeDef * PKAx)

Function description

Check if RAM error interrupt is enabled.

Parameters

- **PKAx:** PKA Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR RAMERRIE LL_PKA_IsEnabledIT_RAMERR

LL_PKA_IsEnabledIT_OPERR

Function name

__STATIC_INLINE uint32_t LL_PKA_IsEnabledIT_OPERR (const PKA_TypeDef * PKAx)

Function description

Check if OPERATION error interrupt is enabled.

Parameters

- **PKAx:** PKA Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR OPERRIE LL_PKA_IsEnabledIT_OPERR

LL_PKA_IsEnabledIT_PROCEND

Function name

__STATIC_INLINE uint32_t LL_PKA_IsEnabledIT_PROCEND (const PKA_TypeDef * PKAx)

Function description

Check if end of operation interrupt is enabled.

Parameters

- **PKAx:** PKA Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR PROCENDIE LL_PKA_IsEnabledIT_PROCEND

LL_PKA_IsActiveFlag_ADDRERR

Function name

__STATIC_INLINE uint32_t LL_PKA_IsActiveFlag_ADDRERR (const PKA_TypeDef * PKAx)

Function description

Get PKA address error flag.

Parameters

- **PKAx:** PKA Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR ADDRERRF LL_PKA_IsActiveFlag_ADDRERR

LL_PKA_IsActiveFlag_RAMERR

Function name

__STATIC_INLINE uint32_t LL_PKA_IsActiveFlag_RAMERR (const PKA_TypeDef * PKAx)

Function description

Get PKA RAM error flag.

Parameters

- **PKAx:** PKA Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR RAMERRF LL_PKA_IsActiveFlag_RAMERR

LL_PKA_IsActiveFlag_OPERR

Function name

__STATIC_INLINE uint32_t LL_PKA_IsActiveFlag_OPERR (const PKA_TypeDef * PKAx)

Function description

Get PKA OPERATION error flag.

Parameters

- **PKAx:** PKA Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR OPERRF LL_PKA_IsActiveFlag_OPERR

LL_PKA_IsActiveFlag_PROCEND

Function name

__STATIC_INLINE uint32_t LL_PKA_IsActiveFlag_PROCEND (const PKA_TypeDef * PKAx)

Function description

Get PKA end of operation flag.

Parameters

- **PKAx:** PKA Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR PROCENDF LL_PKA_IsActiveFlag_PROCEND

LL_PKA_IsActiveFlag_BUSY

Function name

__STATIC_INLINE uint32_t LL_PKA_IsActiveFlag_BUSY (const PKA_TypeDef * PKAx)

Function description

Get PKA busy flag.

Parameters

- **PKAx:** PKA Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR BUSY LL_PKA_IsActiveFlag_BUSY

LL_PKA_ClearFlag_ADDERR

Function name

__STATIC_INLINE void LL_PKA_ClearFlag_ADDERR (PKA_TypeDef * PKAx)

Function description

Clear PKA address error flag.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CLRFR ADDRERRFC LL_PKA_ClearFlag_ADDERR

LL_PKA_ClearFlag_RAMERR

Function name

__STATIC_INLINE void LL_PKA_ClearFlag_RAMERR (PKA_TypeDef * PKAx)

Function description

Clear PKA RAM error flag.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CLRFR RAMERRFC LL_PKA_ClearFlag_RAMERR

LL_PKA_ClearFlag_OPERR

Function name

__STATIC_INLINE void LL_PKA_ClearFlag_OPERR (PKA_TypeDef * PKAx)

Function description

Clear PKA OPERATION error flag.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CLRFR OPERRFC LL_PKA_ClearFlag_OPERR

LL_PKA_ClearFlag_PROCEND

Function name

__STATIC_INLINE void LL_PKA_ClearFlag_PROCEND (PKA_TypeDef * PKAx)

Function description

Clear PKA end of operation flag.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CLRFR PROCENDFC LL_PKA_ClearFlag_PROCEND

LL_PKA_DeInit

Function name

ErrorStatus LL_PKA_DeInit (const PKA_TypeDef * PKAx)

Function description

De-initialize PKA registers (Registers restored to their default values).

Parameters

- **PKAx:** PKA Instance.

Return values

- **ErrorStatus:**
  – SUCCESS: PKA registers are de-initialized
  – ERROR: PKA registers are not de-initialized

LL_PKA_Init

Function name

ErrorStatus LL_PKA_Init (PKA_TypeDef * PKAx, LL_PKA_InitTypeDef * PKA_InitStruct)

Function description

Initialize PKA registers according to the specified parameters in PKA_InitStruct.

Parameters

- **PKAx:** PKA Instance.
- **PKA_InitStruct:** pointer to a LL_PKA_InitTypeDef structure that contains the configuration information for the specified PKA peripheral.

Return values

- **ErrorStatus:**
  – SUCCESS: PKA registers are initialized according to PKA_InitStruct content
  – ERROR: Not applicable

LL_PKA_StructInit

Function name

void LL_PKA_StructInit (LL_PKA_InitTypeDef * PKA_InitStruct)

Function description

Set each LL_PKA_InitTypeDef field to default value.

Parameters

- **PKA_InitStruct:** pointer to a LL_PKA_InitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

Modular reduction

LL_PKA_MODE_MODULAR_ADD

Modular addition

LL_PKA_MODE_MODULAR_SUB

Modular subtraction

LL_PKA_MODE_MONTGOMERY_MUL

Montgomery multiplication

LL_PKA_MODE_DOUBLE_BASE_LADDER

Double base ladder

LL_PKA_MODE_ECC_PROJECTIVE_AFF

ECC projective to affine

Common Write and read registers Macros

LL_PKA_WriteReg

Description:
- Write a value in PKA register.

Parameters:
- __INSTANCE__: PKA Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:
- None

LL_PKA_ReadReg

Description:

- Read a value in PKA register.

Parameters:

- __INSTANCE__: PKA Instance
- __REG__: Register to be read

Return value:

- Register: value

113 LL PWR Generic Driver

113.1 PWR Firmware driver API description

The following section lists the various functions of the PWR library.

113.1.1 Detailed description of functions

LL_PWR_SetPowerMode

Function name

__STATIC_INLINE void LL_PWR_SetPowerMode (uint32_t Mode)

Function description

Set system power mode.

Parameters

- **Mode:** : This parameter can be one of the following values:
  – LL_PWR_STOP0_MODE
  – LL_PWR_STOP1_MODE
  – LL_PWR_STOP2_MODE
  – LL_PWR_STOP3_MODE
  – LL_PWR_STANDBY_MODE
  – LL_PWR_SHUTDOWN_MODE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 LPMS LL_PWR_SetPowerMode

LL_PWR_GetPowerMode

Function name

__STATIC_INLINE uint32_t LL_PWR_GetPowerMode (void)

Function description

Get system power mode.

Return values

- **Returned:** value can be one of the following values:
  – LL_PWR_STOP0_MODE
  – LL_PWR_STOP1_MODE
  – LL_PWR_STOP2_MODE
  – LL_PWR_STOP3_MODE
  – LL_PWR_STANDBY_MODE
  – LL_PWR_SHUTDOWN_MODE

Reference Manual to LL API cross reference:

- CR1 LPMS LL_PWR_GetPowerMode

LL_PWR_SetSRAM2SBRetention

Function name

__STATIC_INLINE void LL_PWR_SetSRAM2SBRetention (uint32_t SRAM2PageRetention)

Function description

Set the SRAM2 page(s) retention in Standby mode.

Parameters

- **SRAM2PageRetention:** : This parameter can be one of the following values:
  – LL_PWR_SRAM2_SB_NO_RETENTION
  – LL_PWR_SRAM2_SB_PAGE1_RETENTION
  – LL_PWR_SRAM2_SB_PAGE2_RETENTION
  – LL_PWR_SRAM2_SB_FULL_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RRSB1 LL_PWR_SetSRAM2SBRetention
-
- CR1 RRSB2 LL_PWR_SetSRAM2SBRetention

LL_PWR_GetSRAM2SBRetention

Function name

__STATIC_INLINE uint32_t LL_PWR_GetSRAM2SBRetention (void)

Function description

Get the SRAM2 page(s) retention in Standby mode.

Return values

- **Returned:** value can be one of the following values:
  – LL_PWR_SRAM2_SB_NO_RETENTION
  – LL_PWR_SRAM2_SB_PAGE1_RETENTION
  – LL_PWR_SRAM2_SB_PAGE2_RETENTION
  – LL_PWR_SRAM2_SB_FULL_RETENTION

Reference Manual to LL API cross reference:

- CR1 RRSB1 LL_PWR_GetSRAM2SBRetention
-
- CR1 RRSB2 LL_PWR_GetSRAM2SBRetention

LL_PWR_EnableUltraLowPowerMode

Function name

__STATIC_INLINE void LL_PWR_EnableUltraLowPowerMode (void)

Function description

Enable BOR ultra low power mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 UPLMEN LL_PWR_EnableUltraLowPowerMode

LL_PWR_DisableUltraLowPowerMode

Function name

__STATIC_INLINE void LL_PWR_DisableUltraLowPowerMode (void)

Function description

Disable BOR ultra low-power mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 UPLMEN LL_PWR_DisableUltraLowPowerMode

LL_PWR_IsEnabledUltraLowPowerMode

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledUltraLowPowerMode (void)

Function description

Check if BOR ultra low power mode is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 UPLMEN LL_PWR_IsEnabledUltraLowPowerMode

LL_PWR_SetSRAM1RunRetention

Function name

__STATIC_INLINE void LL_PWR_SetSRAM1RunRetention (uint32_t SRAM1Retention)

Function description

Set the SRAM1 retention in Run mode.

Parameters

- **SRAM1Retention:** : This parameter can be one of the following values:
  - LL_PWR_SRAM1_RUN_NO_RETENTION
  - LL_PWR_SRAM1_RUN_FULL_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 SRAM1PD LL_PWR_SetSRAM1RunRetention
-

LL_PWR_GetSRAM1RunRetention

Function name

__STATIC_INLINE uint32_t LL_PWR_GetSRAM1RunRetention (void)

Function description

Get the SRAM1 retention in Run mode.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_SRAM1_RUN_NO_RETENTION
  - LL_PWR_SRAM1_RUN_FULL_RETENTION

Reference Manual to LL API cross reference:

- CR1 SRAM1PD LL_PWR_GetSRAM1RunRetention
-

LL_PWR_SetSRAM2RunRetention

Function name

__STATIC_INLINE void LL_PWR_SetSRAM2RunRetention (uint32_t SRAM2Retention)

Function description

Set the SRAM2 retention in Run mode.

Parameters

- **SRAM2Retention:** : This parameter can be one of the following values:
  - LL_PWR_SRAM2_RUN_NO_RETENTION
  - LL_PWR_SRAM2_RUN_FULL_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 SRAM2PD LL_PWR_SetSRAM2RunRetention
-

LL_PWR_GetSRAM2RunRetention

Function name

__STATIC_INLINE uint32_t LL_PWR_GetSRAM2RunRetention (void)

Function description

Get the SRAM2 retention in Run mode.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_SRAM2_RUN_NO_RETENTION
  - LL_PWR_SRAM2_RUN_FULL_RETENTION

Reference Manual to LL API cross reference:

- CR1 SRAM2PD LL_PWR_GetSRAM2RunRetention
-

LL_PWR_SetSRAM3RunRetention

Function name

__STATIC_INLINE void LL_PWR_SetSRAM3RunRetention (uint32_t SRAM3Retention)

Function description

Set the SRAM3 retention in Run mode.

Parameters

- **SRAM3Retention:** : This parameter can be one of the following values:
  - LL_PWR_SRAM3_RUN_NO_RETENTION
  - LL_PWR_SRAM3_RUN_FULL_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 SRAM3PD LL_PWR_SetSRAM3RunRetention
-

LL_PWR_GetSRAM3RunRetention

Function name

__STATIC_INLINE uint32_t LL_PWR_GetSRAM3RunRetention (void)

Function description

Get the SRAM3 retention in Run mode.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_SRAM3_RUN_NO_RETENTION
  - LL_PWR_SRAM3_RUN_FULL_RETENTION

Reference Manual to LL API cross reference:

- CR1 SRAM3PD LL_PWR_GetSRAM3RunRetention
-

LL_PWR_SetSRAM4RunRetention

Function name

__STATIC_INLINE void LL_PWR_SetSRAM4RunRetention (uint32_t SRAM4Retention)

Function description

Set the SRAM4 retention in Run mode.

Parameters

- **SRAM4Retention:** : This parameter can be one of the following values:
  - LL_PWR_SRAM4_RUN_NO_RETENTION
  - LL_PWR_SRAM4_RUN_FULL_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 SRAM4PD LL_PWR_SetSRAM4RunRetention
-

LL_PWR_GetSRAM4RunRetention

Function name

__STATIC_INLINE uint32_t LL_PWR_GetSRAM4RunRetention (void)

Function description

Get the SRAM4 retention in Run mode.

Return values

- **Returned:** value can be one of the following values:
  – LL_PWR_SRAM4_RUN_NO_RETENTION
  – LL_PWR_SRAM4_RUN_FULL_RETENTION

Reference Manual to LL API cross reference:

- CR1 SRAM4PD LL_PWR_GetSRAM4RunRetention
-

LL_PWR_SetSRAM5RunRetention

Function name

__STATIC_INLINE void LL_PWR_SetSRAM5RunRetention (uint32_t SRAM5Retention)

Function description

Set the SRAM5 retention in Run mode.

Parameters

- **SRAM5Retention:** : This parameter can be one of the following values:
  – LL_PWR_SRAM5_RUN_NO_RETENTION
  – LL_PWR_SRAM5_RUN_FULL_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 SRAM5PD LL_PWR_SetSRAM5RunRetention
-

LL_PWR_GetSRAM5RunRetention

Function name

__STATIC_INLINE uint32_t LL_PWR_GetSRAM5RunRetention (void)

Function description

Get the SRAM5 retention in Run mode.

Return values

- **Returned:** value can be one of the following values:
  – LL_PWR_SRAM5_RUN_NO_RETENTION
  – LL_PWR_SRAM5_RUN_FULL_RETENTION

Reference Manual to LL API cross reference:

- CR1 SRAM5PD LL_PWR_GetSRAM5RunRetention
-

LL_PWR_SetSRAM6RunRetention

Function name

__STATIC_INLINE void LL_PWR_SetSRAM6RunRetention (uint32_t SRAM6Retention)

Function description

Set the SRAM6 retention in Run mode.

Parameters

- **SRAM6Retention:** : This parameter can be one of the following values:
  – LL_PWR_SRAM6_RUN_NO_RETENTION
  – LL_PWR_SRAM6_RUN_FULL_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 SRAM6PD LL_PWR_SetSRAM6RunRetention
-

LL_PWR_GetSRAM6RunRetention

Function name

__STATIC_INLINE uint32_t LL_PWR_GetSRAM6RunRetention (void)

Function description

Get the SRAM6 retention in Run mode.

Return values

- **Returned:** value can be one of the following values:
  – LL_PWR_SRAM6_RUN_NO_RETENTION
  – LL_PWR_SRAM6_RUN_FULL_RETENTION

Reference Manual to LL API cross reference:

- CR1 SRAM6PD LL_PWR_GetSRAM6RunRetention
-

LL_PWR_EnableOTGHSPHYLowPowerRetention

Function name

__STATIC_INLINE void LL_PWR_EnableOTGHSPHYLowPowerRetention (void)

Function description

Enable OTG_HS PHY power during low power modes (Stop2, Stop 3 and Standby).

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 FORCE_USBPWR LL_PWR_EnableOTGHSPHYLowPowerRetention

LL_PWR_DisableOTGHSPHYLowPowerRetention

Function name

__STATIC_INLINE void LL_PWR_DisableOTGHSPHYLowPowerRetention (void)

Function description

Disable OTG_HS PHY power during low power modes (Stop2, Stop 3 and Standby).

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 FORCE_USBPWR LL_PWR_DisableOTGHSPHYLowPowerRetention

LL_PWR_IsEnabledOTGHSPHYLowPowerRetention

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledOTGHSPHYLowPowerRetention (void)

Function description

Check if OTG_HS PHY power during low power modes (Stop2, Stop 3 and Standby) is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 FORCE_USBPWR LL_PWR_IsEnabledOTGHSPHYLowPowerRetention

LL_PWR_SetSRAM1StopRetention_1_3

Function name

__STATIC_INLINE void LL_PWR_SetSRAM1StopRetention_1_3 (uint32_t SRAM1PageRetention)

Function description

Set the SRAM1 page(s) (From page 1 to page 3) retention in Stop mode.

Parameters

- **SRAM1PageRetention:** : This parameter can be one of the following values:
  – LL_PWR_SRAM1_STOP_NO_RETENTION
  – LL_PWR_SRAM1_STOP_1_3_RETENTION Or can be a combination of the following values:
  – LL_PWR_SRAM1_STOP_PAGE1_RETENTION
  – LL_PWR_SRAM1_STOP_PAGE2_RETENTION
  – LL_PWR_SRAM1_STOP_PAGE3_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 SRAM1PDS1 LL_PWR_SetSRAM1StopRetention_1_3
-
- CR2 SRAM1PDS2 LL_PWR_SetSRAM1StopRetention_1_3
-
- CR2 SRAM1PDS3 LL_PWR_SetSRAM1StopRetention_1_3

LL_PWR_SetSRAM1StopRetention_4_12

Function name

__STATIC_INLINE void LL_PWR_SetSRAM1StopRetention_4_12 (uint32_t SRAM1PageRetention)

Function description

Set the SRAM1 page(s) (From page 4 to page 12) retention in Stop mode.

Parameters

- **SRAM1PageRetention:** : This parameter can be one of the following values:
  – LL_PWR_SRAM1_STOP_NO_RETENTION
  – LL_PWR_SRAM1_STOP_4_12_RETENTION Or can be a combination of the following values:
  – LL_PWR_SRAM1_STOP_PAGE4_RETENTION
  – LL_PWR_SRAM1_STOP_PAGE5_RETENTION
  – LL_PWR_SRAM1_STOP_PAGE6_RETENTION
  – LL_PWR_SRAM1_STOP_PAGE7_RETENTION
  – LL_PWR_SRAM1_STOP_PAGE8_RETENTION
  – LL_PWR_SRAM1_STOP_PAGE9_RETENTION
  – LL_PWR_SRAM1_STOP_PAGE10_RETENTION
  – LL_PWR_SRAM1_STOP_PAGE11_RETENTION
  – LL_PWR_SRAM1_STOP_PAGE12_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 SRAM1PDS4 LL_PWR_SetSRAM1StopRetention_4_12
-
- CR2 SRAM1PDS5 LL_PWR_SetSRAM1StopRetention_4_12
-
- CR2 SRAM1PDS6 LL_PWR_SetSRAM1StopRetention_4_12
-
- CR2 SRAM1PDS7 LL_PWR_SetSRAM1StopRetention_4_12
-
- CR2 SRAM1PDS8 LL_PWR_SetSRAM1StopRetention_4_12
-
- CR2 SRAM1PDS9 LL_PWR_SetSRAM1StopRetention_4_12
-
- CR2 SRAM1PDS10 LL_PWR_SetSRAM1StopRetention_4_12
-
- CR2 SRAM1PDS11 LL_PWR_SetSRAM1StopRetention_4_12
-
- CR2 SRAM1PDS12 LL_PWR_SetSRAM1StopRetention_4_12

LL_PWR_GetSRAM1StopRetention_1_3

Function name

__STATIC_INLINE uint32_t LL_PWR_GetSRAM1StopRetention_1_3 (void)

Function description

Get the SRAM1 page(s) (From page 1 to page 3) retention in Stop mode.

Return values

- **Returned:** value can be one of the following values:
  – LL_PWR_SRAM1_STOP_NO_RETENTION
  – LL_PWR_SRAM1_STOP_1_3_RETENTION Or a combination of the following values:
  – LL_PWR_SRAM1_STOP_PAGE1_RETENTION
  – LL_PWR_SRAM1_STOP_PAGE2_RETENTION
  – LL_PWR_SRAM1_STOP_PAGE3_RETENTION

Reference Manual to LL API cross reference:

- CR2 SRAM1PDS1 LL_PWR_GetSRAM1StopRetention_1_3
-
- CR2 SRAM1PDS2 LL_PWR_GetSRAM1StopRetention_1_3
-
- CR2 SRAM1PDS3 LL_PWR_GetSRAM1StopRetention_1_3

LL_PWR_GetSRAM1StopRetention_4_12

Function name

__STATIC_INLINE uint32_t LL_PWR_GetSRAM1StopRetention_4_12 (void)

Function description

Get the SRAM1 page(s) (From page 4 to page 12) retention in Stop mode.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_SRAM1_STOP_NO_RETENTION
  - LL_PWR_SRAM1_STOP_4_12_RETENTION Or a combination of the following values:
  - LL_PWR_SRAM1_STOP_PAGE4_RETENTION
  - LL_PWR_SRAM1_STOP_PAGE5_RETENTION
  - LL_PWR_SRAM1_STOP_PAGE6_RETENTION
  - LL_PWR_SRAM1_STOP_PAGE7_RETENTION
  - LL_PWR_SRAM1_STOP_PAGE8_RETENTION
  - LL_PWR_SRAM1_STOP_PAGE9_RETENTION
  - LL_PWR_SRAM1_STOP_PAGE10_RETENTION
  - LL_PWR_SRAM1_STOP_PAGE11_RETENTION
  - LL_PWR_SRAM1_STOP_PAGE12_RETENTION

Reference Manual to LL API cross reference:

- CR2 SRAM1PDS4 LL_PWR_GetSRAM1StopRetention_4_12
-
- CR2 SRAM1PDS5 LL_PWR_GetSRAM1StopRetention_4_12
-
- CR2 SRAM1PDS6 LL_PWR_GetSRAM1StopRetention_4_12
-
- CR2 SRAM1PDS7 LL_PWR_GetSRAM1StopRetention_4_12
-
- CR2 SRAM1PDS8 LL_PWR_GetSRAM1StopRetention_4_12
-
- CR2 SRAM1PDS9 LL_PWR_GetSRAM1StopRetention_4_12
-
- CR2 SRAM1PDS10 LL_PWR_GetSRAM1StopRetention_4_12
-
- CR2 SRAM1PDS11 LL_PWR_GetSRAM1StopRetention_4_12
-
- CR2 SRAM1PDS12 LL_PWR_GetSRAM1StopRetention_4_12

LL_PWR_SetSRAM2StopRetention

Function name

__STATIC_INLINE void LL_PWR_SetSRAM2StopRetention (uint32_t SRAM2PageRetention)

Function description

Set the SRAM2 page(s) retention in Stop mode.

Parameters

- **SRAM2PageRetention:** : This parameter can be one of the following values:
  – LL_PWR_SRAM2_STOP_NO_RETENTION
  – LL_PWR_SRAM2_STOP_PAGE1_RETENTION
  – LL_PWR_SRAM2_STOP_PAGE2_RETENTION
  – LL_PWR_SRAM2_STOP_FULL_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 SRAM2PDS1 LL_PWR_SetSRAM2StopRetention
-
- CR2 SRAM2PDS2 LL_PWR_SetSRAM2StopRetention

LL_PWR_GetSRAM2StopRetention

Function name

__STATIC_INLINE uint32_t LL_PWR_GetSRAM2StopRetention (void)

Function description

Get the SRAM2 page(s) retention in Stop mode.

Return values

- **Returned:** value can be one of the following values:
  – LL_PWR_SRAM2_STOP_NO_RETENTION
  – LL_PWR_SRAM2_STOP_PAGE1_RETENTION
  – LL_PWR_SRAM2_STOP_PAGE2_RETENTION
  – LL_PWR_SRAM2_STOP_FULL_RETENTION

Reference Manual to LL API cross reference:

- CR2 SRAM2PDS1 LL_PWR_GetSRAM2StopRetention
-
- CR2 SRAM2PDS2 LL_PWR_GetSRAM2StopRetention

LL_PWR_SetSRAM3StopRetention_1_8

Function name

__STATIC_INLINE void LL_PWR_SetSRAM3StopRetention_1_8 (uint32_t SRAM3PageRetention)

Function description

Set the SRAM3 page(s) (From page 1 to page 8) retention in Stop mode.

Parameters

- **SRAM3PageRetention:** : This parameter can be one of the following values:
  – LL_PWR_SRAM3_STOP_NO_RETENTION
  – LL_PWR_SRAM3_STOP_1_8_RETENTION Or can be a combination of the following values:
  – LL_PWR_SRAM3_STOP_PAGE1_RETENTION
  – LL_PWR_SRAM3_STOP_PAGE2_RETENTION
  – LL_PWR_SRAM3_STOP_PAGE3_RETENTION
  – LL_PWR_SRAM3_STOP_PAGE4_RETENTION
  – LL_PWR_SRAM3_STOP_PAGE5_RETENTION
  – LL_PWR_SRAM3_STOP_PAGE6_RETENTION
  – LL_PWR_SRAM3_STOP_PAGE7_RETENTION
  – LL_PWR_SRAM3_STOP_PAGE8_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 SRAM3PDS1 LL_PWR_SetSRAM3StopRetention_1_8
-
- CR2 SRAM3PDS2 LL_PWR_SetSRAM3StopRetention_1_8
-
- CR2 SRAM3PDS3 LL_PWR_SetSRAM3StopRetention_1_8
-
- CR2 SRAM3PDS4 LL_PWR_SetSRAM3StopRetention_1_8
-
- CR2 SRAM3PDS5 LL_PWR_SetSRAM3StopRetention_1_8
-
- CR2 SRAM3PDS6 LL_PWR_SetSRAM3StopRetention_1_8
-
- CR2 SRAM3PDS7 LL_PWR_SetSRAM3StopRetention_1_8
-
- CR2 SRAM3PDS8 LL_PWR_SetSRAM3StopRetention_1_8

LL_PWR_SetSRAM3StopRetention_9_13

Function name

__STATIC_INLINE void LL_PWR_SetSRAM3StopRetention_9_13 (uint32_t SRAM3PageRetention)

Function description

Set the SRAM3 page(s) (From page 9 to page 13) retention in Stop mode.

Parameters

- **SRAM3PageRetention:** : This parameter can be one of the following values:
  – LL_PWR_SRAM3_STOP_NO_RETENTION
  – LL_PWR_SRAM3_STOP_9_13_RETENTION Or can be a combination of the following values:
  – LL_PWR_SRAM3_STOP_PAGE9_RETENTION
  – LL_PWR_SRAM3_STOP_PAGE10_RETENTION
  – LL_PWR_SRAM3_STOP_PAGE11_RETENTION
  – LL_PWR_SRAM3_STOP_PAGE12_RETENTION
  – LL_PWR_SRAM3_STOP_PAGE13_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 SRAM3PDS9 LL_PWR_SetSRAM3StopRetention_9_13
-
- CR2 SRAM3PDS10 LL_PWR_SetSRAM3StopRetention_9_13
-
- CR2 SRAM3PDS11 LL_PWR_SetSRAM3StopRetention_9_13
-
- CR2 SRAM3PDS12 LL_PWR_SetSRAM3StopRetention_9_13
-
- CR2 SRAM3PDS13 LL_PWR_SetSRAM3StopRetention_9_13

LL_PWR_GetSRAM3StopRetention_1_8

Function name

__STATIC_INLINE uint32_t LL_PWR_GetSRAM3StopRetention_1_8 (void)

Function description

Get the SRAM3 page(s) (From page 1 to page 8) retention in Stop mode.

Return values

- **Returned:** value can be one of the following values:
  – LL_PWR_SRAM3_STOP_NO_RETENTION
  – LL_PWR_SRAM3_STOP_1_8_RETENTION Or can be a combination of the following values:
  – LL_PWR_SRAM3_STOP_PAGE1_RETENTION
  – LL_PWR_SRAM3_STOP_PAGE2_RETENTION
  – LL_PWR_SRAM3_STOP_PAGE3_RETENTION
  – LL_PWR_SRAM3_STOP_PAGE4_RETENTION
  – LL_PWR_SRAM3_STOP_PAGE5_RETENTION
  – LL_PWR_SRAM3_STOP_PAGE6_RETENTION
  – LL_PWR_SRAM3_STOP_PAGE7_RETENTION
  – LL_PWR_SRAM3_STOP_PAGE8_RETENTION

Reference Manual to LL API cross reference:

- CR2 SRAM3PDS1 LL_PWR_GetSRAM3StopRetention_1_8
-
- CR2 SRAM3PDS2 LL_PWR_GetSRAM3StopRetention_1_8
-
- CR2 SRAM3PDS3 LL_PWR_GetSRAM3StopRetention_1_8
-
- CR2 SRAM3PDS4 LL_PWR_GetSRAM3StopRetention_1_8
-
- CR2 SRAM3PDS5 LL_PWR_GetSRAM3StopRetention_1_8
-
- CR2 SRAM3PDS6 LL_PWR_GetSRAM3StopRetention_1_8
-
- CR2 SRAM3PDS7 LL_PWR_GetSRAM3StopRetention_1_8
-
- CR2 SRAM3PDS8 LL_PWR_GetSRAM3StopRetention_1_8

LL_PWR_GetSRAM3StopRetention_9_13

Function name

__STATIC_INLINE uint32_t LL_PWR_GetSRAM3StopRetention_9_13 (void)

Function description

Get the SRAM3 page(s) (From page 9 to page 13) retention in Stop mode.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_SRAM3_STOP_NO_RETENTION
  - LL_PWR_SRAM3_STOP_9_13_RETENTION Or can be a combination of the following values:
  - LL_PWR_SRAM3_STOP_PAGE9_RETENTION
  - LL_PWR_SRAM3_STOP_PAGE10_RETENTION
  - LL_PWR_SRAM3_STOP_PAGE11_RETENTION
  - LL_PWR_SRAM3_STOP_PAGE12_RETENTION
  - LL_PWR_SRAM3_STOP_PAGE13_RETENTION

Reference Manual to LL API cross reference:

- CR2 SRAM3PDS9 LL_PWR_SetSRAM3StopRetention_9_13
-
- CR2 SRAM3PDS10 LL_PWR_SetSRAM3StopRetention_9_13
-
- CR2 SRAM3PDS11 LL_PWR_SetSRAM3StopRetention_9_13
-
- CR2 SRAM3PDS12 LL_PWR_SetSRAM3StopRetention_9_13
-
- CR2 SRAM3PDS13 LL_PWR_SetSRAM3StopRetention_9_13

LL_PWR_SetSRAM4StopRetention

Function name

__STATIC_INLINE void LL_PWR_SetSRAM4StopRetention (uint32_t SRAM4PageRetention)

Function description

Set the SRAM4 page retention in Stop mode.

Parameters

- **SRAM4PageRetention:** : This parameter can be one of the following values:
  - LL_PWR_SRAM4_STOP_NO_RETENTION
  - LL_PWR_SRAM4_STOP_FULL_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 SRAM4PDS LL_PWR_SetSRAM4StopRetention
-

LL_PWR_GetSRAM4StopRetention

Function name

__STATIC_INLINE uint32_t LL_PWR_GetSRAM4StopRetention (void)

Function description

Get the SRAM4 page retention in Stop mode.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_SRAM4_STOP_NO_RETENTION
  - LL_PWR_SRAM4_STOP_FULL_RETENTION

Reference Manual to LL API cross reference:

- CR2 SRAM4PDS LL_PWR_GetSRAM4StopRetention

LL_PWR_SetSRAM5StopRetention

Function name

__STATIC_INLINE void LL_PWR_SetSRAM5StopRetention (uint32_t SRAM5PageRetention)

Function description

Set the SRAM5 page(s) retention in Stop mode.

Parameters

- **SRAM5PageRetention:** : This parameter can be one of the following values:
  - LL_PWR_SRAM5_STOP_NO_RETENTION
  - LL_PWR_SRAM5_STOP_FULL_RETENTION Or can be a combination of the following values:
  - LL_PWR_SRAM5_STOP_PAGE1_RETENTION
  - LL_PWR_SRAM5_STOP_PAGE2_RETENTION
  - LL_PWR_SRAM5_STOP_PAGE3_RETENTION
  - LL_PWR_SRAM5_STOP_PAGE4_RETENTION
  - LL_PWR_SRAM5_STOP_PAGE5_RETENTION
  - LL_PWR_SRAM5_STOP_PAGE6_RETENTION
  - LL_PWR_SRAM5_STOP_PAGE7_RETENTION
  - LL_PWR_SRAM5_STOP_PAGE8_RETENTION
  - LL_PWR_SRAM5_STOP_PAGE9_RETENTION
  - LL_PWR_SRAM5_STOP_PAGE10_RETENTION
  - LL_PWR_SRAM5_STOP_PAGE11_RETENTION
  - LL_PWR_SRAM5_STOP_PAGE12_RETENTION
  - LL_PWR_SRAM5_STOP_PAGE13_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

-
- CR4 SRAM5PDS13 LL_PWR_SetSRAM5StopRetention

LL_PWR_GetSRAM5StopRetention

Function name

__STATIC_INLINE uint32_t LL_PWR_GetSRAM5StopRetention (void)

Function description

Get the SRAM5 page(s) retention in Stop mode.

Return values

- **Returned:** value can be one of the following values:
  – LL_PWR_SRAM5_STOP_NO_RETENTION
  – LL_PWR_SRAM5_STOP_FULL_RETENTION Or can be a combination of the following values:
  – LL_PWR_SRAM5_STOP_PAGE1_RETENTION
  – LL_PWR_SRAM5_STOP_PAGE2_RETENTION
  – LL_PWR_SRAM5_STOP_PAGE3_RETENTION
  – LL_PWR_SRAM5_STOP_PAGE4_RETENTION
  – LL_PWR_SRAM5_STOP_PAGE5_RETENTION
  – LL_PWR_SRAM5_STOP_PAGE6_RETENTION
  – LL_PWR_SRAM5_STOP_PAGE7_RETENTION
  – LL_PWR_SRAM5_STOP_PAGE8_RETENTION
  – LL_PWR_SRAM5_STOP_PAGE9_RETENTION
  – LL_PWR_SRAM5_STOP_PAGE10_RETENTION
  – LL_PWR_SRAM5_STOP_PAGE11_RETENTION
  – LL_PWR_SRAM5_STOP_PAGE12_RETENTION

- CR4 SRAM5PDS13 LL_PWR_GetSRAM5StopRetention

LL_PWR_SetSRAM6StopRetention

Function name

__STATIC_INLINE void LL_PWR_SetSRAM6StopRetention (uint32_t SRAM6PageRetention)

Function description

Set the SRAM6 page(s) retention in Stop mode.

Parameters

- **SRAM6PageRetention:** : This parameter can be one of the following values:
  - LL_PWR_SRAM6_STOP_NO_RETENTION
  - LL_PWR_SRAM6_STOP_FULL_RETENTION Or can be a combination of the following values:
  - LL_PWR_SRAM6_STOP_PAGE1_RETENTION
  - LL_PWR_SRAM6_STOP_PAGE2_RETENTION
  - LL_PWR_SRAM6_STOP_PAGE3_RETENTION
  - LL_PWR_SRAM6_STOP_PAGE4_RETENTION
  - LL_PWR_SRAM6_STOP_PAGE5_RETENTION
  - LL_PWR_SRAM6_STOP_PAGE6_RETENTION
  - LL_PWR_SRAM6_STOP_PAGE7_RETENTION
  - LL_PWR_SRAM6_STOP_PAGE8_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

-
- CR5 SRAM6PDS8 LL_PWR_SetSRAM6StopRetention

LL_PWR_GetSRAM6StopRetention

Function name

__STATIC_INLINE uint32_t LL_PWR_GetSRAM6StopRetention (void)

Function description

Get the SRAM6 page(s) retention in Stop mode.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_SRAM6_STOP_NO_RETENTION
  - LL_PWR_SRAM6_STOP_FULL_RETENTION Or can be a combination of the following values:
  - LL_PWR_SRAM6_STOP_PAGE1_RETENTION
  - LL_PWR_SRAM6_STOP_PAGE2_RETENTION
  - LL_PWR_SRAM6_STOP_PAGE3_RETENTION
  - LL_PWR_SRAM6_STOP_PAGE4_RETENTION
  - LL_PWR_SRAM6_STOP_PAGE5_RETENTION
  - LL_PWR_SRAM6_STOP_PAGE6_RETENTION
  - LL_PWR_SRAM6_STOP_PAGE7_RETENTION
  - LL_PWR_SRAM6_STOP_PAGE8_RETENTION

Reference Manual to LL API cross reference:

- CR5 SRAM6PDS8 LL_PWR_GetSRAM6StopRetention

LL_PWR_SetICacheRAMStopRetention

Function name

__STATIC_INLINE void LL_PWR_SetICacheRAMStopRetention (uint32_t ICachePageRetention)

Function description

Set the ICACHE SRAM page retention in Stop mode.

Parameters

- **ICachePageRetention:** : This parameter can be one of the following values:
  - LL_PWR_ICACHERAM_STOP_NO_RETENTION
  - LL_PWR_ICACHERAM_STOP_FULL_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 ICRAMPDS LL_PWR_SetICacheRAMStopRetention
-

LL_PWR_GetICacheRAMStopRetention

Function name

__STATIC_INLINE uint32_t LL_PWR_GetICacheRAMStopRetention (void)

Function description

Get the ICACHE SRAM page retention in Stop mode.

Return values

- **Returned:** value can be one of the following values:
  – LL_PWR_ICACHERAM_STOP_NO_RETENTION
  – LL_PWR_ICACHERAM_STOP_FULL_RETENTION

Reference Manual to LL API cross reference:

- CR2 ICRAMPDS LL_PWR_GetICacheRAMStopRetention

LL_PWR_SetDCache1RAMStopRetention

Function name

__STATIC_INLINE void LL_PWR_SetDCache1RAMStopRetention (uint32_t DCache1PageRetention)

Function description

Set the DCACHE1 SRAM page retention in Stop mode.

Parameters

- **DCache1PageRetention:** : This parameter can be one of the following values:
  – LL_PWR_DCACHE1RAM_STOP_NO_RETENTION
  – LL_PWR_DCACHE1RAM_STOP_FULL_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 DC1RAMPDS LL_PWR_SetDCache1RAMStopRetention
-

LL_PWR_GetDCache1RAMStopRetention

Function name

__STATIC_INLINE uint32_t LL_PWR_GetDCache1RAMStopRetention (void)

Function description

Get the DCACHE1 SRAM page retention in Stop mode.

Return values

- **Returned:** value can be one of the following values:
  – LL_PWR_DCACHE1RAM_STOP_NO_RETENTION
  – LL_PWR_DCACHE1RAM_STOP_FULL_RETENTION

Reference Manual to LL API cross reference:

- CR2 DC1RAMPDS LL_PWR_GetDCache1RAMStopRetention

LL_PWR_SetDCache2RAMStopRetention

Function name

__STATIC_INLINE void LL_PWR_SetDCache2RAMStopRetention (uint32_t DCache2PageRetention)

Function description

Set the DCACHE2 SRAM page retention in Stop mode.

Parameters

- **DCache2PageRetention:** : This parameter can be one of the following values:
  – LL_PWR_DCACHE2RAM_STOP_NO_RETENTION
  – LL_PWR_DCACHE2RAM_STOP_FULL_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 DC2RAMPDS LL_PWR_SetDCache2RAMStopRetention
-

LL_PWR_GetDCache2RAMStopRetention

Function name

__STATIC_INLINE uint32_t LL_PWR_GetDCache2RAMStopRetention (void)

Function description

Get the DCACHE2 SRAM page retention in Stop mode.

Return values

- **Returned:** value can be one of the following values:
  – LL_PWR_DCACHE2RAM_STOP_NO_RETENTION
  – LL_PWR_DCACHE2RAM_STOP_FULL_RETENTION

Reference Manual to LL API cross reference:

- CR2 DC2RAMPDS LL_PWR_GetDCache2RAMStopRetention

LL_PWR_SetDMA2DRAMStopRetention

Function name

__STATIC_INLINE void LL_PWR_SetDMA2DRAMStopRetention (uint32_t DMA2DRAMPageRetention)

Function description

Set the DMA2D SRAM page retention in Stop mode.

Parameters

- **DMA2DRAMPageRetention:** : This parameter can be one of the following values:
  – LL_PWR_DMA2DRAM_STOP_NO_RETENTION
  – LL_PWR_DMA2DRAM_STOP_FULL_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 DMA2DRAMPDS LL_PWR_SetDMA2DRAMStopRetention
-

LL_PWR_GetDMA2DRAMStopRetention

Function name

__STATIC_INLINE uint32_t LL_PWR_GetDMA2DRAMStopRetention (void)

Function description

Get the DMA2D SRAM page retention in Stop mode.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_DMA2DRAM_STOP_NO_RETENTION
  - LL_PWR_DMA2DRAM_STOP_FULL_RETENTION

Reference Manual to LL API cross reference:

- CR2 DMA2DRAMPDS LL_PWR_GetDMA2DRAMStopRetention

LL_PWR_SetPeriphRAMStopRetention

Function name

__STATIC_INLINE void LL_PWR_SetPeriphRAMStopRetention (uint32_t PriphRAMPageRetention)

Function description

Set the FMAC, FDCAN and USB SRAMs pages retention in Stop mode.

Parameters

- **PriphRAMPageRetention:** : This parameter can be one of the following values:
  - LL_PWR_PERIPHRAM_STOP_NO_RETENTION
  - LL_PWR_PERIPHRAM_STOP_FULL_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 PRAMPDS LL_PWR_SetPeriphRAMStopRetention
-

LL_PWR_GetPeriphRAMStopRetention

Function name

__STATIC_INLINE uint32_t LL_PWR_GetPeriphRAMStopRetention (void)

Function description

Get the FMAC, FDCAN and USB SRAMs pages retention in Stop mode.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_PERIPHRAM_STOP_NO_RETENTION
  - LL_PWR_PERIPHRAM_STOP_FULL_RETENTION

Reference Manual to LL API cross reference:

- CR2 PRAMPDS LL_PWR_GetPeriphRAMStopRetention

LL_PWR_SetPKARAMStopRetention

Function name

__STATIC_INLINE void LL_PWR_SetPKARAMStopRetention (uint32_t PKARAMPageRetention)

Function description

Set the PKA32 SRAM page retention in Stop mode.

Parameters

- **PKARAMPageRetention:** : This parameter can be one of the following values:
  - LL_PWR_PKARAM_STOP_NO_RETENTION
  - LL_PWR_PKARAM_STOP_FULL_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 PKARAMPDS LL_PWR_SetPKARAMStopRetention

LL_PWR_GetPKARAMStopRetention

Function name

__STATIC_INLINE uint32_t LL_PWR_GetPKARAMStopRetention (void)

Function description

Get the PKA32 SRAM page retention in Stop mode.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_PKARAM_STOP_NO_RETENTION
  - LL_PWR_PKARAM_STOP_FULL_RETENTION

Reference Manual to LL API cross reference:

- CR2 PKARAMPDS LL_PWR_GetPKARAMStopRetention

LL_PWR_SetGraphicPeriphRAMStopRetention

Function name

__STATIC_INLINE void LL_PWR_SetGraphicPeriphRAMStopRetention (uint32_t GraphicPeriphRAMPageRetention)

Function description

Set the Graphic peripherals (LTDC, GFXMMU) SRAM page retention in Stop mode.

Parameters

- **GraphicPeriphRAMPageRetention:** : This parameter can be one of the following values:
  - LL_PWR_GRAPHICPERIPHRAM_STOP_NO_RETENTION
  - LL_PWR_GRAPHICPERIPHRAM_STOP_FULL_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 GPRAMPDS LL_PWR_SetGraphicPeriphRAMStopRetention

LL_PWR_GetGraphicPeriphRAMStopRetention

Function name

__STATIC_INLINE uint32_t LL_PWR_GetGraphicPeriphRAMStopRetention (void)

Function description

Get the Graphic peripherals (LTDC, GFXMMU) SRAM page retention in Stop mode.

Return values

- **Returned:** value can be one of the following values:
  – LL_PWR_GRAPHICPERIPHRAM_STOP_NO_RETENTION
  – LL_PWR_GRAPHICPERIPHRAM_STOP_FULL_RETENTION

Reference Manual to LL API cross reference:

- CR2 GPRAMPDS LL_PWR_GetGraphicPeriphRAMStopRetention

LL_PWR_SetDSIRAMStopRetention

Function name

__STATIC_INLINE void LL_PWR_SetDSIRAMStopRetention (uint32_t DSIRAMPageRetention)

Function description

Set the DSI SRAM page retention in Stop mode.

Parameters

- **DSIRAMPageRetention:** : This parameter can be one of the following values:
  – LL_PWR_DSIRAM_STOP_NO_RETENTION
  – LL_PWR_DSIRAM_STOP_FULL_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 DSIRAMPDS LL_PWR_SetDSIRAMStopRetention

LL_PWR_GetDSIRAMStopRetention

Function name

__STATIC_INLINE uint32_t LL_PWR_GetDSIRAMStopRetention (void)

Function description

Get the DSI SRAM page retention in Stop mode.

Return values

- **Returned:** value can be one of the following values:
  – LL_PWR_DSIRAM_STOP_NO_RETENTION
  – LL_PWR_DSIRAM_STOP_FULL_RETENTION

Reference Manual to LL API cross reference:

- CR2 DSIRAMPDS LL_PWR_GetDSIRAMStopRetention

LL_PWR_SetJPEGRAMStopRetention

Function name

__STATIC_INLINE void LL_PWR_SetJPEGRAMStopRetention (uint32_t JPEGRAMPageRetention)

Function description

Set the JPEG SRAM page retention in Stop mode.

Parameters

- **JPEGRAMPageRetention:** : This parameter can be one of the following values:
  – LL_PWR_JPEGRAM_STOP_NO_RETENTION
  – LL_PWR_JPEGRAM_STOP_FULL_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 JPEGRAMPDS LL_PWR_SetJPEGRAMStopRetention

LL_PWR_GetJPEGRAMStopRetention

Function name

__STATIC_INLINE uint32_t LL_PWR_GetJPEGRAMStopRetention (void)

Function description

Get the JPEG SRAM page retention in Stop mode.

Return values

- **Returned:** value can be one of the following values:
  – LL_PWR_JPEGRAM_STOP_NO_RETENTION
  – LL_PWR_JPEGRAM_STOP_FULL_RETENTION

Reference Manual to LL API cross reference:

- CR2 JPEGRAMPDS LL_PWR_GetJPEGRAMStopRetention

LL_PWR_EnableFlashFastWakeUp

Function name

__STATIC_INLINE void LL_PWR_EnableFlashFastWakeUp (void)

Function description

Enable the flash memory fast wakeup from Stop mode (Stop 0, 1).

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 FLASHFWU LL_PWR_EnableFlashFastWakeUp

LL_PWR_DisableFlashFastWakeUp

Function name

__STATIC_INLINE void LL_PWR_DisableFlashFastWakeUp (void)

Function description

Disable the flash memory fast wakeup from Stop mode (Stop 0, 1).

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 FLASHFWU LL_PWR_DisableFlashFastWakeUp

LL_PWR_IsEnabledFlashFastWakeUp

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledFlashFastWakeUp (void)

Function description

Check if the flash memory fast wakeup from Stop mode (Stop 0, 1) is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR2 FLASHFWU LL_PWR_IsEnabledFlashFastWakeUp

LL_PWR_EnableSRAM4FastWakeUp

Function name

__STATIC_INLINE void LL_PWR_EnableSRAM4FastWakeUp (void)

Function description

Enable the SRAM4 memory fast wakeup from Stop mode (Stop 0, 1, 2).

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 SRAM4FWU LL_PWR_EnableSRAM4FastWakeUp

LL_PWR_DisableSRAM4FastWakeUp

Function name

__STATIC_INLINE void LL_PWR_DisableSRAM4FastWakeUp (void)

Function description

Disable the SRAM4 memory fast wakeup from Stop mode (Stop 0, 1, 2).

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 SRAM4FWU LL_PWR_DisableSRAM4FastWakeUp

LL_PWR_IsEnabledSRAM4FastWakeUp

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledSRAM4FastWakeUp (void)

Function description

Check if the SRAM4 memory fast wakeup from Stop mode (Stop 0, 1, 2).

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR2 SRAM4FWU LL_PWR_IsEnabledSRAM4FastWakeUp

LL_PWR_SetSmartRunDomainMode

Function name

__STATIC_INLINE void LL_PWR_SetSmartRunDomainMode (uint32_t SRDMode)

Function description

Set the smart run domain mode.

Parameters

- **SRDMode:** : This parameter can be one of the following values:
  – LL_PWR_SRD_RUN_MODE
  – LL_PWR_SRD_STOP_MODE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 SRDRUN LL_PWR_SetSmartRunDomainMode

LL_PWR_GetSmartRunDomainMode

Function name

__STATIC_INLINE uint32_t LL_PWR_GetSmartRunDomainMode (void)

Function description

Get the smart run domain mode.

Return values

- **Returned:** value can be one of the following values:
  – LL_PWR_SRD_RUN_MODE
  – LL_PWR_SRD_STOP_MODE

Reference Manual to LL API cross reference:

- CR2 SRDRUN LL_PWR_GetSmartRunDomainMode

LL_PWR_SetRegulatorSupply

Function name

__STATIC_INLINE void LL_PWR_SetRegulatorSupply (uint32_t RegulatorSupply)

Function description

Set the VCore regulator supply.

Parameters

- **RegulatorSupply:** : This parameter can be one of the following values:
  – LL_PWR_LDO_SUPPLY
  – LL_PWR_SMPS_SUPPLY

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 REGSEL LL_PWR_SetRegulatorSupply

LL_PWR_GetRegulatorSupply

Function name

__STATIC_INLINE uint32_t LL_PWR_GetRegulatorSupply (void)

Function description

Get the VCore regulator supply.

Return values

- **Returned:** value can be one of the following values:
  – LL_PWR_LDO_SUPPLY
  – LL_PWR_SMPS_SUPPLY

Reference Manual to LL API cross reference:

- CR3 REGSEL LL_PWR_GetRegulatorSupply

LL_PWR_EnableFastSoftStart

Function name

__STATIC_INLINE void LL_PWR_EnableFastSoftStart (void)

Function description

Enable the fast soft start for selected regulator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 FSTEN LL_PWR_EnableFastSoftStart

LL_PWR_DisableFastSoftStart

Function name

__STATIC_INLINE void LL_PWR_DisableFastSoftStart (void)

Function description

Disable the fast soft start for selected regulator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 FSTEN LL_PWR_DisableFastSoftStart

LL_PWR_IsEnabledFastSoftStart

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledFastSoftStart (void)

Function description

Check if the fast soft start for selected regulator is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 FSTEN LL_PWR_IsEnabledFastSoftStart

LL_PWR_SetRegulVoltageScaling

Function name

__STATIC_INLINE void LL_PWR_SetRegulVoltageScaling (uint32_t VoltageScaling)

Function description

Set the regulator supply output voltage.

Parameters

- **VoltageScaling:** This parameter can be one of the following values:
  - LL_PWR_REGU_VOLTAGE_SCALE1
  - LL_PWR_REGU_VOLTAGE_SCALE2
  - LL_PWR_REGU_VOLTAGE_SCALE3
  - LL_PWR_REGU_VOLTAGE_SCALE4

Return values

- **None:**

Reference Manual to LL API cross reference:

- VOSR VOS LL_PWR_SetRegulVoltageScaling

LL_PWR_GetRegulVoltageScaling

Function name

__STATIC_INLINE uint32_t LL_PWR_GetRegulVoltageScaling (void)

Function description

Get the regulator supply output voltage.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_REGU_VOLTAGE_SCALE1
  - LL_PWR_REGU_VOLTAGE_SCALE2
  - LL_PWR_REGU_VOLTAGE_SCALE3
  - LL_PWR_REGU_VOLTAGE_SCALE4

Reference Manual to LL API cross reference:

- VOSR VOS LL_PWR_GetRegulVoltageScaling

LL_PWR_EnableEPODBooster

Function name

__STATIC_INLINE void LL_PWR_EnableEPODBooster (void)

Function description

Enable the EPOD (Embedded Power Distribution) booster.

Return values

- **None:**

Reference Manual to LL API cross reference:

- VOSR BOOSTEN LL_PWR_EnableEPODBooster

LL_PWR_DisableEPODBooster

Function name

__STATIC_INLINE void LL_PWR_DisableEPODBooster (void)

Function description

Disable the EPOD (Embedded Power Distribution) booster.

Return values

- **None:**

Reference Manual to LL API cross reference:

- VOSR BOOSTEN LL_PWR_DisableEPODBooster

LL_PWR_IsEnabledEPODBooster

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledEPODBooster (void)

Function description

Check if the EPOD (Embedded Power Distribution) booster is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- VOSR BOOSTEN LL_PWR_IsEnabledEPODBooster

LL_PWR_EnableUSBPowerSupply

Function name

__STATIC_INLINE void LL_PWR_EnableUSBPowerSupply (void)

Function description

Enable the USB power supply.

Return values

- **None:**

Reference Manual to LL API cross reference:

- VOSR USBPWREN LL_PWR_EnableUSBPowerSupply

LL_PWR_DisableUSBPowerSupply

Function name

__STATIC_INLINE void LL_PWR_DisableUSBPowerSupply (void)

Function description

Disable the USB power supply.

Return values

- **None:**

Reference Manual to LL API cross reference:

- VOSR USBPWREN LL_PWR_DisableUSBPowerSupply

LL_PWR_IsEnabledUSBPowerSupply

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledUSBPowerSupply (void)

Function description

Check if the USB power supply is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- VOSR USBPWREN LL_PWR_IsEnabledUSBPowerSupply

LL_PWR_EnableUSBEPODBooster

Function name

__STATIC_INLINE void LL_PWR_EnableUSBEPODBooster (void)

Function description

Enable the USB EPOD (Embedded Power Distribution) booster.

Return values

- **None:**

Reference Manual to LL API cross reference:

- VOSR USBBOOSTEN LL_PWR_EnableUSBEPODBooster

LL_PWR_DisableUSBEPODBooster

Function name

__STATIC_INLINE void LL_PWR_DisableUSBEPODBooster (void)

Function description

Disable the USB EPOD (Embedded Power Distribution) booster.

Return values

- **None:**

Reference Manual to LL API cross reference:

- VOSR USBBOOSTEN LL_PWR_DisableUSBEPODBooster

LL_PWR_IsEnabledUSBEPODBooster

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledUSBEPODBooster (void)

Function description

Check if the USB EPOD (Embedded Power Distribution) booster is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- VOSR USBBOOSTEN LL_PWR_IsEnabledUSBEPODBooster

LL_PWR_EnableVDD11USB

Function name

__STATIC_INLINE void LL_PWR_EnableVDD11USB (void)

Function description

Enable the VDD11USB.

Return values

- **None:**

Reference Manual to LL API cross reference:

- VOSR VDD11USBDIS LL_PWR_EnableVDD11USB

LL_PWR_DisableVDD11USB

Function name

__STATIC_INLINE void LL_PWR_DisableVDD11USB (void)

Function description

Disable the VDD11USB.

Return values

- **None:**

Reference Manual to LL API cross reference:

- VOSR VDD11USBDIS LL_PWR_DisableVDD11USB

LL_PWR_IsEnabledVDD11USB

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledVDD11USB (void)

Function description

Check if the VDD11USB is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- VOSR VDD11USBDIS LL_PWR_IsEnabledVDD11USB

LL_PWR_SetPVDLevel

Function name

__STATIC_INLINE void LL_PWR_SetPVDLevel (uint32_t PVDLevel)

Function description

Set the Power voltage detector level.

Parameters

- **PVDLevel:** This parameter can be one of the following values:
  – LL_PWR_PVDLEVEL_0
  – LL_PWR_PVDLEVEL_1
  – LL_PWR_PVDLEVEL_2
  – LL_PWR_PVDLEVEL_3
  – LL_PWR_PVDLEVEL_4
  – LL_PWR_PVDLEVEL_5
  – LL_PWR_PVDLEVEL_6
  – LL_PWR_PVDLEVEL_7

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR PVDLS LL_PWR_SetPVDLevel

LL_PWR_GetPVDLevel

Function name

__STATIC_INLINE uint32_t LL_PWR_GetPVDLevel (void)

Function description

Get the Power voltage detector level.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_PVDLEVEL_0
  - LL_PWR_PVDLEVEL_1
  - LL_PWR_PVDLEVEL_2
  - LL_PWR_PVDLEVEL_3
  - LL_PWR_PVDLEVEL_4
  - LL_PWR_PVDLEVEL_5
  - LL_PWR_PVDLEVEL_6
  - LL_PWR_PVDLEVEL_7

Reference Manual to LL API cross reference:

- SVMCR PVDLS LL_PWR_GetPVDLevel

LL_PWR_EnablePVD

Function name

__STATIC_INLINE void LL_PWR_EnablePVD (void)

Function description

Enable the power voltage detector.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR PVDE LL_PWR_EnablePVD

LL_PWR_DisablePVD

Function name

__STATIC_INLINE void LL_PWR_DisablePVD (void)

Function description

Disable the power voltage detector.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR PVDE LL_PWR_DisablePVD

LL_PWR_IsEnabledPVD

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledPVD (void)

Function description

Check if the power voltage detector is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMCR PVDE LL_PWR_IsEnabledPVD

LL_PWR_EnableVddUSB

Function name

__STATIC_INLINE void LL_PWR_EnableVddUSB (void)

Function description

Enable the independent USB supply.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR USV LL_PWR_EnableVddUSB

LL_PWR_DisableVddUSB

Function name

__STATIC_INLINE void LL_PWR_DisableVddUSB (void)

Function description

Disable the independent USB supply.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR USV LL_PWR_DisableVDDUSB

LL_PWR_IsEnabledVddUSB

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledVddUSB (void)

Function description

Check if the independent USB supply is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMCR USV LL_PWR_IsEnabledVddUSB

LL_PWR_EnableVddIO2

Function name

__STATIC_INLINE void LL_PWR_EnableVddIO2 (void)

Function description

Enable the independent I/Os supply.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR IO2SV LL_PWR_EnableVddIO2

LL_PWR_DisableVddIO2

Function name

__STATIC_INLINE void LL_PWR_DisableVddIO2 (void)

Function description

Disable the independent I/Os supply.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR IO2SV LL_PWR_DisableVddIO2

LL_PWR_IsEnabledVddIO2

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledVddIO2 (void)

Function description

Check if the independent I/Os supply is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMCR IO2SV LL_PWR_IsEnabledVddIO2

LL_PWR_EnableVddA

Function name

__STATIC_INLINE void LL_PWR_EnableVddA (void)

Function description

Enable the independent analog supply.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR ASV LL_PWR_EnableVddA

LL_PWR_DisableVddA

Function name

__STATIC_INLINE void LL_PWR_DisableVddA (void)

Function description

Disable the independent analog supply.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR ASV LL_PWR_DisableVddA

LL_PWR_IsEnabledVddA

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledVddA (void)

Function description

Check if the independent analog supply is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMCR ASV LL_PWR_IsEnabledVddA

LL_PWR_EnableVddUSBMonitor

Function name

__STATIC_INLINE void LL_PWR_EnableVddUSBMonitor (void)

Function description

Enable the independent USB supply monitor.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR UVMEN LL_PWR_EnableVddUSBMonitor

LL_PWR_DisableVddUSBMonitor

Function name

__STATIC_INLINE void LL_PWR_DisableVddUSBMonitor (void)

Function description

Disable the independent USB supply monitor.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR UVMEN LL_PWR_DisableVddUSBMonitor

LL_PWR_IsEnabledVddUSBMonitor

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledVddUSBMonitor (void)

Function description

Check if the independent USB supply monitor is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMCR UVMEN LL_PWR_IsEnabledVddUSBMonitor

LL_PWR_EnableVddIO2Monitor

Function name

__STATIC_INLINE void LL_PWR_EnableVddIO2Monitor (void)

Function description

Enable the independent I/Os supply monitor.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR IO2VMEN LL_PWR_EnableVddIO2Monitor

LL_PWR_DisableVddIO2Monitor

Function name

__STATIC_INLINE void LL_PWR_DisableVddIO2Monitor (void)

Function description

Disable the independent I/Os supply monitor.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR IO2VMEN LL_PWR_DisableVddIO2Monitor

LL_PWR_IsEnabledVddIO2Monitor

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledVddIO2Monitor (void)

Function description

Check if the independent I/Os supply monitor is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMCR IO2VMEN LL_PWR_IsEnabledVddIO2Monitor

LL_PWR_EnableVddAMonitor1

Function name

__STATIC_INLINE void LL_PWR_EnableVddAMonitor1 (void)

Function description

Enable the independent analog supply monitor 1.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR AVM1EN LL_PWR_EnableVddAMonitor1

LL_PWR_DisableVddAMonitor1

Function name

__STATIC_INLINE void LL_PWR_DisableVddAMonitor1 (void)

Function description

Disable the independent analog supply monitor 1.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR AVM1EN LL_PWR_DisableVddAMonitor1

LL_PWR_IsEnabledVddAMonitor1

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledVddAMonitor1 (void)

Function description

Disable the independent analog supply monitor 2.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR AVM2EN LL_PWR_DisableVddAMonitor2

LL_PWR_IsEnabledVddAMonitor2

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledVddAMonitor2 (void)

Function description

Check if the independent analog supply monitor 2 is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMCR AVM2EN LL_PWR_IsEnabledVddAMonitor2

LL_PWR_EnableWakeUpPin

Function name

__STATIC_INLINE void LL_PWR_EnableWakeUpPin (uint32_t WakeUpPin)

Function description

Enable the wake up pin_x.

Parameters

- **WakeUpPin:** This parameter can be a combination of the following values:
  - LL_PWR_WAKEUP_PIN1
  - LL_PWR_WAKEUP_PIN2
  - LL_PWR_WAKEUP_PIN3
  - LL_PWR_WAKEUP_PIN4
  - LL_PWR_WAKEUP_PIN5
  - LL_PWR_WAKEUP_PIN6
  - LL_PWR_WAKEUP_PIN7
  - LL_PWR_WAKEUP_PIN8

Return values

- **None:**

Reference Manual to LL API cross reference:

- WUCR1 WUPENx LL_PWR_EnableWakeUpPin

LL_PWR_DisableWakeUpPin

Function name

__STATIC_INLINE void LL_PWR_DisableWakeUpPin (uint32_t WakeUpPin)

Function description

Disable the wake up pin_x.

Parameters

- **WakeUpPin:** This parameter can be a combination of the following values:
  - LL_PWR_WAKEUP_PIN1
  - LL_PWR_WAKEUP_PIN2
  - LL_PWR_WAKEUP_PIN3
  - LL_PWR_WAKEUP_PIN4
  - LL_PWR_WAKEUP_PIN5
  - LL_PWR_WAKEUP_PIN6
  - LL_PWR_WAKEUP_PIN7
  - LL_PWR_WAKEUP_PIN8

Return values

- **None:**

Reference Manual to LL API cross reference:

- WUCR1 WUPENx LL_PWR_DisableWakeUpPin

LL_PWR_IsEnabledWakeUpPin

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledWakeUpPin (uint32_t WakeUpPin)

Function description

Check if the wake up pin_x is enabled.

Parameters

- **WakeUpPin:** This parameter can be one of the following values:
  - LL_PWR_WAKEUP_PIN1
  - LL_PWR_WAKEUP_PIN2
  - LL_PWR_WAKEUP_PIN3
  - LL_PWR_WAKEUP_PIN4
  - LL_PWR_WAKEUP_PIN5
  - LL_PWR_WAKEUP_PIN6
  - LL_PWR_WAKEUP_PIN7
  - LL_PWR_WAKEUP_PIN8

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- WUCR1 WUPENx LL_PWR_IsEnabledWakeUpPin

LL_PWR_SetWakeUpPinPolarityLow

Function name

__STATIC_INLINE void LL_PWR_SetWakeUpPinPolarityLow (uint32_t WakeUpPin)

Function description

Set the wake up pin polarity low for the event detection.

Parameters

- **WakeUpPin:** This parameter can be a combination of the following values:
  - LL_PWR_WAKEUP_PIN1
  - LL_PWR_WAKEUP_PIN2
  - LL_PWR_WAKEUP_PIN3
  - LL_PWR_WAKEUP_PIN4
  - LL_PWR_WAKEUP_PIN5
  - LL_PWR_WAKEUP_PIN6
  - LL_PWR_WAKEUP_PIN7
  - LL_PWR_WAKEUP_PIN8

Return values

- **None:**

Reference Manual to LL API cross reference:

- WUCR2 WUPPx LL_PWR_SetWakeUpPinPolarityLow

LL_PWR_SetWakeUpPinPolarityHigh

Function name

__STATIC_INLINE void LL_PWR_SetWakeUpPinPolarityHigh (uint32_t WakeUpPin)

Function description

Set the wake up pin polarity high for the event detection.

Parameters

- **WakeUpPin:** This parameter can be a combination of the following values:
  - LL_PWR_WAKEUP_PIN1
  - LL_PWR_WAKEUP_PIN2
  - LL_PWR_WAKEUP_PIN3
  - LL_PWR_WAKEUP_PIN4
  - LL_PWR_WAKEUP_PIN5
  - LL_PWR_WAKEUP_PIN6
  - LL_PWR_WAKEUP_PIN7
  - LL_PWR_WAKEUP_PIN8

Return values

- **None:**

Reference Manual to LL API cross reference:

- WUCR2 WUPPx LL_PWR_SetWakeUpPinPolarityHigh

LL_PWR_GetWakeUpPinPolarity

Function name

__STATIC_INLINE uint32_t LL_PWR_GetWakeUpPinPolarity (uint32_t WakeUpPin)

Function description

Get the wake up pin polarity for the event detection.

Parameters

- **WakeUpPin:** This parameter can be one of the following values:
  – LL_PWR_WAKEUP_PIN1
  – LL_PWR_WAKEUP_PIN2
  – LL_PWR_WAKEUP_PIN3
  – LL_PWR_WAKEUP_PIN4
  – LL_PWR_WAKEUP_PIN5
  – LL_PWR_WAKEUP_PIN6
  – LL_PWR_WAKEUP_PIN7
  – LL_PWR_WAKEUP_PIN8

Return values

- **State:** of bit (1 : polarity or 0 : polarity high).

Reference Manual to LL API cross reference:

- WUCR2 WUPPx LL_PWR_GetWakeUpPinPolarity

LL_PWR_SetWakeUpPinSignal0Selection

Function name

__STATIC_INLINE void LL_PWR_SetWakeUpPinSignal0Selection (uint32_t WakeUpPin)

Function description

Set the wakeup pin_x selection 0.

Parameters

- **WakeUpPin:** This parameter can be one of the following values:
  – LL_PWR_WAKEUP_PIN1
  – LL_PWR_WAKEUP_PIN2
  – LL_PWR_WAKEUP_PIN3
  – LL_PWR_WAKEUP_PIN4
  – LL_PWR_WAKEUP_PIN5
  – LL_PWR_WAKEUP_PIN6
  – LL_PWR_WAKEUP_PIN7
  – LL_PWR_WAKEUP_PIN8

Return values

- **None:**

Reference Manual to LL API cross reference:

- WUCR3 WUSELx LL_PWR_SetWakeUpPinSignal0Selection

LL_PWR_SetWakeUpPinSignal1Selection

Function name

__STATIC_INLINE void LL_PWR_SetWakeUpPinSignal1Selection (uint32_t WakeUpPin)

Function description

Set the wakeup pin_x selection 1.

Parameters

- **WakeUpPin:** This parameter can be one of the following values:
  – LL_PWR_WAKEUP_PIN1
  – LL_PWR_WAKEUP_PIN2
  – LL_PWR_WAKEUP_PIN3
  – LL_PWR_WAKEUP_PIN4
  – LL_PWR_WAKEUP_PIN5
  – LL_PWR_WAKEUP_PIN6
  – LL_PWR_WAKEUP_PIN7
  – LL_PWR_WAKEUP_PIN8

Return values

- **None:**

Reference Manual to LL API cross reference:

- WUCR3 WUSELx LL_PWR_SetWakeUpPinSignal1Selection

LL_PWR_SetWakeUpPinSignal2Selection

Function name

__STATIC_INLINE void LL_PWR_SetWakeUpPinSignal2Selection (uint32_t WakeUpPin)

Function description

Set the wakeup pin_x selection 2.

Parameters

- **WakeUpPin:** This parameter can be one of the following values:
  – LL_PWR_WAKEUP_PIN1
  – LL_PWR_WAKEUP_PIN2
  – LL_PWR_WAKEUP_PIN3
  – LL_PWR_WAKEUP_PIN4
  – LL_PWR_WAKEUP_PIN5
  – LL_PWR_WAKEUP_PIN6
  – LL_PWR_WAKEUP_PIN7
  – LL_PWR_WAKEUP_PIN8

Return values

- **None:**

Reference Manual to LL API cross reference:

- WUCR3 WUSELx LL_PWR_SetWakeUpPinSignal2Selection

LL_PWR_SetWakeUpPinSignal3Selection

Function name

__STATIC_INLINE void LL_PWR_SetWakeUpPinSignal3Selection (uint32_t WakeUpPin)

Function description

Set the wakeup pin_x selection 3.

Parameters

- **WakeUpPin:** This parameter can be one of the following values:
  - LL_PWR_WAKEUP_PIN1
  - LL_PWR_WAKEUP_PIN2
  - LL_PWR_WAKEUP_PIN3
  - LL_PWR_WAKEUP_PIN4
  - LL_PWR_WAKEUP_PIN5
  - LL_PWR_WAKEUP_PIN6
  - LL_PWR_WAKEUP_PIN7
  - LL_PWR_WAKEUP_PIN8

Return values

- **None:**

Reference Manual to LL API cross reference:

- WUCR3 WUSELx LL_PWR_SetWakeUpPinSignal3Selection

LL_PWR_GetWakeUpPinSignalSelection

Function name

__STATIC_INLINE uint32_t LL_PWR_GetWakeUpPinSignalSelection (uint32_t WakeUpPin)

Function description

Get the wakeup pin_x selection.

Parameters

- **WakeUpPin:** This parameter can be one of the following values:
  - LL_PWR_WAKEUP_PIN1
  - LL_PWR_WAKEUP_PIN2
  - LL_PWR_WAKEUP_PIN3
  - LL_PWR_WAKEUP_PIN4
  - LL_PWR_WAKEUP_PIN5

Reference Manual to LL API cross reference:

- WUCR3 WUSELx LL_PWR_GetWakeUpPinSignalSelection

LL_PWR_EnableBkUpRegulator

Function name

__STATIC_INLINE void LL_PWR_EnableBkUpRegulator (void)

Function description

Enable backup regulator.

Return values

- **None:**

Notes

- When this bit is set, the backup RAM content is kept in Standby and VBAT modes. If BREN is reset, the backup RAM can still be used in Run, Sleep and Stop modes. However, its content is lost in Standby, Shutdown and VBAT modes. This bit can be written only when the regulator is LDO, which must be configured before switching to SMPS.

Reference Manual to LL API cross reference:

- BDCR1 BREN LL_PWR_EnableBkUpRegulator

LL_PWR_DisableBkUpRegulator

Function name

__STATIC_INLINE void LL_PWR_DisableBkUpRegulator (void)

Function description

Disable backup regulator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR1 BREN LL_PWR_DisableBkUpRegulator

LL_PWR_IsEnabledBkUpRegulator

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledBkUpRegulator (void)

Function description

Check if the backup regulator is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- BDCR1 BREN LL_PWR_IsEnabledBkUpRegulator

LL_PWR_EnableMonitoring

Function name

__STATIC_INLINE void LL_PWR_EnableMonitoring (void)

Function description

Enable the backup domain voltage and temperature monitoring.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR1 MONEN LL_PWR_EnableMonitoring

LL_PWR_DisableMonitoring

Function name

__STATIC_INLINE void LL_PWR_DisableMonitoring (void)

Function description

Disable the backup domain voltage and temperature monitoring.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR1 MONEN LL_PWR_DisableMonitoring

LL_PWR_IsEnabledMonitoring

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledMonitoring (void)

Function description

Check if the backup domain voltage and temperature monitoring is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- BDCR1 MONEN LL_PWR_IsEnabledMonitoring

LL_PWR_EnableBatteryCharging

Function name

__STATIC_INLINE void LL_PWR_EnableBatteryCharging (void)

Function description

Enable battery charging.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR2 VBE LL_PWR_EnableBatteryCharging

LL_PWR_DisableBatteryCharging

Function name

__STATIC_INLINE void LL_PWR_DisableBatteryCharging (void)

Function description

Disable battery charging.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR2 VBE LL_PWR_DisableBatteryCharging

LL_PWR_IsEnabledBatteryCharging

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledBatteryCharging (void)

Function description

Check if battery charging is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- BDCR2 VBE LL_PWR_IsEnabledBatteryCharging

LL_PWR_SetBattChargResistor

Function name

__STATIC_INLINE void LL_PWR_SetBattChargResistor (uint32_t Resistor)

Function description

Set the Battery charge resistor impedance.

Parameters

- **Resistor:** This parameter can be one of the following values:
  – LL_PWR_BATT_CHARG_RESISTOR_5K
  – LL_PWR_BATT_CHARG_RESISTOR_1_5K

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR2 VBRS LL_PWR_SetBattChargResistor

LL_PWR_GetBattChargResistor

Function name

__STATIC_INLINE uint32_t LL_PWR_GetBattChargResistor (void)

Function description

Get the Battery charge resistor impedance.

Return values

- **Returned:** value can be one of the following values:
  – LL_PWR_BATT_CHARG_RESISTOR_5K
  – LL_PWR_BATT_CHARG_RESISTOR_1_5K

Reference Manual to LL API cross reference:

- BDCR2 VBRS LL_PWR_GetBattChargResistor

LL_PWR_EnableBkUpAccess

Function name

__STATIC_INLINE void LL_PWR_EnableBkUpAccess (void)

Function description

Enable access to the backup domain.

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBPR DBP LL_PWR_EnableBkUpAccess

LL_PWR_DisableBkUpAccess

Function name

__STATIC_INLINE void LL_PWR_DisableBkUpAccess (void)

Function description

Disable access to the backup domain.

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBPR DBP LL_PWR_DisableBkUpAccess

LL_PWR_IsEnabledBkUpAccess

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledBkUpAccess (void)

Function description

Check if the access to backup domain is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DBPR DBP LL_PWR_IsEnabledBkUpAccess

LL_PWR_EnableUCPDStandbyMode

Function name

__STATIC_INLINE void LL_PWR_EnableUCPDStandbyMode (void)

Function description

Enable the USB Type-C and Power Delivery memorization in Standby mode.

Return values

- **None:**

Notes

- This function must be called just before entering Standby mode.

Reference Manual to LL API cross reference:

- UCPDR UCPD_STDBY LL_PWR_EnableUCPDStandbyMode

LL_PWR_DisableUCPDStandbyMode

Function name

__STATIC_INLINE void LL_PWR_DisableUCPDStandbyMode (void)

Function description

Disable the USB Type-C and Power Delivery memorization in Standby mode.

Return values

- **None:**

Notes

- This function must be called after exiting Standby mode and before any UCPD configuration update.

Reference Manual to LL API cross reference:

- UCPDR UCPD_STDBY LL_PWR_DisableUCPDStandbyMode

LL_PWR_IsEnabledUCPDStandbyMode

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledUCPDStandbyMode (void)

Function description

Check the USB Type-C and Power Delivery Standby mode memorization state.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- UCPDR UCPD_STDBY LL_PWR_IsEnabledUCPDStandbyMode

LL_PWR_EnableUCPDDeadBattery

Function name

__STATIC_INLINE void LL_PWR_EnableUCPDDeadBattery (void)

Function description

Enable the USB Type-C and power delivery dead battery pull-down behavior on UCPD CC1 and CC2 pins.

Return values

- **None:**

Notes

- After exiting reset, the USB Type-C dead battery behavior is enabled, which may have a pull-down effect on CC1 and CC2 pins. It is recommended to disable it in all cases, either to stop this pull-down or to hand over control to the UCPD (which should therefore be initialized before doing the disable).

Reference Manual to LL API cross reference:

- UCPDR UCPD_DBDIS LL_PWR_EnableUCPDDeadBattery

LL_PWR_DisableUCPDDeadBattery

Function name

__STATIC_INLINE void LL_PWR_DisableUCPDDeadBattery (void)

Function description

Disable the USB Type-C and power delivery dead battery pull-down behavior on UCPD CC1 and CC2 pins.

Return values

- **None:**

Notes

- After exiting reset, the USB Type-C dead battery behavior is enabled, which may have a pull-down effect on CC1 and CC2 pins. It is recommended to disable it in all cases, either to stop this pull-down or to hand over control to the UCPD (which should therefore be initialized before doing the disable).

Reference Manual to LL API cross reference:

- UCPDR UCPD_DBDIS LL_PWR_DisableUCPDDeadBattery

LL_PWR_IsEnabledUCPDDeadBattery

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledUCPDDeadBattery (void)

Function description

Check the USB Type-C and power delivery dead battery pull-down behavior on UCPD CC1 and CC2 pins.

Return values

- **State:** of feature (1 : enabled; 0 : disabled).

Notes

- After exiting reset, the USB Type-C dead battery behavior is enabled, which may have a pull-down effect on CC1 and CC2 pins. It is recommended to disable it in all cases, either to stop this pull-down or to hand over control to the UCPD (which should therefore be initialized before doing the disable).

Reference Manual to LL API cross reference:

- UCPDR UCPD_DBDIS LL_PWR_IsEnabledUCPDDeadBattery

LL_PWR_EnablePUPDConfig

Function name

__STATIC_INLINE void LL_PWR_EnablePUPDConfig (void)

Function description

Enable the pull-up and pull-down configuration.

Return values

- **None:**

Reference Manual to LL API cross reference:

- APCR APC LL_PWR_EnablePUPDConfig

LL_PWR_DisablePUPDConfig

Function name

__STATIC_INLINE void LL_PWR_DisablePUPDConfig (void)

Function description

Disable the pull-up and pull-down configuration.

Return values

- **None:**

Reference Manual to LL API cross reference:

- APCR APC LL_PWR_DisablePUPDConfig

LL_PWR_IsEnabledPUPDConfig

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledPUPDConfig (void)

Function description

Check if the pull-up and pull-down configuration is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- APCR APC LL_PWR_IsEnabledPUPDConfig

LL_PWR_EnableGPIOPullUp

Function name

__STATIC_INLINE void LL_PWR_EnableGPIOPullUp (uint32_t GPIOPort, uint32_t GPIOPin)

Function description

Enable GPIO pull-up in Standby and Shutdown modes.

Parameters

- **GPIOPort:** This parameter can be one of the following values:
  - LL_PWR_GPIO_PORTA
  - LL_PWR_GPIO_PORTB
  - LL_PWR_GPIO_PORTC
  - LL_PWR_GPIO_PORTD
  - LL_PWR_GPIO_PORTE
  - LL_PWR_GPIO_PORTF
  - LL_PWR_GPIO_PORTG
  - LL_PWR_GPIO_PORTH
  - LL_PWR_GPIO_PORTI
  - LL_PWR_GPIO_PORTJ (*) (*) value can be used only for STM32U59xxx and STM32U5A9xx devices.
- **GPIOPin:** This parameter can be a combination of the following values:
  - LL_PWR_GPIO_PIN_0
  - LL_PWR_GPIO_PIN_1
  - LL_PWR_GPIO_PIN_2
  - LL_PWR_GPIO_PIN_3
  - LL_PWR_GPIO_PIN_4

LL_PWR_IsActiveFlag_BOOST

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_BOOST (void)

Function description

Indicate whether the EPOD (Embedded Power Distribution) booster is ready OR not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- VOSR BOOSTRDY LL_PWR_IsActiveFlag_BOOST

LL_PWR_IsActiveFlag_USBBOOST

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_USBBOOST (void)

Function description

Indicate whether the USB EPOD (Embedded Power Distribution) booster is ready OR not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- VOSR USBBOOSTRDY LL_PWR_IsActiveFlag_USBBOOST

LL_PWR_IsActiveFlag_VOS

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_VOS (void)

Function description

Indicate whether the regulator voltage output is above voltage scaling range or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- VOSR VOSRDY LL_PWR_IsActiveFlag_VOS

LL_PWR_IsActiveFlag_SB

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_SB (void)

Function description

Indicate whether the system was in standby mode or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR SBF LL_PWR_IsActiveFlag_SB

LL_PWR_IsActiveFlag_STOP

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_STOP (void)

Function description

Indicate whether the system was in stop mode or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR STOPF LL_PWR_IsActiveFlag_STOP

LL_PWR_IsActiveFlag_REGULATOR

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_REGULATOR (void)

Function description

Indicate whether the regulator supply is LDO or SMPS.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMSR REGS LL_PWR_IsActiveFlag_REGULATOR

LL_PWR_IsActiveFlag_PVDO

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_PVDO (void)

Function description

Indicate whether the VDD voltage is below the threshold or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMSR PVDO LL_PWR_IsActiveFlag_PVDO

LL_PWR_IsActiveFlag_ACTVOS

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_ACTVOS (void)

Function description

Indicate whether the regulator voltage output is equal to current used voltage scaling range or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMSR ACTVOSRDY LL_PWR_IsActiveFlag_ACTVOS

LL_PWR_IsActiveFlag_VDDUSB

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_VDDUSB (void)

Function description

Indicate whether the VDDUSB is below the threshold of monitor or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMSR VDDUSBRDY LL_PWR_IsActiveFlag_VDDUSB

LL_PWR_IsActiveFlag_VDDIO2

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_VDDIO2 (void)

Function description

Indicate whether the VDDIO2 is below the threshold of monitor or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMSR VDDIO2RDY LL_PWR_IsActiveFlag_VDDIO2

LL_PWR_IsActiveFlag_VDDA1

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_VDDA1 (void)

Function description

Indicate whether the VDDA1 is below the threshold of monitor 1 or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMSR VDDA1RDY LL_PWR_IsActiveFlag_VDDA1

LL_PWR_IsActiveFlag_VDDA2

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_VDDA2 (void)

Function description

Indicate whether the VDDA2 is below the threshold of monitor 2 or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMSR VDDA2RDY LL_PWR_IsActiveFlag_VDDA2

LL_PWR_IsActiveFlag_VBATH

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_VBATH (void)

Function description

Indicate whether the VBAT level is below high threshold or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- BDSR VBATH LL_PWR_IsActiveFlag_VBATH

LL_PWR_IsActiveFlag_TEMPL

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_TEMPL (void)

Function description

Indicate whether the CPU temperature level is above low threshold or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- BDSR TEMPL LL_PWR_IsActiveFlag_TEMPL

LL_PWR_IsActiveFlag_TEMPH

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_TEMPH (void)

Function description

Indicate whether the CPU temperature level is below high threshold or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

PWR

PWR VBAT Charging Resistor Selection

LL_PWR_BATT_CHARG_RESISTOR_5K

Charge the battery through a 5 kO resistor

LL_PWR_BATT_CHARG_RESISTOR_1_5K

Charge the battery through a 1.5 kO resistor

Clear Flags Defines

LL_PWR_SR_CSSF

Clear Stop and Standby flags

LL_PWR_WUSCR_CWUF1

Clear Wakeup flag 1

LL_PWR_WUSCR_CWUF2

Clear Wakeup flag 2

LL_PWR_WUSCR_CWUF3

Clear Wakeup flag 3

LL_PWR_WUSCR_CWUF4

Clear Wakeup flag 4

LL_PWR_WUSCR_CWUF5

Clear Wakeup flag 5

LL_PWR_WUSCR_CWUF6

Clear Wakeup flag 6

LL_PWR_WUSCR_CWUF7

Clear Wakeup flag 7

LL_PWR_WUSCR_CWUF8

Clear Wakeup flag 8

LL_PWR_WUSCR_CWUF_ALL

Clear all Wakeup flags

PWR DCACHE1 Content Retention in Stop Mode

LL_PWR_DCACHE1RAM_STOP_NO_RETENTION

DCACHE1 SRAM no retention in Stop mode (Stop 0, 1, 2)

LL_PWR_DCACHE1RAM_STOP_FULL_RETENTION

DCACHE1 SRAM retention in Stop mode (Stop 0, 1, 2)

PWR DCACHE2 Content Retention in Stop Mode

LL_PWR_DCACHE2RAM_STOP_NO_RETENTION

DCACHE2 SRAM no retention in Stop mode (Stop 0, 1, 2)

LL_PWR_DCACHE2RAM_STOP_FULL_RETENTION

DCACHE2 SRAM retention in Stop mode (Stop 0, 1, 2)

PWR DMA2DRAM Content Retention in Stop Mode

LL_PWR_DMA2DRAM_STOP_NO_RETENTION

DMA2D SRAM no retention in Stop mode (Stop 0, 1, 2)

LL_PWR_DMA2DRAM_STOP_FULL_RETENTION

DMA2D SRAM retention in Stop mode (Stop 0, 1, 2)

PWR DSI RAM Content Retention in Stop Mode

LL_PWR_DSIRAM_STOP_NO_RETENTION

DSI SRAM no retention in Stop mode (Stop 0, 1, 2)

LL_PWR_DSIRAM_STOP_FULL_RETENTION

DSI SRAM retention in Stop mode (Stop 0, 1, 2)

Get Flags Defines

LL_PWR_FLAG_VOSRDY

Voltage scaling ready flag

LL_PWR_FLAG_BOOSTRDY

VOS EPOD booster ready flag

LL_PWR_FLAG_USBBOOSTRDY

USB EPOD booster ready flag

LL_PWR_FLAG_STOPF

Stop flag

LL_PWR_FLAG_SBF

Standby flag

LL_PWR_FLAG_VDDA2RDY

VDDA ready flag (versus 1.8 V threshold)

LL_PWR_FLAG_VDDA1RDY

VDDA ready flag (versus 1.6 V threshold)

LL_PWR_FLAG_VDDIO2RDY

VDDIO2 ready flag

LL_PWR_FLAG_VDDUSBRDY

VDDUSB ready flag

LL_PWR_FLAG_ACTVOSRDY

Currently applied VOS ready flag

LL_PWR_FLAG_PVDO

VDD voltage detector output flag

LL_PWR_FLAG_REGS

Regulator selection flag

LL_PWR_FLAG_TEMPH

Temperature level flag (versus high threshold)

LL_PWR_FLAG_TEMPL

Temperature level flag (versus low threshold)

LL_PWR_FLAG_VBATH

Backup domain voltage level flag (versus high threshold)

LL_PWR_WAKEUP_FLAG1
Wakeup flag 1

LL_PWR_WAKEUP_FLAG2
Wakeup flag 2

LL_PWR_WAKEUP_FLAG3
Wakeup flag 3

LL_PWR_WAKEUP_FLAG4
Wakeup flag 4

LL_PWR_WAKEUP_FLAG5
Wakeup flag 5

LL_PWR_WAKEUP_FLAG6
Wakeup flag 6

LL_PWR_WAKEUP_FLAG7
Wakeup flag 7

LL_PWR_WAKEUP_FLAG8
Wakeup flag 8

PWR GPIO Pin Mask

GPIO port J

PWR GPRAM Content Retention in Stop Mode

LL_PWR_GRAPHICPERIPHRAM_STOP_NO_RETENTION

Graphic peripherals (LTDC, GFXMMU) SRAM no retention in Stop mode (Stop 0, 1, 2)

LL_PWR_GRAPHICPERIPHRAM_STOP_FULL_RETENTION

Graphic peripherals (LTDC, GFXMMU) SRAM retention in Stop mode (Stop 0, 1, 2)

PWR ICACHE Content Retention in Stop Mode

LL_PWR_ICACHERAM_STOP_NO_RETENTION

ICACHE SRAM no retention in Stop mode (Stop 0, 1, 2)

LL_PWR_ICACHERAM_STOP_FULL_RETENTION

ICACHE SRAM retention in Stop mode (Stop 0, 1, 2)

PWR Items Secure Attribute

LL_PWR_WAKEUP_PIN1_NSEC

Wake up pin 1 nsecure mode

LL_PWR_WAKEUP_PIN1_SEC

Wake up pin 1 secure mode

LL_PWR_WAKEUP_PIN2_NSEC

Wake up pin 2 nsecure mode

LL_PWR_WAKEUP_PIN2_SEC

Wake up pin 2 secure mode

LL_PWR_WAKEUP_PIN3_NSEC

Wake up pin 3 nsecure mode

LL_PWR_WAKEUP_PIN3_SEC

Wake up pin 3 secure mode

LL_PWR_WAKEUP_PIN4_NSEC

Wake up pin 4 nsecure mode

LL_PWR_WAKEUP_PIN4_SEC

Wake up pin 4 secure mode

LL_PWR_WAKEUP_PIN5_NSEC

Wake up pin 5 nsecure mode

LL_PWR_WAKEUP_PIN5_SEC

Wake up pin 5 secure mode

LL_PWR_WAKEUP_PIN6_NSEC

Wake up pin 6 nsecure mode

LL_PWR_WAKEUP_PIN6_SEC

Wake up pin 6 secure mode

LL_PWR_WAKEUP_PIN7_NSEC

Wake up pin 7 nsecure mode

LL_PWR_WAKEUP_PIN7_SEC

Wake up pin 7 secure mode

LL_PWR_WAKEUP_PIN8_NSEC

Wake up pin 8 nsecure mode

LL_PWR_WAKEUP_PIN8_SEC

Wake up pin 8 secure mode

LL_PWR_LPM_NSEC

Low-power modes nsecure mode

LL_PWR_LPM_SEC

Low-power modes secure mode

LL_PWR_VDM_NSEC

Voltage detection and monitoring nsecure mode

LL_PWR_VDM_SEC

Voltage detection and monitoring secure mode

LL_PWR_VB_NSEC

Backup domain nsecure mode

LL_PWR_VB_SEC

Backup domain secure mode

LL_PWR_APC_NSEC

Pull-up/pull-down nsecure mode

LL_PWR_APC_SEC

Pull-up/pull-down secure mode

PWR JPEG RAM Content Retention in Stop Mode

LL_PWR_JPEGRAM_STOP_NO_RETENTION

JPEG SRAM no retention in Stop mode (Stop 0, 1, 2)

LL_PWR_JPEGRAM_STOP_FULL_RETENTION

JPEG SRAM retention in Stop mode (Stop 0, 1, 2)

Low Power Mode Selection

LL_PWR_STOP0_MODE

Stop 0 mode

LL_PWR_STOP1_MODE

Stop 1 mode

LL_PWR_STOP2_MODE

Stop 2 mode

LL_PWR_STOP3_MODE

Stop 3 mode

LL_PWR_STANDBY_MODE

Standby mode

LL_PWR_SHUTDOWN_MODE

Shutdown mode

PWR PERIPHRAM Content Retention in Stop Mode

LL_PWR_PERIPHRAM_STOP_NO_RETENTION

FMAC, FDCAN and USB SRAM no retention in Stop mode (Stop 0, 1, 2)

LL_PWR_PERIPHRAM_STOP_FULL_RETENTION

FMAC, FDCAN and USB SRAM retention in Stop mode (Stop 0, 1, 2)

PWR PKARAM Content Retention in Stop Mode

LL_PWR_PKARAM_STOP_NO_RETENTION

PKA32 SRAM no retention in Stop mode (Stop 0, 1, 2)

LL_PWR_PKARAM_STOP_FULL_RETENTION

PKA32 SRAM retention in Stop mode (Stop 0, 1, 2)

PWR Power Voltage Detector Level Selection

LL_PWR_PVDLEVEL_0

Voltage threshold detected by PVD 2.0 V

LL_PWR_PVDLEVEL_1

Voltage threshold detected by PVD 2.2 V

LL_PWR_PVDLEVEL_2

Voltage threshold detected by PVD 2.4 V

LL_PWR_PVDLEVEL_3

Voltage threshold detected by PVD 2.5 V

LL_PWR_PVDLEVEL_4

Voltage threshold detected by PVD 2.6 V

LL_PWR_PVDLEVEL_5

Voltage threshold detected by PVD 2.8 V

LL_PWR_PVDLEVEL_6

Voltage threshold detected by PVD 2.9 V

LL_PWR_PVDLEVEL_7

External input analog voltage on PVD_IN pin, compared to internal VREFINT level

PWR Regulator Supply Selection

LL_PWR_LDO_SUPPLY

LDO regulator supply

LL_PWR_SMPS_SUPPLY

SMPS regulator supply

PWR SRAM1 Content Retention in Run Mode

LL_PWR_SRAM1_RUN_NO_RETENTION

SRAM1 no retention in Run mode

LL_PWR_SRAM1_RUN_FULL_RETENTION

SRAM1 retention in Run mode

PWR SRAM1 Content Retention in Stop Mode

LL_PWR_SRAM1_STOP_NO_RETENTION

SRAM1 no retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM1_STOP_PAGE1_RETENTION

SRAM1 page 1 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM1_STOP_PAGE2_RETENTION

SRAM1 page 2 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM1_STOP_PAGE3_RETENTION

SRAM1 page 3 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM1_STOP_PAGE4_RETENTION

SRAM1 page 4 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM1_STOP_PAGE5_RETENTION

SRAM1 page 5 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM1_STOP_PAGE6_RETENTION

SRAM1 page 6 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM1_STOP_PAGE7_RETENTION

SRAM1 page 7 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM1_STOP_PAGE8_RETENTION

SRAM1 page 8 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM1_STOP_PAGE9_RETENTION

SRAM1 page 9 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM1_STOP_PAGE10_RETENTION

SRAM1 page 10 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM1_STOP_PAGE11_RETENTION

SRAM1 page 11 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM1_STOP_PAGE12_RETENTION

SRAM1 page 12 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM1_STOP_1_3_RETENTION

SRAM1 pages (1 to 3) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM1_STOP_4_12_RETENTION

SRAM1 pages (4 to 12) retention in Stop mode (Stop 0, 1, 2, 3)

PWR SRAM2 Content Retention in Run Mode

LL_PWR_SRAM2_RUN_NO_RETENTION

SRAM2 no retention in Run mode

LL_PWR_SRAM2_RUN_FULL_RETENTION

SRAM2 retention in Run mode

PWR SRAM2 Content Retention in Standby Mode

LL_PWR_SRAM2_SB_NO_RETENTION

SRAM2 no retention in Stop 3 and Standby mode

LL_PWR_SRAM2_SB_PAGE1_RETENTION

SRAM2 page 1 (8 KB) retention in Stop 3 and Standby mode

LL_PWR_SRAM2_SB_PAGE2_RETENTION

SRAM2 page 2 (54 KB) retention in Stop 3 and Standby mode

LL_PWR_SRAM2_SB_FULL_RETENTION

SRAM2 all pages retention in Stop 3 and Standby mode

PWR SRAM2 Content Retention in Stop Mode

LL_PWR_SRAM2_STOP_NO_RETENTION

SRAM2 no retention in Stop mode (Stop 0, 1, 2)

LL_PWR_SRAM2_STOP_PAGE1_RETENTION

SRAM2 page 1 (8 KB) retention in Stop mode (Stop 0, 1, 2)

LL_PWR_SRAM2_STOP_PAGE2_RETENTION

SRAM2 page 2 (54 KB) retention in Stop mode (Stop 0, 1, 2)

LL_PWR_SRAM2_STOP_FULL_RETENTION

SRAM2 all pages retention in Stop mode (Stop 0, 1, 2)

PWR SRAM3 Content Retention in Run Mode

LL_PWR_SRAM3_RUN_NO_RETENTION

SRAM3 no retention in Run mode

LL_PWR_SRAM3_RUN_FULL_RETENTION

SRAM3 retention in Run mode

PWR SRAM3 Content Retention in Stop Mode

LL_PWR_SRAM3_STOP_NO_RETENTION

SRAM3 no retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM3_STOP_PAGE1_RETENTION

SRAM3 page 1 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM3_STOP_PAGE2_RETENTION

SRAM3 page 2 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM3_STOP_PAGE3_RETENTION

SRAM3 page 3 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM3_STOP_PAGE4_RETENTION

SRAM3 page 4 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM3_STOP_PAGE5_RETENTION

SRAM3 page 5 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM3_STOP_PAGE6_RETENTION

SRAM3 page 6 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM3_STOP_PAGE7_RETENTION

SRAM3 page 7 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM3_STOP_PAGE8_RETENTION

SRAM3 page 8 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM3_STOP_PAGE9_RETENTION

SRAM3 page 9 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM3_STOP_PAGE10_RETENTION

SRAM3 page 10 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM3_STOP_PAGE11_RETENTION
SRAM3 page 11 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM3_STOP_PAGE12_RETENTION
SRAM3 page 12 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM3_STOP_PAGE13_RETENTION
SRAM3 page 13 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM3_STOP_1_8_RETENTION
SRAM3 pages (1 to 8) retention in Stop modes (Stop 0, 1, 2, 3)

LL_PWR_SRAM3_STOP_9_13_RETENTION
SRAM3 pages (9 to 13) retention in Stop modes (Stop 0, 1, 2, 3)

PWR SRAM4 Content Retention in Run Mode

LL_PWR_SRAM4_RUN_NO_RETENTION
SRAM4 no retention in Run mode

LL_PWR_SRAM4_RUN_FULL_RETENTION
SRAM4 retention in Run mode

PWR SRAM4 Content Retention in Stop Mode

LL_PWR_SRAM4_STOP_NO_RETENTION
SRAM4 no retention in Stop mode (Stop 0, 1, 2)

LL_PWR_SRAM4_STOP_FULL_RETENTION
SRAM4 retention in Stop mode (Stop 0, 1, 2)

PWR SRAM5 Content Retention in Run Mode

LL_PWR_SRAM5_RUN_NO_RETENTION
SRAM5 no retention in Run mode

LL_PWR_SRAM5_RUN_FULL_RETENTION
SRAM5 retention in Run mode

PWR SRAM5 Content Retention in Stop Mode

LL_PWR_SRAM5_STOP_NO_RETENTION
SRAM5 no retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM5_STOP_PAGE1_RETENTION
SRAM5 page 1 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM5_STOP_PAGE2_RETENTION
SRAM5 page 2 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM5_STOP_PAGE3_RETENTION
SRAM5 page 3 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM5_STOP_PAGE4_RETENTION
SRAM5 page 4 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM5_STOP_PAGE5_RETENTION
SRAM5 page 5 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM5_STOP_PAGE6_RETENTION
SRAM5 page 6 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM5_STOP_PAGE7_RETENTION
SRAM5 page 7 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM5_STOP_PAGE8_RETENTION
SRAM5 page 8 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM5_STOP_PAGE9_RETENTION
SRAM5 page 4 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM5_STOP_PAGE10_RETENTION
SRAM5 page 5 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM5_STOP_PAGE11_RETENTION
SRAM5 page 6 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM5_STOP_PAGE12_RETENTION
SRAM5 page 7 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM5_STOP_PAGE13_RETENTION
SRAM5 page 8 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM5_STOP_FULL_RETENTION
SRAM5 pages (1 to 13) retention in Stop modes (Stop 0, 1, 2, 3)

PWR SRAM6 Content Retention in Run Mode

LL_PWR_SRAM6_RUN_NO_RETENTION
SRAM6 no retention in Run mode

LL_PWR_SRAM6_RUN_FULL_RETENTION
SRAM6 retention in Run mode

PWR SRAM6 Content Retention in Stop Mode

LL_PWR_SRAM6_STOP_NO_RETENTION
SRAM6 no retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM6_STOP_PAGE1_RETENTION
SRAM6 page 1 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM6_STOP_PAGE2_RETENTION
SRAM6 page 2 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM6_STOP_PAGE3_RETENTION
SRAM6 page 3 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM6_STOP_PAGE4_RETENTION
SRAM6 page 4 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM6_STOP_PAGE5_RETENTION
SRAM6 page 5 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM6_STOP_PAGE6_RETENTION
SRAM6 page 6 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM6_STOP_PAGE7_RETENTION

SRAM6 page 7 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM6_STOP_PAGE8_RETENTION

SRAM6 page 8 (64 KB) retention in Stop mode (Stop 0, 1, 2, 3)

LL_PWR_SRAM6_STOP_FULL_RETENTION

SRAM6 pages (1 to 8) retention in Stop modes (Stop 0, 1, 2, 3)

PWR Smart Run Domain Mode

LL_PWR_SRD_STOP_MODE

SmartRun domain AHB3 and APB3 clocks disabled by default in Stop mode (Stop 0, 1, 2)

LL_PWR_SRD_RUN_MODE

SmartRun domain AHB3 and APB3 clocks kept enabled in Stop mode (Stop 0, 1, 2)

PWR Voltage scaling range selection

LL_PWR_REGU_VOLTAGE_SCALE1

Voltage scaling range 1

LL_PWR_REGU_VOLTAGE_SCALE2

Voltage scaling range 2

LL_PWR_REGU_VOLTAGE_SCALE3

Voltage scaling range 3

LL_PWR_REGU_VOLTAGE_SCALE4

Voltage scaling range 4

PWR Wake Up Pin

LL_PWR_WAKEUP_PIN1

Wakeup pin 1 enable

LL_PWR_WAKEUP_PIN2

Wakeup pin 2 enable

LL_PWR_WAKEUP_PIN3

Wakeup pin 3 enable

LL_PWR_WAKEUP_PIN4

Common Write and Read Registers Macros

LL_PWR_WriteReg

Description:

- Write a value in PWR register.

Parameters:

- __REG__: Register to be written.
- __VALUE__: Value to be written in the register.

Return value:

- None.

LL_PWR_ReadReg

Description:

- Read a value in PWR register.

Parameters:

- __REG__: Register to be read.

Return value:

- Register: value.

114 LL RCC Generic Driver

114.1 RCC Firmware driver registers structures

114.1.1 LL_RCC_ClocksTypeDef

LL_RCC_ClocksTypeDef is defined in the stm32u5xx_ll_rcc.h

Data Fields

- ***uint32_t SYSCLK_Frequency***
- ***uint32_t HCLK_Frequency***
- ***uint32_t PCLK1_Frequency***
- ***uint32_t PCLK2_Frequency***
- ***uint32_t PCLK3_Frequency***

Field Documentation

- ***uint32_t LL_RCC_ClocksTypeDef::SYSCLK_Frequency***
  SYSCLK clock frequency
- ***uint32_t LL_RCC_ClocksTypeDef::HCLK_Frequency***
  HCLK clock frequency
- ***uint32_t LL_RCC_ClocksTypeDef::PCLK1_Frequency***
  PCLK1 clock frequency
- ***uint32_t LL_RCC_ClocksTypeDef::PCLK2_Frequency***
  PCLK2 clock frequency
- ***uint32_t LL_RCC_ClocksTypeDef::PCLK3_Frequency***
  PCLK3 clock frequency

114.2 RCC Firmware driver API description

The following section lists the various functions of the RCC library.

114.2.1 Detailed description of functions

LL_RCC_HSE_EnableCSS

Function name

__STATIC_INLINE void LL_RCC_HSE_EnableCSS (void)

Function description

Enable the Clock Security System.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CSSON LL_RCC_HSE_EnableCSS

LL_RCC_HSE_EnableBypass

Function name

__STATIC_INLINE void LL_RCC_HSE_EnableBypass (void)

Function description

Enable HSE external oscillator (HSE Bypass)

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSEBYP LL_RCC_HSE_EnableBypass

LL_RCC_HSE_DisableBypass

Function name

__STATIC_INLINE void LL_RCC_HSE_DisableBypass (void)

Function description

Disable HSE external oscillator (HSE Bypass)

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSEBYP LL_RCC_HSE_DisableBypass

LL_RCC_HSE_Enable

Function name

__STATIC_INLINE void LL_RCC_HSE_Enable (void)

Function description

Enable HSE crystal oscillator (HSE ON)

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSEON LL_RCC_HSE_Enable

LL_RCC_HSE_Disable

Function name

__STATIC_INLINE void LL_RCC_HSE_Disable (void)

Function description

Disable HSE crystal oscillator (HSE ON)

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSEON LL_RCC_HSE_Disable

LL_RCC_HSE_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_HSE_IsReady (void)

Function description

Check if HSE oscillator Ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR HSERDY LL_RCC_HSE_IsReady

LL_RCC_HSE_SetClockMode

Function name

__STATIC_INLINE void LL_RCC_HSE_SetClockMode (uint32_t HSEMode)

Function description

Set external HSE clock mode.

Parameters

- **HSEMode:** This parameter can be one of the following values:
  - LL_RCC_HSE_ANALOG_MODE
  - LL_RCC_HSE_DIGITAL_MODE

Return values

- **None:**

Notes

- This bit can be written only if the HSE oscillator is disabled

Reference Manual to LL API cross reference:

- CR HSEEXT LL_RCC_HSE_SetClockMode

LL_RCC_HSE_GetClockMode

Function name

__STATIC_INLINE uint32_t LL_RCC_HSE_GetClockMode (void)

Function description

Get External HSE clock mode.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_HSE_ANALOG_MODE
  - LL_RCC_HSE_DIGITAL_MODE

Reference Manual to LL API cross reference:

- CR HSEEXT LL_RCC_HSE_GetClockMode

LL_RCC_HSI_EnableInStopMode

Function name

__STATIC_INLINE void LL_RCC_HSI_EnableInStopMode (void)

Function description

Enable HSI even in stop mode.

Return values

- **None:**

Notes

- HSI oscillator is forced ON even in Stop mode

Reference Manual to LL API cross reference:

- CR HSIKERON LL_RCC_HSI_EnableInStopMode

LL_RCC_HSI_DisableInStopMode

Function name

__STATIC_INLINE void LL_RCC_HSI_DisableInStopMode (void)

Function description

Disable HSI in stop mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSIKERON LL_RCC_HSI_DisableInStopMode

LL_RCC_HSI_IsEnabledInStopMode

Function name

__STATIC_INLINE uint32_t LL_RCC_HSI_IsEnabledInStopMode (void)

Function description

Check if HSI is enabled in stop mode.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR HSIKERON LL_RCC_HSI_IsEnabledInStopMode

LL_RCC_HSI_Enable

Function name

__STATIC_INLINE void LL_RCC_HSI_Enable (void)

Function description

Enable HSI oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSION LL_RCC_HSI_Enable

LL_RCC_HSI_Disable

Function name

__STATIC_INLINE void LL_RCC_HSI_Disable (void)

Function description

Disable HSI oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSION LL_RCC_HSI_Disable

LL_RCC_HSI_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_HSI_IsReady (void)

Function description

Check if HSI clock is ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR HSIRDY LL_RCC_HSI_IsReady

LL_RCC_HSI_GetCalibration

Function name

__STATIC_INLINE uint32_t LL_RCC_HSI_GetCalibration (void)

Function description

Get HSI Calibration value.

Return values

- **Between:** Min_Data = 0 and Max_Data = 127

Notes

- When HSITRIM is written, HSICAL is updated with the sum of HSITRIM and the factory trim value

Reference Manual to LL API cross reference:

- ICSCR3 HSICAL LL_RCC_HSI_GetCalibration

LL_RCC_HSI_SetCalibTrimming

Function name

__STATIC_INLINE void LL_RCC_HSI_SetCalibTrimming (uint32_t Value)

Function description

Set HSI Calibration trimming.

Parameters

- **Value:** Between Min_Data = 0 and Max_Data = 127

Return values

- **None:**

Notes

- user-programmable trimming value that is added to the HSICAL
- Default value is 64, which, when added to the HSICAL value, should trim the HSI to 16 MHz +/- 1 %

Reference Manual to LL API cross reference:

- ICSCR3 HSITRIM LL_RCC_HSI_SetCalibTrimming

LL_RCC_HSI_GetCalibTrimming

Function name

__STATIC_INLINE uint32_t LL_RCC_HSI_GetCalibTrimming (void)

Function description

Get HSI Calibration trimming.

Return values

- **Between:** Min_Data = 0 and Max_Data = 127

Reference Manual to LL API cross reference:

- ICSC3R HSITRIM LL_RCC_HSI_GetCalibTrimming

LL_RCC_HSI48_Enable

Function name

__STATIC_INLINE void LL_RCC_HSI48_Enable (void)

Function description

Enable HSI48.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSI48ON LL_RCC_HSI48_Enable

LL_RCC_HSI48_Disable

Function name

__STATIC_INLINE void LL_RCC_HSI48_Disable (void)

Function description

Disable HSI48.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSI48ON LL_RCC_HSI48_Disable

LL_RCC_HSI48_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_HSI48_IsReady (void)

Function description

Check if HSI48 oscillator Ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR HSI48RDY LL_RCC_HSI48_IsReady

LL_RCC_HSI48_GetCalibration

Function name

__STATIC_INLINE uint32_t LL_RCC_HSI48_GetCalibration (void)

Function description

Get HSI48 Calibration value.

Return values

- **Between:** Min_Data = 0x00 and Max_Data = 0x1FF

Reference Manual to LL API cross reference:

- CRRCR HSI48CAL LL_RCC_HSI48_GetCalibration

LL_RCC_LSE_Enable

Function name

__STATIC_INLINE void LL_RCC_LSE_Enable (void)

Function description

Enable Low Speed External (LSE) crystal.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSEON LL_RCC_LSE_Enable

LL_RCC_LSE_Disable

Function name

__STATIC_INLINE void LL_RCC_LSE_Disable (void)

Function description

Disable Low Speed External (LSE) crystal.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSEON LL_RCC_LSE_Disable

LL_RCC_LSE_EnableBypass

Function name

__STATIC_INLINE void LL_RCC_LSE_EnableBypass (void)

Function description

Enable external clock source (LSE bypass).

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSEBYP LL_RCC_LSE_EnableBypass

LL_RCC_LSE_DisableBypass

Function name

__STATIC_INLINE void LL_RCC_LSE_DisableBypass (void)

Function description

Disable external clock source (LSE bypass).

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSEBYP LL_RCC_LSE_DisableBypass

LL_RCC_LSE_SetDriveCapability

Function name

__STATIC_INLINE void LL_RCC_LSE_SetDriveCapability (uint32_t LSEDrive)

Function description

Set LSE oscillator drive capability.

Parameters

- **LSEDrive:** This parameter can be one of the following values:
  - LL_RCC_LSEDRIVE_LOW
  - LL_RCC_LSEDRIVE_MEDIUMLOW
  - LL_RCC_LSEDRIVE_MEDIUMHIGH
  - LL_RCC_LSEDRIVE_HIGH

Return values

- **None:**

Notes

- The oscillator is in Xtal mode when it is not in bypass mode.

Reference Manual to LL API cross reference:

- BDCR LSEDRV LL_RCC_LSE_SetDriveCapability

LL_RCC_LSE_GetDriveCapability

Function name

__STATIC_INLINE uint32_t LL_RCC_LSE_GetDriveCapability (void)

Function description

Get LSE oscillator drive capability.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_LSEDRIVE_LOW
  - LL_RCC_LSEDRIVE_MEDIUMLOW
  - LL_RCC_LSEDRIVE_MEDIUMHIGH
  - LL_RCC_LSEDRIVE_HIGH

Reference Manual to LL API cross reference:

- BDCR LSEDRV LL_RCC_LSE_GetDriveCapability

LL_RCC_LSE_EnableCSS

Function name

__STATIC_INLINE void LL_RCC_LSE_EnableCSS (void)

Function description

Enable Clock security system on LSE.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSECSSON LL_RCC_LSE_EnableCSS

LL_RCC_LSE_DisableCSS

Function name

__STATIC_INLINE void LL_RCC_LSE_DisableCSS (void)

Function description

Disable Clock security system on LSE.

Return values

- **None:**

Notes

- Clock security system can be disabled only after a LSE failure detection. In that case it MUST be disabled by software.

Reference Manual to LL API cross reference:

- BDCR LSECSSON LL_RCC_LSE_DisableCSS

LL_RCC_LSE_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_LSE_IsReady (void)

Function description

Check if LSE oscillator Ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- BDCR LSERDY LL_RCC_LSE_IsReady

LL_RCC_LSE_EnablePropagation

Function name

__STATIC_INLINE void LL_RCC_LSE_EnablePropagation (void)

Function description

Enable LSE oscillator propagation for system clock.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSESYSEN LL_RCC_LSE_EnablePropagation

LL_RCC_LSESYS_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_LSESYS_IsReady (void)

Function description

Check if LSESYS oscillator Ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- BDCR LSESYSRDY LL_RCC_LSESYS_IsReady

LL_RCC_LSE_DisablePropagation

Function name

__STATIC_INLINE void LL_RCC_LSE_DisablePropagation (void)

Function description

Disable LSE oscillator propagation for system clock.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSESYSEN LL_RCC_LSE_DisablePropagation

LL_RCC_LSE_IsPropagationReady

Function name

__STATIC_INLINE uint32_t LL_RCC_LSE_IsPropagationReady (void)

Function description

Check if LSE oscillator propagation for system clock Ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- BDCR LSESYSRDY LL_RCC_LSE_IsPropagationReady

LL_RCC_LSE_IsCSSDetected

Function name

__STATIC_INLINE uint32_t LL_RCC_LSE_IsCSSDetected (void)

Function description

Check if CSS on LSE failure Detection.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- BDCR LSECSSD LL_RCC_LSE_IsCSSDetected

LL_RCC_LSE_EnableGlitchFilter

Function name

__STATIC_INLINE void LL_RCC_LSE_EnableGlitchFilter (void)

Function description

Enable LSE clock glitch filter.

Return values

- **None:**

Notes

- The glitches on LSE can be filtred by setting the LSEGFON.
- LSEGFON must be written when the LSE is disabled (LSEON = 0 and LSERDY = 0).

Reference Manual to LL API cross reference:

- BDCR LSEGFON LL_RCC_LSE_EnableGlitchFilter

LL_RCC_LSE_DisableGlitchFilter

Function name

__STATIC_INLINE void LL_RCC_LSE_DisableGlitchFilter (void)

Function description

Disable LSE clock glitch filter.

Return values

- **None:**

Notes

- LSEGFON must be written when the LSE is disabled (LSEON = 0 and LSERDY = 0).

Reference Manual to LL API cross reference:

- BDCR LSEGFON LL_RCC_LSE_DisableGlitchFilter

LL_RCC_LSE_IsGlitchFilterEnabled

Function name

__STATIC_INLINE uint32_t LL_RCC_LSE_IsGlitchFilterEnabled (void)

Function description

Check if LSE clock glitch filter is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- BDCR LSEGFON LL_RCC_LSE_IsGlitchFilterEnabled

LL_RCC_LSI_Enable

Function name

__STATIC_INLINE void LL_RCC_LSI_Enable (void)

Function description

Enable LSI Oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSION LL_RCC_LSI_Enable

LL_RCC_LSI_Disable

Function name

__STATIC_INLINE void LL_RCC_LSI_Disable (void)

Function description

Disable LSI Oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSION LL_RCC_LSI_Disable

LL_RCC_LSI_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_LSI_IsReady (void)

Function description

Check if LSI is Ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- BDCR LSIRDY LL_RCC_LSI_IsReady

LL_RCC_LSI_SetPrescaler

Function name

__STATIC_INLINE void LL_RCC_LSI_SetPrescaler (uint32_t LSIPrescaler)

Function description

Set LSI prescaler.

Parameters

- **LSIPrescaler:** This parameter can be one of the following values:
  – LL_RCC_LSI_DIV_1
  – LL_RCC_LSI_DIV_128

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSIPREDIV LL_RCC_LSI_SetPrescaler

LL_RCC_LSI_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_RCC_LSI_GetPrescaler (void)

Function description

Get LSI prescaler.

Return values

- **Returned:** value can be one of the following values:
  – LL_RCC_LSI_DIV_1
  – LL_RCC_LSI_DIV_128

Reference Manual to LL API cross reference:

- BDCR LSIPREDIV LL_RCC_LSI_GetPrescaler

LL_RCC_MSIK_Enable

Function name

__STATIC_INLINE void LL_RCC_MSIK_Enable (void)

Function description

Enable MSIK oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR MSIKON LL_RCC_MSIK_Enable

LL_RCC_MSIK_Disable

Function name

__STATIC_INLINE void LL_RCC_MSIK_Disable (void)

Function description

Disable MSIK oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR MSIKON LL_RCC_MSIK_Disable

LL_RCC_MSIK_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_MSIK_IsReady (void)

Function description

Check if MSIK oscillator Ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR MSIKRDY LL_RCC_MSIK_IsReady

LL_RCC_SHSI_Enable

Function name

__STATIC_INLINE void LL_RCC_SHSI_Enable (void)

Function description

Enable SHSI oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR SHSION LL_RCC_SHSI_Enable

LL_RCC_SHSI_Disable

Function name

__STATIC_INLINE void LL_RCC_SHSI_Disable (void)

Function description

Disable SHSI oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR SHSION LL_RCC_SHSI_Disable

LL_RCC_SHSI_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_SHSI_IsReady (void)

Function description

Check if SHSI oscillator Ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR SHSIRDY LL_RCC_SHSI_IsReady

LL_RCC_MSIS_Enable

Function name

__STATIC_INLINE void LL_RCC_MSIS_Enable (void)

Function description

Enable MSIS oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR MSISON LL_RCC_MSIS_Enable

LL_RCC_MSIS_Disable

Function name

__STATIC_INLINE void LL_RCC_MSIS_Disable (void)

Function description

Disable MSIS oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR MSISON LL_RCC_MSIS_Disable

LL_RCC_MSIS_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_MSIS_IsReady (void)

Function description

Check if MSIS oscillator Ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR MSISRDY LL_RCC_MSIS_IsReady

LL_RCC_MSI_EnablePLLMode

Function name

__STATIC_INLINE void LL_RCC_MSI_EnablePLLMode (void)

Function description

Enable MSI PLL-mode (Hardware auto calibration with LSE)

Return values

- **None:**

Notes

- MSIPLLEN must be enabled after LSE is enabled (LSEON enabled) and ready (LSERDY set by hardware)
- hardware protection to avoid enabling MSIPLLEN if LSE is not ready

Reference Manual to LL API cross reference:

- CR MSIPLLEN LL_RCC_MSI_EnablePLLMode

LL_RCC_MSI_DisablePLLMode

Function name

__STATIC_INLINE void LL_RCC_MSI_DisablePLLMode (void)

Function description

Disable MSI-PLL mode.

Return values

- **None:**

Notes

- cleared by hardware when LSE is disabled (LSEON = 0) or when the Clock Security System on LSE detects a LSE failure

Reference Manual to LL API cross reference:

- CR MSIPLLEN LL_RCC_MSI_DisablePLLMode

LL_RCC_IsEnabledPLLMode

Function name

__STATIC_INLINE uint32_t LL_RCC_IsEnabledPLLMode (void)

Function description

Check if MSI-PLL mode has been enabled or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR MSIPLLEN LL_RCC_IsEnabledPLLMode

LL_RCC_SetMSIPLLMode

Function name

__STATIC_INLINE void LL_RCC_SetMSIPLLMode (uint32_t Source)

Function description

Set clock source in PLL mode.

Parameters

- **Source:** This parameter can be one of the following values:
  – LL_RCC_PLLMODE_MSIS
  – LL_RCC_PLLMODE_MSIK

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR MSIPLLSEL LL_RCC_SetMSIPLLMode

LL_RCC_GetMSIPLLMode

Function name

__STATIC_INLINE uint32_t LL_RCC_GetMSIPLLMode (void)

Function description

Get Clock source in PLL Mode.

Return values

- **Returned:** value can be one of the following values:
  – LL_RCC_PLLMODE_MSIS
  – LL_RCC_PLLMODE_MSIK

Reference Manual to LL API cross reference:

- CR MSIPLLSEL LL_RCC_GetMSIPLLMode

LL_RCC_Enable_MSIPLLFAST

Function name

__STATIC_INLINE void LL_RCC_Enable_MSIPLLFAST (void)

Function description

Enable MSI fast mode.

Notes

- This bit is used only if PLL mode is selected.

Reference Manual to LL API cross reference:

- CR MSIPLLFAST LL_RCC_Enable_MSIPLLFAST

LL_RCC_Disable_MSIPLLFAST

Function name

__STATIC_INLINE void LL_RCC_Disable_MSIPLLFAST (void)

Function description

Disable MSI fast mode.

Notes

- This bit is used only if PLL mode is selected.

Reference Manual to LL API cross reference:

- CR MSIPLLFAST LL_RCC_Disable_MSIPLLFAST

LL_RCC_MSI_IsEnabledMSIPLLFAST

Function name

__STATIC_INLINE uint32_t LL_RCC_MSI_IsEnabledMSIPLLFAST (void)

Function description

Check if MSI PLL Fast Mode is enable.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR MSIPLLFAST LL_RCC_MSI_IsEnabledMSIPLLFAST

LL_RCC_MSI_SetMSIBiasMode

Function name

__STATIC_INLINE void LL_RCC_MSI_SetMSIBiasMode (uint32_t BiasMode)

Function description

Set MSI Bias mode.

Parameters

- **BiasMode:** This parameter can be one of the following values:
  - LL_RCC_MSIBIASMODE_CONTINUOUS
  - LL_RCC_MSIBIASMODE_SAMPLING

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICSCR1 MSIBIAS LL_RCC_MSI_SetMSIBiasMode

LL_RCC_MSI_GetMSIBiasMode

Function name

__STATIC_INLINE uint32_t LL_RCC_MSI_GetMSIBiasMode (void)

Function description

Get MSI Bias mode.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_MSIBIASMODE_CONTINUOUS
  - LL_RCC_MSIBIASMODE_SAMPLING

Reference Manual to LL API cross reference:

- ICSCR1 MSIBIAS LL_RCC_MSI_GetMSIBiasMode

LL_RCC_MSIK_EnableInStopMode

Function name

__STATIC_INLINE void LL_RCC_MSIK_EnableInStopMode (void)

Function description

Enable MSIK even in stop mode.

Return values

- **None:**

Notes

- MSIK oscillator is forced ON even in Stop mode

Reference Manual to LL API cross reference:

- CR MSIKERON LL_RCC_MSIK_EnableInStopMode

LL_RCC_MSIK_DisableInStopMode

Function name

__STATIC_INLINE void LL_RCC_MSIK_DisableInStopMode (void)

Function description

Disable MSIK in stop mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR MSIKERON LL_RCC_MSIK_DisableInStopMode

LL_RCC_MSIK_IsEnabledInStopMode

Function name

__STATIC_INLINE uint32_t LL_RCC_MSIK_IsEnabledInStopMode (void)

Function description

Check if MSIK is enabled in stop mode.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR MSIKERON LL_RCC_MSIK_IsEnabledInStopMode

LL_RCC_MSI_EnableRangeSelection

Function name

__STATIC_INLINE void LL_RCC_MSI_EnableRangeSelection (void)

Function description

Enable MSI clock range selection with MSIRANGE register.

Return values

- **None:**

Notes

- Write 0 has no effect. After a standby or a reset MSIRGSEL is at 0 and the MSI range value is provided by MSISRANGE

Reference Manual to LL API cross reference:

- ICSCR1 MSIRGSEL LL_RCC_MSI_EnableRangeSelection

LL_RCC_MSI_IsEnabledRangeSelect

Function name

__STATIC_INLINE uint32_t LL_RCC_MSI_IsEnabledRangeSelect (void)

Function description

Check if MSI clock range is selected with MSIRANGE register.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ICSCR1 MSIRGSEL LL_RCC_MSI_IsEnabledRangeSelect

LL_RCC_MSIS_SetRange

Function name

__STATIC_INLINE void LL_RCC_MSIS_SetRange (uint32_t Range)

Function description

Configure the Internal Multi Speed oscillator (MSI) clock range in run mode.

Parameters

- **Range:** This parameter can be one of the following values:
  - LL_RCC_MSISRANGE_0
  - LL_RCC_MSISRANGE_1
  - LL_RCC_MSISRANGE_2
  - LL_RCC_MSISRANGE_3
  - LL_RCC_MSISRANGE_4
  - LL_RCC_MSISRANGE_5
  - LL_RCC_MSISRANGE_6
  - LL_RCC_MSISRANGE_7
  - LL_RCC_MSISRANGE_8
  - LL_RCC_MSISRANGE_9
  - LL_RCC_MSISRANGE_10
  - LL_RCC_MSISRANGE_11
  - LL_RCC_MSISRANGE_12
  - LL_RCC_MSISRANGE_13
  - LL_RCC_MSISRANGE_14
  - LL_RCC_MSISRANGE_15

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICSCR1 MSISRANGE LL_RCC_MSIS_SetRange

LL_RCC_MSIS_GetRange

Function name

__STATIC_INLINE uint32_t LL_RCC_MSIS_GetRange (void)

Function description

Get the Internal Multi Speed oscillator (MSI) clock range in run mode.

Return values

- **Returned:** value can be one of the following values:
  – LL_RCC_MSISRANGE_0
  – LL_RCC_MSISRANGE_1
  – LL_RCC_MSISRANGE_2
  – LL_RCC_MSISRANGE_3
  – LL_RCC_MSISRANGE_4
  – LL_RCC_MSISRANGE_5
  – LL_RCC_MSISRANGE_6
  – LL_RCC_MSISRANGE_7
  – LL_RCC_MSISRANGE_8
  – LL_RCC_MSISRANGE_9
  – LL_RCC_MSISRANGE_10
  – LL_RCC_MSISRANGE_11
  – LL_RCC_MSISRANGE_12
  – LL_RCC_MSISRANGE_13
  – LL_RCC_MSISRANGE_14
  – LL_RCC_MSISRANGE_15

Reference Manual to LL API cross reference:

- ICSCR1 MSISRANGE LL_RCC_MSIS_GetRange

LL_RCC_MSIS_SetRangeAfterStandby

Function name

__STATIC_INLINE void LL_RCC_MSIS_SetRangeAfterStandby (uint32_t Range)

Function description

Configure MSIS range used after standby.

Parameters

- **Range:** This parameter can be one of the following values:
  – LL_RCC_MSISSRANGE_4
  – LL_RCC_MSISSRANGE_5
  – LL_RCC_MSISSRANGE_6
  – LL_RCC_MSISSRANGE_7
  – LL_RCC_MSISSRANGE_8

Return values

- **None:**

Reference Manual to LL API cross reference:

- CSR MSISSRANGE LL_RCC_MSIS_SetRangeAfterStandby

LL_RCC_MSIS_GetRangeAfterStandby

Function name

__STATIC_INLINE uint32_t LL_RCC_MSIS_GetRangeAfterStandby (void)

Function description

Get MSIS range used after standby.

Return values

- **Returned:** value can be one of the following values:
  – LL_RCC_MSISSRANGE_4
  – LL_RCC_MSISSRANGE_5
  – LL_RCC_MSISSRANGE_6
  – LL_RCC_MSISSRANGE_7
  – LL_RCC_MSISSRANGE_8

Reference Manual to LL API cross reference:

- CSR MSISSRANGE LL_RCC_MSIS_GetRangeAfterStandby

LL_RCC_MSI_SetCalibTrimming

Function name

__STATIC_INLINE void LL_RCC_MSI_SetCalibTrimming (uint32_t Value, uint32_t Oscillator)

Function description

Set MSI OSCILLATORx Calibration trimming.

Parameters

- **Value:** Between Min_Data = 0 and Max_Data = 31
- **Oscillator:** This parameter can be one of the following values:
  – LL_RCC_MSI_OSCILLATOR_0
  – LL_RCC_MSI_OSCILLATOR_1
  – LL_RCC_MSI_OSCILLATOR_2
  – LL_RCC_MSI_OSCILLATOR_3

Return values

- **None:**

Notes

- user-programmable trimming value that is added to the MSICALx

Reference Manual to LL API cross reference:

- ICSCR2 MSITRIMx LL_RCC_MSI_SetCalibTrimming

LL_RCC_MSI_GetCalibTrimming

Function name

__STATIC_INLINE uint32_t LL_RCC_MSI_GetCalibTrimming (uint32_t Oscillator)

Function description

Get MSI OSCILLATORx Calibration trimming.

Parameters

- **Oscillator:** This parameter can be one of the following values:
  - LL_RCC_MSI_OSCILLATOR_0
  - LL_RCC_MSI_OSCILLATOR_1
  - LL_RCC_MSI_OSCILLATOR_2
  - LL_RCC_MSI_OSCILLATOR_3

Return values

- **Between:** 0 and 31

Reference Manual to LL API cross reference:

- ICSCR2 MSITRIMx LL_RCC_MSI_GetCalibTrimming

LL_RCC_MSI_GetCalibration

Function name

__STATIC_INLINE uint32_t LL_RCC_MSI_GetCalibration (uint32_t Oscillator)

Function description

Get MSI OSCILLATORx Calibration value.

Parameters

- **Oscillator:** This parameter can be one of the following values:
  - LL_RCC_MSI_OSCILLATOR_0
  - LL_RCC_MSI_OSCILLATOR_1
  - LL_RCC_MSI_OSCILLATOR_2
  - LL_RCC_MSI_OSCILLATOR_3

Return values

- **Between:** Min_Data = 0 and Max_Data = 31

Notes

- When MSITRIMx is written, MSICALx is updated with the sum of MSITRIMx and the factory trim value

Reference Manual to LL API cross reference:

- ICSCR1 MSICALx LL_RCC_MSI_GetCalibration

LL_RCC_MSIK_SetRange

Function name

__STATIC_INLINE void LL_RCC_MSIK_SetRange (uint32_t Range)

Function description

Configure the Internal Multi Speed oscillator (MSIK) clock range in run mode.

Parameters

- **Range:** This parameter can be one of the following values:
  - LL_RCC_MSIKRANGE_0
  - LL_RCC_MSIKRANGE_1
  - LL_RCC_MSIKRANGE_2
  - LL_RCC_MSIKRANGE_3
  - LL_RCC_MSIKRANGE_4
  - LL_RCC_MSIKRANGE_5
  - LL_RCC_MSIKRANGE_6
  - LL_RCC_MSIKRANGE_7
  - LL_RCC_MSIKRANGE_8
  - LL_RCC_MSIKRANGE_9
  - LL_RCC_MSIKRANGE_10
  - LL_RCC_MSIKRANGE_11
  - LL_RCC_MSIKRANGE_12
  - LL_RCC_MSIKRANGE_13
  - LL_RCC_MSIKRANGE_14
  - LL_RCC_MSIKRANGE_15

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICSCR1 MSIKRANGE LL_RCC_MSIK_SetRange

LL_RCC_MSIK_GetRange

Function name

__STATIC_INLINE uint32_t LL_RCC_MSIK_GetRange (void)

Function description

Get the Internal Multi Speed oscillator (MSIK) clock range in run mode.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_MSIKRANGE_0
  - LL_RCC_MSIKRANGE_1
  - LL_RCC_MSIKRANGE_2
  - LL_RCC_MSIKRANGE_3
  - LL_RCC_MSIKRANGE_4
  - LL_RCC_MSIKRANGE_5
  - LL_RCC_MSIKRANGE_6
  - LL_RCC_MSIKRANGE_7
  - LL_RCC_MSIKRANGE_8
  - LL_RCC_MSIKRANGE_9
  - LL_RCC_MSIKRANGE_10
  - LL_RCC_MSIKRANGE_11
  - LL_RCC_MSIKRANGE_12
  - LL_RCC_MSIKRANGE_13
  - LL_RCC_MSIKRANGE_14
  - LL_RCC_MSIKRANGE_15

Reference Manual to LL API cross reference:

- ICSCR1 MSIKRANGE LL_RCC_MSIK_GetRange

LL_RCC_MSIK_SetRangeAfterStandby

Function name

__STATIC_INLINE void LL_RCC_MSIK_SetRangeAfterStandby (uint32_t Range)

Function description

Configure MSIK range used after standby.

Parameters

- **Range:** This parameter can be one of the following values:
  - LL_RCC_MSIKSRANGE_4
  - LL_RCC_MSIKSRANGE_5
  - LL_RCC_MSIKSRANGE_6
  - LL_RCC_MSIKSRANGE_7
  - LL_RCC_MSIKSRANGE_8

Return values

- **None:**

Reference Manual to LL API cross reference:

- CSR MSIKSRANGE LL_RCC_MSIK_SetRangeAfterStandby

LL_RCC_MSIK_GetRangeAfterStandby

Function name

__STATIC_INLINE uint32_t LL_RCC_MSIK_GetRangeAfterStandby (void)

Function description

Get MSIK range used after standby.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_MSIKSRANGE_4
  - LL_RCC_MSIKSRANGE_5
  - LL_RCC_MSIKSRANGE_6
  - LL_RCC_MSIKSRANGE_7
  - LL_RCC_MSIKSRANGE_8

Reference Manual to LL API cross reference:

- CSR MSIKSRANGE LL_RCC_MSIK_GetRangeAfterStandby

LL_RCC_LSCO_Enable

Function name

__STATIC_INLINE void LL_RCC_LSCO_Enable (void)

Function description

Enable Low speed clock.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSCOEN LL_RCC_LSCO_Enable

LL_RCC_LSCO_Disable

Function name

__STATIC_INLINE void LL_RCC_LSCO_Disable (void)

Function description

Disable Low speed clock.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSCOEN LL_RCC_LSCO_Disable

LL_RCC_LSCO_SetSource

Function name

__STATIC_INLINE void LL_RCC_LSCO_SetSource (uint32_t Source)

Function description

Configure Low speed clock selection.

Parameters

- **Source:** This parameter can be one of the following values:
  – LL_RCC_LSCO_CLKSOURCE_LSI
  – LL_RCC_LSCO_CLKSOURCE_LSE

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSCOSEL LL_RCC_LSCO_SetSource

LL_RCC_LSCO_GetSource

Function name

__STATIC_INLINE uint32_t LL_RCC_LSCO_GetSource (void)

Function description

Get Low speed clock selection.

Return values

- **Returned:** value can be one of the following values:
  – LL_RCC_LSCO_CLKSOURCE_LSI
  – LL_RCC_LSCO_CLKSOURCE_LSE

Reference Manual to LL API cross reference:

- BDCR LSCOSEL LL_RCC_LSCO_GetSource

LL_RCC_SetSysClkSource

Function name

__STATIC_INLINE void LL_RCC_SetSysClkSource (uint32_t Source)

Function description

Configure the system clock source.

Parameters

- **Source:** This parameter can be one of the following values:
  - LL_RCC_SYS_CLKSOURCE_MSIS
  - LL_RCC_SYS_CLKSOURCE_HSI
  - LL_RCC_SYS_CLKSOURCE_HSE
  - LL_RCC_SYS_CLKSOURCE_PLL1

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR1 SW LL_RCC_SetSysClkSource

LL_RCC_GetSysClkSource

Function name

__STATIC_INLINE uint32_t LL_RCC_GetSysClkSource (void)

Function description

Get the system clock source.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_SYS_CLKSOURCE_STATUS_MSIS
  - LL_RCC_SYS_CLKSOURCE_STATUS_HSI
  - LL_RCC_SYS_CLKSOURCE_STATUS_HSE
  - LL_RCC_SYS_CLKSOURCE_STATUS_PLL1

Reference Manual to LL API cross reference:

- CFGR1 SWS LL_RCC_GetSysClkSource

LL_RCC_SetAHBPrescaler

Function name

__STATIC_INLINE void LL_RCC_SetAHBPrescaler (uint32_t Prescaler)

Function description

Set AHB prescaler.

Parameters

- **Prescaler:** This parameter can be one of the following values:
  - LL_RCC_SYSCLK_DIV_1
  - LL_RCC_SYSCLK_DIV_2
  - LL_RCC_SYSCLK_DIV_4
  - LL_RCC_SYSCLK_DIV_8
  - LL_RCC_SYSCLK_DIV_16
  - LL_RCC_SYSCLK_DIV_64
  - LL_RCC_SYSCLK_DIV_128
  - LL_RCC_SYSCLK_DIV_256
  - LL_RCC_SYSCLK_DIV_512

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR2 HPRE LL_RCC_SetAHBPrescaler

LL_RCC_SetSystickClockSource

Function name

__STATIC_INLINE void LL_RCC_SetSystickClockSource (uint32_t SystickSource)

Function description

Set Systick clock source.

Parameters

- **SystickSource:** This parameter can be one of the following values:
  – LL_RCC_SYSTICK_CLKSOURCE_LSI
  – LL_RCC_SYSTICK_CLKSOURCE_LSE
  – LL_RCC_SYSTICK_CLKSOURCE_HCLKDIV8

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR1 SYSTICKSEL LL_RCC_SetSystickClockSource

LL_RCC_SetAPB1Prescaler

Function name

__STATIC_INLINE void LL_RCC_SetAPB1Prescaler (uint32_t Prescaler)

Function description

Set APB1 prescaler.

Parameters

- **Prescaler:** This parameter can be one of the following values:
  – LL_RCC_APB1_DIV_1
  – LL_RCC_APB1_DIV_2
  – LL_RCC_APB1_DIV_4
  – LL_RCC_APB1_DIV_8
  – LL_RCC_APB1_DIV_16

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR2 PPRE1 LL_RCC_SetAPB1Prescaler

LL_RCC_SetAPB2Prescaler

Function name

__STATIC_INLINE void LL_RCC_SetAPB2Prescaler (uint32_t Prescaler)

Function description

Set APB2 prescaler.

Parameters

- **Prescaler:** This parameter can be one of the following values:
  - LL_RCC_APB2_DIV_1
  - LL_RCC_APB2_DIV_2
  - LL_RCC_APB2_DIV_4
  - LL_RCC_APB2_DIV_8
  - LL_RCC_APB2_DIV_16

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR2 PPRE2 LL_RCC_SetAPB2Prescaler

LL_RCC_SetAPB3Prescaler

Function name

__STATIC_INLINE void LL_RCC_SetAPB3Prescaler (uint32_t Prescaler)

Function description

Set APB3 prescaler.

Parameters

- **Prescaler:** This parameter can be one of the following values:
  - LL_RCC_APB3_DIV_1
  - LL_RCC_APB3_DIV_2
  - LL_RCC_APB3_DIV_4
  - LL_RCC_APB3_DIV_8
  - LL_RCC_APB3_DIV_16

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR3 PPRE3 LL_RCC_SetAPB3Prescaler

LL_RCC_SetDPHYPrescaler

Function name

__STATIC_INLINE void LL_RCC_SetDPHYPrescaler (uint32_t Prescaler)

Function description

Set DPHY clock prescaler.

Parameters

- **Prescaler:** This parameter can be one of the following values:
  - LL_RCC_DPHY_DIV_1
  - LL_RCC_DPHY_DIV_2
  - LL_RCC_DPHY_DIV_4
  - LL_RCC_DPHY_DIV_8
  - LL_RCC_DPHY_DIV_16

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR2 PPRE_DPHY LL_RCC_SetDPHYPrescaler

LL_RCC_GetAHBPrescaler

Function name

__STATIC_INLINE uint32_t LL_RCC_GetAHBPrescaler (void)

Function description

Get AHB prescaler.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_SYSCLK_DIV_1
  - LL_RCC_SYSCLK_DIV_2
  - LL_RCC_SYSCLK_DIV_4
  - LL_RCC_SYSCLK_DIV_8
  - LL_RCC_SYSCLK_DIV_16
  - LL_RCC_SYSCLK_DIV_64
  - LL_RCC_SYSCLK_DIV_128
  - LL_RCC_SYSCLK_DIV_256
  - LL_RCC_SYSCLK_DIV_512

Reference Manual to LL API cross reference:

- CFGR2 HPRE LL_RCC_GetAHBPrescaler

LL_RCC_GetSystickClockSource

Function name

__STATIC_INLINE uint32_t LL_RCC_GetSystickClockSource (void)

Function description

Get Sysctick clock source.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_SYSTICK_CLKSOURCE_LSI
  - LL_RCC_SYSTICK_CLKSOURCE_LSE
  - LL_RCC_SYSTICK_CLKSOURCE_HCLKDIV8

Reference Manual to LL API cross reference:

- CCIPR1 SYSTICKSEL LL_RCC_SetSystickClockSource

LL_RCC_GetAPB1Prescaler

Function name

__STATIC_INLINE uint32_t LL_RCC_GetAPB1Prescaler (void)

Function description

Get APB1 prescaler.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_APB1_DIV_1
  - LL_RCC_APB1_DIV_2
  - LL_RCC_APB1_DIV_4
  - LL_RCC_APB1_DIV_8
  - LL_RCC_APB1_DIV_16

Reference Manual to LL API cross reference:

- CFGR2 PPRE1 LL_RCC_GetAPB1Prescaler

LL_RCC_GetAPB2Prescaler

Function name

__STATIC_INLINE uint32_t LL_RCC_GetAPB2Prescaler (void)

Function description

Get APB2 prescaler.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_APB2_DIV_1
  - LL_RCC_APB2_DIV_2
  - LL_RCC_APB2_DIV_4
  - LL_RCC_APB2_DIV_8
  - LL_RCC_APB2_DIV_16

Reference Manual to LL API cross reference:

- CFGR2 PPRE2 LL_RCC_GetAPB2Prescaler

LL_RCC_GetAPB3Prescaler

Function name

__STATIC_INLINE uint32_t LL_RCC_GetAPB3Prescaler (void)

Function description

Get APB3 prescaler.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_APB3_DIV_1
  - LL_RCC_APB3_DIV_2
  - LL_RCC_APB3_DIV_4
  - LL_RCC_APB3_DIV_8
  - LL_RCC_APB3_DIV_16

Reference Manual to LL API cross reference:

- CFGR3 PPRE3 LL_RCC_GetAPB2Prescaler

LL_RCC_GetDPHYPrescaler

Function name

__STATIC_INLINE uint32_t LL_RCC_GetDPHYPrescaler (void)

Function description

Get DPHY clock prescaler.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_DPHY_DIV_1
  - LL_RCC_DPHY_DIV_2
  - LL_RCC_DPHY_DIV_4
  - LL_RCC_DPHY_DIV_8
  - LL_RCC_DPHY_DIV_16

Reference Manual to LL API cross reference:

- CFGR2 PPRE_DPHY LL_RCC_GetDPHYPrescaler

LL_RCC_SetClkAfterWakeFromStop

Function name

__STATIC_INLINE void LL_RCC_SetClkAfterWakeFromStop (uint32_t Clock)

Function description

Set Clock After Wake-Up From Stop mode.

Parameters

- **Clock:** This parameter can be one of the following values:
  - LL_RCC_STOP_WAKEUPCLOCK_MSIS
  - LL_RCC_STOP_WAKEUPCLOCK_HSI

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR1 STOPWUCK LL_RCC_SetClkAfterWakeFromStop

LL_RCC_GetClkAfterWakeFromStop

Function name

__STATIC_INLINE uint32_t LL_RCC_GetClkAfterWakeFromStop (void)

Function description

Get Clock After Wake-Up From Stop mode.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_STOP_WAKEUPCLOCK_MSIS
  - LL_RCC_STOP_WAKEUPCLOCK_HSI

Reference Manual to LL API cross reference:

- CFGR1 STOPWUCK LL_RCC_GetClkAfterWakeFromStop

LL_RCC_SetKerClkAfterWakeFromStop

Function name

__STATIC_INLINE void LL_RCC_SetKerClkAfterWakeFromStop (uint32_t Clock)

Function description

Set Kernel Clock After Wake-Up From Stop mode.

Parameters

- **Clock:** This parameter can be one of the following values:
  – LL_RCC_STOP_WAKEUPKERCLOCK_MSIK
  – LL_RCC_STOP_WAKEUPKERCLOCK_HSI

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR1 STOPKERWUCK LL_RCC_SetKerClkAfterWakeFromStop

LL_RCC_GetKerClkAfterWakeFromStop

Function name

__STATIC_INLINE uint32_t LL_RCC_GetKerClkAfterWakeFromStop (void)

Function description

Get Kernel Clock After Wake-Up From Stop mode.

Return values

- **Returned:** value can be one of the following values:
  – LL_RCC_STOP_WAKEUPKERCLOCK_MSIK
  – LL_RCC_STOP_WAKEUPKERCLOCK_HSI

Reference Manual to LL API cross reference:

- CFGR1 STOPKERWUCK LL_RCC_GetKerClkAfterWakeFromStop

LL_RCC_ConfigMCO

Function name

__STATIC_INLINE void LL_RCC_ConfigMCO (uint32_t MCOxSource, uint32_t MCOxPrescaler)

Function description

Configure MCOx.

Parameters

- **MCOxSource:** This parameter can be one of the following values:
  – LL_RCC_MCO1SOURCE_NOCLOCK
  – LL_RCC_MCO1SOURCE_SYSCLK
  – LL_RCC_MCO1SOURCE_MSIS
  – LL_RCC_MCO1SOURCE_HSI
  – LL_RCC_MCO1SOURCE_HSE
  – LL_RCC_MCO1SOURCE_HSI48
  – LL_RCC_MCO1SOURCE_PLLCLK
  – LL_RCC_MCO1SOURCE_LSI
  – LL_RCC_MCO1SOURCE_LSE
- **MCOxPrescaler:** This parameter can be one of the following values:
  – LL_RCC_MCO1_DIV_1
  – LL_RCC_MCO1_DIV_2
  – LL_RCC_MCO1_DIV_4
  – LL_RCC_MCO1_DIV_8
  – LL_RCC_MCO1_DIV_16

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR1 MCOSEL LL_RCC_ConfigMCO
- CFGR1 MCOPRE LL_RCC_ConfigMCO

LL_RCC_SetUSARTClockSource

Function name

__STATIC_INLINE void LL_RCC_SetUSARTClockSource (uint32_t USARTxSource)

Function description

Configure USARTx clock source.

Parameters

- **USARTxSource:** This parameter can be one of the following values:
  – LL_RCC_USART1_CLKSOURCE_PCLK2
  – LL_RCC_USART1_CLKSOURCE_SYSCLK
  – LL_RCC_USART1_CLKSOURCE_HSI
  – LL_RCC_USART1_CLKSOURCE_LSE
  – LL_RCC_USART2_CLKSOURCE_PCLK1 (*)
  – LL_RCC_USART2_CLKSOURCE_SYSCLK (*)
  – LL_RCC_USART2_CLKSOURCE_HSI (*)
  – LL_RCC_USART2_CLKSOURCE_LSE (*)
  – LL_RCC_USART3_CLKSOURCE_PCLK1
  – LL_RCC_USART3_CLKSOURCE_SYSCLK
  – LL_RCC_USART3_CLKSOURCE_HSI
  – LL_RCC_USART3_CLKSOURCE_LSE
  – LL_RCC_USART6_CLKSOURCE_PCLK1 (*)
  – LL_RCC_USART6_CLKSOURCE_SYSCLK (*)
  – LL_RCC_USART6_CLKSOURCE_HSI (*)
  – LL_RCC_USART6_CLKSOURCE_LSE (*)

  (*) Availability depends on devices.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR1 USART1SEL LL_RCC_SetUSARTClockSource
- CCIPR1 USART2SEL LL_RCC_SetUSARTClockSource
- CCIPR1 USART3SEL LL_RCC_SetUSARTClockSource
- CCIPR2 USART6SEL LL_RCC_SetUSARTClockSource

LL_RCC_SetUARTClockSource

Function name

__STATIC_INLINE void LL_RCC_SetUARTClockSource (uint32_t UARTxSource)

Function description

Configure UARTx clock source.

Parameters

- **UARTxSource:** This parameter can be one of the following values:
  – LL_RCC_UART4_CLKSOURCE_PCLK1
  – LL_RCC_UART4_CLKSOURCE_SYSCLK
  – LL_RCC_UART4_CLKSOURCE_HSI
  – LL_RCC_UART4_CLKSOURCE_LSE
  – LL_RCC_UART5_CLKSOURCE_PCLK1
  – LL_RCC_UART5_CLKSOURCE_SYSCLK
  – LL_RCC_UART5_CLKSOURCE_HSI
  – LL_RCC_UART5_CLKSOURCE_LSE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR1 UART4SEL LL_RCC_SetUARTClockSource
- CCIPR1 UART5SEL LL_RCC_SetUARTClockSource

LL_RCC_SetLPUARTClockSource

Function name

__STATIC_INLINE void LL_RCC_SetLPUARTClockSource (uint32_t LPUARTxSource)

Function description

Configure LPUARTx clock source.

Parameters

- **LPUARTxSource:** This parameter can be one of the following values:
  – LL_RCC_LPUART1_CLKSOURCE_PCLK3
  – LL_RCC_LPUART1_CLKSOURCE_SYSCLK
  – LL_RCC_LPUART1_CLKSOURCE_HSI
  – LL_RCC_LPUART1_CLKSOURCE_LSE
  – LL_RCC_LPUART1_CLKSOURCE_MSIK

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR3 LPUART1SEL LL_RCC_SetLPUARTClockSource

LL_RCC_SetI2CClockSource

Function name

__STATIC_INLINE void LL_RCC_SetI2CClockSource (uint32_t I2CxSource)

Function description

Configure I2Cx clock source.

Parameters

- **I2CxSource:** This parameter can be one of the following values:
  - LL_RCC_I2C1_CLKSOURCE_PCLK1
  - LL_RCC_I2C1_CLKSOURCE_SYSCLK
  - LL_RCC_I2C1_CLKSOURCE_HSI
  - LL_RCC_I2C1_CLKSOURCE_MSIK
  - LL_RCC_I2C2_CLKSOURCE_PCLK1
  - LL_RCC_I2C2_CLKSOURCE_SYSCLK
  - LL_RCC_I2C2_CLKSOURCE_HSI
  - LL_RCC_I2C2_CLKSOURCE_MSIK
  - LL_RCC_I2C3_CLKSOURCE_PCLK3
  - LL_RCC_I2C3_CLKSOURCE_SYSCLK
  - LL_RCC_I2C3_CLKSOURCE_HSI
  - LL_RCC_I2C3_CLKSOURCE_MSIK
  - LL_RCC_I2C4_CLKSOURCE_PCLK1
  - LL_RCC_I2C4_CLKSOURCE_SYSCLK
  - LL_RCC_I2C4_CLKSOURCE_HSI
  - LL_RCC_I2C4_CLKSOURCE_MSIK

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR1 I2C1SEL LL_RCC_SetI2CClockSource
- CCIPR1 I2C2SEL LL_RCC_SetI2CClockSource
- CCIPR3 I2C3SEL LL_RCC_SetI2CClockSource
- CCIPR1 I2C4SEL LL_RCC_SetI2CClockSource

LL_RCC_SetSPIClockSource

Function name

__STATIC_INLINE void LL_RCC_SetSPIClockSource (uint32_t SPIxSource)

Function description

Configure SPIx clock source.

Parameters

- **SPIxSource:** This parameter can be one of the following values:
  - LL_RCC_SPI1_CLKSOURCE_PCLK2
  - LL_RCC_SPI1_CLKSOURCE_SYSCLK
  - LL_RCC_SPI1_CLKSOURCE_HSI
  - LL_RCC_SPI1_CLKSOURCE_MSIK
  - LL_RCC_SPI2_CLKSOURCE_PCLK1
  - LL_RCC_SPI2_CLKSOURCE_SYSCLK
  - LL_RCC_SPI2_CLKSOURCE_HSI
  - LL_RCC_SPI2_CLKSOURCE_MSIK
  - LL_RCC_SPI3_CLKSOURCE_PCLK3
  - LL_RCC_SPI3_CLKSOURCE_SYSCLK
  - LL_RCC_SPI3_CLKSOURCE_HSI
  - LL_RCC_SPI3_CLKSOURCE_MSIK

Return values

- **None:**

- CCIPR1 SPI1SEL LL_RCC_SetSPIClockSource
- CCIPR1 SPI1SEL LL_RCC_SetSPIClockSource
- CCIPR1 SPI2SEL LL_RCC_SetSPIClockSource
- CCIPR3 SPI3SEL LL_RCC_SetSPIClockSource

LL_RCC_SetLPTIMClockSource

Function name

__STATIC_INLINE void LL_RCC_SetLPTIMClockSource (uint32_t LPTIMxSource)

Function description

Configure LPTIMx clock source.

Parameters

- **LPTIMxSource:** This parameter can be one of the following values:
  – LL_RCC_LPTIM1_CLKSOURCE_MSIK
  – LL_RCC_LPTIM1_CLKSOURCE_LSI
  – LL_RCC_LPTIM1_CLKSOURCE_HSI
  – LL_RCC_LPTIM1_CLKSOURCE_LSE
  – LL_RCC_LPTIM2_CLKSOURCE_PCLK1
  – LL_RCC_LPTIM2_CLKSOURCE_LSI
  – LL_RCC_LPTIM2_CLKSOURCE_HSI
  – LL_RCC_LPTIM2_CLKSOURCE_LSE
  – LL_RCC_LPTIM34_CLKSOURCE_MSIK
  – LL_RCC_LPTIM34_CLKSOURCE_LSI
  – LL_RCC_LPTIM34_CLKSOURCE_HSI
  – LL_RCC_LPTIM34_CLKSOURCE_LSE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR1 LPTIM2SEL LL_RCC_SetLPTIMClockSource
- CCIPR3 LPTIM2SEL LL_RCC_SetLPTIMClockSource
- CCIPR3 LPTIM34SEL LL_RCC_SetLPTIMClockSource

LL_RCC_SetFDCANClockSource

Function name

__STATIC_INLINE void LL_RCC_SetFDCANClockSource (uint32_t FDCANxSource)

Function description

Configure FDCAN kernel clock source.

Parameters

- **FDCANxSource:** This parameter can be one of the following values:
  – LL_RCC_FDCAN_CLKSOURCE_HSE
  – LL_RCC_FDCAN_CLKSOURCE_PLL1
  – LL_RCC_FDCAN_CLKSOURCE_PLL2

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR1 FDCANSEL LL_RCC_SetFDCANClockSource

LL_RCC_SetSAIClockSource

Function name

__STATIC_INLINE void LL_RCC_SetSAIClockSource (uint32_t SAIxSource)

Function description

Configure SAIx clock source.

Parameters

- **SAIxSource:** This parameter can be one of the following values:
  – LL_RCC_SAI1_CLKSOURCE_PLL1
  – LL_RCC_SAI1_CLKSOURCE_PLL2
  – LL_RCC_SAI1_CLKSOURCE_PLL3
  – LL_RCC_SAI1_CLKSOURCE_PIN
  – LL_RCC_SAI1_CLKSOURCE_HSI
  – LL_RCC_SAI2_CLKSOURCE_PLL1 (*)
  – LL_RCC_SAI2_CLKSOURCE_PLL2 (*)
  – LL_RCC_SAI2_CLKSOURCE_PLL3 (*)
  – LL_RCC_SAI2_CLKSOURCE_PIN (*)
  – LL_RCC_SAI2_CLKSOURCE_HSI (*)

  (*) Availability depends on devices.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR2 SAI1SEL LL_RCC_SetSAIClockSource
- CCIPR2 SAI2SEL LL_RCC_SetSAIClockSource

LL_RCC_SetSDMMCKernelClockSource

Function name

__STATIC_INLINE void LL_RCC_SetSDMMCKernelClockSource (uint32_t SDMMCxSource)

Function description

Configure SDMMC1/2 kernel clock source.

Parameters

- **SDMMCxSource:** This parameter can be one of the following values:
  – LL_RCC_SDMMC12_KERNELCLKSOURCE_48CLK
  – P

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR2 SDMMCSEL LL_RCC_SetSDMMCKernelClockSource

LL_RCC_SetSDMMCClockSource

Function name

__STATIC_INLINE void LL_RCC_SetSDMMCClockSource (uint32_t SDMMCxSource)

Function description

Configure SDMMC1/2 clock source.

Parameters

- **SDMMCxSource:** This parameter can be one of the following values:
  – LL_RCC_SDMMC12_CLKSOURCE_HSI48
  – LL_RCC_SDMMC12_CLKSOURCE_PLL1
  – LL_RCC_SDMMC12_CLKSOURCE_PLL2
  – LL_RCC_SDMMC12_CLKSOURCE_MSIK

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR1 ICLKSEL LL_RCC_SetSDMMCClockSource

LL_RCC_SetRNGClockSource

Function name

__STATIC_INLINE void LL_RCC_SetRNGClockSource (uint32_t RNGxSource)

Function description

Configure RNG clock source.

Parameters

- **RNGxSource:** This parameter can be one of the following values:
  – LL_RCC_RNG_CLKSOURCE_HSI48
  – LL_RCC_RNG_CLKSOURCE_HSI48_DIV2
  – LL_RCC_RNG_CLKSOURCE_HSI

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR2 RNGSEL LL_RCC_SetRNGClockSource

LL_RCC_SetUSBPHYClockSource

Function name

__STATIC_INLINE void LL_RCC_SetUSBPHYClockSource (uint32_t Source)

Function description

Configure USBPHY clock source.

Parameters

- **Source:** This parameter can be one of the following values:
  – LL_RCC_USBPHYCLKSOURCE_HSE
  – LL_RCC_USBPHYCLKSOURCE_HSE_DIV2
  – LL_RCC_USBPHYCLKSOURCE_PLL1
  – LL_RCC_USBPHYCLKSOURCE_PLL1_DIV2

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR2 USBPHYCSEL LL_RCC_SetUSBPHYClockSource

LL_RCC_SetUSBClockSource

Function name

__STATIC_INLINE void LL_RCC_SetUSBClockSource (uint32_t USBxSource)

Function description

Configure USB clock source.

Parameters

- **USBxSource:** This parameter can be one of the following values:
  - LL_RCC_USB_CLKSOURCE_HSI48
  - LL_RCC_USB_CLKSOURCE_PLL1
  - LL_RCC_USB_CLKSOURCE_PLL2
  - LL_RCC_USB_CLKSOURCE_MSIK

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR1 ICLKSEL LL_RCC_SetUSBClockSource

LL_RCC_SetADCDACClockSource

Function name

__STATIC_INLINE void LL_RCC_SetADCDACClockSource (uint32_t ADCxDAC1Source)

Function description

Configure ADC clock source.

Parameters

- **ADCxDAC1Source:** This parameter can be one of the following values:
  - LL_RCC_ADCDAC_CLKSOURCE_HCLK
  - LL_RCC_ADCDAC_CLKSOURCE_SYSCLK

  - LL_RCC_ADCDAC_CLKSOURCE_HSE
  - LL_RCC_ADCDAC_CLKSOURCE_HSI
  - LL_RCC_ADCDAC_CLKSOURCE_MSIK

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR3 ADCDACSEL LL_RCC_SetADCDACClockSource

LL_RCC_SetDAC1ClockSource

Function name

__STATIC_INLINE void LL_RCC_SetDAC1ClockSource (uint32_t Source)

Function description

Configure DAC1 clock source.

Parameters

- **Source:** This parameter can be one of the following values:
  - LL_RCC_DAC1_CLKSOURCE_LSE
  - LL_RCC_DAC1_CLKSOURCE_LSI

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR3 DAC1SEL LL_RCC_SetDAC1ClockSource

LL_RCC_SetADF1ClockSource

Function name

__STATIC_INLINE void LL_RCC_SetADF1ClockSource (uint32_t Source)

Function description

Configure ADF1 clock source.

Parameters

- **Source:** This parameter can be one of the following values:
  - LL_RCC_ADF1_CLKSOURCE_HCLK
  - LL_RCC_ADF1_CLKSOURCE_PLL1
  - LL_RCC_ADF1_CLKSOURCE_PLL3
  - LL_RCC_ADF1_CLKSOURCE_MSIK
  - LL_RCC_ADF1_CLKSOURCE_PIN

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR3 ADF1SEL LL_RCC_SetADF1ClockSource

LL_RCC_SetMDF1ClockSource

Function name

__STATIC_INLINE void LL_RCC_SetMDF1ClockSource (uint32_t Source)

Function description

Configure MDF1 clock source.

Parameters

- **Source:** This parameter can be one of the following values:
  - LL_RCC_MDF1_CLKSOURCE_HCLK
  - LL_RCC_MDF1_CLKSOURCE_PLL1
  - LL_RCC_MDF1_CLKSOURCE_PLL3
  - LL_RCC_MDF1_CLKSOURCE_MSIK
  - LL_RCC_MDF1_CLKSOURCE_PIN

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR3 MDF1SEL LL_RCC_SetMDF1ClockSource

LL_RCC_SetOCTOSPIClockSource

Function name

__STATIC_INLINE void LL_RCC_SetOCTOSPIClockSource (uint32_t Source)

Function description

Configure OCTOSPI kernel clock source.

Parameters

- **Source:** This parameter can be one of the following values:
  - LL_RCC_OCTOSPI_CLKSOURCE_SYSCLK
  - LL_RCC_OCTOSPI_CLKSOURCE_MSIK
  - LL_RCC_OCTOSPI_CLKSOURCE_PLL1
  - LL_RCC_OCTOSPI_CLKSOURCE_PLL2

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR2 OSPISEL LL_RCC_SetOCTOSPIClockSource

LL_RCC_SetHSPIClockSource

Function name

__STATIC_INLINE void LL_RCC_SetHSPIClockSource (uint32_t Source)

Function description

Configure HSPI kernel clock source.

Parameters

- **Source:** This parameter can be one of the following values:
  - LL_RCC_HSPI_CLKSOURCE_SYSCLK
  - LL_RCC_HSPI_CLKSOURCE_PLL1
  - LL_RCC_HSPI_CLKSOURCE_PLL2
  - LL_RCC_HSPI_CLKSOURCE_PLL3

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR2 HSPISEL LL_RCC_SetHSPIClockSource

LL_RCC_SetSAESClockSource

Function name

__STATIC_INLINE void LL_RCC_SetSAESClockSource (uint32_t Source)

Function description

Configure SAES clock source.

Parameters

- **Source:** This parameter can be one of the following values:
  - LL_RCC_SAES_CLKSOURCE_SHSI
  - LL_RCC_SAES_CLKSOURCE_SHSI_DIV2

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR2 SAESSEL LL_RCC_SetSAESClockSource

LL_RCC_SetDSIClockSource

Function name

__STATIC_INLINE void LL_RCC_SetDSIClockSource (uint32_t Source)

Function description

Configure DSIx clock source.

Parameters

- **Source:** This parameter can be one of the following values:
  – LL_RCC_DSI_CLKSOURCE_PHY
  – LL_RCC_DSI_CLKSOURCE_PLL3

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR2 DSISEL LL_RCC_SetDSIClockSource

LL_RCC_SetLTDCClockSource

Function name

__STATIC_INLINE void LL_RCC_SetLTDCClockSource (uint32_t Source)

Function description

Configure LTDCx clock source.

Parameters

- **Source:** This parameter can be one of the following values:
  – LL_RCC_LTDC_CLKSOURCE_PLL2
  – LL_RCC_LTDC_CLKSOURCE_PLL3

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR2 LTDCSEL LL_RCC_SetLTDCClockSource

LL_RCC_GetUSARTClockSource

Function name

__STATIC_INLINE uint32_t LL_RCC_GetUSARTClockSource (uint32_t USARTx)

Function description

Get USARTx clock source.

Parameters

- **USARTx:** This parameter can be one of the following values:
  – LL_RCC_USART1_CLKSOURCE
  – LL_RCC_USART2_CLKSOURCE (*)
  – LL_RCC_USART3_CLKSOURCE
  – LL_RCC_USART6_CLKSOURCE (*)

Return values

- **Returned:** value can be one of the following values:
  – LL_RCC_USART1_CLKSOURCE_PCLK2
  – LL_RCC_USART1_CLKSOURCE_SYSCLK
  – LL_RCC_USART1_CLKSOURCE_HSI
  – LL_RCC_USART1_CLKSOURCE_LSE
  – LL_RCC_USART2_CLKSOURCE_PCLK1 (*)
  – LL_RCC_USART2_CLKSOURCE_SYSCLK (*)
  – LL_RCC_USART2_CLKSOURCE_HSI (*)
  – LL_RCC_USART2_CLKSOURCE_LSE (*)
  – LL_RCC_USART3_CLKSOURCE_PCLK1
  – LL_RCC_USART3_CLKSOURCE_SYSCLK
  – LL_RCC_USART3_CLKSOURCE_HSI
  – LL_RCC_USART3_CLKSOURCE_LSE
  – LL_RCC_USART6_CLKSOURCE_PCLK1 (*)
  – LL_RCC_USART6_CLKSOURCE_SYSCLK (*)
  – LL_RCC_USART6_CLKSOURCE_HSI (*)
  – LL_RCC_USART6_CLKSOURCE_LSE (*)

  (*) Availability depends on devices.

LL_RCC_GetSPIClockSource

Function name

__STATIC_INLINE uint32_t LL_RCC_GetSPIClockSource (uint32_t SPIx)

Function description

Get SPIx clock source.

Parameters

- **SPIx:** This parameter can be one of the following values:
  - LL_RCC_SPI1_CLKSOURCE
  - LL_RCC_SPI2_CLKSOURCE
  - LL_RCC_SPI3_CLKSOURCE

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_SPI1_CLKSOURCE_PCLK2
  - LL_RCC_SPI1_CLKSOURCE_SYSCLK
  - LL_RCC_SPI1_CLKSOURCE_HSI
  - LL_RCC_SPI1_CLKSOURCE_MSIK
  - LL_RCC_SPI2_CLKSOURCE_PCLK1
  - LL_RCC_SPI2_CLKSOURCE_SYSCLK

LL_RCC_GetLPTIMClockSource

Function name

__STATIC_INLINE uint32_t LL_RCC_GetLPTIMClockSource (uint32_t LPTIMx)

Function description

Get LPTIMx clock source.

Parameters

- **LPTIMx:** This parameter can be one of the following values:
  - LL_RCC_LPTIM1_CLKSOURCE
  - LL_RCC_LPTIM2_CLKSOURCE
  - LL_RCC_LPTIM34_CLKSOURCE

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_LPTIM1_CLKSOURCE_MSIK
  - LL_RCC_LPTIM1_CLKSOURCE_LSI
  - LL_RCC_LPTIM1_CLKSOURCE_HSI
  - LL_RCC_LPTIM1_CLKSOURCE_LSE
  - LL_RCC_LPTIM2_CLKSOURCE_PCLK1
  - LL_RCC_LPTIM2_CLKSOURCE_LSI
  - LL_RCC_LPTIM2_CLKSOURCE_HSI
  - LL_RCC_LPTIM2_CLKSOURCE_LSE
  - LL_RCC_LPTIM34_CLKSOURCE_MSIK
  - LL_RCC_LPTIM34_CLKSOURCE_LSI
  - LL_RCC_LPTIM34_CLKSOURCE_HSI
  - LL_RCC_LPTIM34_CLKSOURCE_LSE

LL_RCC_SetTIMICClockSource

Function name

__STATIC_INLINE void LL_RCC_SetTIMICClockSource (uint32_t TIMICSource)

Function description

Set Tim Input capture clock source.

Parameters

- **TIMICSource:** This parameter can be one of the following combined values:
  - LL_RCC_TIMIC_CLKSOURCE_NONE
  - LL_RCC_TIMIC_CLKSOURCE_HSI_DIV256
  - LL_RCC_TIMIC_CLKSOURCE_MSIS_DIV1024
  - LL_RCC_TIMIC_CLKSOURCE_MSIS_DIV4
  - LL_RCC_TIMIC_CLKSOURCE_MSIK_DIV4
  - LL_RCC_TIMIC_CLKSOURCE_MSIK_DIV1024

Return values

- **None:**

Notes

- HSI, MSI and MSIK clocks without division are also available when TIMICSEL[2] is 1.
- combination to be avoided : LL_RCC_TIMIC_CLKSOURCE_MSIS_DIV1024 and LL_RCC_CLKSOURCE_TIMIC_MSIK_DIV1024 LL_RCC_TIMIC_CLKSOURCE_MSIS_DIV4 and LL_RCC_CLKSOURCE_TIMIC_MSIK_DIV4

  - LL_RCC_RTC_CLKSOURCE_NONE
  - LL_RCC_RTC_CLKSOURCE_LSE
  - LL_RCC_RTC_CLKSOURCE_LSI
  - LL_RCC_RTC_CLKSOURCE_HSE_DIV32

Reference Manual to LL API cross reference:

- BDCR RTCSEL LL_RCC_GetRTCClockSource

LL_RCC_EnableRTC

Function name

__STATIC_INLINE void LL_RCC_EnableRTC (void)

Function description

Enable RTC.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR RTCEN LL_RCC_EnableRTC

LL_RCC_DisableRTC

Function name

__STATIC_INLINE void LL_RCC_DisableRTC (void)

Function description

Disable RTC.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR RTCEN LL_RCC_DisableRTC

LL_RCC_IsEnabledRTC

Function name

__STATIC_INLINE uint32_t LL_RCC_IsEnabledRTC (void)

Function description

Check if RTC has been enabled or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- BDCR RTCEN LL_RCC_IsEnabledRTC

LL_RCC_ForceBackupDomainReset

Function name

__STATIC_INLINE void LL_RCC_ForceBackupDomainReset (void)

Function description

Force the Backup domain reset.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR BDRST LL_RCC_ForceBackupDomainReset

LL_RCC_ReleaseBackupDomainReset

Function name

__STATIC_INLINE void LL_RCC_ReleaseBackupDomainReset (void)

Function description

Release the Backup domain reset.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR BDRST LL_RCC_ReleaseBackupDomainReset

LL_RCC_PLL1_Enable

Function name

__STATIC_INLINE void LL_RCC_PLL1_Enable (void)

Function description

Enable PLL1.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR PLL1ON LL_RCC_PLL1_Enable

LL_RCC_PLL1_Disable

Function name

__STATIC_INLINE void LL_RCC_PLL1_Disable (void)

Function description

Disable PLL1.

Return values

- **None:**

Notes

- Cannot be disabled if the PLL1 clock is used as the system clock

Reference Manual to LL API cross reference:

- CR PLLON LL_RCC_PLL1_Disable

LL_RCC_PLL1_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL1_IsReady (void)

Function description

Check if PLL1 Ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR PLL1RDY LL_RCC_PLL1_IsReady

LL_RCC_PLL1_ConfigDomain_SYS

Function name

__STATIC_INLINE void LL_RCC_PLL1_ConfigDomain_SYS (uint32_t Source, uint32_t PLLM, uint32_t PLLN, uint32_t PLLR)

Function description

Configure PLL1 used for SYSCLK Domain.

Parameters

- **Source:** This parameter can be one of the following values:
  - LL_RCC_PLL1SOURCE_NONE
  - LL_RCC_PLL1SOURCE_MSIS
  - LL_RCC_PLL1SOURCE_HSI
  - LL_RCC_PLL1SOURCE_HSE
- **PLLM:** parameter can be a value between 1 and 16
- **PLLR:** parameter can be a value between 1 and 128 (Only division by 1 and even division are allowed)
- **PLLN:** parameter can be a value between 4 and 512

Return values

- **None:**

Notes

- PLL1 Source, PLLM, PLLN and PLLR can be written only when PLL1 is disabled.
- PLLN/PLLR can be written only when PLL is disabled.

Reference Manual to LL API cross reference:

- PLL1CFGR PLL1SRC LL_RCC_PLL1_ConfigDomain_SYS
- PLL1CFGR PLL1M LL_RCC_PLL1_ConfigDomain_SYS
- PLL1CFGR PLL1N LL_RCC_PLL1_ConfigDomain_SYS
- PLL1CFGR PLL1R LL_RCC_PLL1_ConfigDomain_SYS

LL_RCC_PLL1_ConfigDomain_SAI

Function name

__STATIC_INLINE void LL_RCC_PLL1_ConfigDomain_SAI (uint32_t Source, uint32_t PLLM, uint32_t PLLN, uint32_t PLLP)

Function description

Configure PLL1 used for SAI domain clock.

Parameters

- **Source:** This parameter can be one of the following values:
  – LL_RCC_PLL1SOURCE_NONE
  – LL_RCC_PLL1SOURCE_MSIS
  – LL_RCC_PLL1SOURCE_HSI
  – LL_RCC_PLL1SOURCE_HSE
- **PLLM:** parameter can be a value between 1 and 16
- **PLLN:** parameter can be a value between 4 and 512
- **PLLP:** parameter can be a value between 1 and 128

Return values

- **None:**

Notes

- PLL1 Source, PLLM, PLLN and PLLPDIV can be written only when PLL1 is disabled.
- This can be selected for SAI1 or SAI2

Reference Manual to LL API cross reference:

- PLLC1FGR PLL1SRC LL_RCC_PLL1_ConfigDomain_SAI
- PLLC1FGR PLL1M LL_RCC_PLL1_ConfigDomain_SAI
- PLLC1FGR PLL1N LL_RCC_PLL1_ConfigDomain_SAI
- PLLC1FGR PLL1P LL_RCC_PLL1_ConfigDomain_SAI

LL_RCC_PLL1_ConfigDomain_48M

Function name

__STATIC_INLINE void LL_RCC_PLL1_ConfigDomain_48M (uint32_t Source, uint32_t PLLM, uint32_t PLLN, uint32_t PLLQ)

Function description

Configure PLL1 used for 48Mhz domain clock.

Parameters

- **Source:** This parameter can be one of the following values:
  – LL_RCC_PLL1SOURCE_NONE
  – LL_RCC_PLL1SOURCE_MSIS
  – LL_RCC_PLL1SOURCE_HSI
  – LL_RCC_PLL1SOURCE_HSE
- **PLLM:** parameter can be a value between 1 and 16
- **PLLN:** parameter can be a value between 4 and 512
- **PLLQ:** parameter can be a value between 1 and 128

Return values

- **None:**

Notes

- PLL1 Source, PLLM, PLLN and PLLQ can be written only when PLL1 is disabled.
- This can be selected for USB, SDMMC

Reference Manual to LL API cross reference:

- PLL1CFGR PLL1SRC LL_RCC_PLL1_ConfigDomain_48M
- PLL1CFGR PLL1M LL_RCC_PLL1_ConfigDomain_48M

- PLL1CFGR PLL1Q LL_RCC_PLL1_ConfigDomain_48M

LL_RCC_PLL1_SetMainSource

Function name

__STATIC_INLINE void LL_RCC_PLL1_SetMainSource (uint32_t PLL1Source)

Function description

Configure PLL clock source.

Parameters

- **PLL1Source:** This parameter can be one of the following values:
  – LL_RCC_PLL1SOURCE_NONE
  – LL_RCC_PLL1SOURCE_MSIS
  – LL_RCC_PLL1SOURCE_HSI
  – LL_RCC_PLL1SOURCE_HSE

Return values

- **None:**

Reference Manual to LL API cross reference:

- PLL1CFGR PLL1SRC LL_RCC_PLL1_SetMainSource

LL_RCC_PLL1_GetMainSource

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL1_GetMainSource (void)

Function description

Get the oscillator used as PLL1 clock source.

Return values

- **Returned:** value can be one of the following values:
  – LL_RCC_PLL1SOURCE_NONE
  – LL_RCC_PLL1SOURCE_MSIS
  – LL_RCC_PLL1SOURCE_HSI
  – LL_RCC_PLL1SOURCE_HSE

Reference Manual to LL API cross reference:

- PLL1CFGR PLL1SRC LL_RCC_PLL1_GetMainSource

LL_RCC_PLL1_SetN

Function name

__STATIC_INLINE void LL_RCC_PLL1_SetN (uint32_t PLL1N)

Function description

Set Main PLL1 multiplication factor for VCO.

Parameters

- **PLL1N:** parameter can be a value between 4 and 512

Reference Manual to LL API cross reference:

- PLL1CFGR PLL1N LL_RCC_PLL1_SetN

LL_RCC_PLL1_GetN

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL1_GetN (void)

Function description

Get Main PLL1 multiplication factor for VCO.

Return values

- **Between:** 4 and 512

Reference Manual to LL API cross reference:

- PLL1CFGR PLL1N LL_RCC_PLL1_GetN

LL_RCC_PLL1_SetP

Function name

__STATIC_INLINE void LL_RCC_PLL1_SetP (uint32_t PLL1P)

Function description

Set Main PLL1 division factor for PLL1P.

Parameters

- **PLL1P:** parameter can be a value between 1 and 128

Notes

- Used for SAI1 and SAI2 clock

Reference Manual to LL API cross reference:

- PLL1CFGR PLL1P LL_RCC_PLL1_SetP

LL_RCC_PLL1_GetP

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL1_GetP (void)

Function description

Get Main PLL1 division factor for PLL1P.

Return values

- **Between:** 1 and 128

Notes

- Used for SAI1 and SAI2 clock

Reference Manual to LL API cross reference:

- PLL1CFGR PLL1P LL_RCC_PLL1_GetP

LL_RCC_PLL1_SetQ

Function name

__STATIC_INLINE void LL_RCC_PLL1_SetQ (uint32_t PLL1Q)

Function description

Set Main PLL division factor for PLLQ.

Parameters

- **PLL1Q:** parameter can be a value between 1 and 128

Notes

- Used for PLL48M1CLK selected for USB, SDMMC (48 MHz clock)

Reference Manual to LL API cross reference:

- PLLCFGR PLL1Q LL_RCC_PLL1_SetQ

LL_RCC_PLL1_GetQ

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL1_GetQ (void)

Function description

Get Main PLL division factor for PLLQ.

Return values

- **Between:** 1 and 128

Notes

- Used for PLL48M1CLK selected for USB, SDMMC (48 MHz clock)

Reference Manual to LL API cross reference:

- PLL1CFGR PLL1Q LL_RCC_PLL1_GetQ

LL_RCC_PLL1_SetR

Function name

__STATIC_INLINE void LL_RCC_PLL1_SetR (uint32_t PLL1R)

Function description

Set Main PLL division factor for PLL1R.

Parameters

- **PLL1R:** parameter can be a value between 1 and 128 (Only division by 1 and even division are allowed)

Notes

- Used for PLL1CLK selected for USB, SDMMC (48 MHz clock)

Reference Manual to LL API cross reference:

- PLL1DIVR PLL1R LL_RCC_PLL1_SetR

LL_RCC_PLL1_GetR

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL1_GetR (void)

Function description

Get Main PLL1 division factor for PLL1R.

Return values

- **Between:** 1 and 128

Notes

- Used for PLL1CLK (system clock)

Reference Manual to LL API cross reference:

- PLL1DIVR PLL1R LL_RCC_PLL1_GetR

LL_RCC_PLL1_SetDivider

Function name

__STATIC_INLINE void LL_RCC_PLL1_SetDivider (uint32_t PLL1M)

Function description

Set Division factor for the main PLL and other PLL.

Parameters

- **PLL1M:** parameter can be a value between 1 and 16

Reference Manual to LL API cross reference:

- PLL1CFGR PLL1M LL_RCC_PLL1_SetDivider

LL_RCC_PLL1_GetDivider

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL1_GetDivider (void)

Function description

Get Division factor for the main PLL and other PLL.

Return values

- **Between:** 1 and 16

Reference Manual to LL API cross reference:

- PLL1CFGR PLL1M LL_RCC_PLL1_GetDivider

LL_RCC_PLL1_EnableDomain_SAI

Function name

__STATIC_INLINE void LL_RCC_PLL1_EnableDomain_SAI (void)

Function description

Enable PLL1 output mapped on SAI domain clock.

Return values

- **None:**

Reference Manual to LL API cross reference:

- PLL1CFGR PLL1PEN LL_RCC_PLL1_EnableDomain_SAI

LL_RCC_PLL1_DisableDomain_SAI

Function name

__STATIC_INLINE void LL_RCC_PLL1_DisableDomain_SAI (void)

Function description

Disable PLL1 output mapped on SAI domain clock.

Return values

- **None:**

Notes

- Cannot be disabled if the PLL1 clock is used as the system clock
- In order to save power, when the PLL1CLK of the PLL1 is not used, should be 0

Reference Manual to LL API cross reference:

- PLL1CFGR PLL1PEN LL_RCC_PLL1_DisableDomain_SAI

LL_RCC_PLL1_IsEnabledDomain_SAI

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL1_IsEnabledDomain_SAI (void)

Function description

Check if PLL1 output mapped on SAI domain clock is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- PLL1CFGR PLL1PEN LL_RCC_PLL1_IsEnabledDomain_SAI

LL_RCC_PLL1_EnableDomain_48M

Function name

__STATIC_INLINE void LL_RCC_PLL1_EnableDomain_48M (void)

Function description

Enable PLL output mapped on 48MHz domain clock.

Return values

- **None:**

Reference Manual to LL API cross reference:

- PLL1CFGR PLL1QEN LL_RCC_PLL1_EnableDomain_48M

LL_RCC_PLL1_DisableDomain_48M

Function name

__STATIC_INLINE void LL_RCC_PLL1_DisableDomain_48M (void)

Function description

Disable PLL1 output mapped on 48MHz domain clock.

Return values

- **None:**

Notes

- Cannot be disabled if the PLL clock is used as the system clock
- In order to save power, when the PLL1CLK of the PLL1 is not used, should be 0

Reference Manual to LL API cross reference:

- PLL1CFGR PLL1QEN LL_RCC_PLL1_DisableDomain_48M

LL_RCC_PLL1_IsEnabledDomain_48M

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL1_IsEnabledDomain_48M (void)

Function description

Check if PLL1 output mapped on 48M domain clock is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- PLL1CFGR PLL1QEN LL_RCC_PLL1_IsEnabledDomain_48M

LL_RCC_PLL1_EnableDomain_SYS

Function name

__STATIC_INLINE void LL_RCC_PLL1_EnableDomain_SYS (void)

Function description

Enable PLL1 output mapped on SYSCLK domain.

Return values

- **None:**

Reference Manual to LL API cross reference:

- PLL1CFGR PLL1REN LL_RCC_PLL1_EnableDomain_SYS

LL_RCC_PLL1_DisableDomain_SYS

Function name

__STATIC_INLINE void LL_RCC_PLL1_DisableDomain_SYS (void)

Function description

Disable PLL1 output mapped on SYSCLK domain.

Return values

- **None:**

Notes

- Cannot be disabled if the PLL1 clock is used as the system clock
- In order to save power, when the PLL1CLK of the PLL1 is not used, Main PLL1 should be 0

Reference Manual to LL API cross reference:

- PLL1CFGR PLL1REN LL_RCC_PLL1_DisableDomain_SYS

LL_RCC_PLL1_IsEnabledDomain_SYS

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL1_IsEnabledDomain_SYS (void)

Function description

Check if PLL1 output mapped on SYS domain clock is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- PLL1CFGR PLL1REN LL_RCC_PLL1_IsEnabledDomain_SYS

LL_RCC_PLL1FRACN_Enable

Function name

__STATIC_INLINE void LL_RCC_PLL1FRACN_Enable (void)

Function description

Enable PLL1 FRACN.

Return values

- **None:**

Reference Manual to LL API cross reference:

- PLL1CFGR PLL1FRACEN LL_RCC_PLL1FRACN_Enable

LL_RCC_PLL1FRACN_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL1FRACN_IsEnabled (void)

Function description

Check if PLL1 FRACN is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- PLL1CFGR PLL1FRACEN LL_RCC_PLL1FRACN_IsEnabled

LL_RCC_PLL1FRACN_Disable

Function name

__STATIC_INLINE void LL_RCC_PLL1FRACN_Disable (void)

Function description

Disable PLL1 FRACN.

Return values

- **None:**

Reference Manual to LL API cross reference:

- PLL1CFGR PLL1FRACEN LL_RCC_PLL1FRACN_Disable

LL_RCC_PLL1_SetFRACN

Function name

__STATIC_INLINE void LL_RCC_PLL1_SetFRACN (uint32_t FRACN)

Function description

Set PLL1 FRACN Coefficient.

Parameters

- **FRACN:** parameter can be a value between 0 and 8191 (0x1FFF)

Reference Manual to LL API cross reference:

- PLL1FRACR PLL1FRACN LL_RCC_PLL1_SetFRACN

LL_RCC_PLL1_GetFRACN

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL1_GetFRACN (void)

Function description

Get PLL1 FRACN Coefficient.

Return values

- **A:** value between 0 and 8191 (0x1FFF)

Reference Manual to LL API cross reference:

- PLL1FRACR PLL1FRACN LL_RCC_PLL1_GetFRACN

LL_RCC_PLL1_SetVCOInputRange

Function name

__STATIC_INLINE void LL_RCC_PLL1_SetVCOInputRange (uint32_t InputRange)

Function description

Set PLL1 VCO Input Range.

Parameters

- **InputRange:** This parameter can be one of the following values:
  – LL_RCC_PLLINPUTRANGE_4_8
  – LL_RCC_PLLINPUTRANGE_8_16

Return values

- **None:**

Notes

- This API shall be called only when PLL1 is disabled.

Reference Manual to LL API cross reference:

- PLL1CFGR PLL1RGE LL_RCC_PLL1_SetVCOInputRange

LL_RCC_SetPll1EPodPrescaler

Function name

__STATIC_INLINE void LL_RCC_SetPll1EPodPrescaler (uint32_t BoostDiv)

Function description

Set PLL1 EPOD Prescaler booster input clock.

Parameters

- **BoostDiv:** This parameter can be one of the following values:
  – LL_RCC_PLL1MBOOST_DIV_1
  – LL_RCC_PLL1MBOOST_DIV_2
  – LL_RCC_PLL1MBOOST_DIV_4
  – LL_RCC_PLL1MBOOST_DIV_6
  – LL_RCC_PLL1MBOOST_DIV_8
  – LL_RCC_PLL1MBOOST_DIV_10
  – LL_RCC_PLL1MBOOST_DIV_12
  – LL_RCC_PLL1MBOOST_DIV_14
  – LL_RCC_PLL1MBOOST_DIV_16

Reference Manual to LL API cross reference:

- PLL1CFGR PLL1MBOOST LL_RCC_SetPll1EPodPrescaler

LL_RCC_GetPll1EPodPrescaler

Function name

__STATIC_INLINE uint32_t LL_RCC_GetPll1EPodPrescaler (void)

Function description

Get PLL1 EPOD Prescaler booster input clock.

Return values

- **Returned:** value can be one of the following values:
  – LL_RCC_PLL1MBOOST_DIV_1
  – LL_RCC_PLL1MBOOST_DIV_2
  – LL_RCC_PLL1MBOOST_DIV_4
  – LL_RCC_PLL1MBOOST_DIV_6
  – LL_RCC_PLL1MBOOST_DIV_8
  – LL_RCC_PLL1MBOOST_DIV_10
  – LL_RCC_PLL1MBOOST_DIV_12
  – LL_RCC_PLL1MBOOST_DIV_14
  – LL_RCC_PLL1MBOOST_DIV_16

Reference Manual to LL API cross reference:

- PLL1CFGR PLL1MBOOST LL_RCC_GetPll1EPodPrescaler

LL_RCC_PLL2_Enable

Function name

__STATIC_INLINE void LL_RCC_PLL2_Enable (void)

Function description

Enable PLL2.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR PLL2ON LL_RCC_PLL2_Enable

LL_RCC_PLL2_Disable

Function name

__STATIC_INLINE void LL_RCC_PLL2_Disable (void)

Function description

Disable PLL2.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR PLL2ON LL_RCC_PLL2_Disable

LL_RCC_PLL2_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL2_IsReady (void)

Function description

Check if PLL2 Ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR PLL2RDY LL_RCC_PLL2_IsReady

LL_RCC_PLL2_ConfigDomain_48M

Function name

__STATIC_INLINE void LL_RCC_PLL2_ConfigDomain_48M (uint32_t Source, uint32_t PLLM, uint32_t PLLN, uint32_t PLLQ)

Function description

Configure PLL2 used for 48Mhz domain clock.

Parameters

- **Source:** This parameter can be one of the following values:
  - LL_RCC_PLL2SOURCE_NONE
  - LL_RCC_PLL2SOURCE_MSIS
  - LL_RCC_PLL2SOURCE_HSI
  - LL_RCC_PLL2SOURCE_HSE
- **PLLM:** parameter can be a value between 1 and 16
- **PLLN:** parameter can be a value between 4 and 512
- **PLLQ:** parameter can be a value between 1 and 128

Return values

- **None:**

Notes

- PLL2 Source, PLLM, PLLN and PLLQ can be written only when PLL2 is disabled.
- This can be selected for USB, SDMMC

Reference Manual to LL API cross reference:

- PLL2CFGR PLL2SRC LL_RCC_PLL2_ConfigDomain_48M
- PLL2CFGR PLL2M LL_RCC_PLL2_ConfigDomain_48M
- PLL2CFGR PLL2N LL_RCC_PLL2_ConfigDomain_48M

LL_RCC_PLL2_ConfigDomain_SAI

Function name

__STATIC_INLINE void LL_RCC_PLL2_ConfigDomain_SAI (uint32_t Source, uint32_t PLLM, uint32_t PLLN, uint32_t PLLP)

Function description

Configure PLL2 used for SAI domain clock.

Parameters

- **Source:** This parameter can be one of the following values:
  – LL_RCC_PLL2SOURCE_NONE
  – LL_RCC_PLL2SOURCE_MSIS
  – LL_RCC_PLL2SOURCE_HSI
  – LL_RCC_PLL2SOURCE_HSE
- **PLLM:** parameter can be a value between 1 and 16
- **PLLN:** parameter can be a value between 4 and 512
- **PLLP:** parameter can be a value between 1 and 128

Return values

- **None:**

Notes

- PLL1 Source, PLLM, PLLN and PLL2P can be written only when PLL1 is disabled.
- This can be selected for SAI1 or SAI2

Reference Manual to LL API cross reference:

- PLLC2FGR PLL2SRC LL_RCC_PLL2_ConfigDomain_SAI

- PLLC2FGR PLL2P LL_RCC_PLL2_ConfigDomain_SAI

LL_RCC_PLL2_ConfigDomain_ADC

Function name

__STATIC_INLINE void LL_RCC_PLL2_ConfigDomain_ADC (uint32_t Source, uint32_t PLLM, uint32_t PLLN, uint32_t PLLR)

Function description

Configure PLL2 used for ADC domain clock.

Parameters

- **Source:** This parameter can be one of the following values:
  – LL_RCC_PLL2SOURCE_NONE
  – LL_RCC_PLL2SOURCE_MSIS
  – LL_RCC_PLL2SOURCE_HSI
  – LL_RCC_PLL2SOURCE_HSE
- **PLLM:** parameter can be a value between 1 and 16
- **PLLR:** parameter can be a value between 1 and 128
- **PLLN:** parameter can be a value between 4 and 512

Return values

- **None:**

Notes

- PLL2SRC/PLL2M/PLL2N/PLL2R can be written only when PLL2 is disabled.
- This can be selected for ADC

Reference Manual to LL API cross reference:

- PLL2CFGR PLL2SRC LL_RCC_PLL2_ConfigDomain_ADC

- PLL2CFGR PLL2R LL_RCC_PLL2_ConfigDomain_ADC

LL_RCC_PLL2_SetSource

Function name

__STATIC_INLINE void LL_RCC_PLL2_SetSource (uint32_t PLL2Source)

Function description

Configure PLL2 clock source.

Parameters

- **PLL2Source:** This parameter can be one of the following values:
  - LL_RCC_PLL2SOURCE_NONE
  - LL_RCC_PLL2SOURCE_MSIS
  - LL_RCC_PLL2SOURCE_HSI
  - LL_RCC_PLL2SOURCE_HSE

Return values

- **None:**

Reference Manual to LL API cross reference:

- PLL2CFGR PLL2SRC LL_RCC_PLL2_SetSource

LL_RCC_PLL2_GetSource

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL2_GetSource (void)

Function description

Get the oscillator used as PLL2 clock source.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_PLL2SOURCE_NONE
  - LL_RCC_PLL2SOURCE_MSIS
  - LL_RCC_PLL2SOURCE_HSI
  - LL_RCC_PLL2SOURCE_HSE

Reference Manual to LL API cross reference:

- PLL2CFGR PLL2SRC LL_RCC_PLL2_GetSource

LL_RCC_PLL2_SetN

Function name

__STATIC_INLINE void LL_RCC_PLL2_SetN (uint32_t PLL2N)

Function description

Set Main PLL2 multiplication factor for VCO.

Parameters

- **PLL2N:** parameter can be a value between 4 and 512

Reference Manual to LL API cross reference:

- PLL2CFGR PLL2N LL_RCC_PLL2_SetN

LL_RCC_PLL2_GetN

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL2_GetN (void)

Function description

Get Main PLL2 multiplication factor for VCO.

Return values

- **Between:** 4 and 512

Reference Manual to LL API cross reference:

- PLL2CFGR PLL2N LL_RCC_PLL2_GetN

LL_RCC_PLL2_SetP

Function name

__STATIC_INLINE void LL_RCC_PLL2_SetP (uint32_t PLL2P)

Function description

Set Main PLL2 division factor for PLL2P.

Parameters

- **PLL2P:** parameter can be a value between 1 and 128

Notes

- Used for SAI1 and SAI2 clock

Reference Manual to LL API cross reference:

- PLL2CFGR PLL2P LL_RCC_PLL2_SetP

LL_RCC_PLL2_GetP

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL2_GetP (void)

Function description

Get Main PLL2 division factor for PLL2P.

Return values

- **Between:** 1 and 128

Notes

- Used for SAI1 and SAI2 clock

Reference Manual to LL API cross reference:

- PLL2CFGR PLL2P LL_RCC_PLL2_GetP

LL_RCC_PLL2_SetQ

Function name

__STATIC_INLINE void LL_RCC_PLL2_SetQ (uint32_t PLL2Q)

Function description

Set Main PLL division factor for PLLQ.

Parameters

- **PLL2Q:** parameter can be a value between 1 and 128

Notes

- Used for PLL48M1CLK selected for USB, SDMMC (48 MHz clock)

Reference Manual to LL API cross reference:

- PLLCFGR PLL2Q LL_RCC_PLL2_SetQ

LL_RCC_PLL2_GetQ

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL2_GetQ (void)

Function description

Get Main PLL division factor for PLLQ.

Return values

- **Between:** 1 and 128

Notes

- Used for PLL48M1CLK selected for USB, SDMMC (48 MHz clock)

Reference Manual to LL API cross reference:

- PLL2CFGR PLL2Q LL_RCC_PLL2_GetQ

LL_RCC_PLL2_SetR

Function name

__STATIC_INLINE void LL_RCC_PLL2_SetR (uint32_t PLL2R)

Function description

Set Main PLL division factor for PLLQ.

Parameters

- **PLL2R:** parameter can be a value between 1 and 128

Notes

- Used for PLL2CLK selected for USB, SDMMC (48 MHz clock)

Reference Manual to LL API cross reference:

- PLL2CFGR PLL2R LL_RCC_PLL2_SetR

LL_RCC_PLL2_GetR

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL2_GetR (void)

Function description

Get Main PLL2 division factor for PLL2R.

Return values

- **Between:** 1 and 128

Notes

- Used for PLL2CLK (system clock)

Reference Manual to LL API cross reference:

- PLL2DIVR PLL2R LL_RCC_PLL2_GetR

LL_RCC_PLL2_SetDivider

Function name

__STATIC_INLINE void LL_RCC_PLL2_SetDivider (uint32_t PLL2M)

Function description

Set Division factor for the main PLL and other PLL.

Parameters

- **PLL2M:** parameter can be a value between 1 and 16

Reference Manual to LL API cross reference:

- PLL2CFGR PLL2M LL_RCC_PLL2_SetDivider

LL_RCC_PLL2_GetDivider

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL2_GetDivider (void)

Function description

Get Division factor for the main PLL and other PLL.

Return values

- **Between:** 1 and 16

Reference Manual to LL API cross reference:

- PLL2CFGR PLL2M LL_RCC_PLL2_GetDivider

LL_RCC_PLL2_EnableDomain_SAI

Function name

__STATIC_INLINE void LL_RCC_PLL2_EnableDomain_SAI (void)

Function description

Enable PLL2 output mapped on SAI domain clock.

Return values

- **None:**

Reference Manual to LL API cross reference:

- PLL2CFGR PLL2PEN LL_RCC_PLL2_EnableDomain_SAI

LL_RCC_PLL2_DisableDomain_SAI

Function name

__STATIC_INLINE void LL_RCC_PLL2_DisableDomain_SAI (void)

Function description

Disable PLL2 output mapped on SAI domain clock.

Return values

- **None:**

Notes

- In order to save power, when of the PLL2 is not used, should be 0

Reference Manual to LL API cross reference:

- PLL2CFGR PLL2PEN LL_RCC_PLL2_DisableDomain_SAI

LL_RCC_PLL2_IsEnabledDomain_SAI

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL2_IsEnabledDomain_SAI (void)

Function description

Check if PLL2 output mapped on SAI domain clock is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- PLL2CFGR PLL2PEN LL_RCC_PLL2_IsEnabledDomain_SAI

LL_RCC_PLL2_EnableDomain_48M

Function name

__STATIC_INLINE void LL_RCC_PLL2_EnableDomain_48M (void)

Function description

Enable PLL2 output mapped on 48MHz domain clock.

Return values

- **None:**

Reference Manual to LL API cross reference:

- PLL2CFGR PLL2QEN LL_RCC_PLL2_EnableDomain_48M

LL_RCC_PLL2_DisableDomain_48M

Function name

__STATIC_INLINE void LL_RCC_PLL2_DisableDomain_48M (void)

Function description

Disable PLL2 output mapped on 48MHz domain clock.

Return values

- **None:**

Notes

- In order to save power, when of the PLL2 48M is not used, should be 0

Reference Manual to LL API cross reference:

- PLL2CFGR PLL2QEN LL_RCC_PLL2_DisableDomain_48M

LL_RCC_PLL2_IsEnabledDomain_48M

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL2_IsEnabledDomain_48M (void)

Function description

Check if PLL2 output mapped on 48M domain clock is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- PLL2CFGR PLL2QEN LL_RCC_PLL2_IsEnabledDomain_48M

LL_RCC_PLL2_EnableDomain_ADC

Function name

__STATIC_INLINE void LL_RCC_PLL2_EnableDomain_ADC (void)

Function description

Enable PLL2 output mapped on ADC domain clock.

Return values

- **None:**

Reference Manual to LL API cross reference:

- PLL2CFGR PLL2REN LL_RCC_PLL2_EnableDomain_ADC

LL_RCC_PLL2_DisableDomain_ADC

Function name

__STATIC_INLINE void LL_RCC_PLL2_DisableDomain_ADC (void)

Function description

Disable PLL2 output mapped on ADC domain clock.

Return values

- **None:**

Notes

- In order to save power, when of the PLL2 ADC is not used, Main PLL2ADC should be 0

Reference Manual to LL API cross reference:

- PLL2CFGR PLL2REN LL_RCC_PLL2_DisableDomain_ADC

LL_RCC_PLL2_IsEnabledDomain_ADC

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL2_IsEnabledDomain_ADC (void)

Function description

Check if PLL2 output mapped on ADC domain clock is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- PLL2CFGR PLL2REN LL_RCC_PLL2_IsEnabledDomain_ADC

LL_RCC_PLL2FRACN_Enable

Function name

__STATIC_INLINE void LL_RCC_PLL2FRACN_Enable (void)

Function description

Enable PLL2 FRACN.

Return values

- **None:**

Reference Manual to LL API cross reference:

- PLL2CFGR PLL2FRACEN LL_RCC_PLL2FRACN_Enable

LL_RCC_PLL2FRACN_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL2FRACN_IsEnabled (void)

Function description

Check if PLL2 FRACN is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- PLL2CFGR PLL2FRACEN LL_RCC_PLL2FRACN_IsEnabled

LL_RCC_PLL2FRACN_Disable

Function name

__STATIC_INLINE void LL_RCC_PLL2FRACN_Disable (void)

Function description

Disable PLL2 FRACN.

Return values

- **None:**

Reference Manual to LL API cross reference:

- PLL2CFGR PLL2FRACEN LL_RCC_PLL2FRACN_Disable

LL_RCC_PLL2_SetFRACN

Function name

__STATIC_INLINE void LL_RCC_PLL2_SetFRACN (uint32_t FRACN)

Function description

Set PLL2 FRACN Coefficient.

Parameters

- **FRACN:** parameter can be a value between 0 and 8191 (0x1FFF)

Reference Manual to LL API cross reference:

- PLL2FRACR PLL2FRACN LL_RCC_PLL2_SetFRACN

LL_RCC_PLL2_GetFRACN

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL2_GetFRACN (void)

Function description

Get PLL2 FRACN Coefficient.

Return values

- **A:** value between 0 and 8191 (0x1FFF)

Reference Manual to LL API cross reference:

- PLL2FRACR PLL2FRACN LL_RCC_PLL2_GetFRACN

LL_RCC_PLL2_SetVCOInputRange

Function name

__STATIC_INLINE void LL_RCC_PLL2_SetVCOInputRange (uint32_t InputRange)

Function description

Set PLL2 VCO Input Range.

Parameters

- **InputRange:** This parameter can be one of the following values:
  - LL_RCC_PLLINPUTRANGE_4_8
  - LL_RCC_PLLINPUTRANGE_8_16

Return values

- **None:**

Notes

- This API shall be called only when PLL2 is disabled.

Reference Manual to LL API cross reference:

- PLL2CFGR PLL2RGE LL_RCC_PLL2_SetVCOInputRange

LL_RCC_PLL3_Enable

Function name

__STATIC_INLINE void LL_RCC_PLL3_Enable (void)

Function description

Enable PLL3.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR PLL3ON LL_RCC_PLL3_Enable

LL_RCC_PLL3_Disable

Function name

__STATIC_INLINE void LL_RCC_PLL3_Disable (void)

Function description

Disable PLL3.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR PLL3ON LL_RCC_PLL3_Disable

LL_RCC_PLL3_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL3_IsReady (void)

Function description

Check if PLL3 Ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR PLL3RDY LL_RCC_PLL3_IsReady

LL_RCC_PLL3_ConfigDomain_SAI

Function name

__STATIC_INLINE void LL_RCC_PLL3_ConfigDomain_SAI (uint32_t Source, uint32_t PLLM, uint32_t PLLN, uint32_t PLLP)

Function description

Configure PLL3 used for SAI domain clock.

Parameters

- **Source:** This parameter can be one of the following values:
  - LL_RCC_PLL3SOURCE_NONE
  - LL_RCC_PLL3SOURCE_MSIS
  - LL_RCC_PLL3SOURCE_HSI
  - LL_RCC_PLL3SOURCE_HSE
- **PLLM:** parameter can be a value between 1 and 16
- **PLLN:** parameter can be a value between 4 and 512
- **PLLP:** parameter can be a value between 1 and 128

Return values

- **None:**

Notes

- PLL3SRC/PLL3M/PLL3N/PLL3PDIV can be written only when PLL3 is disabled.
- This can be selected for SAI1 or SAI2

Reference Manual to LL API cross reference:

- PLL3CFGR PLL3SRC LL_RCC_PLL3_ConfigDomain_SAI
- PLL3CFGR PLL3M LL_RCC_PLL3_ConfigDomain_SAI
- PLL3CFGR PLL3N LL_RCC_PLL3_ConfigDomain_SAI
- PLL3DIVR PLL3P LL_RCC_PLL3_ConfigDomain_SAI

LL_RCC_PLL3_ConfigDomain_48M

Function name

__STATIC_INLINE void LL_RCC_PLL3_ConfigDomain_48M (uint32_t Source, uint32_t PLLM, uint32_t PLLN, uint32_t PLLQ)

Function description

Configure PLL3 used for 48Mhz domain clock.

Parameters

- **Source:** This parameter can be one of the following values:
  - LL_RCC_PLL3SOURCE_NONE
  - LL_RCC_PLL3SOURCE_MSIS
  - LL_RCC_PLL3SOURCE_HSI
  - LL_RCC_PLL3SOURCE_HSE
- **PLLM:** parameter can be a value between 1 and 16
- **PLLN:** parameter can be a value between 4 and 512
- **PLLQ:** parameter can be a value between 1 and 128

Return values

- **None:**

Notes

- PLL3 Source, PLLM, PLLN and PLLQ can be written only when PLL3 is disabled.
- This can be selected for USB, SDMMC

Reference Manual to LL API cross reference:

- PLL3CFGR PLL3SRC LL_RCC_PLL3_ConfigDomain_48M
- PLL3CFGR PLL3M LL_RCC_PLL3_ConfigDomain_48M
- PLL3CFGR PLL3N LL_RCC_PLL3_ConfigDomain_48M
- PLL3CFGR PLL3Q LL_RCC_PLL3_ConfigDomain_48M

LL_RCC_PLL3_ConfigDomain_HSPI_LTDC

Function name

__STATIC_INLINE void LL_RCC_PLL3_ConfigDomain_HSPI_LTDC (uint32_t Source, uint32_t PLLM, uint32_t PLLN, uint32_t PLLR)

Function description

Configure PLL3 used for HSPI_LTDC domain clock.

Parameters

- **Source:** This parameter can be one of the following values:
  - LL_RCC_PLL3SOURCE_NONE
  - LL_RCC_PLL3SOURCE_MSIS
  - LL_RCC_PLL3SOURCE_HSI
  - LL_RCC_PLL3SOURCE_HSE
- **PLLM:** parameter can be a value between 1 and 16
- **PLLN:** parameter can be a value between 4 and 512
- **PLLR:** parameter can be a value between 1 and 128

Return values

- **None:**

Notes

- PLL3 Source, PLLM, PLLN and PLLR can be written only when PLL3 is disabled.
- This can be selected for HSPI and LTDC

Reference Manual to LL API cross reference:

- PLL3CFGR PLL3SRC LL_RCC_PLL3_ConfigDomain_HSPI_LTDC
- PLL3CFGR PLL3M LL_RCC_PLL3_ConfigDomain_HSPI_LTDC
- PLL3CFGR PLL3N LL_RCC_PLL3_ConfigDomain_HSPI_LTDC
- PLL3CFGR PLL3R LL_RCC_PLL3_ConfigDomain_HSPI_LTDC

LL_RCC_PLL3_SetSource

Function name

__STATIC_INLINE void LL_RCC_PLL3_SetSource (uint32_t PLLSource)

Function description

Configure PLL3 clock source.

Parameters

- **PLLSource:** This parameter can be one of the following values:
  - LL_RCC_PLL3SOURCE_NONE
  - LL_RCC_PLL3SOURCE_MSIS
  - LL_RCC_PLL3SOURCE_HSI
  - LL_RCC_PLL3SOURCE_HSE

Return values

- **None:**

Reference Manual to LL API cross reference:

- PLL3CFGR PLL3SRC LL_RCC_PLL3_SetSource

LL_RCC_PLL3_GetSource

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL3_GetSource (void)

Function description

Get the oscillator used as PLL3 clock source.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_PLL3SOURCE_NONE
  - LL_RCC_PLL3SOURCE_MSIS
  - LL_RCC_PLL3SOURCE_HSI
  - LL_RCC_PLL3SOURCE_HSE

Reference Manual to LL API cross reference:

- PLL3CFGR PLL3SRC LL_RCC_PLL3_GetSource

LL_RCC_PLL3_SetN

Function name

__STATIC_INLINE void LL_RCC_PLL3_SetN (uint32_t PLL3N)

Function description

Set Main PLL3 multiplication factor for VCO.

Parameters

- **PLL3N:** parameter can be a value between 4 and 512

Reference Manual to LL API cross reference:

- PLL3CFGR PLL3N LL_RCC_PLL3_SetN

LL_RCC_PLL3_GetN

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL3_GetN (void)

Function description

Get Main PLL3 multiplication factor for VCO.

Return values

- **Between:** 4 and 512

Reference Manual to LL API cross reference:

- PLL3CFGR PLL3N LL_RCC_PLL3_GetN

LL_RCC_PLL3_SetP

Function name

__STATIC_INLINE void LL_RCC_PLL3_SetP (uint32_t PLL3P)

Function description

Set Main PLL3 division factor for PLL3P.

Parameters

- **PLL3P:** parameter can be a value between 1 and 128

Notes

- Used for SAI1 and SAI2 clock

Reference Manual to LL API cross reference:

- PLL3CFGR PLL3P LL_RCC_PLL3_SetP

LL_RCC_PLL3_GetP

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL3_GetP (void)

Function description

Get Main PLL3 division factor for PLL3P.

Return values

- **Between:** 1 and 128

Notes

- Used for SAI1 and SAI2 clock

Reference Manual to LL API cross reference:

- PLL3CFGR PLL3P LL_RCC_PLL3_GetP

LL_RCC_PLL3_SetQ

Function name

__STATIC_INLINE void LL_RCC_PLL3_SetQ (uint32_t PLL3Q)

Function description

Set Main PLL division factor for PLLQ.

Parameters

- **PLL3Q:** parameter can be a value between 1 and 128

Notes

- Used for PLL48M1CLK selected for USB, SDMMC (48 MHz clock)

Reference Manual to LL API cross reference:

- PLLCFGR PLL3Q LL_RCC_PLL3_SetQ

LL_RCC_PLL3_GetQ

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL3_GetQ (void)

Function description

Get Main PLL division factor for PLLQ.

Return values

- **Between:** 1 and 128

Notes

- Used for PLL48M1CLK selected for USB, SDMMC (48 MHz clock)

Reference Manual to LL API cross reference:

- PLL3CFGR PLL3Q LL_RCC_PLL3_GetQ

LL_RCC_PLL3_SetR

Function name

__STATIC_INLINE void LL_RCC_PLL3_SetR (uint32_t PLL3R)

Function description

Set Main PLL division factor for PLLQ.

Parameters

- **PLL3R:** parameter can be a value between 1 and 128

Notes

- Used for PLL3CLK selected for USB, SDMMC (48 MHz clock)

Reference Manual to LL API cross reference:

- PLL3CFGR PLL3R LL_RCC_PLL3_SetR

LL_RCC_PLL3_GetR

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL3_GetR (void)

Function description

Get Main PLL3 division factor for PLL3R.

Return values

- **Between:** 1 and 128

Notes

- Used for PLL3CLK (system clock)

Reference Manual to LL API cross reference:

- PLL3DIVR PLL3R LL_RCC_PLL3_GetR

LL_RCC_PLL3_SetDivider

Function name

__STATIC_INLINE void LL_RCC_PLL3_SetDivider (uint32_t PLL3M)

Function description

Set Division factor for the main PLL and other PLL.

Parameters

- **PLL3M:** parameter can be a value between 1 and 16

Reference Manual to LL API cross reference:

- PLL3CFGR PLL3M LL_RCC_PLL3_SetDivider

LL_RCC_PLL3_GetDivider

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL3_GetDivider (void)

Function description

Get Division factor for the main PLL and other PLL.

Return values

- **Between:** 1 and 16

Reference Manual to LL API cross reference:

- PLL3CFGR PLL3M LL_RCC_PLL3_GetDivider

LL_RCC_PLL3_EnableDomain_SAI

Function name

__STATIC_INLINE void LL_RCC_PLL3_EnableDomain_SAI (void)

Function description

Enable PLL3 output mapped on SAI domain clock.

Return values

- **None:**

Reference Manual to LL API cross reference:

- PLL3CFGR PLL3PEN LL_RCC_PLL3_EnableDomain_SAI

LL_RCC_PLL3_DisableDomain_SAI

Function name

__STATIC_INLINE void LL_RCC_PLL3_DisableDomain_SAI (void)

Function description

Disable PLL3 output mapped on SAI domain clock.

Return values

- **None:**

Notes

- In order to save power, when of the PLLSAI2 is not used, should be 0

Reference Manual to LL API cross reference:

- PLL3CFGR PLL3PEN LL_RCC_PLL3_DisableDomain_SAI

LL_RCC_PLL3_IsEnabledDomain_SAI

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL3_IsEnabledDomain_SAI (void)

Function description

Check if PLL3 output mapped on SAI domain clock is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- PLL3CFGR PLL3PEN LL_RCC_PLL3_IsEnabledDomain_SAI

LL_RCC_PLL3_EnableDomain_48M

Function name

__STATIC_INLINE void LL_RCC_PLL3_EnableDomain_48M (void)

Function description

Enable PLL2 output mapped on 48MHz domain clock.

Return values

- **None:**

Reference Manual to LL API cross reference:

- PLL3CFGR PLL3QEN LL_RCC_PLL3_EnableDomain_48M

LL_RCC_PLL3_DisableDomain_48M

Function name

__STATIC_INLINE void LL_RCC_PLL3_DisableDomain_48M (void)

Function description

Disable PLL3 output mapped on 48MHz domain clock.

Return values

- **None:**

Notes

- In order to save power, when of the PLL3 is not used, should be 0

Reference Manual to LL API cross reference:

- PLL3CFGR PLL3QEN LL_RCC_PLL3_DisableDomain_48M

LL_RCC_PLL3_IsEnabledDomain_48M

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL3_IsEnabledDomain_48M (void)

Function description

Check if PLL3 output mapped on 48M domain clock is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- PLL3CFGR PLL3QEN LL_RCC_PLL3_IsEnabledDomain_48M

LL_RCC_PLL3_EnableDomain_HSPI_LTDC

Function name

__STATIC_INLINE void LL_RCC_PLL3_EnableDomain_HSPI_LTDC (void)

Function description

Enable PLL3 output mapped on HSPI_LTDC domain clock.

Return values

- **None:**

Reference Manual to LL API cross reference:

- PLL3CFGR PLL3REN LL_RCC_PLL3_EnableDomain_HSPI_LTDC

LL_RCC_PLL3_DisableDomain_HSPI_LTDC

Function name

__STATIC_INLINE void LL_RCC_PLL3_DisableDomain_HSPI_LTDC (void)

Function description

Disable PLL3 output mapped on HSPI_LTDC domain clock.

Return values

- **None:**

Notes

- In order to save power, when of the PLL3 is not used, should be 0

Reference Manual to LL API cross reference:

- PLL3CFGR PLL3REN LL_RCC_PLL3_DisableDomain_HSPI_LTDC

LL_RCC_PLL3_IsEnabledDomain_HSPI_LTDC

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL3_IsEnabledDomain_HSPI_LTDC (void)

Function description

Check if PLL3 output mapped on HSPI_LTDC domain clock is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- PLL3CFGR PLL3REN LL_RCC_PLL3_IsEnabledDomain_HSPI_LTDC

LL_RCC_PLL3FRACN_Enable

Function name

__STATIC_INLINE void LL_RCC_PLL3FRACN_Enable (void)

Function description

Enable PLL3 FRACN.

Return values

- **None:**

Reference Manual to LL API cross reference:

- PLL3CFGR PLL3FRACEN LL_RCC_PLL3FRACN_Enable

LL_RCC_PLL3FRACN_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL3FRACN_IsEnabled (void)

Function description

Check if PLL3 FRACN is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- PLL3CFGR PLL3FRACEN LL_RCC_PLL3FRACN_IsEnabled

LL_RCC_PLL3FRACN_Disable

Function name

__STATIC_INLINE void LL_RCC_PLL3FRACN_Disable (void)

Function description

Disable PLL3 FRACN.

Return values

- **None:**

Reference Manual to LL API cross reference:

- PLL3CFGR PLL3FRACEN LL_RCC_PLL3FRACN_Disable

LL_RCC_PLL3_SetFRACN

Function name

__STATIC_INLINE void LL_RCC_PLL3_SetFRACN (uint32_t FRACN)

Function description

Set PLL3 FRACN Coefficient.

Parameters

- **FRACN:** parameter can be a value between 0 and 8191 (0x1FFF)

Reference Manual to LL API cross reference:

- PLL3FRACR PLL3FRACN LL_RCC_PLL3_SetFRACN

LL_RCC_PLL3_GetFRACN

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL3_GetFRACN (void)

Function description

Get PLL3 FRACN Coefficient.

Return values

- **A:** value between 0 and 8191 (0x1FFF)

Reference Manual to LL API cross reference:

- PLL3FRACR PLL3FRACN LL_RCC_PLL3_GetFRACN

LL_RCC_PLL3_SetVCOInputRange

Function name

__STATIC_INLINE void LL_RCC_PLL3_SetVCOInputRange (uint32_t InputRange)

Function description

Set PLL3 VCO Input Range.

Parameters

- **InputRange:** This parameter can be one of the following values:
  - LL_RCC_PLLINPUTRANGE_4_8
  - LL_RCC_PLLINPUTRANGE_8_16

Return values

- **None:**

Notes

- This API shall be called only when PLL3 is disabled.

Reference Manual to LL API cross reference:

- PLL3CFGR PLL3RGE LL_RCC_PLL3_SetVCOInputRange

LL_RCC_EnableSecPrivilegedMode

Function name

__STATIC_INLINE void LL_RCC_EnableSecPrivilegedMode (void)

Function description

Enable Secure Privileged mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- PRIVCFGR SPRIV LL_RCC_EnableSecPrivilegedMode

LL_RCC_DisableSecPrivilegedMode

Function name

__STATIC_INLINE void LL_RCC_DisableSecPrivilegedMode (void)

Function description

Disable Secure Privileged mode.

Function description

Clear PLL1 ready interrupt flag.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CICR PLL1RDYC LL_RCC_ClearFlag_PLL1RDY

LL_RCC_ClearFlag_PLL2RDY

Function name

__STATIC_INLINE void LL_RCC_ClearFlag_PLL2RDY (void)

Function description

Clear PLL2 ready interrupt flag.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CICR PLL2RDYC LL_RCC_ClearFlag_PLL2RDY

LL_RCC_ClearFlag_PLL3RDY

Function name

__STATIC_INLINE void LL_RCC_ClearFlag_PLL3RDY (void)

Function description

Clear PLL3 ready interrupt flag.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CICR PLL3RDYC LL_RCC_ClearFlag_PLL3RDY

LL_RCC_ClearFlag_HSECSS

Function name

__STATIC_INLINE void LL_RCC_ClearFlag_HSECSS (void)

Function description

Clear Clock security system interrupt flag.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CICR CSSC LL_RCC_ClearFlag_HSECSS

LL_RCC_ClearFlag_MSIKRDY

Function name

__STATIC_INLINE void LL_RCC_ClearFlag_MSIKRDY (void)

Function description

Clear MSIK ready interrupt flag.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CICR MSIKRDYC LL_RCC_ClearFlag_MSIKRDY

LL_RCC_ClearFlag_SHSIRDY

Function name

__STATIC_INLINE void LL_RCC_ClearFlag_SHSIRDY (void)

Function description

Clear SHSI ready interrupt flag.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CICR SHSIRDYC LL_RCC_ClearFlag_SHSIRDY

LL_RCC_IsActiveFlag_LSIRDY

Function name

__STATIC_INLINE uint32_t LL_RCC_IsActiveFlag_LSIRDY (void)

Function description

Check if LSI ready interrupt occurred or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CIFR LSIRDYF LL_RCC_IsActiveFlag_LSIRDY

LL_RCC_IsActiveFlag_LSERDY

Function name

__STATIC_INLINE uint32_t LL_RCC_IsActiveFlag_LSERDY (void)

Function description

Check if LSE ready interrupt occurred or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

LL_RCC_IsEnabledIT_SHSIRDY

Function name

__STATIC_INLINE uint32_t LL_RCC_IsEnabledIT_SHSIRDY (void)

Function description

Checks if SHSI ready interrupt source is enabled or disabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CIER SHSIRDYIE LL_RCC_IsEnabledIT_SHSIRDY

LL_RCC_ConfigSecure

Function name

__STATIC_INLINE void LL_RCC_ConfigSecure (uint32_t SecureConfig)

Function description

Configure RCC resources security.

Parameters

- **SecureConfig:** This parameter can be one or a combination of the following values:
  - LL_RCC_ALL_NSEC & LL_RCC_ALL_SEC
  - LL_RCC_HSI_SEC & LL_RCC_HSI_NSEC
  - LL_RCC_HSE_SEC & LL_RCC_HSE_NSEC
  - LL_RCC_MSI_SEC & LL_RCC_MSI_NSEC
  - LL_RCC_LSE_SEC & LL_RCC_LSE_NSEC
  - LL_RCC_LSI_SEC & LL_RCC_LSI_NSEC
  - LL_RCC_SYSCLK_SEC & LL_RCC_SYSCLK_NSEC
  - LL_RCC_PRESCALERS_SEC & LL_RCC_PRESCALERS_NSEC
  - LL_RCC_PLL1_SEC & LL_RCC_PLL1_NSEC
  - LL_RCC_PLL2_SEC & LL_RCC_PLL2_NSEC
  - LL_RCC_PLL3_SEC & LL_RCC_PLL3_NSEC
  - LL_RCC_CLK48M_SEC & LL_RCC_CLK48M_NSEC
  - LL_RCC_HSI48_SEC & LL_RCC_HSI48_NSEC
  - LL_RCC_RESET_FLAGS_SEC & LL_RCC_RESET_FLAGS_NSEC

Return values

- **None:**

Notes

- Only available from secure state when system implements security (TZEN=1)

Reference Manual to LL API cross reference:

- SECCFGR RMVFSEC LL_RCC_GetConfigSecure

LL_RCC_DeInit

Function name

ErrorStatus LL_RCC_DeInit (void)

Function description

Reset the RCC clock configuration to the default reset state.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: RCC registers are de-initialized
  - ERROR: not applicable

Notes

- The default reset state of the clock configuration is given below: MSI ON and used as system clock sourceHSE, HSI, PLL1, PLL2 and PLL3 OFFAHB, APB1, APB2 and APB3 prescaler set to 1.CSS, MCO OFFAll interrupts disabled
- This function doesn't modify the configuration of the Peripheral clocksLSI, LSE and RTC clocks

LL_RCC_GetSystemClocksFreq

Function name

void LL_RCC_GetSystemClocksFreq (LL_RCC_ClocksTypeDef * RCC_Clocks)

Function description

Return the frequencies of different on chip clocks; System, AHB, APB1 and APB2 buses clocks.

Parameters

- **RCC_Clocks:** pointer to a LL_RCC_ClocksTypeDef structure which will hold the clocks frequencies

Return values

- **None:**

Notes

- Each time SYSCLK, HCLK, PCLK1, PCLK2 and/or PCLK3 clock changes, this function must be called to update structure fields. Otherwise, any configuration based on this function will be incorrect.

LL_RCC_GetUSARTClockFreq

Function name

uint32_t LL_RCC_GetUSARTClockFreq (uint32_t USARTxSource)

Function description

Return USARTx clock frequency.

Parameters

- **USARTxSource:** This parameter can be one of the following values:
  – LL_RCC_USART1_CLKSOURCE
  – LL_RCC_USART2_CLKSOURCE
  – LL_RCC_USART3_CLKSOURCE
  – LL_RCC_USART6_CLKSOURCE (*)

Return values

- **USART:** clock frequency (in Hz)
  – LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator (HSI or LSE) is not ready

LL_RCC_GetUARTClockFreq

Function name

uint32_t LL_RCC_GetUARTClockFreq (uint32_t UARTxSource)

Function description

Return UARTx clock frequency.

Parameters

- **UARTxSource:** This parameter can be one of the following values:
  – LL_RCC_UART4_CLKSOURCE
  – LL_RCC_UART5_CLKSOURCE

Return values

- **UART:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator (HSI or LSE) is not ready

LL_RCC_GetI2CClockFreq

Function name

uint32_t LL_RCC_GetI2CClockFreq (uint32_t I2CxSource)

Function description

Return I2Cx clock frequency.

Parameters

- **I2CxSource:** This parameter can be one of the following values:
  - LL_RCC_I2C1_CLKSOURCE
  - LL_RCC_I2C2_CLKSOURCE
  - LL_RCC_I2C3_CLKSOURCE
  - LL_RCC_I2C4_CLKSOURCE

Return values

- **I2C:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator (HSI or MSIK) is not ready

LL_RCC_GetLPUARTClockFreq

Function name

uint32_t LL_RCC_GetLPUARTClockFreq (uint32_t LPUARTxSource)

Function description

Return LPUARTx clock frequency.

Parameters

- **LPUARTxSource:** This parameter can be one of the following values:
  - LL_RCC_LPUART1_CLKSOURCE

Return values

- **LPUART:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator (HSI or LSE) is not ready

LL_RCC_GetLPTIMClockFreq

Function name

uint32_t LL_RCC_GetLPTIMClockFreq (uint32_t LPTIMxSource)

Function description

Return LPTIMx clock frequency.

Parameters

- **LPTIMxSource:** This parameter can be one of the following values:
  - LL_RCC_LPTIM1_CLKSOURCE
  - LL_RCC_LPTIM2_CLKSOURCE
  - LL_RCC_LPTIM34_CLKSOURCE

Return values

- **LPTIM:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator (HSI, LSI or LSE) is not ready

LL_RCC_GetFDCANClockFreq

Function name

uint32_t LL_RCC_GetFDCANClockFreq (uint32_t FDCANxSource)

Function description

Return FDCAN kernel clock frequency.

Parameters

- **FDCANxSource:** This parameter can be one of the following values:
  - LL_RCC_FDCAN_CLKSOURCE

Return values

- **FDCAN:** kernel clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator HSE or PLL is not ready

LL_RCC_GetSAIClockFreq

Function name

uint32_t LL_RCC_GetSAIClockFreq (uint32_t SAIxSource)

Function description

Return SAIx clock frequency.

Parameters

- **SAIxSource:** This parameter can be one of the following values:
  - LL_RCC_SAI1_CLKSOURCE
  - LL_RCC_SAI2_CLKSOURCE

Return values

- **SAI:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that PLL is not ready

LL_RCC_GetSDMMCKernelClockFreq

Function name

uint32_t LL_RCC_GetSDMMCKernelClockFreq (uint32_t SDMMCxSource)

Function description

Return SDMMCx kernel clock frequency.

Parameters

- **SDMMCxSource:** This parameter can be one of the following values:
  - LL_RCC_SDMMC_KERNELCLKSOURCE

Return values

- **SDMMC:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator or PLL is not ready

LL_RCC_GetSDMMCClockFreq

Function name

uint32_t LL_RCC_GetSDMMCClockFreq (uint32_t SDMMCxSource)

Function description

Return SDMMCx clock frequency.

Parameters

- **SDMMCxSource:** This parameter can be one of the following values:
  – LL_RCC_SDMMC_CLKSOURCE

Return values

- **SDMMC:** clock frequency (in Hz)
  – LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator (MSI /MSIK /HSI) or PLL is not ready

LL_RCC_GetRNGClockFreq

Function name

uint32_t LL_RCC_GetRNGClockFreq (uint32_t RNGxSource)

Function description

Return RNGx clock frequency.

Parameters

- **RNGxSource:** This parameter can be one of the following values:
  – LL_RCC_RNG_CLKSOURCE

Return values

- **RNG:** clock frequency (in Hz)
  – LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator (MSI or HSI48) or PLL is not ready

LL_RCC_GetUSBClockFreq

Function name

uint32_t LL_RCC_GetUSBClockFreq (uint32_t USBxSource)

Function description

Return USBx clock frequency.

Parameters

- **USBxSource:** This parameter can be one of the following values:
  – LL_RCC_USB_CLKSOURCE

Return values

- **USB:** clock frequency (in Hz)
  – LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator (MSI /HSI48) or PLL is not ready

LL_RCC_GetADCDACClockFreq

Function name

uint32_t LL_RCC_GetADCDACClockFreq (uint32_t ADCxSource)

Function description

Return ADCxDAC clock frequency.

Parameters

- **ADCxSource:** This parameter can be one of the following values:
  - LL_RCC_ADCDAC_CLKSOURCE

Return values

- **ADC/DAC:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator (MSI /HSI /MSIK) or PLL is not ready

LL_RCC_GetADF1ClockFreq

Function name

uint32_t LL_RCC_GetADF1ClockFreq (uint32_t ADF1Source)

Function description

Return ADF1 clock frequency.

Parameters

- **ADF1Source:** This parameter can be one of the following values:
  - LL_RCC_ADF1_CLKSOURCE

Return values

- **ADF1:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator (MSIK) or PLL is not ready

LL_RCC_GetMDF1ClockFreq

Function name

uint32_t LL_RCC_GetMDF1ClockFreq (uint32_t MDF1Source)

Function description

Return MDF1 clock frequency.

Parameters

- **MDF1Source:** This parameter can be one of the following values:
  - LL_RCC_MDF1_CLKSOURCE

Return values

- **MDF1:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator (MSIK) or PLL is not ready

LL_RCC_GetDAC1ClockFreq

Function name

uint32_t LL_RCC_GetDAC1ClockFreq (uint32_t DAC1Source)

Function description

Return DAC1 clock frequency.

Parameters

- **DAC1Source:** This parameter can be one of the following values:
  - LL_RCC_DAC1_CLKSOURCE

Return values

- **DAC1:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that LSI or LSE oscillator is not ready

LL_RCC_GetOCTOSPIClockFreq

Function name

uint32_t LL_RCC_GetOCTOSPIClockFreq (uint32_t OCTOSPIxSource)

Function description

Return OCTOSPI clock frequency.

Parameters

- **OCTOSPIxSource:** This parameter can be one of the following values:
  – LL_RCC_OCTOSPI_CLKSOURCE

Return values

- **OCTOSPI:** clock frequency (in Hz)
  – LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator MSIK or PLL is not ready

LL_RCC_GetSAESClockFreq

Function name

uint32_t LL_RCC_GetSAESClockFreq (uint32_t SAESxSource)

Function description

Return SAESx clock frequency.

Parameters

- **SAESxSource:** This parameter can be one of the following values:
  – LL_RCC_SAES_CLKSOURCE

Return values

- **SAEx:** clock frequency (in Hz)
  – LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator SHSI is not ready

LL_RCC_GetSPIClockFreq

Function name

uint32_t LL_RCC_GetSPIClockFreq (uint32_t SPIxSource)

Function description

Return SPIx clock frequency.

Parameters

- **SPIxSource:** This parameter can be one of the following values:
  – LL_RCC_SPI1_CLKSOURCE
  – LL_RCC_SPI2_CLKSOURCE
  – LL_RCC_SPI3_CLKSOURCE

Return values

- **SPI:** clock frequency (in Hz)
  – LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator (HSI or MSIK) is not ready

LL_RCC_GetDSIClockFreq

Function name

uint32_t LL_RCC_GetDSIClockFreq (uint32_t DSIxSource)

Function description

Return DSI clock frequency.

Parameters

- **DSIxSource:** This parameter can be one of the following values:
  - LL_RCC_DSI_CLKSOURCE

Return values

- **DSI:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator is not ready
  - LL_RCC_PERIPH_FREQUENCY_NA indicates that external clock is used

LL_RCC_GetHSPIClockFreq

Function name

uint32_t LL_RCC_GetHSPIClockFreq (uint32_t HSPIxSource)

Function description

Return HSPI clock frequency.

Parameters

- **HSPIxSource:** This parameter can be one of the following values:
  - LL_RCC_HSPI_CLKSOURCE

Return values

- **HSPI:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator is not ready

LL_RCC_GetLTDCClockFreq

Function name

uint32_t LL_RCC_GetLTDCClockFreq (uint32_t LTDCxSource)

Function description

Return LTDC clock frequency.

Parameters

- **LTDCxSource:** This parameter can be one of the following values:
  - LL_RCC_LTDC_CLKSOURCE

Return values

- **HSPI:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator is not ready

114.3 RCC Firmware driver defines

The following section lists the various define and macros of the module.

114.3.1 RCC

RCC

Peripheral ADCDAC get clock source

LL_RCC_ADCDAC_CLKSOURCE

ADCDACs Clock source selection

Peripheral ADCx and DAC1 clock source selection

LL_RCC_ADCDAC_CLKSOURCE_HCLK

No clock used as ADCx/DAC1 clock source

LL_RCC_ADCDAC_CLKSOURCE_SYSCLK

SYSCLK clock used as ADCx/DAC1 clock source

LL_RCC_ADCDAC_CLKSOURCE_PLL2

PLL2 clock used as ADCx/DAC1 clock source

LL_RCC_ADCDAC_CLKSOURCE_HSI

HSI clock used as ADCx/DAC1 clock source

LL_RCC_ADCDAC_CLKSOURCE_HSE

HSE clock used as ADCx/DAC1 clock source

LL_RCC_ADCDAC_CLKSOURCE_MSIK

MSIK clock used as ADCx/DAC1 clock source

Peripheral ADF1 get clock source

LL_RCC_ADF1_CLKSOURCE

ADF1 Clock source selection

Peripheral ADF1 clock source selection

LL_RCC_ADF1_CLKSOURCE_HCLK

HCLK clock used as ADF1 clock

LL_RCC_ADF1_CLKSOURCE_PLL1

PLL1 clock used as ADF1 clock

LL_RCC_ADF1_CLKSOURCE_PLL3

PLL3 clock used as ADF1 clock

LL_RCC_ADF1_CLKSOURCE_MSIK

MSIK clock used as ADF1 clock

LL_RCC_ADF1_CLKSOURCE_PIN

PIN SAI1_EXTCLK clock used as ADF1 clock

APB low-speed prescaler (APB1)

LL_RCC_APB1_DIV_1

HCLK not divided

LL_RCC_APB1_DIV_2

HCLK divided by 2

LL_RCC_APB1_DIV_4

HCLK divided by 4

LL_RCC_APB1_DIV_8

HCLK divided by 8

LL_RCC_APB1_DIV_16

HCLK divided by 16

APB high-speed prescaler (APB2)

LL_RCC_APB2_DIV_1
HCLK not divided

LL_RCC_APB2_DIV_2
HCLK divided by 2

LL_RCC_APB2_DIV_4
HCLK divided by 4

LL_RCC_APB2_DIV_8
HCLK divided by 8

LL_RCC_APB2_DIV_16
HCLK divided by 16

APB high-speed prescaler (APB3)

LL_RCC_APB3_DIV_1
HCLK not divided

LL_RCC_APB3_DIV_2
HCLK divided by 2

LL_RCC_APB3_DIV_4
HCLK divided by 4

LL_RCC_APB3_DIV_8
HCLK divided by 8

LL_RCC_APB3_DIV_16
HCLK divided by 16

Peripheral DAC1 get clock source

LL_RCC_DAC1_CLKSOURCE

Peripheral DAC1 clock source selection

LL_RCC_DAC1_CLKSOURCE_LSE
LSE clock used as DAC1 clock

LL_RCC_DAC1_CLKSOURCE_LSI
LSI clock used as DAC1 clock

DSI PHY clock prescaler (DCLK)

LL_RCC_DPHY_DIV_1
DCLK not divided

LL_RCC_DPHY_DIV_2
DCLK divided by 2

LL_RCC_DPHY_DIV_4
DCLK divided by 4

LL_RCC_DPHY_DIV_8
DCLK divided by 8

LL_RCC_DPHY_DIV_16

DCLK divided by 16

Peripheral DSI get clock source

LL_RCC_DSI_CLKSOURCE

Peripheral DSI clock source selection

LL_RCC_DSI_CLKSOURCE_PHY

LL_RCC_DSI_CLKSOURCE_PLL3

Peripheral FDCAN get kernel clock source

LL_RCC_FDCAN_CLKSOURCE

FDCAN Kernel Clock source selection

Peripheral FDCAN kernel clock source selection

LL_RCC_FDCAN_CLKSOURCE_HSE

HSE clock used as FDCAN kernel clock source

LL_RCC_FDCAN_CLKSOURCE_PLL1

PLL1 Q clock used as FDCAN kernel clock source

LL_RCC_FDCAN_CLKSOURCE_PLL2

PLL2 P clock used as FDCAN kernel clock source

EXTERNAL HSE Mode

LL_RCC_HSE_ANALOG_MODE

HSE clock used as ANALOG clock source

LL_RCC_HSE_DIGITAL_MODE

HSE clock used as DIGITAL clock source

Peripheral HSPI get clock source

LL_RCC_HSPI_CLKSOURCE

HSPI Clock source selection

Peripheral HSPI1 kernel clock source selection

LL_RCC_HSPI_CLKSOURCE_SYSCLK

LL_RCC_HSPI_CLKSOURCE_PLL1

LL_RCC_HSPI_CLKSOURCE_PLL2

LL_RCC_HSPI_CLKSOURCE_PLL3

Peripheral I2Cx get clock source

LL_RCC_I2C1_CLKSOURCE

I2C1 Clock source selection

LL_RCC_I2C2_CLKSOURCE

I2C2 Clock source selection

LL_RCC_I2C3_CLKSOURCE

I2C3 Clock source selection

LL_RCC_I2C4_CLKSOURCE

I2C4 Clock source selection

LL_RCC_I2C5_CLKSOURCE

I2C1 Clock source selection

LL_RCC_I2C6_CLKSOURCE

I2C1 Clock source selection

Peripheral I2Cx clock source selection

LL_RCC_I2C1_CLKSOURCE_PCLK1

PCLK1 clock used as I2C1 clock source

LL_RCC_I2C1_CLKSOURCE_SYSCLK

SYSCLK clock used as I2C1 clock source

LL_RCC_I2C1_CLKSOURCE_HSI

HSI clock used as I2C1 clock source

LL_RCC_I2C1_CLKSOURCE_MSIK

MSIK clock used as I2C1 clock source

LL_RCC_I2C2_CLKSOURCE_PCLK1

PCLK1 clock used as I2C2 clock source

LL_RCC_I2C2_CLKSOURCE_SYSCLK

SYSCLK clock used as I2C2 clock source

LL_RCC_I2C2_CLKSOURCE_HSI

HSI clock used as I2C2 clock source

LL_RCC_I2C2_CLKSOURCE_MSIK

MSIK clock used as I2C2 clock source

LL_RCC_I2C3_CLKSOURCE_PCLK3

PCLK3 clock used as I2C3 clock source

LL_RCC_I2C3_CLKSOURCE_SYSCLK

SYSCLK clock used as I2C3 clock source

LL_RCC_I2C3_CLKSOURCE_HSI

HSI clock used as I2C3 clock source

LL_RCC_I2C3_CLKSOURCE_MSIK

MSIK clock used as I2C3 clock source

LL_RCC_I2C4_CLKSOURCE_PCLK1

PCLK1 clock used as I2C4 clock source

LL_RCC_I2C4_CLKSOURCE_SYSCLK

SYSCLK clock used as I2C4 clock source

LL_RCC_I2C4_CLKSOURCE_HSI

HSI clock used as I2C4 clock source

LL_RCC_I2C4_CLKSOURCE_MSIK

MSIK clock used as I2C4 clock source

LL_RCC_I2C5_CLKSOURCE_PCLK1

PCLK1 clock used as I2C5 clock source

LL_RCC_I2C5_CLKSOURCE_SYSCLK

SYSCLK clock used as I2C5 clock source

LL_RCC_I2C5_CLKSOURCE_HSI

HSI clock used as I2C5 clock source

LL_RCC_I2C5_CLKSOURCE_MSIK

MSIK clock used as I2C5 clock source

LL_RCC_I2C6_CLKSOURCE_PCLK1

PCLK1 clock used as I2C6 clock source

LL_RCC_I2C6_CLKSOURCE_SYSCLK

SYSCLK clock used as I2C6 clock source

LL_RCC_I2C6_CLKSOURCE_HSI

HSI clock used as I2C6 clock source

LL_RCC_I2C6_CLKSOURCE_MSIK

MSIK clock used as I2C6 clock source

Peripheral LPTIMx get clock source

LL_RCC_LPTIM1_CLKSOURCE

LPTIM1 Clock source selection

LL_RCC_LPTIM2_CLKSOURCE

LPTIM2 Clock source selection

LL_RCC_LPTIM34_CLKSOURCE

LPTIM3 and LPTIM4 Clock source selection

Peripheral LPTIMx clock source selection

LL_RCC_LPTIM1_CLKSOURCE_MSIK

MSIK clock used as LPTIM1 clock source

LL_RCC_LPTIM1_CLKSOURCE_LSI

LSI clock used as LPTIM1 clock source

LL_RCC_LPTIM1_CLKSOURCE_HSI

HSI clock used as LPTIM1 clock source

LL_RCC_LPTIM1_CLKSOURCE_LSE

LSE clock used as LPTIM1 clock source

LL_RCC_LPTIM2_CLKSOURCE_PCLK1

PCLK1 clock used as LPTIM2 clock source

LL_RCC_LPTIM2_CLKSOURCE_LSI

LSI clock used as LPTIM2 clock source

LL_RCC_LPTIM2_CLKSOURCE_HSI

HSI clock used as LPTIM2 clock source

LL_RCC_LPTIM2_CLKSOURCE_LSE

LSE clock used as LPTIM2 clock source

LL_RCC_LPTIM34_CLKSOURCE_MSIK

MSIK clock used as LPTIM34 clock source

LL_RCC_LPTIM34_CLKSOURCE_LSI

LSI clock used as LPTIM34 clock source

LL_RCC_LPTIM34_CLKSOURCE_HSI

HSI clock used as LPTIM34 clock source

LL_RCC_LPTIM34_CLKSOURCE_LSE

LSE clock used as LPTIM34 clock source

Peripheral LPUARTx get clock source

LL_RCC_LPUART1_CLKSOURCE

LPUART1 Clock source selection

Peripheral LPUARTx clock source selection

LL_RCC_LPUART1_CLKSOURCE_PCLK3

PCLK3 clock used as LPUART1 clock source

LL_RCC_LPUART1_CLKSOURCE_SYSCLK

SYSCLK clock used as LPUART1 clock source

LL_RCC_LPUART1_CLKSOURCE_HSI

HSI clock used as LPUART1 clock source

LL_RCC_LPUART1_CLKSOURCE_LSE

LSE clock used as LPUART1 clock source

LL_RCC_LPUART1_CLKSOURCE_MSIK

MSIK clock used as LPUART1 clock source

LSCO Selection

LL_RCC_LSCO_CLKSOURCE_LSI

LSI selection for low speed clock

LL_RCC_LSCO_CLKSOURCE_LSE

LSE selection for low speed clock

LSE oscillator drive capability

LL_RCC_LSEDRIVE_LOW

Xtal mode lower driving capability

LL_RCC_LSEDRIVE_MEDIUMLOW

Xtal mode medium low driving capability

LL_RCC_LSEDRIVE_MEDIUMHIGH

Xtal mode medium high driving capability

LL_RCC_LSEDRIVE_HIGH

Xtal mode higher driving capability

LSI prescaler

LL_RCC_LSI_DIV_1

LSI divided by 1

LL_RCC_LSI_DIV_128

LSI divided by 128

Peripheral LTDC get clock source

LL_RCC_LTDC_CLKSOURCE

Peripheral LTDC clock source selection

LL_RCC_LTDC_CLKSOURCE_PLL2

LL_RCC_LTDC_CLKSOURCE_PLL3

MCO1 SOURCE selection

LL_RCC_MCO1SOURCE_NOCLOCK

MCO output disabled, no clock on MCO

LL_RCC_MCO1SOURCE_SYSCLK

SYSCLK selection as MCO1 source

LL_RCC_MCO1SOURCE_MSIS

MSIS selection as MCO1 source

LL_RCC_MCO1SOURCE_HSI

HSI selection as MCO1 source

LL_RCC_MCO1SOURCE_HSE

HSE selection as MCO1 source

LL_RCC_MCO1SOURCE_PLLCLK

Main PLL selection as MCO1 source

LL_RCC_MCO1SOURCE_LSI

LSI selection as MCO1 source

LL_RCC_MCO1SOURCE_LSE

LSE selection as MCO1 source

LL_RCC_MCO1SOURCE_HSI48

HSI48 selection as MCO1 source

LL_RCC_MCO1SOURCE_MSIK

MSIK selection as MCO1 source

MCO1 prescaler

LL_RCC_MCO1_DIV_1

MCO not divided

LL_RCC_MCO1_DIV_2

MCO divided by 2

LL_RCC_MCO1_DIV_4

MCO divided by 4

LL_RCC_MCO1_DIV_8

MCO divided by 8

LL_RCC_MCO1_DIV_16

MCO divided by 16

Peripheral MDF1 get clock source

LL_RCC_MDF1_CLKSOURCE

Peripheral MDF1 clock source selection

LL_RCC_MDF1_CLKSOURCE_HCLK

HCLK clock used as MDF1 clock

LL_RCC_MDF1_CLKSOURCE_PLL1

PLL1 clock used as MDF1 clock

LL_RCC_MDF1_CLKSOURCE_PLL3

PLL3 clock used as MDF1 clock

LL_RCC_MDF1_CLKSOURCE_MSIK

MSIK clock used as MDF1 clock

LL_RCC_MDF1_CLKSOURCE_PIN

PIN SAI1_EXTCLK clock used as MDF1 clock

MSI BIAS Mode

LL_RCC_MSIBIASMODE_SAMPLING

Sampling mode selection for MSI

LL_RCC_MSIBIASMODE_CONTINUOUS

Continuous mode selection for MSI

MSIK Clock Range

LL_RCC_MSIKRANGE_0

MSIK = 48 MHz

LL_RCC_MSIKRANGE_1

MSIK = 24 MHz

LL_RCC_MSIKRANGE_2

MSIK = 16 MHz

LL_RCC_MSIKRANGE_3

MSIK = 12 MHz

LL_RCC_MSIKRANGE_4
MSIK = 4 MHz

LL_RCC_MSIKRANGE_5
MSIK = 2 MHz

LL_RCC_MSIKRANGE_6
MSIK = 1.5 MHz

LL_RCC_MSIKRANGE_7
MSIK = 1 MHz

LL_RCC_MSIKRANGE_8
MSIK = 3.072 MHz

LL_RCC_MSIKRANGE_9
MSIK = 1.536 MHz

LL_RCC_MSIKRANGE_10
MSIK = 1.024 MHz

LL_RCC_MSIKRANGE_11
MSIK = 768 KHz

LL_RCC_MSIKRANGE_12
MSIK = 400 KHz

LL_RCC_MSIKRANGE_13
MSIK = 200 KHz

LL_RCC_MSIKRANGE_14
MSIK = 150 KHz

LL_RCC_MSIKRANGE_15
MSIK = 100 KHz

MSIK range after Standby mode

LL_RCC_MSIKSRANGE_4
MSIK = 4 MHz

LL_RCC_MSIKSRANGE_5
MSIK = 2 MHz

LL_RCC_MSIKSRANGE_6
MSIK = 1.5 MHz

LL_RCC_MSIKSRANGE_7
MSIK = 1 MHz

LL_RCC_MSIKSRANGE_8
MSIK = 3.072 MHz

MSIS/MSIK Pll Mode

LL_RCC_PLLMODE_MSIS
MSIS selection for Pll Mode

LL_RCC_PLLMODE_MSIK

MSIK selection for Pll Mode

MSI clock range selection

LL_RCC_MSIRANGESEL_STANDBY

MSI Range is provided by MSISRANGE

LL_RCC_MSIRANGESEL_RUN

MSI Range is provided by MSISRANGE

MSIS Clock Range

LL_RCC_MSISRANGE_0

MSIS = 48 MHz

LL_RCC_MSISRANGE_1

MSIS = 24 MHz

LL_RCC_MSISRANGE_2

MSIS = 16 MHz

LL_RCC_MSISRANGE_3

MSIS = 12 MHz

LL_RCC_MSISRANGE_4

MSIS = 4 MHz

LL_RCC_MSISRANGE_5

MSIS = 2 MHz

LL_RCC_MSISRANGE_6

MSIS = 1.5 MHz

LL_RCC_MSISRANGE_7

MSIS = 1 MHz

LL_RCC_MSISRANGE_8

MSIS = 3.072 MHz

LL_RCC_MSISRANGE_9

MSIS = 1.536 MHz

LL_RCC_MSISRANGE_10

MSIS = 1.024 MHz

LL_RCC_MSISRANGE_11

MSIS = 768 KHz

LL_RCC_MSISRANGE_12

MSIS = 400 KHz

LL_RCC_MSISRANGE_13

MSIS = 200 KHz

LL_RCC_MSISRANGE_14

MSIS = 150 KHz

LL_RCC_MSISRANGE_15

MSIS = 100 KHz

MSIS range after Standby mode

LL_RCC_MSISSRANGE_4

MSIS = 4 MHz

LL_RCC_MSISSRANGE_5

MSIS = 2 MHz

LL_RCC_MSISSRANGE_6

MSIS = 1.5 MHz

LL_RCC_MSISSRANGE_7

MSIS = 1 MHz

LL_RCC_MSISSRANGE_8

MSIS = 3.072 MHz

MSI clock Trimming

LL_RCC_MSI_OSCILLATOR_0

MSI clock trimming for ranges 0 to 3

LL_RCC_MSI_OSCILLATOR_1

MSI clock trimming for ranges 4 to 7

LL_RCC_MSI_OSCILLATOR_2

MSI clock trimming for ranges 8 to 11

LL_RCC_MSI_OSCILLATOR_3

MSI clock trimming for ranges 12 to 15

Peripheral OCTOSPI get clock source

LL_RCC_OCTOSPI_CLKSOURCE

OctoSPI Clock source selection

Peripheral OCTOSPI kernel clock source selection

LL_RCC_OCTOSPI_CLKSOURCE_SYSCLK

SYSCLK clock used as OctoSPI kernel clock source

LL_RCC_OCTOSPI_CLKSOURCE_MSIK

MSIK clock used as OctoSPI kernel clock source

LL_RCC_OCTOSPI_CLKSOURCE_PLL1

PLL1 "Q" clock used as OctoSPI kernel clock source

LL_RCC_OCTOSPI_CLKSOURCE_PLL2

PLL2 "Q" clock used as OctoSPI kernel clock source

Oscillator Values adaptation

EXTERNAL_SAI2_CLOCK_VALUE

Value of the SAI2_EXTCLK external oscillator in Hz

Peripheral clock frequency

LL_RCC_PERIPH_FREQUENCY_NO

No clock enabled for the peripheral

LL_RCC_PERIPH_FREQUENCY_NA

Frequency cannot be provided as external clock

EPOD prescaler

LL_RCC_PLL1MBOOST_DIV_1

PLL1CLK not divided

LL_RCC_PLL1MBOOST_DIV_2

PLL1CLK divided by 2

LL_RCC_PLL1MBOOST_DIV_4

PLL1CLK divided by 4

LL_RCC_PLL1MBOOST_DIV_6

PLL1CLK divided by 6

LL_RCC_PLL1MBOOST_DIV_8

PLL1CLK divided by 8

LL_RCC_PLL1MBOOST_DIV_10

PLL1CLK divided by 10

LL_RCC_PLL1MBOOST_DIV_12

PLL1CLK divided by 12

LL_RCC_PLL1MBOOST_DIV_14

PLL1CLK divided by 14

LL_RCC_PLL1MBOOST_DIV_16

PLL1CLK divided by 16

PLL1 entry clock source

LL_RCC_PLL1SOURCE_NONE

No clock selected as main PLL1 entry clock source

LL_RCC_PLL1SOURCE_MSIS

MSIS clock selected as main PLL1 entry clock source

LL_RCC_PLL1SOURCE_HSI

HSI clock selected as main PLL1 entry clock source

LL_RCC_PLL1SOURCE_HSE

HSE clock selected as main PLL1 entry clock source

LL_RCC_PLLSOURCE_NONE

alias define for compatibility with legacy code

LL_RCC_PLLSOURCE_MSIS

alias define for compatibility with legacy code

LL_RCC_PLLSOURCE_HSI

alias define for compatibility with legacy code

LL_RCC_PLLSOURCE_HSE

alias define for compatibility with legacy code

PLL2 entry clock source

LL_RCC_PLL2SOURCE_NONE

No clock selected as main PLL2 entry clock source

LL_RCC_PLL2SOURCE_MSIS

MSIS clock selected as main PLL2 entry clock source

LL_RCC_PLL2SOURCE_HSI

HSI clock selected as main PLL2 entry clock source

LL_RCC_PLL2SOURCE_HSE

HSE clock selected as main PLL2 entry clock source

PLL3 entry clock source

LL_RCC_PLL3SOURCE_NONE

No clock selected as main PLL3 entry clock source

LL_RCC_PLL3SOURCE_MSIS

MSIS clock selected as main PLL3 entry clock source

LL_RCC_PLL3SOURCE_HSI

HSI clock selected as main PLL3 entry clock source

LL_RCC_PLL3SOURCE_HSE

HSE clock selected as main PLL3 entry clock source

All PLLs input ranges

LL_RCC_PLLINPUTRANGE_4_8

VCO input range: 4 to 8 MHz

LL_RCC_PLLINPUTRANGE_8_16

VCO input range: 8 to 16 MHz

Peripheral RNG get clock source

LL_RCC_RNG_CLKSOURCE

RNG Clock source selection

Peripheral RNG clock source selection

LL_RCC_RNG_CLKSOURCE_HSI48

HSI48 clock used as RNG clock source

LL_RCC_RNG_CLKSOURCE_HSI48_DIV2

HSI48/2 clock used as RNG clock source

LL_RCC_RNG_CLKSOURCE_HSI

HSI clock used as RNG clock source

RTC clock source selection

LL_RCC_RTC_CLKSOURCE_NONE

No clock used as RTC clock

LL_RCC_RTC_CLKSOURCE_LSE

LSE oscillator clock used as RTC clock

LL_RCC_RTC_CLKSOURCE_LSI

LSI oscillator clock used as RTC clock

LL_RCC_RTC_CLKSOURCE_HSE_DIV32

HSE oscillator clock divided by 32 used as RTC clock

Peripheral SAES get clock source

LL_RCC_SAES_CLKSOURCE

SAES Clock source selection

Peripheral SAES clock source selection

LL_RCC_SAES_CLKSOURCE_SHSI

SHSI clock used as SAES clock source

LL_RCC_SAES_CLKSOURCE_SHSI_DIV2

SHSI_DIV2 clock used as SAES clock source

Peripheral SAIx get clock source

LL_RCC_SAI1_CLKSOURCE

SAI1 Clock source selection

LL_RCC_SAI2_CLKSOURCE

SAI2 Clock source selection

Peripheral SAIx clock source selection

LL_RCC_SAI1_CLKSOURCE_PLL2

PLL2 clock used as SAI1 clock source

LL_RCC_SAI1_CLKSOURCE_PLL3

PLL3 clock used as SAI1 clock source

LL_RCC_SAI1_CLKSOURCE_PLL1

PLL1 clock used as SAI1 clock source

LL_RCC_SAI1_CLKSOURCE_HSI

HSI clock used as SAI1 clock source

LL_RCC_SAI1_CLKSOURCE_PIN

External input clock used as SAI1 clock source

LL_RCC_SAI2_CLKSOURCE_PLL2

PLL2 clock used as SAI2 clock source

LL_RCC_SAI2_CLKSOURCE_PLL3

PLL3 clock used as SAI2 clock source

LL_RCC_SAI2_CLKSOURCE_PLL1
PLL1clock used as SAI2 clock source

LL_RCC_SAI2_CLKSOURCE_HSI
HSI clock used as SAI2 clock source

LL_RCC_SAI2_CLKSOURCE_PIN
External input clock used as SAI2 clock source

/2 Peripheral SDMMC get clock source

LL_RCC_SDMMC_CLKSOURCE
SDMMC1/2 Clock source selection

Peripheral SDMMC clock source selection

LL_RCC_SDMMC12_CLKSOURCE_HSI48
HSI48 clock used as SDMMC1/2 clock source

LL_RCC_SDMMC12_CLKSOURCE_PLL2
PLL2 "Q" clock used as SDMMC1/2 clock source

LL_RCC_SDMMC12_CLKSOURCE_PLL1
PLL1 "Q" clock used as SDMMC1/2 clock source

LL_RCC_SDMMC12_CLKSOURCE_MSIK
MSIK clock used as SDMMC1/2 clock source

Peripheral SDMMC get kernel clock source

LL_RCC_SDMMC_KERNELCLKSOURCE
SDMMC1/2 Kernel Clock source selection

Peripheral SDMMC1/2 kernel clock source selection

LL_RCC_SDMMC12_KERNELCLKSOURCE_48CLK
48MHz clock from internal multiplexor used as SDMMC1/2 clock source

LL_RCC_SDMMC12_KERNELCLKSOURCE_PLL1
PLL1 "P" used as SDMMC1/2 clock source

Peripheral SPIx get clock source

LL_RCC_SPI1_CLKSOURCE
SPI1 Clock source selection

LL_RCC_SPI2_CLKSOURCE
SPI2 Clock source selection

LL_RCC_SPI3_CLKSOURCE
SPI3 Clock source selection

Peripheral SPIx clock source selection

LL_RCC_SPI1_CLKSOURCE_PCLK2
PCLK2 clock used as SPI1 clock source

LL_RCC_SPI1_CLKSOURCE_SYSCLK
SYSCLK clock used as SPI1 clock source

LL_RCC_SPI1_CLKSOURCE_HSI
HSI clock used as SPI1 clock source

LL_RCC_SPI1_CLKSOURCE_MSIK
MSIK clock used as SPI1 clock source

LL_RCC_SPI2_CLKSOURCE_PCLK1
PCLK1 clock used as SPI2 clock source

LL_RCC_SPI2_CLKSOURCE_SYSCLK
SYSCLK clock used as SPI2 clock source

LL_RCC_SPI2_CLKSOURCE_HSI
HSI clock used as SPI2 clock source

LL_RCC_SPI2_CLKSOURCE_MSIK
MSIK clock used as SPI2 clock source

LL_RCC_SPI3_CLKSOURCE_PCLK3
PCLK3 clock used as SPI3 clock source

LL_RCC_SPI3_CLKSOURCE_SYSCLK
SYSCLK clock used as SPI3 clock source

LL_RCC_SPI3_CLKSOURCE_HSI
HSI clock used as SPI3 clock source

LL_RCC_SPI3_CLKSOURCE_MSIK
MSIK clock used as SPI3 clock source

Wakeup from Stop and CSS backup clock selection

LL_RCC_STOP_WAKEUPCLOCK_MSIS
MSIS selection after wake-up from STOP

LL_RCC_STOP_WAKEUPCLOCK_HSI
HSI selection after wake-up from STOP

Wakeup from Stop kernel clock automatic enable selection

LL_RCC_STOP_WAKEUPKERCLOCK_MSIK
MSIK oscillator automatically enabled when exiting Stop mode

LL_RCC_STOP_WAKEUPKERCLOCK_HSI
HSI oscillator automatically enabled when exiting Stop mode

AHB prescaler

LL_RCC_SYSCLK_DIV_1
SYSCLK not divided

LL_RCC_SYSCLK_DIV_2
SYSCLK divided by 2

LL_RCC_SYSCLK_DIV_4
SYSCLK divided by 4

LL_RCC_SYSCLK_DIV_8
SYSCLK divided by 8

LL_RCC_SYSCLK_DIV_16
SYSCLK divided by 16

LL_RCC_SYSCLK_DIV_64
SYSCLK divided by 64

LL_RCC_SYSCLK_DIV_128
SYSCLK divided by 128

LL_RCC_SYSCLK_DIV_256
SYSCLK divided by 256

LL_RCC_SYSCLK_DIV_512
SYSCLK divided by 512

SYSTICK clock source selection

LL_RCC_SYSTICK_CLKSOURCE_HCLKDIV8
HCLKDIV8 clock used as SYSTICK clock source

LL_RCC_SYSTICK_CLKSOURCE_LSI
LSI clock used as SYSTICK clock source

LL_RCC_SYSTICK_CLKSOURCE_LSE
LSE clock used as SYSTICK clock source

System clock switch

LL_RCC_SYS_CLKSOURCE_MSIS
MSIS selection as system clock

LL_RCC_SYS_CLKSOURCE_HSI
HSI oscillator selection as system clock

LL_RCC_SYS_CLKSOURCE_HSE
HSE selection as system clock

LL_RCC_SYS_CLKSOURCE_PLL1
PLL selection as system clock

System clock switch status

LL_RCC_SYS_CLKSOURCE_STATUS_MSIS
MSIS used as system clock

LL_RCC_SYS_CLKSOURCE_STATUS_HSI
HSI used as system clock

LL_RCC_SYS_CLKSOURCE_STATUS_HSE
HSE used as system clock

LL_RCC_SYS_CLKSOURCE_STATUS_PLL1

PLL1 used as system clock

TIM Input capture clock source selection

LL_RCC_TIMIC_CLKSOURCE_NONE

No clock available for TIM16/TIM17 and LPTIM2 input capture

LL_RCC_TIMIC_CLKSOURCE_HSI_DIV256

HSI/256 selected for TIM16/TIM17 and LPTIM2 input capture

LL_RCC_TIMIC_CLKSOURCE_MSIS_DIV1024

MSIS/1024 selected for TIM16/TIM17 and LPTIM2 input capture

LL_RCC_TIMIC_CLKSOURCE_MSIS_DIV4

MSIS/4 selected for TIM16/TIM17 and LPTIM2 input capture

LL_RCC_TIMIC_CLKSOURCE_MSIK_DIV4

MSIK/4 selected for TIM16/TIM17 and LPTIM2 input capture

LL_RCC_TIMIC_CLKSOURCE_MSIK_DIV1024

MSIK/1024 selected for TIM16/TIM17 and LPTIM2 input capture

Peripheral UARTx get clock source

LL_RCC_UART4_CLKSOURCE

UART4 Clock source selection

LL_RCC_UART5_CLKSOURCE

UART5 Clock source selection

Peripheral UARTx clock source selection

LL_RCC_UART4_CLKSOURCE_PCLK1

PCLK1 clock used as UART4 clock source

LL_RCC_UART4_CLKSOURCE_SYSCLK

SYSCLK clock used as UART4 clock source

LL_RCC_UART4_CLKSOURCE_HSI

HSI clock used as UART4 clock source

LL_RCC_UART4_CLKSOURCE_LSE

LSE clock used as UART4 clock source

LL_RCC_UART5_CLKSOURCE_PCLK1

PCLK1 clock used as UART5 clock source

LL_RCC_UART5_CLKSOURCE_SYSCLK

SYSCLK clock used as UART5 clock source

LL_RCC_UART5_CLKSOURCE_HSI

HSI clock used as UART5 clock source

LL_RCC_UART5_CLKSOURCE_LSE

LSE clock used as UART5 clock source

Peripheral USARTx get clock source

LL_RCC_USART1_CLKSOURCE
USART1 Clock source selection

LL_RCC_USART2_CLKSOURCE
USART2 Clock source selection

LL_RCC_USART3_CLKSOURCE
USART3 Clock source selection

LL_RCC_USART6_CLKSOURCE
USART6 Clock source selection

Peripheral USARTx clock source selection

LL_RCC_USART1_CLKSOURCE_PCLK2
PCLK2 clock used as USART1 clock source

LL_RCC_USART1_CLKSOURCE_SYSCLK
SYSCLK clock used as USART1 clock source

LL_RCC_USART1_CLKSOURCE_HSI
HSI clock used as USART1 clock source

LL_RCC_USART1_CLKSOURCE_LSE
LSE clock used as USART1 clock source

LL_RCC_USART2_CLKSOURCE_PCLK1
PCLK1 clock used as USART2 clock source

LL_RCC_USART2_CLKSOURCE_SYSCLK
SYSCLK clock used as USART2 clock source

LL_RCC_USART2_CLKSOURCE_HSI
HSI clock used as USART2 clock source

LL_RCC_USART2_CLKSOURCE_LSE
LSE clock used as USART2 clock source

LL_RCC_USART3_CLKSOURCE_PCLK1
PCLK3 clock used as USART3 clock source

LL_RCC_USART3_CLKSOURCE_SYSCLK
SYSCLK clock used as USART3 clock source

LL_RCC_USART3_CLKSOURCE_HSI
HSI clock used as USART3 clock source

LL_RCC_USART3_CLKSOURCE_LSE
LSE clock used as USART3 clock source

LL_RCC_USART6_CLKSOURCE_PCLK1
PCLK1 clock used as USART6 clock source

LL_RCC_USART6_CLKSOURCE_SYSCLK
SYSCLK clock used as USART6 clock source

LL_RCC_USART6_CLKSOURCE_HSI
HSI clock used as USART6 clock source

LL_RCC_USART6_CLKSOURCE_LSE

LSE clock used as USART6 clock source

LL_RCC_USART6_CLKSOURCE_PCLK2

Peripheral USB get clock source

LL_RCC_USB_CLKSOURCE

USB Clock source selection

Peripheral USBPHY get clock source

LL_RCC_USBPHY_CLKSOURCE

Peripheral USBPHY clock source selection

LL_RCC_USBPHYCLKSOURCE_HSE

HSE clock selected as USBPHYC clock

LL_RCC_USBPHYCLKSOURCE_HSE_DIV2

HSE clock divided by 2 selected as USBPHYC clock

LL_RCC_USBPHYCLKSOURCE_PLL1

PLL1 divider P selected as USBPHYC clock

LL_RCC_USBPHYCLKSOURCE_PLL1_DIV2

PLL1 divider P divided by 2 selected as USBPHYC clock

Peripheral USB clock source selection

LL_RCC_USB_CLKSOURCE_HSI48

HSI48 clock used as USB clock source

LL_RCC_USB_CLKSOURCE_PLL2

PLL2 "Q" clock used as USB clock source

LL_RCC_USB_CLKSOURCE_PLL1

PLL1 "Q" clock used as USB clock source

LL_RCC_USB_CLKSOURCE_MSIK

MSIK clock used as USB clock source

Calculate frequencies

__LL_RCC_CALC_PLL1CLK_FREQ

Description:
- Helper macro to calculate the PLL1CLK frequency on system domain.

Parameters:
- __INPUTFREQ__: PLL1 Input frequency (based on MSI/HSE/HSI)
- __PLL1M__: parameter can be a value between 1 and 16
- __PLL1N__: parameter can be a value between 4 and 512
- __PLL1R__: parameter can be a value between 1 and 128 (Only division by 1 and even division are allowed)

Return value:
- PLL1: clock frequency (in Hz)

Notes:
- ex: __LL_RCC_CALC_PLL1CLK_FREQ (HSE_VALUE,LL_RCC_PLL1_GetDivider (), LL_RCC_PLL1_GetN (), LL_RCC_PLL1_GetR ());

__LL_RCC_CALC_PLLCLK_FREQ

alias for compatibility with legacy code

__LL_RCC_CALC_PLL1CLK_SAI_FREQ

Description:

- Helper macro to calculate the PLL1CLK frequency used on SAI domain.

Parameters:

- __INPUTFREQ__: PLL1 Input frequency (based on MSI/HSE/HSI)
- __PLL1M__: parameter can be a value between 1 and 16
- __PLL1N__: parameter can be a value between 4 and 512
- __PLL1P__: parameter can be a value between 1 and 128

Return value:

- PLL1: clock frequency (in Hz)

Notes:

- ex: __LL_RCC_CALC_PLL1CLK_SAI_FREQ (HSE_VALUE,LL_RCC_PLL1_GetDivider (), LL_RCC_PLL1_GetN (), LL_RCC_PLL1_GetP ());

__LL_RCC_CALC_PLLCLK_SAI_FREQ

alias for compatibility with legacy code

__LL_RCC_CALC_PLL1CLK_48M_FREQ

Description:

- Helper macro to calculate the PLL1CLK frequency used on 48M domain.

Parameters:

- __INPUTFREQ__: PLL1 Input frequency (based on MSI/HSE/HSI)
- __PLL1M__: parameter can be a value between 1 and 16
- __PLL1N__: parameter can be a value between 4 and 512
- __PLL1Q__: parameter can be a value between 1 and 128

Return value:

- PLL: clock frequency (in Hz)

Notes:

- ex: __LL_RCC_CALC_PLL1CLK_48M_FREQ (HSE_VALUE,LL_RCC_PLL1_GetDivider (), LL_RCC_PLL1_GetN (), LL_RCC_PLL1_GetQ ());

__LL_RCC_CALC_PLLCLK_48M_FREQ

alias for compatibility with legacy code

__LL_RCC_CALC_PLL2CLK_SAI_FREQ

Description:

- Helper macro to calculate the PLL2 frequency used for SAI domain.

Parameters:

- __INPUTFREQ__: PLL Input frequency (based on MSI/HSE/HSI)
- __PLL2M__: parameter can be a value between 1 and 16
- __PLL2N__: parameter can be a value between 4 and 512
- __PLL2P__: parameter can be a value between 1 and 128

Return value:

- PLL2: clock frequency (in Hz)

Notes:

- ex: __LL_RCC_CALC_PLL2CLK_SAI_FREQ (HSE_ALUE,LL_RCC_PLL2_GetDivider (), LL_RCC_PLL2_GetN (), LL_RCC_PLL2_GetP ());

__LL_RCC_CALC_PLL2CLK_48M_FREQ

Description:

- Helper macro to calculate the PLL2 frequency used on 48M domain.

Parameters:

- __INPUTFREQ__: PLL Input frequency (based on MSI/HSE/HSI)
- __PLL2M__: parameter can be a value between 1 and 16
- __PLL2N__: parameter can be a value between 4 and 512
- __PLL2Q__: parameter can be a value between 1 and 128

Return value:

- PLL2: clock frequency (in Hz)

Notes:

- ex: __LL_RCC_CALC_PLL2CLK_48M_FREQ (HSE_VALUE,LL_RCC_PLL2_GetDivider (), LL_RCC_PLL2_GetN (), LL_RCC_PLL2_GetQ ());

__LL_RCC_CALC_PLL2CLK_ADC_FREQ

Description:

- Helper macro to calculate the PLL2 frequency used on ADC domain.

Parameters:

- __INPUTFREQ__: PLL2 Input frequency (based on MSI/HSE/HSI)
- __PLL2M__: parameter can be a value between 1 and 16
- __PLL2N__: parameter can be a value between 4 and 512
- __PLL2R__: parameter can be a value between 1 and 128

Return value:

- PLL2: clock frequency (in Hz)

Notes:

- ex: __LL_RCC_CALC_PLL2CLK_ADC_FREQ (HSE_VALUE,LL_RCC_PLL2_GetDivider (), LL_RCC_PLL2_GetN (), LL_RCC_PLL2_GetR ());

__LL_RCC_CALC_PLL3CLK_SAI_FREQ

Description:

- Helper macro to calculate the PLL3 frequency used for SAI domain.

Parameters:

- __INPUTFREQ__: PLL3 Input frequency (based on MSI/HSE/HSI)
- __PLL3M__: parameter can be a value between 1 and 16
- __PLL3N__: parameter can be a value between 4 and 512
- __PLL3P__: parameter can be a value between 1 and 128

Return value:

- PLL3: clock frequency (in Hz)

Notes:

- ex: __LL_RCC_CALC_PLL3CLK_SAI_FREQ (HSE_VALUE,LL_RCC_PLL3_GetDivider (), LL_RCC_PLL3_GetN (), LL_RCC_PLL3_GetP ());

__LL_RCC_CALC_PLL3CLK_48M_FREQ

Description:
- Helper macro to calculate the PLL2 frequency used on 48M domain.

Parameters:
- __INPUTFREQ__: PLL3 Input frequency (based on MSI/HSE/HSI)
- __PLL3M__: parameter can be a value between 1 and 16
- __PLL3N__: parameter can be a value between 4 and 512
- __PLL3Q__: parameter can be a value between 1 and 128

Return value:
- PLL3: clock frequency (in Hz)

Notes:
- ex: __LL_RCC_CALC_PLL3CLK_48M_FREQ (HSE_VALUE,LL_RCC_PLL3_GetDivider (), LL_RCC_PLL3_GetN (), LL_RCC_PLL3_GetQ ());

__LL_RCC_CALC_PLL3CLK_HSPI_LTDC_FREQ

Description:
- Helper macro to calculate the PLL3 frequency used on HSPI domain.

Parameters:
- __INPUTFREQ__: PLL3 Input frequency (based on MSI/HSE/HSI)
- __PLL3M__: parameter can be a value between 1 and 16
- __PLL3N__: parameter can be a value between 4 and 512
- __PLL3R__: parameter can be a value between 1 and 128

Return value:
- PLL3: clock frequency (in Hz)

Notes:
- ex: __LL_RCC_CALC_PLL3CLK_HSPI_LTDC_FREQ (HSE_VALUE,LL_RCC_PLL3_GetDivider (), LL_RCC_PLL3_GetN (), LL_RCC_PLL3_GetQ ());

__LL_RCC_CALC_PLL3CLK_HSPI_FREQ

__LL_RCC_CALC_HCLK_FREQ

Description:
- Helper macro to calculate the HCLK frequency.

Parameters:
- __SYSCLKFREQ__: SYSCLK frequency (based on MSI/HSE/HSI/PLLCLK)
- __AHBPRESCALER__: This parameter can be one of the following values:
  – LL_RCC_SYSCLK_DIV_1
  – LL_RCC_SYSCLK_DIV_2
  – LL_RCC_SYSCLK_DIV_4
  – LL_RCC_SYSCLK_DIV_8
  – LL_RCC_SYSCLK_DIV_16
  – LL_RCC_SYSCLK_DIV_64
  – LL_RCC_SYSCLK_DIV_128
  – LL_RCC_SYSCLK_DIV_256
  – LL_RCC_SYSCLK_DIV_512

Return value:
- HCLK: clock frequency (in Hz)

__LL_RCC_CALC_PCLK1_FREQ

Description:

- Helper macro to calculate the PCLK1 frequency (ABP1)

Parameters:

- __HCLKFREQ__: HCLK frequency
- __APB1PRESCALER__: This parameter can be one of the following values:
  – LL_RCC_APB1_DIV_1
  – LL_RCC_APB1_DIV_2
  – LL_RCC_APB1_DIV_4
  – LL_RCC_APB1_DIV_8
  – LL_RCC_APB1_DIV_16

Return value:

- PCLK1: clock frequency (in Hz)

__LL_RCC_CALC_PCLK2_FREQ

Description:

- Helper macro to calculate the PCLK2 frequency (ABP2)

Parameters:

- __HCLKFREQ__: HCLK frequency
- __APB2PRESCALER__: This parameter can be one of the following values:
  – LL_RCC_APB2_DIV_1
  – LL_RCC_APB2_DIV_2
  – LL_RCC_APB2_DIV_4
  – LL_RCC_APB2_DIV_8
  – LL_RCC_APB2_DIV_16

Return value:

- PCLK2: clock frequency (in Hz)

__LL_RCC_CALC_PCLK3_FREQ

Description:

- Helper macro to calculate the PCLK3 frequency (ABP3)

Parameters:

- __HCLKFREQ__: HCLK frequency
- __APB3PRESCALER__: This parameter can be one of the following values:
  – LL_RCC_APB3_DIV_1
  – LL_RCC_APB3_DIV_2
  – LL_RCC_APB3_DIV_4
  – LL_RCC_APB3_DIV_8
  – LL_RCC_APB3_DIV_16

Return value:

- PCLK3: clock frequency (in Hz)

__LL_RCC_CALC_MSIS_FREQ

Description:

- Helper macro to calculate the MSIS frequency (in Hz)

Parameters:

- __MSISSEL__: This parameter can be one of the following values:
  - LL_RCC_MSIRANGESEL_STANDBY
  - LL_RCC_MSIRANGESEL_RUN
- __MSISRANGE__: This parameter can be one of the following values:
  - LL_RCC_MSISRANGE_0
  - LL_RCC_MSISRANGE_1
  - LL_RCC_MSISRANGE_2
  - LL_RCC_MSISRANGE_3
  - LL_RCC_MSISRANGE_4
  - LL_RCC_MSISRANGE_5
  - LL_RCC_MSISRANGE_6
  - LL_RCC_MSISRANGE_7
  - LL_RCC_MSISRANGE_8
  - LL_RCC_MSISRANGE_9
  - LL_RCC_MSISRANGE_10
  - LL_RCC_MSISRANGE_11
  - LL_RCC_MSISRANGE_12
  - LL_RCC_MSISRANGE_13
  - LL_RCC_MSISRANGE_14
  - LL_RCC_MSISRANGE_15

Return value:

- MSI: clock frequency (in Hz)

Notes:

- __MSISSEL__ can be retrieved thanks to function LL_RCC_MSI_IsEnabledRangeSelect() if __MSISSEL__ is equal to LL_RCC_MSIRANGESEL_STANDBY, __MSISRANGE__can be retrieved by LL_RCC_MSI_GetRangeAfterStandby() else by LL_RCC_MSI_GetRange() ex: __LL_RCC_CALC_MSIS_FREQ(LL_RCC_MSI_IsEnabledRangeSelect(), (LL_RCC_MSI_IsEnabledRangeSelect()? LL_RCC_MSI_GetRange(): LL_RCC_MSI_GetRangeAfterStandby()))

__LL_RCC_CALC_MSIK_FREQ

Description:

- Helper macro to calculate the MSIK frequency (in Hz)

Parameters:

- __MSIKSEL__: This parameter can be one of the following values:
  - LL_RCC_MSIRANGESEL_STANDBY
  - LL_RCC_MSIRANGESEL_RUN
- __MSIKRANGE__: This parameter can be one of the following values:
  - LL_RCC_MSIKRANGE_0
  - LL_RCC_MSIKRANGE_1
  - LL_RCC_MSIKRANGE_2
  - LL_RCC_MSIKRANGE_3
  - LL_RCC_MSIKRANGE_4
  - LL_RCC_MSIKRANGE_5
  - LL_RCC_MSIKRANGE_6
  - LL_RCC_MSIKRANGE_7
  - LL_RCC_MSIKRANGE_8
  - LL_RCC_MSIKRANGE_9
  - LL_RCC_MSIKRANGE_10
  - LL_RCC_MSIKRANGE_11
  - LL_RCC_MSIKRANGE_12
  - LL_RCC_MSIKRANGE_13
  - LL_RCC_MSIKRANGE_14
  - LL_RCC_MSIKRANGE_15

Return value:

- MSIK: clock frequency (in Hz)

Notes:

- __MSIKSEL__ can be retrieved thanks to function LL_RCC_MSIK_IsEnabledRangeSelect() if __MSIKSEL__ is equal to LL_RCC_MSIKRANGESEL_STANDBY, __MSIKRANGE__can be retrieved by LL_RCC_MSIK_GetRangeAfterStandby() else by LL_RCC_MSIK_GetRange() ex: __LL_RCC_CALC_MSIK_FREQ(LL_RCC_MSIK_IsEnabledRangeSelect(), (LL_RCC_MSIK_IsEnabledRangeSelect()? LL_RCC_MSIK_GetRange(): LL_RCC_MSIK_GetRangeAfterStandby()))

Common Write and read registers Macros

LL_RCC_WriteReg

Description:

- Write a value in RCC register.

Parameters:

- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_RCC_ReadReg

Description:

- Read a value in RCC register.

Parameters:

- __REG__: Register to be read

Return value:

- Register: value

115 LL RNG Generic Driver

115.1 RNG Firmware driver registers structures

115.1.1 LL_RNG_InitTypeDef

LL_RNG_InitTypeDef is defined in the stm32u5xx_ll_rng.h

Field Documentation

- ***uint32_t LL_RNG_InitTypeDef::ClockErrorDetection***
  Clock error detection. This parameter can be one value of ***RNG_LL_CED***. This parameter can be modified using unitary functions **LL_RNG_EnableClkErrorDetect()**.

115.2 RNG Firmware driver API description

The following section lists the various functions of the RNG library.

115.2.1 Detailed description of functions

LL_RNG_Enable

Function name

__STATIC_INLINE void LL_RNG_Enable (RNG_TypeDef * RNGx)

Function description

Enable Random Number Generation.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RNGEN LL_RNG_Enable

LL_RNG_Disable

Function name

__STATIC_INLINE void LL_RNG_Disable (RNG_TypeDef * RNGx)

Function description

Disable Random Number Generation.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RNGEN LL_RNG_Disable

LL_RNG_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RNG_IsEnabled (const RNG_TypeDef * RNGx)

Function description

Check if Random Number Generator is enabled.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR RNGEN LL_RNG_IsEnabled

LL_RNG_EnableClkErrorDetect

Function name

__STATIC_INLINE void LL_RNG_EnableClkErrorDetect (RNG_TypeDef * RNGx)

Function description

Enable Clock Error Detection.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CED LL_RNG_EnableClkErrorDetect

LL_RNG_DisableClkErrorDetect

Function name

__STATIC_INLINE void LL_RNG_DisableClkErrorDetect (RNG_TypeDef * RNGx)

Function description

Disable RNG Clock Error Detection.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CED LL_RNG_DisableClkErrorDetect

LL_RNG_IsEnabledClkErrorDetect

Function name

__STATIC_INLINE uint32_t LL_RNG_IsEnabledClkErrorDetect (const RNG_TypeDef * RNGx)

Function description

Check if RNG Clock Error Detection is enabled.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR CED LL_RNG_IsEnabledClkErrorDetect

LL_RNG_EnableCondReset

Function name

__STATIC_INLINE void LL_RNG_EnableCondReset (RNG_TypeDef * RNGx)

Function description

Set RNG Conditioning Soft Reset bit.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CONDRST LL_RNG_EnableCondReset

LL_RNG_DisableCondReset

Function name

__STATIC_INLINE void LL_RNG_DisableCondReset (RNG_TypeDef * RNGx)

Function description

Reset RNG Conditioning Soft Reset bit.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CONDRST LL_RNG_DisableCondReset

LL_RNG_IsEnabledCondReset

Function name

__STATIC_INLINE uint32_t LL_RNG_IsEnabledCondReset (const RNG_TypeDef * RNGx)

Function description

Check if RNG Conditioning Soft Reset bit is set.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR CONDRST LL_RNG_IsEnabledCondReset

LL_RNG_ConfigLock

Function name

__STATIC_INLINE void LL_RNG_ConfigLock (RNG_TypeDef * RNGx)

Function description

Enable RNG Config Lock.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CONFIGLOCK LL_RNG_ConfigLock

LL_RNG_IsConfigLocked

Function name

__STATIC_INLINE uint32_t LL_RNG_IsConfigLocked (const RNG_TypeDef * RNGx)

Function description

Check if RNG Config Lock is enabled.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR CONFIGLOCK LL_RNG_IsConfigLocked

LL_RNG_EnableNistCompliance

Function name

__STATIC_INLINE void LL_RNG_EnableNistCompliance (RNG_TypeDef * RNGx)

Function description

Enable NIST Compliance.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR NISTC LL_RNG_EnableNistCompliance

LL_RNG_DisableNistCompliance

Function name

__STATIC_INLINE void LL_RNG_DisableNistCompliance (RNG_TypeDef * RNGx)

Function description

Disable NIST Compliance.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR NISTC LL_RNG_DisableNistCompliance

LL_RNG_IsEnabledNistCompliance

Function name

__STATIC_INLINE uint32_t LL_RNG_IsEnabledNistCompliance (const RNG_TypeDef * RNGx)

Function description

Check if NIST Compliance is enabled.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR NISTC LL_RNG_IsEnabledNistCompliance

LL_RNG_SetConfig1

Function name

__STATIC_INLINE void LL_RNG_SetConfig1 (RNG_TypeDef * RNGx, uint32_t Config1)

Function description

Set RNG Config1 Configuration field value.

Parameters

- **RNGx:** RNG Instance
- **Config1:** Value between 0 and 0x3F

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RNG_CONFIG1 LL_RNG_SetConfig1

LL_RNG_GetConfig1

Function name

__STATIC_INLINE uint32_t LL_RNG_GetConfig1 (const RNG_TypeDef * RNGx)

Function description

Get RNG Config1 Configuration field value.

Parameters

- **RNGx:** RNG Instance

Return values

- **Returned:** Value expressed on 6 bits : Value between 0 and 0x3F

Reference Manual to LL API cross reference:

- CR RNG_CONFIG1 LL_RNG_GetConfig1

LL_RNG_SetConfig2

Function name

__STATIC_INLINE void LL_RNG_SetConfig2 (RNG_TypeDef * RNGx, uint32_t Config2)

Function description

Set RNG Config2 Configuration field value.

Parameters

- **RNGx:** RNG Instance
- **Config2:** Value between 0 and 0x7

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RNG_CONFIG2 LL_RNG_SetConfig2

LL_RNG_GetConfig2

Function name

__STATIC_INLINE uint32_t LL_RNG_GetConfig2 (const RNG_TypeDef * RNGx)

Function description

Get RNG Config2 Configuration field value.

Parameters

- **RNGx:** RNG Instance

Return values

- **Returned:** Value expressed on 3 bits : Value between 0 and 0x7

Reference Manual to LL API cross reference:

- CR RNG_CONFIG2 LL_RNG_GetConfig2

LL_RNG_SetConfig3

Function name

__STATIC_INLINE void LL_RNG_SetConfig3 (RNG_TypeDef * RNGx, uint32_t Config3)

Function description

Set RNG Config3 Configuration field value.

Parameters

- **RNGx:** RNG Instance
- **Config3:** Value between 0 and 0xF

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RNG_CONFIG3 LL_RNG_SetConfig3

LL_RNG_GetConfig3

Function name

__STATIC_INLINE uint32_t LL_RNG_GetConfig3 (const RNG_TypeDef * RNGx)

Function description

Get RNG Config3 Configuration field value.

Parameters

- **RNGx:** RNG Instance

Return values

- **Returned:** Value expressed on 4 bits : Value between 0 and 0xF

Reference Manual to LL API cross reference:

- CR RNG_CONFIG3 LL_RNG_GetConfig3

LL_RNG_SetClockDivider

Function name

__STATIC_INLINE void LL_RNG_SetClockDivider (RNG_TypeDef * RNGx, uint32_t Divider)

Function description

Set RNG Clock divider factor.

Parameters

- **RNGx:** RNG Instance
- **Divider:** can be one of the following values:
  - LL_RNG_CLKDIV_BY_1
  - LL_RNG_CLKDIV_BY_2
  - LL_RNG_CLKDIV_BY_4
  - LL_RNG_CLKDIV_BY_8
  - LL_RNG_CLKDIV_BY_16
  - LL_RNG_CLKDIV_BY_32
  - LL_RNG_CLKDIV_BY_64
  - LL_RNG_CLKDIV_BY_128
  - LL_RNG_CLKDIV_BY_256
  - LL_RNG_CLKDIV_BY_512
  - LL_RNG_CLKDIV_BY_1024
  - LL_RNG_CLKDIV_BY_2048
  - LL_RNG_CLKDIV_BY_4096
  - LL_RNG_CLKDIV_BY_8192
  - LL_RNG_CLKDIV_BY_16384
  - LL_RNG_CLKDIV_BY_32768

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CLKDIV LL_RNG_SetClockDivider

LL_RNG_GetClockDivider

Function name

__STATIC_INLINE uint32_t LL_RNG_GetClockDivider (const RNG_TypeDef * RNGx)

Function description

Get RNG Clock divider factor.

Parameters

- **RNGx:** RNG Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RNG_CLKDIV_BY_1
  - LL_RNG_CLKDIV_BY_2
  - LL_RNG_CLKDIV_BY_4
  - LL_RNG_CLKDIV_BY_8
  - LL_RNG_CLKDIV_BY_16
  - LL_RNG_CLKDIV_BY_32
  - LL_RNG_CLKDIV_BY_64
  - LL_RNG_CLKDIV_BY_128
  - LL_RNG_CLKDIV_BY_256
  - LL_RNG_CLKDIV_BY_512
  - LL_RNG_CLKDIV_BY_1024
  - LL_RNG_CLKDIV_BY_2048
  - LL_RNG_CLKDIV_BY_4096
  - LL_RNG_CLKDIV_BY_8192
  - LL_RNG_CLKDIV_BY_16384
  - LL_RNG_CLKDIV_BY_32768

Reference Manual to LL API cross reference:

- CR CLKDIV LL_RNG_GetClockDivider

LL_RNG_IsActiveFlag_DRDY

Function name

__STATIC_INLINE uint32_t LL_RNG_IsActiveFlag_DRDY (const RNG_TypeDef * RNGx)

Function description

Indicate if the RNG Data ready Flag is set or not.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR DRDY LL_RNG_IsActiveFlag_DRDY

LL_RNG_IsActiveFlag_CECS

Function name

__STATIC_INLINE uint32_t LL_RNG_IsActiveFlag_CECS (const RNG_TypeDef * RNGx)

Function description

Indicate if the Clock Error Current Status Flag is set or not.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CECS LL_RNG_IsActiveFlag_CECS

LL_RNG_IsActiveFlag_SECS

Function name

__STATIC_INLINE uint32_t LL_RNG_IsActiveFlag_SECS (const RNG_TypeDef * RNGx)

Function description

Indicate if the Seed Error Current Status Flag is set or not.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR SECS LL_RNG_IsActiveFlag_SECS

LL_RNG_IsActiveFlag_CEIS

Function name

__STATIC_INLINE uint32_t LL_RNG_IsActiveFlag_CEIS (const RNG_TypeDef * RNGx)

Function description

Indicate if the Clock Error Interrupt Status Flag is set or not.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CEIS LL_RNG_IsActiveFlag_CEIS

LL_RNG_IsActiveFlag_SEIS

Function name

__STATIC_INLINE uint32_t LL_RNG_IsActiveFlag_SEIS (const RNG_TypeDef * RNGx)

Function description

Indicate if the Seed Error Interrupt Status Flag is set or not.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR SEIS LL_RNG_IsActiveFlag_SEIS

LL_RNG_ClearFlag_CEIS

Function name

__STATIC_INLINE void LL_RNG_ClearFlag_CEIS (RNG_TypeDef * RNGx)

Function description

Clear Clock Error interrupt Status (CEIS) Flag.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CEIS LL_RNG_ClearFlag_CEIS

LL_RNG_ClearFlag_SEIS

Function name

__STATIC_INLINE void LL_RNG_ClearFlag_SEIS (RNG_TypeDef * RNGx)

Function description

Clear Seed Error interrupt Status (SEIS) Flag.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR SEIS LL_RNG_ClearFlag_SEIS

LL_RNG_EnableIT

Function name

__STATIC_INLINE void LL_RNG_EnableIT (RNG_TypeDef * RNGx)

Function description

Enable Random Number Generator Interrupt (applies for either Seed error, Clock Error or Data ready interrupts)

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR IE LL_RNG_EnableIT

LL_RNG_DisableIT

Function name

__STATIC_INLINE void LL_RNG_DisableIT (RNG_TypeDef * RNGx)

Function description

Disable Random Number Generator Interrupt (applies for either Seed error, Clock Error or Data ready interrupts)

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR IE LL_RNG_DisableIT

LL_RNG_IsEnabledIT

Function name

__STATIC_INLINE uint32_t LL_RNG_IsEnabledIT (const RNG_TypeDef * RNGx)

Function description

Check if Random Number Generator Interrupt is enabled (applies for either Seed error, Clock Error or Data ready interrupts)

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR IE LL_RNG_IsEnabledIT

LL_RNG_ReadRandData32

Function name

__STATIC_INLINE uint32_t LL_RNG_ReadRandData32 (const RNG_TypeDef * RNGx)

Function description

Return32-bit Random Number value.

Parameters

- **RNGx:** RNG Instance

Return values

- **Generated:** 32-bit random value

Reference Manual to LL API cross reference:

- DR RNDATA LL_RNG_ReadRandData32

LL_RNG_EnableArdis

Function name

__STATIC_INLINE void LL_RNG_EnableArdis (RNG_TypeDef * RNGx)

Function description

Enable Auto reset.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR ARDIS LL_RNG_EnableArdis

LL_RNG_DisableArdis

Function name

__STATIC_INLINE void LL_RNG_DisableArdis (RNG_TypeDef * RNGx)

Function description

Disable Auto reset.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR ARDIS LL_RNG_DisableArdis

LL_RNG_IsEnabledArdis

Function name

__STATIC_INLINE uint32_t LL_RNG_IsEnabledArdis (const RNG_TypeDef * RNGx)

Function description

Check if RNG Auto reset is enabled.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR ARDIS LL_RNG_IsEnabledArdis

LL_RNG_SetHealthConfig

Function name

__STATIC_INLINE void LL_RNG_SetHealthConfig (RNG_TypeDef * RNGx, uint32_t HTCFG)

Function description

Set RNG Health Test Control.

Parameters

- **RNGx:** RNG Instance
- **HTCFG:** can be values of 32 bits

Return values

- **None:**

Reference Manual to LL API cross reference:

- HTCR HTCFG LL_RNG_SetHealthConfig

LL_RNG_GetHealthConfig

Function name

__STATIC_INLINE uint32_t LL_RNG_GetHealthConfig (const RNG_TypeDef * RNGx)

Function description

Get RNG Health Test Control.

Parameters

- **RNGx:** RNG Instance

Return values

- **Return:** 32-bit RNG Health Test configuration

Reference Manual to LL API cross reference:

- HTCR HTCFG LL_RNG_GetHealthConfig

LL_RNG_Init

Function name

ErrorStatus LL_RNG_Init (RNG_TypeDef * RNGx, LL_RNG_InitTypeDef * RNG_InitStruct)

Function description

Initialize RNG registers according to the specified parameters in RNG_InitStruct.

Parameters

- **RNGx:** RNG Instance
- **RNG_InitStruct:** pointer to a LL_RNG_InitTypeDef structure that contains the configuration information for the specified RNG peripheral.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: RNG registers are initialized according to RNG_InitStruct content
  - ERROR: not applicable

LL_RNG_StructInit

Function name

void LL_RNG_StructInit (LL_RNG_InitTypeDef * RNG_InitStruct)

Function description

Set each LL_RNG_InitTypeDef field to default value.

Parameters

- **RNG_InitStruct:** pointer to a LL_RNG_InitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

LL_RNG_DeInit

Function name

ErrorStatus LL_RNG_DeInit (const RNG_TypeDef * RNGx)

Function description

De-initialize RNG registers (Registers restored to their default values).

Parameters

- **RNGx:** RNG Instance

Return values

- **An:** ErrorStatus enumeration value:
  – SUCCESS: RNG registers are de-initialized
  – ERROR: not applicable

115.3 RNG Firmware driver defines

The following section lists the various define and macros of the module.

115.3.1 RNG

RNG

Auto reset disable

LL_RNG_ARDIS_ENABLE

ARDIS enabled automatic reset to clear SECS bit

LL_RNG_ARDIS_DISABLE

ARDIS disabled no automatic reset to clear SECS bit

Clock Error Detection

LL_RNG_CED_ENABLE

Clock error detection enabled

LL_RNG_CED_DISABLE

Clock error detection disabled

Value used to configure an internal

LL_RNG_CLKDIV_BY_1

No clock division

LL_RNG_CLKDIV_BY_2

2 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_4

4 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_8

8 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_16

16 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_32

32 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_64

64 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_128

128 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_256

256 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_512

512 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_1024

1024 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_2048

2048 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_4096

4096 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_8192

8192 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_16384

16384 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_32768

32768 RNG clock cycles per internal RNG clock

Get Flags Defines

LL_RNG_SR_DRDY

Register contains valid random data

LL_RNG_SR_CECS

Clock error current status

LL_RNG_SR_SECS

Seed error current status

LL_RNG_SR_CEIS

Clock error interrupt status

LL_RNG_SR_SEIS

Seed error interrupt status

IT Defines

LL_RNG_CR_IE

RNG Interrupt enable

Common Write and read registers Macros

LL_RNG_WriteReg

Description:

- Write a value in RNG register.

Parameters:

- __INSTANCE__: RNG Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_RNG_ReadReg

Description:

- Read a value in RNG register.

Parameters:

- __INSTANCE__: RNG Instance
- __REG__: Register to be read

Return value:

- Register: value

NIST Compliance configuration

LL_RNG_NIST_COMPLIANT

Default NIST compliant configuration

LL_RNG_CUSTOM_NIST

Custom NIST configuration

116 LL RTC Generic Driver

116.1 RTC Firmware driver registers structures

116.1.1 LL_RTC_InitTypeDef

LL_RTC_InitTypeDef is defined in the stm32u5xx_ll_rtc.h

Data Fields

- ***uint32_t HourFormat***
- ***uint32_t AsynchPrescaler***
- ***uint32_t SynchPrescaler***

Field Documentation

- ***uint32_t LL_RTC_InitTypeDef::HourFormat***
  Specifies the RTC Hours Format. This parameter can be a value of ***RTC_LL_EC_HOURFORMAT***This feature can be modified afterwards using unitary function **LL_RTC_SetHourFormat()**.
- ***uint32_t LL_RTC_InitTypeDef::AsynchPrescaler***
  Specifies the RTC Asynchronous Predivider value. This parameter must be a number between Min_Data = 0x00 and Max_Data = 0x7FThis feature can be modified afterwards using unitary function **LL_RTC_SetAsynchPrescaler()**.
- ***uint32_t LL_RTC_InitTypeDef::SynchPrescaler***
  Specifies the RTC Synchronous Predivider value. This parameter must be a number between Min_Data = 0x00 and Max_Data = 0x7FFFThis feature can be modified afterwards using unitary function **LL_RTC_SetSynchPrescaler()**.

116.1.2 LL_RTC_TimeTypeDef

LL_RTC_TimeTypeDef is defined in the stm32u5xx_ll_rtc.h

Data Fields

- ***uint32_t TimeFormat***
- ***uint8_t Hours***
- ***uint8_t Minutes***
- ***uint8_t Seconds***

Field Documentation

- ***uint32_t LL_RTC_TimeTypeDef::TimeFormat***
  Specifies the RTC AM/PM Time. This parameter can be a value of ***RTC_LL_EC_TIME_FORMAT*** This feature can be modified afterwards using unitary function **LL_RTC_TIME_SetFormat()**.
- ***uint8_t LL_RTC_TimeTypeDef::Hours***
  Specifies the RTC Time Hours. This parameter must be a number between Min_Data = 0 and Max_Data = 12 if the **LL_RTC_TIME_FORMAT_PM** is selected. This parameter must be a number between Min_Data = 0 and Max_Data = 23 if the **LL_RTC_TIME_FORMAT_AM_OR_24** is selected. This feature can be modified afterwards using unitary function **LL_RTC_TIME_SetHour()**.
- ***uint8_t LL_RTC_TimeTypeDef::Minutes***
  Specifies the RTC Time Minutes. This parameter must be a number between Min_Data = 0 and Max_Data = 59 This feature can be modified afterwards using unitary function **LL_RTC_TIME_SetMinute()**.
- ***uint8_t LL_RTC_TimeTypeDef::Seconds***
  Specifies the RTC Time Seconds. This parameter must be a number between Min_Data = 0 and Max_Data = 59 This feature can be modified afterwards using unitary function **LL_RTC_TIME_SetSecond()**.

116.1.3 LL_RTC_DateTypeDef

LL_RTC_DateTypeDef is defined in the stm32u5xx_ll_rtc.h

Data Fields

- ***uint8_t WeekDay***
- ***uint8_t Month***
- ***uint8_t Day***

- ***uint8_t Year***

Field Documentation

- ***uint8_t LL_RTC_DateTypeDef::WeekDay***
  Specifies the RTC Date WeekDay. This parameter can be a value of ***RTC_LL_EC_WEEKDAY*** This feature can be modified afterwards using unitary function **LL_RTC_DATE_SetWeekDay()**.
- ***uint8_t LL_RTC_DateTypeDef::Month***
  Specifies the RTC Date Month. This parameter can be a value of ***RTC_LL_EC_MONTH*** This feature can be modified afterwards using unitary function **LL_RTC_DATE_SetMonth()**.
- ***uint8_t LL_RTC_DateTypeDef::Day***
  Specifies the RTC Date Day. This parameter must be a number between Min_Data = 1 and Max_Data = 31 This feature can be modified afterwards using unitary function **LL_RTC_DATE_SetDay()**.
- ***uint8_t LL_RTC_DateTypeDef::Year***
  Specifies the RTC Date Year. This parameter must be a number between Min_Data = 0 and Max_Data = 99 This feature can be modified afterwards using unitary function **LL_RTC_DATE_SetYear()**.

116.1.4 LL_RTC_AlarmTypeDef

LL_RTC_AlarmTypeDef is defined in the stm32u5xx_ll_rtc.h

Data Fields

- ***LL_RTC_TimeTypeDef AlarmTime***
- ***uint32_t AlarmMask***
- ***uint32_t AlarmDateWeekDaySel***
- ***uint8_t AlarmDateWeekDay***

Field Documentation

- ***LL_RTC_TimeTypeDef LL_RTC_AlarmTypeDef::AlarmTime***
  Specifies the RTC Alarm Time members.
- ***uint32_t LL_RTC_AlarmTypeDef::AlarmMask***
  Specifies the RTC Alarm Masks. This parameter can be a value of ***RTC_LL_EC_ALMA_MASK*** for ALARM A or ***RTC_LL_EC_ALMB_MASK*** for ALARM B. This feature can be modified afterwards using unitary function **LL_RTC_ALMA_SetMask()** for ALARM A or **LL_RTC_ALMB_SetMask()** for ALARM B
- ***uint32_t LL_RTC_AlarmTypeDef::AlarmDateWeekDaySel***
  Specifies the RTC Alarm is on day or WeekDay. This parameter can be a value of ***RTC_LL_EC_ALMA_WEEKDAY_SELECTION*** for ALARM A or ***RTC_LL_EC_ALMB_WEEKDAY_SELECTION*** for ALARM B This feature can be modified afterwards using unitary function **LL_RTC_ALMA_EnableWeekday()** or **LL_RTC_ALMA_DisableWeekday()** for ALARM A or **LL_RTC_ALMB_EnableWeekday()** or **LL_RTC_ALMB_DisableWeekday()** for ALARM B
- ***uint8_t LL_RTC_AlarmTypeDef::AlarmDateWeekDay***
  Specifies the RTC Alarm Day/WeekDay. If AlarmDateWeekDaySel set to day, this parameter must be a number between Min_Data = 1 and Max_Data = 31. This feature can be modified afterwards using unitary function **LL_RTC_ALMA_SetDay()** for ALARM A or **LL_RTC_ALMB_SetDay()** for ALARM B. If AlarmDateWeekDaySel set to Weekday, this parameter can be a value of ***RTC_LL_EC_WEEKDAY***. This feature can be modified afterwards using unitary function **LL_RTC_ALMA_SetWeekDay()** for ALARM A or **LL_RTC_ALMB_SetWeekDay()** for ALARM B.

116.2 RTC Firmware driver API description

The following section lists the various functions of the RTC library.

116.2.1 Detailed description of functions

LL_RTC_SetHourFormat

Function name

__STATIC_INLINE void LL_RTC_SetHourFormat (RTC_TypeDef * RTCx, uint32_t HourFormat)

Function description

Set Hours format (24 hour/day or AM/PM hour format)

Parameters

- **RTCx:** RTC Instance
- **HourFormat:** This parameter can be one of the following values:
  – LL_RTC_HOURFORMAT_24HOUR
  – LL_RTC_HOURFORMAT_AMPM

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function)

Reference Manual to LL API cross reference:

- RTC_CR FMT LL_RTC_SetHourFormat

LL_RTC_GetHourFormat

Function name

__STATIC_INLINE uint32_t LL_RTC_GetHourFormat (const RTC_TypeDef * RTCx)

Function description

Get Hours format (24 hour/day or AM/PM hour format)

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_RTC_HOURFORMAT_24HOUR
  – LL_RTC_HOURFORMAT_AMPM

Reference Manual to LL API cross reference:

- RTC_CR FMT LL_RTC_GetHourFormat

LL_RTC_SetAlarmOutEvent

Function name

__STATIC_INLINE void LL_RTC_SetAlarmOutEvent (RTC_TypeDef * RTCx, uint32_t AlarmOutput)

Function description

Select the flag to be routed to RTC_ALARM output.

Parameters

- **RTCx:** RTC Instance
- **AlarmOutput:** This parameter can be one of the following values:
  – LL_RTC_ALARMOUT_DISABLE
  – LL_RTC_ALARMOUT_ALMA
  – LL_RTC_ALARMOUT_ALMB
  – LL_RTC_ALARMOUT_WAKEUP

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR OSEL LL_RTC_SetAlarmOutEvent

LL_RTC_GetAlarmOutEvent

Function name

__STATIC_INLINE uint32_t LL_RTC_GetAlarmOutEvent (const RTC_TypeDef * RTCx)

Function description

Get the flag to be routed to RTC_ALARM output.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_ALARMOUT_DISABLE
  - LL_RTC_ALARMOUT_ALMA
  - LL_RTC_ALARMOUT_ALMB
  - LL_RTC_ALARMOUT_WAKEUP

Reference Manual to LL API cross reference:

- RTC_CR OSEL LL_RTC_GetAlarmOutEvent

LL_RTC_SetAlarmOutputType

Function name

__STATIC_INLINE void LL_RTC_SetAlarmOutputType (RTC_TypeDef * RTCx, uint32_t Output)

Function description

Set RTC_ALARM output type (ALARM in push-pull or open-drain output)

Parameters

- **RTCx:** RTC Instance
- **Output:** This parameter can be one of the following values:
  - LL_RTC_ALARM_OUTPUTTYPE_OPENDRAIN
  - LL_RTC_ALARM_OUTPUTTYPE_PUSHPULL

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_CR TAMPALRM_TYPE LL_RTC_SetAlarmOutputType

LL_RTC_GetAlarmOutputType

Function name

__STATIC_INLINE uint32_t LL_RTC_GetAlarmOutputType (const RTC_TypeDef * RTCx)

Function description

Get RTC_ALARM output type (ALARM in push-pull or open-drain output)

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_RTC_ALARM_OUTPUTTYPE_OPENDRAIN
  – LL_RTC_ALARM_OUTPUTTYPE_PUSHPULL

Reference Manual to LL API cross reference:

- RTC_CR TAMPALRM_TYPE LL_RTC_SetAlarmOutputType

LL_RTC_EnableInitMode

Function name

__STATIC_INLINE void LL_RTC_EnableInitMode (RTC_TypeDef * RTCx)

Function description

Enable initialization mode.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Initialization mode is used to program time and date register (RTC_TR and RTC_DR) and prescaler register (RTC_PRER). Counters are stopped and start counting from the new value when INIT is reset.

Reference Manual to LL API cross reference:

- RTC_ICSR INIT LL_RTC_EnableInitMode

LL_RTC_DisableInitMode

Function name

__STATIC_INLINE void LL_RTC_DisableInitMode (RTC_TypeDef * RTCx)

Function description

Disable initialization mode (Free running mode)

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ICSR INIT LL_RTC_DisableInitMode

LL_RTC_SetBinaryMode

Function name

__STATIC_INLINE void LL_RTC_SetBinaryMode (RTC_TypeDef * RTCx, uint32_t BinaryMode)

Function description

Set Binary mode (Sub Second Register)

Parameters

- **RTCx:** RTC Instance
- **BinaryMode:** can be one of the following values:
  – LL_RTC_BINARY_NONE
  – LL_RTC_BINARY_ONLY
  – LL_RTC_BINARY_MIX

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function).

Reference Manual to LL API cross reference:

- RTC_ICSR BIN LL_RTC_SetBinaryMode

LL_RTC_GetBinaryMode

Function name

__STATIC_INLINE uint32_t LL_RTC_GetBinaryMode (const RTC_TypeDef * RTCx)

Function description

Get Binary mode (Sub Second Register)

Parameters

- **RTCx:** RTC Instance

Return values

- **This:** parameter can be one of the following values:
  – LL_RTC_BINARY_NONE
  – LL_RTC_BINARY_ONLY
  – LL_RTC_BINARY_MIX
- **None:**

Reference Manual to LL API cross reference:

- RTC_ICSR BIN LL_RTC_GetBinaryMode

LL_RTC_SetBinMixBCDU

Function name

__STATIC_INLINE void LL_RTC_SetBinMixBCDU (RTC_TypeDef * RTCx, uint32_t BinMixBcdU)

Function description

Set Binary Mix mode BCDU.

Parameters

- **RTCx:** RTC Instance
- **BinMixBcdU:** can be one of the following values:
  – LL_RTC_BINARY_MIX_BCDU_0
  – LL_RTC_BINARY_MIX_BCDU_1
  – LL_RTC_BINARY_MIX_BCDU_2
  – LL_RTC_BINARY_MIX_BCDU_3
  – LL_RTC_BINARY_MIX_BCDU_4
  – LL_RTC_BINARY_MIX_BCDU_5
  – LL_RTC_BINARY_MIX_BCDU_6
  – LL_RTC_BINARY_MIX_BCDU_7

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function).

Reference Manual to LL API cross reference:

- RTC_ICSR BCDU LL_RTC_SetBinMixBCDU

LL_RTC_GetBinMixBCDU

Function name

__STATIC_INLINE uint32_t LL_RTC_GetBinMixBCDU (const RTC_TypeDef * RTCx)

Function description

Get Binary Mix mode BCDU.

Parameters

- **RTCx:** RTC Instance

Return values

- **This:** parameter can be one of the following values:
  – LL_RTC_BINARY_MIX_BCDU_0
  – LL_RTC_BINARY_MIX_BCDU_1
  – LL_RTC_BINARY_MIX_BCDU_2
  – LL_RTC_BINARY_MIX_BCDU_3
  – LL_RTC_BINARY_MIX_BCDU_4
  – LL_RTC_BINARY_MIX_BCDU_5
  – LL_RTC_BINARY_MIX_BCDU_6
  – LL_RTC_BINARY_MIX_BCDU_7
- **None:**

Reference Manual to LL API cross reference:

- RTC_ICSR BCDU LL_RTC_GetBinMixBCDU

LL_RTC_SetOutputPolarity

Function name

__STATIC_INLINE void LL_RTC_SetOutputPolarity (RTC_TypeDef * RTCx, uint32_t Polarity)

Function description

Set Output polarity (pin is low when ALRAF/ALRBF/WUTF is asserted)

Parameters

- **RTCx:** RTC Instance
- **Polarity:** This parameter can be one of the following values:
  – LL_RTC_OUTPUTPOLARITY_PIN_HIGH
  – LL_RTC_OUTPUTPOLARITY_PIN_LOW

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR POL LL_RTC_SetOutputPolarity

LL_RTC_GetOutputPolarity

Function name

__STATIC_INLINE uint32_t LL_RTC_GetOutputPolarity (const RTC_TypeDef * RTCx)

Function description

Get Output polarity.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_RTC_OUTPUTPOLARITY_PIN_HIGH
  – LL_RTC_OUTPUTPOLARITY_PIN_LOW

Reference Manual to LL API cross reference:

- RTC_CR POL LL_RTC_GetOutputPolarity

LL_RTC_EnableShadowRegBypass

Function name

__STATIC_INLINE void LL_RTC_EnableShadowRegBypass (RTC_TypeDef * RTCx)

Function description

Enable Bypass the shadow registers.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR BYPSHAD LL_RTC_EnableShadowRegBypass

LL_RTC_DisableShadowRegBypass

Function name

__STATIC_INLINE void LL_RTC_DisableShadowRegBypass (RTC_TypeDef * RTCx)

Function description

Disable Bypass the shadow registers.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_CR BYPSHAD LL_RTC_DisableShadowRegBypass

LL_RTC_IsShadowRegBypassEnabled

Function name

__STATIC_INLINE uint32_t LL_RTC_IsShadowRegBypassEnabled (const RTC_TypeDef * RTCx)

Function description

Check if Shadow registers bypass is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CR BYPSHAD LL_RTC_IsShadowRegBypassEnabled

LL_RTC_EnableRefClock

Function name

__STATIC_INLINE void LL_RTC_EnableRefClock (RTC_TypeDef * RTCx)

Function description

Enable RTC_REFIN reference clock detection (50 or 60 Hz)

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function)

Reference Manual to LL API cross reference:

- RTC_CR REFCKON LL_RTC_EnableRefClock

LL_RTC_DisableRefClock

Function name

__STATIC_INLINE void LL_RTC_DisableRefClock (RTC_TypeDef * RTCx)

Function description

Disable RTC_REFIN reference clock detection (50 or 60 Hz)

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function)

Reference Manual to LL API cross reference:

- RTC_CR REFCKON LL_RTC_DisableRefClock

LL_RTC_SetAsynchPrescaler

Function name

__STATIC_INLINE void LL_RTC_SetAsynchPrescaler (RTC_TypeDef * RTCx, uint32_t AsynchPrescaler)

Function description

Set Asynchronous prescaler factor.

Parameters

- **RTCx:** RTC Instance
- **AsynchPrescaler:** Value between Min_Data = 0 and Max_Data = 0x7F

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_PRER PREDIV_A LL_RTC_SetAsynchPrescaler

LL_RTC_SetSynchPrescaler

Function name

__STATIC_INLINE void LL_RTC_SetSynchPrescaler (RTC_TypeDef * RTCx, uint32_t SynchPrescaler)

Function description

Set Synchronous prescaler factor.

Parameters

- **RTCx:** RTC Instance
- **SynchPrescaler:** Value between Min_Data = 0 and Max_Data = 0x7FFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_PRER PREDIV_S LL_RTC_SetSynchPrescaler

LL_RTC_GetAsynchPrescaler

Function name

__STATIC_INLINE uint32_t LL_RTC_GetAsynchPrescaler (const RTC_TypeDef * RTCx)

Function description

Get Asynchronous prescaler factor.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data = 0 and Max_Data = 0x7F

Reference Manual to LL API cross reference:

- RTC_PRER PREDIV_A LL_RTC_GetAsynchPrescaler

LL_RTC_GetSynchPrescaler

Function name

__STATIC_INLINE uint32_t LL_RTC_GetSynchPrescaler (const RTC_TypeDef * RTCx)

Function description

Get Synchronous prescaler factor.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data = 0 and Max_Data = 0x7FFF

Reference Manual to LL API cross reference:

- RTC_PRER PREDIV_S LL_RTC_GetSynchPrescaler

LL_RTC_EnableWriteProtection

Function name

__STATIC_INLINE void LL_RTC_EnableWriteProtection (RTC_TypeDef * RTCx)

Function description

Enable the write protection for RTC registers.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_WPR KEY LL_RTC_EnableWriteProtection

LL_RTC_DisableWriteProtection

Function name

__STATIC_INLINE void LL_RTC_DisableWriteProtection (RTC_TypeDef * RTCx)

Function description

Disable the write protection for RTC registers.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_WPR KEY LL_RTC_DisableWriteProtection

LL_RTC_EnableTamperOutput

Function name

__STATIC_INLINE void LL_RTC_EnableTamperOutput (RTC_TypeDef * RTCx)

Function description

Enable tamper output.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- When the tamper output is enabled, all external and internal tamper flags are ORed and routed to the TAMPALRM output.

Reference Manual to LL API cross reference:

- RTC_CR TAMPOE LL_RTC_EnableTamperOutput

LL_RTC_DisableTamperOutput

Function name

__STATIC_INLINE void LL_RTC_DisableTamperOutput (RTC_TypeDef * RTCx)

Function description

Disable tamper output.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_CR TAMPOE LL_RTC_DisableTamperOutput

LL_RTC_IsTamperOutputEnabled

Function name

__STATIC_INLINE uint32_t LL_RTC_IsTamperOutputEnabled (const RTC_TypeDef * RTCx)

Function description

Check if tamper output is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CR TAMPOE LL_RTC_IsTamperOutputEnabled

LL_RTC_EnableAlarmPullUp

Function name

__STATIC_INLINE void LL_RTC_EnableAlarmPullUp (RTC_TypeDef * RTCx)

Function description

Enable internal pull-up in output mode.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_CR TAMPALRM_PU LL_RTC_EnableAlarmPullUp

LL_RTC_DisableAlarmPullUp

Function name

__STATIC_INLINE void LL_RTC_DisableAlarmPullUp (RTC_TypeDef * RTCx)

Function description

Disable internal pull-up in output mode.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_CR TAMPALRM_PU LL_RTC_EnableAlarmPullUp

LL_RTC_IsAlarmPullUpEnabled

Function name

__STATIC_INLINE uint32_t LL_RTC_IsAlarmPullUpEnabled (const RTC_TypeDef * RTCx)

Function description

Check if internal pull-up in output mode is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CR TAMPALRM_PU LL_RTC_IsAlarmPullUpEnabled

LL_RTC_EnableOutput2

Function name

__STATIC_INLINE void LL_RTC_EnableOutput2 (RTC_TypeDef * RTCx)

Function description

Enable RTC_OUT2 output.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- RTC_OUT2 mapping depends on both OSEL (LL_RTC_SetAlarmOutEvent) and COE (LL_RTC_CAL_SetOutputFreq) settings.
- RTC_OUT2 is not available ins VBAT mode.

Reference Manual to LL API cross reference:

- RTC_CR OUT2EN LL_RTC_EnableOutput2

LL_RTC_DisableOutput2

Function name

__STATIC_INLINE void LL_RTC_DisableOutput2 (RTC_TypeDef * RTCx)

Function description

Disable RTC_OUT2 output.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_CR OUT2EN LL_RTC_DisableOutput2

LL_RTC_IsOutput2Enabled

Function name

__STATIC_INLINE uint32_t LL_RTC_IsOutput2Enabled (const RTC_TypeDef * RTCx)

Function description

Check if RTC_OUT2 output is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CR OUT2EN LL_RTC_IsOutput2Enabled

LL_RTC_TIME_SetFormat

Function name

__STATIC_INLINE void LL_RTC_TIME_SetFormat (RTC_TypeDef * RTCx, uint32_t TimeFormat)

Function description

Set time format (AM/24-hour or PM notation)

Parameters

- **RTCx:** RTC Instance
- **TimeFormat:** This parameter can be one of the following values:
  – LL_RTC_TIME_FORMAT_AM_OR_24
  – LL_RTC_TIME_FORMAT_PM

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function)

Reference Manual to LL API cross reference:

- RTC_TR PM LL_RTC_TIME_SetFormat

LL_RTC_TIME_GetFormat

Function name

__STATIC_INLINE uint32_t LL_RTC_TIME_GetFormat (const RTC_TypeDef * RTCx)

Function description

Get time format (AM or PM notation)

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_RTC_TIME_FORMAT_AM_OR_24
  – LL_RTC_TIME_FORMAT_PM

Notes

- if RTC shadow registers are not bypassed (BYPSHAD=0), need to check if RSF flag is set before reading this bit
- Read either RTC_SSR or RTC_TR locks the values in the higher-order calendar shadow registers until RTC_DR is read (LL_RTC_ReadReg(RTC, DR)).

Reference Manual to LL API cross reference:

- RTC_TR PM LL_RTC_TIME_GetFormat

LL_RTC_TIME_SetHour

Function name

__STATIC_INLINE void LL_RTC_TIME_SetHour (RTC_TypeDef * RTCx, uint32_t Hours)

Function description

Set Hours in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Hours:** Value between Min_Data=0x01 and Max_Data=0x12 or between Min_Data=0x00 and Max_Data=0x23

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function)
- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert hour from binary to BCD format

Reference Manual to LL API cross reference:

- RTC_TR HT LL_RTC_TIME_SetHour
- RTC_TR HU LL_RTC_TIME_SetHour

LL_RTC_TIME_GetHour

Function name

__STATIC_INLINE uint32_t LL_RTC_TIME_GetHour (const RTC_TypeDef * RTCx)

Function description

Get Hours in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x01 and Max_Data=0x12 or between Min_Data=0x00 and Max_Data=0x23

Notes

- if RTC shadow registers are not bypassed (BYPSHAD=0), need to check if RSF flag is set before reading this bit
- Read either RTC_SSR or RTC_TR locks the values in the higher-order calendar shadow registers until RTC_DR is read (LL_RTC_ReadReg(RTC, DR)).
- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert hour from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_TR HT LL_RTC_TIME_GetHour
- RTC_TR HU LL_RTC_TIME_GetHour

LL_RTC_TIME_SetMinute

Function name

__STATIC_INLINE void LL_RTC_TIME_SetMinute (RTC_TypeDef * RTCx, uint32_t Minutes)

Function description

Set Minutes in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Minutes:** Value between Min_Data=0x00 and Max_Data=0x59

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function)
- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Minutes from binary to BCD format

Reference Manual to LL API cross reference:

- RTC_TR MNT LL_RTC_TIME_SetMinute
- RTC_TR MNU LL_RTC_TIME_SetMinute

LL_RTC_TIME_GetMinute

Function name

__STATIC_INLINE uint32_t LL_RTC_TIME_GetMinute (const RTC_TypeDef * RTCx)

Function description

Get Minutes in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x59

Notes

- if RTC shadow registers are not bypassed (BYPSHAD=0), need to check if RSF flag is set before reading this bit
- Read either RTC_SSR or RTC_TR locks the values in the higher-order calendar shadow registers until RTC_DR is read (LL_RTC_ReadReg(RTC, DR)).
- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert minute from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_TR MNT LL_RTC_TIME_GetMinute
- RTC_TR MNU LL_RTC_TIME_GetMinute

LL_RTC_TIME_SetSecond

Function name

__STATIC_INLINE void LL_RTC_TIME_SetSecond (RTC_TypeDef * RTCx, uint32_t Seconds)

Function description

Set Seconds in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Seconds:** Value between Min_Data=0x00 and Max_Data=0x59

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function)
- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Seconds from binary to BCD format

Reference Manual to LL API cross reference:

- RTC_TR ST LL_RTC_TIME_SetSecond
- RTC_TR SU LL_RTC_TIME_SetSecond

LL_RTC_TIME_GetSecond

Function name

__STATIC_INLINE uint32_t LL_RTC_TIME_GetSecond (const RTC_TypeDef * RTCx)

Function description

Get Seconds in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x59

Notes

- if RTC shadow registers are not bypassed (BYPSHAD=0), need to check if RSF flag is set before reading this bit
- Read either RTC_SSR or RTC_TR locks the values in the higher-order calendar shadow registers until RTC_DR is read (LL_RTC_ReadReg(RTC, DR)).
- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Seconds from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_TR ST LL_RTC_TIME_GetSecond
- RTC_TR SU LL_RTC_TIME_GetSecond

LL_RTC_TIME_Config

Function name

__STATIC_INLINE void LL_RTC_TIME_Config (RTC_TypeDef * RTCx, uint32_t Format12_24, uint32_t Hours, uint32_t Minutes, uint32_t Seconds)

Function description

Set time (hour, minute and second) in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Format12_24:** This parameter can be one of the following values:
  - LL_RTC_TIME_FORMAT_AM_OR_24
  - LL_RTC_TIME_FORMAT_PM
- **Hours:** Value between Min_Data=0x01 and Max_Data=0x12 or between Min_Data=0x00 and Max_Data=0x23
- **Minutes:** Value between Min_Data=0x00 and Max_Data=0x59
- **Seconds:** Value between Min_Data=0x00 and Max_Data=0x59

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function)
- TimeFormat and Hours should follow the same format

Reference Manual to LL API cross reference:

- RTC_TR PM LL_RTC_TIME_Config
- RTC_TR HT LL_RTC_TIME_Config
- RTC_TR HU LL_RTC_TIME_Config
- RTC_TR MNT LL_RTC_TIME_Config
- RTC_TR MNU LL_RTC_TIME_Config
- RTC_TR ST LL_RTC_TIME_Config
- RTC_TR SU LL_RTC_TIME_Config

LL_RTC_TIME_Get

Function name

__STATIC_INLINE uint32_t LL_RTC_TIME_Get (const RTC_TypeDef * RTCx)

Function description

Get time (hour, minute and second) in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Combination:** of hours, minutes and seconds (Format: 0x00HHMMSS).

Notes

- if RTC shadow registers are not bypassed (BYPSHAD=0), need to check if RSF flag is set before reading this bit
- Read either RTC_SSR or RTC_TR locks the values in the higher-order calendar shadow registers until RTC_DR is read (LL_RTC_ReadReg(RTC, DR)).
- helper macros __LL_RTC_GET_HOUR, __LL_RTC_GET_MINUTE and __LL_RTC_GET_SECOND are available to get independently each parameter.

Reference Manual to LL API cross reference:

- RTC_TR HT LL_RTC_TIME_Get
- RTC_TR HU LL_RTC_TIME_Get
- RTC_TR MNT LL_RTC_TIME_Get
- RTC_TR MNU LL_RTC_TIME_Get
- RTC_TR ST LL_RTC_TIME_Get
- RTC_TR SU LL_RTC_TIME_Get

LL_RTC_TIME_EnableDayLightStore

Function name

__STATIC_INLINE void LL_RTC_TIME_EnableDayLightStore (RTC_TypeDef * RTCx)

Function description

Memorize whether the daylight saving time change has been performed.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR BKP LL_RTC_TIME_EnableDayLightStore

LL_RTC_TIME_DisableDayLightStore

Function name

__STATIC_INLINE void LL_RTC_TIME_DisableDayLightStore (RTC_TypeDef * RTCx)

Function description

Disable memorization whether the daylight saving time change has been performed.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR BKP LL_RTC_TIME_DisableDayLightStore

LL_RTC_TIME_IsDayLightStoreEnabled

Function name

__STATIC_INLINE uint32_t LL_RTC_TIME_IsDayLightStoreEnabled (const RTC_TypeDef * RTCx)

Function description

Check if RTC Day Light Saving stored operation has been enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CR BKP LL_RTC_TIME_IsDayLightStoreEnabled

LL_RTC_TIME_DecHour

Function name

__STATIC_INLINE void LL_RTC_TIME_DecHour (RTC_TypeDef * RTCx)

Function description

Subtract 1 hour (winter time change)

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR SUB1H LL_RTC_TIME_DecHour

LL_RTC_TIME_IncHour

Function name

__STATIC_INLINE void LL_RTC_TIME_IncHour (RTC_TypeDef * RTCx)

Function description

Add 1 hour (summer time change)

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ADD1H LL_RTC_TIME_IncHour

LL_RTC_TIME_GetSubSecond

Function name

__STATIC_INLINE uint32_t LL_RTC_TIME_GetSubSecond (const RTC_TypeDef * RTCx)

Function description

Get Sub second value in the synchronous prescaler counter.

Parameters

- **RTCx:** RTC Instance

Return values

- **If:** binary mode is none, Value between Min_Data=0x0 and Max_Data=0x7FFF else Value between Min_Data=0x0 and Max_Data=0xFFFFFFFF

Notes

- You can use both SubSeconds value and SecondFraction (PREDIV_S through LL_RTC_GetSynchPrescaler function) terms returned to convert Calendar SubSeconds value in second fraction ratio with time unit following generic formula: ==> Seconds fraction ratio * time_unit= [(SecondFraction-SubSeconds)/(SecondFraction+1)] * time_unit This conversion can be performed only if no shift operation is pending (ie. SHFP=0) when PREDIV_S >= SS.

Reference Manual to LL API cross reference:

- RTC_SSR SS LL_RTC_TIME_GetSubSecond

LL_RTC_TIME_Synchronize

Function name

__STATIC_INLINE void LL_RTC_TIME_Synchronize (RTC_TypeDef * RTCx, uint32_t ShiftSecond, uint32_t Fraction)

Function description

Synchronize to a remote clock with a high degree of precision.

Parameters

- **RTCx:** RTC Instance
- **ShiftSecond:** This parameter can be one of the following values:
  – LL_RTC_SHIFT_SECOND_DELAY
  – LL_RTC_SHIFT_SECOND_ADVANCE
- **Fraction:** Number of Seconds Fractions (any value from 0 to 0x7FFF)

Return values

- **None:**

Notes

- This operation effectively subtracts from (delays) or advance the clock of a fraction of a second.
- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- When REFCKON is set, firmware must not write to Shift control register.

Reference Manual to LL API cross reference:

- RTC_SHIFTR ADD1S LL_RTC_TIME_Synchronize
- RTC_SHIFTR SUBFS LL_RTC_TIME_Synchronize

LL_RTC_DATE_SetYear

Function name

__STATIC_INLINE void LL_RTC_DATE_SetYear (RTC_TypeDef * RTCx, uint32_t Year)

Function description

Set Year in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Year:** Value between Min_Data=0x00 and Max_Data=0x99

Return values

- **None:**

Notes

- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Year from binary to BCD format

Reference Manual to LL API cross reference:

- RTC_DR YT LL_RTC_DATE_SetYear

LL_RTC_DATE_GetYear

Function name

__STATIC_INLINE uint32_t LL_RTC_DATE_GetYear (const RTC_TypeDef * RTCx)

Function description

Get Year in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x99

Notes

- if RTC shadow registers are not bypassed (BYPSHAD=0), need to check if RSF flag is set before reading this bit
- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Year from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_DR YT LL_RTC_DATE_GetYear
- RTC_DR YU LL_RTC_DATE_GetYear

LL_RTC_DATE_SetWeekDay

Function name

__STATIC_INLINE void LL_RTC_DATE_SetWeekDay (RTC_TypeDef * RTCx, uint32_t WeekDay)

Function description

Set Week day.

Parameters

- **RTCx:** RTC Instance
- **WeekDay:** This parameter can be one of the following values:
  – LL_RTC_WEEKDAY_MONDAY
  – LL_RTC_WEEKDAY_TUESDAY
  – LL_RTC_WEEKDAY_WEDNESDAY
  – LL_RTC_WEEKDAY_THURSDAY
  – LL_RTC_WEEKDAY_FRIDAY
  – LL_RTC_WEEKDAY_SATURDAY
  – LL_RTC_WEEKDAY_SUNDAY

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_DR WDU LL_RTC_DATE_SetWeekDay

LL_RTC_DATE_GetWeekDay

Function name

__STATIC_INLINE uint32_t LL_RTC_DATE_GetWeekDay (const RTC_TypeDef * RTCx)

Function description

Get Week day.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_RTC_WEEKDAY_MONDAY
  – LL_RTC_WEEKDAY_TUESDAY
  – LL_RTC_WEEKDAY_WEDNESDAY
  – LL_RTC_WEEKDAY_THURSDAY
  – LL_RTC_WEEKDAY_FRIDAY
  – LL_RTC_WEEKDAY_SATURDAY
  – LL_RTC_WEEKDAY_SUNDAY

Notes

- if RTC shadow registers are not bypassed (BYPSHAD=0), need to check if RSF flag is set before reading this bit

- RTC_DR WDU LL_RTC_DATE_GetWeekDay

LL_RTC_DATE_SetMonth

Function name

__STATIC_INLINE void LL_RTC_DATE_SetMonth (RTC_TypeDef * RTCx, uint32_t Month)

Function description

Set Month in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Month:** This parameter can be one of the following values:
  - LL_RTC_MONTH_JANUARY
  - LL_RTC_MONTH_FEBRUARY
  - LL_RTC_MONTH_MARCH
  - LL_RTC_MONTH_APRIL
  - LL_RTC_MONTH_MAY
  - LL_RTC_MONTH_JUNE
  - LL_RTC_MONTH_JULY
  - LL_RTC_MONTH_AUGUST
  - LL_RTC_MONTH_SEPTEMBER
  - LL_RTC_MONTH_OCTOBER
  - LL_RTC_MONTH_NOVEMBER
  - LL_RTC_MONTH_DECEMBER

Return values

- **None:**

Notes

- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Month from binary to BCD format

Reference Manual to LL API cross reference:

LL_RTC_DATE_Config

Function name

__STATIC_INLINE void LL_RTC_DATE_Config (RTC_TypeDef * RTCx, uint32_t WeekDay, uint32_t Day, uint32_t Month, uint32_t Year)

Function description

Set date (WeekDay, Day, Month and Year) in BCD format.

Parameters

- **RTCx:** RTC Instance
- **WeekDay:** This parameter can be one of the following values:
  – LL_RTC_WEEKDAY_MONDAY
  – LL_RTC_WEEKDAY_TUESDAY
  – LL_RTC_WEEKDAY_WEDNESDAY
  – LL_RTC_WEEKDAY_THURSDAY
  – LL_RTC_WEEKDAY_FRIDAY
  – LL_RTC_WEEKDAY_SATURDAY
  – LL_RTC_WEEKDAY_SUNDAY
- **Day:** Value between Min_Data=0x01 and Max_Data=0x31
- **Month:** This parameter can be one of the following values:
  – LL_RTC_MONTH_JANUARY
  – LL_RTC_MONTH_FEBRUARY
  – LL_RTC_MONTH_MARCH
  – LL_RTC_MONTH_APRIL
  – LL_RTC_MONTH_MAY
  – LL_RTC_MONTH_JUNE
  – LL_RTC_MONTH_JULY
  – LL_RTC_MONTH_AUGUST
  – LL_RTC_MONTH_SEPTEMBER
  – LL_RTC_MONTH_OCTOBER
  – LL_RTC_MONTH_NOVEMBER
  – LL_RTC_MONTH_DECEMBER
- **Year:** Value between Min_Data=0x00 and Max_Data=0x99

Return values

- **None:**

LL_RTC_DATE_Get

Function name

__STATIC_INLINE uint32_t LL_RTC_DATE_Get (const RTC_TypeDef * RTCx)

Function description

Get date (WeekDay, Day, Month and Year) in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Combination:** of WeekDay, Day, Month and Year (Format: 0xWWDDMMYY).

Notes

- if RTC shadow registers are not bypassed (BYPSHAD=0), need to check if RSF flag is set before reading this bit
- helper macros __LL_RTC_GET_WEEKDAY, __LL_RTC_GET_YEAR, __LL_RTC_GET_MONTH, and __LL_RTC_GET_DAY are available to get independently each parameter.

LL_RTC_ALMA_Enable

Function name

__STATIC_INLINE void LL_RTC_ALMA_Enable (RTC_TypeDef * RTCx)

Function description

Enable Alarm A.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ALRAE LL_RTC_ALMA_Enable

LL_RTC_ALMA_Disable

Function name

__STATIC_INLINE void LL_RTC_ALMA_Disable (RTC_TypeDef * RTCx)

Function description

Disable Alarm A.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ALRAE LL_RTC_ALMA_Disable

LL_RTC_ALMA_SetMask

Function name

__STATIC_INLINE void LL_RTC_ALMA_SetMask (RTC_TypeDef * RTCx, uint32_t Mask)

Function description

Specify the Alarm A masks.

Parameters

- **RTCx:** RTC Instance
- **Mask:** This parameter can be a combination of the following values:
  – LL_RTC_ALMA_MASK_NONE
  – LL_RTC_ALMA_MASK_DATEWEEKDAY
  – LL_RTC_ALMA_MASK_HOURS
  – LL_RTC_ALMA_MASK_MINUTES
  – LL_RTC_ALMA_MASK_SECONDS
  – LL_RTC_ALMA_MASK_ALL

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ALRMAR MSK4 LL_RTC_ALMA_SetMask
- RTC_ALRMAR MSK3 LL_RTC_ALMA_SetMask
- RTC_ALRMAR MSK2 LL_RTC_ALMA_SetMask

LL_RTC_ALMA_EnableWeekday

Function name

__STATIC_INLINE void LL_RTC_ALMA_EnableWeekday (RTC_TypeDef * RTCx)

Function description

Enable AlarmA Week day selection (DU[3:0] represents the week day.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ALRMAR WDSEL LL_RTC_ALMA_EnableWeekday

LL_RTC_ALMA_DisableWeekday

Function name

__STATIC_INLINE void LL_RTC_ALMA_DisableWeekday (RTC_TypeDef * RTCx)

Function description

Disable AlarmA Week day selection (DU[3:0] represents the date)

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ALRMAR WDSEL LL_RTC_ALMA_DisableWeekday

LL_RTC_ALMA_SetDay

Function name

__STATIC_INLINE void LL_RTC_ALMA_SetDay (RTC_TypeDef * RTCx, uint32_t Day)

Function description

Set ALARM A Day in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Day:** Value between Min_Data=0x01 and Max_Data=0x31

Return values

- **None:**

Notes

- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Day from binary to BCD format

LL_RTC_ALMA_SetTimeFormat

Function name

__STATIC_INLINE void LL_RTC_ALMA_SetTimeFormat (RTC_TypeDef * RTCx, uint32_t TimeFormat)

Function description

Set Alarm A time format (AM/24-hour or PM notation)

Parameters

- **RTCx:** RTC Instance
- **TimeFormat:** This parameter can be one of the following values:
  – LL_RTC_ALMA_TIME_FORMAT_AM
  – LL_RTC_ALMA_TIME_FORMAT_PM

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ALRMAR PM LL_RTC_ALMA_SetTimeFormat

LL_RTC_ALMA_GetTimeFormat

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMA_GetTimeFormat (const RTC_TypeDef * RTCx)

Function description

Get Alarm A time format (AM or PM notation)

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_ALMA_TIME_FORMAT_AM
  - LL_RTC_ALMA_TIME_FORMAT_PM

Reference Manual to LL API cross reference:

- RTC_ALRMAR PM LL_RTC_ALMA_GetTimeFormat

LL_RTC_ALMA_SetHour

Function name

__STATIC_INLINE void LL_RTC_ALMA_SetHour (RTC_TypeDef * RTCx, uint32_t Hours)

Function description

Set ALARM A Hours in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Hours:** Value between Min_Data=0x01 and Max_Data=0x12 or between Min_Data=0x00 and Max_Data=0x23

Return values

- **None:**

Notes

- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Hours from binary to BCD format

Reference Manual to LL API cross reference:

- RTC_ALRMAR HT LL_RTC_ALMA_SetHour

LL_RTC_ALMB_EnableWeekday

Function name

__STATIC_INLINE void LL_RTC_ALMB_EnableWeekday (RTC_TypeDef * RTCx)

Function description

Enable AlarmB Week day selection (DU[3:0] represents the week day.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ALRMBR WDSEL LL_RTC_ALMB_EnableWeekday

LL_RTC_ALMB_DisableWeekday

Function name

__STATIC_INLINE void LL_RTC_ALMB_DisableWeekday (RTC_TypeDef * RTCx)

Function description

Disable AlarmB Week day selection (DU[3:0] represents the date)

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ALRMBR WDSEL LL_RTC_ALMB_DisableWeekday

LL_RTC_ALMB_SetDay

Function name

__STATIC_INLINE void LL_RTC_ALMB_SetDay (RTC_TypeDef * RTCx, uint32_t Day)

Function description

Set ALARM B Day in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Day:** Value between Min_Data=0x01 and Max_Data=0x31

Return values

- **None:**

Notes

- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Day from binary to BCD format

Reference Manual to LL API cross reference:

- RTC_ALRMBR DT LL_RTC_ALMB_SetDay
- RTC_ALRMBR DU LL_RTC_ALMB_SetDay

LL_RTC_ALMB_GetDay

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMB_GetDay (const RTC_TypeDef * RTCx)

Function description

Get ALARM B Day in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x01 and Max_Data=0x31

Notes

- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Day from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_ALRMBR DT LL_RTC_ALMB_GetDay
- RTC_ALRMBR DU LL_RTC_ALMB_GetDay

LL_RTC_ALMB_SetWeekDay

Function name

__STATIC_INLINE void LL_RTC_ALMB_SetWeekDay (RTC_TypeDef * RTCx, uint32_t WeekDay)

Function description

Set ALARM B Weekday.

Parameters

- **RTCx:** RTC Instance
- **WeekDay:** This parameter can be one of the following values:
  – LL_RTC_WEEKDAY_MONDAY
  – LL_RTC_WEEKDAY_TUESDAY
  – LL_RTC_WEEKDAY_WEDNESDAY
  – LL_RTC_WEEKDAY_THURSDAY
  – LL_RTC_WEEKDAY_FRIDAY
  – LL_RTC_WEEKDAY_SATURDAY
  – LL_RTC_WEEKDAY_SUNDAY

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ALRMBR DU LL_RTC_ALMB_SetWeekDay

LL_RTC_ALMB_GetWeekDay

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMB_GetWeekDay (const RTC_TypeDef * RTCx)

Function description

Get ALARM B Weekday.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_RTC_WEEKDAY_MONDAY
  – LL_RTC_WEEKDAY_TUESDAY
  – LL_RTC_WEEKDAY_WEDNESDAY
  – LL_RTC_WEEKDAY_THURSDAY
  – LL_RTC_WEEKDAY_FRIDAY
  – LL_RTC_WEEKDAY_SATURDAY
  – LL_RTC_WEEKDAY_SUNDAY

Reference Manual to LL API cross reference:

- RTC_ALRMBR DU LL_RTC_ALMB_GetWeekDay

LL_RTC_ALMB_SetTimeFormat

Function name

__STATIC_INLINE void LL_RTC_ALMB_SetTimeFormat (RTC_TypeDef * RTCx, uint32_t TimeFormat)

Function description

Set ALARM B time format (AM/24-hour or PM notation)

Parameters

- **RTCx:** RTC Instance
- **TimeFormat:** This parameter can be one of the following values:
  – LL_RTC_ALMB_TIME_FORMAT_AM
  – LL_RTC_ALMB_TIME_FORMAT_PM

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ALRMBR PM LL_RTC_ALMB_SetTimeFormat

LL_RTC_ALMB_GetTimeFormat

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMB_GetTimeFormat (const RTC_TypeDef * RTCx)

Function description

Get ALARM B time format (AM or PM notation)

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_RTC_ALMB_TIME_FORMAT_AM
  – LL_RTC_ALMB_TIME_FORMAT_PM

Reference Manual to LL API cross reference:

- RTC_ALRMBR PM LL_RTC_ALMB_GetTimeFormat

LL_RTC_ALMB_SetHour

Function name

__STATIC_INLINE void LL_RTC_ALMB_SetHour (RTC_TypeDef * RTCx, uint32_t Hours)

Function description

Set ALARM B Hours in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Hours:** Value between Min_Data=0x01 and Max_Data=0x12 or between Min_Data=0x00 and Max_Data=0x23

Return values

- **None:**

Notes

- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Hours from binary to BCD format

Reference Manual to LL API cross reference:

- RTC_ALRMBR HT LL_RTC_ALMB_SetHour
- RTC_ALRMBR HU LL_RTC_ALMB_SetHour

LL_RTC_ALMB_GetHour

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMB_GetHour (const RTC_TypeDef * RTCx)

Function description

Get ALARM B Hours in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x01 and Max_Data=0x12 or between Min_Data=0x00 and Max_Data=0x23

Notes

- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Hours from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_ALRMBR HT LL_RTC_ALMB_GetHour
- RTC_ALRMBR HU LL_RTC_ALMB_GetHour

LL_RTC_ALMB_SetMinute

Function name

__STATIC_INLINE void LL_RTC_ALMB_SetMinute (RTC_TypeDef * RTCx, uint32_t Minutes)

Function description

Set ALARM B Minutes in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Minutes:** between Min_Data=0x00 and Max_Data=0x59

Return values

- **None:**

Notes

- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Minutes from binary to BCD format

Reference Manual to LL API cross reference:

- RTC_ALRMBR MNT LL_RTC_ALMB_SetMinute
- RTC_ALRMBR MNU LL_RTC_ALMB_SetMinute

LL_RTC_ALMB_GetMinute

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMB_GetMinute (const RTC_TypeDef * RTCx)

Function description

Get ALARM B Minutes in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x59

Notes

- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Minutes from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_ALRMBR MNT LL_RTC_ALMB_GetMinute
- RTC_ALRMBR MNU LL_RTC_ALMB_GetMinute

LL_RTC_ALMB_SetSecond

Function name

__STATIC_INLINE void LL_RTC_ALMB_SetSecond (RTC_TypeDef * RTCx, uint32_t Seconds)

Function description

Set ALARM B Seconds in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Seconds:** Value between Min_Data=0x00 and Max_Data=0x59

Return values

- **None:**

Notes

- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Seconds from binary to BCD format

Reference Manual to LL API cross reference:

- RTC_ALRMBR ST LL_RTC_ALMB_SetSecond
- RTC_ALRMBR SU LL_RTC_ALMB_SetSecond

LL_RTC_ALMB_GetSecond

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMB_GetSecond (const RTC_TypeDef * RTCx)

Function description

Get ALARM B Seconds in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x59

Notes

- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Seconds from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_ALRMBR ST LL_RTC_ALMB_GetSecond
- RTC_ALRMBR SU LL_RTC_ALMB_GetSecond

LL_RTC_ALMB_ConfigTime

Function name

__STATIC_INLINE void LL_RTC_ALMB_ConfigTime (RTC_TypeDef * RTCx, uint32_t Format12_24, uint32_t Hours, uint32_t Minutes, uint32_t Seconds)

Function description

Set Alarm B Time (hour, minute and second) in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Format12_24:** This parameter can be one of the following values:
  - LL_RTC_ALMB_TIME_FORMAT_AM
  - LL_RTC_ALMB_TIME_FORMAT_PM
- **Hours:** Value between Min_Data=0x01 and Max_Data=0x12 or between Min_Data=0x00 and Max_Data=0x23
- **Minutes:** Value between Min_Data=0x00 and Max_Data=0x59
- **Seconds:** Value between Min_Data=0x00 and Max_Data=0x59

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ALRMBR PM LL_RTC_ALMB_ConfigTime
- RTC_ALRMBR HT LL_RTC_ALMB_ConfigTime
- RTC_ALRMBR HU LL_RTC_ALMB_ConfigTime
- RTC_ALRMBR MNT LL_RTC_ALMB_ConfigTime
- RTC_ALRMBR MNU LL_RTC_ALMB_ConfigTime
- RTC_ALRMBR ST LL_RTC_ALMB_ConfigTime
- RTC_ALRMBR SU LL_RTC_ALMB_ConfigTime

LL_RTC_ALMB_GetTime

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMB_GetTime (const RTC_TypeDef * RTCx)

Function description

Get Alarm B Time (hour, minute and second) in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Combination:** of hours, minutes and seconds.

Notes

- helper macros __LL_RTC_GET_HOUR, __LL_RTC_GET_MINUTE and __LL_RTC_GET_SECOND are available to get independently each parameter.

Reference Manual to LL API cross reference:

- RTC_ALRMBR HT LL_RTC_ALMB_GetTime
- RTC_ALRMBR HU LL_RTC_ALMB_GetTime
- RTC_ALRMBR MNT LL_RTC_ALMB_GetTime
- RTC_ALRMBR MNU LL_RTC_ALMB_GetTime
- RTC_ALRMBR ST LL_RTC_ALMB_GetTime
- RTC_ALRMBR SU LL_RTC_ALMB_GetTime

LL_RTC_ALMB_SetSubSecondMask

Function name

__STATIC_INLINE void LL_RTC_ALMB_SetSubSecondMask (RTC_TypeDef * RTCx, uint32_t Mask)

Function description

Set Alarm B Mask the most-significant bits starting at this bit.

Parameters

- **RTCx:** RTC Instance
- **Mask:** If binary mode is none, Value between Min_Data=0x0 and Max_Data=0xF else Value between Min_Data=0x0 and Max_Data=0x3F

Return values

- **None:**

Notes

- This register can be written only when ALRBE is reset in RTC_CR register, or in initialization mode.

Reference Manual to LL API cross reference:

- RTC_ALRMBSSR MASKSS LL_RTC_ALMB_SetSubSecondMask

LL_RTC_ALMB_GetSubSecondMask

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMB_GetSubSecondMask (const RTC_TypeDef * RTCx)

Function description

Get Alarm B Mask the most-significant bits starting at this bit.

Parameters

- **RTCx:** RTC Instance

Return values

- **If:** binary mode is none, Value between Min_Data=0x0 and Max_Data=0xF else Value between Min_Data=0x0 and Max_Data=0x3F

Reference Manual to LL API cross reference:

- RTC_ALRMBSSR MASKSS LL_RTC_ALMB_GetSubSecondMask

LL_RTC_ALMB_SetBinAutoClr

Function name

__STATIC_INLINE void LL_RTC_ALMB_SetBinAutoClr (RTC_TypeDef * RTCx, uint32_t BinaryAutoClr)

Function description

Set Alarm B Binary mode auto clear.

Parameters

- **RTCx:** RTC Instance
- **BinaryAutoClr:** This parameter can be one of the following values:
  – LL_RTC_ALMB_SUBSECONDBIN_AUTOCLR_NO
  – LL_RTC_ALMB_SUBSECONDBIN_AUTOCLR_YES

Return values

- **None:**

Notes

- This register can be written only when ALRBE is reset in RTC_CR register, or in initialization mode.

Reference Manual to LL API cross reference:

- RTC_ALRBBINR SSCLR LL_RTC_ALMB_SetBinAutoClr

LL_RTC_ALMB_GetBinAutoClr

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMB_GetBinAutoClr (const RTC_TypeDef * RTCx)

Function description

Get Alarm B Binary mode auto clear.

Parameters

- **RTCx:** RTC Instance

Return values

- **It:** can be one of the following values:
  – LL_RTC_ALMB_SUBSECONDBIN_AUTOCLR_NO
  – LL_RTC_ALMB_SUBSECONDBIN_AUTOCLR_YES

Reference Manual to LL API cross reference:

- RTC_ALRBBINR SSCLR LL_RTC_ALMB_GetBinAutoClr

LL_RTC_ALMB_SetSubSecond

Function name

__STATIC_INLINE void LL_RTC_ALMB_SetSubSecond (RTC_TypeDef * RTCx, uint32_t Subsecond)

Function description

Set Alarm B Sub seconds value.

Parameters

- **RTCx:** RTC Instance
- **Subsecond:** If binary mode is none, Value between Min_Data=0x0 and Max_Data=0x7FFF else Value between Min_Data=0x0 and Max_Data=0xFFFFFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ALRMBSSR SS LL_RTC_ALMB_SetSubSecond

LL_RTC_ALMB_GetSubSecond

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMB_GetSubSecond (const RTC_TypeDef * RTCx)

Function description

Get Alarm B Sub seconds value.

Parameters

- **RTCx:** RTC Instance

Return values

- **If:** binary mode is none, Value between Min_Data=0x0 and Max_Data=0x7FFF else Value between Min_Data=0x0 and Max_Data=0xFFFFFFFF

Reference Manual to LL API cross reference:

- RTC_ALRMBSSR SS LL_RTC_ALMB_GetSubSecond

LL_RTC_TS_EnableInternalEvent

Function name

__STATIC_INLINE void LL_RTC_TS_EnableInternalEvent (RTC_TypeDef * RTCx)

Function description

Enable internal event timestamp.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ITSE LL_RTC_TS_EnableInternalEvent

LL_RTC_TS_DisableInternalEvent

Function name

__STATIC_INLINE void LL_RTC_TS_DisableInternalEvent (RTC_TypeDef * RTCx)

Function description

Disable internal event timestamp.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ITSE LL_RTC_TS_DisableInternalEvent

LL_RTC_TS_Enable

Function name

__STATIC_INLINE void LL_RTC_TS_Enable (RTC_TypeDef * RTCx)

Function description

Enable Timestamp.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR TSE LL_RTC_TS_Enable

LL_RTC_TS_Disable

Function name

__STATIC_INLINE void LL_RTC_TS_Disable (RTC_TypeDef * RTCx)

Function description

Disable Timestamp.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR TSE LL_RTC_TS_Disable

LL_RTC_TS_SetActiveEdge

Function name

__STATIC_INLINE void LL_RTC_TS_SetActiveEdge (RTC_TypeDef * RTCx, uint32_t Edge)

Function description

Set Time-stamp event active edge.

Parameters

- **RTCx:** RTC Instance
- **Edge:** This parameter can be one of the following values:
  – LL_RTC_TIMESTAMP_EDGE_RISING
  – LL_RTC_TIMESTAMP_EDGE_FALLING

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- TSE must be reset when TSEDGE is changed to avoid unwanted TSF setting

Reference Manual to LL API cross reference:

- RTC_CR TSEDGE LL_RTC_TS_SetActiveEdge

LL_RTC_TS_GetActiveEdge

Function name

__STATIC_INLINE uint32_t LL_RTC_TS_GetActiveEdge (const RTC_TypeDef * RTCx)

Function description

Get Time-stamp event active edge.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_RTC_TIMESTAMP_EDGE_RISING
  – LL_RTC_TIMESTAMP_EDGE_FALLING

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR TSEDGE LL_RTC_TS_GetActiveEdge

LL_RTC_TS_GetTimeFormat

Function name

__STATIC_INLINE uint32_t LL_RTC_TS_GetTimeFormat (const RTC_TypeDef * RTCx)

Function description

Get Timestamp AM/PM notation (AM or 24-hour format)

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_RTC_TS_TIME_FORMAT_AM
  – LL_RTC_TS_TIME_FORMAT_PM

Reference Manual to LL API cross reference:

- RTC_TSTR PM LL_RTC_TS_GetTimeFormat

LL_RTC_TS_GetHour

Function name

__STATIC_INLINE uint32_t LL_RTC_TS_GetHour (const RTC_TypeDef * RTCx)

Function description

Get Timestamp Hours in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x01 and Max_Data=0x12 or between Min_Data=0x00 and Max_Data=0x23

Notes

- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Hours from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_TSTR HT LL_RTC_TS_GetHour
- RTC_TSTR HU LL_RTC_TS_GetHour

LL_RTC_TS_GetMinute

Function name

__STATIC_INLINE uint32_t LL_RTC_TS_GetMinute (const RTC_TypeDef * RTCx)

Function description

Get Timestamp Minutes in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x59

Notes

- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Minutes from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_TSTR MNT LL_RTC_TS_GetMinute
- RTC_TSTR MNU LL_RTC_TS_GetMinute

LL_RTC_TS_GetSecond

Function name

__STATIC_INLINE uint32_t LL_RTC_TS_GetSecond (const RTC_TypeDef * RTCx)

Function description

Get Timestamp Seconds in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x59

Notes

- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Seconds from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_TSTR ST LL_RTC_TS_GetSecond
- RTC_TSTR SU LL_RTC_TS_GetSecond

LL_RTC_TS_GetTime

Function name

__STATIC_INLINE uint32_t LL_RTC_TS_GetTime (const RTC_TypeDef * RTCx)

Function description

Get Timestamp time (hour, minute and second) in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Combination:** of hours, minutes and seconds.

Notes

- helper macros __LL_RTC_GET_HOUR, __LL_RTC_GET_MINUTE and __LL_RTC_GET_SECOND are available to get independently each parameter.

Reference Manual to LL API cross reference:

- RTC_TSTR HT LL_RTC_TS_GetTime
- RTC_TSTR HU LL_RTC_TS_GetTime
- RTC_TSTR MNT LL_RTC_TS_GetTime

- RTC_TSTR ST LL_RTC_TS_GetTime
- RTC_TSTR SU LL_RTC_TS_GetTime

LL_RTC_TS_GetWeekDay

Function name

__STATIC_INLINE uint32_t LL_RTC_TS_GetWeekDay (const RTC_TypeDef * RTCx)

Function description

Get Timestamp Week day.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_WEEKDAY_MONDAY
  - LL_RTC_WEEKDAY_TUESDAY
  - LL_RTC_WEEKDAY_WEDNESDAY
  - LL_RTC_WEEKDAY_THURSDAY
  - LL_RTC_WEEKDAY_FRIDAY
  - LL_RTC_WEEKDAY_SATURDAY
  - LL_RTC_WEEKDAY_SUNDAY

Reference Manual to LL API cross reference:

- RTC_TSDR WDU LL_RTC_TS_GetWeekDay

LL_RTC_TS_GetMonth

Function name

__STATIC_INLINE uint32_t LL_RTC_TS_GetMonth (const RTC_TypeDef * RTCx)

Function description

Get Timestamp Month in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_MONTH_JANUARY
  - LL_RTC_MONTH_FEBRUARY
  - LL_RTC_MONTH_MARCH
  - LL_RTC_MONTH_APRIL
  - LL_RTC_MONTH_MAY
  - LL_RTC_MONTH_JUNE
  - LL_RTC_MONTH_JULY
  - LL_RTC_MONTH_AUGUST
  - LL_RTC_MONTH_SEPTEMBER
  - LL_RTC_MONTH_OCTOBER
  - LL_RTC_MONTH_NOVEMBER
  - LL_RTC_MONTH_DECEMBER

Notes

- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Month from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_TSDR MT LL_RTC_TS_GetMonth
- RTC_TSDR MU LL_RTC_TS_GetMonth

LL_RTC_TS_GetDay

Function name

__STATIC_INLINE uint32_t LL_RTC_TS_GetDay (const RTC_TypeDef * RTCx)

Function description

Get Timestamp Day in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x01 and Max_Data=0x31

Notes

- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Day from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_TSDR DT LL_RTC_TS_GetDay
- RTC_TSDR DU LL_RTC_TS_GetDay

LL_RTC_TS_GetDate

Function name

__STATIC_INLINE uint32_t LL_RTC_TS_GetDate (const RTC_TypeDef * RTCx)

Function description

Get Timestamp date (WeekDay, Day and Month) in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Combination:** of Weekday, Day and Month

Notes

- helper macros __LL_RTC_GET_WEEKDAY, __LL_RTC_GET_MONTH, and __LL_RTC_GET_DAY are available to get independently each parameter.

Reference Manual to LL API cross reference:

- RTC_TSDR WDU LL_RTC_TS_GetDate
- RTC_TSDR MT LL_RTC_TS_GetDate
- RTC_TSDR MU LL_RTC_TS_GetDate
- RTC_TSDR DT LL_RTC_TS_GetDate
- RTC_TSDR DU LL_RTC_TS_GetDate

LL_RTC_TS_GetSubSecond

Function name

__STATIC_INLINE uint32_t LL_RTC_TS_GetSubSecond (const RTC_TypeDef * RTCx)

Function description

Get time-stamp sub second value.

Parameters

- **RTCx:** RTC Instance

Return values

- **If:** binary mode is none, Value between Min_Data=0x0 and Max_Data=0x7FFF else Value between Min_Data=0x0 and Max_Data=0xFFFFFFFF

Reference Manual to LL API cross reference:

- RTC_TSDR SS LL_RTC_TS_GetSubSecond

LL_RTC_TS_EnableOnTamper

Function name

__STATIC_INLINE void LL_RTC_TS_EnableOnTamper (RTC_TypeDef * RTCx)

Function description

Activate timestamp on tamper detection event.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_CR TAMPTS LL_RTC_TS_EnableOnTamper

LL_RTC_TS_DisableOnTamper

Function name

__STATIC_INLINE void LL_RTC_TS_DisableOnTamper (RTC_TypeDef * RTCx)

Function description

Disable timestamp on tamper detection event.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_CR TAMPTS LL_RTC_TS_DisableOnTamper

LL_RTC_TAMPER_Enable

Function name

__STATIC_INLINE void LL_RTC_TAMPER_Enable (const RTC_TypeDef * RTCx, uint32_t Tamper)

Function description

Enable TAMPx input detection.

Parameters

- **RTCx:** RTC Instance
- **Tamper:** This parameter can be a combination of the following values:
  - TAMPER

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_CR1 TAMP1E LL_RTC_TAMPER_Enable
- TAMP_CR1 TAMP2E... LL_RTC_TAMPER_Enable
-

LL_RTC_TAMPER_Disable

Function name

__STATIC_INLINE void LL_RTC_TAMPER_Disable (const RTC_TypeDef * RTCx, uint32_t Tamper)

Function description

Clear TAMPx input detection.

Parameters

- **RTCx:** RTC Instance
- **Tamper:** This parameter can be a combination of the following values:
  - TAMPER

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_CR1 TAMP1E LL_RTC_TAMPER_Disable
- TAMP_CR1 TAMP2E... LL_RTC_TAMPER_Disable

LL_RTC_TAMPER_EnableMask

Function name

__STATIC_INLINE void LL_RTC_TAMPER_EnableMask (const RTC_TypeDef * RTCx, uint32_t Mask)

Function description

Enable Tamper mask flag.

Parameters

- **RTCx:** RTC Instance
- **Mask:** This parameter can be a combination of the following values:
  - TAMPER MASK

Return values

- **None:**

Notes

- Associated Tamper IT must not enabled when tamper mask is set.

Reference Manual to LL API cross reference:

- TAMP_CR2 TAMP1MF LL_RTC_TAMPER_EnableMask
- TAMP_CR2 TAMP2MF... LL_RTC_TAMPER_EnableMask

LL_RTC_TAMPER_DisableMask

Function name

__STATIC_INLINE void LL_RTC_TAMPER_DisableMask (const RTC_TypeDef * RTCx, uint32_t Mask)

Function description

Disable Tamper mask flag.

Parameters

- **RTCx:** RTC Instance
- **Mask:** This parameter can be a combination of the following values:
  - TAMPER MASK

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_CR2 TAMP1MF LL_RTC_TAMPER_DisableMask
- TAMP_CR2 TAMP2MF... LL_RTC_TAMPER_DisableMask

LL_RTC_TAMPER_EnableEraseBKP

Function name

__STATIC_INLINE void LL_RTC_TAMPER_EnableEraseBKP (const RTC_TypeDef * RTCx, uint32_t Tamper)

Function description

Enable backup register erase after Tamper event detection.

Parameters

- **RTCx:** RTC Instance
- **Tamper:** This parameter can be a combination of the following values:
  - TAMPER NO ERASE

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_CR2 TAMP1NOERASE LL_RTC_TAMPER_EnableEraseBKP
- TAMP_CR2 TAMP2NOERASE... LL_RTC_TAMPER_EnableEraseBKP

LL_RTC_TAMPER_DisableEraseBKP

Function name

__STATIC_INLINE void LL_RTC_TAMPER_DisableEraseBKP (const RTC_TypeDef * RTCx, uint32_t Tamper)

Function description

Disable backup register erase after Tamper event detection.

Parameters

- **RTCx:** RTC Instance
- **Tamper:** This parameter can be a combination of the following values:
  – TAMPER NO ERASE

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_CR2 TAMP1NOERASE LL_RTC_TAMPER_DisableEraseBKP
- TAMP_CR2 TAMP2NOERASE... LL_RTC_TAMPER_DisableEraseBKP

LL_RTC_TAMPER_DisablePullUp

Function name

__STATIC_INLINE void LL_RTC_TAMPER_DisablePullUp (const RTC_TypeDef * RTCx)

Function description

Disable RTC_TAMPx pull-up disable (Disable precharge of RTC_TAMPx pins)

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_FLTCR TAMPPUDIS LL_RTC_TAMPER_DisablePullUp

LL_RTC_TAMPER_EnablePullUp

Function name

__STATIC_INLINE void LL_RTC_TAMPER_EnablePullUp (const RTC_TypeDef * RTCx)

Function description

Enable RTC_TAMPx pull-up disable (Precharge RTC_TAMPx pins before sampling)

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_FLTCR TAMPPUDIS LL_RTC_TAMPER_EnablePullUp

LL_RTC_TAMPER_SetPrecharge

Function name

__STATIC_INLINE void LL_RTC_TAMPER_SetPrecharge (const RTC_TypeDef * RTCx, uint32_t Duration)

Function description

Set RTC_TAMPx precharge duration.

Parameters

- **RTCx:** RTC Instance
- **Duration:** This parameter can be one of the following values:
  - LL_RTC_TAMPER_DURATION_1RTCCLK
  - LL_RTC_TAMPER_DURATION_2RTCCLK
  - LL_RTC_TAMPER_DURATION_4RTCCLK
  - LL_RTC_TAMPER_DURATION_8RTCCLK

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_FLTCR TAMPPRCH LL_RTC_TAMPER_SetPrecharge

LL_RTC_TAMPER_GetPrecharge

Function name

__STATIC_INLINE uint32_t LL_RTC_TAMPER_GetPrecharge (const RTC_TypeDef * RTCx)

Function description

Get RTC_TAMPx precharge duration.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_TAMPER_DURATION_1RTCCLK
  - LL_RTC_TAMPER_DURATION_2RTCCLK
  - LL_RTC_TAMPER_DURATION_4RTCCLK
  - LL_RTC_TAMPER_DURATION_8RTCCLK

Reference Manual to LL API cross reference:

- TAMP_FLTCR TAMPPRCH LL_RTC_TAMPER_GetPrecharge

LL_RTC_TAMPER_SetFilterCount

Function name

__STATIC_INLINE void LL_RTC_TAMPER_SetFilterCount (const RTC_TypeDef * RTCx, uint32_t FilterCount)

Function description

Set RTC_TAMPx filter count.

Parameters

- **RTCx:** RTC Instance
- **FilterCount:** This parameter can be one of the following values:
  – LL_RTC_TAMPER_FILTER_DISABLE
  – LL_RTC_TAMPER_FILTER_2SAMPLE
  – LL_RTC_TAMPER_FILTER_4SAMPLE
  – LL_RTC_TAMPER_FILTER_8SAMPLE

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_FLTCR TAMPFLT LL_RTC_TAMPER_SetFilterCount

LL_RTC_TAMPER_GetFilterCount

Function name

__STATIC_INLINE uint32_t LL_RTC_TAMPER_GetFilterCount (const RTC_TypeDef * RTCx)

Function description

Get RTC_TAMPx filter count.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_RTC_TAMPER_FILTER_DISABLE
  – LL_RTC_TAMPER_FILTER_2SAMPLE
  – LL_RTC_TAMPER_FILTER_4SAMPLE
  – LL_RTC_TAMPER_FILTER_8SAMPLE

Reference Manual to LL API cross reference:

- TAMP_FLTCR TAMPFLT LL_RTC_TAMPER_GetFilterCount

LL_RTC_TAMPER_SetSamplingFreq

Function name

__STATIC_INLINE void LL_RTC_TAMPER_SetSamplingFreq (const RTC_TypeDef * RTCx, uint32_t SamplingFreq)

Function description

Set Tamper sampling frequency.

Parameters

- **RTCx:** RTC Instance
- **SamplingFreq:** This parameter can be one of the following values:
  – LL_RTC_TAMPER_SAMPLFREQDIV_32768
  – LL_RTC_TAMPER_SAMPLFREQDIV_16384
  – LL_RTC_TAMPER_SAMPLFREQDIV_8192
  – LL_RTC_TAMPER_SAMPLFREQDIV_4096
  – LL_RTC_TAMPER_SAMPLFREQDIV_2048
  – LL_RTC_TAMPER_SAMPLFREQDIV_1024
  – LL_RTC_TAMPER_SAMPLFREQDIV_512
  – LL_RTC_TAMPER_SAMPLFREQDIV_256

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_FLTCR TAMPFREQ LL_RTC_TAMPER_SetSamplingFreq

LL_RTC_TAMPER_GetSamplingFreq

Function name

__STATIC_INLINE uint32_t LL_RTC_TAMPER_GetSamplingFreq (const RTC_TypeDef * RTCx)

Function description

Get Tamper sampling frequency.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_TAMPER_SAMPLFREQDIV_32768
  - LL_RTC_TAMPER_SAMPLFREQDIV_16384
  - LL_RTC_TAMPER_SAMPLFREQDIV_8192
  - LL_RTC_TAMPER_SAMPLFREQDIV_4096
  - LL_RTC_TAMPER_SAMPLFREQDIV_2048
  - LL_RTC_TAMPER_SAMPLFREQDIV_1024
  - LL_RTC_TAMPER_SAMPLFREQDIV_512
  - LL_RTC_TAMPER_SAMPLFREQDIV_256

Reference Manual to LL API cross reference:

- TAMP_FLTCR TAMPFREQ LL_RTC_TAMPER_GetSamplingFreq

LL_RTC_TAMPER_EnableActiveLevel

Function name

__STATIC_INLINE void LL_RTC_TAMPER_EnableActiveLevel (const RTC_TypeDef * RTCx, uint32_t Tamper)

Function description

Enable Active level for Tamper input.

Parameters

- **RTCx:** RTC Instance
- **Tamper:** This parameter can be a combination of the following values:
  - TAMPER ACTIVE LEVEL

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_CR2 TAMP1TRG LL_RTC_TAMPER_EnableActiveLevel
- TAMP_CR2 TAMP2TRG... LL_RTC_TAMPER_EnableActiveLevel

LL_RTC_TAMPER_DisableActiveLevel

Function name

__STATIC_INLINE void LL_RTC_TAMPER_DisableActiveLevel (const RTC_TypeDef * RTCx, uint32_t Tamper)

Function description

Disable Active level for Tamper input.

Parameters

- **RTCx:** RTC Instance
- **Tamper:** This parameter can be a combination of the following values:
  - TAMPER ACTIVE LEVEL

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_CR2 TAMP1TRG LL_RTC_TAMPER_DisableActiveLevel
- TAMP_CR2 TAMP2TRG... LL_RTC_TAMPER_DisableActiveLevel

LL_RTC_TAMPER_ITAMP_Enable

Function name

__STATIC_INLINE void LL_RTC_TAMPER_ITAMP_Enable (const RTC_TypeDef * RTCx, uint32_t InternalTamper)

Function description

Enable internal tamper detection.

Parameters

- **RTCx:** RTC Instance
- **InternalTamper:** This parameter can be a combination of the following values:
  - INTERNAL TAMPER

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_CR1 ITAMP1E LL_RTC_TAMPER_ITAMP_Enable
- TAMP_CR1 ITAMP2E.. LL_RTC_TAMPER_ITAMP_Enable
-

LL_RTC_TAMPER_ITAMP_Disable

Function name

__STATIC_INLINE void LL_RTC_TAMPER_ITAMP_Disable (const RTC_TypeDef * RTCx, uint32_t InternalTamper)

Function description

Disable internal tamper detection.

Parameters

- **RTCx:** RTC Instance
- **InternalTamper:** This parameter can be a combination of the following values:
  - INTERNAL TAMPER

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_CR1 ITAMP1E LL_RTC_TAMPER_ITAMP_Disable
- TAMP_CR1 ITAMP2E LL_RTC_TAMPER_ITAMP_Disable
- TAMP_CR1 ITAMP3E LL_RTC_TAMPER_ITAMP_Disable
- TAMP_CR1 ITAMP5E LL_RTC_TAMPER_ITAMP_Disable
- TAMP_CR1 ITAMP8E LL_RTC_TAMPER_ITAMP_Disable

LL_RTC_TAMPER_ATAMP_EnableActiveMode

Function name

__STATIC_INLINE void LL_RTC_TAMPER_ATAMP_EnableActiveMode (uint32_t Tamper)

Function description

Enable tamper active mode.

Parameters

- **Tamper:** to configure as active. This parameter can be a combination of the following values:
  – ACTIVE TAMPER MODE

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_ATCR1 TAMP1AM LL_RTC_TAMPER_ATAMP_EnableActiveMode
-
- TAMP_ATCR1 TAMP2AM LL_RTC_TAMPER_ATAMP_EnableActiveMode
-
- TAMP_ATCR1 TAMPxAM LL_RTC_TAMPER_ATAMP_EnableActiveMode
-

LL_RTC_TAMPER_ATAMP_DisableActiveMode

Function name

__STATIC_INLINE void LL_RTC_TAMPER_ATAMP_DisableActiveMode (uint32_t Tamper)

Function description

Disable tamper active mode.

Parameters

- **Tamper:** to configure as active. This parameter can be a combination of the following values:
  – ACTIVE TAMPER MODE

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_ATCR1 TAMP1AM LL_RTC_TAMPER_ATAMP_DisableActiveMode
-
- TAMP_ATCR1 TAMP2AM LL_RTC_TAMPER_ATAMP_DisableActiveMode
-
- TAMP_ATCR1 TAMPxAM LL_RTC_TAMPER_ATAMP_DisableActiveMode
-

LL_RTC_TAMPER_ATAMP_EnableFilter

Function name

__STATIC_INLINE void LL_RTC_TAMPER_ATAMP_EnableFilter (void)

Function description

Enable active tamper filter.

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_ATCR1 FLTEN LL_RTC_TAMPER_ATAMP_EnableFilter
-

LL_RTC_TAMPER_ATAMP_DisableFilter

Function name

__STATIC_INLINE void LL_RTC_TAMPER_ATAMP_DisableFilter (void)

Function description

Disable active tamper filter.

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_ATCR1 FLTEN LL_RTC_TAMPER_ATAMP_DisableFilter
-

LL_RTC_TAMPER_ATAMP_SetOutputChangePeriod

Function name

__STATIC_INLINE void LL_RTC_TAMPER_ATAMP_SetOutputChangePeriod (uint32_t ActiveOutputChangePeriod)

Function description

Set Active tamper output change period.

Parameters

- **ActiveOutputChangePeriod:** This parameter can be a value from 0 to 7

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_ATCR1 ATPER LL_RTC_TAMPER_ATAMP_SetOutputChangePeriod
-

LL_RTC_TAMPER_ATAMP_GetOutputChangePeriod

Function name

__STATIC_INLINE uint32_t LL_RTC_TAMPER_ATAMP_GetOutputChangePeriod (void)

Function description

Get Active tamper output change period.

Return values

- **Output:** change period. This parameter can be a value from 0 to 7.

Reference Manual to LL API cross reference:

- TAMP_ATCR1 ATPER LL_RTC_TAMPER_ATAMP_GetOutputChangePeriod
-

LL_RTC_TAMPER_ATAMP_SetAsyncPrescaler

Function name

__STATIC_INLINE void LL_RTC_TAMPER_ATAMP_SetAsyncPrescaler (uint32_t ActiveAsynvPrescaler)

Function description

Set Active tamper asynchronous prescaler clock selection.

Parameters

- **ActiveAsynvPrescaler:** Specifies the Active Tamper asynchronous Prescaler clock. This parameter can be a value of the following values:
  – ACTIVE TAMPER ASYNCHRONOUS PRESCALER CLOCK

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_ATCR1 ATCKSEL LL_RTC_TAMPER_ATAMP_SetAsyncPrescaler
-

LL_RTC_TAMPER_ATAMP_GetAsyncPrescaler

Function name

__STATIC_INLINE uint32_t LL_RTC_TAMPER_ATAMP_GetAsyncPrescaler (void)

Function description

Get Active tamper asynchronous prescaler clock selection.

Return values

- **One:** of
  – ACTIVE TAMPER ASYNCHRONOUS PRESCALER CLOCK

Reference Manual to LL API cross reference:

- TAMP_ATCR1 ATCKSEL LL_RTC_TAMPER_ATAMP_GetAsyncPrescaler
-

LL_RTC_TAMPER_ATAMP_EnableOutputSharing

Function name

__STATIC_INLINE void LL_RTC_TAMPER_ATAMP_EnableOutputSharing (void)

Function description

Enable active tamper output sharing.

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_ATCR1 ATOSHARE LL_RTC_TAMPER_ATAMP_EnableOutputSharing
-

LL_RTC_TAMPER_ATAMP_DisableOutputSharing

Function name

__STATIC_INLINE void LL_RTC_TAMPER_ATAMP_DisableOutputSharing (void)

Function description

Disable active tamper output sharing.

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_ATCR1 ATOSHARE LL_RTC_TAMPER_ATAMP_DisableOutputSharing
-

LL_RTC_TAMPER_ATAMP_SetSharedOuputSelection

Function name

__STATIC_INLINE void LL_RTC_TAMPER_ATAMP_SetSharedOuputSelection (uint32_t OutputSelection)

Function description

Set Active tamper output selection.

Parameters

- **OutputSelection:** Specifies all the output selection of the Active Tamper. This parameter is a combinasation of the following values: One of
  – ACTIVE TAMPER OUTPUT SELECTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_ATCR2 ATCKSEL LL_RTC_TAMPER_ATAMP_SetSharedOuputSelection
-

LL_RTC_TAMPER_ATAMP_GetSharedOuputSelection

Function name

__STATIC_INLINE uint32_t LL_RTC_TAMPER_ATAMP_GetSharedOuputSelection (void)

Function description

Get Active tamper asynchronous prescaler clock selection.

Return values

- **A:** combination of
  – ACTIVE TAMPER OUTPUT SELECTION

Reference Manual to LL API cross reference:

- TAMP_ATCR2 ATCKSEL LL_RTC_TAMPER_ATAMP_GetAsyncPrescaler
-

LL_RTC_TAMPER_ATAMP_WriteSeed

Function name

__STATIC_INLINE void LL_RTC_TAMPER_ATAMP_WriteSeed (uint32_t Seed)

Function description

Write active tamper seed.

Parameters

- **Seed:** Pseudo-random generator seed value

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_ATSEEDR SEED LL_RTC_TAMPER_ATAMP_WriteSeed
-

LL_RTC_IsActiveFlag_ATAMP_INITS

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ATAMP_INITS (void)

Function description

Get active tamper initialization status flag.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_ATOR INITS LL_RTC_IsActiveFlag_ATAMP_INITS

LL_RTC_IsActiveFlag_ATAMP_SEEDF

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ATAMP_SEEDF (void)

Function description

Get active tamper seed running status flag.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_ATOR INITS LL_RTC_IsActiveFlag_ATAMP_INITS

LL_RTC_WAKEUP_Enable

Function name

__STATIC_INLINE void LL_RTC_WAKEUP_Enable (RTC_TypeDef * RTCx)

Function description

Enable Wakeup timer.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR WUTE LL_RTC_WAKEUP_Enable

LL_RTC_WAKEUP_Disable

Function name

__STATIC_INLINE void LL_RTC_WAKEUP_Disable (RTC_TypeDef * RTCx)

Function description

Disable Wakeup timer.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR WUTE LL_RTC_WAKEUP_Disable

LL_RTC_WAKEUP_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RTC_WAKEUP_IsEnabled (const RTC_TypeDef * RTCx)

Function description

Check if Wakeup timer is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CR WUTE LL_RTC_WAKEUP_IsEnabled

LL_RTC_WAKEUP_SetClock

Function name

__STATIC_INLINE void LL_RTC_WAKEUP_SetClock (RTC_TypeDef * RTCx, uint32_t WakeupClock)

Function description

Select Wakeup clock.

Parameters

- **RTCx:** RTC Instance
- **WakeupClock:** This parameter can be one of the following values:
  – LL_RTC_WAKEUPCLOCK_DIV_16
  – LL_RTC_WAKEUPCLOCK_DIV_8
  – LL_RTC_WAKEUPCLOCK_DIV_4
  – LL_RTC_WAKEUPCLOCK_DIV_2
  – LL_RTC_WAKEUPCLOCK_CKSPRE
  – LL_RTC_WAKEUPCLOCK_CKSPRE_WUT

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- Bit can be written only when RTC_CR WUTE bit = 0 and RTC_ICSR WUTWF bit = 1

Reference Manual to LL API cross reference:

- RTC_CR WUCKSEL LL_RTC_WAKEUP_SetClock

LL_RTC_WAKEUP_GetClock

Function name

__STATIC_INLINE uint32_t LL_RTC_WAKEUP_GetClock (const RTC_TypeDef * RTCx)

Function description

Get Wakeup clock.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_RTC_WAKEUPCLOCK_DIV_16
  – LL_RTC_WAKEUPCLOCK_DIV_8
  – LL_RTC_WAKEUPCLOCK_DIV_4
  – LL_RTC_WAKEUPCLOCK_DIV_2
  – LL_RTC_WAKEUPCLOCK_CKSPRE
  – LL_RTC_WAKEUPCLOCK_CKSPRE_WUT

Reference Manual to LL API cross reference:

- RTC_CR WUCKSEL LL_RTC_WAKEUP_GetClock

LL_RTC_WAKEUP_SetAutoReload

Function name

__STATIC_INLINE void LL_RTC_WAKEUP_SetAutoReload (RTC_TypeDef * RTCx, uint32_t Value)

Function description

Set Wakeup auto-reload value.

Parameters

- **RTCx:** RTC Instance
- **Value:** Value between Min_Data=0x00 and Max_Data=0xFFFF

Return values

- **None:**

Notes

- Bit can be written only when WUTWF is set to 1 in RTC_ICSR

Reference Manual to LL API cross reference:

- RTC_WUTR WUT LL_RTC_WAKEUP_SetAutoReload

LL_RTC_WAKEUP_GetAutoReload

Function name

__STATIC_INLINE uint32_t LL_RTC_WAKEUP_GetAutoReload (const RTC_TypeDef * RTCx)

Function description

Get Wakeup auto-reload value.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0xFFFF

Reference Manual to LL API cross reference:

- RTC_WUTR WUT LL_RTC_WAKEUP_GetAutoReload

LL_RTC_BKP_SetRegister

Function name

__STATIC_INLINE void LL_RTC_BKP_SetRegister (const RTC_TypeDef * RTCx, uint32_t BackupRegister, uint32_t Data)

Function description

Writes a data in a specified Backup data register.

Parameters

- **RTCx:** RTC Instance
- **BackupRegister:** This parameter can be one of the following values:
  – LL_RTC_BKP_DR0
  – LL_RTC_BKP_DR1
  – LL_RTC_BKP_DR2
  – LL_RTC_BKP_DR3
  – LL_RTC_BKP_DR4
  – LL_RTC_BKP_DR5
  – LL_RTC_BKP_DR6
  – LL_RTC_BKP_DR7
  – LL_RTC_BKP_DR8
  – LL_RTC_BKP_DR9
  – LL_RTC_BKP_DR10
  – LL_RTC_BKP_DR11
  – LL_RTC_BKP_DR12
  – LL_RTC_BKP_DR13
  – LL_RTC_BKP_DR14
  – LL_RTC_BKP_DR15
  – LL_RTC_BKP_DR16
  – LL_RTC_BKP_DR17
  – LL_RTC_BKP_DR18
  – LL_RTC_BKP_DR19
  – LL_RTC_BKP_DR20
  – LL_RTC_BKP_DR21
  – LL_RTC_BKP_DR22
  – LL_RTC_BKP_DR23
  – LL_RTC_BKP_DR24
  – LL_RTC_BKP_DR25
  – LL_RTC_BKP_DR26
  – LL_RTC_BKP_DR27
  – LL_RTC_BKP_DR28
  – LL_RTC_BKP_DR29
  – LL_RTC_BKP_DR30
  – LL_RTC_BKP_DR31
- **Data:** Value between Min_Data=0x00 and Max_Data=0xFFFFFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_BKPxR BKP LL_RTC_BKP_SetRegister

LL_RTC_BKP_GetRegister

Function name

__STATIC_INLINE uint32_t LL_RTC_BKP_GetRegister (const RTC_TypeDef * RTCx, uint32_t BackupRegister)

Function description

Reads data from the specified RTC Backup data Register.

Parameters

- **RTCx:** RTC Instance
- **BackupRegister:** This parameter can be one of the following values:
  - LL_RTC_BKP_DR0
  - LL_RTC_BKP_DR1
  - LL_RTC_BKP_DR2
  - LL_RTC_BKP_DR3
  - LL_RTC_BKP_DR4
  - LL_RTC_BKP_DR5
  - LL_RTC_BKP_DR6
  - LL_RTC_BKP_DR7
  - LL_RTC_BKP_DR8
  - LL_RTC_BKP_DR9
  - LL_RTC_BKP_DR10
  - LL_RTC_BKP_DR11
  - LL_RTC_BKP_DR12
  - LL_RTC_BKP_DR13
  - LL_RTC_BKP_DR14
  - LL_RTC_BKP_DR15
  - LL_RTC_BKP_DR16
  - LL_RTC_BKP_DR17
  - LL_RTC_BKP_DR18
  - LL_RTC_BKP_DR19
  - LL_RTC_BKP_DR20
  - LL_RTC_BKP_DR21
  - LL_RTC_BKP_DR22
  - LL_RTC_BKP_DR23
  - LL_RTC_BKP_DR24
  - LL_RTC_BKP_DR25
  - LL_RTC_BKP_DR26
  - LL_RTC_BKP_DR27
  - LL_RTC_BKP_DR28
  - LL_RTC_BKP_DR29
  - LL_RTC_BKP_DR30
  - LL_RTC_BKP_DR31

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0xFFFFFFFF

Reference Manual to LL API cross reference:

- TAMP_BKPxR BKP LL_RTC_BKP_GetRegister

LL_RTC_CAL_SetOutputFreq

Function name

__STATIC_INLINE void LL_RTC_CAL_SetOutputFreq (RTC_TypeDef * RTCx, uint32_t Frequency)

Function description

Set Calibration output frequency (1 Hz or 512 Hz)

Parameters

- **RTCx:** RTC Instance
- **Frequency:** This parameter can be one of the following values:
  - LL_RTC_CALIB_OUTPUT_NONE
  - LL_RTC_CALIB_OUTPUT_1HZ
  - LL_RTC_CALIB_OUTPUT_512HZ

Return values

- **None:**

Notes

- Bits are write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR COE LL_RTC_CAL_SetOutputFreq
- RTC_CR COSEL LL_RTC_CAL_SetOutputFreq

LL_RTC_CAL_GetOutputFreq

Function name

__STATIC_INLINE uint32_t LL_RTC_CAL_GetOutputFreq (const RTC_TypeDef * RTCx)

Function description

Get Calibration output frequency (1 Hz or 512 Hz)

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_CALIB_OUTPUT_NONE
  - LL_RTC_CALIB_OUTPUT_1HZ
  - LL_RTC_CALIB_OUTPUT_512HZ

Reference Manual to LL API cross reference:

- RTC_CR COE LL_RTC_CAL_GetOutputFreq
- RTC_CR COSEL LL_RTC_CAL_GetOutputFreq

LL_RTC_CAL_SetPulse

Function name

__STATIC_INLINE void LL_RTC_CAL_SetPulse (RTC_TypeDef * RTCx, uint32_t Pulse)

Function description

Insert or not One RTCCLK pulse every 2exp11 pulses (frequency increased by 488.5 ppm)

Parameters

- **RTCx:** RTC Instance
- **Pulse:** This parameter can be one of the following values:
  - LL_RTC_CALIB_INSERTPULSE_NONE
  - LL_RTC_CALIB_INSERTPULSE_SET

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- Bit can be written only when RECALPF is set to 0 in RTC_ICSR

Reference Manual to LL API cross reference:

- RTC_CALR CALP LL_RTC_CAL_SetPulse

LL_RTC_CAL_IsPulseInserted

Function name

__STATIC_INLINE uint32_t LL_RTC_CAL_IsPulseInserted (const RTC_TypeDef * RTCx)

Function description

Check if one RTCCLK has been inserted or not every 2exp11 pulses (frequency increased by 488.5 ppm)

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CALR CALP LL_RTC_CAL_IsPulseInserted

LL_RTC_CAL_SetPeriod

Function name

__STATIC_INLINE void LL_RTC_CAL_SetPeriod (RTC_TypeDef * RTCx, uint32_t Period)

Function description

Set the calibration cycle period.

Parameters

- **RTCx:** RTC Instance
- **Period:** This parameter can be one of the following values:
  - LL_RTC_CALIB_PERIOD_32SEC
  - LL_RTC_CALIB_PERIOD_16SEC
  - LL_RTC_CALIB_PERIOD_8SEC

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- Bit can be written only when RECALPF is set to 0 in RTC_ICSR

Reference Manual to LL API cross reference:

- RTC_CALR CALW8 LL_RTC_CAL_SetPeriod
- RTC_CALR CALW16 LL_RTC_CAL_SetPeriod

LL_RTC_CAL_GetPeriod

Function name

__STATIC_INLINE uint32_t LL_RTC_CAL_GetPeriod (const RTC_TypeDef * RTCx)

Function description

Get the calibration cycle period.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_CALIB_PERIOD_32SEC
  - LL_RTC_CALIB_PERIOD_16SEC
  - LL_RTC_CALIB_PERIOD_8SEC

Reference Manual to LL API cross reference:

- RTC_CALR CALW8 LL_RTC_CAL_GetPeriod
- RTC_CALR CALW16 LL_RTC_CAL_GetPeriod

LL_RTC_CAL_SetMinus

Function name

__STATIC_INLINE void LL_RTC_CAL_SetMinus (RTC_TypeDef * RTCx, uint32_t CalibMinus)

Function description

Set Calibration minus.

Parameters

- **RTCx:** RTC Instance
- **CalibMinus:** Value between Min_Data=0x00 and Max_Data=0x1FF

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- Bit can be written only when RECALPF is set to 0 in RTC_ICSR

Reference Manual to LL API cross reference:

- RTC_CALR CALM LL_RTC_CAL_SetMinus

LL_RTC_CAL_GetMinus

Function name

__STATIC_INLINE uint32_t LL_RTC_CAL_GetMinus (const RTC_TypeDef * RTCx)

Function description

Get Calibration minus.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data= 0x1FF

Reference Manual to LL API cross reference:

- RTC_CALR CALM LL_RTC_CAL_GetMinus

LL_RTC_CAL_LowPower_Enable

Function name

__STATIC_INLINE void LL_RTC_CAL_LowPower_Enable (RTC_TypeDef * RTCx)

Function description

Enable Calibration Low Power.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- Bit can be written only when RECALPF is set to 0

Reference Manual to LL API cross reference:

- RTC_CALR LPCAL LL_RTC_CAL_LowPower_Enable

LL_RTC_CAL_LowPower_Disable

Function name

__STATIC_INLINE void LL_RTC_CAL_LowPower_Disable (RTC_TypeDef * RTCx)

Function description

Disable Calibration Low Power.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- Bit can be written only when RECALPF is set to 0

Reference Manual to LL API cross reference:

- RTC_CALR LPCAL LL_RTC_CAL_LowPower_Disable

LL_RTC_CAL_LowPower_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RTC_CAL_LowPower_IsEnabled (const RTC_TypeDef * RTCx)

Function description

Check if Calibration Low Power is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CALR LPCAL LL_RTC_CAL_LowPower_IsEnabled

LL_RTC_IsActiveFlag_ITS

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITS (const RTC_TypeDef * RTCx)

Function description

Get Internal Time-stamp flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_SR ITSF LL_RTC_IsActiveFlag_ITS

LL_RTC_IsActiveFlag_RECALP

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_RECALP (const RTC_TypeDef * RTCx)

Function description

Get Recalibration pending Flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_ICSR RECALPF LL_RTC_IsActiveFlag_RECALP

LL_RTC_IsActiveFlag_TSOV

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TSOV (const RTC_TypeDef * RTCx)

Function description

Get Time-stamp overflow flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_SR TSOVF LL_RTC_IsActiveFlag_TSOV

LL_RTC_IsActiveFlag_TS

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TS (const RTC_TypeDef * RTCx)

Function description

Get Time-stamp flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_SR TSF LL_RTC_IsActiveFlag_TS

LL_RTC_IsActiveFlag_WUT

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_WUT (const RTC_TypeDef * RTCx)

Function description

Get Wakeup timer flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_SR WUTF LL_RTC_IsActiveFlag_WUT

LL_RTC_IsActiveFlag_ALRB

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ALRB (const RTC_TypeDef * RTCx)

Function description

Get Alarm B flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_SR ALRBF LL_RTC_IsActiveFlag_ALRB

LL_RTC_IsActiveFlag_ALRA

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ALRA (const RTC_TypeDef * RTCx)

Function description

Get Alarm A flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_SR ALRAF LL_RTC_IsActiveFlag_ALRA

LL_RTC_IsActiveFlag_SSRU

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_SSRU (const RTC_TypeDef * RTCx)

Function description

Get SSR Underflow flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_SR SSRUF LL_RTC_IsActiveFlag_SSRU

LL_RTC_ClearFlag_ITS

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_ITS (RTC_TypeDef * RTCx)

Function description

Clear Internal Time-stamp flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_SCR CITSF LL_RTC_ClearFlag_ITS

LL_RTC_ClearFlag_TSOV

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_TSOV (RTC_TypeDef * RTCx)

Function description

Clear Time-stamp overflow flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_SCR CTSOVF LL_RTC_ClearFlag_TSOV

LL_RTC_ClearFlag_TS

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_TS (RTC_TypeDef * RTCx)

Function description

Clear Time-stamp flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_SCR CTSF LL_RTC_ClearFlag_TS

LL_RTC_ClearFlag_WUT

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_WUT (RTC_TypeDef * RTCx)

Function description

Clear Wakeup timer flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_SCR CWUTF LL_RTC_ClearFlag_WUT

LL_RTC_ClearFlag_ALRB

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_ALRB (RTC_TypeDef * RTCx)

Function description

Clear Alarm B flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_SCR CALRBF LL_RTC_ClearFlag_ALRB

LL_RTC_ClearFlag_ALRA

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_ALRA (RTC_TypeDef * RTCx)

Function description

Clear Alarm A flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_SCR CALRAF LL_RTC_ClearFlag_ALRA

LL_RTC_ClearFlag_SSRU

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_SSRU (RTC_TypeDef * RTCx)

Function description

Clear SSR Underflow flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_SCR CSSRUF LL_RTC_ClearFlag_SSRU

LL_RTC_IsActiveFlag_INIT

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_INIT (const RTC_TypeDef * RTCx)

Function description

Get Initialization flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_ICSR INITF LL_RTC_IsActiveFlag_INIT

LL_RTC_IsActiveFlag_RS

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_RS (const RTC_TypeDef * RTCx)

Function description

Get Registers synchronization flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_ICSR RSF LL_RTC_IsActiveFlag_RS

LL_RTC_ClearFlag_RS

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_RS (RTC_TypeDef * RTCx)

Function description

Clear Registers synchronization flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ICSR RSF LL_RTC_ClearFlag_RS

LL_RTC_IsActiveFlag_INITS

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_INITS (const RTC_TypeDef * RTCx)

Function description

Get Initialization status flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_ICSR INITS LL_RTC_IsActiveFlag_INITS

LL_RTC_IsActiveFlag_SHP

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_SHP (const RTC_TypeDef * RTCx)

Function description

Get Shift operation pending flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_ICSR SHPF LL_RTC_IsActiveFlag_SHP

LL_RTC_IsActiveFlag_WUTW

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_WUTW (const RTC_TypeDef * RTCx)

Function description

Get Wakeup timer write flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_ICSR WUTWF LL_RTC_IsActiveFlag_WUTW

LL_RTC_IsActiveFlag_ALRAM

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ALRAM (const RTC_TypeDef * RTCx)

Function description

Get Alarm A masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_MISR ALRAMF LL_RTC_IsActiveFlag_ALRAM

LL_RTC_IsActiveFlag_SSRUM

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_SSRUM (const RTC_TypeDef * RTCx)

Function description

Get SSR Underflow masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_MISR SSRUMF LL_RTC_IsActiveFlag_SSRUM

LL_RTC_IsActiveFlag_ALRBM

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ALRBM (const RTC_TypeDef * RTCx)

Function description

Get Alarm B masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_MISR ALRBMF LL_RTC_IsActiveFlag_ALRBM

LL_RTC_IsActiveFlag_WUTM

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_WUTM (const RTC_TypeDef * RTCx)

Function description

Get Wakeup timer masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_MISR WUTMF LL_RTC_IsActiveFlag_WUTM

LL_RTC_IsActiveFlag_TSM

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TSM (const RTC_TypeDef * RTCx)

Function description

Get Time-stamp masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_MISR TSMF LL_RTC_IsActiveFlag_TSM

LL_RTC_IsActiveFlag_TSOVM

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TSOVM (const RTC_TypeDef * RTCx)

Function description

Get Time-stamp overflow masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_MISR TSOVMF LL_RTC_IsActiveFlag_TSOVM

LL_RTC_IsActiveFlag_ITSM

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITSM (const RTC_TypeDef * RTCx)

Function description

Get Internal Time-stamp masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_MISR ITSMF LL_RTC_IsActiveFlag_ITSM

LL_RTC_IsActiveFlag_TAMP1

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TAMP1 (const RTC_TypeDef * RTCx)

Function description

Get tamper 1 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR TAMP1F LL_RTC_IsActiveFlag_TAMP1

LL_RTC_IsActiveFlag_TAMP2

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TAMP2 (const RTC_TypeDef * RTCx)

Function description

Get tamper 2 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR TAMP2F LL_RTC_IsActiveFlag_TAMP2

LL_RTC_IsActiveFlag_TAMP3

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TAMP3 (const RTC_TypeDef * RTCx)

Function description

Get tamper 3 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR TAMP3F LL_RTC_IsActiveFlag_TAMP3

LL_RTC_IsActiveFlag_TAMP4

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TAMP4 (const RTC_TypeDef * RTCx)

Function description

Get tamper 4 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR TAMP4F LL_RTC_IsActiveFlag_TAMP4

LL_RTC_IsActiveFlag_TAMP5

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TAMP5 (const RTC_TypeDef * RTCx)

Function description

Get tamper 5 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR TAMP5F LL_RTC_IsActiveFlag_TAMP5

LL_RTC_IsActiveFlag_TAMP6

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TAMP6 (const RTC_TypeDef * RTCx)

Function description

Get tamper 6 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR TAMP6F LL_RTC_IsActiveFlag_TAMP6

LL_RTC_IsActiveFlag_TAMP7

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TAMP7 (const RTC_TypeDef * RTCx)

Function description

Get tamper 7 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR TAMP7F LL_RTC_IsActiveFlag_TAMP7

LL_RTC_IsActiveFlag_TAMP8

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TAMP8 (const RTC_TypeDef * RTCx)

Function description

Get tamper 8 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR TAMP8F LL_RTC_IsActiveFlag_TAMP8

LL_RTC_IsActiveFlag_ITAMP1

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP1 (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 1 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR ITAMP1F LL_RTC_IsActiveFlag_ITAMP1

LL_RTC_IsActiveFlag_ITAMP2

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP2 (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 2 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR ITAMP2F LL_RTC_IsActiveFlag_ITAMP2

LL_RTC_IsActiveFlag_ITAMP3

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP3 (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 3 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR ITAMP3F LL_RTC_IsActiveFlag_ITAMP3

LL_RTC_IsActiveFlag_ITAMP5

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP5 (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 5 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR ITAMP5F LL_RTC_IsActiveFlag_ITAMP5

LL_RTC_IsActiveFlag_ITAMP6

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP6 (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 6 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR ITAMP6F LL_RTC_IsActiveFlag_ITAMP6

LL_RTC_IsActiveFlag_ITAMP7

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP7 (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 7 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR ITAMP7F LL_RTC_IsActiveFlag_ITAMP7

LL_RTC_IsActiveFlag_ITAMP8

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP8 (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 8 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR ITAMP8F LL_RTC_IsActiveFlag_ITAMP8

LL_RTC_IsActiveFlag_ITAMP9

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP9 (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 9 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR ITAMP9F LL_RTC_IsActiveFlag_ITAMP9

LL_RTC_IsActiveFlag_ITAMP11

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP11 (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 11 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR ITAMP11F LL_RTC_IsActiveFlag_ITAMP11

LL_RTC_IsActiveFlag_ITAMP12

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP12 (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 12 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR ITAMP12F LL_RTC_IsActiveFlag_ITAMP12

LL_RTC_IsActiveFlag_ITAMP13

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP13 (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 13 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR ITAMP13F LL_RTC_IsActiveFlag_ITAMP13

LL_RTC_IsActiveFlag_TAMP1M

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TAMP1M (const RTC_TypeDef * RTCx)

Function description

Get tamper 1 interrupt masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_MISR TAMP1MF LL_RTC_IsActiveFlag_TAMP1M

LL_RTC_IsActiveFlag_TAMP2M

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TAMP2M (const RTC_TypeDef * RTCx)

Function description

Get tamper 2 interrupt masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_MISR TAMP2MF LL_RTC_IsActiveFlag_TAMP2M

LL_RTC_IsActiveFlag_TAMP3M

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TAMP3M (const RTC_TypeDef * RTCx)

Function description

Get tamper 3 interrupt masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

Function description

Clear tamper 6 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_SCR CTAMP6F LL_RTC_ClearFlag_TAMP6

LL_RTC_ClearFlag_TAMP7

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_TAMP7 (const RTC_TypeDef * RTCx)

Function description

Clear tamper 7 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_SCR CTAMP7F LL_RTC_ClearFlag_TAMP7

LL_RTC_ClearFlag_TAMP8

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_TAMP8 (const RTC_TypeDef * RTCx)

Function description

Clear tamper 8 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_SCR CTAMP8F LL_RTC_ClearFlag_TAMP8

LL_RTC_ClearFlag_ITAMP1

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_ITAMP1 (const RTC_TypeDef * RTCx)

Function description

Clear internal tamper 1 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_SCR CITAMP1F LL_RTC_ClearFlag_ITAMP1

LL_RTC_ClearFlag_ITAMP2

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_ITAMP2 (const RTC_TypeDef * RTCx)

Function description

Clear internal tamper 2 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_SCR CITAMP2F LL_RTC_ClearFlag_ITAMP2

LL_RTC_ClearFlag_ITAMP3

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_ITAMP3 (const RTC_TypeDef * RTCx)

Function description

Clear internal tamper 3 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_SCR CITAMP3F LL_RTC_ClearFlag_ITAMP3

LL_RTC_ClearFlag_ITAMP5

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_ITAMP5 (const RTC_TypeDef * RTCx)

Function description

Clear internal tamper 5 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_SCR CITAMP5F LL_RTC_ClearFlag_ITAMP5

LL_RTC_ClearFlag_ITAMP8

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_ITAMP8 (const RTC_TypeDef * RTCx)

Function description

Clear internal tamper 8 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_SCR CITAMP8F LL_RTC_ClearFlag_ITAMP8

LL_RTC_SetRtcSecure

Function name

__STATIC_INLINE void LL_RTC_SetRtcSecure (RTC_TypeDef * RTCx, uint32_t rtcSecure)

Function description

Set RTC secure level.

Parameters

- **RTCx:** RTC Instance
- **rtcSecure:** This parameter can be a combination of the following values:
  – LL_RTC_SECURE_FULL_YES
  – LL_RTC_SECURE_FULL_NO
  – LL_RTC_UNSECURE_FEATURE_INIT
  – LL_RTC_UNSECURE_FEATURE_CAL
  – LL_RTC_UNSECURE_FEATURE_TS
  – LL_RTC_UNSECURE_FEATURE_WUT
  – LL_RTC_UNSECURE_FEATURE_ALRA
  – LL_RTC_UNSECURE_FEATURE_ALRB

Return values

- **None:**

Notes

- secure features are relevant if LL_RTC_SECURE_FULL_NO.

Reference Manual to LL API cross reference:

- RTC_SECCFGR SEC LL_RTC_SetRtcSecure
- RTC_SECCFGR INITSEC LL_RTC_SetRtcSecure
- RTC_SECCFGR CALSEC LL_RTC_SetRtcSecure

- RTC_SECCFGR ALRASEC LL_RTC_SetRtcSecure
- RTC_SECCFGR ALRBSEC LL_RTC_SetRtcSecure

LL_RTC_GetRtcSecure

Function name

__STATIC_INLINE uint32_t LL_RTC_GetRtcSecure (const RTC_TypeDef * RTCx)

Function description

Get RTC secure level.

Parameters

- **RTCx:** RTC Instance

Return values

- **Combination:** of the following values:
  – LL_RTC_SECURE_FULL_YES
  – LL_RTC_SECURE_FULL_NO
  – LL_RTC_UNSECURE_FEATURE_INIT
  – LL_RTC_UNSECURE_FEATURE_CAL
  – LL_RTC_UNSECURE_FEATURE_TS
  – LL_RTC_UNSECURE_FEATURE_WUT
  – LL_RTC_UNSECURE_FEATURE_ALRA
  – LL_RTC_UNSECURE_FEATURE_ALRB

Notes

- Secure features is relevant if LL_RTC_SECURE_FULL_YES.

LL_RTC_SetTampSecure

Function name

__STATIC_INLINE void LL_RTC_SetTampSecure (const RTC_TypeDef * RTCx, uint32_t tampSecure)

Function description

Set TAMPER secure level.

Parameters

- **RTCx:** RTC Instance
- **tampSecure:** This parameter can be one of the following values:
  – LL_TAMP_SECURE_FULL_YES
  – LL_TAMP_SECURE_FULL_NO

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_SECCFGR TAMPSEC LL_RTC_SetTampSecure

LL_RTC_GetTampSecure

Function name

__STATIC_INLINE uint32_t LL_RTC_GetTampSecure (const RTC_TypeDef * RTCx)

Function description

Get TAMPER secure level.

Parameters

- **RTCx:** RTC Instance

Return values

- **This:** parameter can be one of the following values:
  – LL_TAMP_SECURE_FULL_YES
  – LL_TAMP_SECURE_FULL_NO

Reference Manual to LL API cross reference:

- TAMP_SECCFGR TAMPSEC LL_RTC_GetTampSecure

LL_RTC_SetRtcPrivilege

Function name

__STATIC_INLINE void LL_RTC_SetRtcPrivilege (RTC_TypeDef * RTCx, uint32_t rtcPrivilege)

Function description

Set RTC privilege level.

Parameters

- **RTCx:** RTC Instance
- **rtcPrivilege:** This parameter can be a combination of the following values:
  - LL_RTC_PRIVILEGE_FULL_YES
  - LL_RTC_PRIVILEGE_FULL_NO
  - LL_RTC_PRIVILEGE_FEATURE_INIT
  - LL_RTC_PRIVILEGE_FEATURE_CAL
  - LL_RTC_PRIVILEGE_FEATURE_TS
  - LL_RTC_PRIVILEGE_FEATURE_WUT
  - LL_RTC_PRIVILEGE_FEATURE_ALRA
  - LL_RTC_PRIVILEGE_FEATURE_ALRB

Return values

- **None:**

Notes

- Privilege features are relevant if LL_RTC_PRIVILEGE_FULL_NO.

LL_RTC_SetTampPrivilege

Function name

__STATIC_INLINE void LL_RTC_SetTampPrivilege (const RTC_TypeDef * RTCx, uint32_t tampPrivilege)

Function description

Set TAMPER privilege level.

Parameters

- **RTCx:** RTC Instance
- **tampPrivilege:** This parameter can be one of the following values:
  – LL_TAMP_PRIVILEGE_FULL_YES
  – LL_TAMP_PRIVILEGE_FULL_NO

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_SECCFGR TAMPPRIV LL_RTC_SetTampPrivilege

LL_RTC_GetTampPrivilege

Function name

__STATIC_INLINE uint32_t LL_RTC_GetTampPrivilege (const RTC_TypeDef * RTCx)

Function description

Get TAMPER privilege level.

Parameters

- **RTCx:** RTC Instance

Return values

- **This:** parameter can be one of the following values:
  – LL_TAMP_PRIVILEGE_FULL_YES
  – LL_TAMP_PRIVILEGE_FULL_NO

Reference Manual to LL API cross reference:

- TAMP_SECCFGR TAMPSEC LL_RTC_GetTampPrivilege

LL_RTC_SetBackupRegisterPrivilege

Function name

__STATIC_INLINE void LL_RTC_SetBackupRegisterPrivilege (const RTC_TypeDef * RTCx, uint32_t bckupRegisterPrivilege)

Function description

Set Backup Registers privilege level.

Parameters

- **RTCx:** RTC Instance
- **bckupRegisterPrivilege:** This parameter can be one of the following values:
  – LL_RTC_PRIVILEGE_BKUP_ZONE_NONE
  – LL_RTC_PRIVILEGE_BKUP_ZONE_1
  – LL_RTC_PRIVILEGE_BKUP_ZONE_2
  – LL_RTC_PRIVILEGE_BKUP_ZONE_ALL

Return values

- **None:**

Notes

- bckupRegisterPrivilege is only writable in secure mode or if trustzone is disabled

Reference Manual to LL API cross reference:

- TAMP_PRIVCFGR BKPWPRIV LL_RTC_SetTampPrivilege
- TAMP_PRIVCFGR BKPRWPRIV LL_RTC_SetTampPrivilege

LL_RTC_GetBackupRegisterPrivilege

Function name

__STATIC_INLINE uint32_t LL_RTC_GetBackupRegisterPrivilege (const RTC_TypeDef * RTCx)

Function description

Get Backup Registers privilege level.

Parameters

- **RTCx:** RTC Instance

Return values

- **This:** parameter can be one of the following values:
  – LL_RTC_PRIVILEGE_BKUP_ZONE_NONE
  – LL_RTC_PRIVILEGE_BKUP_ZONE_1
  – LL_RTC_PRIVILEGE_BKUP_ZONE_2
  – LL_RTC_PRIVILEGE_BKUP_ZONE_ALL

Reference Manual to LL API cross reference:

LL_RTC_SetBackupRegProtection

Function name

__STATIC_INLINE void LL_RTC_SetBackupRegProtection (const RTC_TypeDef * RTCx, uint32_t startZone2, uint32_t startZone3)

Function description

Set Backup registers protection level.

Parameters

- **RTCx:** RTC Instance
- **startZone2:** This parameter can be one of the following values:
  - LL_RTC_BKP_DR0
  - LL_RTC_BKP_DR1
  - LL_RTC_BKP_DR2
  - LL_RTC_BKP_DR3
  - LL_RTC_BKP_DR4
  - LL_RTC_BKP_DR5
  - LL_RTC_BKP_DR6
  - LL_RTC_BKP_DR7
  - LL_RTC_BKP_DR8
  - LL_RTC_BKP_DR9
  - LL_RTC_BKP_DR10
  - LL_RTC_BKP_DR11
  - LL_RTC_BKP_DR12
  - LL_RTC_BKP_DR13

LL_RTC_EnableIT_TS

Function name

__STATIC_INLINE void LL_RTC_EnableIT_TS (RTC_TypeDef * RTCx)

Function description

Enable Time-stamp interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR TSIE LL_RTC_EnableIT_TS

LL_RTC_DisableIT_TS

Function name

__STATIC_INLINE void LL_RTC_DisableIT_TS (RTC_TypeDef * RTCx)

Function description

Disable Time-stamp interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR TSIE LL_RTC_DisableIT_TS

LL_RTC_EnableIT_WUT

Function name

__STATIC_INLINE void LL_RTC_EnableIT_WUT (RTC_TypeDef * RTCx)

Function description

Enable Wakeup timer interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR WUTIE LL_RTC_EnableIT_WUT

LL_RTC_DisableIT_WUT

Function name

__STATIC_INLINE void LL_RTC_DisableIT_WUT (RTC_TypeDef * RTCx)

Function description

Disable Wakeup timer interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR WUTIE LL_RTC_DisableIT_WUT

LL_RTC_EnableIT_ALRB

Function name

__STATIC_INLINE void LL_RTC_EnableIT_ALRB (RTC_TypeDef * RTCx)

Function description

Enable Alarm B interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ALRBIE LL_RTC_EnableIT_ALRB

LL_RTC_DisableIT_ALRB

Function name

__STATIC_INLINE void LL_RTC_DisableIT_ALRB (RTC_TypeDef * RTCx)

Function description

Disable Alarm B interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ALRBIE LL_RTC_DisableIT_ALRB

LL_RTC_EnableIT_ALRA

Function name

__STATIC_INLINE void LL_RTC_EnableIT_ALRA (RTC_TypeDef * RTCx)

Function description

Enable Alarm A interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ALRAIE LL_RTC_EnableIT_ALRA

LL_RTC_DisableIT_ALRA

Function name

__STATIC_INLINE void LL_RTC_DisableIT_ALRA (RTC_TypeDef * RTCx)

Function description

Disable Alarm A interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ALRAIE LL_RTC_DisableIT_ALRA

LL_RTC_EnableIT_SSRU

Function name

__STATIC_INLINE void LL_RTC_EnableIT_SSRU (RTC_TypeDef * RTCx)

Function description

Enable SSR Underflow interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR SSRUIE LL_RTC_EnableIT_SSRU

LL_RTC_DisableIT_SSRU

Function name

__STATIC_INLINE void LL_RTC_DisableIT_SSRU (RTC_TypeDef * RTCx)

Function description

Disable SSR Underflow interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR SSRUIE LL_RTC_DisableIT_SSRU

LL_RTC_IsEnabledIT_TS

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_TS (const RTC_TypeDef * RTCx)

Function description

Check if Time-stamp interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CR TSIE LL_RTC_IsEnabledIT_TS

LL_RTC_IsEnabledIT_WUT

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_WUT (const RTC_TypeDef * RTCx)

Function description

Check if Wakeup timer interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CR WUTIE LL_RTC_IsEnabledIT_WUT

LL_RTC_IsEnabledIT_ALRB

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_ALRB (const RTC_TypeDef * RTCx)

Function description

Check if Alarm B interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CR ALRBIE LL_RTC_IsEnabledIT_ALRB

LL_RTC_IsEnabledIT_ALRA

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_ALRA (const RTC_TypeDef * RTCx)

Function description

Check if Alarm A interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CR ALRAIE LL_RTC_IsEnabledIT_ALRA

LL_RTC_IsEnabledIT_SSRU

Function name

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CR SSRUIE LL_RTC_IsEnabledIT_SSRU

LL_RTC_EnableIT_TAMP1

Function name

__STATIC_INLINE void LL_RTC_EnableIT_TAMP1 (const RTC_TypeDef * RTCx)

Function description

Enable tamper 1 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER TAMP1IE LL_RTC_EnableIT_TAMP1

LL_RTC_DisableIT_TAMP1

Function name

__STATIC_INLINE void LL_RTC_DisableIT_TAMP1 (const RTC_TypeDef * RTCx)

Function description

Disable tamper 1 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER TAMP1IE LL_RTC_DisableIT_TAMP1

LL_RTC_EnableIT_TAMP2

Function name

__STATIC_INLINE void LL_RTC_EnableIT_TAMP2 (const RTC_TypeDef * RTCx)

Function description

Enable tamper 2 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER TAMP2IE LL_RTC_EnableIT_TAMP2

LL_RTC_DisableIT_TAMP2

Function name

__STATIC_INLINE void LL_RTC_DisableIT_TAMP2 (const RTC_TypeDef * RTCx)

Function description

Disable tamper 2 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER TAMP2IE LL_RTC_DisableIT_TAMP2

LL_RTC_EnableIT_TAMP3

Function name

__STATIC_INLINE void LL_RTC_EnableIT_TAMP3 (const RTC_TypeDef * RTCx)

Function description

Enable tamper 3 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER TAMP3IE LL_RTC_EnableIT_TAMP3

LL_RTC_DisableIT_TAMP3

Function name

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER TAMP8IE LL_RTC_DisableIT_TAMP8

LL_RTC_EnableIT_ITAMP1

Function name

__STATIC_INLINE void LL_RTC_EnableIT_ITAMP1 (const RTC_TypeDef * RTCx)

Function description

Enable internal tamper 1 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP1IE LL_RTC_EnableIT_ITAMP1

LL_RTC_DisableIT_ITAMP1

Function name

__STATIC_INLINE void LL_RTC_DisableIT_ITAMP1 (const RTC_TypeDef * RTCx)

Function description

Disable internal tamper 1 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP1IE LL_RTC_DisableIT_ITAMP1

LL_RTC_EnableIT_ITAMP2

Function name

__STATIC_INLINE void LL_RTC_EnableIT_ITAMP2 (const RTC_TypeDef * RTCx)

Function description

Enable internal tamper 2 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP2IE LL_RTC_EnableIT_ITAMP2

LL_RTC_DisableIT_ITAMP2

Function name

__STATIC_INLINE void LL_RTC_DisableIT_ITAMP2 (const RTC_TypeDef * RTCx)

Function description

Disable internal tamper 2 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP2IE LL_RTC_DisableIT_ITAMP2

LL_RTC_EnableIT_ITAMP3

Function name

__STATIC_INLINE void LL_RTC_EnableIT_ITAMP3 (const RTC_TypeDef * RTCx)

Function description

Enable internal tamper 3 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP3IE LL_RTC_EnableIT_ITAMP3

LL_RTC_DisableIT_ITAMP3

Function name

__STATIC_INLINE void LL_RTC_DisableIT_ITAMP3 (const RTC_TypeDef * RTCx)

Function description

Disable internal tamper 3 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP3IE LL_RTC_DisableIT_ITAMP3

LL_RTC_EnableIT_ITAMP5

Function name

__STATIC_INLINE void LL_RTC_EnableIT_ITAMP5 (const RTC_TypeDef * RTCx)

Function description

Enable internal tamper 5 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP5IE LL_RTC_EnableIT_ITAMP5

LL_RTC_DisableIT_ITAMP5

Function name

__STATIC_INLINE void LL_RTC_DisableIT_ITAMP5 (const RTC_TypeDef * RTCx)

Function description

Disable internal tamper 5 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP5IE LL_RTC_DisableIT_ITAMP5

LL_RTC_EnableIT_ITAMP6

Function name

__STATIC_INLINE void LL_RTC_EnableIT_ITAMP6 (const RTC_TypeDef * RTCx)

Function description

Enable internal tamper 6 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP6IE LL_RTC_EnableIT_ITAMP6

LL_RTC_DisableIT_ITAMP6

Function name

__STATIC_INLINE void LL_RTC_DisableIT_ITAMP6 (const RTC_TypeDef * RTCx)

Function description

Disable internal tamper 6 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP6IE LL_RTC_DisableIT_ITAMP6

LL_RTC_EnableIT_ITAMP7

Function name

__STATIC_INLINE void LL_RTC_EnableIT_ITAMP7 (const RTC_TypeDef * RTCx)

Function description

Enable internal tamper 7 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP7IE LL_RTC_EnableIT_ITAMP7

LL_RTC_DisableIT_ITAMP7

Function name

__STATIC_INLINE void LL_RTC_DisableIT_ITAMP7 (const RTC_TypeDef * RTCx)

Function description

Disable internal tamper 7 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP7IE LL_RTC_DisableIT_ITAMP7

LL_RTC_EnableIT_ITAMP8

Function name

__STATIC_INLINE void LL_RTC_EnableIT_ITAMP8 (const RTC_TypeDef * RTCx)

Function description

Enable internal tamper 8 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP8IE LL_RTC_EnableIT_ITAMP8

LL_RTC_DisableIT_ITAMP8

Function name

__STATIC_INLINE void LL_RTC_DisableIT_ITAMP8 (const RTC_TypeDef * RTCx)

Function description

Disable internal tamper 8 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER TAMP8IE LL_RTC_DisableIT_ITAMP8

LL_RTC_EnableIT_ITAMP9

Function name

__STATIC_INLINE void LL_RTC_EnableIT_ITAMP9 (const RTC_TypeDef * RTCx)

Function description

Enable internal tamper 9 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP9IE LL_RTC_EnableIT_ITAMP9

LL_RTC_DisableIT_ITAMP9

Function name

__STATIC_INLINE void LL_RTC_DisableIT_ITAMP9 (const RTC_TypeDef * RTCx)

Function description

Disable internal tamper 9 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP9IE LL_RTC_DisableIT_ITAMP9

LL_RTC_EnableIT_ITAMP11

Function name

__STATIC_INLINE void LL_RTC_EnableIT_ITAMP11 (const RTC_TypeDef * RTCx)

Function description

Enable internal tamper 11 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP11IE LL_RTC_EnableIT_ITAMP11

LL_RTC_DisableIT_ITAMP11

Function name

__STATIC_INLINE void LL_RTC_DisableIT_ITAMP11 (const RTC_TypeDef * RTCx)

Function description

Disable internal tamper 11 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP11IE LL_RTC_DisableIT_ITAMP11

LL_RTC_EnableIT_ITAMP12

Function name

__STATIC_INLINE void LL_RTC_EnableIT_ITAMP12 (const RTC_TypeDef * RTCx)

Function description

Enable internal tamper 12 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP12IE LL_RTC_EnableIT_ITAMP12

LL_RTC_DisableIT_ITAMP12

Function name

__STATIC_INLINE void LL_RTC_DisableIT_ITAMP12 (const RTC_TypeDef * RTCx)

Function description

Disable internal tamper 12 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER TAMP12IE LL_RTC_DisableIT_ITAMP12

LL_RTC_EnableIT_ITAMP13

Function name

__STATIC_INLINE void LL_RTC_EnableIT_ITAMP13 (const RTC_TypeDef * RTCx)

Function description

Enable internal tamper 13 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP13IE LL_RTC_EnableIT_ITAMP13

LL_RTC_DisableIT_ITAMP13

Function name

__STATIC_INLINE void LL_RTC_DisableIT_ITAMP13 (const RTC_TypeDef * RTCx)

Function description

Disable internal tamper 13 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER TAMP13IE LL_RTC_DisableIT_ITAMP13

LL_RTC_IsEnabledIT_TAMP1

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_TAMP1 (const RTC_TypeDef * RTCx)

Function description

Check if tamper 1 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER TAMP1IE LL_RTC_IsEnabledIT_TAMP1

LL_RTC_IsEnabledIT_TAMP2

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_TAMP2 (const RTC_TypeDef * RTCx)

Function description

Check if tamper 2 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER TAMP2IE LL_RTC_IsEnabledIT_TAMP2

LL_RTC_IsEnabledIT_TAMP3

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_TAMP3 (const RTC_TypeDef * RTCx)

Function description

Check if tamper 3 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER TAMP3IE LL_RTC_IsEnabledIT_TAMP3

LL_RTC_IsEnabledIT_TAMP4

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_TAMP4 (const RTC_TypeDef * RTCx)

Function description

Check if tamper 4 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER TAMP4IE LL_RTC_IsEnabledIT_TAMP4

LL_RTC_IsEnabledIT_TAMP5

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_TAMP5 (const RTC_TypeDef * RTCx)

Function description

Check if tamper 5 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER TAMP1IE LL_RTC_IsEnabledIT_TAMP5

LL_RTC_IsEnabledIT_TAMP6

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_TAMP6 (const RTC_TypeDef * RTCx)

Function description

Check if tamper 6 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER TAMP6IE LL_RTC_IsEnabledIT_TAMP6

LL_RTC_IsEnabledIT_TAMP7

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_TAMP7 (const RTC_TypeDef * RTCx)

Function description

Check if tamper 7 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER TAMP1IE LL_RTC_IsEnabledIT_TAMP7

LL_RTC_IsEnabledIT_TAMP8

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_TAMP8 (const RTC_TypeDef * RTCx)

Function description

Check if tamper 8 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER TAMP8IE LL_RTC_IsEnabledIT_TAMP8

LL_RTC_IsEnabledIT_ITAMP1

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_ITAMP1 (const RTC_TypeDef * RTCx)

Function description

Check if internal tamper 1 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP1IE LL_RTC_IsEnabledIT_ITAMP1

LL_RTC_IsEnabledIT_ITAMP2

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_ITAMP2 (const RTC_TypeDef * RTCx)

Function description

Check if internal tamper 2 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP2IE LL_RTC_IsEnabledIT_ITAMP2

LL_RTC_IsEnabledIT_ITAMP3

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_ITAMP3 (const RTC_TypeDef * RTCx)

Function description

Check if internal tamper 3 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP3IE LL_RTC_IsEnabledIT_ITAMP3

LL_RTC_IsEnabledIT_ITAMP5

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_ITAMP5 (const RTC_TypeDef * RTCx)

Function description

Check if internal tamper 5 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP5IE LL_RTC_IsEnabledIT_ITAMP5

LL_RTC_IsEnabledIT_ITAMP6

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_ITAMP6 (const RTC_TypeDef * RTCx)

Function description

Check if internal tamper 6 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP6IE LL_RTC_IsEnabledIT_ITAMP6

LL_RTC_IsEnabledIT_ITAMP7

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_ITAMP7 (const RTC_TypeDef * RTCx)

Function description

Check if internal tamper 7 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP7IE LL_RTC_IsEnabledIT_ITAMP7

LL_RTC_IsEnabledIT_ITAMP8

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_ITAMP8 (const RTC_TypeDef * RTCx)

Function description

Check if internal tamper 8 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP8IE LL_RTC_IsEnabledIT_ITAMP8

LL_RTC_IsEnabledIT_ITAMP9

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_ITAMP9 (const RTC_TypeDef * RTCx)

Function description

Check if internal tamper 9 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP9IE LL_RTC_IsEnabledIT_ITAMP9

LL_RTC_IsEnabledIT_ITAMP11

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_ITAMP11 (const RTC_TypeDef * RTCx)

Function description

Check if internal tamper 11 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP11IE LL_RTC_IsEnabledIT_ITAMP11

LL_RTC_IsEnabledIT_ITAMP12

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_ITAMP12 (const RTC_TypeDef * RTCx)

Function description

Check if internal tamper 12 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP12IE LL_RTC_IsEnabledIT_ITAMP12

LL_RTC_IsEnabledIT_ITAMP13

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_ITAMP13 (const RTC_TypeDef * RTCx)

Function description

Check if internal tamper 13 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP13IE LL_RTC_IsEnabledIT_ITAMP13

LL_RTC_IncrementMonotonicCounter

Function name

__STATIC_INLINE void LL_RTC_IncrementMonotonicCounter (const RTC_TypeDef * RTCx)

Function description

Increment Monotonic counter.

Parameters

- **RTCx:** RTC Instance

Return values

- **None.:**

Reference Manual to LL API cross reference:

- TAMP_COUNTR COUNT LL_RTC_IncrementMonotonicCounter

LL_RTC_GetMonotonicCounter

Function name

__STATIC_INLINE uint32_t LL_RTC_GetMonotonicCounter (const RTC_TypeDef * RTCx)

Function description

Increment Monotonic counter.

Parameters

- **RTCx:** RTC Instance

Return values

- **Monotonic:** counter value.

Reference Manual to LL API cross reference:

- TAMP_COUNTR COUNT LL_RTC_GetMonotonicCounter

LL_RTC_DeInit

Function name

ErrorStatus LL_RTC_DeInit (RTC_TypeDef * RTCx)

Function description

De-Initializes the RTC registers to their default reset values.

Parameters

- **RTCx:** RTC Instance

Return values

- **An:** ErrorStatus enumeration value:
  – SUCCESS: RTC registers are de-initialized
  – ERROR: RTC registers are not de-initialized

Notes

- This function does not reset the RTC Clock source and RTC Backup Data registers.

LL_RTC_Init

Function name

ErrorStatus LL_RTC_Init (RTC_TypeDef * RTCx, LL_RTC_InitTypeDef * RTC_InitStruct)

Function description

Initializes the RTC registers according to the specified parameters in RTC_InitStruct.

Parameters

- **RTCx:** RTC Instance
- **RTC_InitStruct:** pointer to a LL_RTC_InitTypeDef structure that contains the configuration information for the RTC peripheral.

Return values

- **An:** ErrorStatus enumeration value:
  – SUCCESS: RTC registers are initialized
  – ERROR: RTC registers are not initialized

Notes

- The RTC Prescaler register is write protected and can be written in initialization mode only.

LL_RTC_StructInit

Function name

void LL_RTC_StructInit (LL_RTC_InitTypeDef * RTC_InitStruct)

Function description

Set each LL_RTC_InitTypeDef field to default value.

Parameters

- **RTC_InitStruct:** pointer to a LL_RTC_InitTypeDef structure which will be initialized.

Return values

- **None:**

LL_RTC_TIME_Init

Function name

ErrorStatus LL_RTC_TIME_Init (RTC_TypeDef * RTCx, uint32_t RTC_Format, LL_RTC_TimeTypeDef * RTC_TimeStruct)

Function description

Set the RTC current time.

Parameters

- **RTCx:** RTC Instance
- **RTC_Format:** This parameter can be one of the following values:
  – LL_RTC_FORMAT_BIN
  – LL_RTC_FORMAT_BCD
- **RTC_TimeStruct:** pointer to a RTC_TimeTypeDef structure that contains the time configuration information for the RTC.

Return values

- **An:** ErrorStatus enumeration value:
  – SUCCESS: RTC Time register is configured
  – ERROR: RTC Time register is not configured

LL_RTC_TIME_StructInit

Function name

void LL_RTC_TIME_StructInit (LL_RTC_TimeTypeDef * RTC_TimeStruct)

Function description

Set each LL_RTC_TimeTypeDef field to default value (Time = 00h:00min:00sec).

Parameters

- **RTC_TimeStruct:** pointer to a LL_RTC_TimeTypeDef structure which will be initialized.

Return values

- **None:**

LL_RTC_DATE_Init

Function name

ErrorStatus LL_RTC_DATE_Init (RTC_TypeDef * RTCx, uint32_t RTC_Format, LL_RTC_DateTypeDef * RTC_DateStruct)

Function description

Set the RTC current date.

Parameters

- **RTCx:** RTC Instance
- **RTC_Format:** This parameter can be one of the following values:
  - LL_RTC_FORMAT_BIN
  - LL_RTC_FORMAT_BCD
- **RTC_DateStruct:** pointer to a RTC_DateTypeDef structure that contains the date configuration information for the RTC.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: RTC Day register is configured
  - ERROR: RTC Day register is not configured

LL_RTC_DATE_StructInit

Function name

void LL_RTC_DATE_StructInit (LL_RTC_DateTypeDef * RTC_DateStruct)

Function description

Set each LL_RTC_DateTypeDef field to default value (date = Monday, January 01 xx00)

Parameters

- **RTC_DateStruct:** pointer to a LL_RTC_DateTypeDef structure which will be initialized.

Return values

- **None:**

LL_RTC_ALMA_Init

Function name

ErrorStatus LL_RTC_ALMA_Init (RTC_TypeDef * RTCx, uint32_t RTC_Format, LL_RTC_AlarmTypeDef * RTC_AlarmStruct)

Function description

Set the RTC Alarm A.

Parameters

- **RTCx:** RTC Instance
- **RTC_Format:** This parameter can be one of the following values:
  - LL_RTC_FORMAT_BIN
  - LL_RTC_FORMAT_BCD
- **RTC_AlarmStruct:** pointer to a LL_RTC_AlarmTypeDef structure that contains the alarm configuration parameters.

Return values

- **An:** ErrorStatus enumeration value:
  – SUCCESS: ALARMA registers are configured
  – ERROR: ALARMA registers are not configured

Notes

- The Alarm register can only be written when the corresponding Alarm is disabled (Use LL_RTC_ALMA_Disable function).

LL_RTC_ALMB_Init

Function name

ErrorStatus LL_RTC_ALMB_Init (RTC_TypeDef * RTCx, uint32_t RTC_Format, LL_RTC_AlarmTypeDef * RTC_AlarmStruct)

Function description

Set the RTC Alarm B.

Parameters

- **RTCx:** RTC Instance
- **RTC_Format:** This parameter can be one of the following values:
  – LL_RTC_FORMAT_BIN
  – LL_RTC_FORMAT_BCD
- **RTC_AlarmStruct:** pointer to a LL_RTC_AlarmTypeDef structure that contains the alarm configuration parameters.

Return values

- **An:** ErrorStatus enumeration value:
  – SUCCESS: ALARMB registers are configured
  – ERROR: ALARMB registers are not configured

Notes

- The Alarm register can only be written when the corresponding Alarm is disabled (LL_RTC_ALMB_Disable function).

LL_RTC_ALMA_StructInit

Function name

void LL_RTC_ALMA_StructInit (LL_RTC_AlarmTypeDef * RTC_AlarmStruct)

Function description

Set each LL_RTC_AlarmTypeDef of ALARMA field to default value (Time = 00h:00mn:00sec / Day = 1st day of the month/Mask = all fields are masked).

Parameters

- **RTC_AlarmStruct:** pointer to a LL_RTC_AlarmTypeDef structure which will be initialized.

Return values

- **None:**

LL_RTC_ALMB_StructInit

Function name

void LL_RTC_ALMB_StructInit (LL_RTC_AlarmTypeDef * RTC_AlarmStruct)

Function description

Set each LL_RTC_AlarmTypeDef of ALARMA field to default value (Time = 00h:00mn:00sec / Day = 1st day of the month/Mask = all fields are masked).

Parameters

- **RTC_AlarmStruct:** pointer to a LL_RTC_AlarmTypeDef structure which will be initialized.

Return values

- **None:**

LL_RTC_EnterInitMode

Function name

ErrorStatus LL_RTC_EnterInitMode (RTC_TypeDef * RTCx)

Function description

Enters the RTC Initialization mode.

Parameters

- **RTCx:** RTC Instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: RTC is in Init mode
  - ERROR: RTC is not in Init mode

Notes

- The RTC Initialization mode is write protected, use the LL_RTC_DisableWriteProtection before calling this function.

LL_RTC_ExitInitMode

Function name

ErrorStatus LL_RTC_ExitInitMode (RTC_TypeDef * RTCx)

Function description

Exit the RTC Initialization mode.

Parameters

- **RTCx:** RTC Instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: RTC exited from in Init mode
  - ERROR: Not applicable

Notes

- When the initialization sequence is complete, the calendar restarts counting after 4 RTCCLK cycles.
- The RTC Initialization mode is write protected, use the LL_RTC_DisableWriteProtection before calling this function.

LL_RTC_WaitForSynchro

Function name

ErrorStatus LL_RTC_WaitForSynchro (RTC_TypeDef * RTCx)

Function description

Waits until the RTC Time and Day registers (RTC_TR and RTC_DR) are synchronized with RTC APB clock.

Parameters

- **RTCx:** RTC Instance

Return values

- **An:** ErrorStatus enumeration value:
  – SUCCESS: RTC registers are synchronised
  – ERROR: RTC registers are not synchronised

Notes

- The RTC Resynchronization mode is write protected, use the LL_RTC_DisableWriteProtection before calling this function.
- To read the calendar through the shadow registers after Calendar initialization, calendar update or after wakeup from low power modes the software must first clear the RSF flag. The software must then wait until it is set again before reading the calendar, which means that the calendar registers have been correctly copied into the RTC_TR and RTC_DR shadow registers.

116.3 RTC Firmware driver defines

Tamper 7 input detection

LL_RTC_TAMPER_8

Tamper 8 input detection

TAMPER ACTIVE LEVEL

LL_RTC_TAMPER_ACTIVELEVEL_TAMP1

Tamper 1 input falling edge (if TAMPFLT = 00) or staying high (if TAMPFLT != 00) triggers a tamper detection event

LL_RTC_TAMPER_ACTIVELEVEL_TAMP2

Tamper 2 input falling edge (if TAMPFLT = 00) or staying high (if TAMPFLT != 00) triggers a tamper detection event

LL_RTC_TAMPER_ACTIVELEVEL_TAMP3

Tamper 3 input falling edge (if TAMPFLT = 00) or staying high (if TAMPFLT != 00) triggers a tamper detection event

LL_RTC_TAMPER_ACTIVELEVEL_TAMP4

Tamper 4 input falling edge (if TAMPFLT = 00) or staying high (if TAMPFLT != 00) triggers a tamper detection event

LL_RTC_TAMPER_ACTIVELEVEL_TAMP5

Tamper 5 input falling edge (if TAMPFLT = 00) or staying high (if TAMPFLT != 00) triggers a tamper detection event

LL_RTC_TAMPER_ACTIVELEVEL_TAMP6

Tamper 6 input falling edge (if TAMPFLT = 00) or staying high (if TAMPFLT != 00) triggers a tamper detection event

LL_RTC_TAMPER_ACTIVELEVEL_TAMP7

Tamper 7 input falling edge (if TAMPFLT = 00) or staying high (if TAMPFLT != 00) triggers a tamper detection event

LL_RTC_TAMPER_ACTIVELEVEL_TAMP8

Tamper 8 input falling edge (if TAMPFLT = 00) or staying high (if TAMPFLT != 00) triggers a tamper detection event

TAMPER DURATION

LL_RTC_TAMPER_DURATION_1RTCCLK

Tamper pins are pre-charged before sampling during 1 RTCCLK cycle

LL_RTC_TAMPER_DURATION_2RTCCLK

Tamper pins are pre-charged before sampling during 2 RTCCLK cycles

LL_RTC_TAMPER_DURATION_4RTCCLK

Tamper pins are pre-charged before sampling during 4 RTCCLK cycles

LL_RTC_TAMPER_DURATION_8RTCCLK

Tamper pins are pre-charged before sampling during 8 RTCCLK cycles

TAMPER FILTER

LL_RTC_TAMPER_FILTER_DISABLE

Tamper filter is disabled

LL_RTC_TAMPER_FILTER_2SAMPLE

Tamper is activated after 2 consecutive samples at the active level

LL_RTC_TAMPER_FILTER_4SAMPLE

Tamper is activated after 4 consecutive samples at the active level

LL_RTC_TAMPER_FILTER_8SAMPLE

Tamper is activated after 8 consecutive samples at the active level.

TAMPER MASK

LL_RTC_TAMPER_MASK_TAMPER1

Tamper 1 event generates a trigger event. TAMP1F is masked and internally cleared by hardware.The backup registers are not erased

LL_RTC_TAMPER_MASK_TAMPER2

Tamper 2 event generates a trigger event. TAMP2F is masked and internally cleared by hardware. The backup registers are not erased.

LL_RTC_TAMPER_MASK_TAMPER3

Tamper 3 event generates a trigger event. TAMP2F is masked and internally cleared by hardware. The backup registers are not erased.

TAMPER NO ERASE

LL_RTC_TAMPER_NOERASE_TAMPER1

Tamper 1 event does not erase the backup registers.

LL_RTC_TAMPER_NOERASE_TAMPER2

Tamper 2 event does not erase the backup registers.

LL_RTC_TAMPER_NOERASE_TAMPER3

Tamper 3 event does not erase the backup registers.

LL_RTC_TAMPER_NOERASE_TAMPER4

Tamper 4 event does not erase the backup registers.

LL_RTC_TAMPER_NOERASE_TAMPER5

Tamper 5 event does not erase the backup registers.

LL_RTC_TAMPER_NOERASE_TAMPER6

Tamper 6 event does not erase the backup registers.

LL_RTC_TAMPER_NOERASE_TAMPER7

Tamper 7 event does not erase the backup registers.

LL_RTC_TAMPER_NOERASE_TAMPER8
Tamper 8 event does not erase the backup registers.

TAMPER SAMPLING FREQUENCY DIVIDER

LL_RTC_TAMPER_SAMPLFREQDIV_32768
Each of the tamper inputs are sampled with a frequency = RTCCLK / 32768

LL_RTC_TAMPER_SAMPLFREQDIV_16384
Each of the tamper inputs are sampled with a frequency = RTCCLK / 16384

LL_RTC_TAMPER_SAMPLFREQDIV_8192
Each of the tamper inputs are sampled with a frequency = RTCCLK / 8192

LL_RTC_TAMPER_SAMPLFREQDIV_4096
Each of the tamper inputs are sampled with a frequency = RTCCLK / 4096

LL_RTC_TAMPER_SAMPLFREQDIV_2048
Each of the tamper inputs are sampled with a frequency = RTCCLK / 2048

LL_RTC_TAMPER_SAMPLFREQDIV_1024
Each of the tamper inputs are sampled with a frequency = RTCCLK / 1024

LL_RTC_TAMPER_SAMPLFREQDIV_512
Each of the tamper inputs are sampled with a frequency = RTCCLK / 512

LL_RTC_TAMPER_SAMPLFREQDIV_256
Each of the tamper inputs are sampled with a frequency = RTCCLK / 256

TIMESTAMP EDGE

LL_RTC_TIMESTAMP_EDGE_RISING
RTC_TS input rising edge generates a time-stamp event

LL_RTC_TIMESTAMP_EDGE_FALLING
RTC_TS input falling edge generates a time-stamp even

TIME FORMAT

LL_RTC_TIME_FORMAT_AM_OR_24
AM or 24-hour format

LL_RTC_TIME_FORMAT_PM
PM

TIMESTAMP TIME FORMAT

LL_RTC_TS_TIME_FORMAT_AM
AM or 24-hour format

LL_RTC_TS_TIME_FORMAT_PM
PM

UnSecure features rtc in case of LL_RTC_SECURE_FULL_NO.

LL_RTC_UNSECURE_FEATURE_INIT
Initialization feature is not secure

LL_RTC_UNSECURE_FEATURE_CAL
Calibration feature is not secure

LL_RTC_UNSECURE_FEATURE_TS
Time stamp feature is not secure

LL_RTC_UNSECURE_FEATURE_WUT
Wake up timer feature is not secure

LL_RTC_UNSECURE_FEATURE_ALRA
Alarm A feature is not secure

LL_RTC_UNSECURE_FEATURE_ALRB
Alarm B feature is not secure

WAKEUP CLOCK DIV

LL_RTC_WAKEUPCLOCK_DIV_16
RTC/16 clock is selected

LL_RTC_WAKEUPCLOCK_DIV_8
RTC/8 clock is selected

LL_RTC_WAKEUPCLOCK_DIV_4
RTC/4 clock is selected

LL_RTC_WAKEUPCLOCK_DIV_2
RTC/2 clock is selected

LL_RTC_WAKEUPCLOCK_CKSPRE
ck_spre (usually 1 Hz) clock is selected

LL_RTC_WAKEUPCLOCK_CKSPRE_WUT
ck_spre (usually 1 Hz) clock is selected and 2exp16 is added to the WUT counter value

LL_RTC_WEEKDAY_SATURDAY
Saturday

LL_RTC_WEEKDAY_SUNDAY
Sunday

Convert helper Macros

__LL_RTC_CONVERT_BIN2BCD

Description:

- Helper macro to convert a value from 2 digit decimal format to BCD format.

Parameters:

- __VALUE__: Byte to be converted

Return value:

- Converted: byte

__LL_RTC_CONVERT_BCD2BIN

Description:

- Helper macro to convert a value from BCD format to 2 digit decimal format.

Parameters:

- __VALUE__: BCD value to be converted

Return value:

- Converted: byte

Date helper Macros

__LL_RTC_GET_WEEKDAY

Description:

- Helper macro to retrieve weekday.

Parameters:

- __RTC_DATE__: Date returned by

Return value:

- Returned: value can be one of the following values:
  - LL_RTC_WEEKDAY_MONDAY
  - LL_RTC_WEEKDAY_TUESDAY
  - LL_RTC_WEEKDAY_WEDNESDAY
  - LL_RTC_WEEKDAY_THURSDAY
  - LL_RTC_WEEKDAY_FRIDAY
  - LL_RTC_WEEKDAY_SATURDAY
  - LL_RTC_WEEKDAY_SUNDAY

__LL_RTC_GET_YEAR

Description:

- Helper macro to retrieve Year in BCD format.

Parameters:

- __RTC_DATE__: Value returned by

Return value:

- Year: in BCD format (0x00 . . . 0x99)

__LL_RTC_GET_MONTH

Description:

- Helper macro to retrieve Month in BCD format.

Parameters:

- __RTC_DATE__: Value returned by

Return value:

- Returned: value can be one of the following values:
  - LL_RTC_MONTH_JANUARY
  - LL_RTC_MONTH_FEBRUARY
  - LL_RTC_MONTH_MARCH
  - LL_RTC_MONTH_APRIL
  - LL_RTC_MONTH_MAY
  - LL_RTC_MONTH_JUNE
  - LL_RTC_MONTH_JULY
  - LL_RTC_MONTH_AUGUST
  - LL_RTC_MONTH_SEPTEMBER
  - LL_RTC_MONTH_OCTOBER
  - LL_RTC_MONTH_NOVEMBER
  - LL_RTC_MONTH_DECEMBER

__LL_RTC_GET_DAY

Description:

- Helper macro to retrieve Day in BCD format.

Parameters:

- __RTC_DATE__: Value returned by

Return value:

- Day: in BCD format (0x01 . . . 0x31)

Time helper Macros

__LL_RTC_GET_HOUR

Description:

- Helper macro to retrieve hour in BCD format.

Parameters:

- __RTC_TIME__: RTC time returned by

Return value:

- Hours: in BCD format (0x01. . .0x12 or between Min_Data=0x00 and Max_Data=0x23)

__LL_RTC_GET_MINUTE

Description:

- Helper macro to retrieve minute in BCD format.

Parameters:

- __RTC_TIME__: RTC time returned by

Return value:

- Minutes: in BCD format (0x00. . .0x59)

__LL_RTC_GET_SECOND

Description:

- Helper macro to retrieve second in BCD format.

Parameters:

- __RTC_TIME__: RTC time returned by

Return value:

- Seconds: in format (0x00. . .0x59)

Common Write and read registers Macros

LL_RTC_WriteReg

Description:

- Write a value in RTC register.

Parameters:

- __INSTANCE__: RTC Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_RTC_ReadReg

Description:

- Read a value in RTC register.

Parameters:

- __INSTANCE__: RTC Instance
- __REG__: Register to be read

Return value:

- Register: value

117 LL SPI Generic Driver

117.1 SPI Firmware driver registers structures

117.1.1 LL_SPI_InitTypeDef

LL_SPI_InitTypeDef is defined in the stm32u5xx_ll_spi.h

Data Fields

- ***uint32_t TransferDirection***
- ***uint32_t Mode***
- ***uint32_t DataWidth***
- ***uint32_t ClockPolarity***
- ***uint32_t ClockPhase***
- ***uint32_t NSS***
- ***uint32_t BaudRate***
- ***uint32_t BitOrder***
- ***uint32_t CRCCalculation***
- ***uint32_t CRCPoly***

Field Documentation

- ***uint32_t LL_SPI_InitTypeDef::TransferDirection***
  Specifies the SPI unidirectional or bidirectional data mode. This parameter can be a value of ***SPI_LL_EC_TRANSFER_MODE***.This feature can be modified afterwards using unitary function **LL_SPI_SetTransferDirection()**.
- ***uint32_t LL_SPI_InitTypeDef::Mode***
  Specifies the SPI mode (Master/Slave). This parameter can be a value of ***SPI_LL_EC_MODE***.This feature can be modified afterwards using unitary function **LL_SPI_SetMode()**.
- ***uint32_t LL_SPI_InitTypeDef::DataWidth***
  Specifies the SPI data width. This parameter can be a value of ***SPI_LL_EC_DATAWIDTH***.This feature can be modified afterwards using unitary function **LL_SPI_SetDataWidth()**.
- ***uint32_t LL_SPI_InitTypeDef::ClockPolarity***
  Specifies the serial clock steady state. This parameter can be a value of ***SPI_LL_EC_POLARITY***.This feature can be modified afterwards using unitary function **LL_SPI_SetClockPolarity()**.
- ***uint32_t LL_SPI_InitTypeDef::ClockPhase***
  Specifies the clock active edge for the bit capture. This parameter can be a value of ***SPI_LL_EC_PHASE***.This feature can be modified afterwards using unitary function **LL_SPI_SetClockPhase()**.
- ***uint32_t LL_SPI_InitTypeDef::NSS***
  Specifies whether the NSS signal is managed by hardware (NSS pin) or by software using the SSI bit.This parameter can be a value of ***SPI_LL_EC_NSS_MODE***.This feature can be modified afterwards using unitary function **LL_SPI_SetNSSMode()**.
- ***uint32_t LL_SPI_InitTypeDef::BaudRate***
  Specifies the BaudRate prescaler value which will be used to configure the transmit and receive SCK clock. This parameter can be a value of ***SPI_LL_EC_BAUDRATEPRESCALER***.
  Note:
  – The communication clock is derived from the master clock. The slave clock does not need to be set.

  This feature can be modified afterwards using unitary function **LL_SPI_SetBaudRatePrescaler()**.
- ***uint32_t LL_SPI_InitTypeDef::BitOrder***
  Specifies whether data transfers start from MSB or LSB bit. This parameter can be a value of ***SPI_LL_EC_BIT_ORDER***.This feature can be modified afterwards using unitary function **LL_SPI_SetTransferBitOrder()**.
- ***uint32_t LL_SPI_InitTypeDef::CRCCalculation***
  Specifies if the CRC calculation is enabled or not. This parameter can be a value of ***SPI_LL_EC_CRC_CALCULATION***.This feature can be modified afterwards using unitary functions **LL_SPI_EnableCRC()** and **LL_SPI_DisableCRC()**.

- ***uint32_t LL_SPI_InitTypeDef::CRCPoly***
  Specifies the polynomial used for the CRC calculation. This parameter must be a number between Min_Data = 0x00 and Max_Data = 0xFFFFFFFF.This feature can be modified afterwards using unitary function **LL_SPI_SetCRCPolynomial()**.

117.2 SPI Firmware driver API description

The following section lists the various functions of the SPI library.

117.2.1 Detailed description of functions

LL_SPI_Enable

Function name

__STATIC_INLINE void LL_SPI_Enable (SPI_TypeDef * SPIx)

Function description

Enable SPI peripheral.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 SPE LL_SPI_Enable

LL_SPI_Disable

Function name

__STATIC_INLINE void LL_SPI_Disable (SPI_TypeDef * SPIx)

Function description

Disable SPI peripheral.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- When disabling the SPI, follow the procedure described in the Reference Manual.

Reference Manual to LL API cross reference:

- CR1 SPE LL_SPI_Disable

LL_SPI_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabled (const SPI_TypeDef * SPIx)

Function description

Check if SPI peripheral is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CR1 SPE LL_SPI_IsEnabled

LL_SPI_EnableIOSwap

Function name

__STATIC_INLINE void LL_SPI_EnableIOSwap (SPI_TypeDef * SPIx)

Function description

Swap the MOSI and MISO pin.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG2 IOSWP LL_SPI_EnableIOSwap

LL_SPI_DisableIOSwap

Function name

__STATIC_INLINE void LL_SPI_DisableIOSwap (SPI_TypeDef * SPIx)

Function description

Restore default function for MOSI and MISO pin.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG2 IOSWP LL_SPI_DisableIOSwap

LL_SPI_IsEnabledIOSwap

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIOSwap (const SPI_TypeDef * SPIx)

Function description

Check if MOSI and MISO pin are swapped.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CFG2 IOSWP LL_SPI_IsEnabledIOSwap

LL_SPI_EnableGPIOControl

Function name

__STATIC_INLINE void LL_SPI_EnableGPIOControl (SPI_TypeDef * SPIx)

Function description

Enable GPIO control.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG2 AFCNTR LL_SPI_EnableGPIOControl

LL_SPI_DisableGPIOControl

Function name

__STATIC_INLINE void LL_SPI_DisableGPIOControl (SPI_TypeDef * SPIx)

Function description

Disable GPIO control.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG2 AFCNTR LL_SPI_DisableGPIOControl

LL_SPI_IsEnabledGPIOControl

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledGPIOControl (const SPI_TypeDef * SPIx)

Function description

Check if GPIO control is active.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CFG2 AFCNTR LL_SPI_IsEnabledGPIOControl

LL_SPI_SetMode

Function name

__STATIC_INLINE void LL_SPI_SetMode (SPI_TypeDef * SPIx, uint32_t Mode)

Function description

Set SPI Mode to Master or Slave.

Parameters

- **SPIx:** SPI Instance
- **Mode:** This parameter can be one of the following values:
  – LL_SPI_MODE_MASTER
  – LL_SPI_MODE_SLAVE

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG2 MASTER LL_SPI_SetMode

LL_SPI_GetMode

Function name

__STATIC_INLINE uint32_t LL_SPI_GetMode (const SPI_TypeDef * SPIx)

Function description

Get SPI Mode (Master or Slave)

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_SPI_MODE_MASTER
  – LL_SPI_MODE_SLAVE

Reference Manual to LL API cross reference:

- CFG2 MASTER LL_SPI_GetMode

LL_SPI_SetMasterSSIdleness

Function name

__STATIC_INLINE void LL_SPI_SetMasterSSIdleness (SPI_TypeDef * SPIx, uint32_t MasterSSIdleness)

Function description

Configure the Idleness applied by master between active edge of SS and first send data.

Parameters

- **SPIx:** SPI Instance
- **MasterSSIdleness:** This parameter can be one of the following values:
  - LL_SPI_SS_IDLENESS_00CYCLE
  - LL_SPI_SS_IDLENESS_01CYCLE
  - LL_SPI_SS_IDLENESS_02CYCLE
  - LL_SPI_SS_IDLENESS_03CYCLE
  - LL_SPI_SS_IDLENESS_04CYCLE
  - LL_SPI_SS_IDLENESS_05CYCLE
  - LL_SPI_SS_IDLENESS_06CYCLE
  - LL_SPI_SS_IDLENESS_07CYCLE
  - LL_SPI_SS_IDLENESS_08CYCLE
  - LL_SPI_SS_IDLENESS_09CYCLE
  - LL_SPI_SS_IDLENESS_10CYCLE
  - LL_SPI_SS_IDLENESS_11CYCLE
  - LL_SPI_SS_IDLENESS_12CYCLE
  - LL_SPI_SS_IDLENESS_13CYCLE
  - LL_SPI_SS_IDLENESS_14CYCLE
  - LL_SPI_SS_IDLENESS_15CYCLE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG2 MSSI LL_SPI_SetMasterSSIdleness

LL_SPI_GetMasterSSIdleness

Function name

__STATIC_INLINE uint32_t LL_SPI_GetMasterSSIdleness (const SPI_TypeDef * SPIx)

Function description

Get the configured Idleness applied by master.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_SS_IDLENESS_00CYCLE
  - LL_SPI_SS_IDLENESS_01CYCLE
  - LL_SPI_SS_IDLENESS_02CYCLE
  - LL_SPI_SS_IDLENESS_03CYCLE
  - LL_SPI_SS_IDLENESS_04CYCLE
  - LL_SPI_SS_IDLENESS_05CYCLE
  - LL_SPI_SS_IDLENESS_06CYCLE
  - LL_SPI_SS_IDLENESS_07CYCLE
  - LL_SPI_SS_IDLENESS_08CYCLE
  - LL_SPI_SS_IDLENESS_09CYCLE
  - LL_SPI_SS_IDLENESS_10CYCLE
  - LL_SPI_SS_IDLENESS_11CYCLE
  - LL_SPI_SS_IDLENESS_12CYCLE
  - LL_SPI_SS_IDLENESS_13CYCLE
  - LL_SPI_SS_IDLENESS_14CYCLE
  - LL_SPI_SS_IDLENESS_15CYCLE

Reference Manual to LL API cross reference:

- CFG2 MSSI LL_SPI_GetMasterSSIdleness

LL_SPI_SetInterDataIdleness

Function name

__STATIC_INLINE void LL_SPI_SetInterDataIdleness (SPI_TypeDef * SPIx, uint32_t MasterInterDataIdleness)

Function description

Configure the idleness applied by master between data frame.

Parameters

- **SPIx:** SPI Instance
- **MasterInterDataIdleness:** This parameter can be one of the following values:
  - LL_SPI_ID_IDLENESS_00CYCLE
  - LL_SPI_ID_IDLENESS_01CYCLE
  - LL_SPI_ID_IDLENESS_02CYCLE
  - LL_SPI_ID_IDLENESS_03CYCLE
  - LL_SPI_ID_IDLENESS_04CYCLE
  - LL_SPI_ID_IDLENESS_05CYCLE
  - LL_SPI_ID_IDLENESS_06CYCLE
  - LL_SPI_ID_IDLENESS_07CYCLE
  - LL_SPI_ID_IDLENESS_08CYCLE
  - LL_SPI_ID_IDLENESS_09CYCLE
  - LL_SPI_ID_IDLENESS_10CYCLE
  - LL_SPI_ID_IDLENESS_11CYCLE
  - LL_SPI_ID_IDLENESS_12CYCLE
  - LL_SPI_ID_IDLENESS_13CYCLE
  - LL_SPI_ID_IDLENESS_14CYCLE
  - LL_SPI_ID_IDLENESS_15CYCLE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG2 MIDI LL_SPI_SetInterDataIdleness

LL_SPI_GetInterDataIdleness

Function name

__STATIC_INLINE uint32_t LL_SPI_GetInterDataIdleness (const SPI_TypeDef * SPIx)

Function description

Get the configured inter data idleness.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_SPI_ID_IDLENESS_00CYCLE
  – LL_SPI_ID_IDLENESS_01CYCLE
  – LL_SPI_ID_IDLENESS_02CYCLE
  – LL_SPI_ID_IDLENESS_03CYCLE
  – LL_SPI_ID_IDLENESS_04CYCLE
  – LL_SPI_ID_IDLENESS_05CYCLE
  – LL_SPI_ID_IDLENESS_06CYCLE
  – LL_SPI_ID_IDLENESS_07CYCLE
  – LL_SPI_ID_IDLENESS_08CYCLE
  – LL_SPI_ID_IDLENESS_09CYCLE
  – LL_SPI_ID_IDLENESS_10CYCLE
  – LL_SPI_ID_IDLENESS_11CYCLE
  – LL_SPI_ID_IDLENESS_12CYCLE
  – LL_SPI_ID_IDLENESS_13CYCLE
  – LL_SPI_ID_IDLENESS_14CYCLE
  – LL_SPI_ID_IDLENESS_15CYCLE

Reference Manual to LL API cross reference:

- CFG2 MIDI LL_SPI_SetInterDataIdleness

LL_SPI_SetTransferSize

Function name

__STATIC_INLINE void LL_SPI_SetTransferSize (SPI_TypeDef * SPIx, uint32_t Count)

Function description

Set transfer size.

Parameters

- **SPIx:** SPI Instance
- **Count:** 0..0xFFFF

Return values

- **None:**

Notes

- Count is the number of frame to be transferred

Reference Manual to LL API cross reference:

- CR2 TSIZE LL_SPI_SetTransferSize

LL_SPI_GetTransferSize

Function name

__STATIC_INLINE uint32_t LL_SPI_GetTransferSize (const SPI_TypeDef * SPIx)

Function description

Get transfer size.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFFFF:**

Notes

- Count is the number of frame to be transferred

Reference Manual to LL API cross reference:

- CR2 TSIZE LL_SPI_GetTransferSize

LL_SPI_EnableIOLock

Function name

__STATIC_INLINE void LL_SPI_EnableIOLock (SPI_TypeDef * SPIx)

Function description

Lock the AF configuration of associated IOs.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- Once this bit is set, the AF configuration remains locked until a hardware reset occurs. the reset of the IOLock bit is done by hardware. for that, LL_SPI_DisableIOLock can not exist.

Reference Manual to LL API cross reference:

- CR1 IOLOCK LL_SPI_EnableIOLock

LL_SPI_IsEnabledIOLock

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIOLock (const SPI_TypeDef * SPIx)

Function description

Check if the AF configuration is locked.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CR1 IOLOCK LL_SPI_IsEnabledIOLock

LL_SPI_SetTxCRCInitPattern

Function name

__STATIC_INLINE void LL_SPI_SetTxCRCInitPattern (SPI_TypeDef * SPIx, uint32_t TXCRCInitAll)

Function description

Set Tx CRC Initialization Pattern.

Parameters

- **SPIx:** SPI Instance
- **TXCRCInitAll:** This parameter can be one of the following values:
  - LL_SPI_TXCRCINIT_ALL_ZERO_PATTERN
  - LL_SPI_TXCRCINIT_ALL_ONES_PATTERN

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TCRCINI LL_SPI_SetTxCRCInitPattern

LL_SPI_GetTxCRCInitPattern

Function name

__STATIC_INLINE uint32_t LL_SPI_GetTxCRCInitPattern (const SPI_TypeDef * SPIx)

Function description

Get Tx CRC Initialization Pattern.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_TXCRCINIT_ALL_ZERO_PATTERN
  - LL_SPI_TXCRCINIT_ALL_ONES_PATTERN

Reference Manual to LL API cross reference:

- CR1 TCRCINI LL_SPI_GetTxCRCInitPattern

LL_SPI_SetRxCRCInitPattern

Function name

__STATIC_INLINE void LL_SPI_SetRxCRCInitPattern (SPI_TypeDef * SPIx, uint32_t RXCRCInitAll)

Function description

Set Rx CRC Initialization Pattern.

Parameters

- **SPIx:** SPI Instance
- **RXCRCInitAll:** This parameter can be one of the following values:
  - LL_SPI_RXCRCINIT_ALL_ZERO_PATTERN
  - LL_SPI_RXCRCINIT_ALL_ONES_PATTERN

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RCRCINI LL_SPI_SetRxCRCInitPattern

LL_SPI_GetRxCRCInitPattern

Function name

__STATIC_INLINE uint32_t LL_SPI_GetRxCRCInitPattern (const SPI_TypeDef * SPIx)

Function description

Get Rx CRC Initialization Pattern.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_RXCRCINIT_ALL_ZERO_PATTERN
  - LL_SPI_RXCRCINIT_ALL_ONES_PATTERN

Reference Manual to LL API cross reference:

- CR1 RCRCINI LL_SPI_GetRxCRCInitPattern

LL_SPI_SetInternalSSLevel

Function name

__STATIC_INLINE void LL_SPI_SetInternalSSLevel (SPI_TypeDef * SPIx, uint32_t SSLevel)

Function description

Set internal SS input level ignoring what comes from PIN.

Parameters

- **SPIx:** SPI Instance
- **SSLevel:** This parameter can be one of the following values:
  - LL_SPI_SS_LEVEL_HIGH
  - LL_SPI_SS_LEVEL_LOW

Return values

- **None:**

Notes

- This configuration has effect only with config LL_SPI_NSS_SOFT

Reference Manual to LL API cross reference:

- CR1 SSI LL_SPI_SetInternalSSLevel

LL_SPI_GetInternalSSLevel

Function name

__STATIC_INLINE uint32_t LL_SPI_GetInternalSSLevel (const SPI_TypeDef * SPIx)

Function description

Get internal SS input level.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_SPI_SS_LEVEL_HIGH
  – LL_SPI_SS_LEVEL_LOW

Reference Manual to LL API cross reference:

- CR1 SSI LL_SPI_GetInternalSSLevel

LL_SPI_EnableFullSizeCRC

Function name

__STATIC_INLINE void LL_SPI_EnableFullSizeCRC (SPI_TypeDef * SPIx)

Function description

Enable CRC computation on 33/17 bits.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CRC33_17 LL_SPI_EnableFullSizeCRC

LL_SPI_DisableFullSizeCRC

Function name

__STATIC_INLINE void LL_SPI_DisableFullSizeCRC (SPI_TypeDef * SPIx)

Function description

Disable CRC computation on 33/17 bits.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CRC33_17 LL_SPI_DisableFullSizeCRC

LL_SPI_IsEnabledFullSizeCRC

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledFullSizeCRC (const SPI_TypeDef * SPIx)

Function description

Check if Enable CRC computation on 33/17 bits is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CR1 CRC33_17 LL_SPI_IsEnabledFullSizeCRC

LL_SPI_SuspendMasterTransfer

Function name

__STATIC_INLINE void LL_SPI_SuspendMasterTransfer (SPI_TypeDef * SPIx)

Function description

Suspend an ongoing transfer for Master configuration.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CSUSP LL_SPI_SuspendMasterTransfer

LL_SPI_StartMasterTransfer

Function name

__STATIC_INLINE void LL_SPI_StartMasterTransfer (SPI_TypeDef * SPIx)

Function description

Start effective transfer on wire for Master configuration.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CSTART LL_SPI_StartMasterTransfer

LL_SPI_IsActiveMasterTransfer

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveMasterTransfer (const SPI_TypeDef * SPIx)

Function description

Check if there is an unfinished master transfer.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CR1 CSTART LL_SPI_IsActiveMasterTransfer

LL_SPI_EnableMasterRxAutoSuspend

Function name

__STATIC_INLINE void LL_SPI_EnableMasterRxAutoSuspend (SPI_TypeDef * SPIx)

Function description

Enable Master Rx auto suspend in case of overrun.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 MASRX LL_SPI_EnableMasterRxAutoSuspend

LL_SPI_DisableMasterRxAutoSuspend

Function name

__STATIC_INLINE void LL_SPI_DisableMasterRxAutoSuspend (SPI_TypeDef * SPIx)

Function description

Disable Master Rx auto suspend in case of overrun.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 MASRX LL_SPI_DisableMasterRxAutoSuspend

LL_SPI_IsEnabledMasterRxAutoSuspend

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledMasterRxAutoSuspend (const SPI_TypeDef * SPIx)

Function description

Check if Master Rx auto suspend is activated.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CR1 MASRX LL_SPI_IsEnabledMasterRxAutoSuspend

LL_SPI_SetUDRConfiguration

Function name

__STATIC_INLINE void LL_SPI_SetUDRConfiguration (SPI_TypeDef * SPIx, uint32_t UDRConfig)

Function description

Set Underrun behavior.

Parameters

- **SPIx:** SPI Instance
- **UDRConfig:** This parameter can be one of the following values:
  - LL_SPI_UDR_CONFIG_REGISTER_PATTERN
  - LL_SPI_UDR_CONFIG_LAST_RECEIVED

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG1 UDRCFG LL_SPI_SetUDRConfiguration

LL_SPI_GetUDRConfiguration

Function name

__STATIC_INLINE uint32_t LL_SPI_GetUDRConfiguration (const SPI_TypeDef * SPIx)

Function description

Get Underrun behavior.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_UDR_CONFIG_REGISTER_PATTERN
  - LL_SPI_UDR_CONFIG_LAST_RECEIVED

Reference Manual to LL API cross reference:

- CFG1 UDRCFG LL_SPI_GetUDRConfiguration

LL_SPI_SetStandard

Function name

__STATIC_INLINE void LL_SPI_SetStandard (SPI_TypeDef * SPIx, uint32_t Standard)

Function description

Set Serial protocol used.

Parameters

- **SPIx:** SPI Instance
- **Standard:** This parameter can be one of the following values:
  - LL_SPI_PROTOCOL_MOTOROLA
  - LL_SPI_PROTOCOL_TI

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG2 SP LL_SPI_SetStandard

LL_SPI_GetStandard

Function name

__STATIC_INLINE uint32_t LL_SPI_GetStandard (const SPI_TypeDef * SPIx)

Function description

Get Serial protocol used.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_SPI_PROTOCOL_MOTOROLA
  – LL_SPI_PROTOCOL_TI

Reference Manual to LL API cross reference:

- CFG2 SP LL_SPI_GetStandard

LL_SPI_SetClockPhase

Function name

__STATIC_INLINE void LL_SPI_SetClockPhase (SPI_TypeDef * SPIx, uint32_t ClockPhase)

Function description

Set Clock phase.

Parameters

- **SPIx:** SPI Instance
- **ClockPhase:** This parameter can be one of the following values:
  – LL_SPI_PHASE_1EDGE
  – LL_SPI_PHASE_2EDGE

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled. This bit is not used in SPI TI mode.

Reference Manual to LL API cross reference:

- CFG2 CPHA LL_SPI_SetClockPhase

LL_SPI_GetClockPhase

Function name

__STATIC_INLINE uint32_t LL_SPI_GetClockPhase (const SPI_TypeDef * SPIx)

Function description

Get Clock phase.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_SPI_PHASE_1EDGE
  – LL_SPI_PHASE_2EDGE

Reference Manual to LL API cross reference:

- CFG2 CPHA LL_SPI_GetClockPhase

LL_SPI_SetClockPolarity

Function name

__STATIC_INLINE void LL_SPI_SetClockPolarity (SPI_TypeDef * SPIx, uint32_t ClockPolarity)

Function description

Set Clock polarity.

Parameters

- **SPIx:** SPI Instance
- **ClockPolarity:** This parameter can be one of the following values:
  – LL_SPI_POLARITY_LOW
  – LL_SPI_POLARITY_HIGH

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled. This bit is not used in SPI TI mode.

Reference Manual to LL API cross reference:

- CFG2 CPOL LL_SPI_SetClockPolarity

LL_SPI_GetClockPolarity

Function name

__STATIC_INLINE uint32_t LL_SPI_GetClockPolarity (const SPI_TypeDef * SPIx)

Function description

Get Clock polarity.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_SPI_POLARITY_LOW
  – LL_SPI_POLARITY_HIGH

Reference Manual to LL API cross reference:

- CFG2 CPOL LL_SPI_GetClockPolarity

LL_SPI_SetNSSPolarity

Function name

__STATIC_INLINE void LL_SPI_SetNSSPolarity (SPI_TypeDef * SPIx, uint32_t NSSPolarity)

Function description

Set NSS polarity.

Parameters

- **SPIx:** SPI Instance
- **NSSPolarity:** This parameter can be one of the following values:
  – LL_SPI_NSS_POLARITY_LOW
  – LL_SPI_NSS_POLARITY_HIGH

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled. This bit is not used in SPI TI mode.

Reference Manual to LL API cross reference:

- CFG2 SSIOP LL_SPI_SetNSSPolarity

LL_SPI_GetNSSPolarity

Function name

__STATIC_INLINE uint32_t LL_SPI_GetNSSPolarity (const SPI_TypeDef * SPIx)

Function description

Get NSS polarity.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_SPI_NSS_POLARITY_LOW
  – LL_SPI_NSS_POLARITY_HIGH

Reference Manual to LL API cross reference:

- CFG2 SSIOP LL_SPI_GetNSSPolarity

LL_SPI_SetBaudRatePrescaler

Function name

__STATIC_INLINE void LL_SPI_SetBaudRatePrescaler (SPI_TypeDef * SPIx, uint32_t Baudrate)

Function description

Set Baudrate Prescaler.

Parameters

- **SPIx:** SPI Instance
- **Baudrate:** This parameter can be one of the following values:
  – LL_SPI_BAUDRATEPRESCALER_BYPASS
  – LL_SPI_BAUDRATEPRESCALER_DIV2
  – LL_SPI_BAUDRATEPRESCALER_DIV4
  – LL_SPI_BAUDRATEPRESCALER_DIV8
  – LL_SPI_BAUDRATEPRESCALER_DIV16
  – LL_SPI_BAUDRATEPRESCALER_DIV32
  – LL_SPI_BAUDRATEPRESCALER_DIV64
  – LL_SPI_BAUDRATEPRESCALER_DIV128
  – LL_SPI_BAUDRATEPRESCALER_DIV256

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled. SPI BaudRate = fPCLK/Pescaler.

Reference Manual to LL API cross reference:

- CFG1 MBR LL_SPI_SetBaudRatePrescaler
- CFG1 BPASS LL_SPI_SetBaudRatePrescaler

LL_SPI_GetBaudRatePrescaler

Function name

__STATIC_INLINE uint32_t LL_SPI_GetBaudRatePrescaler (const SPI_TypeDef * SPIx)

Function description

Get Baudrate Prescaler.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_SPI_BAUDRATEPRESCALER_BYPASS
  – LL_SPI_BAUDRATEPRESCALER_DIV2
  – LL_SPI_BAUDRATEPRESCALER_DIV4
  – LL_SPI_BAUDRATEPRESCALER_DIV8
  – LL_SPI_BAUDRATEPRESCALER_DIV16
  – LL_SPI_BAUDRATEPRESCALER_DIV32
  – LL_SPI_BAUDRATEPRESCALER_DIV64
  – LL_SPI_BAUDRATEPRESCALER_DIV128
  – LL_SPI_BAUDRATEPRESCALER_DIV256

Reference Manual to LL API cross reference:

- CFG1 MBR LL_SPI_GetBaudRatePrescaler
- CFG1 BPASS LL_SPI_GetBaudRatePrescaler

LL_SPI_SetTransferBitOrder

Function name

__STATIC_INLINE void LL_SPI_SetTransferBitOrder (SPI_TypeDef * SPIx, uint32_t BitOrder)

Function description

Set Transfer Bit Order.

Parameters

- **SPIx:** SPI Instance
- **BitOrder:** This parameter can be one of the following values:
  - LL_SPI_LSB_FIRST
  - LL_SPI_MSB_FIRST

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled. This bit is not used in SPI TI mode.

Reference Manual to LL API cross reference:

- CFG2 LSBFRST LL_SPI_SetTransferBitOrder

LL_SPI_GetTransferBitOrder

Function name

__STATIC_INLINE uint32_t LL_SPI_GetTransferBitOrder (const SPI_TypeDef * SPIx)

Function description

Get Transfer Bit Order.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_LSB_FIRST
  - LL_SPI_MSB_FIRST

Reference Manual to LL API cross reference:

- CFG2 LSBFRST LL_SPI_GetTransferBitOrder

LL_SPI_SetTransferDirection

Function name

__STATIC_INLINE void LL_SPI_SetTransferDirection (SPI_TypeDef * SPIx, uint32_t TransferDirection)

Function description

Set Transfer Mode.

Parameters

- **SPIx:** SPI Instance
- **TransferDirection:** This parameter can be one of the following values:
  - LL_SPI_FULL_DUPLEX
  - LL_SPI_SIMPLEX_TX
  - LL_SPI_SIMPLEX_RX
  - LL_SPI_HALF_DUPLEX_RX
  - LL_SPI_HALF_DUPLEX_TX

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled except for half duplex direction using LL_SPI_SetHalfDuplexDirection.

Reference Manual to LL API cross reference:

- CR1 HDDIR LL_SPI_SetTransferDirection
- CFG2 COMM LL_SPI_SetTransferDirection

LL_SPI_GetTransferDirection

Function name

__STATIC_INLINE uint32_t LL_SPI_GetTransferDirection (const SPI_TypeDef * SPIx)

Function description

Get Transfer Mode.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_SPI_FULL_DUPLEX
  – LL_SPI_SIMPLEX_TX
  – LL_SPI_SIMPLEX_RX
  – LL_SPI_HALF_DUPLEX_RX
  – LL_SPI_HALF_DUPLEX_TX

Reference Manual to LL API cross reference:

- CR1 HDDIR LL_SPI_GetTransferDirection
- CFG2 COMM LL_SPI_GetTransferDirection

LL_SPI_SetHalfDuplexDirection

Function name

__STATIC_INLINE void LL_SPI_SetHalfDuplexDirection (SPI_TypeDef * SPIx, uint32_t HalfDuplexDirection)

Function description

Set direction for Half-Duplex Mode.

Parameters

- **SPIx:** SPI Instance
- **HalfDuplexDirection:** This parameter can be one of the following values:
  – LL_SPI_HALF_DUPLEX_RX
  – LL_SPI_HALF_DUPLEX_TX

Return values

- **None:**

Notes

- In master mode the MOSI pin is used and in slave mode the MISO pin is used for Half-Duplex.

Reference Manual to LL API cross reference:

- CR1 HDDIR LL_SPI_SetHalfDuplexDirection

LL_SPI_GetHalfDuplexDirection

Function name

__STATIC_INLINE uint32_t LL_SPI_GetHalfDuplexDirection (const SPI_TypeDef * SPIx)

Function description

Get direction for Half-Duplex Mode.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_HALF_DUPLEX_RX
  - LL_SPI_HALF_DUPLEX_TX

Notes

- In master mode the MOSI pin is used and in slave mode the MISO pin is used for Half-Duplex.

Reference Manual to LL API cross reference:

- CR1 HDDIR LL_SPI_GetHalfDuplexDirection

LL_SPI_SetDataWidth

Function name

__STATIC_INLINE void LL_SPI_SetDataWidth (SPI_TypeDef * SPIx, uint32_t DataWidth)

Function description

Set Frame Data Size.

Parameters

- **SPIx:** SPI Instance
- **DataWidth:** This parameter can be one of the following values:
  - LL_SPI_DATAWIDTH_4BIT
  - LL_SPI_DATAWIDTH_5BIT
  - LL_SPI_DATAWIDTH_6BIT
  - LL_SPI_DATAWIDTH_7BIT
  - LL_SPI_DATAWIDTH_8BIT
  - LL_SPI_DATAWIDTH_9BIT
  - LL_SPI_DATAWIDTH_10BIT
  - LL_SPI_DATAWIDTH_11BIT
  - LL_SPI_DATAWIDTH_12BIT
  - LL_SPI_DATAWIDTH_13BIT
  - LL_SPI_DATAWIDTH_14BIT
  - LL_SPI_DATAWIDTH_15BIT
  - LL_SPI_DATAWIDTH_16BIT
  - LL_SPI_DATAWIDTH_17BIT
  - LL_SPI_DATAWIDTH_18BIT
  - LL_SPI_DATAWIDTH_19BIT
  - LL_SPI_DATAWIDTH_20BIT
  - LL_SPI_DATAWIDTH_21BIT
  - LL_SPI_DATAWIDTH_22BIT
  - LL_SPI_DATAWIDTH_23BIT
  - LL_SPI_DATAWIDTH_24BIT
  - LL_SPI_DATAWIDTH_25BIT
  - LL_SPI_DATAWIDTH_26BIT
  - LL_SPI_DATAWIDTH_27BIT
  - LL_SPI_DATAWIDTH_28BIT
  - LL_SPI_DATAWIDTH_29BIT
  - LL_SPI_DATAWIDTH_30BIT
  - LL_SPI_DATAWIDTH_31BIT
  - LL_SPI_DATAWIDTH_32BIT

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG1 DSIZE LL_SPI_SetDataWidth

LL_SPI_GetDataWidth

Function name

__STATIC_INLINE uint32_t LL_SPI_GetDataWidth (const SPI_TypeDef * SPIx)

Function description

Get Frame Data Size.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_DATAWIDTH_4BIT
  - LL_SPI_DATAWIDTH_5BIT
  - LL_SPI_DATAWIDTH_6BIT
  - LL_SPI_DATAWIDTH_7BIT
  - LL_SPI_DATAWIDTH_8BIT
  - LL_SPI_DATAWIDTH_9BIT
  - LL_SPI_DATAWIDTH_10BIT
  - LL_SPI_DATAWIDTH_11BIT
  - LL_SPI_DATAWIDTH_12BIT
  - LL_SPI_DATAWIDTH_13BIT
  - LL_SPI_DATAWIDTH_14BIT
  - LL_SPI_DATAWIDTH_15BIT
  - LL_SPI_DATAWIDTH_16BIT
  - LL_SPI_DATAWIDTH_17BIT
  - LL_SPI_DATAWIDTH_18BIT
  - LL_SPI_DATAWIDTH_19BIT
  - LL_SPI_DATAWIDTH_20BIT
  - LL_SPI_DATAWIDTH_21BIT
  - LL_SPI_DATAWIDTH_22BIT
  - LL_SPI_DATAWIDTH_23BIT
  - LL_SPI_DATAWIDTH_24BIT
  - LL_SPI_DATAWIDTH_25BIT
  - LL_SPI_DATAWIDTH_26BIT
  - LL_SPI_DATAWIDTH_27BIT
  - LL_SPI_DATAWIDTH_28BIT
  - LL_SPI_DATAWIDTH_29BIT
  - LL_SPI_DATAWIDTH_30BIT
  - LL_SPI_DATAWIDTH_31BIT
  - LL_SPI_DATAWIDTH_32BIT

Reference Manual to LL API cross reference:

- CFG1 DSIZE LL_SPI_GetDataWidth

LL_SPI_SetFIFOThreshold

Function name

__STATIC_INLINE void LL_SPI_SetFIFOThreshold (SPI_TypeDef * SPIx, uint32_t Threshold)

Function description

Set threshold of FIFO that triggers a transfer event.

Parameters

- **SPIx:** SPI Instance
- **Threshold:** This parameter can be one of the following values:
  – LL_SPI_FIFO_TH_01DATA
  – LL_SPI_FIFO_TH_02DATA
  – LL_SPI_FIFO_TH_03DATA
  – LL_SPI_FIFO_TH_04DATA
  – LL_SPI_FIFO_TH_05DATA
  – LL_SPI_FIFO_TH_06DATA
  – LL_SPI_FIFO_TH_07DATA
  – LL_SPI_FIFO_TH_08DATA
  – LL_SPI_FIFO_TH_09DATA
  – LL_SPI_FIFO_TH_10DATA
  – LL_SPI_FIFO_TH_11DATA
  – LL_SPI_FIFO_TH_12DATA
  – LL_SPI_FIFO_TH_13DATA
  – LL_SPI_FIFO_TH_14DATA
  – LL_SPI_FIFO_TH_15DATA
  – LL_SPI_FIFO_TH_16DATA

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG1 FTHLV LL_SPI_SetFIFOThreshold

LL_SPI_GetFIFOThreshold

Function name

__STATIC_INLINE uint32_t LL_SPI_GetFIFOThreshold (const SPI_TypeDef * SPIx)

Function description

Get threshold of FIFO that triggers a transfer event.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_FIFO_TH_01DATA
  - LL_SPI_FIFO_TH_02DATA
  - LL_SPI_FIFO_TH_03DATA
  - LL_SPI_FIFO_TH_04DATA
  - LL_SPI_FIFO_TH_05DATA
  - LL_SPI_FIFO_TH_06DATA
  - LL_SPI_FIFO_TH_07DATA
  - LL_SPI_FIFO_TH_08DATA
  - LL_SPI_FIFO_TH_09DATA
  - LL_SPI_FIFO_TH_10DATA
  - LL_SPI_FIFO_TH_11DATA
  - LL_SPI_FIFO_TH_12DATA
  - LL_SPI_FIFO_TH_13DATA
  - LL_SPI_FIFO_TH_14DATA
  - LL_SPI_FIFO_TH_15DATA
  - LL_SPI_FIFO_TH_16DATA

Reference Manual to LL API cross reference:

- CFG1 FTHLV LL_SPI_GetFIFOThreshold

LL_SPI_EnableCRC

Function name

__STATIC_INLINE void LL_SPI_EnableCRC (SPI_TypeDef * SPIx)

Function description

Enable CRC.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG1 CRCEN LL_SPI_EnableCRC

LL_SPI_DisableCRC

Function name

__STATIC_INLINE void LL_SPI_DisableCRC (SPI_TypeDef * SPIx)

Function description

Disable CRC.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 CRCEN LL_SPI_DisableCRC

LL_SPI_IsEnabledCRC

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledCRC (const SPI_TypeDef * SPIx)

Function description

Check if CRC is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CFG1 CRCEN LL_SPI_IsEnabledCRC

LL_SPI_SetCRCWidth

Function name

__STATIC_INLINE void LL_SPI_SetCRCWidth (SPI_TypeDef * SPIx, uint32_t CRCLength)

Function description

Set CRC Length.

Parameters

- **SPIx:** SPI Instance
- **CRCLength:** This parameter can be one of the following values:
  – LL_SPI_CRC_4BIT
  – LL_SPI_CRC_5BIT
  – LL_SPI_CRC_6BIT
  – LL_SPI_CRC_7BIT
  – LL_SPI_CRC_8BIT
  – LL_SPI_CRC_9BIT
  – LL_SPI_CRC_10BIT
  – LL_SPI_CRC_11BIT
  – LL_SPI_CRC_12BIT
  – LL_SPI_CRC_13BIT
  – LL_SPI_CRC_14BIT
  – LL_SPI_CRC_15BIT
  – LL_SPI_CRC_16BIT
  – LL_SPI_CRC_17BIT
  – LL_SPI_CRC_18BIT
  – LL_SPI_CRC_19BIT
  – LL_SPI_CRC_20BIT
  – LL_SPI_CRC_21BIT
  – LL_SPI_CRC_22BIT
  – LL_SPI_CRC_23BIT
  – LL_SPI_CRC_24BIT
  – LL_SPI_CRC_25BIT
  – LL_SPI_CRC_26BIT
  – LL_SPI_CRC_27BIT
  – LL_SPI_CRC_28BIT
  – LL_SPI_CRC_29BIT
  – LL_SPI_CRC_30BIT
  – LL_SPI_CRC_31BIT
  – LL_SPI_CRC_32BIT

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG1 CRCSIZE LL_SPI_SetCRCWidth

LL_SPI_GetCRCWidth

Function name

__STATIC_INLINE uint32_t LL_SPI_GetCRCWidth (const SPI_TypeDef * SPIx)

Function description

Get CRC Length.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_SPI_CRC_4BIT
  – LL_SPI_CRC_5BIT
  – LL_SPI_CRC_6BIT
  – LL_SPI_CRC_7BIT
  – LL_SPI_CRC_8BIT
  – LL_SPI_CRC_9BIT
  – LL_SPI_CRC_10BIT
  – LL_SPI_CRC_11BIT
  – LL_SPI_CRC_12BIT
  – LL_SPI_CRC_13BIT
  – LL_SPI_CRC_14BIT
  – LL_SPI_CRC_15BIT
  – LL_SPI_CRC_16BIT
  – LL_SPI_CRC_17BIT
  – LL_SPI_CRC_18BIT
  – LL_SPI_CRC_19BIT
  – LL_SPI_CRC_20BIT
  – LL_SPI_CRC_21BIT
  – LL_SPI_CRC_22BIT
  – LL_SPI_CRC_23BIT
  – LL_SPI_CRC_24BIT
  – LL_SPI_CRC_25BIT
  – LL_SPI_CRC_26BIT
  – LL_SPI_CRC_27BIT
  – LL_SPI_CRC_28BIT
  – LL_SPI_CRC_29BIT
  – LL_SPI_CRC_30BIT
  – LL_SPI_CRC_31BIT
  – LL_SPI_CRC_32BIT

Reference Manual to LL API cross reference:

- CFG1 CRCSIZE LL_SPI_GetCRCWidth

LL_SPI_SetNSSMode

Function name

__STATIC_INLINE void LL_SPI_SetNSSMode (SPI_TypeDef * SPIx, uint32_t NSS)

Function description

Set NSS Mode.

Parameters

- **SPIx:** SPI Instance
- **NSS:** This parameter can be one of the following values:
  – LL_SPI_NSS_SOFT
  – LL_SPI_NSS_HARD_INPUT
  – LL_SPI_NSS_HARD_OUTPUT

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled. This bit is not used in SPI TI mode.

Reference Manual to LL API cross reference:

- CFG2 SSM LL_SPI_SetNSSMode
- CFG2 SSOE LL_SPI_SetNSSMode

LL_SPI_GetNSSMode

Function name

__STATIC_INLINE uint32_t LL_SPI_GetNSSMode (const SPI_TypeDef * SPIx)

Function description

Set NSS Mode.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_SPI_NSS_SOFT
  – LL_SPI_NSS_HARD_INPUT
  – LL_SPI_NSS_HARD_OUTPUT

Reference Manual to LL API cross reference:

- CFG2 SSM LL_SPI_GetNSSMode
- CFG2 SSOE LL_SPI_GetNSSMode

LL_SPI_EnableNSSPulseMgt

Function name

__STATIC_INLINE void LL_SPI_EnableNSSPulseMgt (SPI_TypeDef * SPIx)

Function description

Enable NSS pulse mgt.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled. This bit is not used in SPI TI mode.

Reference Manual to LL API cross reference:

- CFG2 SSOM LL_SPI_EnableNSSPulseMgt

LL_SPI_DisableNSSPulseMgt

Function name

__STATIC_INLINE void LL_SPI_DisableNSSPulseMgt (SPI_TypeDef * SPIx)

Function description

Disable NSS pulse mgt.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled. This bit is not used in SPI TI mode.

Reference Manual to LL API cross reference:

- CFG2 SSOM LL_SPI_DisableNSSPulseMgt

LL_SPI_IsEnabledNSSPulse

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledNSSPulse (const SPI_TypeDef * SPIx)

Function description

Check if NSS pulse is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CFG2 SSOM LL_SPI_IsEnabledNSSPulse

LL_SPI_IsActiveFlag_RXP

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_RXP (const SPI_TypeDef * SPIx)

Function description

Check if there is enough data in FIFO to read a full packet.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- SR RXP LL_SPI_IsActiveFlag_RXP

LL_SPI_IsActiveFlag_TXP

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_TXP (const SPI_TypeDef * SPIx)

Function description

Check if there is enough space in FIFO to hold a full packet.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- SR TXP LL_SPI_IsActiveFlag_TXP

LL_SPI_IsActiveFlag_DXP

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_DXP (const SPI_TypeDef * SPIx)

Function description

Check if there enough space in FIFO to hold a full packet, AND enough data to read a full packet.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- SR DXP LL_SPI_IsActiveFlag_DXP

LL_SPI_IsActiveFlag_EOT

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_EOT (const SPI_TypeDef * SPIx)

Function description

Check that end of transfer event occurred.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR EOT LL_SPI_IsActiveFlag_EOT

LL_SPI_IsActiveFlag_TXTF

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_TXTF (const SPI_TypeDef * SPIx)

Function description

Check that all required data has been filled in the fifo according to transfer size.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR TXTF LL_SPI_IsActiveFlag_TXTF

LL_SPI_IsActiveFlag_UDR

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_UDR (const SPI_TypeDef * SPIx)

Function description

Get Underrun error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR UDR LL_SPI_IsActiveFlag_UDR

LL_SPI_IsActiveFlag_CRCERR

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_CRCERR (const SPI_TypeDef * SPIx)

Function description

Get CRC error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CRCE LL_SPI_IsActiveFlag_CRCERR

LL_SPI_IsActiveFlag_MODF

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_MODF (const SPI_TypeDef * SPIx)

Function description

Get Mode fault error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR MODF LL_SPI_IsActiveFlag_MODF

LL_SPI_IsActiveFlag_OVR

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_OVR (const SPI_TypeDef * SPIx)

Function description

Get Overrun error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR OVR LL_SPI_IsActiveFlag_OVR

LL_SPI_IsActiveFlag_FRE

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_FRE (const SPI_TypeDef * SPIx)

Function description

Get TI Frame format error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR TIFRE LL_SPI_IsActiveFlag_FRE

LL_SPI_IsActiveFlag_SUSP

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_SUSP (const SPI_TypeDef * SPIx)

Function description

Check if a suspend operation is done.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- SR SUSP LL_SPI_IsActiveFlag_SUSP

LL_SPI_IsActiveFlag_TXC

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_TXC (const SPI_TypeDef * SPIx)

Function description

Check if last TxFIFO or CRC frame transmission is completed.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR TXC LL_SPI_IsActiveFlag_TXC

LL_SPI_IsActiveFlag_RXWNE

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_RXWNE (const SPI_TypeDef * SPIx)

Function description

Check if at least one 32-bit data is available in RxFIFO.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- SR RXWNE LL_SPI_IsActiveFlag_RXWNE

LL_SPI_GetRemainingDataFrames

Function name

__STATIC_INLINE uint32_t LL_SPI_GetRemainingDataFrames (const SPI_TypeDef * SPIx)

Function description

Get number of data framed remaining in current TSIZE.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFFFF:**

Reference Manual to LL API cross reference:

- SR CTSIZE LL_SPI_GetRemainingDataFrames

LL_SPI_GetRxFIFOPackingLevel

Function name

__STATIC_INLINE uint32_t LL_SPI_GetRxFIFOPackingLevel (const SPI_TypeDef * SPIx)

Function description

Get RxFIFO packing Level.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_SPI_RX_FIFO_0PACKET
  – LL_SPI_RX_FIFO_1PACKET
  – LL_SPI_RX_FIFO_2PACKET
  – LL_SPI_RX_FIFO_3PACKET

Reference Manual to LL API cross reference:

- SR RXPLVL LL_SPI_GetRxFIFOPackingLevel

LL_SPI_ClearFlag_EOT

Function name

__STATIC_INLINE void LL_SPI_ClearFlag_EOT (SPI_TypeDef * SPIx)

Function description

Clear End Of Transfer flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR EOTC LL_SPI_ClearFlag_EOT

LL_SPI_ClearFlag_TXTF

Function name

__STATIC_INLINE void LL_SPI_ClearFlag_TXTF (SPI_TypeDef * SPIx)

Function description

Clear TXTF flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR TXTFC LL_SPI_ClearFlag_TXTF

LL_SPI_ClearFlag_UDR

Function name

__STATIC_INLINE void LL_SPI_ClearFlag_UDR (SPI_TypeDef * SPIx)

Function description

Clear Underrun error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR UDRC LL_SPI_ClearFlag_UDR

LL_SPI_ClearFlag_OVR

Function name

__STATIC_INLINE void LL_SPI_ClearFlag_OVR (SPI_TypeDef * SPIx)

Function description

Clear Overrun error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR OVRC LL_SPI_ClearFlag_OVR

LL_SPI_ClearFlag_CRCERR

Function name

__STATIC_INLINE void LL_SPI_ClearFlag_CRCERR (SPI_TypeDef * SPIx)

Function description

Clear CRC error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR CRCEC LL_SPI_ClearFlag_CRCERR

LL_SPI_ClearFlag_MODF

Function name

__STATIC_INLINE void LL_SPI_ClearFlag_MODF (SPI_TypeDef * SPIx)

Function description

Clear Mode fault error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR MODFC LL_SPI_ClearFlag_MODF

LL_SPI_ClearFlag_FRE

Function name

__STATIC_INLINE void LL_SPI_ClearFlag_FRE (SPI_TypeDef * SPIx)

Function description

Clear Frame format error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR TIFREC LL_SPI_ClearFlag_FRE

LL_SPI_ClearFlag_SUSP

Function name

__STATIC_INLINE void LL_SPI_ClearFlag_SUSP (SPI_TypeDef * SPIx)

Function description

Clear SUSP flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR SUSPC LL_SPI_ClearFlag_SUSP

LL_SPI_EnableIT_RXP

Function name

__STATIC_INLINE void LL_SPI_EnableIT_RXP (SPI_TypeDef * SPIx)

Function description

Enable Rx Packet available IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER RXPIE LL_SPI_EnableIT_RXP

LL_SPI_EnableIT_TXP

Function name

__STATIC_INLINE void LL_SPI_EnableIT_TXP (SPI_TypeDef * SPIx)

Function description

Enable Tx Packet space available IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TXPIE LL_SPI_EnableIT_TXP

LL_SPI_EnableIT_DXP

Function name

__STATIC_INLINE void LL_SPI_EnableIT_DXP (SPI_TypeDef * SPIx)

Function description

Enable Duplex Packet available IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER DXPIE LL_SPI_EnableIT_DXP

LL_SPI_EnableIT_EOT

Function name

__STATIC_INLINE void LL_SPI_EnableIT_EOT (SPI_TypeDef * SPIx)

Function description

Enable End Of Transfer IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER EOTIE LL_SPI_EnableIT_EOT

LL_SPI_EnableIT_TXTF

Function name

__STATIC_INLINE void LL_SPI_EnableIT_TXTF (SPI_TypeDef * SPIx)

Function description

Enable TXTF IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TXTFIE LL_SPI_EnableIT_TXTF

LL_SPI_EnableIT_UDR

Function name

__STATIC_INLINE void LL_SPI_EnableIT_UDR (SPI_TypeDef * SPIx)

Function description

Enable Underrun IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER UDRIE LL_SPI_EnableIT_UDR

LL_SPI_EnableIT_OVR

Function name

__STATIC_INLINE void LL_SPI_EnableIT_OVR (SPI_TypeDef * SPIx)

Function description

Enable Overrun IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER OVRIE LL_SPI_EnableIT_OVR

LL_SPI_EnableIT_CRCERR

Function name

__STATIC_INLINE void LL_SPI_EnableIT_CRCERR (SPI_TypeDef * SPIx)

Function description

Enable CRC Error IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER CRCEIE LL_SPI_EnableIT_CRCERR

LL_SPI_EnableIT_FRE

Function name

__STATIC_INLINE void LL_SPI_EnableIT_FRE (SPI_TypeDef * SPIx)

Function description

Enable TI Frame Format Error IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TIFREIE LL_SPI_EnableIT_FRE

LL_SPI_EnableIT_MODF

Function name

__STATIC_INLINE void LL_SPI_EnableIT_MODF (SPI_TypeDef * SPIx)

Function description

Enable MODF IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER MODFIE LL_SPI_EnableIT_MODF

LL_SPI_DisableIT_RXP

Function name

__STATIC_INLINE void LL_SPI_DisableIT_RXP (SPI_TypeDef * SPIx)

Function description

Disable Rx Packet available IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER RXPIE LL_SPI_DisableIT_RXP

LL_SPI_DisableIT_TXP

Function name

__STATIC_INLINE void LL_SPI_DisableIT_TXP (SPI_TypeDef * SPIx)

Function description

Disable Tx Packet space available IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TXPIE LL_SPI_DisableIT_TXP

LL_SPI_DisableIT_DXP

Function name

__STATIC_INLINE void LL_SPI_DisableIT_DXP (SPI_TypeDef * SPIx)

Function description

Disable Duplex Packet available IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER DXPIE LL_SPI_DisableIT_DXP

LL_SPI_DisableIT_EOT

Function name

__STATIC_INLINE void LL_SPI_DisableIT_EOT (SPI_TypeDef * SPIx)

Function description

Disable End Of Transfer IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER EOTIE LL_SPI_DisableIT_EOT

LL_SPI_DisableIT_TXTF

Function name

__STATIC_INLINE void LL_SPI_DisableIT_TXTF (SPI_TypeDef * SPIx)

Function description

Disable TXTF IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TXTFIE LL_SPI_DisableIT_TXTF

LL_SPI_DisableIT_UDR

Function name

__STATIC_INLINE void LL_SPI_DisableIT_UDR (SPI_TypeDef * SPIx)

Function description

Disable Underrun IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER UDRIE LL_SPI_DisableIT_UDR

LL_SPI_DisableIT_OVR

Function name

__STATIC_INLINE void LL_SPI_DisableIT_OVR (SPI_TypeDef * SPIx)

Function description

Disable Overrun IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER OVRIE LL_SPI_DisableIT_OVR

LL_SPI_DisableIT_CRCERR

Function name

__STATIC_INLINE void LL_SPI_DisableIT_CRCERR (SPI_TypeDef * SPIx)

Function description

Disable CRC Error IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER CRCEIE LL_SPI_DisableIT_CRCERR

LL_SPI_DisableIT_FRE

Function name

__STATIC_INLINE void LL_SPI_DisableIT_FRE (SPI_TypeDef * SPIx)

Function description

Disable TI Frame Format Error IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TIFREIE LL_SPI_DisableIT_FRE

LL_SPI_DisableIT_MODF

Function name

__STATIC_INLINE void LL_SPI_DisableIT_MODF (SPI_TypeDef * SPIx)

Function description

Disable MODF IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER MODFIE LL_SPI_DisableIT_MODF

LL_SPI_IsEnabledIT_RXP

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_RXP (const SPI_TypeDef * SPIx)

Function description

Check if Rx Packet available IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER RXPIE LL_SPI_IsEnabledIT_RXP

LL_SPI_IsEnabledIT_TXP

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_TXP (const SPI_TypeDef * SPIx)

Function description

Check if Tx Packet space available IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER TXPIE LL_SPI_IsEnabledIT_TXP

LL_SPI_IsEnabledIT_DXP

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_DXP (const SPI_TypeDef * SPIx)

Function description

Check if Duplex Packet available IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER DXPIE LL_SPI_IsEnabledIT_DXP

LL_SPI_IsEnabledIT_EOT

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_EOT (const SPI_TypeDef * SPIx)

Function description

Check if End Of Transfer IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER EOTIE LL_SPI_IsEnabledIT_EOT

LL_SPI_IsEnabledIT_TXTF

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_TXTF (const SPI_TypeDef * SPIx)

Function description

Check if TXTF IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER TXTFIE LL_SPI_IsEnabledIT_TXTF

LL_SPI_IsEnabledIT_UDR

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_UDR (const SPI_TypeDef * SPIx)

Function description

Check if Underrun IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER UDRIE LL_SPI_IsEnabledIT_UDR

LL_SPI_IsEnabledIT_OVR

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_OVR (const SPI_TypeDef * SPIx)

Function description

Check if Overrun IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER OVRIE LL_SPI_IsEnabledIT_OVR

LL_SPI_IsEnabledIT_CRCERR

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_CRCERR (const SPI_TypeDef * SPIx)

Function description

Check if CRC Error IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER CRCEIE LL_SPI_IsEnabledIT_CRCERR

LL_SPI_IsEnabledIT_FRE

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_FRE (const SPI_TypeDef * SPIx)

Function description

Check if TI Frame Format Error IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER TIFREIE LL_SPI_IsEnabledIT_FRE

LL_SPI_IsEnabledIT_MODF

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_MODF (const SPI_TypeDef * SPIx)

Function description

Check if MODF IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER MODFIE LL_SPI_IsEnabledIT_MODF

LL_SPI_EnableDMAReq_RX

Function name

__STATIC_INLINE void LL_SPI_EnableDMAReq_RX (SPI_TypeDef * SPIx)

Function description

Enable DMA Rx.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 RXDMAEN LL_SPI_EnableDMAReq_RX

LL_SPI_DisableDMAReq_RX

Function name

__STATIC_INLINE void LL_SPI_DisableDMAReq_RX (SPI_TypeDef * SPIx)

Function description

Disable DMA Rx.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 RXDMAEN LL_SPI_DisableDMAReq_RX

LL_SPI_IsEnabledDMAReq_RX

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledDMAReq_RX (const SPI_TypeDef * SPIx)

Function description

Check if DMA Rx is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CFG1 RXDMAEN LL_SPI_IsEnabledDMAReq_RX

LL_SPI_EnableDMAReq_TX

Function name

__STATIC_INLINE void LL_SPI_EnableDMAReq_TX (SPI_TypeDef * SPIx)

Function description

Enable DMA Tx.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 TXDMAEN LL_SPI_EnableDMAReq_TX

LL_SPI_DisableDMAReq_TX

Function name

__STATIC_INLINE void LL_SPI_DisableDMAReq_TX (SPI_TypeDef * SPIx)

Function description

Disable DMA Tx.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 TXDMAEN LL_SPI_DisableDMAReq_TX

LL_SPI_IsEnabledDMAReq_TX

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledDMAReq_TX (const SPI_TypeDef * SPIx)

Function description

Check if DMA Tx is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CFG1 TXDMAEN LL_SPI_IsEnabledDMAReq_TX

LL_SPI_DMA_GetTxRegAddr

Function name

__STATIC_INLINE uint32_t LL_SPI_DMA_GetTxRegAddr (const SPI_TypeDef * SPIx)

Function description

Get the data register address used for DMA transfer.

Parameters

- **SPIx:** SPI Instance

Return values

- **Address:** of data register

Reference Manual to LL API cross reference:

- TXDR TXDR LL_SPI_DMA_GetTxRegAddr

LL_SPI_DMA_GetRxRegAddr

Function name

__STATIC_INLINE uint32_t LL_SPI_DMA_GetRxRegAddr (const SPI_TypeDef * SPIx)

Function description

Get the data register address used for DMA transfer.

Parameters

- **SPIx:** SPI Instance

Return values

- **Address:** of data register

Reference Manual to LL API cross reference:

- RXDR RXDR LL_SPI_DMA_GetRxRegAddr

LL_SPI_ReceiveData8

Function name

__STATIC_INLINE uint8_t LL_SPI_ReceiveData8 (SPI_TypeDef * SPIx)

Function description

Read Data Register.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFF:**

Reference Manual to LL API cross reference:

- RXDR . LL_SPI_ReceiveData8

LL_SPI_ReceiveData16

Function name

__STATIC_INLINE uint16_t LL_SPI_ReceiveData16 (SPI_TypeDef * SPIx)

Function description

Read Data Register.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFFFF:**

Reference Manual to LL API cross reference:

- RXDR . LL_SPI_ReceiveData16

LL_SPI_ReceiveData32

Function name

__STATIC_INLINE uint32_t LL_SPI_ReceiveData32 (SPI_TypeDef * SPIx)

Function description

Read Data Register.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFFFFFFFF:**

Reference Manual to LL API cross reference:

- RXDR . LL_SPI_ReceiveData32

LL_SPI_TransmitData8

Function name

__STATIC_INLINE void LL_SPI_TransmitData8 (SPI_TypeDef * SPIx, uint8_t TxData)

Function description

Write Data Register.

Parameters

- **SPIx:** SPI Instance
- **TxData:** 0..0xFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TXDR . LL_SPI_TransmitData8

LL_SPI_TransmitData16

Function name

__STATIC_INLINE void LL_SPI_TransmitData16 (SPI_TypeDef * SPIx, uint16_t TxData)

Function description

Write Data Register.

Parameters

- **SPIx:** SPI Instance
- **TxData:** 0..0xFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TXDR . LL_SPI_TransmitData16

LL_SPI_TransmitData32

Function name

__STATIC_INLINE void LL_SPI_TransmitData32 (SPI_TypeDef * SPIx, uint32_t TxData)

Function description

Write Data Register.

Parameters

- **SPIx:** SPI Instance
- **TxData:** 0..0xFFFFFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TXDR . LL_SPI_TransmitData32

LL_SPI_SetCRCPolynomial

Function name

__STATIC_INLINE void LL_SPI_SetCRCPolynomial (SPI_TypeDef * SPIx, uint32_t CRCPoly)

Function description

Set polynomial for CRC calcul.

Parameters

- **SPIx:** SPI Instance
- **CRCPoly:** 0..0xFFFFFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- CRCPOLY CRCPOLY LL_SPI_SetCRCPolynomial

LL_SPI_GetCRCPolynomial

Function name

__STATIC_INLINE uint32_t LL_SPI_GetCRCPolynomial (const SPI_TypeDef * SPIx)

Function description

Get polynomial for CRC calcul.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFFFFFFFF:**

Reference Manual to LL API cross reference:

- CRCPOLY CRCPOLY LL_SPI_GetCRCPolynomial

LL_SPI_SetUDRPattern

Function name

__STATIC_INLINE void LL_SPI_SetUDRPattern (SPI_TypeDef * SPIx, uint32_t Pattern)

Function description

Set the underrun pattern.

Parameters

- **SPIx:** SPI Instance
- **Pattern:** 0..0xFFFFFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- UDRDR UDRDR LL_SPI_SetUDRPattern

LL_SPI_GetUDRPattern

Function name

__STATIC_INLINE uint32_t LL_SPI_GetUDRPattern (const SPI_TypeDef * SPIx)

Function description

Get the underrun pattern.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFFFFFFFF:**

Reference Manual to LL API cross reference:

- UDRDR UDRDR LL_SPI_GetUDRPattern

LL_SPI_GetRxCRC

Function name

__STATIC_INLINE uint32_t LL_SPI_GetRxCRC (const SPI_TypeDef * SPIx)

Function description

Get Rx CRC.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFFFFFFFF:**

Reference Manual to LL API cross reference:

- RXCRCR RXCRC LL_SPI_GetRxCRC

LL_SPI_GetTxCRC

Function name

__STATIC_INLINE uint32_t LL_SPI_GetTxCRC (const SPI_TypeDef * SPIx)

Function description

Get Tx CRC.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFFFFFFFF:**

Reference Manual to LL API cross reference:

- TXCRCR TXCRC LL_SPI_GetTxCRC

LL_SPI_Enable_SelectedTrigger

Function name

__STATIC_INLINE void LL_SPI_Enable_SelectedTrigger (SPI_TypeDef * SPIx)

Function description

Enable Selected Trigger.

Parameters

- **SPIx:** SPI Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGEN LL_SPI_Enable_SelectedTrigger

LL_SPI_Disable_SelectedTrigger

Function name

__STATIC_INLINE void LL_SPI_Disable_SelectedTrigger (SPI_TypeDef * SPIx)

Function description

Disable Selected Trigger.

Parameters

- **SPIx:** SPI Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGEN LL_SPI_Disable_SelectedTrigger

LL_SPI_IsEnabled_SelectedTrigger

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabled_SelectedTrigger (const SPI_TypeDef * SPIx)

Function description

Indicate if selected Trigger is disabled or enabled.

Parameters

- **SPIx:** SPI Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- AUTOCR TRIGEN LL_SPI_IsEnabled_SelectedTrigger

LL_SPI_SetTriggerPolarity

Function name

__STATIC_INLINE void LL_SPI_SetTriggerPolarity (SPI_TypeDef * SPIx, uint32_t Polarity)

Function description

Set the trigger polarity.

Parameters

- **SPIx:** SPI Instance.
- **Polarity:** This parameter can be one of the following values:
  – LL_SPI_TRIG_POLARITY_RISING
  – LL_SPI_TRIG_POLARITY_FALLING

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGPOL LL_SPI_SetTriggerPolarity

LL_SPI_GetTriggerPolarity

Function name

__STATIC_INLINE uint32_t LL_SPI_GetTriggerPolarity (const SPI_TypeDef * SPIx)

Function description

Get the trigger polarity.

Parameters

- **SPIx:** SPI Instance.

Return values

- **Returned:** value can be one of the following values:
  – LL_SPI_TRIG_POLARITY_RISING
  – LL_SPI_TRIG_POLARITY_FALLING

Reference Manual to LL API cross reference:

- AUTOCR TRIGPOL LL_SPI_GetTriggerPolarity

LL_SPI_SetSelectedTrigger

Function name

__STATIC_INLINE void LL_SPI_SetSelectedTrigger (SPI_TypeDef * SPIx, uint32_t Trigger)

Function description

Set the selected trigger.

Parameters

- **SPIx:** SPI Instance.
- **Trigger:** This parameter can be one of the following values:
  – LL_SPI_GRP1_GPDMA_CH0_TCF_TRG
  – LL_SPI_GRP1_GPDMA_CH1_TCF_TRG
  – LL_SPI_GRP1_GPDMA_CH2_TCF_TRG
  – LL_SPI_GRP1_GPDMA_CH3_TCF_TRG
  – LL_SPI_GRP1_EXTI4_TRG
  – LL_SPI_GRP1_EXTI9_TRG
  – LL_SPI_GRP1_LPTIM1_CH1_TRG
  – LL_SPI_GRP1_LPTIM2_CH1_TRG
  – LL_SPI_GRP1_COMP1_TRG
  – LL_SPI_GRP1_COMP2_TRG
  – LL_SPI_GRP1_RTC_ALRA_TRG
  – LL_SPI_GRP1_RTC_WUT_TRG
  – LL_SPI_GRP2_LPDMA_CH0_TCF_TRG
  – LL_SPI_GRP2_LPDMA_CH1_TCF_TRG
  – LL_SPI_GRP2_LPDMA_CH2_TCF_TRG
  – LL_SPI_GRP2_LPDMA_CH3_TCF_TRG
  – LL_SPI_GRP2_EXTI4_TRG
  – LL_SPI_GRP2_EXTI8_TRG
  – LL_SPI_GRP2_LPTIM1_CH1_TRG
  – LL_SPI_GRP2_LPTIM3_CH1_TRG
  – LL_SPI_GRP2_COMP1_TRG
  – LL_SPI_GRP2_COMP2_TRG
  – LL_SPI_GRP2_RTC_ALRA_TRG
  – LL_SPI_GRP2_RTC_WUT_TRG

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGSEL LL_SPI_SetSelectedTrigger

LL_SPI_GetSelectedTrigger

Function name

__STATIC_INLINE uint32_t LL_SPI_GetSelectedTrigger (const SPI_TypeDef * SPIx)

Function description

Get the selected trigger.

Parameters

- **SPIx:** SPI Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_GRP1_GPDMA_CH0_TCF_TRG
  - LL_SPI_GRP1_GPDMA_CH1_TCF_TRG
  - LL_SPI_GRP1_GPDMA_CH2_TCF_TRG
  - LL_SPI_GRP1_GPDMA_CH3_TCF_TRG
  - LL_SPI_GRP1_EXTI4_TRG
  - LL_SPI_GRP1_EXTI9_TRG
  - LL_SPI_GRP1_LPTIM1_CH1_TRG
  - LL_SPI_GRP1_LPTIM2_CH1_TRG
  - LL_SPI_GRP1_COMP1_TRG
  - LL_SPI_GRP1_COMP2_TRG
  - LL_SPI_GRP1_RTC_ALRA_TRG
  - LL_SPI_GRP1_RTC_WUT_TRG
  - LL_SPI_GRP2_LPDMA_CH0_TCF_TRG
  - LL_SPI_GRP2_LPDMA_CH1_TCF_TRG
  - LL_SPI_GRP2_LPDMA_CH2_TCF_TRG
  - LL_SPI_GRP2_LPDMA_CH3_TCF_TRG
  - LL_SPI_GRP2_EXTI4_TRG
  - LL_SPI_GRP2_EXTI8_TRG
  - LL_SPI_GRP2_LPTIM1_CH1_TRG
  - LL_SPI_GRP2_LPTIM3_CH1_TRG
  - LL_SPI_GRP2_COMP1_TRG
  - LL_SPI_GRP2_COMP2_TRG
  - LL_SPI_GRP2_RTC_ALRA_TRG
  - LL_SPI_GRP2_RTC_WUT_TRG

Reference Manual to LL API cross reference:

- AUTOCR TRIGSEL LL_SPI_GetSelectedTrigger

LL_SPI_DeInit

Function name

ErrorStatus LL_SPI_DeInit (const SPI_TypeDef * SPIx)

Function description

De-initialize the SPI registers to their default reset values.

Parameters

- **SPIx:** SPI Instance

Return values

- **An:** ErrorStatus enumeration value:
  – SUCCESS: SPI registers are de-initialized
  – ERROR: SPI registers are not de-initialized

LL_SPI_Init

Function name

ErrorStatus LL_SPI_Init (SPI_TypeDef * SPIx, LL_SPI_InitTypeDef * SPI_InitStruct)

Function description

Initialize the SPI registers according to the specified parameters in SPI_InitStruct.

Parameters

- **SPIx:** SPI Instance
- **SPI_InitStruct:** pointer to a LL_SPI_InitTypeDef structure

Return values

- **An:** ErrorStatus enumeration value. (Return always SUCCESS)

Notes

- As some bits in SPI configuration registers can only be written when the SPI is disabled (SPI_CR1_SPE bit =0), SPI IP should be in disabled state prior calling this function. Otherwise, ERROR result will be returned.

LL_SPI_StructInit

Function name

void LL_SPI_StructInit (LL_SPI_InitTypeDef * SPI_InitStruct)

Function description

Set each LL_SPI_InitTypeDef field to default value.

Parameters

- **SPI_InitStruct:** pointer to a LL_SPI_InitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

Common Write and read registers Macros

LL_SPI_WriteReg

Description:
- Write a value in SPI register.

Parameters:
- __INSTANCE__: SPI Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:
- None

LL_SPI_ReadReg

Description:
- Read a value in SPI register.

Parameters:
- __INSTANCE__: SPI Instance
- __REG__: Register to be read

Return value:
- Register: value

118 LL SYSTEM Generic Driver

118.1 SYSTEM Firmware driver API description

The following section lists the various functions of the SYSTEM library.

118.1.1 Detailed description of functions

LL_SYSCFG_EnableAnalogSwitchVdd

Function name

__STATIC_INLINE void LL_SYSCFG_EnableAnalogSwitchVdd (void)

Function description

Enable I/O analog switches supplied by VDD.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_CFGR1 ANASWVDD LL_SYSCFG_EnableAnalogSwitchVdd

LL_SYSCFG_DisableAnalogSwitchVdd

Function name

__STATIC_INLINE void LL_SYSCFG_DisableAnalogSwitchVdd (void)

Function description

Disable I/O analog switches supplied by VDD.

Return values

- **None:**

Notes

- I/O analog switches are supplied by VDDA or booster when booster in on. Dedicated voltage booster (supplied by VDD) is the recommended configuration with low VDDA voltage operation.

Reference Manual to LL API cross reference:

- SYSCFG_CFGR1 ANASWVDD LL_SYSCFG_DisableAnalogSwitchVdd

LL_SYSCFG_EnableAnalogBooster

Function name

__STATIC_INLINE void LL_SYSCFG_EnableAnalogBooster (void)

Function description

Enable I/O analog switch voltage booster.

Return values

- **None:**

Notes

- When voltage booster is enabled, I/O analog switches are supplied by a dedicated voltage booster, from VDD power domain. This is the recommended configuration with low VDDA voltage operation.
- The I/O analog switch voltage booster is relevant for peripherals using I/O in analog input: ADC, COMP, OPAMP. However, COMP and OPAMP inputs have a high impedance and voltage booster do not impact performance significantly. Therefore, the voltage booster is mainly intended for usage with ADC.

Reference Manual to LL API cross reference:

- SYSCFG_CFGR1 BOOSTEN LL_SYSCFG_EnableAnalogBooster

LL_SYSCFG_DisableAnalogBooster

Function name

__STATIC_INLINE void LL_SYSCFG_DisableAnalogBooster (void)

Function description

Disable I/O analog switch voltage booster.

Return values

- **None:**

Notes

- When voltage booster is enabled, I/O analog switches are supplied by a dedicated voltage booster, from VDD power domain. This is the recommended configuration with low VDDA voltage operation.
- The I/O analog switch voltage booster is relevant for peripherals using I/O in analog input: ADC, COMP, OPAMP. However, COMP and OPAMP inputs have a high impedance and voltage booster do not impact performance significantly. Therefore, the voltage booster is mainly intended for usage with ADC.

Reference Manual to LL API cross reference:

- SYSCFG_CFGR1 BOOSTEN LL_SYSCFG_DisableAnalogBooster

LL_SYSCFG_EnableFastModePlus

Function name

__STATIC_INLINE void LL_SYSCFG_EnableFastModePlus (uint32_t ConfigFastModePlus)

Function description

Enable the fast mode plus driving capability.

Parameters

- **ConfigFastModePlus:** This parameter can be a combination of the following values:
  - LL_SYSCFG_FASTMODEPLUS_PB6
  - LL_SYSCFG_FASTMODEPLUS_PB7
  - LL_SYSCFG_FASTMODEPLUS_PB8
  - LL_SYSCFG_FASTMODEPLUS_PB9

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_CFGR1 PBx_FMP LL_SYSCFG_EnableFastModePlus

LL_SYSCFG_DisableFastModePlus

Function name

__STATIC_INLINE void LL_SYSCFG_DisableFastModePlus (uint32_t ConfigFastModePlus)

Function description

Disable the fast mode plus driving capability.

Parameters

- **ConfigFastModePlus:** This parameter can be a combination of the following values:
  - LL_SYSCFG_FASTMODEPLUS_PB6
  - LL_SYSCFG_FASTMODEPLUS_PB7
  - LL_SYSCFG_FASTMODEPLUS_PB8
  - LL_SYSCFG_FASTMODEPLUS_PB9

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_CFGR1 PBx_FMP LL_SYSCFG_DisableFastModePlus

LL_SYSCFG_EnableIT_FPU_IOC

Function name

__STATIC_INLINE void LL_SYSCFG_EnableIT_FPU_IOC (void)

Function description

Enable Floating Point Unit Invalid operation Interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_IE_0 LL_SYSCFG_EnableIT_FPU_IOC

LL_SYSCFG_EnableIT_FPU_DZC

Function name

__STATIC_INLINE void LL_SYSCFG_EnableIT_FPU_DZC (void)

Function description

Enable Floating Point Unit Divide-by-zero Interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_IE_1 LL_SYSCFG_EnableIT_FPU_DZC

LL_SYSCFG_EnableIT_FPU_UFC

Function name

__STATIC_INLINE void LL_SYSCFG_EnableIT_FPU_UFC (void)

Function description

Enable Floating Point Unit Underflow Interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_IE_2 LL_SYSCFG_EnableIT_FPU_UFC

LL_SYSCFG_EnableIT_FPU_OFC

Function name

__STATIC_INLINE void LL_SYSCFG_EnableIT_FPU_OFC (void)

Function description

Enable Floating Point Unit Overflow Interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_IE_3 LL_SYSCFG_EnableIT_FPU_OFC

LL_SYSCFG_EnableIT_FPU_IDC

Function name

__STATIC_INLINE void LL_SYSCFG_EnableIT_FPU_IDC (void)

Function description

Enable Floating Point Unit Input denormal Interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_IE_4 LL_SYSCFG_EnableIT_FPU_IDC

LL_SYSCFG_EnableIT_FPU_IXC

Function name

__STATIC_INLINE void LL_SYSCFG_EnableIT_FPU_IXC (void)

Function description

Enable Floating Point Unit Inexact Interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_IE_5 LL_SYSCFG_EnableIT_FPU_IXC

LL_SYSCFG_DisableIT_FPU_IOC

Function name

__STATIC_INLINE void LL_SYSCFG_DisableIT_FPU_IOC (void)

Function description

Disable Floating Point Unit Invalid operation Interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_IE_0 LL_SYSCFG_DisableIT_FPU_IOC

LL_SYSCFG_DisableIT_FPU_DZC

Function name

__STATIC_INLINE void LL_SYSCFG_DisableIT_FPU_DZC (void)

Function description

Disable Floating Point Unit Divide-by-zero Interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_IE_1 LL_SYSCFG_DisableIT_FPU_DZC

LL_SYSCFG_DisableIT_FPU_UFC

Function name

__STATIC_INLINE void LL_SYSCFG_DisableIT_FPU_UFC (void)

Function description

Disable Floating Point Unit Underflow Interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_IE_2 LL_SYSCFG_DisableIT_FPU_UFC

LL_SYSCFG_DisableIT_FPU_OFC

Function name

__STATIC_INLINE void LL_SYSCFG_DisableIT_FPU_OFC (void)

Function description

Disable Floating Point Unit Overflow Interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_IE_3 LL_SYSCFG_DisableIT_FPU_OFC

LL_SYSCFG_DisableIT_FPU_IDC

Function name

__STATIC_INLINE void LL_SYSCFG_DisableIT_FPU_IDC (void)

Function description

Disable Floating Point Unit Input denormal Interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_IE_4 LL_SYSCFG_DisableIT_FPU_IDC

LL_SYSCFG_DisableIT_FPU_IXC

Function name

__STATIC_INLINE void LL_SYSCFG_DisableIT_FPU_IXC (void)

Function description

Disable Floating Point Unit Inexact Interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_IE_5 LL_SYSCFG_DisableIT_FPU_IXC

LL_SYSCFG_IsEnabledIT_FPU_IOC

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsEnabledIT_FPU_IOC (void)

Function description

Check if Floating Point Unit Invalid operation Interrupt source is enabled or disabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_IE_0 LL_SYSCFG_IsEnabledIT_FPU_IOC

LL_SYSCFG_IsEnabledIT_FPU_DZC

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsEnabledIT_FPU_DZC (void)

Function description

Check if Floating Point Unit Divide-by-zero Interrupt source is enabled or disabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_IE_1 LL_SYSCFG_IsEnabledIT_FPU_DZC

LL_SYSCFG_IsEnabledIT_FPU_UFC

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsEnabledIT_FPU_UFC (void)

Function description

Check if Floating Point Unit Underflow Interrupt source is enabled or disabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_IE_2 LL_SYSCFG_IsEnabledIT_FPU_UFC

LL_SYSCFG_IsEnabledIT_FPU_OFC

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsEnabledIT_FPU_OFC (void)

Function description

Check if Floating Point Unit Overflow Interrupt source is enabled or disabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_IE_3 LL_SYSCFG_IsEnabledIT_FPU_OFC

LL_SYSCFG_IsEnabledIT_FPU_IDC

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsEnabledIT_FPU_IDC (void)

Function description

Check if Floating Point Unit Input denormal Interrupt source is enabled or disabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_IE_4 LL_SYSCFG_IsEnabledIT_FPU_IDC

LL_SYSCFG_IsEnabledIT_FPU_IXC

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsEnabledIT_FPU_IXC (void)

Function description

Check if Floating Point Unit Inexact Interrupt source is enabled or disabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_IE_5 LL_SYSCFG_IsEnabledIT_FPU_IXC

LL_SYSCFG_SetTIMBreakInputs

Function name

__STATIC_INLINE void LL_SYSCFG_SetTIMBreakInputs (uint32_t Break)

Function description

Set connections to TIM1/8/15/16/17 Break inputs.

Parameters

- **Break:** This parameter can be a combination of the following values:
  – LL_SYSCFG_TIMBREAK_ECC
  – LL_SYSCFG_TIMBREAK_PVD
  – LL_SYSCFG_TIMBREAK_SRAM_ECC_LOCK
  – LL_SYSCFG_TIMBREAK_LOCKUP

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_CFGR2 CLL LL_SYSCFG_SetTIMBreakInputs
- SYSCFG_CFGR2 SPL LL_SYSCFG_SetTIMBreakInputs
- SYSCFG_CFGR2 PVDL LL_SYSCFG_SetTIMBreakInputs
- SYSCFG_CFGR2 ECCL LL_SYSCFG_SetTIMBreakInputs

LL_SYSCFG_GetTIMBreakInputs

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetTIMBreakInputs (void)

Function description

Get connections to TIM1/8/15/16/17 Break inputs.

Return values

- **Returned:** value can be can be a combination of the following values:
  – LL_SYSCFG_TIMBREAK_ECC
  – LL_SYSCFG_TIMBREAK_PVD
  – LL_SYSCFG_TIMBREAK_SRAM_ECC_LOCK
  – LL_SYSCFG_TIMBREAK_LOCKUP

Reference Manual to LL API cross reference:

- SYSCFG_CFGR2 CLL LL_SYSCFG_GetTIMBreakInputs
- SYSCFG_CFGR2 SPL LL_SYSCFG_GetTIMBreakInputs
- SYSCFG_CFGR2 PVDL LL_SYSCFG_GetTIMBreakInputs
- SYSCFG_CFGR2 ECCL LL_SYSCFG_GetTIMBreakInputs

LL_SYSCFG_ConfigSecure

Function name

__STATIC_INLINE void LL_SYSCFG_ConfigSecure (uint32_t Configuration)

Function description

Configure Secure mode.

Parameters

- **Configuration:** This parameter shall be the full combination of the following values:
  – LL_SYSCFG_CLOCK_SEC or LL_SYSCFG_CLOCK_NSEC
  – LL_SYSCFG_CLASSB_SEC or LL_SYSCFG_CLASSB_NSEC
  – LL_SYSCFG_FPU_SEC or LL_SYSCFG_FPU_NSEC

Return values

- **None:**

Notes

- Only available from secure state when system implements security (TZEN=1)

Reference Manual to LL API cross reference:

- SECCFGR SYSCFGSEC LL_SYSCFG_ConfigSecure
- SECCFGR CLASSBSEC LL_SYSCFG_ConfigSecure
- SECCFGR FPUSEC LL_SYSCFG_ConfigSecure

LL_SYSCFG_GetConfigSecure

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetConfigSecure (void)

Function description

Get Secure mode configuration.

Return values

- **Returned:** value is the combination of the following values:
  - LL_SYSCFG_CLOCK_SEC or LL_SYSCFG_CLOCK_NSEC
  - LL_SYSCFG_CLASSB_SEC or LL_SYSCFG_CLASSB_NSEC
  - LL_SYSCFG_FPU_SEC or LL_SYSCFG_FPU_NSEC

Notes

- Only available when system implements security (TZEN=1)

Reference Manual to LL API cross reference:

- SECCFGR SYSCFGSEC LL_SYSCFG_ConfigSecure
- SECCFGR CLASSBSEC LL_SYSCFG_ConfigSecure
- SECCFGR FPUSEC LL_SYSCFG_ConfigSecure

LL_SYSCFG_GetPMOSVddCompensationValue

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetPMOSVddCompensationValue (void)

Function description

Get the compensation cell value of the GPIO PMOS transistor supplied by VDD.

Return values

- **Returned:** value is the PMOS compensation cell

Reference Manual to LL API cross reference:

- CCVR PCV1 LL_SYSCFG_GetPMOSVddCompensationValue

LL_SYSCFG_GetNMOSVddCompensationValue

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetNMOSVddCompensationValue (void)

Function description

Get the compensation cell value of the GPIO NMOS transistor supplied by VDD.

Return values

- **Returned:** value is the NMOS compensation cell

Reference Manual to LL API cross reference:

- CCVR NCV1 LL_SYSCFG_GetNMOSVddCompensationValue

LL_SYSCFG_GetPMOSVddIO2CompensationValue

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetPMOSVddIO2CompensationValue (void)

Function description

Get the compensation cell value of the GPIO PMOS transistor supplied by VDDIO2.

Return values

- **Returned:** value is the PMOS compensation cell

Reference Manual to LL API cross reference:

- CCVR PCV2 LL_SYSCFG_GetPMOSVddIO2CompensationValue

LL_SYSCFG_GetNMOSVddIO2CompensationValue

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetNMOSVddIO2CompensationValue (void)

Function description

Get the compensation cell value of the GPIO NMOS transistor supplied by VDDIO2.

Return values

- **Returned:** value is the NMOS compensation cell

Reference Manual to LL API cross reference:

- CCVR NCV2 LL_SYSCFG_GetNMOSVddIO2CompensationValue

LL_SYSCFG_GetPMOSVddHSPICompensationValue

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetPMOSVddHSPICompensationValue (void)

Function description

Get the compensation cell value of the HSPI IO PMOS transistor supplied by VDD.

Return values

- **Returned:** value is the PMOS compensation cell

Reference Manual to LL API cross reference:

- CCVR PCV3 LL_SYSCFG_GetPMOSVddHSPICompensationValue

LL_SYSCFG_GetNMOSVddHSPICompensationValue

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetNMOSVddHSPICompensationValue (void)

Function description

Get the compensation cell value of the HSPI IO NMOS transistor supplied by VDD.

Return values

- **Returned:** value is the NMOS compensation cell

Reference Manual to LL API cross reference:

- CCVR NCV3 LL_SYSCFG_GetNMOSVddHSPICompensationValue

LL_SYSCFG_SetPMOSVddCompensationCode

Function name

__STATIC_INLINE void LL_SYSCFG_SetPMOSVddCompensationCode (uint32_t PMOSCode)

Function description

Set the compensation cell code of the GPIO PMOS transistor supplied by VDD.

Parameters

- **PMOSCode:** PMOS compensation code This code is applied to the PMOS compensation cell when the CS1 bit of the SYSCFG_CCCSR is set

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCCR PCC1 LL_SYSCFG_SetPMOSVddCompensationCode

LL_SYSCFG_GetPMOSVddCompensationCode

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetPMOSVddCompensationCode (void)

Function description

Get the compensation cell code of the GPIO PMOS transistor supplied by VDD.

Return values

- **Returned:** value is the PMOS compensation cell

Reference Manual to LL API cross reference:

- CCCR PCC1 LL_SYSCFG_GetPMOSVddCompensationCode

LL_SYSCFG_SetPMOSVddIO2CompensationCode

Function name

__STATIC_INLINE void LL_SYSCFG_SetPMOSVddIO2CompensationCode (uint32_t PMOSCode)

Function description

Set the compensation cell code of the GPIO PMOS transistor supplied by VDDIO2.

Parameters

- **PMOSCode:** PMOS compensation code This code is applied to the PMOS compensation cell when the CS2 bit of the SYSCFG_CCCSR is set

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCCR PCC2 LL_SYSCFG_SetPMOSVddIO2CompensationCode

LL_SYSCFG_GetPMOSVddIO2CompensationCode

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetPMOSVddIO2CompensationCode (void)

Function description

Get the compensation cell code of the GPIO PMOS transistor supplied by VDDIO2.

Return values

- **Returned:** value is the PMOS compensation

Reference Manual to LL API cross reference:

- CCCR PCC2 LL_SYSCFG_GetPMOSVddIO2CompensationCode

LL_SYSCFG_SetPMOSVddHSPICompensationCode

Function name

__STATIC_INLINE void LL_SYSCFG_SetPMOSVddHSPICompensationCode (uint32_t PMOSCode)

Function description

Set the compensation cell code of the HSPI IO PMOS transistor supplied by VDD.

Parameters

- **PMOSCode:** PMOS compensation code This code is applied to the PMOS compensation cell when the CS3 bit of the SYSCFG_CCCSR is set

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCCR PCC3 LL_SYSCFG_SetPMOSVddHSPICompensationCode

LL_SYSCFG_GetPMOSVddHSPICompensationCode

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetPMOSVddHSPICompensationCode (void)

Function description

Get the compensation cell code of the HSPI IO PMOS transistor supplied by VDD.

Return values

- **Returned:** value is the PMOS compensation

Reference Manual to LL API cross reference:

- CCCR PCC3 LL_SYSCFG_GetPMOSVddHSPICompensationCode

LL_SYSCFG_SetNMOSVddCompensationCode

Function name

__STATIC_INLINE void LL_SYSCFG_SetNMOSVddCompensationCode (uint32_t NMOSCode)

Function description

Set the compensation cell code of the GPIO NMOS transistor supplied by VDD.

Parameters

- **NMOSCode:** NMOS compensation code This code is applied to the NMOS compensation cell when the CS2 bit of the SYSCFG_CMPCR is set

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCCR PCC2 LL_SYSCFG_SetNMOSVddCompensationCode

LL_SYSCFG_GetNMOSVddCompensationCode

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetNMOSVddCompensationCode (void)

Function description

Get the compensation cell code of the GPIO NMOS transistor supplied by VDD.

Return values

- **Returned:** value is the Vdd compensation cell code for NMOS transistors

Reference Manual to LL API cross reference:

- CCCR NCC1 LL_SYSCFG_GetNMOSVddCompensationCode

LL_SYSCFG_SetNMOSVddIO2CompensationCode

Function name

__STATIC_INLINE void LL_SYSCFG_SetNMOSVddIO2CompensationCode (uint32_t NMOSCode)

Function description

Set the compensation cell code of the GPIO NMOS transistor supplied by VDDIO2.

Parameters

- **NMOSCode:** NMOS compensation code This code is applied to the NMOS compensation cell when the CS2 bit of the SYSCFG_CMPCR is set Value between 0 and 15

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCCR NCC2 LL_SYSCFG_SetNMOSVddIO2CompensationCode

LL_SYSCFG_GetNMOSVddIO2CompensationCode

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetNMOSVddIO2CompensationCode (void)

Function description

Get the compensation cell code of the GPIO NMOS transistor supplied by VDDIO2.

Return values

- **Returned:** value is the NMOS compensation cell code

Reference Manual to LL API cross reference:

- CCCR NCC2 LL_SYSCFG_GetNMOSVddIO2CompensationCode

LL_SYSCFG_SetNMOSVddHSPICompensationCode

Function name

__STATIC_INLINE void LL_SYSCFG_SetNMOSVddHSPICompensationCode (uint32_t NMOSCode)

Function description

Set the compensation cell code of the HSPI IO NMOS transistor supplied by VDD.

Parameters

- **NMOSCode:** NMOS compensation code This code is applied to the NMOS compensation cell when the CS3 bit of the SYSCFG_CCCSR is set Value between 0 and 15

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCCR NCC3 LL_SYSCFG_SetNMOSVddHSPICompensationCode

LL_SYSCFG_GetNMOSVddHSPICompensationCode

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetNMOSVddHSPICompensationCode (void)

Function description

Get the compensation cell code of the HSPI IO NMOS transistor supplied by VDD.

Return values

- **Returned:** value is the NMOS compensation cell code

Reference Manual to LL API cross reference:

- CCCR NCC3 LL_SYSCFG_GetNMOSVddHSPICompensationCode

LL_SYSCFG_EnableVddCompensationCell

Function name

__STATIC_INLINE void LL_SYSCFG_EnableVddCompensationCell (void)

Function description

Enable the Compensation Cell of GPIO supplied by VDD.

Return values

- **None:**

Notes

- The vdd compensation cell can be used only when the device supply voltage ranges from 1.71 to 3.6 V

Reference Manual to LL API cross reference:

- CCCSR EN1 LL_SYSCFG_EnableVddCompensationCell

LL_SYSCFG_EnableVddIO2CompensationCell

Function name

__STATIC_INLINE void LL_SYSCFG_EnableVddIO2CompensationCell (void)

Function description

Enable the Compensation Cell of GPIO supplied by VDDIO2.

Return values

- **None:**

Notes

- The Vdd I/O compensation cell can be used only when the device supply voltage ranges from 1.08 to 3.6 V

Reference Manual to LL API cross reference:

- CCCSR EN2 LL_SYSCFG_EnableVddIO2CompensationCell

LL_SYSCFG_EnableVddHSPICompensationCell

Function name

__STATIC_INLINE void LL_SYSCFG_EnableVddHSPICompensationCell (void)

Function description

Enable the Compensation Cell of HSPI IO supplied by VDD.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCCSR EN3 LL_SYSCFG_EnableVddHSPICompensationCell

LL_SYSCFG_DisableVddCompensationCell

Function name

__STATIC_INLINE void LL_SYSCFG_DisableVddCompensationCell (void)

Function description

Disable the Compensation Cell of GPIO supplied by VDD.

Return values

- **None:**

Notes

- The Vdd compensation cell can be used only when the device supply voltage ranges from 1.71 to 3.6 V

Reference Manual to LL API cross reference:

- CCCSR EN1 LL_SYSCFG_DisableVddCompensationCell

LL_SYSCFG_DisableVddIO2CompensationCell

Function name

__STATIC_INLINE void LL_SYSCFG_DisableVddIO2CompensationCell (void)

Function description

Disable the Compensation Cell of GPIO supplied by VDDIO2.

Return values

- **None:**

Notes

- The Vdd I/O compensation cell can be used only when the device supply voltage ranges from 1.08 to 3.6 V

Reference Manual to LL API cross reference:

- CCCSR EN2 LL_SYSCFG_DisableVddIO2CompensationCell

LL_SYSCFG_DisableVddHSPICompensationCell

Function name

__STATIC_INLINE void LL_SYSCFG_DisableVddHSPICompensationCell (void)

Function description

Disable the Compensation Cell of HSPI IO supplied by VDD.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCCSR EN3 LL_SYSCFG_DisableVddHSPICompensationCell

LL_SYSCFG_IsEnabled_VddCompensationCell

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsEnabled_VddCompensationCell (void)

Function description

Check if the Compensation Cell of GPIO supplied by VDD is enable.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CCCSR EN1 LL_SYSCFG_IsEnabled_VddCompensationCell

LL_SYSCFG_IsEnabled_VddIO2CompensationCell

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsEnabled_VddIO2CompensationCell (void)

Function description

Check if the Compensation Cell of GPIO supplied by VDDIO2 is enable.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CCCSR EN2 LL_SYSCFG_IsEnabled_VddIO2CompensationCell

LL_SYSCFG_IsEnabled_VddHSPICompensationCell

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsEnabled_VddHSPICompensationCell (void)

Function description

Check if the Compensation Cell of HSPI IO supplied by VDD is enable.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CCCSR EN3 LL_SYSCFG_IsEnabled_VddHSPICompensationCell

LL_SYSCFG_IsActiveFlag_VddCMPCR

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsActiveFlag_VddCMPCR (void)

Function description

Get Compensation Cell ready Flag of GPIO supplied by VDD.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CCCSR RDY1 LL_SYSCFG_IsActiveFlag_VddCMPCR

LL_SYSCFG_IsActiveFlag_VddIO2CMPCR

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsActiveFlag_VddIO2CMPCR (void)

Function description

Get Compensation Cell ready Flag of GPIO supplied by VDDIO2.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CCCSR RDY2 LL_SYSCFG_IsActiveFlag_VddIO2CMPCR

LL_SYSCFG_IsActiveFlag_VddHSPICMPCR

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsActiveFlag_VddHSPICMPCR (void)

Function description

Get Compensation Cell ready Flag of HSPI IO supplied by VDD.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CCCSR RDY3 LL_SYSCFG_IsActiveFlag_VddHSPICMPCR

LL_SYSCFG_SetVddCellCompensationCode

Function name

__STATIC_INLINE void LL_SYSCFG_SetVddCellCompensationCode (uint32_t CompCode)

Function description

Set the compensation cell code selection of GPIO supplied by VDD.

Parameters

- **CompCode:** Selects the code to be applied for the Vdd compensation cell This parameter can be one of the following values:
  - LL_SYSCFG_VDD_CELL_CODE : Select Code from the cell (available in the SYSCFG_CCVR)
  - LL_SYSCFG_VDD_REGISTER_CODE: Select Code from the SYSCFG compensation cell code register (SYSCFG_CCCR)

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCCSR CS1 LL_SYSCFG_SetVddCellCompensationCode

LL_SYSCFG_SetVddIO2CellCompensationCode

Function name

__STATIC_INLINE void LL_SYSCFG_SetVddIO2CellCompensationCode (uint32_t CompCode)

Function description

Set the compensation cell code selection of GPIO supplied by VDDIO2.

Parameters

- **CompCode:** Selects the code to be applied for the VddIO compensation cell This parameter can be one of the following values:
  - LL_SYSCFG_VDDIO2_CELL_CODE : Select Code from the cell (available in the SYSCFG_CCVR)
  - LL_SYSCFG_VDDIO2_REGISTER_CODE: Select Code from the SYSCFG compensation cell code register (SYSCFG_CCCR)

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCCSR CS2 LL_SYSCFG_SetVddIO2CellCompensationCode

LL_SYSCFG_SetVddHSPICellCompensationCode

Function name

__STATIC_INLINE void LL_SYSCFG_SetVddHSPICellCompensationCode (uint32_t CompCode)

Function description

Set the compensation cell code selection of HSPI IO supplied by VDD.

Parameters

- **CompCode:** Selects the code to be applied for the VddIO compensation cell This parameter can be one of the following values:
  - LL_SYSCFG_VDDHSPI_CELL_CODE : Select Code from the cell (available in the SYSCFG_CCVR)
  - LL_SYSCFG_VDDHSPI_REGISTER_CODE: Select Code from the SYSCFG compensation cell code register (SYSCFG_CCCR)

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCCSR CS3 LL_SYSCFG_SetVddHSPICellCompensationCode

LL_SYSCFG_GetVddCellCompensationCode

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetVddCellCompensationCode (void)

Function description

Get the compensation cell code selection of GPIO supplied by VDD.

Return values

- **Returned:** value can be one of the following values:
  - LL_SYSCFG_VDD_CELL_CODE : Selected Code is from the cell (available in the SYSCFG_CCVR)
  - LL_SYSCFG_VDD_REGISTER_CODE: Selected Code is from the SYSCFG compensation cell code register (SYSCFG_CCCR)

Reference Manual to LL API cross reference:

- CCCSR CS1 LL_SYSCFG_GetVddCellCompensationCode

LL_SYSCFG_GetVddIO2CellCompensationCode

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetVddIO2CellCompensationCode (void)

Function description

Get the compensation cell code selection of GPIO supplied by VDDIO2.

Return values

- **Returned:** value can be one of the following values:
  – LL_SYSCFG_VDDIO2_CELL_CODE : Selected Code is from the cell (available in the SYSCFG_CCVR)
  – LL_SYSCFG_VDDIO2_REGISTER_CODE: Selected Code is from the SYSCFG compensation cell code register (SYSCFG_CCCR)

Reference Manual to LL API cross reference:

- CCCSR CS2 LL_SYSCFG_GetVddIO2CellCompensationCode

LL_SYSCFG_GetVddHSPICellCompensationCode

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetVddHSPICellCompensationCode (void)

Function description

Get the compensation cell code selection of HSPI IO supplied by VDD.

Return values

- **Returned:** value can be one of the following values:
  – LL_SYSCFG_VDDHSPI_CELL_CODE : Selected Code is from the cell (available in the SYSCFG_CCVR)
  – LL_SYSCFG_VDDHSPI_REGISTER_CODE: Selected Code is from the SYSCFG compensation cell code register (SYSCFG_CCCR)

Reference Manual to LL API cross reference:

- CCCSR CS3 LL_SYSCFG_GetVddHSPICellCompensationCode

LL_DBGMCU_GetDeviceID

Function name

__STATIC_INLINE uint32_t LL_DBGMCU_GetDeviceID (void)

Function description

Return the device identifier.

Return values

- **Values:** between Min_Data=0x00 and Max_Data=0xFFFF (ex: device ID is 0x6415)

Reference Manual to LL API cross reference:

- DBGMCU_IDCODE DEV_ID LL_DBGMCU_GetDeviceID

LL_DBGMCU_GetRevisionID

Function name

__STATIC_INLINE uint32_t LL_DBGMCU_GetRevisionID (void)

Function description

Return the device revision identifier.

Return values

- **Values:** between Min_Data=0x00 and Max_Data=0xFFFF

Notes

- This field indicates the revision of the device.

Reference Manual to LL API cross reference:

- DBGMCU_IDCODE REV_ID LL_DBGMCU_GetRevisionID

LL_DBGMCU_EnableDBGStopMode

Function name

__STATIC_INLINE void LL_DBGMCU_EnableDBGStopMode (void)

Function description

Enable the Debug Module during STOP mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_CR DBG_STOP LL_DBGMCU_EnableDBGStopMode

LL_DBGMCU_DisableDBGStopMode

Function name

__STATIC_INLINE void LL_DBGMCU_DisableDBGStopMode (void)

Function description

Disable the Debug Module during STOP mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_CR DBG_STOP LL_DBGMCU_DisableDBGStopMode

LL_DBGMCU_EnableDBGStandbyMode

Function name

__STATIC_INLINE void LL_DBGMCU_EnableDBGStandbyMode (void)

Function description

Enable the Debug Module during STANDBY mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_CR DBG_STANDBY LL_DBGMCU_EnableDBGStandbyMode

LL_DBGMCU_DisableDBGStandbyMode

Function name

__STATIC_INLINE void LL_DBGMCU_DisableDBGStandbyMode (void)

Function description

Disable the Debug Module during STANDBY mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_CR DBG_STANDBY LL_DBGMCU_DisableDBGStandbyMode

LL_DBGMCU_EnableTraceClock

Function name

__STATIC_INLINE void LL_DBGMCU_EnableTraceClock (void)

Function description

Enable the Debug Clock Trace.

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_CR TRACE_CLKEN LL_DBGMCU_EnableTraceClock

LL_DBGMCU_DisableTraceClock

Function name

__STATIC_INLINE void LL_DBGMCU_DisableTraceClock (void)

Function description

Disable the Debug Clock Trace.

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_CR TRACE_CLKEN LL_DBGMCU_DisableTraceClock

LL_DBGMCU_IsEnabledTraceClock

Function name

__STATIC_INLINE uint32_t LL_DBGMCU_IsEnabledTraceClock (void)

Function description

Check if clock trace is enabled or disabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DBGMCU_CR_TRACE_CLKEN LL_DBGMCU_IsEnabledTraceClock

LL_DBGMCU_SetTracePinAssignment

Function name

__STATIC_INLINE void LL_DBGMCU_SetTracePinAssignment (uint32_t PinAssignment)

Function description

Set Trace pin assignment control.

Parameters

- **PinAssignment:** This parameter can be one of the following values:
  - LL_DBGMCU_TRACE_NONE
  - LL_DBGMCU_TRACE_ASYNCH
  - LL_DBGMCU_TRACE_SYNCH_SIZE1
  - LL_DBGMCU_TRACE_SYNCH_SIZE2
  - LL_DBGMCU_TRACE_SYNCH_SIZE4

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_CR TRACE_IOEN LL_DBGMCU_SetTracePinAssignment
- DBGMCU_CR TRACE_MODE LL_DBGMCU_SetTracePinAssignment

LL_DBGMCU_GetTracePinAssignment

Function name

__STATIC_INLINE uint32_t LL_DBGMCU_GetTracePinAssignment (void)

Function description

Get Trace pin assignment control.

Return values

- **Returned:** value can be one of the following values:
  - LL_DBGMCU_TRACE_NONE
  - LL_DBGMCU_TRACE_ASYNCH
  - LL_DBGMCU_TRACE_SYNCH_SIZE1
  - LL_DBGMCU_TRACE_SYNCH_SIZE2
  - LL_DBGMCU_TRACE_SYNCH_SIZE4

Reference Manual to LL API cross reference:

- DBGMCU_CR TRACE_IOEN LL_DBGMCU_GetTracePinAssignment
- DBGMCU_CR TRACE_MODE LL_DBGMCU_GetTracePinAssignment

LL_DBGMCU_APB1_GRP1_FreezePeriph

Function name

__STATIC_INLINE void LL_DBGMCU_APB1_GRP1_FreezePeriph (uint32_t Periphs)

Function description

Freeze APB1 peripherals (group1 peripherals)

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_DBGMCU_APB1_GRP1_TIM2_STOP
  - LL_DBGMCU_APB1_GRP1_TIM3_STOP
  - LL_DBGMCU_APB1_GRP1_TIM4_STOP
  - LL_DBGMCU_APB1_GRP1_TIM5_STOP
  - LL_DBGMCU_APB1_GRP1_TIM6_STOP
  - LL_DBGMCU_APB1_GRP1_TIM7_STOP
  - LL_DBGMCU_APB1_GRP1_WWDG_STOP
  - LL_DBGMCU_APB1_GRP1_IWDG_STOP
  - LL_DBGMCU_APB1_GRP1_I2C1_STOP
  - LL_DBGMCU_APB1_GRP1_I2C2_STOP

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_APB1FZR1 DBG_xxxx_STOP LL_DBGMCU_APB1_GRP1_FreezePeriph

LL_DBGMCU_APB1_GRP2_FreezePeriph

Function name

__STATIC_INLINE void LL_DBGMCU_APB1_GRP2_FreezePeriph (uint32_t Periphs)

Function description

Freeze APB1 peripherals (group2 peripherals)

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_DBGMCU_APB1_GRP2_I2C4_STOP
  - LL_DBGMCU_APB1_GRP2_LPTIM2_STOP
  - LL_DBGMCU_APB1_GRP2_I2C5_STOP (*)
  - LL_DBGMCU_APB1_GRP2_I2C6_STOP (*)

Return values

- **None:**

Notes

- (*) Availability depends on devices.

Reference Manual to LL API cross reference:

- DBGMCU_APB1FZR2 DBG_xxxx_STOP LL_DBGMCU_APB1_GRP2_FreezePeriph

LL_DBGMCU_APB1_GRP1_UnFreezePeriph

Function name

__STATIC_INLINE void LL_DBGMCU_APB1_GRP1_UnFreezePeriph (uint32_t Periphs)

Function description

Unfreeze APB1 peripherals (group1 peripherals)

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_DBGMCU_APB1_GRP1_TIM2_STOP
  - LL_DBGMCU_APB1_GRP1_TIM3_STOP
  - LL_DBGMCU_APB1_GRP1_TIM4_STOP
  - LL_DBGMCU_APB1_GRP1_TIM5_STOP
  - LL_DBGMCU_APB1_GRP1_TIM6_STOP
  - LL_DBGMCU_APB1_GRP1_TIM7_STOP
  - LL_DBGMCU_APB1_GRP1_WWDG_STOP
  - LL_DBGMCU_APB1_GRP1_IWDG_STOP
  - LL_DBGMCU_APB1_GRP1_I2C1_STOP
  - LL_DBGMCU_APB1_GRP1_I2C2_STOP

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_APB1FZR1 DBG_xxxx_STOP LL_DBGMCU_APB1_GRP1_UnFreezePeriph

LL_DBGMCU_APB1_GRP2_UnFreezePeriph

Function name

__STATIC_INLINE void LL_DBGMCU_APB1_GRP2_UnFreezePeriph (uint32_t Periphs)

Function description

Unfreeze APB1 peripherals (group2 peripherals)

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_DBGMCU_APB1_GRP2_I2C4_STOP
  - LL_DBGMCU_APB1_GRP2_LPTIM2_STOP

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_APB1FZR2 DBG_xxxx_STOP LL_DBGMCU_APB1_GRP2_UnFreezePeriph

LL_DBGMCU_APB2_GRP1_FreezePeriph

Function name

__STATIC_INLINE void LL_DBGMCU_APB2_GRP1_FreezePeriph (uint32_t Periphs)

Function description

Freeze APB2 peripherals.

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_DBGMCU_APB2_GRP1_TIM1_STOP
  - LL_DBGMCU_APB2_GRP1_TIM8_STOP
  - LL_DBGMCU_APB2_GRP1_TIM15_STOP
  - LL_DBGMCU_APB2_GRP1_TIM16_STOP
  - LL_DBGMCU_APB2_GRP1_TIM17_STOP

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_APB2FZ DBG_TIMx_STOP LL_DBGMCU_APB2_GRP1_FreezePeriph

LL_DBGMCU_APB2_GRP1_UnFreezePeriph

Function name

__STATIC_INLINE void LL_DBGMCU_APB2_GRP1_UnFreezePeriph (uint32_t Periphs)

Function description

Unfreeze APB2 peripherals.

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  – LL_DBGMCU_APB2_GRP1_TIM1_STOP
  – LL_DBGMCU_APB2_GRP1_TIM8_STOP
  – LL_DBGMCU_APB2_GRP1_TIM15_STOP
  – LL_DBGMCU_APB2_GRP1_TIM16_STOP
  – LL_DBGMCU_APB2_GRP1_TIM17_STOP

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_APB2FZR DBG_TIMx_STOP LL_DBGMCU_APB2_GRP1_UnFreezePeriph

LL_DBGMCU_APB3_GRP1_FreezePeriph

Function name

__STATIC_INLINE void LL_DBGMCU_APB3_GRP1_FreezePeriph (uint32_t Periphs)

Function description

Freeze APB3 peripherals.

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  – LL_DBGMCU_APB3_GRP1_I2C3_STOP
  – LL_DBGMCU_APB3_GRP1_LPTIM1_STOP
  – LL_DBGMCU_APB3_GRP1_LPTIM3_STOP
  – LL_DBGMCU_APB3_GRP1_LPTIM4_STOP
  – LL_DBGMCU_APB3_GRP1_RTC_STOP

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_APB3FZ DBG_TIMx_STOP LL_DBGMCU_APB3_GRP1_FreezePeriph

LL_DBGMCU_APB3_GRP1_UnFreezePeriph

Function name

__STATIC_INLINE void LL_DBGMCU_APB3_GRP1_UnFreezePeriph (uint32_t Periphs)

Function description

Unfreeze APB3 peripherals.

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_DBGMCU_APB3_GRP1_I2C3_STOP
  - LL_DBGMCU_APB3_GRP1_LPTIM1_STOP
  - LL_DBGMCU_APB3_GRP1_LPTIM3_STOP
  - LL_DBGMCU_APB3_GRP1_LPTIM4_STOP
  - LL_DBGMCU_APB3_GRP1_RTC_STOP

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_APB3FZR DBG_TIMx_STOP LL_DBGMCU_APB3_GRP1_UnFreezePeriph

LL_DBGMCU_AHB1_GRP1_FreezePeriph

Function name

__STATIC_INLINE void LL_DBGMCU_AHB1_GRP1_FreezePeriph (uint32_t Periphs)

Function description

Freeze AHB1 peripherals.

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_DBGMCU_AHB1_GRP1_GPDMA0_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA1_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA2_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA3_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA4_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA5_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA6_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA7_STOP

  - LL_DBGMCU_AHB1_GRP1_GPDMA9_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA10_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA11_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA12_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA13_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA14_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA15_STOP

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_AHB1FZ DBG_GPDMAx_STOP LL_DBGMCU_AHB1_GRP1_FreezePeriph

LL_DBGMCU_AHB1_GRP1_UnFreezePeriph

Function name

__STATIC_INLINE void LL_DBGMCU_AHB1_GRP1_UnFreezePeriph (uint32_t Periphs)

Function description

Unfreeze AHB1 peripherals.

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_DBGMCU_AHB1_GRP1_GPDMA0_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA1_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA2_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA3_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA4_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA5_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA6_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA7_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA8_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA9_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA10_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA11_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA12_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA13_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA14_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA15_STOP

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_AHB1FZ DBG_GPDMAx_STOP LL_DBGMCU_AHB1_GRP1_FreezePeriph

LL_DBGMCU_AHB3_GRP1_FreezePeriph

Function name

__STATIC_INLINE void LL_DBGMCU_AHB3_GRP1_FreezePeriph (uint32_t Periphs)

Function description

Freeze AHB3 peripherals.

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_DBGMCU_AHB3_GRP1_LPDMA0_STOP
  - LL_DBGMCU_AHB3_GRP1_LPDMA1_STOP
  - LL_DBGMCU_AHB3_GRP1_LPDMA2_STOP
  - LL_DBGMCU_AHB3_GRP1_LPDMA3_STOP

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_AHB3FZ DBG_LPDMAx_STOP LL_DBGMCU_AHB3_GRP1_FreezePeriph

LL_DBGMCU_AHB3_GRP1_UnFreezePeriph

Function name

__STATIC_INLINE void LL_DBGMCU_AHB3_GRP1_UnFreezePeriph (uint32_t Periphs)

Function description

Unfreeze AHB3 peripherals.

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  – LL_DBGMCU_AHB3_GRP1_LPDMA0_STOP
  – LL_DBGMCU_AHB3_GRP1_LPDMA1_STOP
  – LL_DBGMCU_AHB3_GRP1_LPDMA2_STOP
  – LL_DBGMCU_AHB3_GRP1_LPDMA3_STOP

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_AHB3FZ DBG_LPDMAx_STOP LL_DBGMCU_AHB3_GRP1_FreezePeriph

LL_VREFBUF_Enable

Function name

__STATIC_INLINE void LL_VREFBUF_Enable (void)

Function description

Enable Internal voltage reference.

Return values

- **None:**

Reference Manual to LL API cross reference:

- VREFBUF_CSR ENVR LL_VREFBUF_Enable

LL_VREFBUF_Disable

Function name

__STATIC_INLINE void LL_VREFBUF_Disable (void)

Function description

Disable Internal voltage reference.

Return values

- **None:**

Reference Manual to LL API cross reference:

- VREFBUF_CSR ENVR LL_VREFBUF_Disable

LL_VREFBUF_EnableHIZ

Function name

__STATIC_INLINE void LL_VREFBUF_EnableHIZ (void)

Function description

Enable high impedance (VREF+pin is high impedance)

Return values

- **None:**

Reference Manual to LL API cross reference:

- VREFBUF_CSR HIZ LL_VREFBUF_EnableHIZ

LL_VREFBUF_DisableHIZ

Function name

__STATIC_INLINE void LL_VREFBUF_DisableHIZ (void)

Function description

Disable high impedance (VREF+pin is internally connected to the voltage reference buffer output)

Return values

- **None:**

Reference Manual to LL API cross reference:

- VREFBUF_CSR HIZ LL_VREFBUF_DisableHIZ

LL_VREFBUF_SetVoltageScaling

Function name

__STATIC_INLINE void LL_VREFBUF_SetVoltageScaling (uint32_t Scale)

Function description

Set the Voltage reference scale.

Parameters

- **Scale:** This parameter can be one of the following values:
  – LL_VREFBUF_VOLTAGE_SCALE0
  – LL_VREFBUF_VOLTAGE_SCALE1
  – LL_VREFBUF_VOLTAGE_SCALE2
  – LL_VREFBUF_VOLTAGE_SCALE3

Return values

- **None:**

Reference Manual to LL API cross reference:

- VREFBUF_CSR VRS LL_VREFBUF_SetVoltageScaling

LL_VREFBUF_GetVoltageScaling

Function name

__STATIC_INLINE uint32_t LL_VREFBUF_GetVoltageScaling (void)

Function description

Get the Voltage reference scale.

Return values

- **Returned:** value can be one of the following values:
  – LL_VREFBUF_VOLTAGE_SCALE0
  – LL_VREFBUF_VOLTAGE_SCALE1
  – LL_VREFBUF_VOLTAGE_SCALE2
  – LL_VREFBUF_VOLTAGE_SCALE3

Reference Manual to LL API cross reference:

- VREFBUF_CSR VRS LL_VREFBUF_GetVoltageScaling

LL_VREFBUF_IsVREFReady

Function name

__STATIC_INLINE uint32_t LL_VREFBUF_IsVREFReady (void)

Function description

Check if Voltage reference buffer is ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- VREFBUF_CSR VRR LL_VREFBUF_IsVREFReady

LL_VREFBUF_GetTrimming

Function name

__STATIC_INLINE uint32_t LL_VREFBUF_GetTrimming (void)

Function description

Get the trimming code for VREFBUF calibration.

Return values

- **Between:** 0 and 0x3F

Reference Manual to LL API cross reference:

- VREFBUF_CCR TRIM LL_VREFBUF_GetTrimming

LL_VREFBUF_SetTrimming

Function name

__STATIC_INLINE void LL_VREFBUF_SetTrimming (uint32_t Value)

Function description

Set the trimming code for VREFBUF calibration (Tune the internal reference buffer voltage)

Parameters

- **Value:** Between 0 and 0x3F

Return values

- **None:**

Reference Manual to LL API cross reference:

- VREFBUF_CCR TRIM LL_VREFBUF_SetTrimming

LL_FLASH_SetLatency

Function name

__STATIC_INLINE void LL_FLASH_SetLatency (uint32_t Latency)

Function description

Set FLASH Latency.

Parameters

- **Latency:** This parameter can be one of the following values:
  - LL_FLASH_LATENCY_0
  - LL_FLASH_LATENCY_1
  - LL_FLASH_LATENCY_2
  - LL_FLASH_LATENCY_3
  - LL_FLASH_LATENCY_4
  - LL_FLASH_LATENCY_5
  - LL_FLASH_LATENCY_6
  - LL_FLASH_LATENCY_7
  - LL_FLASH_LATENCY_8
  - LL_FLASH_LATENCY_9
  - LL_FLASH_LATENCY_10
  - LL_FLASH_LATENCY_11
  - LL_FLASH_LATENCY_12
  - LL_FLASH_LATENCY_13
  - LL_FLASH_LATENCY_14
  - LL_FLASH_LATENCY_15

Return values

- **None:**

Reference Manual to LL API cross reference:

- FLASH_ACR LATENCY LL_FLASH_SetLatency

LL_FLASH_GetLatency

Function name

__STATIC_INLINE uint32_t LL_FLASH_GetLatency (void)

Function description

Get FLASH Latency.

Return values

- **Returned:** value can be one of the following values:
  - LL_FLASH_LATENCY_0
  - LL_FLASH_LATENCY_1
  - LL_FLASH_LATENCY_2
  - LL_FLASH_LATENCY_3
  - LL_FLASH_LATENCY_4
  - LL_FLASH_LATENCY_5
  - LL_FLASH_LATENCY_6
  - LL_FLASH_LATENCY_7
  - LL_FLASH_LATENCY_8
  - LL_FLASH_LATENCY_9
  - LL_FLASH_LATENCY_10
  - LL_FLASH_LATENCY_11
  - LL_FLASH_LATENCY_12
  - LL_FLASH_LATENCY_13
  - LL_FLASH_LATENCY_14
  - LL_FLASH_LATENCY_15

Reference Manual to LL API cross reference:

- FLASH_ACR LATENCY LL_FLASH_GetLatency

LL_FLASH_EnableRunPowerDown

Function name

__STATIC_INLINE void LL_FLASH_EnableRunPowerDown (void)

Function description

Enable Flash Power-down mode during run mode or Low-power run mode.

Return values

- **None:**

Notes

- Flash memory can be put in power-down mode only when the code is executed from RAM
- Flash must not be accessed when power down is enabled
- Flash must not be put in power-down while a program or an erase operation is on-going

Reference Manual to LL API cross reference:

- FLASH_ACR RUN_PD LL_FLASH_EnableRunPowerDown
- FLASH_PDKEYR PDKEY1_1 LL_FLASH_EnableRunPowerDown
- FLASH_PDKEYR PDKEY1_2 LL_FLASH_EnableRunPowerDown
- FLASH_PDKEYR PDKEY2_1 LL_FLASH_EnableRunPowerDown
- FLASH_PDKEYR PDKEY2_2 LL_FLASH_EnableRunPowerDown

LL_FLASH_EnableRunPowerDownBank1

Function name

__STATIC_INLINE void LL_FLASH_EnableRunPowerDownBank1 (void)

Function description

Enable flash Power-down mode during run mode or Low-power run mode of bank1.

Return values

- **None:**

Notes

- Bank 1 of flash memory can be put in power-down mode only when the code is executed from RAM
- Bank1 of flash must not be accessed when power down is enabled
- Bank1 of flash must not be put in power-down while a program or an erase operation is on-going

Reference Manual to LL API cross reference:

- FLASH_ACR RUN_PD LL_FLASH_EnableRunPowerDown
- FLASH_PDKEYR PDKEY1_1 LL_FLASH_EnableRunPowerDown
- FLASH_PDKEYR PDKEY1_2 LL_FLASH_EnableRunPowerDown
-

LL_FLASH_EnableRunPowerDownBank2

Function name

__STATIC_INLINE void LL_FLASH_EnableRunPowerDownBank2 (void)

Function description

Enable flash Power-down mode during run mode or Low-power run mode of Bank2.

Return values

- **None:**

Notes

- Bank 2 of flash memory can be put in power-down mode only when the code is executed from RAM
- Bank2 of flash must not be accessed when power down is enabled
- Bank2 of flash must not be put in power-down while a program or an erase operation is on-going

Reference Manual to LL API cross reference:

- FLASH_ACR RUN_PD LL_FLASH_EnableRunPowerDown
- FLASH_PDKEYR PDKEY2_1 LL_FLASH_EnableRunPowerDown
- FLASH_PDKEYR PDKEY2_2 LL_FLASH_EnableRunPowerDown
-

LL_FLASH_EnableSleepPowerDown

Function name

__STATIC_INLINE void LL_FLASH_EnableSleepPowerDown (void)

Function description

Enable Flash Power-down mode during Sleep or Low-power sleep mode.

Return values

- **None:**

Notes

- Flash must not be put in power-down while a program or an erase operation is on-going

Reference Manual to LL API cross reference:

- FLASH_ACR SLEEP_PD LL_FLASH_EnableSleepPowerDown

LL_FLASH_DisableSleepPowerDown

Function name

__STATIC_INLINE void LL_FLASH_DisableSleepPowerDown (void)

Function description

Disable Flash Power-down mode during Sleep or Low-power sleep mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- FLASH_ACR SLEEP_PD LL_FLASH_DisableSleepPowerDown

LL_SYSCFG_ClearEraseEndStatus

Function name

__STATIC_INLINE void LL_SYSCFG_ClearEraseEndStatus (void)

Function description

Clear Status of End of Erase for ICACHE and PKA RAMs.

Return values

- **None:**

Reference Manual to LL API cross reference:

- MESR IPMEE LL_SYSCFG_ClearEraseEndStatus

LL_SYSCFG_GetEraseEndStatus

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetEraseEndStatus (void)

Function description

Get Status of End of Erase for ICACHE and PKA RAMs.

Return values

- **Returned:** value can be one of the following values:
  - LL_SYSCFG_MEMORIES_ERASE_ON_GOING : Erase of memories not yet done
  - LL_SYSCFG_MEMORIES_ERASE_ENDED: Erase of memories ended

Reference Manual to LL API cross reference:

- MESR IPMEE LL_SYSCFG_GetEraseEndStatus

LL_SYSCFG_ClearEraseAfterResetStatus

Function name

__STATIC_INLINE void LL_SYSCFG_ClearEraseAfterResetStatus (void)

Function description

Clear Status of End of Erase after reset for SRAM2, BKPRAM, ICACHE, DCACHE,PKA rams.

Return values

- **None:**

Reference Manual to LL API cross reference:

- MESR MCLR LL_SYSCFG_ClearEraseAfterResetStatus

LL_SYSCFG_GetEraseAfterResetStatus

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetEraseAfterResetStatus (void)

Function description

Get Status of End of Erase after reset for SRAM2, BKPRAM, ICACHE, DCACHE,PKA rams.

Return values

- **Returned:** value can be one of the following values:
  - LL_SYSCFG_MEMORIES_ERASE_ON_GOING : Erase of memories not yet done
  - LL_SYSCFG_MEMORIES_ERASE_ENDED: Erase of memories ended

Reference Manual to LL API cross reference:

- MESR MCLR LL_SYSCFG_GetEraseAfterResetStatus

118.2 SYSTEM Firmware driver defines

The following section lists the various define and macros of the module.

118.2.1 SYSTEM

SYSTEM

DBGMCU AHB1 GRP1 STOP IP

LL_DBGMCU_AHB1_GRP1_GPDMA0_STOP
The counter clock of GPDMA0 is stopped when the core is halted

LL_DBGMCU_AHB1_GRP1_GPDMA1_STOP
The counter clock of GPDMA1 is stopped when the core is halted

LL_DBGMCU_AHB1_GRP1_GPDMA2_STOP
The counter clock of GPDMA2 is stopped when the core is halted

LL_DBGMCU_AHB1_GRP1_GPDMA3_STOP
The counter clock of GPDMA3 is stopped when the core is halted

LL_DBGMCU_AHB1_GRP1_GPDMA4_STOP
The counter clock of GPDMA4 is stopped when the core is halted

LL_DBGMCU_AHB1_GRP1_GPDMA5_STOP
The counter clock of GPDMA5 is stopped when the core is halted

LL_DBGMCU_AHB1_GRP1_GPDMA6_STOP
The counter clock of GPDMA6 is stopped when the core is halted

LL_DBGMCU_AHB1_GRP1_GPDMA7_STOP
The counter clock of GPDMA7 is stopped when the core is halted

LL_DBGMCU_AHB1_GRP1_GPDMA8_STOP
The counter clock of GPDMA8 is stopped when the core is halted

LL_DBGMCU_AHB1_GRP1_GPDMA9_STOP
The counter clock of GPDMA9 is stopped when the core is halted

LL_DBGMCU_AHB1_GRP1_GPDMA10_STOP
The counter clock of GPDMA10 is stopped when the core is halted

LL_DBGMCU_AHB1_GRP1_GPDMA11_STOP
The counter clock of GPDMA11 is stopped when the core is halted

LL_DBGMCU_AHB1_GRP1_GPDMA12_STOP
The counter clock of GPDMA12 is stopped when the core is halted

LL_DBGMCU_AHB1_GRP1_GPDMA13_STOP
The counter clock of GPDMA13 is stopped when the core is halted

LL_DBGMCU_AHB1_GRP1_GPDMA14_STOP
The counter clock of GPDMA14 is stopped when the core is halted

LL_DBGMCU_AHB1_GRP1_GPDMA15_STOP
The counter clock of GPDMA15 is stopped when the core is halted

DBGMCU AHB3 GRP1 STOP IP

LL_DBGMCU_AHB3_GRP1_LPDMA0_STOP
The counter clock of LPDMA0 is stopped when the core is halted

LL_DBGMCU_AHB3_GRP1_LPDMA1_STOP
The counter clock of LPDMA1 is stopped when the core is halted

LL_DBGMCU_AHB3_GRP1_LPDMA2_STOP
The counter clock of LPDMA2 is stopped when the core is halted

LL_DBGMCU_AHB3_GRP1_LPDMA3_STOP

The counter clock of LPDMA3 is stopped when the core is halted

DBGMCU APB1 GRP1 STOP IP

LL_DBGMCU_APB1_GRP1_TIM2_STOP

The counter clock of TIM2 is stopped when the core is halted

LL_DBGMCU_APB1_GRP1_TIM3_STOP

The counter clock of TIM3 is stopped when the core is halted

LL_DBGMCU_APB1_GRP1_TIM4_STOP

The counter clock of TIM4 is stopped when the core is halted

LL_DBGMCU_APB1_GRP1_TIM5_STOP

The counter clock of TIM5 is stopped when the core is halted

LL_DBGMCU_APB1_GRP1_TIM6_STOP

The counter clock of TIM6 is stopped when the core is halted

LL_DBGMCU_APB1_GRP1_TIM7_STOP

The counter clock of TIM7 is stopped when the core is halted

LL_DBGMCU_APB1_GRP1_WWDG_STOP

The window watchdog counter clock is stopped when the core is halted

LL_DBGMCU_APB1_GRP1_IWDG_STOP

The independent watchdog counter clock is stopped when the core is halted

LL_DBGMCU_APB1_GRP1_I2C1_STOP

The I2C1 SMBus timeout is frozen

LL_DBGMCU_APB1_GRP1_I2C2_STOP

The I2C2 SMBus timeout is frozen

DBGMCU APB1 GRP2 STOP IP

LL_DBGMCU_APB1_GRP2_I2C4_STOP

The I2C4 SMBus timeout is frozen

LL_DBGMCU_APB1_GRP2_LPTIM2_STOP

The counter clock of LPTIM2 is stopped when the core is halted

LL_DBGMCU_APB1_GRP2_I2C5_STOP

The I2C5 SMBus timeout is frozen

LL_DBGMCU_APB1_GRP2_I2C6_STOP

The I2C6 SMBus timeout is frozen

DBGMCU APB2 GRP1 STOP IP

LL_DBGMCU_APB2_GRP1_TIM1_STOP

The counter clock of TIM1 is stopped when the core is halted

LL_DBGMCU_APB2_GRP1_TIM8_STOP

The counter clock of TIM8 is stopped when the core is halted

LL_DBGMCU_APB2_GRP1_TIM15_STOP

The counter clock of TIM15 is stopped when the core is halted

LL_DBGMCU_APB2_GRP1_TIM16_STOP

The counter clock of TIM16 is stopped when the core is halted

LL_DBGMCU_APB2_GRP1_TIM17_STOP

The counter clock of TIM17 is stopped when the core is halted

DBGMCU APB3 GRP1 STOP IP

LL_DBGMCU_APB3_GRP1_I2C3_STOP

The counter clock of I2C3 is stopped when the core is halted

LL_DBGMCU_APB3_GRP1_LPTIM1_STOP

The counter clock of LPTIM1 is stopped when the core is halted

LL_DBGMCU_APB3_GRP1_LPTIM3_STOP

The counter clock of LPTIM3 is stopped when the core is halted

LL_DBGMCU_APB3_GRP1_LPTIM4_STOP

The counter clock of LPTIM4 is stopped when the core is halted

LL_DBGMCU_APB3_GRP1_RTC_STOP

The counter clock of RTC is stopped when the core is halted

SYSCFG TIMER BREAK

LL_SYSCFG_TIMBREAK_ECC

Enables and locks the ECC error signal with Break Input of TIM1/8/15/16/17

LL_SYSCFG_TIMBREAK_PVD

Enables and locks the PVD connection with TIM1/8/15/16/17 Break Input and also the PVDE and PLS bits of the Power Control Interface

LL_SYSCFG_TIMBREAK_SRAM_ECC_LOCK

Enables and locks the SRAM ECC double error signal with Break Input of TIM1/8/15/16/17

LL_SYSCFG_TIMBREAK_LOCKUP

Enables and locks the LOCKUP output of CortexM33 with Break Input of TIM1/15/16/17

DBGMCU TRACE Pin Assignment

LL_DBGMCU_TRACE_NONE

TRACE pins not assigned (default state)

LL_DBGMCU_TRACE_ASYNCH

TRACE pin assignment for Asynchronous Mode

LL_DBGMCU_TRACE_SYNCH_SIZE1

TRACE pin assignment for Synchronous Mode with a TRACEDATA size of 1

LL_DBGMCU_TRACE_SYNCH_SIZE2

TRACE pin assignment for Synchronous Mode with a TRACEDATA size of 2

LL_DBGMCU_TRACE_SYNCH_SIZE4

TRACE pin assignment for Synchronous Mode with a TRACEDATA size of 4

VREFBUF VOLTAGE

LL_VREFBUF_VOLTAGE_SCALE0

Voltage reference scale 0 (VREF_OUT1)

LL_VREFBUF_VOLTAGE_SCALE1

Voltage reference scale 1 (VREF_OUT2)

LL_VREFBUF_VOLTAGE_SCALE2

Voltage reference scale 0 (VREF_OUT3)

LL_VREFBUF_VOLTAGE_SCALE3

Voltage reference scale 1 (VREF_OUT4)

119 LL TIM Generic Driver

119.1 TIM Firmware driver registers structures

119.1.1 LL_TIM_InitTypeDef

LL_TIM_InitTypeDef is defined in the stm32u5xx_ll_tim.h

Data Fields

- ***uint16_t Prescaler***
- ***uint32_t CounterMode***
- ***uint32_t Autoreload***
- ***uint32_t ClockDivision***
- ***uint32_t RepetitionCounter***

Field Documentation

- ***uint16_t LL_TIM_InitTypeDef::Prescaler***
  Specifies the prescaler value used to divide the TIM clock. This parameter can be a number between Min_Data=0x0000 and Max_Data=0xFFFF.This feature can be modified afterwards using unitary function **LL_TIM_SetPrescaler()**.
- ***uint32_t LL_TIM_InitTypeDef::CounterMode***
  Specifies the counter mode. This parameter can be a value of ***TIM_LL_EC_COUNTERMODE***.This feature can be modified afterwards using unitary function **LL_TIM_SetCounterMode()**.
- ***uint32_t LL_TIM_InitTypeDef::Autoreload***
  Specifies the auto reload value to be loaded into the active Auto-Reload Register at the next update event. This parameter must be a number between Min_Data=0x0000 and Max_Data=0xFFFF. Some timer instances may support 32 bits counters. In that case this parameter must be a number between 0x0000 and 0xFFFFFFFF.This feature can be modified afterwards using unitary function **LL_TIM_SetAutoReload()**.
- ***uint32_t LL_TIM_InitTypeDef::ClockDivision***
  Specifies the clock division. This parameter can be a value of ***TIM_LL_EC_CLOCKDIVISION***.This feature can be modified afterwards using unitary function **LL_TIM_SetClockDivision()**.
- ***uint32_t LL_TIM_InitTypeDef::RepetitionCounter***
  Specifies the repetition counter value. Each time the RCR downcounter reaches zero, an update event is generated and counting restarts from the RCR value (N). This means in PWM mode that (N+1) corresponds to:
  - the number of PWM periods in edge-aligned mode
  - the number of half PWM period in center-aligned mode GP timers: this parameter must be a number between Min_Data = 0x00 and Max_Data = 0xFF. Advanced timers: this parameter must be a number between Min_Data = 0x0000 and Max_Data = 0xFFFF.

  This feature can be modified afterwards using unitary function **LL_TIM_SetRepetitionCounter()**.

119.1.2 LL_TIM_OC_InitTypeDef

LL_TIM_OC_InitTypeDef is defined in the stm32u5xx_ll_tim.h

Data Fields

- ***uint32_t OCMode***
- ***uint32_t OCState***
- ***uint32_t OCNState***
- ***uint32_t CompareValue***
- ***uint32_t OCPolarity***
- ***uint32_t OCNPolarity***
- ***uint32_t OCIdleState***
- ***uint32_t OCNIdleState***

Field Documentation

- ***uint32_t LL_TIM_OC_InitTypeDef::OCMode***
  Specifies the output mode. This parameter can be a value of ***TIM_LL_EC_OCMODE***.This feature can be modified afterwards using unitary function **LL_TIM_OC_SetMode()**.
- ***uint32_t LL_TIM_OC_InitTypeDef::OCState***
  Specifies the TIM Output Compare state. This parameter can be a value of ***TIM_LL_EC_OCSTATE***.This feature can be modified afterwards using unitary functions **LL_TIM_CC_EnableChannel()** or **LL_TIM_CC_DisableChannel()**.
- ***uint32_t LL_TIM_OC_InitTypeDef::OCNState***
  Specifies the TIM complementary Output Compare state. This parameter can be a value of ***TIM_LL_EC_OCSTATE***.This feature can be modified afterwards using unitary functions **LL_TIM_CC_EnableChannel()** or **LL_TIM_CC_DisableChannel()**.
- ***uint32_t LL_TIM_OC_InitTypeDef::CompareValue***
  Specifies the Compare value to be loaded into the Capture Compare Register. This parameter can be a number between Min_Data=0x0000 and Max_Data=0xFFFF.This feature can be modified afterwards using unitary function LL_TIM_OC_SetCompareCHx (x=1..6).
- ***uint32_t LL_TIM_OC_InitTypeDef::OCPolarity***
  Specifies the output polarity. This parameter can be a value of ***TIM_LL_EC_OCPOLARITY***.This feature can be modified afterwards using unitary function **LL_TIM_OC_SetPolarity()**.
- ***uint32_t LL_TIM_OC_InitTypeDef::OCNPolarity***
  Specifies the complementary output polarity. This parameter can be a value of ***TIM_LL_EC_OCPOLARITY***.This feature can be modified afterwards using unitary function **LL_TIM_OC_SetPolarity()**.
- ***uint32_t LL_TIM_OC_InitTypeDef::OCIdleState***
  Specifies the TIM Output Compare pin state during Idle state. This parameter can be a value of ***TIM_LL_EC_OCIDLESTATE***.This feature can be modified afterwards using unitary function **LL_TIM_OC_SetIdleState()**.
- ***uint32_t LL_TIM_OC_InitTypeDef::OCNIdleState***
  Specifies the TIM Output Compare pin state during Idle state. This parameter can be a value of ***TIM_LL_EC_OCIDLESTATE***.This feature can be modified afterwards using unitary function **LL_TIM_OC_SetIdleState()**.

119.1.3 LL_TIM_IC_InitTypeDef

LL_TIM_IC_InitTypeDef is defined in the stm32u5xx_ll_tim.h

Data Fields

- ***uint32_t ICPolarity***
- ***uint32_t ICActiveInput***
- ***uint32_t ICPrescaler***
- ***uint32_t ICFilter***

Field Documentation

- ***uint32_t LL_TIM_IC_InitTypeDef::ICPolarity***
  Specifies the active edge of the input signal. This parameter can be a value of ***TIM_LL_EC_IC_POLARITY***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetPolarity()**.
- ***uint32_t LL_TIM_IC_InitTypeDef::ICActiveInput***
  Specifies the input. This parameter can be a value of ***TIM_LL_EC_ACTIVEINPUT***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetActiveInput()**.
- ***uint32_t LL_TIM_IC_InitTypeDef::ICPrescaler***
  Specifies the Input Capture Prescaler. This parameter can be a value of ***TIM_LL_EC_ICPSC***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetPrescaler()**.
- ***uint32_t LL_TIM_IC_InitTypeDef::ICFilter***
  Specifies the input capture filter. This parameter can be a value of ***TIM_LL_EC_IC_FILTER***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetFilter()**.

119.1.4 LL_TIM_ENCODER_InitTypeDef

LL_TIM_ENCODER_InitTypeDef is defined in the stm32u5xx_ll_tim.h

Data Fields

- ***uint32_t EncoderMode***
- ***uint32_t IC1Polarity***
- ***uint32_t IC1ActiveInput***
- ***uint32_t IC1Prescaler***
- ***uint32_t IC1Filter***
- ***uint32_t IC2Polarity***
- ***uint32_t IC2ActiveInput***
- ***uint32_t IC2Prescaler***
- ***uint32_t IC2Filter***

Field Documentation

- ***uint32_t LL_TIM_ENCODER_InitTypeDef::EncoderMode***
  Specifies the encoder resolution (x2 or x4). This parameter can be a value of *TIM_LL_EC_ENCODERMODE*.This feature can be modified afterwards using unitary function **LL_TIM_SetEncoderMode()**.
- ***uint32_t LL_TIM_ENCODER_InitTypeDef::IC1Polarity***
  Specifies the active edge of TI1 input. This parameter can be a value of *TIM_LL_EC_IC_POLARITY*.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetPolarity()**.
- ***uint32_t LL_TIM_ENCODER_InitTypeDef::IC1ActiveInput***
  Specifies the TI1 input source This parameter can be a value of *TIM_LL_EC_ACTIVEINPUT*.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetActiveInput()**.
- ***uint32_t LL_TIM_ENCODER_InitTypeDef::IC1Prescaler***
  Specifies the TI1 input prescaler value. This parameter can be a value of *TIM_LL_EC_ICPSC*.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetPrescaler()**.
- ***uint32_t LL_TIM_ENCODER_InitTypeDef::IC1Filter***
  Specifies the TI1 input filter. This parameter can be a value of *TIM_LL_EC_IC_FILTER*.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetFilter()**.
- ***uint32_t LL_TIM_ENCODER_InitTypeDef::IC2Polarity***
  Specifies the active edge of TI2 input. This parameter can be a value of *TIM_LL_EC_IC_POLARITY*.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetPolarity()**.
- ***uint32_t LL_TIM_ENCODER_InitTypeDef::IC2ActiveInput***
  Specifies the TI2 input source This parameter can be a value of *TIM_LL_EC_ACTIVEINPUT*.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetActiveInput()**.
- ***uint32_t LL_TIM_ENCODER_InitTypeDef::IC2Prescaler***
  Specifies the TI2 input prescaler value. This parameter can be a value of *TIM_LL_EC_ICPSC*.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetPrescaler()**.
- ***uint32_t LL_TIM_ENCODER_InitTypeDef::IC2Filter***
  Specifies the TI2 input filter. This parameter can be a value of *TIM_LL_EC_IC_FILTER*.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetFilter()**.

119.1.5 LL_TIM_HALLSENSOR_InitTypeDef

LL_TIM_HALLSENSOR_InitTypeDef is defined in the stm32u5xx_ll_tim.h

Data Fields

- ***uint32_t IC1Polarity***
- ***uint32_t IC1Prescaler***
- ***uint32_t IC1Filter***
- ***uint32_t CommutationDelay***

Field Documentation

- ***uint32_t LL_TIM_HALLSENSOR_InitTypeDef::IC1Polarity***
  Specifies the active edge of TI1 input. This parameter can be a value of *TIM_LL_EC_IC_POLARITY*.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetPolarity()**.
- ***uint32_t LL_TIM_HALLSENSOR_InitTypeDef::IC1Prescaler***
  Specifies the TI1 input prescaler value. Prescaler must be set to get a maximum counter period longer than the time interval between 2 consecutive changes on the Hall inputs. This parameter can be a value of *TIM_LL_EC_ICPSC*.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetPrescaler()**.

- ***uint32_t LL_TIM_HALLSENSOR_InitTypeDef::IC1Filter***
  Specifies the TI1 input filter. This parameter can be a value of *TIM_LL_EC_IC_FILTER*.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetFilter()**.
- ***uint32_t LL_TIM_HALLSENSOR_InitTypeDef::CommutationDelay***
  Specifies the compare value to be loaded into the Capture Compare Register. A positive pulse (TRGO event) is generated with a programmable delay every time a change occurs on the Hall inputs. This parameter can be a number between Min_Data = 0x0000 and Max_Data = 0xFFFF.This feature can be modified afterwards using unitary function **LL_TIM_OC_SetCompareCH2()**.

119.1.6 LL_TIM_BDTR_InitTypeDef

LL_TIM_BDTR_InitTypeDef is defined in the stm32u5xx_ll_tim.h

Data Fields

- ***uint32_t OSSRState***
- ***uint32_t OSSIState***
- ***uint32_t LockLevel***
- ***uint8_t DeadTime***
- ***uint16_t BreakState***
- ***uint32_t BreakPolarity***
- ***uint32_t BreakFilter***
- ***uint32_t BreakAFMode***
- ***uint32_t Break2State***
- ***uint32_t Break2Polarity***
- ***uint32_t Break2Filter***
- ***uint32_t Break2AFMode***
- ***uint32_t AutomaticOutput***

Field Documentation

- ***uint32_t LL_TIM_BDTR_InitTypeDef::OSSRState***
  Specifies the Off-State selection used in Run mode. This parameter can be a value of *TIM_LL_EC_OSSR*This feature can be modified afterwards using unitary function **LL_TIM_SetOffStates()**
  Note:
  – This bit-field cannot be modified as long as LOCK level 2 has been programmed.
- ***uint32_t LL_TIM_BDTR_InitTypeDef::OSSIState***
  Specifies the Off-State used in Idle state. This parameter can be a value of *TIM_LL_EC_OSSI*This feature can be modified afterwards using unitary function **LL_TIM_SetOffStates()**
  Note:
  – This bit-field cannot be modified as long as LOCK level 2 has been programmed.
- ***uint32_t LL_TIM_BDTR_InitTypeDef::LockLevel***
  Specifies the LOCK level parameters. This parameter can be a value of *TIM_LL_EC_LOCKLEVEL*
  Note:
  – The LOCK bits can be written only once after the reset. Once the TIMx_BDTR register has been written, their content is frozen until the next reset.
- ***uint8_t LL_TIM_BDTR_InitTypeDef::DeadTime***
  Specifies the delay time between the switching-off and the switching-on of the outputs. This parameter can be a number between Min_Data = 0x00 and Max_Data = 0xFF.This feature can be modified afterwards using unitary function **LL_TIM_OC_SetDeadTime()**
  Note:
  – This bit-field can not be modified as long as LOCK level 1, 2 or 3 has been programmed.
- ***uint16_t LL_TIM_BDTR_InitTypeDef::BreakState***
  Specifies whether the TIM Break input is enabled or not. This parameter can be a value of *TIM_LL_EC_BREAK_ENABLE*This feature can be modified afterwards using unitary functions **LL_TIM_EnableBRK()** or **LL_TIM_DisableBRK()**
  Note:
  – This bit-field can not be modified as long as LOCK level 1 has been programmed.

- ***uint32_t LL_TIM_BDTR_InitTypeDef::BreakPolarity***
  Specifies the TIM Break Input pin polarity. This parameter can be a value of *TIM_LL_EC_BREAK_POLARITY*This feature can be modified afterwards using unitary function **LL_TIM_ConfigBRK()**
  Note:
  – This bit-field can not be modified as long as LOCK level 1 has been programmed.
- ***uint32_t LL_TIM_BDTR_InitTypeDef::BreakFilter***
  Specifies the TIM Break Filter. This parameter can be a value of *TIM_LL_EC_BREAK_FILTER*This feature can be modified afterwards using unitary function **LL_TIM_ConfigBRK()**
  Note:
  – This bit-field can not be modified as long as LOCK level 1 has been programmed.
- ***uint32_t LL_TIM_BDTR_InitTypeDef::BreakAFMode***
  Specifies the alternate function mode of the break input. This parameter can be a value of *TIM_LL_EC_BREAK_AFMODE*This feature can be modified afterwards using unitary functions **LL_TIM_ConfigBRK()**
  Note:
  – Bidirectional break input is only supported by advanced timers instances.
  – This bit-field can not be modified as long as LOCK level 1 has been programmed.
- ***uint32_t LL_TIM_BDTR_InitTypeDef::Break2State***
  Specifies whether the TIM Break2 input is enabled or not. This parameter can be a value of *TIM_LL_EC_BREAK2_ENABLE*This feature can be modified afterwards using unitary functions **LL_TIM_EnableBRK2()** or **LL_TIM_DisableBRK2()**
  Note:
  – This bit-field can not be modified as long as LOCK level 1 has been programmed.
- ***uint32_t LL_TIM_BDTR_InitTypeDef::Break2Polarity***
  Specifies the TIM Break2 Input pin polarity. This parameter can be a value of *TIM_LL_EC_BREAK2_POLARITY*This feature can be modified afterwards using unitary function **LL_TIM_ConfigBRK2()**
  Note:
  – This bit-field can not be modified as long as LOCK level 1 has been programmed.
- ***uint32_t LL_TIM_BDTR_InitTypeDef::Break2Filter***
  Specifies the TIM Break2 Filter. This parameter can be a value of *TIM_LL_EC_BREAK2_FILTER*This feature can be modified afterwards using unitary function **LL_TIM_ConfigBRK2()**
  Note:
  – This bit-field can not be modified as long as LOCK level 1 has been programmed.
- ***uint32_t LL_TIM_BDTR_InitTypeDef::Break2AFMode***
  Specifies the alternate function mode of the break2 input. This parameter can be a value of *TIM_LL_EC_BREAK2_AFMODE*This feature can be modified afterwards using unitary functions **LL_TIM_ConfigBRK2()**
  Note:
  – Bidirectional break input is only supported by advanced timers instances.
  – This bit-field can not be modified as long as LOCK level 1 has been programmed.
- ***uint32_t LL_TIM_BDTR_InitTypeDef::AutomaticOutput***
  Specifies whether the TIM Automatic Output feature is enabled or not. This parameter can be a value of *TIM_LL_EC_AUTOMATICOUTPUT_ENABLE*This feature can be modified afterwards using unitary functions **LL_TIM_EnableAutomaticOutput()** or **LL_TIM_DisableAutomaticOutput()**
  Note:
  – This bit-field can not be modified as long as LOCK level 1 has been programmed.

119.2 TIM Firmware driver API description

The following section lists the various functions of the TIM library.

119.2.1 Detailed description of functions

LL_TIM_EnableCounter

Function name

__STATIC_INLINE void LL_TIM_EnableCounter (TIM_TypeDef * TIMx)

Function description

Enable timer counter.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CEN LL_TIM_EnableCounter

LL_TIM_DisableCounter

Function name

__STATIC_INLINE void LL_TIM_DisableCounter (TIM_TypeDef * TIMx)

Function description

Disable timer counter.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CEN LL_TIM_DisableCounter

LL_TIM_IsEnabledCounter

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledCounter (const TIM_TypeDef * TIMx)

Function description

Indicates whether the timer counter is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 CEN LL_TIM_IsEnabledCounter

LL_TIM_EnableUpdateEvent

Function name

__STATIC_INLINE void LL_TIM_EnableUpdateEvent (TIM_TypeDef * TIMx)

Function description

Enable update event generation.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 UDIS LL_TIM_EnableUpdateEvent

LL_TIM_DisableUpdateEvent

Function name

__STATIC_INLINE void LL_TIM_DisableUpdateEvent (TIM_TypeDef * TIMx)

Function description

Disable update event generation.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 UDIS LL_TIM_DisableUpdateEvent

LL_TIM_IsEnabledUpdateEvent

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledUpdateEvent (const TIM_TypeDef * TIMx)

Function description

Indicates whether update event generation is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **Inverted:** state of bit (0 or 1).

Reference Manual to LL API cross reference:

- CR1 UDIS LL_TIM_IsEnabledUpdateEvent

LL_TIM_SetUpdateSource

Function name

__STATIC_INLINE void LL_TIM_SetUpdateSource (TIM_TypeDef * TIMx, uint32_t UpdateSource)

Function description

Set update event source.

Parameters

- **TIMx:** Timer instance
- **UpdateSource:** This parameter can be one of the following values:
  – LL_TIM_UPDATESOURCE_REGULAR
  – LL_TIM_UPDATESOURCE_COUNTER

Return values

- **None:**

Notes

- Update event source set to LL_TIM_UPDATESOURCE_REGULAR: any of the following events generate an update interrupt or DMA request if enabled: Counter overflow/underflowSetting the UG bitUpdate generation through the slave mode controller
- Update event source set to LL_TIM_UPDATESOURCE_COUNTER: only counter overflow/underflow generates an update interrupt or DMA request if enabled.

Reference Manual to LL API cross reference:

- CR1 URS LL_TIM_SetUpdateSource

LL_TIM_GetUpdateSource

Function name

__STATIC_INLINE uint32_t LL_TIM_GetUpdateSource (const TIM_TypeDef * TIMx)

Function description

Get actual event update source.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  – LL_TIM_UPDATESOURCE_REGULAR
  – LL_TIM_UPDATESOURCE_COUNTER

Reference Manual to LL API cross reference:

- CR1 URS LL_TIM_GetUpdateSource

LL_TIM_SetOnePulseMode

Function name

__STATIC_INLINE void LL_TIM_SetOnePulseMode (TIM_TypeDef * TIMx, uint32_t OnePulseMode)

Function description

Set one pulse mode (one shot v.s.

Parameters

- **TIMx:** Timer instance
- **OnePulseMode:** This parameter can be one of the following values:
  – LL_TIM_ONEPULSEMODE_SINGLE
  – LL_TIM_ONEPULSEMODE_REPETITIVE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 OPM LL_TIM_SetOnePulseMode

LL_TIM_GetOnePulseMode

Function name

__STATIC_INLINE uint32_t LL_TIM_GetOnePulseMode (const TIM_TypeDef * TIMx)

Function description

Get actual one pulse mode.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  – LL_TIM_ONEPULSEMODE_SINGLE
  – LL_TIM_ONEPULSEMODE_REPETITIVE

Reference Manual to LL API cross reference:

- CR1 OPM LL_TIM_GetOnePulseMode

LL_TIM_SetCounterMode

Function name

__STATIC_INLINE void LL_TIM_SetCounterMode (TIM_TypeDef * TIMx, uint32_t CounterMode)

Function description

Set the timer counter counting mode.

Parameters

- **TIMx:** Timer instance
- **CounterMode:** This parameter can be one of the following values:
  – LL_TIM_COUNTERMODE_UP
  – LL_TIM_COUNTERMODE_DOWN
  – LL_TIM_COUNTERMODE_CENTER_UP
  – LL_TIM_COUNTERMODE_CENTER_DOWN
  – LL_TIM_COUNTERMODE_CENTER_UP_DOWN

Return values

- **None:**

Notes

- Macro IS_TIM_COUNTER_MODE_SELECT_INSTANCE(TIMx) can be used to check whether or not the counter mode selection feature is supported by a timer instance.
- Switching from Center Aligned counter mode to Edge counter mode (or reverse) requires a timer reset to avoid unexpected direction due to DIR bit readonly in center aligned mode.

Reference Manual to LL API cross reference:

- CR1 DIR LL_TIM_SetCounterMode
- CR1 CMS LL_TIM_SetCounterMode

LL_TIM_GetCounterMode

Function name

__STATIC_INLINE uint32_t LL_TIM_GetCounterMode (const TIM_TypeDef * TIMx)

Function description

Get actual counter mode.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_COUNTERMODE_UP
  - LL_TIM_COUNTERMODE_DOWN
  - LL_TIM_COUNTERMODE_CENTER_UP
  - LL_TIM_COUNTERMODE_CENTER_DOWN
  - LL_TIM_COUNTERMODE_CENTER_UP_DOWN

Notes

- Macro IS_TIM_COUNTER_MODE_SELECT_INSTANCE(TIMx) can be used to check whether or not the counter mode selection feature is supported by a timer instance.

Reference Manual to LL API cross reference:

- CR1 DIR LL_TIM_GetCounterMode
- CR1 CMS LL_TIM_GetCounterMode

LL_TIM_EnableARRPreload

Function name

__STATIC_INLINE void LL_TIM_EnableARRPreload (TIM_TypeDef * TIMx)

Function description

Enable auto-reload (ARR) preload.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 ARPE LL_TIM_EnableARRPreload

LL_TIM_DisableARRPreload

Function name

__STATIC_INLINE void LL_TIM_DisableARRPreload (TIM_TypeDef * TIMx)

Function description

Disable auto-reload (ARR) preload.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 ARPE LL_TIM_DisableARRPreload

LL_TIM_IsEnabledARRPreload

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledARRPreload (const TIM_TypeDef * TIMx)

Function description

Indicates whether auto-reload (ARR) preload is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 ARPE LL_TIM_IsEnabledARRPreload

LL_TIM_SetClockDivision

Function name

__STATIC_INLINE void LL_TIM_SetClockDivision (TIM_TypeDef * TIMx, uint32_t ClockDivision)

Function description

Set the division ratio between the timer clock and the sampling clock used by the dead-time generators (when supported) and the digital filters.

Parameters

- **TIMx:** Timer instance
- **ClockDivision:** This parameter can be one of the following values:
  - LL_TIM_CLOCKDIVISION_DIV1
  - LL_TIM_CLOCKDIVISION_DIV2
  - LL_TIM_CLOCKDIVISION_DIV4

Return values

- **None:**

Notes

- Macro IS_TIM_CLOCK_DIVISION_INSTANCE(TIMx) can be used to check whether or not the clock division feature is supported by the timer instance.

Reference Manual to LL API cross reference:

- CR1 CKD LL_TIM_SetClockDivision

LL_TIM_GetClockDivision

Function name

__STATIC_INLINE uint32_t LL_TIM_GetClockDivision (const TIM_TypeDef * TIMx)

Function description

Get the actual division ratio between the timer clock and the sampling clock used by the dead-time generators (when supported) and the digital filters.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  – LL_TIM_CLOCKDIVISION_DIV1
  – LL_TIM_CLOCKDIVISION_DIV2
  – LL_TIM_CLOCKDIVISION_DIV4

Notes

- Macro IS_TIM_CLOCK_DIVISION_INSTANCE(TIMx) can be used to check whether or not the clock division feature is supported by the timer instance.

Reference Manual to LL API cross reference:

- CR1 CKD LL_TIM_GetClockDivision

LL_TIM_SetCounter

Function name

__STATIC_INLINE void LL_TIM_SetCounter (TIM_TypeDef * TIMx, uint32_t Counter)

Function description

Set the counter value.

Parameters

- **TIMx:** Timer instance
- **Counter:** Counter value (between Min_Data=0 and Max_Data=0xFFFF or 0xFFFFFFFF)

Return values

- **None:**

Notes

- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- If dithering is activated, pay attention to the Counter value interpretation

Reference Manual to LL API cross reference:

- CNT CNT LL_TIM_SetCounter

LL_TIM_GetCounter

Function name

__STATIC_INLINE uint32_t LL_TIM_GetCounter (const TIM_TypeDef * TIMx)

Function description

Get the counter value.

Parameters

- **TIMx:** Timer instance

Return values

- **Counter:** value (between Min_Data=0 and Max_Data=0xFFFF or 0xFFFFFFFF)

Notes

- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- If dithering is activated, pay attention to the Counter value interpretation

Reference Manual to LL API cross reference:

- CNT CNT LL_TIM_GetCounter

LL_TIM_GetDirection

Function name

__STATIC_INLINE uint32_t LL_TIM_GetDirection (const TIM_TypeDef * TIMx)

Function description

Get the current direction of the counter.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_COUNTERDIRECTION_UP
  - LL_TIM_COUNTERDIRECTION_DOWN

Reference Manual to LL API cross reference:

- CR1 DIR LL_TIM_GetDirection

LL_TIM_SetPrescaler

Function name

__STATIC_INLINE void LL_TIM_SetPrescaler (TIM_TypeDef * TIMx, uint32_t Prescaler)

Function description

Set the prescaler value.

Parameters

- **TIMx:** Timer instance
- **Prescaler:** between Min_Data=0 and Max_Data=65535

Return values

- **None:**

Notes

- The counter clock frequency CK_CNT is equal to fCK_PSC / (PSC[15:0] + 1).
- The prescaler can be changed on the fly as this control register is buffered. The new prescaler ratio is taken into account at the next update event.
- Helper macro __LL_TIM_CALC_PSC can be used to calculate the Prescaler parameter

Reference Manual to LL API cross reference:

- PSC PSC LL_TIM_SetPrescaler

LL_TIM_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_TIM_GetPrescaler (const TIM_TypeDef * TIMx)

Function description

Get the prescaler value.

Parameters

- **TIMx:** Timer instance

Return values

- **Prescaler:** value between Min_Data=0 and Max_Data=65535

Reference Manual to LL API cross reference:

- PSC PSC LL_TIM_GetPrescaler

LL_TIM_SetAutoReload

Function name

__STATIC_INLINE void LL_TIM_SetAutoReload (TIM_TypeDef * TIMx, uint32_t AutoReload)

Function description

Set the auto-reload value.

Parameters

- **TIMx:** Timer instance
- **AutoReload:** between Min_Data=0 and Max_Data=65535

Return values

- **None:**

Notes

- The counter is blocked while the auto-reload value is null.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Helper macro __LL_TIM_CALC_ARR can be used to calculate the AutoReload parameter In case dithering is activated,macro __LL_TIM_CALC_ARR_DITHER can be used instead, to calculate the AutoReload parameter.

Reference Manual to LL API cross reference:

- ARR ARR LL_TIM_SetAutoReload

LL_TIM_GetAutoReload

Function name

__STATIC_INLINE uint32_t LL_TIM_GetAutoReload (const TIM_TypeDef * TIMx)

Function description

Get the auto-reload value.

Parameters

- **TIMx:** Timer instance

Return values

- **Auto-reload:** value

Notes

- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- If dithering is activated, pay attention to the returned value interpretation

Reference Manual to LL API cross reference:

- ARR ARR LL_TIM_GetAutoReload

LL_TIM_SetRepetitionCounter

Function name

__STATIC_INLINE void LL_TIM_SetRepetitionCounter (TIM_TypeDef * TIMx, uint32_t RepetitionCounter)

Function description

Set the repetition counter value.

Parameters

- **TIMx:** Timer instance
- **RepetitionCounter:** between Min_Data=0 and Max_Data=255 or 65535 for advanced timer.

Return values

- **None:**

Notes

- For advanced timer instances RepetitionCounter can be up to 65535.
- Macro IS_TIM_REPETITION_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a repetition counter.

Reference Manual to LL API cross reference:

- RCR REP LL_TIM_SetRepetitionCounter

LL_TIM_GetRepetitionCounter

Function name

__STATIC_INLINE uint32_t LL_TIM_GetRepetitionCounter (const TIM_TypeDef * TIMx)

Function description

Get the repetition counter value.

Parameters

- **TIMx:** Timer instance

Return values

- **Repetition:** counter value

Notes

- Macro IS_TIM_REPETITION_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a repetition counter.

Reference Manual to LL API cross reference:

- RCR REP LL_TIM_GetRepetitionCounter

LL_TIM_EnableUIFRemap

Function name

__STATIC_INLINE void LL_TIM_EnableUIFRemap (TIM_TypeDef * TIMx)

Function description

Force a continuous copy of the update interrupt flag (UIF) into the timer counter register (bit 31).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- This allows both the counter value and a potential roll-over condition signalled by the UIFCPY flag to be read in an atomic way.

Reference Manual to LL API cross reference:

- CR1 UIFREMAP LL_TIM_EnableUIFRemap

LL_TIM_DisableUIFRemap

Function name

__STATIC_INLINE void LL_TIM_DisableUIFRemap (TIM_TypeDef * TIMx)

Function description

Disable update interrupt flag (UIF) remapping.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 UIFREMAP LL_TIM_DisableUIFRemap

LL_TIM_IsActiveUIFCPY

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveUIFCPY (const uint32_t Counter)

Function description

Indicate whether update interrupt flag (UIF) copy is set.

Parameters

- **Counter:** Counter value

Return values

- **State:** of bit (1 or 0).

LL_TIM_EnableDithering

Function name

__STATIC_INLINE void LL_TIM_EnableDithering (TIM_TypeDef * TIMx)

Function description

Enable dithering.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_DITHERING_INSTANCE(TIMx) can be used to check whether or not a timer instance provides dithering.

Reference Manual to LL API cross reference:

- CR1 DITHEN LL_TIM_EnableDithering

LL_TIM_DisableDithering

Function name

__STATIC_INLINE void LL_TIM_DisableDithering (TIM_TypeDef * TIMx)

Function description

Disable dithering.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_DITHERING_INSTANCE(TIMx) can be used to check whether or not a timer instance provides dithering.

Reference Manual to LL API cross reference:

- CR1 DITHEN LL_TIM_DisableDithering

LL_TIM_IsEnabledDithering

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledDithering (const TIM_TypeDef * TIMx)

Function description

Indicates whether dithering is activated.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_DITHERING_INSTANCE(TIMx) can be used to check whether or not a timer instance provides dithering.

Reference Manual to LL API cross reference:

- CR1 DITHEN LL_TIM_IsEnabledDithering

LL_TIM_CC_EnablePreload

Function name

__STATIC_INLINE void LL_TIM_CC_EnablePreload (TIM_TypeDef * TIMx)

Function description

Enable the capture/compare control bits (CCxE, CCxNE and OCxM) preload.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- CCxE, CCxNE and OCxM bits are preloaded, after having been written, they are updated only when a commutation event (COM) occurs.
- Only on channels that have a complementary output.
- Macro IS_TIM_COMMUTATION_EVENT_INSTANCE(TIMx) can be used to check whether or not a timer instance is able to generate a commutation event.

Reference Manual to LL API cross reference:

- CR2 CCPC LL_TIM_CC_EnablePreload

LL_TIM_CC_DisablePreload

Function name

__STATIC_INLINE void LL_TIM_CC_DisablePreload (TIM_TypeDef * TIMx)

Function description

Disable the capture/compare control bits (CCxE, CCxNE and OCxM) preload.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_COMMUTATION_EVENT_INSTANCE(TIMx) can be used to check whether or not a timer instance is able to generate a commutation event.

Reference Manual to LL API cross reference:

- CR2 CCPC LL_TIM_CC_DisablePreload

LL_TIM_CC_IsEnabledPreload

Function name

__STATIC_INLINE uint32_t LL_TIM_CC_IsEnabledPreload (TIM_TypeDef * TIMx)

Function description

Indicates whether the capture/compare control bits (CCxE, CCxNE and OCxM) preload is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR2 CCPC LL_TIM_CC_IsEnabledPreload

LL_TIM_CC_SetUpdate

Function name

__STATIC_INLINE void LL_TIM_CC_SetUpdate (TIM_TypeDef * TIMx, uint32_t CCUpdateSource)

Function description

Set the updated source of the capture/compare control bits (CCxE, CCxNE and OCxM).

Parameters

- **TIMx:** Timer instance
- **CCUpdateSource:** This parameter can be one of the following values:
  - LL_TIM_CCUPDATESOURCE_COMG_ONLY
  - LL_TIM_CCUPDATESOURCE_COMG_AND_TRGI

Return values

- **None:**

Notes

- Macro IS_TIM_COMMUTATION_EVENT_INSTANCE(TIMx) can be used to check whether or not a timer instance is able to generate a commutation event.

Reference Manual to LL API cross reference:

- CR2 CCUS LL_TIM_CC_SetUpdate

LL_TIM_CC_SetDMAReqTrigger

Function name

__STATIC_INLINE void LL_TIM_CC_SetDMAReqTrigger (TIM_TypeDef * TIMx, uint32_t DMAReqTrigger)

Function description

Set the trigger of the capture/compare DMA request.

Parameters

- **TIMx:** Timer instance
- **DMAReqTrigger:** This parameter can be one of the following values:
  - LL_TIM_CCDMAREQUEST_CC
  - LL_TIM_CCDMAREQUEST_UPDATE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 CCDS LL_TIM_CC_SetDMAReqTrigger

LL_TIM_CC_GetDMAReqTrigger

Function name

__STATIC_INLINE uint32_t LL_TIM_CC_GetDMAReqTrigger (const TIM_TypeDef * TIMx)

Function description

Get actual trigger of the capture/compare DMA request.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_CCDMAREQUEST_CC
  - LL_TIM_CCDMAREQUEST_UPDATE

Reference Manual to LL API cross reference:

- CR2 CCDS LL_TIM_CC_GetDMAReqTrigger

LL_TIM_CC_SetLockLevel

Function name

__STATIC_INLINE void LL_TIM_CC_SetLockLevel (TIM_TypeDef * TIMx, uint32_t LockLevel)

Function description

Set the lock level to freeze the configuration of several capture/compare parameters.

Parameters

- **TIMx:** Timer instance
- **LockLevel:** This parameter can be one of the following values:
  – LL_TIM_LOCKLEVEL_OFF
  – LL_TIM_LOCKLEVEL_1
  – LL_TIM_LOCKLEVEL_2
  – LL_TIM_LOCKLEVEL_3

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not the lock mechanism is supported by a timer instance.

Reference Manual to LL API cross reference:

- BDTR LOCK LL_TIM_CC_SetLockLevel

LL_TIM_CC_EnableChannel

Function name

__STATIC_INLINE void LL_TIM_CC_EnableChannel (TIM_TypeDef * TIMx, uint32_t Channels)

Function description

Enable capture/compare channels.

Parameters

- **TIMx:** Timer instance
- **Channels:** This parameter can be a combination of the following values:
  – LL_TIM_CHANNEL_CH1
  – LL_TIM_CHANNEL_CH1N
  – LL_TIM_CHANNEL_CH2
  – LL_TIM_CHANNEL_CH2N
  – LL_TIM_CHANNEL_CH3
  – LL_TIM_CHANNEL_CH3N
  – LL_TIM_CHANNEL_CH4
  – LL_TIM_CHANNEL_CH4N
  – LL_TIM_CHANNEL_CH5
  – LL_TIM_CHANNEL_CH6

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCER CC1E LL_TIM_CC_EnableChannel
- CCER CC1NE LL_TIM_CC_EnableChannel
- CCER CC2E LL_TIM_CC_EnableChannel
- CCER CC2NE LL_TIM_CC_EnableChannel
- CCER CC3E LL_TIM_CC_EnableChannel
- CCER CC3NE LL_TIM_CC_EnableChannel
- CCER CC4E LL_TIM_CC_EnableChannel
- CCER CC4NE LL_TIM_CC_EnableChannel
- CCER CC5E LL_TIM_CC_EnableChannel
- CCER CC6E LL_TIM_CC_EnableChannel

LL_TIM_CC_DisableChannel

Function name

__STATIC_INLINE void LL_TIM_CC_DisableChannel (TIM_TypeDef * TIMx, uint32_t Channels)

Function description

Disable capture/compare channels.

Parameters

- **TIMx:** Timer instance
- **Channels:** This parameter can be a combination of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH1N
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH2N
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH3N
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH4N
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCER CC1E LL_TIM_CC_DisableChannel
- CCER CC1NE LL_TIM_CC_DisableChannel
- CCER CC2E LL_TIM_CC_DisableChannel
- CCER CC2NE LL_TIM_CC_DisableChannel
- CCER CC3E LL_TIM_CC_DisableChannel
- CCER CC3NE LL_TIM_CC_DisableChannel
- CCER CC4E LL_TIM_CC_DisableChannel
- CCER CC4NE LL_TIM_CC_DisableChannel
- CCER CC5E LL_TIM_CC_DisableChannel
- CCER CC6E LL_TIM_CC_DisableChannel

LL_TIM_CC_IsEnabledChannel

Function name

__STATIC_INLINE uint32_t LL_TIM_CC_IsEnabledChannel (const TIM_TypeDef * TIMx, uint32_t Channels)

Function description

Indicate whether channel(s) is(are) enabled.

Parameters

- **TIMx:** Timer instance
- **Channels:** This parameter can be a combination of the following values:
  – LL_TIM_CHANNEL_CH1
  – LL_TIM_CHANNEL_CH1N
  – LL_TIM_CHANNEL_CH2
  – LL_TIM_CHANNEL_CH2N
  – LL_TIM_CHANNEL_CH3
  – LL_TIM_CHANNEL_CH3N
  – LL_TIM_CHANNEL_CH4
  – LL_TIM_CHANNEL_CH4N
  – LL_TIM_CHANNEL_CH5
  – LL_TIM_CHANNEL_CH6

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CCER CC1E LL_TIM_CC_IsEnabledChannel
- CCER CC1NE LL_TIM_CC_IsEnabledChannel
- CCER CC2E LL_TIM_CC_IsEnabledChannel
- CCER CC2NE LL_TIM_CC_IsEnabledChannel
- CCER CC3E LL_TIM_CC_IsEnabledChannel
- CCER CC3NE LL_TIM_CC_IsEnabledChannel
- CCER CC4E LL_TIM_CC_IsEnabledChannel
- CCER CC4NE LL_TIM_CC_IsEnabledChannel
- CCER CC5E LL_TIM_CC_IsEnabledChannel
- CCER CC6E LL_TIM_CC_IsEnabledChannel

LL_TIM_OC_ConfigOutput

Function name

__STATIC_INLINE void LL_TIM_OC_ConfigOutput (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t Configuration)

Function description

Configure an output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6
- **Configuration:** This parameter must be a combination of all the following values:
  - LL_TIM_OCPOLARITY_HIGH or LL_TIM_OCPOLARITY_LOW
  - LL_TIM_OCIDLESTATE_LOW or LL_TIM_OCIDLESTATE_HIGH

Return values

- **None:**

LL_TIM_OC_SetMode

Function name

__STATIC_INLINE void LL_TIM_OC_SetMode (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t Mode)

Function description

Define the behavior of the output reference signal OCxREF from which OCx and OCxN (when relevant) are derived.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6
- **Mode:** This parameter can be one of the following values:
  - LL_TIM_OCMODE_FROZEN
  - LL_TIM_OCMODE_ACTIVE
  - LL_TIM_OCMODE_INACTIVE
  - LL_TIM_OCMODE_TOGGLE
  - LL_TIM_OCMODE_FORCED_INACTIVE
  - LL_TIM_OCMODE_FORCED_ACTIVE
  - LL_TIM_OCMODE_PWM1
  - LL_TIM_OCMODE_PWM2
  - LL_TIM_OCMODE_RETRIG_OPM1
  - LL_TIM_OCMODE_RETRIG_OPM2
  - LL_TIM_OCMODE_COMBINED_PWM1
  - LL_TIM_OCMODE_COMBINED_PWM2
  - LL_TIM_OCMODE_ASYMMETRIC_PWM1
  - LL_TIM_OCMODE_ASYMMETRIC_PWM2
  - LL_TIM_OCMODE_PULSE_ON_COMPARE (for channel 3 or channel 4 only)
  - LL_TIM_OCMODE_DIRECTION_OUTPUT (for channel 3 or channel 4 only)

Return values

- **None:**

LL_TIM_OC_GetMode

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_GetMode (const TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Get the output compare mode of an output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  – LL_TIM_CHANNEL_CH1
  – LL_TIM_CHANNEL_CH2
  – LL_TIM_CHANNEL_CH3
  – LL_TIM_CHANNEL_CH4
  – LL_TIM_CHANNEL_CH5
  – LL_TIM_CHANNEL_CH6

Return values

- **Returned:** value can be one of the following values:
  – LL_TIM_OCMODE_FROZEN
  – LL_TIM_OCMODE_ACTIVE
  – LL_TIM_OCMODE_INACTIVE
  – LL_TIM_OCMODE_TOGGLE
  – LL_TIM_OCMODE_FORCED_INACTIVE
  – LL_TIM_OCMODE_FORCED_ACTIVE
  – LL_TIM_OCMODE_PWM1
  – LL_TIM_OCMODE_PWM2
  – LL_TIM_OCMODE_RETRIG_OPM1

LL_TIM_OC_SetPolarity

Function name

__STATIC_INLINE void LL_TIM_OC_SetPolarity (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t Polarity)

Function description

Set the polarity of an output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  – LL_TIM_CHANNEL_CH1
  – LL_TIM_CHANNEL_CH1N
  – LL_TIM_CHANNEL_CH2
  – LL_TIM_CHANNEL_CH2N
  – LL_TIM_CHANNEL_CH3
  – LL_TIM_CHANNEL_CH3N
  – LL_TIM_CHANNEL_CH4
  – LL_TIM_CHANNEL_CH4N
  – LL_TIM_CHANNEL_CH5
  – LL_TIM_CHANNEL_CH6
- **Polarity:** This parameter can be one of the following values:
  – LL_TIM_OCPOLARITY_HIGH
  – LL_TIM_OCPOLARITY_LOW

Return values

- **None:**

Reference Manual to LL API cross reference:

LL_TIM_OC_GetPolarity

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_GetPolarity (const TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Get the polarity of an output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH1N
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH2N
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH3N
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH4N
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_OCPOLARITY_HIGH
  - LL_TIM_OCPOLARITY_LOW

Reference Manual to LL API cross reference:

- CCER CC1P LL_TIM_OC_GetPolarity

LL_TIM_OC_SetIdleState

Function name

__STATIC_INLINE void LL_TIM_OC_SetIdleState (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t IdleState)

Function description

Set the IDLE state of an output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  – LL_TIM_CHANNEL_CH1
  – LL_TIM_CHANNEL_CH1N
  – LL_TIM_CHANNEL_CH2
  – LL_TIM_CHANNEL_CH2N
  – LL_TIM_CHANNEL_CH3
  – LL_TIM_CHANNEL_CH3N
  – LL_TIM_CHANNEL_CH4
  – LL_TIM_CHANNEL_CH4N
  – LL_TIM_CHANNEL_CH5
  – LL_TIM_CHANNEL_CH6
- **IdleState:** This parameter can be one of the following values:
  – LL_TIM_OCIDLESTATE_LOW
  – LL_TIM_OCIDLESTATE_HIGH

Return values

- **None:**

Notes

- This function is significant only for the timer instances supporting the break feature. Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- CR2 OIS6 LL_TIM_OC_SetIdleState

LL_TIM_OC_GetIdleState

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_GetIdleState (const TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Get the IDLE state of an output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  – LL_TIM_CHANNEL_CH1
  – LL_TIM_CHANNEL_CH1N
  – LL_TIM_CHANNEL_CH2
  – LL_TIM_CHANNEL_CH2N
  – LL_TIM_CHANNEL_CH3
  – LL_TIM_CHANNEL_CH3N
  – LL_TIM_CHANNEL_CH4
  – LL_TIM_CHANNEL_CH4N
  – LL_TIM_CHANNEL_CH5
  – LL_TIM_CHANNEL_CH6

Return values

- **Returned:** value can be one of the following values:
  – LL_TIM_OCIDLESTATE_LOW
  – LL_TIM_OCIDLESTATE_HIGH

Reference Manual to LL API cross reference:

- CR2 OIS1 LL_TIM_OC_GetIdleState

- CR2 OIS6 LL_TIM_OC_GetIdleState

LL_TIM_OC_EnableFast

Function name

__STATIC_INLINE void LL_TIM_OC_EnableFast (TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Enable fast mode for the output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  – LL_TIM_CHANNEL_CH1
  – LL_TIM_CHANNEL_CH2
  – LL_TIM_CHANNEL_CH3
  – LL_TIM_CHANNEL_CH4
  – LL_TIM_CHANNEL_CH5
  – LL_TIM_CHANNEL_CH6

Return values

- **None:**

Notes

- Acts only if the channel is configured in PWM1 or PWM2 mode.

Reference Manual to LL API cross reference:

- CCMR1 OC1FE LL_TIM_OC_EnableFast
- CCMR1 OC2FE LL_TIM_OC_EnableFast
- CCMR2 OC3FE LL_TIM_OC_EnableFast

- CCMR3 OC6FE LL_TIM_OC_EnableFast

LL_TIM_OC_DisableFast

Function name

__STATIC_INLINE void LL_TIM_OC_DisableFast (TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Disable fast mode for the output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCMR3 OC5FE LL_TIM_OC_DisableFast
- CCMR3 OC6FE LL_TIM_OC_DisableFast

LL_TIM_OC_IsEnabledFast

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_IsEnabledFast (const TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Indicates whether fast mode is enabled for the output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  – LL_TIM_CHANNEL_CH1
  – LL_TIM_CHANNEL_CH2
  – LL_TIM_CHANNEL_CH3
  – LL_TIM_CHANNEL_CH4
  – LL_TIM_CHANNEL_CH5
  – LL_TIM_CHANNEL_CH6

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CCMR3 OC5FE LL_TIM_OC_IsEnabledFast
- CCMR3 OC6FE LL_TIM_OC_IsEnabledFast

LL_TIM_OC_EnablePreload

Function name

__STATIC_INLINE void LL_TIM_OC_EnablePreload (TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Enable compare register (TIMx_CCRx) preload for the output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  – LL_TIM_CHANNEL_CH1
  – LL_TIM_CHANNEL_CH2
  – LL_TIM_CHANNEL_CH3
  – LL_TIM_CHANNEL_CH4
  – LL_TIM_CHANNEL_CH5
  – LL_TIM_CHANNEL_CH6

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCMR1 OC1PE LL_TIM_OC_EnablePreload
- CCMR1 OC2PE LL_TIM_OC_EnablePreload
- CCMR2 OC3PE LL_TIM_OC_EnablePreload

- CCMR3 OC5PE LL_TIM_OC_EnablePreload
- CCMR3 OC6PE LL_TIM_OC_EnablePreload

LL_TIM_OC_DisablePreload

Function name

__STATIC_INLINE void LL_TIM_OC_DisablePreload (TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Disable compare register (TIMx_CCRx) preload for the output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCMR1 OC1PE LL_TIM_OC_DisablePreload
- CCMR1 OC2PE LL_TIM_OC_DisablePreload
- CCMR2 OC3PE LL_TIM_OC_DisablePreload

- CCMR3 OC5PE LL_TIM_OC_DisablePreload
- CCMR3 OC6PE LL_TIM_OC_DisablePreload

LL_TIM_OC_IsEnabledPreload

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_IsEnabledPreload (const TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Indicates whether compare register (TIMx_CCRx) preload is enabled for the output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CCMR3 OC5PE LL_TIM_OC_IsEnabledPreload
- CCMR3 OC6PE LL_TIM_OC_IsEnabledPreload

LL_TIM_OC_EnableClear

Function name

__STATIC_INLINE void LL_TIM_OC_EnableClear (TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Enable clearing the output channel on an external event.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **None:**

Notes

- This function can only be used in Output compare and PWM modes. It does not work in Forced mode.
- Macro IS_TIM_OCXREF_CLEAR_INSTANCE(TIMx) can be used to check whether or not a timer instance can clear the OCxREF signal on an external event.

Reference Manual to LL API cross reference:

- CCMR1 OC1CE LL_TIM_OC_EnableClear
- CCMR1 OC2CE LL_TIM_OC_EnableClear
- CCMR2 OC3CE LL_TIM_OC_EnableClear
- CCMR2 OC4CE LL_TIM_OC_EnableClear
- CCMR3 OC5CE LL_TIM_OC_EnableClear
- CCMR3 OC6CE LL_TIM_OC_EnableClear

LL_TIM_OC_DisableClear

Function name

__STATIC_INLINE void LL_TIM_OC_DisableClear (TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Disable clearing the output channel on an external event.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **None:**

Notes

- Macro IS_TIM_OCXREF_CLEAR_INSTANCE(TIMx) can be used to check whether or not a timer instance can clear the OCxREF signal on an external event.

Reference Manual to LL API cross reference:

- CCMR1 OC1CE LL_TIM_OC_DisableClear
- CCMR1 OC2CE LL_TIM_OC_DisableClear
- CCMR2 OC3CE LL_TIM_OC_DisableClear
- CCMR2 OC4CE LL_TIM_OC_DisableClear
- CCMR3 OC5CE LL_TIM_OC_DisableClear
- CCMR3 OC6CE LL_TIM_OC_DisableClear

LL_TIM_OC_IsEnabledClear

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_IsEnabledClear (const TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Indicates clearing the output channel on an external event is enabled for the output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **State:** of bit (1 or 0).

Notes

- This function enables clearing the output channel on an external event.
- This function can only be used in Output compare and PWM modes. It does not work in Forced mode.
- Macro IS_TIM_OCXREF_CLEAR_INSTANCE(TIMx) can be used to check whether or not a timer instance can clear the OCxREF signal on an external event.

- CCMR2 OC4CE LL_TIM_OC_IsEnabledClear
- CCMR3 OC5CE LL_TIM_OC_IsEnabledClear
- CCMR3 OC6CE LL_TIM_OC_IsEnabledClear

LL_TIM_OC_SetDeadTime

Function name

__STATIC_INLINE void LL_TIM_OC_SetDeadTime (TIM_TypeDef * TIMx, uint32_t DeadTime)

Function description

Set the dead-time delay (delay inserted between the rising edge of the OCxREF signal and the rising edge of the Ocx and OCxN signals).

Parameters

- **TIMx:** Timer instance
- **DeadTime:** between Min_Data=0 and Max_Data=255

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not dead-time insertion feature is supported by a timer instance.
- Helper macro __LL_TIM_CALC_DEADTIME can be used to calculate the DeadTime parameter

Reference Manual to LL API cross reference:

- BDTR DTG LL_TIM_OC_SetDeadTime

LL_TIM_OC_SetCompareCH1

Function name

__STATIC_INLINE void LL_TIM_OC_SetCompareCH1 (TIM_TypeDef * TIMx, uint32_t CompareValue)

Function description

Set compare value for output channel 1 (TIMx_CCR1).

Parameters

- **TIMx:** Timer instance
- **CompareValue:** between Min_Data=0 and Max_Data=65535

Return values

- **None:**

Notes

- In 32-bit timer implementations compare value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC1_INSTANCE(TIMx) can be used to check whether or not output channel 1 is supported by a timer instance.
- If dithering is activated, CompareValue can be calculated with macro __LL_TIM_CALC_DELAY_DITHER .

Reference Manual to LL API cross reference:

- CCR1 CCR1 LL_TIM_OC_SetCompareCH1

LL_TIM_OC_SetCompareCH2

Function name

__STATIC_INLINE void LL_TIM_OC_SetCompareCH2 (TIM_TypeDef * TIMx, uint32_t CompareValue)

Function description

Set compare value for output channel 2 (TIMx_CCR2).

Parameters

- **TIMx:** Timer instance
- **CompareValue:** between Min_Data=0 and Max_Data=65535

Return values

- **None:**

Notes

- In 32-bit timer implementations compare value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC2_INSTANCE(TIMx) can be used to check whether or not output channel 2 is supported by a timer instance.
- If dithering is activated, CompareValue can be calculated with macro __LL_TIM_CALC_DELAY_DITHER .

Reference Manual to LL API cross reference:

- CCR2 CCR2 LL_TIM_OC_SetCompareCH2

LL_TIM_OC_SetCompareCH3

Function name

__STATIC_INLINE void LL_TIM_OC_SetCompareCH3 (TIM_TypeDef * TIMx, uint32_t CompareValue)

Function description

Set compare value for output channel 3 (TIMx_CCR3).

Parameters

- **TIMx:** Timer instance
- **CompareValue:** between Min_Data=0 and Max_Data=65535

Return values

- **None:**

Notes

- In 32-bit timer implementations compare value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC3_INSTANCE(TIMx) can be used to check whether or not output channel is supported by a timer instance.
- If dithering is activated, CompareValue can be calculated with macro __LL_TIM_CALC_DELAY_DITHER .

Function description

Set compare value for output channel 4 (TIMx_CCR4).

Parameters

- **TIMx:** Timer instance
- **CompareValue:** between Min_Data=0 and Max_Data=65535

Return values

- **None:**

Notes

- In 32-bit timer implementations compare value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC4_INSTANCE(TIMx) can be used to check whether or not output channel 4 is supported by a timer instance.
- If dithering is activated, CompareValue can be calculated with macro __LL_TIM_CALC_DELAY_DITHER .

LL_TIM_OC_SetCompareCH5

Function name

__STATIC_INLINE void LL_TIM_OC_SetCompareCH5 (TIM_TypeDef * TIMx, uint32_t CompareValue)

Function description

Set compare value for output channel 5 (TIMx_CCR5).

Parameters

- **TIMx:** Timer instance
- **CompareValue:** between Min_Data=0 and Max_Data=65535

Return values

- **None:**

Notes

- Macro IS_TIM_CC5_INSTANCE(TIMx) can be used to check whether or not output channel 5 is supported by a timer instance.
- If dithering is activated, CompareValue can be calculated with macro __LL_TIM_CALC_DELAY_DITHER .

Reference Manual to LL API cross reference:

- CCR5 CCR5 LL_TIM_OC_SetCompareCH5

LL_TIM_OC_SetCompareCH6

Function name

__STATIC_INLINE void LL_TIM_OC_SetCompareCH6 (TIM_TypeDef * TIMx, uint32_t CompareValue)

Function description

Set compare value for output channel 6 (TIMx_CCR6).

Parameters

- **TIMx:** Timer instance
- **CompareValue:** between Min_Data=0 and Max_Data=65535

Return values

- **None:**

Notes

- Macro IS_TIM_CC6_INSTANCE(TIMx) can be used to check whether or not output channel 6 is supported by a timer instance.
- If dithering is activated, CompareValue can be calculated with macro __LL_TIM_CALC_DELAY_DITHER .

Reference Manual to LL API cross reference:

- CCR6 CCR6 LL_TIM_OC_SetCompareCH6

LL_TIM_OC_GetCompareCH1

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_GetCompareCH1 (const TIM_TypeDef * TIMx)

Function description

Get compare value (TIMx_CCR1) set for output channel 1.

Parameters

- **TIMx:** Timer instance

Return values

- **CompareValue:** (between Min_Data=0 and Max_Data=65535)

Notes

- In 32-bit timer implementations returned compare value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC1_INSTANCE(TIMx) can be used to check whether or not output channel 1 is supported by a timer instance.
- If dithering is activated, pay attention to the returned value interpretation.

Reference Manual to LL API cross reference:

- CCR1 CCR1 LL_TIM_OC_GetCompareCH1

LL_TIM_OC_GetCompareCH2

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_GetCompareCH2 (const TIM_TypeDef * TIMx)

Function description

Get compare value (TIMx_CCR2) set for output channel 2.

Parameters

- **TIMx:** Timer instance

Return values

- **CompareValue:** (between Min_Data=0 and Max_Data=65535)

Notes

- In 32-bit timer implementations returned compare value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC2_INSTANCE(TIMx) can be used to check whether or not output channel 2 is supported by a timer instance.
- If dithering is activated, pay attention to the returned value interpretation.

Reference Manual to LL API cross reference:

- CCR2 CCR2 LL_TIM_OC_GetCompareCH2

LL_TIM_OC_GetCompareCH3

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_GetCompareCH3 (const TIM_TypeDef * TIMx)

Function description

Get compare value (TIMx_CCR3) set for output channel 3.

Parameters

- **TIMx:** Timer instance

Return values

- **CompareValue:** (between Min_Data=0 and Max_Data=65535)

Notes

- In 32-bit timer implementations returned compare value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC3_INSTANCE(TIMx) can be used to check whether or not output channel 3 is supported by a timer instance.
- If dithering is activated, pay attention to the returned value interpretation.

Reference Manual to LL API cross reference:

LL_TIM_SetCH5CombinedChannels

Function name

__STATIC_INLINE void LL_TIM_SetCH5CombinedChannels (TIM_TypeDef * TIMx, uint32_t GroupCH5)

Function description

Select on which reference signal the OC5REF is combined to.

Parameters

- **TIMx:** Timer instance
- **GroupCH5:** This parameter can be a combination of the following values:
  – LL_TIM_GROUPCH5_NONE
  – LL_TIM_GROUPCH5_OC1REFC
  – LL_TIM_GROUPCH5_OC2REFC
  – LL_TIM_GROUPCH5_OC3REFC

Return values

- **None:**

Notes

- Macro IS_TIM_COMBINED3PHASEPWM_INSTANCE(TIMx) can be used to check whether or not a timer instance supports the combined 3-phase PWM mode.

LL_TIM_OC_SetPulseWidthPrescaler

Function name

__STATIC_INLINE void LL_TIM_OC_SetPulseWidthPrescaler (TIM_TypeDef * TIMx, uint32_t PulseWidthPrescaler)

Function description

Set the pulse on compare pulse width prescaler.

Parameters

- **TIMx:** Timer instance
- **PulseWidthPrescaler:** This parameter can be one of the following values:
  – LL_TIM_PWPRSC_X1
  – LL_TIM_PWPRSC_X2
  – LL_TIM_PWPRSC_X4
  – LL_TIM_PWPRSC_X8
  – LL_TIM_PWPRSC_X16
  – LL_TIM_PWPRSC_X32
  – LL_TIM_PWPRSC_X64
  – LL_TIM_PWPRSC_X128

Return values

- **None:**

Notes

- Macro IS_TIM_PULSEONCOMPARE_INSTANCE(TIMx) can be used to check whether or not the pulse on compare feature is supported by the timer instance.

Reference Manual to LL API cross reference:

- ECR PWPRSC LL_TIM_OC_SetPulseWidthPrescaler

LL_TIM_OC_GetPulseWidthPrescaler

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_GetPulseWidthPrescaler (const TIM_TypeDef * TIMx)

Function description

Get the pulse on compare pulse width prescaler.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  – LL_TIM_PWPRSC_X1
  – LL_TIM_PWPRSC_X2
  – LL_TIM_PWPRSC_X4
  – LL_TIM_PWPRSC_X8
  – LL_TIM_PWPRSC_X16
  – LL_TIM_PWPRSC_X32
  – LL_TIM_PWPRSC_X64
  – LL_TIM_PWPRSC_X128

Notes

- Macro IS_TIM_PULSEONCOMPARE_INSTANCE(TIMx) can be used to check whether or not the pulse on compare feature is supported by the timer instance.

Reference Manual to LL API cross reference:

LL_TIM_OC_SetPulseWidth

Function name

__STATIC_INLINE void LL_TIM_OC_SetPulseWidth (TIM_TypeDef * TIMx, uint32_t PulseWidth)

Function description

Set the pulse on compare pulse width duration.

Parameters

- **TIMx:** Timer instance
- **PulseWidth:** This parameter can be between Min_Data=0 and Max_Data=255

Return values

- **None:**

Notes

- Macro IS_TIM_PULSEONCOMPARE_INSTANCE(TIMx) can be used to check whether or not the pulse on compare feature is supported by the timer instance.

Reference Manual to LL API cross reference:

- ECR PW LL_TIM_OC_SetPulseWidth

LL_TIM_OC_GetPulseWidth

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_GetPulseWidth (const TIM_TypeDef * TIMx)

Function description

Get the pulse on compare pulse width duration.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be between Min_Data=0 and Max_Data=255:

Notes

- Macro IS_TIM_PULSEONCOMPARE_INSTANCE(TIMx) can be used to check whether or not the pulse on compare feature is supported by the timer instance.

Reference Manual to LL API cross reference:

LL_TIM_IC_Config

Function name

__STATIC_INLINE void LL_TIM_IC_Config (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t Configuration)

Function description

Configure input channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
- **Configuration:** This parameter must be a combination of all the following values:
  - LL_TIM_ACTIVEINPUT_DIRECTTI or LL_TIM_ACTIVEINPUT_INDIRECTTI or LL_TIM_ACTIVEINPUT_TRC
  - LL_TIM_ICPSC_DIV1 or ... or LL_TIM_ICPSC_DIV8
  - LL_TIM_IC_FILTER_FDIV1 or ... or LL_TIM_IC_FILTER_FDIV32_N8
  - LL_TIM_IC_POLARITY_RISING or LL_TIM_IC_POLARITY_FALLING or LL_TIM_IC_POLARITY_BOTHEDGE

Return values

- **None:**

LL_TIM_IC_SetActiveInput

Function name

__STATIC_INLINE void LL_TIM_IC_SetActiveInput (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t ICActiveInput)

Function description

Set the active input.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  – LL_TIM_CHANNEL_CH1
  – LL_TIM_CHANNEL_CH2
  – LL_TIM_CHANNEL_CH3
  – LL_TIM_CHANNEL_CH4
- **ICActiveInput:** This parameter can be one of the following values:
  – LL_TIM_ACTIVEINPUT_DIRECTTI
  – LL_TIM_ACTIVEINPUT_INDIRECTTI
  – LL_TIM_ACTIVEINPUT_TRC

Return values

- **None:**

LL_TIM_IC_GetActiveInput

Function name

__STATIC_INLINE uint32_t LL_TIM_IC_GetActiveInput (const TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Get the current active input.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_ACTIVEINPUT_DIRECTTI
  - LL_TIM_ACTIVEINPUT_INDIRECTTI
  - LL_TIM_ACTIVEINPUT_TRC

Reference Manual to LL API cross reference:

LL_TIM_IC_SetPrescaler

Function name

__STATIC_INLINE void LL_TIM_IC_SetPrescaler (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t ICPrescaler)

Function description

Set the prescaler of input channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
- **ICPrescaler:** This parameter can be one of the following values:
  - LL_TIM_ICPSC_DIV1
  - LL_TIM_ICPSC_DIV2
  - LL_TIM_ICPSC_DIV4
  - LL_TIM_ICPSC_DIV8

Return values

- **None:**

LL_TIM_IC_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_TIM_IC_GetPrescaler (const TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Get the current prescaler value acting on an input channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  – LL_TIM_CHANNEL_CH1
  – LL_TIM_CHANNEL_CH2
  – LL_TIM_CHANNEL_CH3
  – LL_TIM_CHANNEL_CH4

Return values

- **Returned:** value can be one of the following values:
  – LL_TIM_ICPSC_DIV1
  – LL_TIM_ICPSC_DIV2
  – LL_TIM_ICPSC_DIV4
  – LL_TIM_ICPSC_DIV8

LL_TIM_IC_SetFilter

Function name

__STATIC_INLINE void LL_TIM_IC_SetFilter (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t ICFilter)

Function description

Set the input filter duration.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  – LL_TIM_CHANNEL_CH1
  – LL_TIM_CHANNEL_CH2
  – LL_TIM_CHANNEL_CH3
  – LL_TIM_CHANNEL_CH4
- **ICFilter:** This parameter can be one of the following values:
  – LL_TIM_IC_FILTER_FDIV1
  – LL_TIM_IC_FILTER_FDIV1_N2
  – LL_TIM_IC_FILTER_FDIV1_N4
  – LL_TIM_IC_FILTER_FDIV1_N8

LL_TIM_IC_SetPolarity

Function name

__STATIC_INLINE void LL_TIM_IC_SetPolarity (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t ICPolarity)

Function description

Set the input channel polarity.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
- **ICPolarity:** This parameter can be one of the following values:
  - LL_TIM_IC_POLARITY_RISING
  - LL_TIM_IC_POLARITY_FALLING
  - LL_TIM_IC_POLARITY_BOTHEDGE

Return values

- **None:**

Reference Manual to LL API cross reference:

LL_TIM_IC_EnableXORCombination

Function name

__STATIC_INLINE void LL_TIM_IC_EnableXORCombination (TIM_TypeDef * TIMx)

Function description

Connect the TIMx_CH1, CH2 and CH3 pins to the TI1 input (XOR combination).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_XOR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an XOR input.

Reference Manual to LL API cross reference:

- CR2 TI1S LL_TIM_IC_EnableXORCombination

LL_TIM_IC_DisableXORCombination

Function name

__STATIC_INLINE void LL_TIM_IC_DisableXORCombination (TIM_TypeDef * TIMx)

Function description

Disconnect the TIMx_CH1, CH2 and CH3 pins from the TI1 input.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_XOR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an XOR input.

Reference Manual to LL API cross reference:

- CR2 TI1S LL_TIM_IC_DisableXORCombination

LL_TIM_IC_IsEnabledXORCombination

Function name

__STATIC_INLINE uint32_t LL_TIM_IC_IsEnabledXORCombination (const TIM_TypeDef * TIMx)

Function description

Indicates whether the TIMx_CH1, CH2 and CH3 pins are connectected to the TI1 input.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_XOR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an XOR input.

Reference Manual to LL API cross reference:

- CR2 TI1S LL_TIM_IC_IsEnabledXORCombination

LL_TIM_IC_GetCaptureCH1

Function name

__STATIC_INLINE uint32_t LL_TIM_IC_GetCaptureCH1 (const TIM_TypeDef * TIMx)

Function description

Get captured value for input channel 1.

Parameters

- **TIMx:** Timer instance

Return values

- **CapturedValue:** (between Min_Data=0 and Max_Data=65535)

Notes

- In 32-bit timer implementations returned captured value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC1_INSTANCE(TIMx) can be used to check whether or not input channel 1 is supported by a timer instance.
- If dithering is activated, pay attention to the returned value interpretation.

Reference Manual to LL API cross reference:

- CCR1 CCR1 LL_TIM_IC_GetCaptureCH1

LL_TIM_IC_GetCaptureCH2

Function name

__STATIC_INLINE uint32_t LL_TIM_IC_GetCaptureCH2 (const TIM_TypeDef * TIMx)

Function description

Get captured value for input channel 2.

Parameters

- **TIMx:** Timer instance

Return values

- **CapturedValue:** (between Min_Data=0 and Max_Data=65535)

Notes

- In 32-bit timer implementations returned captured value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC2_INSTANCE(TIMx) can be used to check whether or not input channel 2 is supported by a timer instance.
- If dithering is activated, pay attention to the returned value interpretation.

Reference Manual to LL API cross reference:

- CCR2 CCR2 LL_TIM_IC_GetCaptureCH2

LL_TIM_IC_GetCaptureCH3

Function name

__STATIC_INLINE uint32_t LL_TIM_IC_GetCaptureCH3 (const TIM_TypeDef * TIMx)

Function description

Get captured value for input channel 3.

Parameters

- **TIMx:** Timer instance

Return values

- **CapturedValue:** (between Min_Data=0 and Max_Data=65535)

Notes

- In 32-bit timer implementations returned captured value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC3_INSTANCE(TIMx) can be used to check whether or not input channel 3 is supported by a timer instance.
- If dithering is activated, pay attention to the returned value interpretation.

Reference Manual to LL API cross reference:

- CCR3 CCR3 LL_TIM_IC_GetCaptureCH3

LL_TIM_IC_GetCaptureCH4

Function name

__STATIC_INLINE uint32_t LL_TIM_IC_GetCaptureCH4 (const TIM_TypeDef * TIMx)

Function description

Get captured value for input channel 4.

Parameters

- **TIMx:** Timer instance

Return values

- **CapturedValue:** (between Min_Data=0 and Max_Data=65535)

Notes

- In 32-bit timer implementations returned captured value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC4_INSTANCE(TIMx) can be used to check whether or not input channel 4 is supported by a timer instance.
- If dithering is activated, pay attention to the returned value interpretation.

Reference Manual to LL API cross reference:

- CCR4 CCR4 LL_TIM_IC_GetCaptureCH4

LL_TIM_EnableExternalClock

Function name

__STATIC_INLINE void LL_TIM_EnableExternalClock (TIM_TypeDef * TIMx)

Function description

Enable external clock mode 2.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- When external clock mode 2 is enabled the counter is clocked by any active edge on the ETRF signal.
- Macro IS_TIM_CLOCKSOURCE_ETRMODE2_INSTANCE(TIMx) can be used to check whether or not a timer instance supports external clock mode2.

Reference Manual to LL API cross reference:

- SMCR ECE LL_TIM_EnableExternalClock

LL_TIM_DisableExternalClock

Function name

__STATIC_INLINE void LL_TIM_DisableExternalClock (TIM_TypeDef * TIMx)

Function description

Disable external clock mode 2.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_CLOCKSOURCE_ETRMODE2_INSTANCE(TIMx) can be used to check whether or not a timer instance supports external clock mode2.

Reference Manual to LL API cross reference:

- SMCR ECE LL_TIM_DisableExternalClock

LL_TIM_IsEnabledExternalClock

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledExternalClock (const TIM_TypeDef * TIMx)

Function description

Indicate whether external clock mode 2 is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_CLOCKSOURCE_ETRMODE2_INSTANCE(TIMx) can be used to check whether or not a timer instance supports external clock mode2.

Reference Manual to LL API cross reference:

- SMCR ECE LL_TIM_IsEnabledExternalClock

LL_TIM_SetClockSource

Function name

__STATIC_INLINE void LL_TIM_SetClockSource (TIM_TypeDef * TIMx, uint32_t ClockSource)

Function description

Set the clock source of the counter clock.

Parameters

- **TIMx:** Timer instance
- **ClockSource:** This parameter can be one of the following values:
  - LL_TIM_CLOCKSOURCE_INTERNAL
  - LL_TIM_CLOCKSOURCE_EXT_MODE1
  - LL_TIM_CLOCKSOURCE_EXT_MODE2

Return values

- **None:**

Notes

- when selected clock source is external clock mode 1, the timer input the external clock is applied is selected by calling the LL_TIM_SetTriggerInput() function. This timer input must be configured by calling the LL_TIM_IC_Config() function.
- Macro IS_TIM_CLOCKSOURCE_ETRMODE1_INSTANCE(TIMx) can be used to check whether or not a timer instance supports external clock mode1.
- Macro IS_TIM_CLOCKSOURCE_ETRMODE2_INSTANCE(TIMx) can be used to check whether or not a timer instance supports external clock mode2.

Reference Manual to LL API cross reference:

- SMCR ECE LL_TIM_SetClockSource

LL_TIM_SetEncoderMode

Function name

__STATIC_INLINE void LL_TIM_SetEncoderMode (TIM_TypeDef * TIMx, uint32_t EncoderMode)

Function description

Set the encoder interface mode.

Parameters

- **TIMx:** Timer instance
- **EncoderMode:** This parameter can be one of the following values:
  - LL_TIM_ENCODERMODE_X2_TI1
  - LL_TIM_ENCODERMODE_X2_TI2
  - LL_TIM_ENCODERMODE_X4_TI12
  - LL_TIM_ENCODERMODE_CLOCKPLUSDIRECTION_X2
  - LL_TIM_ENCODERMODE_CLOCKPLUSDIRECTION_X1
  - LL_TIM_ENCODERMODE_DIRECTIONALCLOCK_X2
  - LL_TIM_ENCODERMODE_DIRECTIONALCLOCK_X1_TI12
  - LL_TIM_ENCODERMODE_X1_TI1
  - LL_TIM_ENCODERMODE_X1_TI2

Return values

- **None:**

Notes

- Macro IS_TIM_ENCODER_INTERFACE_INSTANCE(TIMx) can be used to check whether or not a timer instance supports the encoder mode.

Reference Manual to LL API cross reference:

- SMCR SMS LL_TIM_SetEncoderMode

LL_TIM_SetTriggerOutput

Function name

__STATIC_INLINE void LL_TIM_SetTriggerOutput (TIM_TypeDef * TIMx, uint32_t TimerSynchronization)

Function description

Set the trigger output (TRGO) used for timer synchronization .

Parameters

- **TIMx:** Timer instance
- **TimerSynchronization:** This parameter can be one of the following values:
  - LL_TIM_TRGO_RESET
  - LL_TIM_TRGO_ENABLE
  - LL_TIM_TRGO_UPDATE
  - LL_TIM_TRGO_CC1IF
  - LL_TIM_TRGO_OC1REF
  - LL_TIM_TRGO_OC2REF
  - LL_TIM_TRGO_OC3REF
  - LL_TIM_TRGO_OC4REF
  - LL_TIM_TRGO_ENCODERCLK

Return values

- **None:**

Notes

- Macro IS_TIM_MASTER_INSTANCE(TIMx) can be used to check whether or not a timer instance can operate as a master timer.

Reference Manual to LL API cross reference:

- CR2 MMS LL_TIM_SetTriggerOutput

LL_TIM_SetTriggerOutput2

Function name

__STATIC_INLINE void LL_TIM_SetTriggerOutput2 (TIM_TypeDef * TIMx, uint32_t ADCSynchronization)

Function description

Set the trigger output 2 (TRGO2) used for ADC synchronization .

Parameters

- **TIMx:** Timer Instance
- **ADCSynchronization:** This parameter can be one of the following values:
  – LL_TIM_TRGO2_RESET
  – LL_TIM_TRGO2_ENABLE
  – LL_TIM_TRGO2_UPDATE
  – LL_TIM_TRGO2_CC1F
  – LL_TIM_TRGO2_OC1
  – LL_TIM_TRGO2_OC2
  – LL_TIM_TRGO2_OC3
  – LL_TIM_TRGO2_OC4
  – LL_TIM_TRGO2_OC5
  – LL_TIM_TRGO2_OC6
  – LL_TIM_TRGO2_OC4_RISINGFALLING
  – LL_TIM_TRGO2_OC6_RISINGFALLING
  – LL_TIM_TRGO2_OC4_RISING_OC6_RISING
  – LL_TIM_TRGO2_OC4_RISING_OC6_FALLING
  – LL_TIM_TRGO2_OC5_RISING_OC6_RISING
  – LL_TIM_TRGO2_OC5_RISING_OC6_FALLING

Return values

- **None:**

Notes

- Macro IS_TIM_TRGO2_INSTANCE(TIMx) can be used to check whether or not a timer instance can be used for ADC synchronization.

Reference Manual to LL API cross reference:

- CR2 MMS2 LL_TIM_SetTriggerOutput2

LL_TIM_SetSlaveMode

Function name

__STATIC_INLINE void LL_TIM_SetSlaveMode (TIM_TypeDef * TIMx, uint32_t SlaveMode)

Function description

Set the synchronization mode of a slave timer.

Parameters

- **TIMx:** Timer instance
- **SlaveMode:** This parameter can be one of the following values:
  – LL_TIM_SLAVEMODE_DISABLED
  – LL_TIM_SLAVEMODE_RESET
  – LL_TIM_SLAVEMODE_GATED
  – LL_TIM_SLAVEMODE_TRIGGER
  – LL_TIM_SLAVEMODE_COMBINED_RESETTRIGGER
  – LL_TIM_SLAVEMODE_COMBINED_GATEDRESET

Return values

- **None:**

Notes

- Macro IS_TIM_SLAVE_INSTANCE(TIMx) can be used to check whether or not a timer instance can operate as a slave timer.

Reference Manual to LL API cross reference:

- SMCR SMS LL_TIM_SetSlaveMode

LL_TIM_SetTriggerInput

Function name

__STATIC_INLINE void LL_TIM_SetTriggerInput (TIM_TypeDef * TIMx, uint32_t TriggerInput)

Function description

Set the selects the trigger input to be used to synchronize the counter.

Parameters

- **TIMx:** Timer instance
- **TriggerInput:** This parameter can be one of the following values:
  - LL_TIM_TS_ITR0
  - LL_TIM_TS_ITR1
  - LL_TIM_TS_ITR2
  - LL_TIM_TS_ITR3
  - LL_TIM_TS_ITR4
  - LL_TIM_TS_ITR5
  - LL_TIM_TS_ITR6
  - LL_TIM_TS_ITR7
  - LL_TIM_TS_ITR8
  - LL_TIM_TS_ITR11
  - LL_TIM_TS_TI1F_ED
  - LL_TIM_TS_TI1FP1
  - LL_TIM_TS_TI2FP2
  - LL_TIM_TS_ETRF

Return values

- **None:**

Notes

- Macro IS_TIM_SLAVE_INSTANCE(TIMx) can be used to check whether or not a timer instance can operate as a slave timer.

Reference Manual to LL API cross reference:

- SMCR TS LL_TIM_SetTriggerInput

LL_TIM_EnableMasterSlaveMode

Function name

__STATIC_INLINE void LL_TIM_EnableMasterSlaveMode (TIM_TypeDef * TIMx)

Function description

Enable the Master/Slave mode.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_SLAVE_INSTANCE(TIMx) can be used to check whether or not a timer instance can operate as a slave timer.

Reference Manual to LL API cross reference:

- SMCR MSM LL_TIM_EnableMasterSlaveMode

LL_TIM_DisableMasterSlaveMode

Function name

__STATIC_INLINE void LL_TIM_DisableMasterSlaveMode (TIM_TypeDef * TIMx)

Function description

Disable the Master/Slave mode.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_SLAVE_INSTANCE(TIMx) can be used to check whether or not a timer instance can operate as a slave timer.

Reference Manual to LL API cross reference:

- SMCR MSM LL_TIM_DisableMasterSlaveMode

LL_TIM_IsEnabledMasterSlaveMode

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledMasterSlaveMode (const TIM_TypeDef * TIMx)

Function description

Indicates whether the Master/Slave mode is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_SLAVE_INSTANCE(TIMx) can be used to check whether or not a timer instance can operate as a slave timer.

Reference Manual to LL API cross reference:

- SMCR MSM LL_TIM_IsEnabledMasterSlaveMode

LL_TIM_ConfigETR

Function name

__STATIC_INLINE void LL_TIM_ConfigETR (TIM_TypeDef * TIMx, uint32_t ETRPolarity, uint32_t ETRPrescaler, uint32_t ETRFilter)

Function description

Configure the external trigger (ETR) input.

Parameters

- **TIMx:** Timer instance
- **ETRPolarity:** This parameter can be one of the following values:
  – LL_TIM_ETR_POLARITY_NONINVERTED
  – LL_TIM_ETR_POLARITY_INVERTED
- **ETRPrescaler:** This parameter can be one of the following values:
  – LL_TIM_ETR_PRESCALER_DIV1
  – LL_TIM_ETR_PRESCALER_DIV2
  – LL_TIM_ETR_PRESCALER_DIV4
  – LL_TIM_ETR_PRESCALER_DIV8
- **ETRFilter:** This parameter can be one of the following values:
  – LL_TIM_ETR_FILTER_FDIV1
  – LL_TIM_ETR_FILTER_FDIV1_N2
  – LL_TIM_ETR_FILTER_FDIV1_N4
  – LL_TIM_ETR_FILTER_FDIV1_N8
  – LL_TIM_ETR_FILTER_FDIV2_N6
  – LL_TIM_ETR_FILTER_FDIV2_N8
  – LL_TIM_ETR_FILTER_FDIV4_N6
  – LL_TIM_ETR_FILTER_FDIV4_N8
  – LL_TIM_ETR_FILTER_FDIV8_N6
  – LL_TIM_ETR_FILTER_FDIV8_N8
  – LL_TIM_ETR_FILTER_FDIV16_N5
  – LL_TIM_ETR_FILTER_FDIV16_N6
  – LL_TIM_ETR_FILTER_FDIV16_N8
  – LL_TIM_ETR_FILTER_FDIV32_N5
  – LL_TIM_ETR_FILTER_FDIV32_N6
  – LL_TIM_ETR_FILTER_FDIV32_N8

Return values

- **None:**

Notes

- Macro IS_TIM_ETR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an external trigger input.

Reference Manual to LL API cross reference:

- SMCR ETP LL_TIM_ConfigETR
- SMCR ETPS LL_TIM_ConfigETR
- SMCR ETF LL_TIM_ConfigETR

LL_TIM_SetETRSource

Function name

__STATIC_INLINE void LL_TIM_SetETRSource (TIM_TypeDef * TIMx, uint32_t ETRSource)

Function description

Select the external trigger (ETR) input source.

Parameters

- **TIMx:** Timer instance
- **ETRSource:** This parameter can be one of the following values:

Return values

- **None:**

Notes

- Macro IS_TIM_ETR_INSTANCE(TIMx) can be used to check whether or not a timer instance supports ETR source selection.

Reference Manual to LL API cross reference:

- AF1 ETRSEL LL_TIM_SetETRSource

LL_TIM_EnableSMSPreload

Function name

__STATIC_INLINE void LL_TIM_EnableSMSPreload (TIM_TypeDef * TIMx)

Function description

Enable SMS preload.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_SMS_PRELOAD_INSTANCE(TIMx) can be used to check whether or not a timer instance supports the preload of SMS field in SMCR register.

Reference Manual to LL API cross reference:

- SMCR SMSPE LL_TIM_EnableSMSPreload

LL_TIM_DisableSMSPreload

Function name

__STATIC_INLINE void LL_TIM_DisableSMSPreload (TIM_TypeDef * TIMx)

Function description

Disable SMS preload.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_SMS_PRELOAD_INSTANCE(TIMx) can be used to check whether or not a timer instance supports the preload of SMS field in SMCR register.

Reference Manual to LL API cross reference:

- SMCR SMSPE LL_TIM_DisableSMSPreload

LL_TIM_IsEnabledSMSPreload

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledSMSPreload (const TIM_TypeDef * TIMx)

Function description

Indicate whether SMS preload is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_SMS_PRELOAD_INSTANCE(TIMx) can be used to check whether or not a timer instance supports the preload of SMS field in SMCR register.

Reference Manual to LL API cross reference:

- SMCR SMSPE LL_TIM_IsEnabledSMSPreload

LL_TIM_SetSMSPreloadSource

Function name

__STATIC_INLINE void LL_TIM_SetSMSPreloadSource (TIM_TypeDef * TIMx, uint32_t PreloadSource)

Function description

Set the preload source of SMS.

Parameters

- **TIMx:** Timer instance
- **PreloadSource:** This parameter can be one of the following values:
  – LL_TIM_SMSPS_TIMUPDATE
  – LL_TIM_SMSPS_INDEX

Return values

- **None:**

Notes

- Macro IS_TIM_SMS_PRELOAD_INSTANCE(TIMx) can be used to check whether or not a timer instance supports the preload of SMS field in SMCR register.

Reference Manual to LL API cross reference:

- SMCR SMSPS LL_TIM_SetSMSPreloadSource
-

LL_TIM_GetSMSPreloadSource

Function name

__STATIC_INLINE uint32_t LL_TIM_GetSMSPreloadSource (const TIM_TypeDef * TIMx)

Function description

Get the preload source of SMS.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  – LL_TIM_SMSPS_TIMUPDATE
  – LL_TIM_SMSPS_INDEX

Notes

- Macro IS_TIM_SMS_PRELOAD_INSTANCE(TIMx) can be used to check whether or not a timer instance supports the preload of SMS field in SMCR register.

Reference Manual to LL API cross reference:

- SMCR SMSPS LL_TIM_GetSMSPreloadSource
-

LL_TIM_EnableBRK

Function name

__STATIC_INLINE void LL_TIM_EnableBRK (TIM_TypeDef * TIMx)

Function description

Enable the break function.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR BKE LL_TIM_EnableBRK

LL_TIM_DisableBRK

Function name

__STATIC_INLINE void LL_TIM_DisableBRK (TIM_TypeDef * TIMx)

Function description

Disable the break function.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR BKE LL_TIM_DisableBRK

LL_TIM_ConfigBRK

Function name

__STATIC_INLINE void LL_TIM_ConfigBRK (TIM_TypeDef * TIMx, uint32_t BreakPolarity, uint32_t BreakFilter, uint32_t BreakAFMode)

Function description

Configure the break input.

Parameters

- **TIMx:** Timer instance
- **BreakPolarity:** This parameter can be one of the following values:
  – LL_TIM_BREAK_POLARITY_LOW
  – LL_TIM_BREAK_POLARITY_HIGH
- **BreakFilter:** This parameter can be one of the following values:
  – LL_TIM_BREAK_FILTER_FDIV1
  – LL_TIM_BREAK_FILTER_FDIV1_N2
  – LL_TIM_BREAK_FILTER_FDIV1_N4
  – LL_TIM_BREAK_FILTER_FDIV1_N8
  – LL_TIM_BREAK_FILTER_FDIV2_N6
  – LL_TIM_BREAK_FILTER_FDIV2_N8
  – LL_TIM_BREAK_FILTER_FDIV4_N6
  – LL_TIM_BREAK_FILTER_FDIV4_N8
  – LL_TIM_BREAK_FILTER_FDIV8_N6
  – LL_TIM_BREAK_FILTER_FDIV8_N8
  – LL_TIM_BREAK_FILTER_FDIV16_N5
  – LL_TIM_BREAK_FILTER_FDIV16_N6
  – LL_TIM_BREAK_FILTER_FDIV16_N8
  – LL_TIM_BREAK_FILTER_FDIV32_N5
  – LL_TIM_BREAK_FILTER_FDIV32_N6
  – LL_TIM_BREAK_FILTER_FDIV32_N8
- **BreakAFMode:** This parameter can be one of the following values:
  – LL_TIM_BREAK_AFMODE_INPUT
  – LL_TIM_BREAK_AFMODE_BIDIRECTIONAL

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.
- Bidirectional mode is only supported by advanced timer instances. Macro IS_TIM_ADVANCED_INSTANCE(TIMx) can be used to check whether or not a timer instance is an advanced-control timer.
- In bidirectional mode (BKBID bit set), the Break input is configured both in input mode and in open drain output mode. Any active Break event will assert a low logic level on the Break input to indicate an internal break event to external devices.
- When bidirectional mode isn't supported, BreakAFMode must be set to LL_TIM_BREAK_AFMODE_INPUT.

Reference Manual to LL API cross reference:

- BDTR BKP LL_TIM_ConfigBRK
- BDTR BKF LL_TIM_ConfigBRK
- BDTR BKBID LL_TIM_ConfigBRK

LL_TIM_DisarmBRK

Function name

__STATIC_INLINE void LL_TIM_DisarmBRK (TIM_TypeDef * TIMx)

Function description

Disarm the break input (when it operates in bidirectional mode).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- The break input can be disarmed only when it is configured in bidirectional mode and when when MOE is reset.
- Purpose is to be able to have the input voltage back to high-state, whatever the time constant on the output .

Reference Manual to LL API cross reference:

- BDTR BKDSRM LL_TIM_DisarmBRK

LL_TIM_EnableBRK2

Function name

__STATIC_INLINE void LL_TIM_EnableBRK2 (TIM_TypeDef * TIMx)

Function description

Enable the break 2 function.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_BKIN2_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a second break input.

Reference Manual to LL API cross reference:

- BDTR BK2E LL_TIM_EnableBRK2

LL_TIM_DisableBRK2

Function name

__STATIC_INLINE void LL_TIM_DisableBRK2 (TIM_TypeDef * TIMx)

Function description

Disable the break 2 function.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_BKIN2_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a second break input.

Reference Manual to LL API cross reference:

- BDTR BK2E LL_TIM_DisableBRK2

LL_TIM_ConfigBRK2

Function name

__STATIC_INLINE void LL_TIM_ConfigBRK2 (TIM_TypeDef * TIMx, uint32_t Break2Polarity, uint32_t Break2Filter, uint32_t Break2AFMode)

Function description

Configure the break 2 input.

Parameters

- **TIMx:** Timer instance
- **Break2Polarity:** This parameter can be one of the following values:
  - LL_TIM_BREAK2_POLARITY_LOW
  - LL_TIM_BREAK2_POLARITY_HIGH
- **Break2Filter:** This parameter can be one of the following values:
  - LL_TIM_BREAK2_FILTER_FDIV1
  - LL_TIM_BREAK2_FILTER_FDIV1_N2
  - LL_TIM_BREAK2_FILTER_FDIV1_N4
  - LL_TIM_BREAK2_FILTER_FDIV1_N8
  - LL_TIM_BREAK2_FILTER_FDIV2_N6
  - LL_TIM_BREAK2_FILTER_FDIV2_N8
  - LL_TIM_BREAK2_FILTER_FDIV4_N6
  - LL_TIM_BREAK2_FILTER_FDIV4_N8
  - LL_TIM_BREAK2_FILTER_FDIV8_N6
  - LL_TIM_BREAK2_FILTER_FDIV8_N8
  - LL_TIM_BREAK2_FILTER_FDIV16_N5
  - LL_TIM_BREAK2_FILTER_FDIV16_N6
  - LL_TIM_BREAK2_FILTER_FDIV16_N8
  - LL_TIM_BREAK2_FILTER_FDIV32_N5
  - LL_TIM_BREAK2_FILTER_FDIV32_N6
  - LL_TIM_BREAK2_FILTER_FDIV32_N8
- **Break2AFMode:** This parameter can be one of the following values:
  - LL_TIM_BREAK2_AFMODE_INPUT
  - LL_TIM_BREAK2_AFMODE_BIDIRECTIONAL

Return values

- **None:**

Notes

- Macro IS_TIM_BKIN2_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a second break input.
- Bidirectional mode is only supported by advanced timer instances. Macro IS_TIM_ADVANCED_INSTANCE(TIMx) can be used to check whether or not a timer instance is an advanced-control timer.
- In bidirectional mode (BK2BID bit set), the Break 2 input is configured both in input mode and in open drain output mode. Any active Break event will assert a low logic level on the Break 2 input to indicate an internal break event to external devices.
- When bidirectional mode isn't supported, Break2AFMode must be set to LL_TIM_BREAK2_AFMODE_INPUT.

Reference Manual to LL API cross reference:

- BDTR BK2P LL_TIM_ConfigBRK2
- BDTR BK2F LL_TIM_ConfigBRK2
- BDTR BK2BID LL_TIM_ConfigBRK2

LL_TIM_DisarmBRK2

Function name

__STATIC_INLINE void LL_TIM_DisarmBRK2 (TIM_TypeDef * TIMx)

Function description

Disarm the break 2 input (when it operates in bidirectional mode).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- The break 2 input can be disarmed only when it is configured in bidirectional mode and when when MOE is reset.
- Purpose is to be able to have the input voltage back to high-state, whatever the time constant on the output.

Reference Manual to LL API cross reference:

- BDTR BK2DSRM LL_TIM_DisarmBRK2

LL_TIM_SetOffStates

Function name

__STATIC_INLINE void LL_TIM_SetOffStates (TIM_TypeDef * TIMx, uint32_t OffStateIdle, uint32_t OffStateRun)

Function description

Select the outputs off state (enabled v.s.

Parameters

- **TIMx:** Timer instance
- **OffStateIdle:** This parameter can be one of the following values:
  – LL_TIM_OSSI_DISABLE
  – LL_TIM_OSSI_ENABLE
- **OffStateRun:** This parameter can be one of the following values:
  – LL_TIM_OSSR_DISABLE
  – LL_TIM_OSSR_ENABLE

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR OSSI LL_TIM_SetOffStates
- BDTR OSSR LL_TIM_SetOffStates

LL_TIM_EnableAutomaticOutput

Function name

__STATIC_INLINE void LL_TIM_EnableAutomaticOutput (TIM_TypeDef * TIMx)

Function description

Enable automatic output (MOE can be set by software or automatically when a break input is active).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR AOE LL_TIM_EnableAutomaticOutput

LL_TIM_DisableAutomaticOutput

Function name

__STATIC_INLINE void LL_TIM_DisableAutomaticOutput (TIM_TypeDef * TIMx)

Function description

Disable automatic output (MOE can be set only by software).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR AOE LL_TIM_DisableAutomaticOutput

LL_TIM_IsEnabledAutomaticOutput

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledAutomaticOutput (const TIM_TypeDef * TIMx)

Function description

Indicate whether automatic output is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR AOE LL_TIM_IsEnabledAutomaticOutput

LL_TIM_EnableAllOutputs

Function name

__STATIC_INLINE void LL_TIM_EnableAllOutputs (TIM_TypeDef * TIMx)

Function description

Enable the outputs (set the MOE bit in TIMx_BDTR register).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- The MOE bit in TIMx_BDTR register allows to enable /disable the outputs by software and is reset in case of break or break2 event
- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR MOE LL_TIM_EnableAllOutputs

LL_TIM_DisableAllOutputs

Function name

__STATIC_INLINE void LL_TIM_DisableAllOutputs (TIM_TypeDef * TIMx)

Function description

Disable the outputs (reset the MOE bit in TIMx_BDTR register).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- The MOE bit in TIMx_BDTR register allows to enable /disable the outputs by software and is reset in case of break or break2 event.
- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR MOE LL_TIM_DisableAllOutputs

LL_TIM_IsEnabledAllOutputs

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledAllOutputs (const TIM_TypeDef * TIMx)

Function description

Indicates whether outputs are enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR MOE LL_TIM_IsEnabledAllOutputs

LL_TIM_EnableBreakInputSource

Function name

__STATIC_INLINE void LL_TIM_EnableBreakInputSource (TIM_TypeDef * TIMx, uint32_t BreakInput, uint32_t Source)

Function description

Enable the signals connected to the designated timer break input.

Parameters

- **TIMx:** Timer instance
- **BreakInput:** This parameter can be one of the following values:
  – LL_TIM_BREAK_INPUT_BKIN
  – LL_TIM_BREAK_INPUT_BKIN2
- **Source:** This parameter can be one of the following values:
  – LL_TIM_BKIN_SOURCE_BKIN
  – LL_TIM_BKIN_SOURCE_BKCOMP1
  – LL_TIM_BKIN_SOURCE_BKCOMP2 (*)
  – LL_TIM_BKIN_SOURCE_MDF1

  (*) Value not defined in all devices.

Return values

- **None:**

Notes

- Macro IS_TIM_BREAKSOURCE_INSTANCE(TIMx) can be used to check whether or not a timer instance allows for break input selection.

Reference Manual to LL API cross reference:

- AF1 BKINE LL_TIM_EnableBreakInputSource
- AF1 BKCMP1E LL_TIM_EnableBreakInputSource

LL_TIM_DisableBreakInputSource

Function name

__STATIC_INLINE void LL_TIM_DisableBreakInputSource (TIM_TypeDef * TIMx, uint32_t BreakInput, uint32_t Source)

Function description

Disable the signals connected to the designated timer break input.

Parameters

- **TIMx:** Timer instance
- **BreakInput:** This parameter can be one of the following values:
  – LL_TIM_BREAK_INPUT_BKIN
  – LL_TIM_BREAK_INPUT_BKIN2
- **Source:** This parameter can be one of the following values:
  – LL_TIM_BKIN_SOURCE_BKIN
  – LL_TIM_BKIN_SOURCE_BKCOMP1
  – LL_TIM_BKIN_SOURCE_BKCOMP2 (*)
  – LL_TIM_BKIN_SOURCE_MDF1

  (*) Value not defined in all devices.

Return values

- **None:**

Notes

- Macro IS_TIM_BREAKSOURCE_INSTANCE(TIMx) can be used to check whether or not a timer instance allows for break input selection.

Reference Manual to LL API cross reference:

LL_TIM_SetBreakInputSourcePolarity

Function name

__STATIC_INLINE void LL_TIM_SetBreakInputSourcePolarity (TIM_TypeDef * TIMx, uint32_t BreakInput, uint32_t Source, uint32_t Polarity)

Function description

Set the polarity of the break signal for the timer break input.

Parameters

- **TIMx:** Timer instance
- **BreakInput:** This parameter can be one of the following values:
  – LL_TIM_BREAK_INPUT_BKIN
  – LL_TIM_BREAK_INPUT_BKIN2
- **Source:** This parameter can be one of the following values:
  – LL_TIM_BKIN_SOURCE_BKIN
  – LL_TIM_BKIN_SOURCE_BKCOMP1
  – LL_TIM_BKIN_SOURCE_BKCOMP2 (*)
- **Polarity:** This parameter can be one of the following values:
  – LL_TIM_BKIN_POLARITY_LOW
  – LL_TIM_BKIN_POLARITY_HIGH

  (*) Value not defined in all devices.

Return values

- **None:**

Notes

- Macro IS_TIM_BREAKSOURCE_INSTANCE(TIMx) can be used to check whether or not a timer instance allows for break input selection.

- AF2 BK2CMP1P LL_TIM_SetBreakInputSourcePolarity
- AF2 BK2CMP2P LL_TIM_SetBreakInputSourcePolarity

LL_TIM_EnableAsymmetricalDeadTime

Function name

__STATIC_INLINE void LL_TIM_EnableAsymmetricalDeadTime (TIM_TypeDef * TIMx)

Function description

Enable asymmetrical deadtime.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_DEADTIME_ASYMMETRICAL_INSTANCE(TIMx) can be used to check whether or not a timer instance provides asymmetrical deadtime.

Reference Manual to LL API cross reference:

- DTR2 DTAE LL_TIM_EnableAsymmetricalDeadTime

LL_TIM_DisableAsymmetricalDeadTime

Function name

__STATIC_INLINE void LL_TIM_DisableAsymmetricalDeadTime (TIM_TypeDef * TIMx)

Function description

Disable asymmetrical dead-time.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_DEADTIME_ASYMMETRICAL_INSTANCE(TIMx) can be used to check whether or not a timer instance provides asymmetrical deadtime.

Reference Manual to LL API cross reference:

- DTR2 DTAE LL_TIM_DisableAsymmetricalDeadTime

LL_TIM_IsEnabledAsymmetricalDeadTime

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledAsymmetricalDeadTime (const TIM_TypeDef * TIMx)

Function description

Indicates whether asymmetrical deadtime is activated.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_DEADTIME_ASYMMETRICAL_INSTANCE(TIMx) can be used to check whether or not a timer instance provides asymmetrical deadtime.

Reference Manual to LL API cross reference:

- DTR2 DTAE LL_TIM_IsEnabledAsymmetricalDeadTime

LL_TIM_SetFallingDeadTime

Function name

__STATIC_INLINE void LL_TIM_SetFallingDeadTime (TIM_TypeDef * TIMx, uint32_t DeadTime)

Function description

Set the falling edge dead-time delay (delay inserted between the falling edge of the OCxREF signal and the rising edge of OCxN signals).

Parameters

- **TIMx:** Timer instance
- **DeadTime:** between Min_Data=0 and Max_Data=255

Return values

- **None:**

Notes

- Macro IS_TIM_DEADTIME_ASYMMETRICAL_INSTANCE(TIMx) can be used to check whether or not asymmetrical dead-time insertion feature is supported by a timer instance.
- Helper macro __LL_TIM_CALC_DEADTIME can be used to calculate the DeadTime parameter
- This bit-field can not be modified as long as LOCK level 1, 2 or 3 has been programmed (LOCK bits in TIMx_BDTR register).

Reference Manual to LL API cross reference:

- DTR2 DTGF LL_TIM_SetFallingDeadTime

LL_TIM_GetFallingDeadTime

Function name

__STATIC_INLINE uint32_t LL_TIM_GetFallingDeadTime (const TIM_TypeDef * TIMx)

Function description

Get the falling edge dead-time delay (delay inserted between the falling edge of the OCxREF signal and the rising edge of OCxN signals).

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be between Min_Data=0 and Max_Data=255:

Notes

- Macro IS_TIM_DEADTIME_ASYMMETRICAL_INSTANCE(TIMx) can be used to check whether or not asymmetrical dead-time insertion feature is supported by a timer instance.
- This bit-field can not be modified as long as LOCK level 1, 2 or 3 has been programmed (LOCK bits in TIMx_BDTR register).

Reference Manual to LL API cross reference:

- DTR2 DTGF LL_TIM_GetFallingDeadTime

LL_TIM_EnableDeadTimePreload

Function name

__STATIC_INLINE void LL_TIM_EnableDeadTimePreload (TIM_TypeDef * TIMx)

Function description

Enable deadtime preload.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides deadtime preload.

Reference Manual to LL API cross reference:

- DTR2 DTPE LL_TIM_EnableDeadTimePreload

LL_TIM_DisableDeadTimePreload

Function name

__STATIC_INLINE void LL_TIM_DisableDeadTimePreload (TIM_TypeDef * TIMx)

Function description

Disable dead-time preload.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides deadtime preload.

Reference Manual to LL API cross reference:

- DTR2 DTPE LL_TIM_DisableDeadTimePreload

LL_TIM_IsEnabledDeadTimePreload

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledDeadTimePreload (const TIM_TypeDef * TIMx)

Function description

Indicates whether deadtime preload is activated.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides deadtime preload.

Reference Manual to LL API cross reference:

- DTR2 DTPE LL_TIM_IsEnabledDeadTimePreload

LL_TIM_ConfigDMABurst

Function name

__STATIC_INLINE void LL_TIM_ConfigDMABurst (TIM_TypeDef * TIMx, uint32_t DMABurstBaseAddress, uint32_t DMABurstLength, uint32_t DMABurstSource)

Function description

Configures the timer DMA burst feature.

Parameters

- **TIMx:** Timer instance
- **DMABurstBaseAddress:** This parameter can be one of the following values:
  - LL_TIM_DMABURST_BASEADDR_CR1
  - LL_TIM_DMABURST_BASEADDR_CR2
  - LL_TIM_DMABURST_BASEADDR_SMCR
  - LL_TIM_DMABURST_BASEADDR_DIER
  - LL_TIM_DMABURST_BASEADDR_SR
  - LL_TIM_DMABURST_BASEADDR_EGR
  - LL_TIM_DMABURST_BASEADDR_CCMR1
  - LL_TIM_DMABURST_BASEADDR_CCMR2
  - LL_TIM_DMABURST_BASEADDR_CCER
  - LL_TIM_DMABURST_BASEADDR_CNT
  - LL_TIM_DMABURST_BASEADDR_PSC
  - LL_TIM_DMABURST_BASEADDR_ARR
  - LL_TIM_DMABURST_BASEADDR_RCR
  - LL_TIM_DMABURST_BASEADDR_CCR1
  - LL_TIM_DMABURST_BASEADDR_CCR2
  - LL_TIM_DMABURST_BASEADDR_CCR3
  - LL_TIM_DMABURST_BASEADDR_CCR4
  - LL_TIM_DMABURST_BASEADDR_BDTR
  - LL_TIM_DMABURST_BASEADDR_CCR5
  - LL_TIM_DMABURST_BASEADDR_CCR6
  - LL_TIM_DMABURST_BASEADDR_CCMR3
  - LL_TIM_DMABURST_BASEADDR_DTR2
  - LL_TIM_DMABURST_BASEADDR_ECR
  - LL_TIM_DMABURST_BASEADDR_TISEL
  - LL_TIM_DMABURST_BASEADDR_AF1
  - LL_TIM_DMABURST_BASEADDR_AF2
  - LL_TIM_DMABURST_BASEADDR_OR1

- **DMABurstLength:** This parameter can be one of the following values:
  – LL_TIM_DMABURST_LENGTH_1TRANSFER
  – LL_TIM_DMABURST_LENGTH_2TRANSFERS
  – LL_TIM_DMABURST_LENGTH_3TRANSFERS
  – LL_TIM_DMABURST_LENGTH_4TRANSFERS
  – LL_TIM_DMABURST_LENGTH_5TRANSFERS
  – LL_TIM_DMABURST_LENGTH_6TRANSFERS
  – LL_TIM_DMABURST_LENGTH_7TRANSFERS
  – LL_TIM_DMABURST_LENGTH_8TRANSFERS
  – LL_TIM_DMABURST_LENGTH_9TRANSFERS
  – LL_TIM_DMABURST_LENGTH_10TRANSFERS
  – LL_TIM_DMABURST_LENGTH_11TRANSFERS
  – LL_TIM_DMABURST_LENGTH_12TRANSFERS
  – LL_TIM_DMABURST_LENGTH_13TRANSFERS
  – LL_TIM_DMABURST_LENGTH_14TRANSFERS
  – LL_TIM_DMABURST_LENGTH_15TRANSFERS
  – LL_TIM_DMABURST_LENGTH_16TRANSFERS
  – LL_TIM_DMABURST_LENGTH_17TRANSFERS
  – LL_TIM_DMABURST_LENGTH_18TRANSFERS
  – LL_TIM_DMABURST_LENGTH_19TRANSFERS
  – LL_TIM_DMABURST_LENGTH_20TRANSFERS
  – LL_TIM_DMABURST_LENGTH_21TRANSFERS
  – LL_TIM_DMABURST_LENGTH_22TRANSFERS
  – LL_TIM_DMABURST_LENGTH_23TRANSFERS
  – LL_TIM_DMABURST_LENGTH_24TRANSFERS
  – LL_TIM_DMABURST_LENGTH_25TRANSFERS
  – LL_TIM_DMABURST_LENGTH_26TRANSFERS
- **DMABurstSource:** This parameter can be one of the following values:
  – LL_TIM_DMA_UPDATE
  – LL_TIM_DMA_CC1
  – LL_TIM_DMA_CC2
  – LL_TIM_DMA_CC3
  – LL_TIM_DMA_CC4
  – LL_TIM_DMA_COM
  – LL_TIM_DMA_TRIGGER

Return values

- **None:**

Notes

- Macro IS_TIM_DMABURST_INSTANCE(TIMx) can be used to check whether or not a timer instance supports the DMA burst mode.

Reference Manual to LL API cross reference:

- DCR DBL LL_TIM_ConfigDMABurst
- DCR DBA LL_TIM_ConfigDMABurst

LL_TIM_EnableEncoderIndex

Function name

__STATIC_INLINE void LL_TIM_EnableEncoderIndex (TIM_TypeDef * TIMx)

Function description

Enable encoder index.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_INDEX_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an index input.

Reference Manual to LL API cross reference:

- ECR IE LL_TIM_EnableEncoderIndex

LL_TIM_DisableEncoderIndex

Function name

__STATIC_INLINE void LL_TIM_DisableEncoderIndex (TIM_TypeDef * TIMx)

Function description

Disable encoder index.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_INDEX_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an index input.

Reference Manual to LL API cross reference:

- ECR IE LL_TIM_DisableEncoderIndex

LL_TIM_IsEnabledEncoderIndex

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledEncoderIndex (const TIM_TypeDef * TIMx)

Function description

Indicate whether encoder index is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_INDEX_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an index input.

Reference Manual to LL API cross reference:

- ECR IE LL_TIM_IsEnabledEncoderIndex

LL_TIM_SetIndexDirection

Function name

__STATIC_INLINE void LL_TIM_SetIndexDirection (TIM_TypeDef * TIMx, uint32_t IndexDirection)

Function description

Set index direction.

Parameters

- **TIMx:** Timer instance
- **IndexDirection:** This parameter can be one of the following values:
  - LL_TIM_INDEX_UP_DOWN
  - LL_TIM_INDEX_UP
  - LL_TIM_INDEX_DOWN

Return values

- **None:**

Notes

- Macro IS_TIM_INDEX_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an index input.

Reference Manual to LL API cross reference:

- ECR IDIR LL_TIM_SetIndexDirection

LL_TIM_GetIndexDirection

Function name

__STATIC_INLINE uint32_t LL_TIM_GetIndexDirection (const TIM_TypeDef * TIMx)

Function description

Get actual index direction.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_INDEX_UP_DOWN
  - LL_TIM_INDEX_UP
  - LL_TIM_INDEX_DOWN

Notes

- Macro IS_TIM_INDEX_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an index input.

Reference Manual to LL API cross reference:

- ECR IDIR LL_TIM_GetIndexDirection

LL_TIM_SetIndexblanking

Function name

__STATIC_INLINE void LL_TIM_SetIndexblanking (TIM_TypeDef * TIMx, uint32_t Indexblanking)

Function description

Set index blanking.

Parameters

- **TIMx:** Timer instance
- **Indexblanking:** This parameter can be one of the following values:
  - LL_TIM_INDEX_BLANK_ALWAYS
  - LL_TIM_INDEX_BLANK_TI3
  - LL_TIM_INDEX_BLANK_TI4

Return values

- **None:**

Notes

- Macro IS_TIM_INDEX_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an index input.

Reference Manual to LL API cross reference:

- ECR IBLK LL_TIM_SetIndexblanking

LL_TIM_GetIndexblanking

Function name

__STATIC_INLINE uint32_t LL_TIM_GetIndexblanking (const TIM_TypeDef * TIMx)

Function description

Get actual index blanking.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_INDEX_BLANK_ALWAYS
  - LL_TIM_INDEX_BLANK_TI3
  - LL_TIM_INDEX_BLANK_TI4

Notes

- Macro IS_TIM_INDEX_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an index input.

Reference Manual to LL API cross reference:

- ECR IBLK LL_TIM_GetIndexblanking

LL_TIM_EnableFirstIndex

Function name

__STATIC_INLINE void LL_TIM_EnableFirstIndex (TIM_TypeDef * TIMx)

Function description

Enable first index.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_INDEX_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an index input.

Reference Manual to LL API cross reference:

- ECR FIDX LL_TIM_EnableFirstIndex

LL_TIM_DisableFirstIndex

Function name

__STATIC_INLINE void LL_TIM_DisableFirstIndex (TIM_TypeDef * TIMx)

Function description

Disable first index.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_INDEX_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an index input.

Reference Manual to LL API cross reference:

- ECR FIDX LL_TIM_DisableFirstIndex

LL_TIM_IsEnabledFirstIndex

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledFirstIndex (const TIM_TypeDef * TIMx)

Function description

Indicates whether first index is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_INDEX_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an index input.

Reference Manual to LL API cross reference:

- ECR FIDX LL_TIM_IsEnabledFirstIndex

LL_TIM_SetIndexPositionning

Function name

__STATIC_INLINE void LL_TIM_SetIndexPositionning (TIM_TypeDef * TIMx, uint32_t IndexPositionning)

Function description

Set index positioning.

Parameters

- **TIMx:** Timer instance
- **IndexPositionning:** This parameter can be one of the following values:
  – LL_TIM_INDEX_POSITION_DOWN_DOWN
  – LL_TIM_INDEX_POSITION_DOWN_UP
  – LL_TIM_INDEX_POSITION_UP_DOWN
  – LL_TIM_INDEX_POSITION_UP_UP
  – LL_TIM_INDEX_POSITION_DOWN
  – LL_TIM_INDEX_POSITION_UP

Return values

- **None:**

Notes

- Macro IS_TIM_INDEX_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an index input.

Reference Manual to LL API cross reference:

- ECR IPOS LL_TIM_SetIndexPositionning

LL_TIM_GetIndexPositionning

Function name

__STATIC_INLINE uint32_t LL_TIM_GetIndexPositionning (const TIM_TypeDef * TIMx)

Function description

Get actual index positioning.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  – LL_TIM_INDEX_POSITION_DOWN_DOWN
  – LL_TIM_INDEX_POSITION_DOWN_UP
  – LL_TIM_INDEX_POSITION_UP_DOWN
  – LL_TIM_INDEX_POSITION_UP_UP
  – LL_TIM_INDEX_POSITION_DOWN
  – LL_TIM_INDEX_POSITION_UP

Notes

- Macro IS_TIM_INDEX_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an index input.

Reference Manual to LL API cross reference:

- ECR IPOS LL_TIM_GetIndexPositionning

LL_TIM_ConfigIDX

Function name

__STATIC_INLINE void LL_TIM_ConfigIDX (TIM_TypeDef * TIMx, uint32_t Configuration)

Function description

Configure encoder index.

Parameters

- **TIMx:** Timer instance
- **Configuration:** This parameter must be a combination of all the following values:
  - LL_TIM_INDEX_UP or LL_TIM_INDEX_DOWN or LL_TIM_INDEX_UP_DOWN
  - LL_TIM_INDEX_BLANK_ALWAYS or LL_TIM_INDEX_BLANK_TI3 or LL_TIM_INDEX_BLANK_TI4
  - LL_TIM_INDEX_ALL or LL_TIM_INDEX_FIRST_ONLY
  - LL_TIM_INDEX_POSITION_DOWN_DOWN or ... or LL_TIM_INDEX_POSITION_UP

Return values

- **None:**

Notes

- Macro IS_TIM_INDEX_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an index input.

Reference Manual to LL API cross reference:

- ECR IDIR LL_TIM_ConfigIDX
- ECR IBLK LL_TIM_ConfigIDX
- ECR FIDX LL_TIM_ConfigIDX
- ECR IPOS LL_TIM_ConfigIDX

LL_TIM_SetRemap

Function name

__STATIC_INLINE void LL_TIM_SetRemap (TIM_TypeDef * TIMx, uint32_t Remap)

Function description

Remap TIM inputs (input channel, internal/external triggers).

Parameters

- **TIMx:** Timer instance
- **Remap:** Remap param depends on the TIMx. Description available only in CHM version of the User Manual (not in .pdf). Otherwise see Reference Manual description of TISEL registers.

Return values

- **None:**

Notes

- Macro IS_TIM_REMAP_INSTANCE(TIMx) can be used to check whether or not a some timer inputs can be remapped.

Reference Manual to LL API cross reference:

- TIM1_TISEL TI1SEL LL_TIM_SetRemap
- TIM2_TISEL TI1SEL LL_TIM_SetRemap
- TIM2_TISEL TI2SEL LL_TIM_SetRemap

- TIM3_TISEL TI1SEL LL_TIM_SetRemap
- TIM3_TISEL TI2SEL LL_TIM_SetRemap
- TIM4_TISEL TI1SEL LL_TIM_SetRemap
- TIM4_TISEL TI2SEL LL_TIM_SetRemap
- TIM5_TISEL TI1SEL LL_TIM_SetRemap
- TIM5_TISEL TI2SEL LL_TIM_SetRemap
- TIM8_TISEL TI1SEL LL_TIM_SetRemap
- TIM15_TISEL TI1SEL LL_TIM_SetRemap
- TIM15_TISEL TI2SEL LL_TIM_SetRemap
- TIM16_TISEL TI1SEL LL_TIM_SetRemap
- TIM17_TISEL TI1SEL LL_TIM_SetRemap
-

LL_TIM_EnableHSE32

Function name

__STATIC_INLINE void LL_TIM_EnableHSE32 (TIM_TypeDef * TIMx)

Function description

Enable request for HSE/32 clock used for TISEL remap.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Only TIM16 and TIM17 support HSE/32 remap
- The Cut1.x contains a limitation when using HSE/32 as input capture for TIM16
- Bug ID 56: On TIM16, the HSE/32 input capture requires the set of HSE32EN bit of TIM17 Option Register

Reference Manual to LL API cross reference:

- OR1 HSE32EN LL_TIM_EnableHSE32

LL_TIM_DisableHSE32

Function name

__STATIC_INLINE void LL_TIM_DisableHSE32 (TIM_TypeDef * TIMx)

Function description

Disable request for HSE/32 clock used for TISEL remap.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Only TIM16 and TIM17 support HSE/32 remap

Reference Manual to LL API cross reference:

- OR1 HSE32EN LL_TIM_DisableHSE32

LL_TIM_IsEnabledHSE32

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledHSE32 (const TIM_TypeDef * TIMx)

Function description

Indicate whether request for HSE/32 clock is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Only TIM16 and TIM17 support HSE/32 remap

Reference Manual to LL API cross reference:

- OR1 HSE32EN LL_TIM_IsEnabledHSE32

LL_TIM_SetOCRefClearInputSource

Function name

__STATIC_INLINE void LL_TIM_SetOCRefClearInputSource (TIM_TypeDef * TIMx, uint32_t OCRefClearInputSource)

Function description

Set the OCREF clear input source.

Parameters

- **TIMx:** Timer instance
- **OCRefClearInputSource:** This parameter can be one of the following values:
  - LL_TIM_OCREF_CLR_INT_ETR
  - LL_TIM_OCREF_CLR_INT_COMP1
  - LL_TIM_OCREF_CLR_INT_COMP2 (*)

  (*) Value not defined in all devices.
- – LL_TIM_OCREF_CLR_INT_COMP2

Return values

- **None:**

Notes

- The OCxREF signal of a given channel can be cleared when a high level is applied on the OCREF_CLR_INPUT
- This function can only be used in Output compare and PWM modes.

Reference Manual to LL API cross reference:

- SMCR OCCS LL_TIM_SetOCRefClearInputSource
- AF2 OCRSEL LL_TIM_SetOCRefClearInputSource

LL_TIM_ClearFlag_UPDATE

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_UPDATE (TIM_TypeDef * TIMx)

Function description

Clear the update interrupt flag (UIF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR UIF LL_TIM_ClearFlag_UPDATE

LL_TIM_IsActiveFlag_UPDATE

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_UPDATE (const TIM_TypeDef * TIMx)

Function description

Indicate whether update interrupt flag (UIF) is set (update interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR UIF LL_TIM_IsActiveFlag_UPDATE

LL_TIM_ClearFlag_CC1

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC1 (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 1 interrupt flag (CC1F).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC1IF LL_TIM_ClearFlag_CC1

LL_TIM_IsActiveFlag_CC1

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC1 (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 1 interrupt flag (CC1F) is set (Capture/Compare 1 interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC1IF LL_TIM_IsActiveFlag_CC1

LL_TIM_ClearFlag_CC2

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC2 (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 2 interrupt flag (CC2F).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC2IF LL_TIM_ClearFlag_CC2

LL_TIM_IsActiveFlag_CC2

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC2 (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 2 interrupt flag (CC2F) is set (Capture/Compare 2 interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC2IF LL_TIM_IsActiveFlag_CC2

LL_TIM_ClearFlag_CC3

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC3 (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 3 interrupt flag (CC3F).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC3IF LL_TIM_ClearFlag_CC3

LL_TIM_IsActiveFlag_CC3

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC3 (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 3 interrupt flag (CC3F) is set (Capture/Compare 3 interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC3IF LL_TIM_IsActiveFlag_CC3

LL_TIM_ClearFlag_CC4

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC4 (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 4 interrupt flag (CC4F).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC4IF LL_TIM_ClearFlag_CC4

LL_TIM_IsActiveFlag_CC4

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC4 (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 4 interrupt flag (CC4F) is set (Capture/Compare 4 interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC4IF LL_TIM_IsActiveFlag_CC4

LL_TIM_ClearFlag_CC5

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC5 (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 5 interrupt flag (CC5F).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC5IF LL_TIM_ClearFlag_CC5

LL_TIM_IsActiveFlag_CC5

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC5 (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 5 interrupt flag (CC5F) is set (Capture/Compare 5 interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC5IF LL_TIM_IsActiveFlag_CC5

LL_TIM_ClearFlag_CC6

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC6 (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 6 interrupt flag (CC6F).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC6IF LL_TIM_ClearFlag_CC6

LL_TIM_IsActiveFlag_CC6

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC6 (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 6 interrupt flag (CC6F) is set (Capture/Compare 6 interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC6IF LL_TIM_IsActiveFlag_CC6

LL_TIM_ClearFlag_COM

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_COM (TIM_TypeDef * TIMx)

Function description

Clear the commutation interrupt flag (COMIF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR COMIF LL_TIM_ClearFlag_COM

LL_TIM_IsActiveFlag_COM

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_COM (const TIM_TypeDef * TIMx)

Function description

Indicate whether commutation interrupt flag (COMIF) is set (commutation interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR COMIF LL_TIM_IsActiveFlag_COM

LL_TIM_ClearFlag_TRIG

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_TRIG (TIM_TypeDef * TIMx)

Function description

Clear the trigger interrupt flag (TIF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR TIF LL_TIM_ClearFlag_TRIG

LL_TIM_IsActiveFlag_TRIG

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_TRIG (const TIM_TypeDef * TIMx)

Function description

Indicate whether trigger interrupt flag (TIF) is set (trigger interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR TIF LL_TIM_IsActiveFlag_TRIG

LL_TIM_ClearFlag_BRK

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_BRK (TIM_TypeDef * TIMx)

Function description

Clear the break interrupt flag (BIF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR BIF LL_TIM_ClearFlag_BRK

LL_TIM_IsActiveFlag_BRK

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_BRK (const TIM_TypeDef * TIMx)

Function description

Indicate whether break interrupt flag (BIF) is set (break interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR BIF LL_TIM_IsActiveFlag_BRK

LL_TIM_ClearFlag_BRK2

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_BRK2 (TIM_TypeDef * TIMx)

Function description

Clear the break 2 interrupt flag (B2IF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR B2IF LL_TIM_ClearFlag_BRK2

LL_TIM_IsActiveFlag_BRK2

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_BRK2 (const TIM_TypeDef * TIMx)

Function description

Indicate whether break 2 interrupt flag (B2IF) is set (break 2 interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR B2IF LL_TIM_IsActiveFlag_BRK2

LL_TIM_ClearFlag_CC1OVR

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC1OVR (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 1 over-capture interrupt flag (CC1OF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC1OF LL_TIM_ClearFlag_CC1OVR

LL_TIM_IsActiveFlag_CC1OVR

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC1OVR (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 1 over-capture interrupt flag (CC1OF) is set (Capture/Compare 1 interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC1OF LL_TIM_IsActiveFlag_CC1OVR

LL_TIM_ClearFlag_CC2OVR

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC2OVR (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 2 over-capture interrupt flag (CC2OF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC2OF LL_TIM_ClearFlag_CC2OVR

LL_TIM_IsActiveFlag_CC2OVR

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC2OVR (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 2 over-capture interrupt flag (CC2OF) is set (Capture/Compare 2 over-capture interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC2OF LL_TIM_IsActiveFlag_CC2OVR

LL_TIM_ClearFlag_CC3OVR

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC3OVR (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 3 over-capture interrupt flag (CC3OF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC3OF LL_TIM_ClearFlag_CC3OVR

LL_TIM_IsActiveFlag_CC3OVR

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC3OVR (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 3 over-capture interrupt flag (CC3OF) is set (Capture/Compare 3 over-capture interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC3OF LL_TIM_IsActiveFlag_CC3OVR

LL_TIM_ClearFlag_CC4OVR

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC4OVR (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 4 over-capture interrupt flag (CC4OF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC4OF LL_TIM_ClearFlag_CC4OVR

LL_TIM_IsActiveFlag_CC4OVR

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC4OVR (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 4 over-capture interrupt flag (CC4OF) is set (Capture/Compare 4 over-capture interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC4OF LL_TIM_IsActiveFlag_CC4OVR

LL_TIM_ClearFlag_SYSBRK

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_SYSBRK (TIM_TypeDef * TIMx)

Function description

Clear the system break interrupt flag (SBIF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR SBIF LL_TIM_ClearFlag_SYSBRK

LL_TIM_IsActiveFlag_SYSBRK

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_SYSBRK (const TIM_TypeDef * TIMx)

Function description

Indicate whether system break interrupt flag (SBIF) is set (system break interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR SBIF LL_TIM_IsActiveFlag_SYSBRK

LL_TIM_ClearFlag_TERR

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_TERR (TIM_TypeDef * TIMx)

Function description

Clear the transition error interrupt flag (TERRF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_ENCODER_ERROR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder error management.

Reference Manual to LL API cross reference:

- SR TERRF LL_TIM_ClearFlag_TERR

LL_TIM_IsActiveFlag_TERR

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_TERR (const TIM_TypeDef * TIMx)

Function description

Indicate whether transition error interrupt flag (TERRF) is set (transition error interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_ENCODER_ERROR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder error management.

Reference Manual to LL API cross reference:

- SR TERRF LL_TIM_IsActiveFlag_TERR

LL_TIM_ClearFlag_IERR

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_IERR (TIM_TypeDef * TIMx)

Function description

Clear the index error interrupt flag (IERRF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_ENCODER_ERROR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder error management.

Reference Manual to LL API cross reference:

- SR IERRF LL_TIM_ClearFlag_IERR

LL_TIM_IsActiveFlag_IERR

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_IERR (const TIM_TypeDef * TIMx)

Function description

Indicate whether index error interrupt flag (IERRF) is set (index error interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_ENCODER_ERROR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder error management.

Reference Manual to LL API cross reference:

- SR IERRF LL_TIM_IsActiveFlag_IERR

LL_TIM_ClearFlag_DIR

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_DIR (TIM_TypeDef * TIMx)

Function description

Clear the direction change interrupt flag (DIRF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_FUNCTINONAL_ENCODER_INTERRUPT_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder interrupt management.

Reference Manual to LL API cross reference:

- SR DIRF LL_TIM_ClearFlag_DIR

LL_TIM_IsActiveFlag_DIR

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_DIR (const TIM_TypeDef * TIMx)

Function description

Indicate whether direction change interrupt flag (DIRF) is set (direction change interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_FUNCTINONAL_ENCODER_INTERRUPT_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder interrupt management.

Reference Manual to LL API cross reference:

- SR DIRF LL_TIM_IsActiveFlag_DIR

LL_TIM_ClearFlag_IDX

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_IDX (TIM_TypeDef * TIMx)

Function description

Clear the index interrupt flag (IDXF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_FUNCTINONAL_ENCODER_INTERRUPT_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder interrupt management.

Reference Manual to LL API cross reference:

- SR IDXF LL_TIM_ClearFlag_IDX

LL_TIM_IsActiveFlag_IDX

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_IDX (const TIM_TypeDef * TIMx)

Function description

Indicate whether index interrupt flag (IDXF) is set (index interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_FUNCTINONAL_ENCODER_INTERRUPT_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder interrupt management.

Reference Manual to LL API cross reference:

- SR IDXF LL_TIM_IsActiveFlag_IDX

LL_TIM_EnableIT_UPDATE

Function name

__STATIC_INLINE void LL_TIM_EnableIT_UPDATE (TIM_TypeDef * TIMx)

Function description

Enable update interrupt (UIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER UIE LL_TIM_EnableIT_UPDATE

LL_TIM_DisableIT_UPDATE

Function name

__STATIC_INLINE void LL_TIM_DisableIT_UPDATE (TIM_TypeDef * TIMx)

Function description

Disable update interrupt (UIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER UIE LL_TIM_DisableIT_UPDATE

LL_TIM_IsEnabledIT_UPDATE

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_UPDATE (const TIM_TypeDef * TIMx)

Function description

Indicates whether the update interrupt (UIE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER UIE LL_TIM_IsEnabledIT_UPDATE

LL_TIM_EnableIT_CC1

Function name

__STATIC_INLINE void LL_TIM_EnableIT_CC1 (TIM_TypeDef * TIMx)

Function description

Enable capture/compare 1 interrupt (CC1IE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC1IE LL_TIM_EnableIT_CC1

LL_TIM_DisableIT_CC1

Function name

__STATIC_INLINE void LL_TIM_DisableIT_CC1 (TIM_TypeDef * TIMx)

Function description

Disable capture/compare 1 interrupt (CC1IE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC1IE LL_TIM_DisableIT_CC1

LL_TIM_IsEnabledIT_CC1

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_CC1 (const TIM_TypeDef * TIMx)

Function description

Indicates whether the capture/compare 1 interrupt (CC1IE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC1IE LL_TIM_IsEnabledIT_CC1

LL_TIM_EnableIT_CC2

Function name

__STATIC_INLINE void LL_TIM_EnableIT_CC2 (TIM_TypeDef * TIMx)

Function description

Enable capture/compare 2 interrupt (CC2IE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC2IE LL_TIM_EnableIT_CC2

LL_TIM_DisableIT_CC2

Function name

__STATIC_INLINE void LL_TIM_DisableIT_CC2 (TIM_TypeDef * TIMx)

Function description

Disable capture/compare 2 interrupt (CC2IE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC2IE LL_TIM_DisableIT_CC2

LL_TIM_IsEnabledIT_CC2

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_CC2 (const TIM_TypeDef * TIMx)

Function description

Indicates whether the capture/compare 2 interrupt (CC2IE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC2IE LL_TIM_IsEnabledIT_CC2

LL_TIM_EnableIT_CC3

Function name

__STATIC_INLINE void LL_TIM_EnableIT_CC3 (TIM_TypeDef * TIMx)

Function description

Enable capture/compare 3 interrupt (CC3IE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC3IE LL_TIM_EnableIT_CC3

LL_TIM_DisableIT_CC3

Function name

__STATIC_INLINE void LL_TIM_DisableIT_CC3 (TIM_TypeDef * TIMx)

Function description

Disable capture/compare 3 interrupt (CC3IE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC3IE LL_TIM_DisableIT_CC3

LL_TIM_IsEnabledIT_CC3

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_CC3 (const TIM_TypeDef * TIMx)

Function description

Indicates whether the capture/compare 3 interrupt (CC3IE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC3IE LL_TIM_IsEnabledIT_CC3

LL_TIM_EnableIT_CC4

Function name

__STATIC_INLINE void LL_TIM_EnableIT_CC4 (TIM_TypeDef * TIMx)

Function description

Enable capture/compare 4 interrupt (CC4IE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC4IE LL_TIM_EnableIT_CC4

LL_TIM_DisableIT_CC4

Function name

__STATIC_INLINE void LL_TIM_DisableIT_CC4 (TIM_TypeDef * TIMx)

Function description

Disable capture/compare 4 interrupt (CC4IE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC4IE LL_TIM_DisableIT_CC4

LL_TIM_IsEnabledIT_CC4

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_CC4 (const TIM_TypeDef * TIMx)

Function description

Indicates whether the capture/compare 4 interrupt (CC4IE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC4IE LL_TIM_IsEnabledIT_CC4

LL_TIM_EnableIT_COM

Function name

__STATIC_INLINE void LL_TIM_EnableIT_COM (TIM_TypeDef * TIMx)

Function description

Enable commutation interrupt (COMIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER COMIE LL_TIM_EnableIT_COM

LL_TIM_DisableIT_COM

Function name

__STATIC_INLINE void LL_TIM_DisableIT_COM (TIM_TypeDef * TIMx)

Function description

Disable commutation interrupt (COMIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER COMIE LL_TIM_DisableIT_COM

LL_TIM_IsEnabledIT_COM

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_COM (const TIM_TypeDef * TIMx)

Function description

Indicates whether the commutation interrupt (COMIE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER COMIE LL_TIM_IsEnabledIT_COM

LL_TIM_EnableIT_TRIG

Function name

__STATIC_INLINE void LL_TIM_EnableIT_TRIG (TIM_TypeDef * TIMx)

Function description

Enable trigger interrupt (TIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER TIE LL_TIM_EnableIT_TRIG

LL_TIM_DisableIT_TRIG

Function name

__STATIC_INLINE void LL_TIM_DisableIT_TRIG (TIM_TypeDef * TIMx)

Function description

Disable trigger interrupt (TIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER TIE LL_TIM_DisableIT_TRIG

LL_TIM_IsEnabledIT_TRIG

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_TRIG (const TIM_TypeDef * TIMx)

Function description

Indicates whether the trigger interrupt (TIE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER TIE LL_TIM_IsEnabledIT_TRIG

LL_TIM_EnableIT_BRK

Function name

__STATIC_INLINE void LL_TIM_EnableIT_BRK (TIM_TypeDef * TIMx)

Function description

Enable break interrupt (BIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER BIE LL_TIM_EnableIT_BRK

LL_TIM_DisableIT_BRK

Function name

__STATIC_INLINE void LL_TIM_DisableIT_BRK (TIM_TypeDef * TIMx)

Function description

Disable break interrupt (BIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER BIE LL_TIM_DisableIT_BRK

LL_TIM_IsEnabledIT_BRK

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_BRK (const TIM_TypeDef * TIMx)

Function description

Indicates whether the break interrupt (BIE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER BIE LL_TIM_IsEnabledIT_BRK

LL_TIM_EnableIT_TERR

Function name

__STATIC_INLINE void LL_TIM_EnableIT_TERR (TIM_TypeDef * TIMx)

Function description

Enable transition error interrupt (TERRIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_ENCODER_ERROR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder error management.

Reference Manual to LL API cross reference:

- DIER TERRIE LL_TIM_EnableIT_TERR

LL_TIM_DisableIT_TERR

Function name

__STATIC_INLINE void LL_TIM_DisableIT_TERR (TIM_TypeDef * TIMx)

Function description

Disable transition error interrupt (TERRIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_ENCODER_ERROR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder error management.

Reference Manual to LL API cross reference:

- DIER TERRIE LL_TIM_DisableIT_TERR

LL_TIM_IsEnabledIT_TERR

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_TERR (const TIM_TypeDef * TIMx)

Function description

Indicates whether the transition error interrupt (TERRIE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_ENCODER_ERROR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder error management.

Reference Manual to LL API cross reference:

- DIER TERRIE LL_TIM_IsEnabledIT_TERR

LL_TIM_EnableIT_IERR

Function name

__STATIC_INLINE void LL_TIM_EnableIT_IERR (TIM_TypeDef * TIMx)

Function description

Enable index error interrupt (IERRIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_ENCODER_ERROR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder error management.

Reference Manual to LL API cross reference:

- DIER IERRIE LL_TIM_EnableIT_IERR

LL_TIM_DisableIT_IERR

Function name

__STATIC_INLINE void LL_TIM_DisableIT_IERR (TIM_TypeDef * TIMx)

Function description

Disable index error interrupt (IERRIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_ENCODER_ERROR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder error management.

Reference Manual to LL API cross reference:

- DIER IERRIE LL_TIM_DisableIT_IERR

LL_TIM_IsEnabledIT_IERR

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_IERR (const TIM_TypeDef * TIMx)

Function description

Indicates whether the index error interrupt (IERRIE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_ENCODER_ERROR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder error management.

Reference Manual to LL API cross reference:

- DIER IERRIE LL_TIM_IsEnabledIT_IERR

LL_TIM_EnableIT_DIR

Function name

__STATIC_INLINE void LL_TIM_EnableIT_DIR (TIM_TypeDef * TIMx)

Function description

Enable direction change interrupt (DIRIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_FUNCTINONAL_ENCODER_INTERRUPT_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder interrupt management.

Reference Manual to LL API cross reference:

- DIER DIRIE LL_TIM_EnableIT_DIR

LL_TIM_DisableIT_DIR

Function name

__STATIC_INLINE void LL_TIM_DisableIT_DIR (TIM_TypeDef * TIMx)

Function description

Disable direction change interrupt (DIRIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_FUNCTINONAL_ENCODER_INTERRUPT_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder interrupt management.

Reference Manual to LL API cross reference:

- DIER DIRIE LL_TIM_DisableIT_DIR

LL_TIM_IsEnabledIT_DIR

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_DIR (const TIM_TypeDef * TIMx)

Function description

Indicates whether the direction change interrupt (DIRIE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_FUNCTINONAL_ENCODER_INTERRUPT_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder interrupt management.

Reference Manual to LL API cross reference:

- DIER DIRIE LL_TIM_IsEnabledIT_DIR

LL_TIM_EnableIT_IDX

Function name

__STATIC_INLINE void LL_TIM_EnableIT_IDX (TIM_TypeDef * TIMx)

Function description

Enable index interrupt (IDXIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_FUNCTINONAL_ENCODER_INTERRUPT_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder interrupt management.

Reference Manual to LL API cross reference:

- DIER IDXIE LL_TIM_EnableIT_IDX

LL_TIM_DisableIT_IDX

Function name

__STATIC_INLINE void LL_TIM_DisableIT_IDX (TIM_TypeDef * TIMx)

Function description

Disable index interrupt (IDXIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_FUNCTINONAL_ENCODER_INTERRUPT_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder interrupt management.

Reference Manual to LL API cross reference:

- DIER IDXIE LL_TIM_DisableIT_IDX

LL_TIM_IsEnabledIT_IDX

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_IDX (const TIM_TypeDef * TIMx)

Function description

Indicates whether the index interrupt (IDXIE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_FUNCTINONAL_ENCODER_INTERRUPT_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder interrupt management.

Reference Manual to LL API cross reference:

- DIER IDXIE LL_TIM_IsEnabledIT_IDX

LL_TIM_EnableDMAReq_UPDATE

Function name

__STATIC_INLINE void LL_TIM_EnableDMAReq_UPDATE (TIM_TypeDef * TIMx)

Function description

Enable update DMA request (UDE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER UDE LL_TIM_EnableDMAReq_UPDATE

LL_TIM_DisableDMAReq_UPDATE

Function name

__STATIC_INLINE void LL_TIM_DisableDMAReq_UPDATE (TIM_TypeDef * TIMx)

Function description

Disable update DMA request (UDE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER UDE LL_TIM_DisableDMAReq_UPDATE

LL_TIM_IsEnabledDMAReq_UPDATE

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledDMAReq_UPDATE (const TIM_TypeDef * TIMx)

Function description

Indicates whether the update DMA request (UDE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER UDE LL_TIM_IsEnabledDMAReq_UPDATE

LL_TIM_EnableDMAReq_CC1

Function name

__STATIC_INLINE void LL_TIM_EnableDMAReq_CC1 (TIM_TypeDef * TIMx)

Function description

Enable capture/compare 1 DMA request (CC1DE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC1DE LL_TIM_EnableDMAReq_CC1

LL_TIM_DisableDMAReq_CC1

Function name

__STATIC_INLINE void LL_TIM_DisableDMAReq_CC1 (TIM_TypeDef * TIMx)

Function description

Disable capture/compare 1 DMA request (CC1DE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC1DE LL_TIM_DisableDMAReq_CC1

LL_TIM_IsEnabledDMAReq_CC1

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledDMAReq_CC1 (const TIM_TypeDef * TIMx)

Function description

Indicates whether the capture/compare 1 DMA request (CC1DE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC1DE LL_TIM_IsEnabledDMAReq_CC1

LL_TIM_EnableDMAReq_CC2

Function name

__STATIC_INLINE void LL_TIM_EnableDMAReq_CC2 (TIM_TypeDef * TIMx)

Function description

Enable capture/compare 2 DMA request (CC2DE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC2DE LL_TIM_EnableDMAReq_CC2

LL_TIM_DisableDMAReq_CC2

Function name

__STATIC_INLINE void LL_TIM_DisableDMAReq_CC2 (TIM_TypeDef * TIMx)

Function description

Disable capture/compare 2 DMA request (CC2DE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC2DE LL_TIM_DisableDMAReq_CC2

LL_TIM_IsEnabledDMAReq_CC2

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledDMAReq_CC2 (const TIM_TypeDef * TIMx)

Function description

Indicates whether the capture/compare 2 DMA request (CC2DE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC2DE LL_TIM_IsEnabledDMAReq_CC2

LL_TIM_EnableDMAReq_CC3

Function name

__STATIC_INLINE void LL_TIM_EnableDMAReq_CC3 (TIM_TypeDef * TIMx)

Function description

Enable capture/compare 3 DMA request (CC3DE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC3DE LL_TIM_EnableDMAReq_CC3

LL_TIM_DisableDMAReq_CC3

Function name

__STATIC_INLINE void LL_TIM_DisableDMAReq_CC3 (TIM_TypeDef * TIMx)

Function description

Disable capture/compare 3 DMA request (CC3DE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC3DE LL_TIM_DisableDMAReq_CC3

LL_TIM_IsEnabledDMAReq_CC3

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledDMAReq_CC3 (const TIM_TypeDef * TIMx)

Function description

Indicates whether the capture/compare 3 DMA request (CC3DE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC3DE LL_TIM_IsEnabledDMAReq_CC3

LL_TIM_EnableDMAReq_CC4

Function name

__STATIC_INLINE void LL_TIM_EnableDMAReq_CC4 (TIM_TypeDef * TIMx)

Function description

Enable capture/compare 4 DMA request (CC4DE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC4DE LL_TIM_EnableDMAReq_CC4

LL_TIM_DisableDMAReq_CC4

Function name

__STATIC_INLINE void LL_TIM_DisableDMAReq_CC4 (TIM_TypeDef * TIMx)

Function description

Disable capture/compare 4 DMA request (CC4DE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC4DE LL_TIM_DisableDMAReq_CC4

LL_TIM_IsEnabledDMAReq_CC4

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledDMAReq_CC4 (const TIM_TypeDef * TIMx)

Function description

Indicates whether the capture/compare 4 DMA request (CC4DE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC4DE LL_TIM_IsEnabledDMAReq_CC4

LL_TIM_EnableDMAReq_COM

Function name

__STATIC_INLINE void LL_TIM_EnableDMAReq_COM (TIM_TypeDef * TIMx)

Function description

Enable commutation DMA request (COMDE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER COMDE LL_TIM_EnableDMAReq_COM

LL_TIM_DisableDMAReq_COM

Function name

__STATIC_INLINE void LL_TIM_DisableDMAReq_COM (TIM_TypeDef * TIMx)

Function description

Disable commutation DMA request (COMDE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER COMDE LL_TIM_DisableDMAReq_COM

LL_TIM_IsEnabledDMAReq_COM

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledDMAReq_COM (const TIM_TypeDef * TIMx)

Function description

Indicates whether the commutation DMA request (COMDE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER COMDE LL_TIM_IsEnabledDMAReq_COM

LL_TIM_EnableDMAReq_TRIG

Function name

__STATIC_INLINE void LL_TIM_EnableDMAReq_TRIG (TIM_TypeDef * TIMx)

Function description

Enable trigger interrupt (TDE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER TDE LL_TIM_EnableDMAReq_TRIG

LL_TIM_DisableDMAReq_TRIG

Function name

__STATIC_INLINE void LL_TIM_DisableDMAReq_TRIG (TIM_TypeDef * TIMx)

Function description

Disable trigger interrupt (TDE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER TDE LL_TIM_DisableDMAReq_TRIG

LL_TIM_IsEnabledDMAReq_TRIG

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledDMAReq_TRIG (const TIM_TypeDef * TIMx)

Function description

Indicates whether the trigger interrupt (TDE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER TDE LL_TIM_IsEnabledDMAReq_TRIG

LL_TIM_GenerateEvent_UPDATE

Function name

__STATIC_INLINE void LL_TIM_GenerateEvent_UPDATE (TIM_TypeDef * TIMx)

Function description

Generate an update event.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EGR UG LL_TIM_GenerateEvent_UPDATE

LL_TIM_GenerateEvent_CC1

Function name

__STATIC_INLINE void LL_TIM_GenerateEvent_CC1 (TIM_TypeDef * TIMx)

Function description

Generate Capture/Compare 1 event.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EGR CC1G LL_TIM_GenerateEvent_CC1

LL_TIM_GenerateEvent_CC2

Function name

__STATIC_INLINE void LL_TIM_GenerateEvent_CC2 (TIM_TypeDef * TIMx)

Function description

Generate Capture/Compare 2 event.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EGR CC2G LL_TIM_GenerateEvent_CC2

LL_TIM_GenerateEvent_CC3

Function name

__STATIC_INLINE void LL_TIM_GenerateEvent_CC3 (TIM_TypeDef * TIMx)

Function description

Generate Capture/Compare 3 event.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EGR CC3G LL_TIM_GenerateEvent_CC3

LL_TIM_GenerateEvent_CC4

Function name

__STATIC_INLINE void LL_TIM_GenerateEvent_CC4 (TIM_TypeDef * TIMx)

Function description

Generate Capture/Compare 4 event.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EGR CC4G LL_TIM_GenerateEvent_CC4

LL_TIM_GenerateEvent_COM

Function name

__STATIC_INLINE void LL_TIM_GenerateEvent_COM (TIM_TypeDef * TIMx)

Function description

Generate commutation event.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EGR COMG LL_TIM_GenerateEvent_COM

LL_TIM_GenerateEvent_TRIG

Function name

__STATIC_INLINE void LL_TIM_GenerateEvent_TRIG (TIM_TypeDef * TIMx)

Function description

Generate trigger event.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EGR TG LL_TIM_GenerateEvent_TRIG

LL_TIM_GenerateEvent_BRK

Function name

__STATIC_INLINE void LL_TIM_GenerateEvent_BRK (TIM_TypeDef * TIMx)

Function description

Generate break event.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EGR BG LL_TIM_GenerateEvent_BRK

LL_TIM_GenerateEvent_BRK2

Function name

__STATIC_INLINE void LL_TIM_GenerateEvent_BRK2 (TIM_TypeDef * TIMx)

Function description

Generate break 2 event.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EGR B2G LL_TIM_GenerateEvent_BRK2

LL_TIM_DeInit

Function name

ErrorStatus LL_TIM_DeInit (const TIM_TypeDef * TIMx)

Function description

Set TIMx registers to their reset values.

Parameters

- **TIMx:** Timer instance

Return values

- **An:** ErrorStatus enumeration value:
  – SUCCESS: TIMx registers are de-initialized
  – ERROR: invalid TIMx instance

LL_TIM_StructInit

Function name

void LL_TIM_StructInit (LL_TIM_InitTypeDef * TIM_InitStruct)

Function description

Set the fields of the time base unit configuration data structure to their default values.

Parameters

- **TIM_InitStruct:** pointer to a LL_TIM_InitTypeDef structure (time base unit configuration data structure)

Return values

- **None:**

LL_TIM_Init

Function name

ErrorStatus LL_TIM_Init (TIM_TypeDef * TIMx, const LL_TIM_InitTypeDef * TIM_InitStruct)

Function description

Configure the TIMx time base unit.

Parameters

- **TIMx:** Timer Instance
- **TIM_InitStruct:** pointer to a LL_TIM_InitTypeDef structure (TIMx time base unit configuration data structure)

Return values

- **An:** ErrorStatus enumeration value:
  – SUCCESS: TIMx registers are de-initialized
  – ERROR: not applicable

LL_TIM_OC_StructInit

Function name

void LL_TIM_OC_StructInit (LL_TIM_OC_InitTypeDef * TIM_OC_InitStruct)

Function description

Set the fields of the TIMx output channel configuration data structure to their default values.

Parameters

- **TIM_OC_InitStruct:** pointer to a LL_TIM_OC_InitTypeDef structure (the output channel configuration data structure)

Return values

- **None:**

LL_TIM_OC_Init

Function name

ErrorStatus LL_TIM_OC_Init (TIM_TypeDef * TIMx, uint32_t Channel, const LL_TIM_OC_InitTypeDef * TIM_OC_InitStruct)

Function description

Configure the TIMx output channel.

Parameters

- **TIMx:** Timer Instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6
- **TIM_OC_InitStruct:** pointer to a LL_TIM_OC_InitTypeDef structure (TIMx output channel configuration data structure)

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: TIMx output channel is initialized
  - ERROR: TIMx output channel is not initialized

LL_TIM_IC_StructInit

Function name

void LL_TIM_IC_StructInit (LL_TIM_IC_InitTypeDef * TIM_ICInitStruct)

Function description

Set the fields of the TIMx input channel configuration data structure to their default values.

Parameters

- **TIM_ICInitStruct:** pointer to a LL_TIM_IC_InitTypeDef structure (the input channel configuration data structure)

Return values

- **None:**

LL_TIM_IC_Init

Function name

ErrorStatus LL_TIM_IC_Init (TIM_TypeDef * TIMx, uint32_t Channel, const LL_TIM_IC_InitTypeDef * TIM_IC_InitStruct)

Function description

Configure the TIMx input channel.

Parameters

- **TIMx:** Timer Instance
- **Channel:** This parameter can be one of the following values:
  – LL_TIM_CHANNEL_CH1
  – LL_TIM_CHANNEL_CH2
  – LL_TIM_CHANNEL_CH3
  – LL_TIM_CHANNEL_CH4
- **TIM_IC_InitStruct:** pointer to a LL_TIM_IC_InitTypeDef structure (TIMx input channel configuration data structure)

Return values

- **An:** ErrorStatus enumeration value:
  – SUCCESS: TIMx output channel is initialized
  – ERROR: TIMx output channel is not initialized

LL_TIM_ENCODER_StructInit

Function name

void LL_TIM_ENCODER_StructInit (LL_TIM_ENCODER_InitTypeDef * TIM_EncoderInitStruct)

Function description

Fills each TIM_EncoderInitStruct field with its default value.

Parameters

- **TIM_EncoderInitStruct:** pointer to a LL_TIM_ENCODER_InitTypeDef structure (encoder interface configuration data structure)

Return values

- **None:**

LL_TIM_ENCODER_Init

Function name

ErrorStatus LL_TIM_ENCODER_Init (TIM_TypeDef * TIMx, const LL_TIM_ENCODER_InitTypeDef * TIM_EncoderInitStruct)

Function description

Configure the encoder interface of the timer instance.

Parameters

- **TIMx:** Timer Instance
- **TIM_EncoderInitStruct:** pointer to a LL_TIM_ENCODER_InitTypeDef structure (TIMx encoder interface configuration data structure)

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: TIMx registers are de-initialized
  - ERROR: not applicable

LL_TIM_HALLSENSOR_StructInit

Function name

void LL_TIM_HALLSENSOR_StructInit (LL_TIM_HALLSENSOR_InitTypeDef * TIM_HallSensorInitStruct)

Function description

Set the fields of the TIMx Hall sensor interface configuration data structure to their default values.

Parameters

- **TIM_HallSensorInitStruct:** pointer to a LL_TIM_HALLSENSOR_InitTypeDef structure (HALL sensor interface configuration data structure)

Return values

- **None:**

LL_TIM_HALLSENSOR_Init

Function name

ErrorStatus LL_TIM_HALLSENSOR_Init (TIM_TypeDef * TIMx, const LL_TIM_HALLSENSOR_InitTypeDef * TIM_HallSensorInitStruct)

Function description

Configure the Hall sensor interface of the timer instance.

Parameters

- **TIMx:** Timer Instance
- **TIM_HallSensorInitStruct:** pointer to a LL_TIM_HALLSENSOR_InitTypeDef structure (TIMx HALL sensor interface configuration data structure)

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: TIMx registers are de-initialized
  - ERROR: not applicable

Notes

- TIMx CH1, CH2 and CH3 inputs connected through a XOR to the TI1 input channel
- TIMx slave mode controller is configured in reset mode. Selected internal trigger is TI1F_ED.
- Channel 1 is configured as input, IC1 is mapped on TRC.
- Captured value stored in TIMx_CCR1 correspond to the time elapsed between 2 changes on the inputs. It gives information about motor speed.
- Channel 2 is configured in output PWM 2 mode.
- Compare value stored in TIMx_CCR2 corresponds to the commutation delay.
- OC2REF is selected as trigger output on TRGO.
- LL_TIM_IC_POLARITY_BOTHEDGE must not be used for TI1 when it is used when TIMx operates in Hall sensor interface mode.

LL_TIM_BDTR_StructInit

Function name

void LL_TIM_BDTR_StructInit (LL_TIM_BDTR_InitTypeDef * TIM_BDTRInitStruct)

Function description

Set the fields of the Break and Dead Time configuration data structure to their default values.

Parameters

- **TIM_BDTRInitStruct:** pointer to a LL_TIM_BDTR_InitTypeDef structure (Break and Dead Time configuration data structure)

Return values

- **None:**

LL_TIM_BDTR_Init

Function name

ErrorStatus LL_TIM_BDTR_Init (TIM_TypeDef * TIMx, const LL_TIM_BDTR_InitTypeDef * TIM_BDTRInitStruct)

Function description

Configure the Break and Dead Time feature of the timer instance.

Parameters

- **TIMx:** Timer Instance
- **TIM_BDTRInitStruct:** pointer to a LL_TIM_BDTR_InitTypeDef structure (Break and Dead Time configuration data structure)

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: Break and Dead Time is initialized
  - ERROR: not applicable

Notes

- As the bits BK2P, BK2E, BK2F[3:0], BKF[3:0], AOE, BKP, BKE, OSSI, OSSR and DTG[7:0] can be write-locked depending on the LOCK configuration, it can be necessary to configure all of them during the first write access to the TIMx_BDTR register.
- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.
- Macro IS_TIM_BKIN2_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a second break input.

119.3 TIM Firmware driver defines

The following section lists the various define and macros of the module.

119.3.1 TIM

TIM

Active Input Selection

LL_TIM_ACTIVEINPUT_DIRECTTI

ICx is mapped on TIx

LL_TIM_ACTIVEINPUT_INDIRECTTI

ICx is mapped on TIy

LL_TIM_ACTIVEINPUT_TRC

ICx is mapped on TRC

Automatic output enable

LL_TIM_AUTOMATICOUTPUT_DISABLE

MOE can be set only by software

LL_TIM_AUTOMATICOUTPUT_ENABLE

MOE can be set by software or automatically at the next update event

BKIN POLARITY

LL_TIM_BKIN_POLARITY_LOW

BRK BKIN input is active low

LL_TIM_BKIN_POLARITY_HIGH

BRK BKIN input is active high

BKIN SOURCE

LL_TIM_BKIN_SOURCE_BKIN

BKIN input from AF controller

LL_TIM_BKIN_SOURCE_BKCOMP1

internal signal: COMP1 output

LL_TIM_BKIN_SOURCE_BKCOMP2

internal signal: COMP2 output

LL_TIM_BKIN_SOURCE_MDF1

internal signal: Digital filter break output

BREAK2 AF MODE

LL_TIM_BREAK2_AFMODE_INPUT

Break2 input BRK2 in input mode

LL_TIM_BREAK2_AFMODE_BIDIRECTIONAL

Break2 input BRK2 in bidirectional mode

Break2 Enable

LL_TIM_BREAK2_DISABLE

Break2 function disabled

LL_TIM_BREAK2_ENABLE

Break2 function enabled

BREAK2 FILTER

LL_TIM_BREAK2_FILTER_FDIV1

No filter, BRK acts asynchronously

LL_TIM_BREAK2_FILTER_FDIV1_N2

fSAMPLING=fCK_INT, N=2

LL_TIM_BREAK2_FILTER_FDIV1_N4

fSAMPLING=fCK_INT, N=4

LL_TIM_BREAK2_FILTER_FDIV1_N8

fSAMPLING=fCK_INT, N=8

LL_TIM_BREAK2_FILTER_FDIV2_N6
fSAMPLING=fDTS/2, N=6

LL_TIM_BREAK2_FILTER_FDIV2_N8
fSAMPLING=fDTS/2, N=8

LL_TIM_BREAK2_FILTER_FDIV4_N6
fSAMPLING=fDTS/4, N=6

LL_TIM_BREAK2_FILTER_FDIV4_N8
fSAMPLING=fDTS/4, N=8

LL_TIM_BREAK2_FILTER_FDIV8_N6
fSAMPLING=fDTS/8, N=6

LL_TIM_BREAK2_FILTER_FDIV8_N8
fSAMPLING=fDTS/8, N=8

LL_TIM_BREAK2_FILTER_FDIV16_N5
fSAMPLING=fDTS/16, N=5

LL_TIM_BREAK2_FILTER_FDIV16_N6
fSAMPLING=fDTS/16, N=6

LL_TIM_BREAK2_FILTER_FDIV16_N8
fSAMPLING=fDTS/16, N=8

LL_TIM_BREAK2_FILTER_FDIV32_N5
fSAMPLING=fDTS/32, N=5

LL_TIM_BREAK2_FILTER_FDIV32_N6
fSAMPLING=fDTS/32, N=6

LL_TIM_BREAK2_FILTER_FDIV32_N8
fSAMPLING=fDTS/32, N=8

BREAK2 POLARITY

LL_TIM_BREAK2_POLARITY_LOW
Break input BRK2 is active low

LL_TIM_BREAK2_POLARITY_HIGH
Break input BRK2 is active high

BREAK AF MODE

LL_TIM_BREAK_AFMODE_INPUT
Break input BRK in input mode

LL_TIM_BREAK_AFMODE_BIDIRECTIONAL
Break input BRK in bidirectional mode

Break Enable

LL_TIM_BREAK_DISABLE
Break function disabled

LL_TIM_BREAK_ENABLE

Break function enabled

break filter

LL_TIM_BREAK_FILTER_FDIV1

No filter, BRK acts asynchronously

LL_TIM_BREAK_FILTER_FDIV1_N2

fSAMPLING=fCK_INT, N=2

LL_TIM_BREAK_FILTER_FDIV1_N4

fSAMPLING=fCK_INT, N=4

LL_TIM_BREAK_FILTER_FDIV1_N8

fSAMPLING=fCK_INT, N=8

LL_TIM_BREAK_FILTER_FDIV2_N6

fSAMPLING=fDTS/2, N=6

LL_TIM_BREAK_FILTER_FDIV2_N8

fSAMPLING=fDTS/2, N=8

LL_TIM_BREAK_FILTER_FDIV4_N6

fSAMPLING=fDTS/4, N=6

LL_TIM_BREAK_FILTER_FDIV4_N8

fSAMPLING=fDTS/4, N=8

LL_TIM_BREAK_FILTER_FDIV8_N6

fSAMPLING=fDTS/8, N=6

LL_TIM_BREAK_FILTER_FDIV8_N8

fSAMPLING=fDTS/8, N=8

LL_TIM_BREAK_FILTER_FDIV16_N5

fSAMPLING=fDTS/16, N=5

LL_TIM_BREAK_FILTER_FDIV16_N6

fSAMPLING=fDTS/16, N=6

LL_TIM_BREAK_FILTER_FDIV16_N8

fSAMPLING=fDTS/16, N=8

LL_TIM_BREAK_FILTER_FDIV32_N5

fSAMPLING=fDTS/32, N=5

LL_TIM_BREAK_FILTER_FDIV32_N6

fSAMPLING=fDTS/32, N=6

LL_TIM_BREAK_FILTER_FDIV32_N8

fSAMPLING=fDTS/32, N=8

BREAK INPUT

LL_TIM_BREAK_INPUT_BKIN

TIMx_BKIN input

LL_TIM_BREAK_INPUT_BKIN2

TIMx_BKIN2 input

break polarity

LL_TIM_BREAK_POLARITY_LOW

Break input BRK is active low

LL_TIM_BREAK_POLARITY_HIGH

Break input BRK is active high

Capture Compare DMA Request

LL_TIM_CCDMAREQUEST_CC

CCx DMA request sent when CCx event occurs

LL_TIM_CCDMAREQUEST_UPDATE

CCx DMA requests sent when update event occurs

Capture Compare Update Source

LL_TIM_CCUPDATESOURCE_COMG_ONLY

Capture/compare control bits are updated by setting the COMG bit only

LL_TIM_CCUPDATESOURCE_COMG_AND_TRGI

Capture/compare control bits are updated by setting the COMG bit or when a rising edge occurs on trigger input (TRGI)

Channel

LL_LPTIM_CHANNEL_CH1

LPTIM input/output channel 1

LL_LPTIM_CHANNEL_CH2

LPTIM input/output channel 2

LL_TIM_CHANNEL_CH1

Timer input/output channel 1

LL_TIM_CHANNEL_CH1N

Timer complementary output channel 1

LL_TIM_CHANNEL_CH2

Timer input/output channel 2

LL_TIM_CHANNEL_CH2N

Timer complementary output channel 2

LL_TIM_CHANNEL_CH3

Timer input/output channel 3

LL_TIM_CHANNEL_CH3N

Timer complementary output channel 3

LL_TIM_CHANNEL_CH4

Timer input/output channel 4

LL_TIM_CHANNEL_CH4N

Timer complementary output channel 4

LL_TIM_CHANNEL_CH5

Timer output channel 5

LL_TIM_CHANNEL_CH6

Timer output channel 6

Clock Division

LL_TIM_CLOCKDIVISION_DIV1

tDTS=tCK_INT

LL_TIM_CLOCKDIVISION_DIV2

tDTS=2*tCK_INT

LL_TIM_CLOCKDIVISION_DIV4

tDTS=4*tCK_INT

Clock Source

LL_TIM_CLOCKSOURCE_INTERNAL

The timer is clocked by the internal clock provided from the RCC

LL_TIM_CLOCKSOURCE_EXT_MODE1

Counter counts at each rising or falling edge on a selected input

LL_TIM_CLOCKSOURCE_EXT_MODE2

Counter counts at each rising or falling edge on the external trigger input ETR

Counter Direction

LL_TIM_COUNTERDIRECTION_UP

Timer counter counts up

LL_TIM_COUNTERDIRECTION_DOWN

Timer counter counts down

Counter Mode

LL_TIM_COUNTERMODE_UP

Counter used as upcounter

LL_TIM_COUNTERMODE_DOWN

Counter used as downcounter

LL_TIM_COUNTERMODE_CENTER_DOWN

The counter counts up and down alternatively. Output compare interrupt flags of output channels are set only when the counter is counting down.

LL_TIM_COUNTERMODE_CENTER_UP

The counter counts up and down alternatively. Output compare interrupt flags of output channels are set only when the counter is counting up

LL_TIM_COUNTERMODE_CENTER_UP_DOWN

The counter counts up and down alternatively. Output compare interrupt flags of output channels are set only when the counter is counting up or down.

DMA Burst Base Address

LL_TIM_DMABURST_BASEADDR_CR1

TIMx_CR1 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CR2

TIMx_CR2 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_SMCR

TIMx_SMCR register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_DIER

TIMx_DIER register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_SR

TIMx_SR register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_EGR

TIMx_EGR register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCMR1

TIMx_CCMR1 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCMR2

TIMx_CCMR2 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCER

TIMx_CCER register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CNT

TIMx_CNT register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_PSC

TIMx_PSC register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_ARR

TIMx_ARR register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_RCR

TIMx_RCR register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCR1

TIMx_CCR1 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCR2

TIMx_CCR2 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCR3

TIMx_CCR3 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCR4

TIMx_CCR4 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_BDTR

TIMx_BDTR register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCR5

TIMx_CCR5 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCR6

TIMx_CCR6 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCMR3

TIMx_CCMR3 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_DTR2

TIMx_DTR2 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_ECR

TIMx_ECR register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_TISEL

TIMx_TISEL register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_AF1

TIMx_AF1 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_AF2

TIMx_AF2 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_OR1

TIMx_OR1 register is the DMA base address for DMA burst

DMA Burst Length

LL_TIM_DMABURST_LENGTH_1TRANSFER

Transfer is done to 1 register starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_2TRANSFERS

Transfer is done to 2 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_3TRANSFERS

Transfer is done to 3 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_4TRANSFERS

Transfer is done to 4 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_5TRANSFERS

Transfer is done to 5 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_6TRANSFERS

Transfer is done to 6 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_7TRANSFERS

Transfer is done to 7 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_8TRANSFERS

Transfer is done to 1 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_9TRANSFERS

Transfer is done to 9 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_10TRANSFERS

Transfer is done to 10 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_11TRANSFERS

Transfer is done to 11 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_12TRANSFERS

Transfer is done to 12 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_13TRANSFERS

Transfer is done to 13 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_14TRANSFERS

Transfer is done to 14 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_15TRANSFERS

Transfer is done to 15 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_16TRANSFERS

Transfer is done to 16 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_17TRANSFERS

Transfer is done to 17 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_18TRANSFERS

Transfer is done to 18 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_19TRANSFERS

Transfer is done to 19 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_20TRANSFERS

Transfer is done to 20 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_21TRANSFERS

Transfer is done to 21 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_22TRANSFERS

Transfer is done to 22 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_23TRANSFERS

Transfer is done to 23 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_24TRANSFERS

Transfer is done to 24 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_25TRANSFERS

Transfer is done to 25 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_26TRANSFERS

Transfer is done to 26 registers starting from the DMA burst base address

DMA Burst Source

LL_TIM_DMA_UPDATE

Transfer source is update event

LL_TIM_DMA_CC1

Transfer source is CC1 event

LL_TIM_DMA_CC2

Transfer source is CC2 event

LL_TIM_DMA_CC3

Transfer source is CC3 event

LL_TIM_DMA_CC4

Transfer source is CC4 event

LL_TIM_DMA_COM

Transfer source is COM event

LL_TIM_DMA_TRIGGER

Transfer source is trigger event

Encoder Mode

LL_TIM_ENCODERMODE_X2_TI1

Quadrature encoder mode 1, x2 mode - Counter counts up/down on TI1FP1 edge depending on TI2FP2 level

LL_TIM_ENCODERMODE_X2_TI2

Quadrature encoder mode 2, x2 mode - Counter counts up/down on TI2FP2 edge depending on TI1FP1 level

LL_TIM_ENCODERMODE_X4_TI12

Quadrature encoder mode 3, x4 mode - Counter counts up/down on both TI1FP1 and TI2FP2 edges depending on the level of the other input

LL_TIM_ENCODERMODE_CLOCKPLUSDIRECTION_X2

Encoder mode: Clock plus direction - x2 mode

LL_TIM_ENCODERMODE_CLOCKPLUSDIRECTION_X1

Encoder mode: Clock plus direction, x1 mode, TI2FP2 edge sensitivity is set by CC2P

LL_TIM_ENCODERMODE_DIRECTIONALCLOCK_X2

Encoder mode: Directional Clock, x2 mode

LL_TIM_ENCODERMODE_DIRECTIONALCLOCK_X1_TI12

Encoder mode: Directional Clock, x1 mode, TI1FP1 and TI2FP2 edge sensitivity is set by CC1P and CC2P

LL_TIM_ENCODERMODE_X1_TI1

Quadrature encoder mode: x1 mode, counting on TI1FP1 edges only, edge sensitivity is set by CC1P

LL_TIM_ENCODERMODE_X1_TI2

Quadrature encoder mode: x1 mode, counting on TI2FP2 edges only, edge sensitivity is set by CC1P

External Trigger Filter

LL_TIM_ETR_FILTER_FDIV1

No filter, sampling is done at fDTS

LL_TIM_ETR_FILTER_FDIV1_N2

fSAMPLING=fCK_INT, N=2

LL_TIM_ETR_FILTER_FDIV1_N4

fSAMPLING=fCK_INT, N=4

LL_TIM_ETR_FILTER_FDIV1_N8

fSAMPLING=fCK_INT, N=8

LL_TIM_ETR_FILTER_FDIV2_N6

fSAMPLING=fDTS/2, N=6

LL_TIM_ETR_FILTER_FDIV2_N8

fSAMPLING=fDTS/2, N=8

LL_TIM_ETR_FILTER_FDIV4_N6

fSAMPLING=fDTS/4, N=6

LL_TIM_ETR_FILTER_FDIV4_N8

fSAMPLING=fDTS/4, N=8

LL_TIM_ETR_FILTER_FDIV8_N6

fSAMPLING=fDTS/8, N=6

LL_TIM_ETR_FILTER_FDIV8_N8

fSAMPLING=fDTS/16, N=8

LL_TIM_ETR_FILTER_FDIV16_N5

fSAMPLING=fDTS/16, N=5

LL_TIM_ETR_FILTER_FDIV16_N6

fSAMPLING=fDTS/16, N=6

LL_TIM_ETR_FILTER_FDIV16_N8

fSAMPLING=fDTS/16, N=8

LL_TIM_ETR_FILTER_FDIV32_N5

fSAMPLING=fDTS/32, N=5

LL_TIM_ETR_FILTER_FDIV32_N6

fSAMPLING=fDTS/32, N=6

LL_TIM_ETR_FILTER_FDIV32_N8

fSAMPLING=fDTS/32, N=8

External Trigger Polarity

LL_TIM_ETR_POLARITY_NONINVERTED

ETR is non-inverted, active at high level or rising edge

LL_TIM_ETR_POLARITY_INVERTED

ETR is inverted, active at low level or falling edge

External Trigger Prescaler

LL_TIM_ETR_PRESCALER_DIV1

ETR prescaler OFF

LL_TIM_ETR_PRESCALER_DIV2

ETR frequency is divided by 2

LL_TIM_ETR_PRESCALER_DIV4

ETR frequency is divided by 4

LL_TIM_ETR_PRESCALER_DIV8

ETR frequency is divided by 8

first index selection

LL_TIM_INDEX_ALL

Index is always active

LL_TIM_INDEX_FIRST_ONLY

The first Index only resets the counter

Get Flags Defines

LL_TIM_SR_UIF

Update interrupt flag

LL_TIM_SR_CC1IF

Capture/compare 1 interrupt flag

LL_TIM_SR_CC2IF

Capture/compare 2 interrupt flag

LL_TIM_SR_CC3IF

Capture/compare 3 interrupt flag

LL_TIM_SR_CC4IF

Capture/compare 4 interrupt flag

LL_TIM_SR_CC5IF

Capture/compare 5 interrupt flag

LL_TIM_SR_CC6IF

Capture/compare 6 interrupt flag

LL_TIM_SR_COMIF

COM interrupt flag

LL_TIM_SR_TIF

Trigger interrupt flag

LL_TIM_SR_BIF

Break interrupt flag

LL_TIM_SR_B2IF

Second break interrupt flag

LL_TIM_SR_CC1OF

Capture/Compare 1 overcapture flag

LL_TIM_SR_CC2OF

Capture/Compare 2 overcapture flag

LL_TIM_SR_CC3OF

Capture/Compare 3 overcapture flag

LL_TIM_SR_CC4OF

Capture/Compare 4 overcapture flag

LL_TIM_SR_SBIF

System Break interrupt flag

LL_TIM_SR_IDXF

Index interrupt flag

LL_TIM_SR_DIRF

Direction Change interrupt flag

LL_TIM_SR_IERRF

Index Error flag

LL_TIM_SR_TERRF

Transition Error flag

GROUPCH5

LL_TIM_GROUPCH5_NONE

No effect of OC5REF on OC1REFC, OC2REFC and OC3REFC

LL_TIM_GROUPCH5_OC1REFC

OC1REFC is the logical AND of OC1REFC and OC5REF

LL_TIM_GROUPCH5_OC2REFC

OC2REFC is the logical AND of OC2REFC and OC5REF

LL_TIM_GROUPCH5_OC3REFC

OC3REFC is the logical AND of OC3REFC and OC5REF

Input Configuration Prescaler

LL_TIM_ICPSC_DIV1

No prescaler, capture is done each time an edge is detected on the capture input

LL_TIM_ICPSC_DIV2

Capture is done once every 2 events

LL_TIM_ICPSC_DIV4

Capture is done once every 4 events

LL_TIM_ICPSC_DIV8

Capture is done once every 8 events

Input Configuration Filter

LL_TIM_IC_FILTER_FDIV1

No filter, sampling is done at fDTS

LL_TIM_IC_FILTER_FDIV1_N2

fSAMPLING=fCK_INT, N=2

LL_TIM_IC_FILTER_FDIV1_N4

fSAMPLING=fCK_INT, N=4

LL_TIM_IC_FILTER_FDIV1_N8

fSAMPLING=fCK_INT, N=8

LL_TIM_IC_FILTER_FDIV2_N6

fSAMPLING=fDTS/2, N=6

LL_TIM_IC_FILTER_FDIV2_N8

fSAMPLING=fDTS/2, N=8

LL_TIM_IC_FILTER_FDIV4_N6

fSAMPLING=fDTS/4, N=6

LL_TIM_IC_FILTER_FDIV4_N8

fSAMPLING=fDTS/4, N=8

LL_TIM_IC_FILTER_FDIV8_N6

fSAMPLING=fDTS/8, N=6

LL_TIM_IC_FILTER_FDIV8_N8

fSAMPLING=fDTS/8, N=8

LL_TIM_IC_FILTER_FDIV16_N5

fSAMPLING=fDTS/16, N=5

LL_TIM_IC_FILTER_FDIV16_N6

fSAMPLING=fDTS/16, N=6

LL_TIM_IC_FILTER_FDIV16_N8

fSAMPLING=fDTS/16, N=8

LL_TIM_IC_FILTER_FDIV32_N5

fSAMPLING=fDTS/32, N=5

LL_TIM_IC_FILTER_FDIV32_N6

fSAMPLING=fDTS/32, N=6

LL_TIM_IC_FILTER_FDIV32_N8

fSAMPLING=fDTS/32, N=8

Input Configuration Polarity

LL_TIM_IC_POLARITY_RISING

The circuit is sensitive to TIxFP1 rising edge, TIxFP1 is not inverted

LL_TIM_IC_POLARITY_FALLING

The circuit is sensitive to TIxFP1 falling edge, TIxFP1 is inverted

LL_TIM_IC_POLARITY_BOTHEDGE

The circuit is sensitive to both TIxFP1 rising and falling edges, TIxFP1 is not inverted

index blanking selection

LL_TIM_INDEX_BLANK_ALWAYS

Index always active

LL_TIM_INDEX_BLANK_TI3

Index disabled when TI3 input is active, as per CC3P bitfield

LL_TIM_INDEX_BLANK_TI4

Index disabled when TI4 input is active, as per CC4P bitfield

index direction selection

LL_TIM_INDEX_UP_DOWN

Index resets the counter whatever the direction

LL_TIM_INDEX_UP

Index resets the counter when up-counting only

LL_TIM_INDEX_DOWN

Index resets the counter when down-counting only

index positioning selection

LL_TIM_INDEX_POSITION_DOWN_DOWN

Index resets the counter when AB = 00

LL_TIM_INDEX_POSITION_DOWN_UP

Index resets the counter when AB = 01

LL_TIM_INDEX_POSITION_UP_DOWN

Index resets the counter when AB = 10

LL_TIM_INDEX_POSITION_UP_UP

Index resets the counter when AB = 11

LL_TIM_INDEX_POSITION_DOWN

Index resets the counter when clock is 0

LL_TIM_INDEX_POSITION_UP

Index resets the counter when clock is 1

IT Defines

LL_TIM_DIER_UIE

Update interrupt enable

LL_TIM_DIER_CC1IE

Capture/compare 1 interrupt enable

LL_TIM_DIER_CC2IE

Capture/compare 2 interrupt enable

LL_TIM_DIER_CC3IE

Capture/compare 3 interrupt enable

LL_TIM_DIER_CC4IE

Capture/compare 4 interrupt enable

LL_TIM_DIER_COMIE

COM interrupt enable

LL_TIM_DIER_TIE

Trigger interrupt enable

LL_TIM_DIER_BIE

Break interrupt enable

LL_TIM_DIER_IDXIE

Index interrupt enable

LL_TIM_DIER_DIRIE

Direction Change interrupt enable

LL_TIM_DIER_IERRIE

Index Error interrupt enable

LL_TIM_DIER_TERRIE

Transition Error interrupt enable

Lock Level

LL_TIM_LOCKLEVEL_OFF

LOCK OFF - No bit is write protected

LL_TIM_LOCKLEVEL_1

LOCK Level 1

LL_TIM_LOCKLEVEL_2

LOCK Level 2

LL_TIM_LOCKLEVEL_3

LOCK Level 3

Output Configuration Idle State

LL_TIM_OCIDLESTATE_LOW

OCx=0 (after a dead-time if OC is implemented) when MOE=0

LL_TIM_OCIDLESTATE_HIGH

OCx=1 (after a dead-time if OC is implemented) when MOE=0

Output Configuration Mode

LL_TIM_OCMODE_FROZEN

The comparison between the output compare register TIMx_CCRy and the counter TIMx_CNT has no effect on the output channel level

LL_TIM_OCMODE_ACTIVE

OCyREF is forced high on compare match

LL_TIM_OCMODE_INACTIVE

OCyREF is forced low on compare match

LL_TIM_OCMODE_TOGGLE

OCyREF toggles on compare match

LL_TIM_OCMODE_FORCED_INACTIVE

OCyREF is forced low

LL_TIM_OCMODE_FORCED_ACTIVE

OCyREF is forced high

LL_TIM_OCMODE_PWM1

In upcounting, channel y is active as long as TIMx_CNT<TIMx_CCRy else inactive. In downcounting, channel y is inactive as long as TIMx_CNT>TIMx_CCRy else active.

LL_TIM_OCMODE_PWM2

In upcounting, channel y is inactive as long as TIMx_CNT<TIMx_CCRy else active. In downcounting, channel y is active as long as TIMx_CNT>TIMx_CCRy else inactive

LL_TIM_OCMODE_RETRIG_OPM1

Retrigerrable OPM mode 1

LL_TIM_OCMODE_RETRIG_OPM2

Retrigerrable OPM mode 2

LL_TIM_OCMODE_COMBINED_PWM1

Combined PWM mode 1

LL_TIM_OCMODE_COMBINED_PWM2

Combined PWM mode 2

LL_TIM_OCMODE_ASYMMETRIC_PWM1

Asymmetric PWM mode 1

LL_TIM_OCMODE_ASYMMETRIC_PWM2

Asymmetric PWM mode 2

LL_TIM_OCMODE_PULSE_ON_COMPARE

Pulse on Compare mode

LL_TIM_OCMODE_DIRECTION_OUTPUT

Direction output mode

Output Configuration Polarity

LL_TIM_OCPOLARITY_HIGH

OCxactive high

LL_TIM_OCPOLARITY_LOW

OCxactive low

OCREF clear input selection

LL_TIM_OCREF_CLR_INT_ETR

OCREF_CLR_INT is connected to ETRF

LL_TIM_OCREF_CLR_INT_COMP1

OCREF clear input is connected to COMP1_OUT

LL_TIM_OCREF_CLR_INT_COMP2

OCREF clear input is connected to COMP2_OUT

Output Configuration State

LL_TIM_OCSTATE_DISABLE

OCx is not active

LL_TIM_OCSTATE_ENABLE

OCx signal is output on the corresponding output pin

One Pulse Mode

LL_TIM_ONEPULSEMODE_SINGLE

Counter stops counting at the next update event

LL_TIM_ONEPULSEMODE_REPETITIVE

Counter is not stopped at update event

OSSI

LL_TIM_OSSI_DISABLE

When inactive, OCx/OCxN outputs are disabled

LL_TIM_OSSI_ENABLE

When inactive, OxC/OCxN outputs are first forced with their inactive level then forced to their idle level after the deadtime

OSSR

LL_TIM_OSSR_DISABLE

When inactive, OCx/OCxN outputs are disabled

LL_TIM_OSSR_ENABLE

When inactive, OC/OCN outputs are enabled with their inactive level as soon as CCxE=1 or CCxNE=1

Pulse on compare pulse width prescaler

LL_TIM_PWPRSC_X1

Pulse on compare pulse width prescaler 1

LL_TIM_PWPRSC_X2

Pulse on compare pulse width prescaler 2

LL_TIM_PWPRSC_X4

Pulse on compare pulse width prescaler 4

LL_TIM_PWPRSC_X8

Pulse on compare pulse width prescaler 8

LL_TIM_PWPRSC_X16

Pulse on compare pulse width prescaler 16

LL_TIM_PWPRSC_X32

Pulse on compare pulse width prescaler 32

LL_TIM_PWPRSC_X64

Pulse on compare pulse width prescaler 64

LL_TIM_PWPRSC_X128

Pulse on compare pulse width prescaler 128

Slave Mode

LL_TIM_SLAVEMODE_DISABLED

Slave mode disabled

LL_TIM_SLAVEMODE_RESET

Reset Mode - Rising edge of the selected trigger input (TRGI) reinitializes the counter

LL_TIM_SLAVEMODE_GATED

Gated Mode - The counter clock is enabled when the trigger input (TRGI) is high

LL_TIM_SLAVEMODE_TRIGGER

Trigger Mode - The counter starts at a rising edge of the trigger TRGI

LL_TIM_SLAVEMODE_COMBINED_RESETTRIGGER

Combined reset + trigger mode - Rising edge of the selected trigger input (TRGI) reinitializes the counter, generates an update of the registers and starts the counter

LL_TIM_SLAVEMODE_COMBINED_GATEDRESET

Combined gated + reset mode - The counter clock is enabled when the trigger input (TRGI) is high. The counter stops and is reset) as soon as the trigger becomes low.Both startand stop of the counter are controlled.

SMS Preload Source

LL_TIM_SMSPS_TIMUPDATE

The SMS preload transfer is triggered by the Timer's Update event

LL_TIM_SMSPS_INDEX

The SMS preload transfer is triggered by the Index event

TIM15 External Input Ch1 Remap

LL_TIM_TIM4_ETRSOURCE_DSI_TE

TIM2_ETR is connected to DSI_TE

LL_TIM_TIM4_ETRSOURCE_ADC2_AWD1

ETR input is connected to ADC2 AWD1

LL_TIM_TIM4_ETRSOURCE_ADC2_AWD2

ETR input is connected to ADC2 AWD2

LL_TIM_TIM4_ETRSOURCE_ADC2_AWD3

ETR input is connected to ADC2 AWD3

LL_TIM_TIM4_ETRSOURCE_DCMI_HSYNC

ETR input is connected to DCMI HSYNC

LL_TIM_TIM4_ETRSOURCE_LTDC_HSYNC

ETR input is connected to LTDC HSYNC

TIM4 External Input Ch1 Remap

LL_TIM_TIM4_TI1_RMP_GPIO

TIM4 TI1 is connected to GPIO

LL_TIM_TIM4_TI1_RMP_COMP1

TIM4 TI1 is connected to COMP1 output

LL_TIM_TIM4_TI1_RMP_COMP2

TIM4 TI1 is connected to COMP2 output

TIM4 External Input Ch2 Remap

LL_TIM_TIM4_TI2_RMP_GPIO

TIM4 TI2 is connected to GPIO

LL_TIM_TIM4_TI2_RMP_COMP1

TIM4 TI2 is connected to COMP1 output

LL_TIM_TIM4_TI2_RMP_COMP2

TIM4 TI2 is connected to COMP2 output

External Trigger Source TIM5

LL_TIM_TIM5_ETRSOURCE_GPIO

ETR input is connected to GPIO

LL_TIM_TIM5_ETRSOURCE_COMP1

ETR input is connected to COMP1_OUT

LL_TIM_TIM5_ETRSOURCE_COMP2

ETR input is connected to COMP2_OUT

LL_TIM_TIM5_ETRSOURCE_MSIK

ETR input is connected to MSIK

LL_TIM_TIM5_ETRSOURCE_HSI

ETR input is connected to HSI

LL_TIM_TIM5_ETRSOURCE_MSIS

ETR input is connected to MSIS

LL_TIM_TIM5_ETRSOURCE_DCMI_VSYNC

ETR input is connected to DCMI VSYNC

LL_TIM_TIM5_ETRSOURCE_LTDC_VSYNC

ETR input is connected to LTDC_VSYNC

LL_TIM_TIM5_ETRSOURCE_TIM2_ETR

ETR input is connected to TIM2 ETR

LL_TIM_TIM5_ETRSOURCE_TIM3_ETR

ETR input is connected to TIM3 ETR

LL_TIM_TIM5_ETRSOURCE_DSI_TE

ETR input is connected to DSI_TE

LL_TIM_TIM5_ETRSOURCE_DCMI_HSYNC

ETR input is connected to DCMI HSYNC

LL_TIM_TIM5_ETRSOURCE_LTDC_HSYNC

ETR input is connected to LTDC HSYNC

TIM5 External Input Ch1 Remap

LL_TIM_TIM5_TI1_RMP_GPIO

TIM5 TI1 is connected to GPIO

LL_TIM_TIM5_TI1_RMP_LSI

TIM5 TI1 is connected to LSI

LL_TIM_TIM5_TI1_RMP_LSE

TIM5 TI1 is connected to LSE

LL_TIM_TIM5_TI1_RMP_RTC

TIM5 TI1 is connected to RTC Wakeup

LL_TIM_TIM5_TI1_RMP_COMP1

TIM5 TI1 is connected to COMP1 output

LL_TIM_TIM5_TI1_RMP_COMP2

TIM5 TI1 is connected to COMP2 output

TIM5 External Input Ch2 Remap

LL_TIM_TIM5_TI2_RMP_GPIO

TIM5 TI2 is connected to GPIO

LL_TIM_TIM5_TI2_RMP_COMP1

TIM5 TI2 is connected to COMP1 output

LL_TIM_TIM5_TI2_RMP_COMP2

TIM5 TI2 is connected to COMP2 output

External Trigger Source TIM8

LL_TIM_TIM8_ETRSOURCE_GPIO

ETR input is connected to GPIO

LL_TIM_TIM8_ETRSOURCE_COMP1

ETR input is connected to COMP1_OUT

LL_TIM_TIM8_ETRSOURCE_COMP2

ETR input is connected to COMP2_OUT

LL_TIM_TIM8_ETRSOURCE_MSIK

ETR input is connected to MSIK

LL_TIM_TIM8_ETRSOURCE_HSI

ETR input is connected to HSI

LL_TIM_TIM8_ETRSOURCE_MSIS
ETR input is connected to MSIS

LL_TIM_TIM8_ETRSOURCE_ADC2_AWD2
ETR input is connected to ADC2 AWD2

LL_TIM_TIM8_ETRSOURCE_ADC2_AWD3
ETR input is connected to ADC2 AWD3

LL_TIM_TIM8_ETRSOURCE_ADC1_AWD1
ADC1 analog watchdog 1

LL_TIM_TIM8_ETRSOURCE_ADC1_AWD2
ADC1 analog watchdog 2

LL_TIM_TIM8_ETRSOURCE_ADC1_AWD3
ADC1 analog watchdog 3

LL_TIM_TIM8_ETRSOURCE_ADC4_AWD1
ADC4 analog watchdog 1

LL_TIM_TIM8_ETRSOURCE_ADC4_AWD2
ADC4 analog watchdog 2

LL_TIM_TIM8_ETRSOURCE_ADC4_AWD3
ADC4 analog watchdog 3

LL_TIM_TIM8_ETRSOURCE_ADC2_AWD1
ETR input is connected to ADC2 AWD1

TIM8 External Input Ch1 Remap

LL_TIM_TIM8_TI1_RMP_GPIO
TIM8 TI1 is connected to GPIO

LL_TIM_TIM8_TI1_RMP_COMP1
TIM8 TI1 is connected to COMP1 output

LL_TIM_TIM8_TI1_RMP_COMP2
TIM8 TI1 is connected to COMP2 output

Trigger Output

LL_TIM_TRGO_RESET
UG bit from the TIMx_EGR register is used as trigger output

LL_TIM_TRGO_ENABLE
Counter Enable signal (CNT_EN) is used as trigger output

LL_TIM_TRGO_UPDATE
Update event is used as trigger output

LL_TIM_TRGO_CC1IF
CC1 capture or a compare match is used as trigger output

LL_TIM_TRGO_OC1REF
OC1REF signal is used as trigger output

LL_TIM_TRGO_OC2REF

OC2REF signal is used as trigger output

LL_TIM_TRGO_OC3REF

OC3REF signal is used as trigger output

LL_TIM_TRGO_OC4REF

OC4REF signal is used as trigger output

LL_TIM_TRGO_ENCODERCLK

Encoder clock signal is used as trigger output

Trigger Output 2

LL_TIM_TRGO2_RESET

UG bit from the TIMx_EGR register is used as trigger output 2

LL_TIM_TRGO2_ENABLE

Counter Enable signal (CNT_EN) is used as trigger output 2

LL_TIM_TRGO2_UPDATE

Update event is used as trigger output 2

LL_TIM_TRGO2_CC1F

CC1 capture or a compare match is used as trigger output 2

LL_TIM_TRGO2_OC1

OC1REF signal is used as trigger output 2

LL_TIM_TRGO2_OC2

OC2REF signal is used as trigger output 2

LL_TIM_TRGO2_OC3

OC3REF signal is used as trigger output 2

LL_TIM_TRGO2_OC4

OC4REF signal is used as trigger output 2

LL_TIM_TRGO2_OC5

OC5REF signal is used as trigger output 2

LL_TIM_TRGO2_OC6

OC6REF signal is used as trigger output 2

LL_TIM_TRGO2_OC4_RISINGFALLING

OC4REF rising or falling edges are used as trigger output 2

LL_TIM_TRGO2_OC6_RISINGFALLING

OC6REF rising or falling edges are used as trigger output 2

LL_TIM_TRGO2_OC4_RISING_OC6_RISING

OC4REF or OC6REF rising edges are used as trigger output 2

LL_TIM_TRGO2_OC4_RISING_OC6_FALLING

OC4REF rising or OC6REF falling edges are used as trigger output 2

LL_TIM_TRGO2_OC5_RISING_OC6_RISING

OC5REF or OC6REF rising edges are used as trigger output 2

LL_TIM_TRGO2_OC5_RISING_OC6_FALLING

OC5REF rising or OC6REF falling edges are used as trigger output 2

Trigger Selection

LL_TIM_TS_ITR0

Internal Trigger 0 (ITR0) is used as trigger input

LL_TIM_TS_ITR1

Internal Trigger 1 (ITR1) is used as trigger input

LL_TIM_TS_ITR2

Internal Trigger 2 (ITR2) is used as trigger input

LL_TIM_TS_ITR3

Internal Trigger 3 (ITR3) is used as trigger input

LL_TIM_TS_ITR4

Internal Trigger 4 (ITR4) is used as trigger input

LL_TIM_TS_ITR5

Internal Trigger 5 (ITR5) is used as trigger input

LL_TIM_TS_ITR6

Internal Trigger 6 (ITR6) is used as trigger input

LL_TIM_TS_ITR7

Internal Trigger 7 (ITR7) is used as trigger input

LL_TIM_TS_ITR8

Internal Trigger 8 (ITR8) is used as trigger input

LL_TIM_TS_ITR11

Internal Trigger 11 (ITR11) is used as trigger input

LL_TIM_TS_TI1F_ED

TI1 Edge Detector (TI1F_ED) is used as trigger input

LL_TIM_TS_TI1FP1

Filtered Timer Input 1 (TI1FP1) is used as trigger input

LL_TIM_TS_TI2FP2

Filtered Timer Input 2 (TI12P2) is used as trigger input

LL_TIM_TS_ETRF

Filtered external Trigger (ETRF) is used as trigger input

Update Source

LL_TIM_UPDATESOURCE_REGULAR

Counter overflow/underflow, Setting the UG bit or Update generation through the slave mode controller generates an update request

LL_TIM_UPDATESOURCE_COUNTER

Only counter overflow/underflow generates an update request

Common Write and read registers Macros

LL_TIM_WriteReg

Description:
- Write a value in TIM register.

Parameters:
- __INSTANCE__: TIM Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:
- None

LL_TIM_ReadReg

Description:
- Read a value in TIM register.

Parameters:
- __INSTANCE__: TIM Instance
- __REG__: Register to be read

Return value:
- Register: value

TIM Exported Macros

__LL_TIM_GETFLAG_UIFCPY

Description:
- HELPER macro retrieving the UIFCPY flag from the counter value.

Parameters:
- __CNT__: Counter value

Return value:
- UIF: status bit

Notes:
- ex: __LL_TIM_GETFLAG_UIFCPY (LL_TIM_GetCounter ()); Relevant only if UIF flag remapping has been enabled (UIF status bit is copied to TIMx_CNT register bit 31)

__LL_TIM_CALC_DEADTIME

Description:
- HELPER macro calculating DTG[0:7] in the TIMx_BDTR register to achieve the requested dead time duration.

Parameters:
- __TIMCLK__: timer input clock frequency (in Hz)
- __CKD__: This parameter can be one of the following values:
  - LL_TIM_CLOCKDIVISION_DIV1
  - LL_TIM_CLOCKDIVISION_DIV2
  - LL_TIM_CLOCKDIVISION_DIV4
- __DT__: deadtime duration (in ns)

Return value:
- DTG[0:7]

Notes:
- ex: __LL_TIM_CALC_DEADTIME (80000000, LL_TIM_GetClockDivision (), 120);

__LL_TIM_CALC_PSC

Description:

- HELPER macro calculating the prescaler value to achieve the required counter clock frequency.

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __CNTCLK__: counter clock frequency (in Hz)

Return value:

- Prescaler: value (between Min_Data=0 and Max_Data=65535)

Notes:

- ex: __LL_TIM_CALC_PSC (80000000, 1000000);

__LL_TIM_CALC_ARR

Description:

- HELPER macro calculating the auto-reload value to achieve the required output signal frequency.

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __PSC__: prescaler
- __FREQ__: output signal frequency (in Hz)

Return value:

- Auto-reload: value (between Min_Data=0 and Max_Data=65535)

Notes:

- ex: __LL_TIM_CALC_ARR (1000000, LL_TIM_GetPrescaler (), 10000);

__LL_TIM_CALC_ARR_DITHER

Description:

- HELPER macro calculating the auto-reload value, with dithering feature enabled, to achieve the required output signal frequency.

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __PSC__: prescaler
- __FREQ__: output signal frequency (in Hz)

Return value:

- Auto-reload: value (between Min_Data=0 and Max_Data=65535)

Notes:

- ex: __LL_TIM_CALC_ARR_DITHER (1000000, LL_TIM_GetPrescaler (), 10000);

__LL_TIM_CALC_DELAY

Description:

- HELPER macro calculating the compare value required to achieve the required timer output compare active/inactive delay.

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __PSC__: prescaler
- __DELAY__: timer output compare active/inactive delay (in us)

Return value:

- Compare: value (between Min_Data=0 and Max_Data=65535)

Notes:

- ex: __LL_TIM_CALC_DELAY (1000000, LL_TIM_GetPrescaler (), 10);

__LL_TIM_CALC_DELAY_DITHER

Description:

- HELPER macro calculating the compare value, with dithering feature enabled, to achieve the required timer output compare active/inactive delay.

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __PSC__: prescaler
- __DELAY__: timer output compare active/inactive delay (in us)

Return value:

- Compare: value (between Min_Data=0 and Max_Data=65535)

Notes:

- ex: __LL_TIM_CALC_DELAY_DITHER (1000000, LL_TIM_GetPrescaler (), 10);

__LL_TIM_CALC_PULSE

Description:

- HELPER macro calculating the auto-reload value to achieve the required pulse duration (when the timer operates in one pulse mode).

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __PSC__: prescaler
- __DELAY__: timer output compare active/inactive delay (in us)
- __PULSE__: pulse duration (in us)

Return value:

- Auto-reload: value (between Min_Data=0 and Max_Data=65535)

Notes:

- ex: __LL_TIM_CALC_PULSE (1000000, LL_TIM_GetPrescaler (), 10, 20);

__LL_TIM_CALC_PULSE_DITHER

Description:

- HELPER macro calculating the auto-reload value, with dithering feature enabled, to achieve the required pulse duration (when the timer operates in one pulse mode).

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __PSC__: prescaler
- __DELAY__: timer output compare active/inactive delay (in us)
- __PULSE__: pulse duration (in us)

Return value:

- Auto-reload: value (between Min_Data=0 and Max_Data=65535)

Notes:

- ex: __LL_TIM_CALC_PULSE_DITHER (1000000, LL_TIM_GetPrescaler (), 10, 20);

__LL_TIM_GET_ICPSC_RATIO

Description:

- HELPER macro retrieving the ratio of the input capture prescaler.

Parameters:

- __ICPSC__: This parameter can be one of the following values:
  - LL_TIM_ICPSC_DIV1
  - LL_TIM_ICPSC_DIV2
  - LL_TIM_ICPSC_DIV4
  - LL_TIM_ICPSC_DIV8

Return value:

- Input: capture prescaler ratio (1, 2, 4 or 8)

Notes:

- ex: __LL_TIM_GET_ICPSC_RATIO (LL_TIM_IC_GetPrescaler ());

120 LL UCPD Generic Driver

120.1 UCPD Firmware driver registers structures

120.1.1 LL_UCPD_InitTypeDef

LL_UCPD_InitTypeDef is defined in the stm32u5xx_ll_ucpd.h

Data Fields

- ***uint32_t psc_ucpdclk***
- ***uint32_t transwin***
- ***uint32_t IfrGap***
- ***uint32_t HbitClockDiv***

Field Documentation

- ***uint32_t LL_UCPD_InitTypeDef::psc_ucpdclk***
  Specify the prescaler for the UCPD clock. This parameter can be a value of ***UCPD_LL_EC_PSC***. This feature can be modified afterwards using function **LL_UCPD_SetPSCClk()**.
- ***uint32_t LL_UCPD_InitTypeDef::transwin***
  Specify the number of cycles (minus 1) of the half bit clock (see HBITCLKDIV) to achieve a legal tTransitionWindow (set according to peripheral clock to define an interval of between 12 and 20 us). This parameter can be a value between Min_Data=0x1 and Max_Data=0x1F This value can be modified afterwards using function **LL_UCPD_SetTransWin()**.
- ***uint32_t LL_UCPD_InitTypeDef::IfrGap***
  Specify the definition of the clock divider (minus 1) in order to generate tInterframeGap from the peripheral clock. This parameter can be a value between Min_Data=0x1 and Max_Data=0x1F This feature can be modified afterwards using function **LL_UCPD_SetIfrGap()**.
- ***uint32_t LL_UCPD_InitTypeDef::HbitClockDiv***
  Specify the number of cycles (minus one) at UCPD peripheral for a half bit clock e.g. program 3 for a bit clock that takes 8 cycles of the peripheral clock : "UCPD1_CLK". This parameter can be a value between Min_Data=0x0 and Max_Data=0x3F. This feature can be modified using function **LL_UCPD_SetHbitClockDiv()**.

120.2 UCPD Firmware driver API description

The following section lists the various functions of the UCPD library.

120.2.1 Detailed description of functions

LL_UCPD_Enable

Function name

__STATIC_INLINE void LL_UCPD_Enable (UCPD_TypeDef * UCPDx)

Function description

Enable UCPD peripheral.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 UCPDEN LL_UCPD_Enable

LL_UCPD_Disable

Function name

__STATIC_INLINE void LL_UCPD_Disable (UCPD_TypeDef * UCPDx)

Function description

Disable UCPD peripheral.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Notes

- When disabling the UCPD, follow the procedure described in the Reference Manual.

Reference Manual to LL API cross reference:

- CFG1 UCPDEN LL_UCPD_Disable

LL_UCPD_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsEnabled (UCPD_TypeDef const *const UCPDx)

Function description

Check if UCPD peripheral is enabled.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CFG1 UCPDEN LL_UCPD_IsEnabled

LL_UCPD_SetRxOrderSet

Function name

__STATIC_INLINE void LL_UCPD_SetRxOrderSet (UCPD_TypeDef * UCPDx, uint32_t OrderSet)

Function description

Set the receiver ordered set detection enable.

Parameters

- **UCPDx:** UCPD Instance
- **OrderSet:** This parameter can be combination of the following values:
  – LL_UCPD_ORDERSET_SOP
  – LL_UCPD_ORDERSET_SOP1
  – LL_UCPD_ORDERSET_SOP2
  – LL_UCPD_ORDERSET_HARDRST
  – LL_UCPD_ORDERSET_CABLERST
  – LL_UCPD_ORDERSET_SOP1_DEBUG
  – LL_UCPD_ORDERSET_SOP2_DEBUG
  – LL_UCPD_ORDERSET_SOP_EXT1
  – LL_UCPD_ORDERSET_SOP_EXT2

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 RXORDSETEN LL_UCPD_SetRxOrderSet

LL_UCPD_SetPSCClk

Function name

__STATIC_INLINE void LL_UCPD_SetPSCClk (UCPD_TypeDef * UCPDx, uint32_t Psc)

Function description

Set the prescaler for ucpd clock.

Parameters

- **UCPDx:** UCPD Instance
- **Psc:** This parameter can be one of the following values:
  – LL_UCPD_PSC_DIV1
  – LL_UCPD_PSC_DIV2
  – LL_UCPD_PSC_DIV4
  – LL_UCPD_PSC_DIV8
  – LL_UCPD_PSC_DIV16

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 UCPDCLK LL_UCPD_SetPSCClk

LL_UCPD_SetTransWin

Function name

__STATIC_INLINE void LL_UCPD_SetTransWin (UCPD_TypeDef * UCPDx, uint32_t TransWin)

Function description

Set the number of cycles (minus 1) of the half bit clock.

Parameters

- **UCPDx:** UCPD Instance
- **TransWin:** a value between Min_Data=0x1 and Max_Data=0x1F

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 TRANSWIN LL_UCPD_SetTransWin

LL_UCPD_SetIfrGap

Function name

__STATIC_INLINE void LL_UCPD_SetIfrGap (UCPD_TypeDef * UCPDx, uint32_t IfrGap)

Function description

Set the clock divider value to generate an interframe gap.

Parameters

- **UCPDx:** UCPD Instance
- **IfrGap:** a value between Min_Data=0x1 and Max_Data=0x1F

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 IFRGAP LL_UCPD_SetIfrGap

LL_UCPD_SetHbitClockDiv

Function name

__STATIC_INLINE void LL_UCPD_SetHbitClockDiv (UCPD_TypeDef * UCPDx, uint32_t HbitClock)

Function description

Set the clock divider value to generate an interframe gap.

Parameters

- **UCPDx:** UCPD Instance
- **HbitClock:** a value between Min_Data=0x0 and Max_Data=0x3F

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 HBITCLKDIV LL_UCPD_SetHbitClockDiv

LL_UCPD_RxAnalogFilterEnable

Function name

__STATIC_INLINE void LL_UCPD_RxAnalogFilterEnable (UCPD_TypeDef * UCPDx)

Function description

Enable Rx Analog Filter.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG2 RXAFILTEN LL_UCPD_RxAnalogFilterEnable

LL_UCPD_RxAnalogFilterDisable

Function name

__STATIC_INLINE void LL_UCPD_RxAnalogFilterDisable (UCPD_TypeDef * UCPDx)

Function description

Disable Rx Analog Filter.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG2 RXAFILTEN LL_UCPD_RxAnalogFilterDisable

LL_UCPD_WakeUpEnable

Function name

__STATIC_INLINE void LL_UCPD_WakeUpEnable (UCPD_TypeDef * UCPDx)

Function description

Enable the wakeup mode.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG2 WUPEN LL_UCPD_WakeUpEnable

LL_UCPD_WakeUpDisable

Function name

__STATIC_INLINE void LL_UCPD_WakeUpDisable (UCPD_TypeDef * UCPDx)

Function description

Disable the wakeup mode.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG2 WUPEN LL_UCPD_WakeUpDisable

LL_UCPD_ForceClockEnable

Function name

__STATIC_INLINE void LL_UCPD_ForceClockEnable (UCPD_TypeDef * UCPDx)

Function description

Force clock enable.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG2 FORCECLK LL_UCPD_ForceClockEnable

LL_UCPD_ForceClockDisable

Function name

__STATIC_INLINE void LL_UCPD_ForceClockDisable (UCPD_TypeDef * UCPDx)

Function description

Force clock disable.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG2 FORCECLK LL_UCPD_ForceClockDisable

LL_UCPD_RxFilterEnable

Function name

__STATIC_INLINE void LL_UCPD_RxFilterEnable (UCPD_TypeDef * UCPDx)

Function description

RxFilter enable.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG2 RXFILTDIS LL_UCPD_RxFilterEnable

LL_UCPD_RxFilterDisable

Function name

__STATIC_INLINE void LL_UCPD_RxFilterDisable (UCPD_TypeDef * UCPDx)

Function description

RxFilter disable.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG2 RXFILTDIS LL_UCPD_RxFilterDisable

LL_UCPD_TypeCDetectionCC2Enable

Function name

__STATIC_INLINE void LL_UCPD_TypeCDetectionCC2Enable (UCPD_TypeDef * UCPDx)

Function description

Type C detector for CC2 enable.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CC2TCDIS LL_UCPD_TypeCDetectionCC2Enable

LL_UCPD_TypeCDetectionCC2Disable

Function name

__STATIC_INLINE void LL_UCPD_TypeCDetectionCC2Disable (UCPD_TypeDef * UCPDx)

Function description

Type C detector for CC2 disable.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CC2TCDIS LL_UCPD_TypeCDetectionCC2Disable

LL_UCPD_TypeCDetectionCC1Enable

Function name

__STATIC_INLINE void LL_UCPD_TypeCDetectionCC1Enable (UCPD_TypeDef * UCPDx)

Function description

Type C detector for CC1 enable.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CC1TCDIS LL_UCPD_TypeCDetectionCC1Enable

LL_UCPD_TypeCDetectionCC1Disable

Function name

__STATIC_INLINE void LL_UCPD_TypeCDetectionCC1Disable (UCPD_TypeDef * UCPDx)

Function description

Type C detector for CC1 disable.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CC1TCDIS LL_UCPD_TypeCDetectionCC1Disable

LL_UCPD_VconnDischargeEnable

Function name

__STATIC_INLINE void LL_UCPD_VconnDischargeEnable (UCPD_TypeDef * UCPDx)

Function description

Source Vconn discharge enable.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RDCH LL_UCPD_VconnDischargeEnable

LL_UCPD_VconnDischargeDisable

Function name

__STATIC_INLINE void LL_UCPD_VconnDischargeDisable (UCPD_TypeDef * UCPDx)

Function description

Source Vconn discharge disable.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RDCH LL_UCPD_VconnDischargeDisable

LL_UCPD_SignalFRSTX

Function name

__STATIC_INLINE void LL_UCPD_SignalFRSTX (UCPD_TypeDef * UCPDx)

Function description

Signal Fast Role Swap request.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR FRSTX LL_UCPD_VconnDischargeDisable

LL_UCPD_FRSDetectionEnable

Function name

__STATIC_INLINE void LL_UCPD_FRSDetectionEnable (UCPD_TypeDef * UCPDx)

Function description

Fast Role swap RX detection enable.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR FRSRXEN LL_UCPD_FRSDetectionEnable

LL_UCPD_FRSDetectionDisable

Function name

__STATIC_INLINE void LL_UCPD_FRSDetectionDisable (UCPD_TypeDef * UCPDx)

Function description

Fast Role swap RX detection disable.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR FRSRXEN LL_UCPD_FRSDetectionDisable

LL_UCPD_SetccEnable

Function name

__STATIC_INLINE void LL_UCPD_SetccEnable (UCPD_TypeDef * UCPDx, uint32_t CCEnable)

Function description

Set cc enable.

Parameters

- **UCPDx:** UCPD Instance
- **CCEnable:** This parameter can be one of the following values:
  – LL_UCPD_CCENABLE_NONE
  – LL_UCPD_CCENABLE_CC1
  – LL_UCPD_CCENABLE_CC2
  – LL_UCPD_CCENABLE_CC1CC2

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CC1VCONNEN LL_UCPD_SetccEnable

LL_UCPD_SetSNKRole

Function name

__STATIC_INLINE void LL_UCPD_SetSNKRole (UCPD_TypeDef * UCPDx)

Function description

Set UCPD SNK role.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR ANAMODE LL_UCPD_SetSNKRole

LL_UCPD_SetSRCRole

Function name

__STATIC_INLINE void LL_UCPD_SetSRCRole (UCPD_TypeDef * UCPDx)

Function description

Set UCPD SRC role.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR ANAMODE LL_UCPD_SetSRCRole

LL_UCPD_GetRole

Function name

__STATIC_INLINE uint32_t LL_UCPD_GetRole (UCPD_TypeDef const *const UCPDx)

Function description

Get UCPD Role.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_UCPD_ROLE_SNK
  - LL_UCPD_ROLE_SRC

Reference Manual to LL API cross reference:

- CR ANAMODE LL_UCPD_GetRole

LL_UCPD_SetRpResistor

Function name

__STATIC_INLINE void LL_UCPD_SetRpResistor (UCPD_TypeDef * UCPDx, uint32_t Resistor)

Function description

Set Rp resistor.

Parameters

- **UCPDx:** UCPD Instance
- **Resistor:** This parameter can be one of the following values:
  - LL_UCPD_RESISTOR_DEFAULT
  - LL_UCPD_RESISTOR_1_5A
  - LL_UCPD_RESISTOR_3_0A
  - LL_UCPD_RESISTOR_NONE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR ANASUBMODE LL_UCPD_SetRpResistor

LL_UCPD_SetCCPin

Function name

__STATIC_INLINE void LL_UCPD_SetCCPin (UCPD_TypeDef * UCPDx, uint32_t CCPin)

Function description

Set CC pin.

Parameters

- **UCPDx:** UCPD Instance
- **CCPin:** This parameter can be one of the following values:
  - LL_UCPD_CCPIN_CC1
  - LL_UCPD_CCPIN_CC2

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR PHYCCSEL LL_UCPD_SetCCPin

LL_UCPD_RxEnable

Function name

__STATIC_INLINE void LL_UCPD_RxEnable (UCPD_TypeDef * UCPDx)

Function description

Rx enable.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR PHYRXEN LL_UCPD_RxEnable

LL_UCPD_RxDisable

Function name

__STATIC_INLINE void LL_UCPD_RxDisable (UCPD_TypeDef * UCPDx)

Function description

Rx disable.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR PHYRXEN LL_UCPD_RxDisable

LL_UCPD_SetRxMode

Function name

__STATIC_INLINE void LL_UCPD_SetRxMode (UCPD_TypeDef * UCPDx, uint32_t RxMode)

Function description

Set Rx mode.

Parameters

- **UCPDx:** UCPD Instance
- **RxMode:** This parameter can be one of the following values:
  – LL_UCPD_RXMODE_NORMAL
  – LL_UCPD_RXMODE_BIST_TEST_DATA

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RXMODE LL_UCPD_SetRxMode

LL_UCPD_SendHardReset

Function name

__STATIC_INLINE void LL_UCPD_SendHardReset (UCPD_TypeDef * UCPDx)

Function description

Send Hard Reset.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR TXHRST LL_UCPD_SendHardReset

LL_UCPD_SendMessage

Function name

__STATIC_INLINE void LL_UCPD_SendMessage (UCPD_TypeDef * UCPDx)

Function description

Send message.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR TXSEND LL_UCPD_SendMessage

LL_UCPD_SetTxMode

Function name

__STATIC_INLINE void LL_UCPD_SetTxMode (UCPD_TypeDef * UCPDx, uint32_t TxMode)

Function description

Set Tx mode.

Parameters

- **UCPDx:** UCPD Instance
- **TxMode:** This parameter can be one of the following values:
  – LL_UCPD_TXMODE_NORMAL
  – LL_UCPD_TXMODE_CABLE_RESET
  – LL_UCPD_TXMODE_BIST_CARRIER2

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR TXMODE LL_UCPD_SetTxMode

LL_UCPD_EnableIT_FRS

Function name

__STATIC_INLINE void LL_UCPD_EnableIT_FRS (UCPD_TypeDef * UCPDx)

Function description

Enable FRS interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR FRSEVTIE LL_UCPD_EnableIT_FRS

LL_UCPD_EnableIT_TypeCEventCC2

Function name

__STATIC_INLINE void LL_UCPD_EnableIT_TypeCEventCC2 (UCPD_TypeDef * UCPDx)

Function description

Enable type c event on CC2.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR TYPECEVT2IE LL_UCPD_EnableIT_TypeCEventCC2

LL_UCPD_EnableIT_TypeCEventCC1

Function name

__STATIC_INLINE void LL_UCPD_EnableIT_TypeCEventCC1 (UCPD_TypeDef * UCPDx)

Function description

Enable type c event on CC1.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR TYPECEVT1IE LL_UCPD_EnableIT_TypeCEventCC1

LL_UCPD_EnableIT_RxMsgEnd

Function name

__STATIC_INLINE void LL_UCPD_EnableIT_RxMsgEnd (UCPD_TypeDef * UCPDx)

Function description

Enable Rx message end interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR RXMSGENDIE LL_UCPD_EnableIT_RxMsgEnd

LL_UCPD_EnableIT_RxOvr

Function name

__STATIC_INLINE void LL_UCPD_EnableIT_RxOvr (UCPD_TypeDef * UCPDx)

Function description

Enable Rx overrun interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR RXOVRIE LL_UCPD_EnableIT_RxOvr

LL_UCPD_EnableIT_RxHRST

Function name

__STATIC_INLINE void LL_UCPD_EnableIT_RxHRST (UCPD_TypeDef * UCPDx)

Function description

Enable Rx hard resrt interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR RXHRSTDETIE LL_UCPD_EnableIT_RxHRST

LL_UCPD_EnableIT_RxOrderSet

Function name

__STATIC_INLINE void LL_UCPD_EnableIT_RxOrderSet (UCPD_TypeDef * UCPDx)

Function description

Enable Rx orderset interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR RXORDDETIE LL_UCPD_EnableIT_RxOrderSet

LL_UCPD_EnableIT_RxNE

Function name

__STATIC_INLINE void LL_UCPD_EnableIT_RxNE (UCPD_TypeDef * UCPDx)

Function description

Enable Rx non empty interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR RXNEIE LL_UCPD_EnableIT_RxNE

LL_UCPD_EnableIT_TxUND

Function name

__STATIC_INLINE void LL_UCPD_EnableIT_TxUND (UCPD_TypeDef * UCPDx)

Function description

Enable TX underrun interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR TXUNDIE LL_UCPD_EnableIT_TxUND

LL_UCPD_EnableIT_TxHRSTSENT

Function name

__STATIC_INLINE void LL_UCPD_EnableIT_TxHRSTSENT (UCPD_TypeDef * UCPDx)

Function description

Enable hard reset sent interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR HRSTSENTIE LL_UCPD_EnableIT_TxHRSTSENT

LL_UCPD_EnableIT_TxHRSTDISC

Function name

__STATIC_INLINE void LL_UCPD_EnableIT_TxHRSTDISC (UCPD_TypeDef * UCPDx)

Function description

Enable hard reset discard interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR HRSTDISCIE LL_UCPD_EnableIT_TxHRSTDISC

LL_UCPD_EnableIT_TxMSGABT

Function name

__STATIC_INLINE void LL_UCPD_EnableIT_TxMSGABT (UCPD_TypeDef * UCPDx)

Function description

Enable Tx message abort interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR TXMSGABTIE LL_UCPD_EnableIT_TxMSGABT

LL_UCPD_EnableIT_TxMSGSENT

Function name

__STATIC_INLINE void LL_UCPD_EnableIT_TxMSGSENT (UCPD_TypeDef * UCPDx)

Function description

Enable Tx message sent interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR TXMSGSENTIE LL_UCPD_EnableIT_TxMSGSENT

LL_UCPD_EnableIT_TxMSGDISC

Function name

__STATIC_INLINE void LL_UCPD_EnableIT_TxMSGDISC (UCPD_TypeDef * UCPDx)

Function description

Enable Tx message discarded interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR TXMSGDISCIE LL_UCPD_EnableIT_TxMSGDISC

LL_UCPD_EnableIT_TxIS

Function name

__STATIC_INLINE void LL_UCPD_EnableIT_TxIS (UCPD_TypeDef * UCPDx)

Function description

Enable Tx data receive interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR TXISIE LL_UCPD_EnableIT_TxIS

LL_UCPD_DisableIT_FRS

Function name

__STATIC_INLINE void LL_UCPD_DisableIT_FRS (UCPD_TypeDef * UCPDx)

Function description

Disable FRS interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR FRSEVTIE LL_UCPD_DisableIT_FRS

LL_UCPD_DisableIT_TypeCEventCC2

Function name

__STATIC_INLINE void LL_UCPD_DisableIT_TypeCEventCC2 (UCPD_TypeDef * UCPDx)

Function description

Disable type c event on CC2.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR TYPECEVT2IE LL_UCPD_DisableIT_TypeCEventCC2

LL_UCPD_DisableIT_TypeCEventCC1

Function name

__STATIC_INLINE void LL_UCPD_DisableIT_TypeCEventCC1 (UCPD_TypeDef * UCPDx)

Function description

Disable type c event on CC1.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR TYPECEVT1IE LL_UCPD_DisableIT_TypeCEventCC1

LL_UCPD_DisableIT_RxMsgEnd

Function name

__STATIC_INLINE void LL_UCPD_DisableIT_RxMsgEnd (UCPD_TypeDef * UCPDx)

Function description

Disable Rx message end interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR RXMSGENDIE LL_UCPD_DisableIT_RxMsgEnd

LL_UCPD_DisableIT_RxOvr

Function name

__STATIC_INLINE void LL_UCPD_DisableIT_RxOvr (UCPD_TypeDef * UCPDx)

Function description

Disable Rx overrun interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR RXOVRIE LL_UCPD_DisableIT_RxOvr

LL_UCPD_DisableIT_RxHRST

Function name

__STATIC_INLINE void LL_UCPD_DisableIT_RxHRST (UCPD_TypeDef * UCPDx)

Function description

Disable Rx hard resrt interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR RXHRSTDETIE LL_UCPD_DisableIT_RxHRST

LL_UCPD_DisableIT_RxOrderSet

Function name

__STATIC_INLINE void LL_UCPD_DisableIT_RxOrderSet (UCPD_TypeDef * UCPDx)

Function description

Disable Rx orderset interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR RXORDDETIE LL_UCPD_DisableIT_RxOrderSet

LL_UCPD_DisableIT_RxNE

Function name

__STATIC_INLINE void LL_UCPD_DisableIT_RxNE (UCPD_TypeDef * UCPDx)

Function description

Disable Rx non empty interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR RXNEIE LL_UCPD_DisableIT_RxNE

LL_UCPD_DisableIT_TxUND

Function name

__STATIC_INLINE void LL_UCPD_DisableIT_TxUND (UCPD_TypeDef * UCPDx)

Function description

Disable TX underrun interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR TXUNDIE LL_UCPD_DisableIT_TxUND

LL_UCPD_DisableIT_TxHRSTSENT

Function name

__STATIC_INLINE void LL_UCPD_DisableIT_TxHRSTSENT (UCPD_TypeDef * UCPDx)

Function description

Disable hard reset sent interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR HRSTSENTIE LL_UCPD_DisableIT_TxHRSTSENT

LL_UCPD_DisableIT_TxHRSTDISC

Function name

__STATIC_INLINE void LL_UCPD_DisableIT_TxHRSTDISC (UCPD_TypeDef * UCPDx)

Function description

Disable hard reset discard interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR HRSTDISCIE LL_UCPD_DisableIT_TxHRSTDISC

LL_UCPD_DisableIT_TxMSGABT

Function name

__STATIC_INLINE void LL_UCPD_DisableIT_TxMSGABT (UCPD_TypeDef * UCPDx)

Function description

Disable Tx message abort interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR TXMSGABTIE LL_UCPD_DisableIT_TxMSGABT

LL_UCPD_DisableIT_TxMSGSENT

Function name

__STATIC_INLINE void LL_UCPD_DisableIT_TxMSGSENT (UCPD_TypeDef * UCPDx)

Function description

Disable Tx message sent interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR TXMSGSENTIE LL_UCPD_DisableIT_TxMSGSENT

LL_UCPD_DisableIT_TxMSGDISC

Function name

__STATIC_INLINE void LL_UCPD_DisableIT_TxMSGDISC (UCPD_TypeDef * UCPDx)

Function description

Disable Tx message discarded interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR TXMSGDISCIE LL_UCPD_DisableIT_TxMSGDISC

LL_UCPD_DisableIT_TxIS

Function name

__STATIC_INLINE void LL_UCPD_DisableIT_TxIS (UCPD_TypeDef * UCPDx)

Function description

Disable Tx data receive interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR TXISIE LL_UCPD_DisableIT_TxIS

LL_UCPD_IsEnableIT_FRS

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsEnableIT_FRS (UCPD_TypeDef const *const UCPDx)

Function description

Check if FRS interrupt enabled.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IMR FRSEVTIE LL_UCPD_DisableIT_FRS

LL_UCPD_IsEnableIT_TypeCEventCC2

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsEnableIT_TypeCEventCC2 (UCPD_TypeDef const *const UCPDx)

Function description

Check if type c event on CC2 enabled.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IMR TYPECEVT2IE LL_UCPD_DisableIT_TypeCEventCC2

LL_UCPD_IsEnableIT_TypeCEventCC1

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsEnableIT_TypeCEventCC1 (UCPD_TypeDef const *const UCPDx)

Function description

Check if type c event on CC1 enabled.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IMR2 TYPECEVT1IE LL_UCPD_IsEnableIT_TypeCEventCC1

LL_UCPD_IsEnableIT_RxMsgEnd

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsEnableIT_RxMsgEnd (UCPD_TypeDef const *const UCPDx)

Function description

Check if Rx message end interrupt enabled.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IMR RXMSGENDIE LL_UCPD_IsEnableIT_RxMsgEnd

LL_UCPD_IsEnableIT_RxOvr

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsEnableIT_RxOvr (UCPD_TypeDef const *const UCPDx)

Function description

Check if Rx overrun interrupt enabled.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IMR RXOVRIE LL_UCPD_IsEnableIT_RxOvr

LL_UCPD_IsEnableIT_RxHRST

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsEnableIT_RxHRST (UCPD_TypeDef const *const UCPDx)

Function description

Check if Rx hard resrt interrupt enabled.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IMR RXHRSTDETIE LL_UCPD_IsEnableIT_RxHRST

LL_UCPD_IsEnableIT_RxOrderSet

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsEnableIT_RxOrderSet (UCPD_TypeDef const *const UCPDx)

Function description

Check if Rx orderset interrupt enabled.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IMR RXORDDETIE LL_UCPD_IsEnableIT_RxOrderSet

LL_UCPD_IsEnableIT_RxNE

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsEnableIT_RxNE (UCPD_TypeDef const *const UCPDx)

Function description

Check if Rx non empty interrupt enabled.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IMR RXNEIE LL_UCPD_IsEnableIT_RxNE

LL_UCPD_IsEnableIT_TxUND

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsEnableIT_TxUND (UCPD_TypeDef const *const UCPDx)

Function description

Check if TX underrun interrupt enabled.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IMR TXUNDIE LL_UCPD_IsEnableIT_TxUND

LL_UCPD_IsEnableIT_TxHRSTSENT

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsEnableIT_TxHRSTSENT (UCPD_TypeDef const *const UCPDx)

Function description

Check if hard reset sent interrupt enabled.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IMR HRSTSENTIE LL_UCPD_IsEnableIT_TxHRSTSENT

LL_UCPD_IsEnableIT_TxHRSTDISC

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsEnableIT_TxHRSTDISC (UCPD_TypeDef const *const UCPDx)

Function description

Check if hard reset discard interrupt enabled.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IMR HRSTDISCIE LL_UCPD_IsEnableIT_TxHRSTDISC

LL_UCPD_IsEnableIT_TxMSGABT

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsEnableIT_TxMSGABT (UCPD_TypeDef const *const UCPDx)

Function description

Check if Tx message abort interrupt enabled.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IMR TXMSGABTIE LL_UCPD_IsEnableIT_TxMSGABT

LL_UCPD_IsEnableIT_TxMSGSENT

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsEnableIT_TxMSGSENT (UCPD_TypeDef const *const UCPDx)

Function description

Check if Tx message sent interrupt enabled.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IMR TXMSGSENTIE LL_UCPD_IsEnableIT_TxMSGSENT

LL_UCPD_IsEnableIT_TxMSGDISC

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsEnableIT_TxMSGDISC (UCPD_TypeDef const *const UCPDx)

Function description

Check if Tx message discarded interrupt enabled.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IMR TXMSGDISCIE LL_UCPD_IsEnableIT_TxMSGDISC

LL_UCPD_IsEnableIT_TxIS

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsEnableIT_TxIS (UCPD_TypeDef const *const UCPDx)

Function description

Check if Tx data receive interrupt enabled.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IMR TXISIE LL_UCPD_IsEnableIT_TxIS

LL_UCPD_ClearFlag_FRS

Function name

__STATIC_INLINE void LL_UCPD_ClearFlag_FRS (UCPD_TypeDef * UCPDx)

Function description

Clear FRS interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR FRSEVTIE LL_UCPD_ClearFlag_FRS

LL_UCPD_ClearFlag_TypeCEventCC2

Function name

__STATIC_INLINE void LL_UCPD_ClearFlag_TypeCEventCC2 (UCPD_TypeDef * UCPDx)

Function description

Clear type c event on CC2.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IIMR TYPECEVT2IE LL_UCPD_ClearFlag_TypeCEventCC2

LL_UCPD_ClearFlag_TypeCEventCC1

Function name

__STATIC_INLINE void LL_UCPD_ClearFlag_TypeCEventCC1 (UCPD_TypeDef * UCPDx)

Function description

Clear type c event on CC1.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IIMR TYPECEVT1IE LL_UCPD_ClearFlag_TypeCEventCC1

LL_UCPD_ClearFlag_RxMsgEnd

Function name

__STATIC_INLINE void LL_UCPD_ClearFlag_RxMsgEnd (UCPD_TypeDef * UCPDx)

Function description

Clear Rx message end interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR RXMSGENDIE LL_UCPD_ClearFlag_RxMsgEnd

LL_UCPD_ClearFlag_RxOvr

Function name

__STATIC_INLINE void LL_UCPD_ClearFlag_RxOvr (UCPD_TypeDef * UCPDx)

Function description

Clear Rx overrun interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR RXOVRIE LL_UCPD_ClearFlag_RxOvr

LL_UCPD_ClearFlag_RxHRST

Function name

__STATIC_INLINE void LL_UCPD_ClearFlag_RxHRST (UCPD_TypeDef * UCPDx)

Function description

Clear Rx hard resrt interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR RXHRSTDETIE LL_UCPD_ClearFlag_RxHRST

LL_UCPD_ClearFlag_RxOrderSet

Function name

__STATIC_INLINE void LL_UCPD_ClearFlag_RxOrderSet (UCPD_TypeDef * UCPDx)

Function description

Clear Rx orderset interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR RXORDDETIE LL_UCPD_ClearFlag_RxOrderSet

LL_UCPD_ClearFlag_TxUND

Function name

__STATIC_INLINE void LL_UCPD_ClearFlag_TxUND (UCPD_TypeDef * UCPDx)

Function description

Clear TX underrun interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR TXUNDIE LL_UCPD_ClearFlag_TxUND

LL_UCPD_ClearFlag_TxHRSTSENT

Function name

__STATIC_INLINE void LL_UCPD_ClearFlag_TxHRSTSENT (UCPD_TypeDef * UCPDx)

Function description

Clear hard reset sent interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR HRSTSENTIE LL_UCPD_ClearFlag_TxHRSTSENT

LL_UCPD_ClearFlag_TxHRSTDISC

Function name

__STATIC_INLINE void LL_UCPD_ClearFlag_TxHRSTDISC (UCPD_TypeDef * UCPDx)

Function description

Clear hard reset discard interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR HRSTDISCIE LL_UCPD_ClearFlag_TxHRSTDISC

LL_UCPD_ClearFlag_TxMSGABT

Function name

__STATIC_INLINE void LL_UCPD_ClearFlag_TxMSGABT (UCPD_TypeDef * UCPDx)

Function description

Clear Tx message abort interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR TXMSGABTIE LL_UCPD_ClearFlag_TxMSGABT

LL_UCPD_ClearFlag_TxMSGSENT

Function name

__STATIC_INLINE void LL_UCPD_ClearFlag_TxMSGSENT (UCPD_TypeDef * UCPDx)

Function description

Clear Tx message sent interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR TXMSGSENTIE LL_UCPD_ClearFlag_TxMSGSENT

LL_UCPD_ClearFlag_TxMSGDISC

Function name

__STATIC_INLINE void LL_UCPD_ClearFlag_TxMSGDISC (UCPD_TypeDef * UCPDx)

Function description

Clear Tx message discarded interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR TXMSGDISCIE LL_UCPD_ClearFlag_TxMSGDISC

LL_UCPD_IsActiveFlag_FRS

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsActiveFlag_FRS (UCPD_TypeDef const *const UCPDx)

Function description

Check if FRS interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR FRSEVT LL_UCPD_IsActiveFlag_FRS

LL_UCPD_IsActiveFlag_TypeCEventCC2

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsActiveFlag_TypeCEventCC2 (UCPD_TypeDef const *const UCPDx)

Function description

Check if type c event on CC2.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR TYPECEVT2 LL_UCPD_IsActiveFlag_TypeCEventCC2

LL_UCPD_IsActiveFlag_TypeCEventCC1

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsActiveFlag_TypeCEventCC1 (UCPD_TypeDef const *const UCPDx)

Function description

Check if type c event on CC1.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR TYPECEVT1 LL_UCPD_IsActiveFlag_TypeCEventCC1

LL_UCPD_IsActiveFlag_RxMsgEnd

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsActiveFlag_RxMsgEnd (UCPD_TypeDef const *const UCPDx)

Function description

Check if Rx message end interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR RXMSGEND LL_UCPD_IsActiveFlag_RxMsgEnd

LL_UCPD_IsActiveFlag_RxOvr

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsActiveFlag_RxOvr (UCPD_TypeDef const *const UCPDx)

Function description

Check if Rx overrun interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR RXOVR LL_UCPD_IsActiveFlag_RxOvr

LL_UCPD_IsActiveFlag_RxHRST

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsActiveFlag_RxHRST (UCPD_TypeDef const *const UCPDx)

Function description

Check if Rx hard resrt interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR RXHRSTDET LL_UCPD_IsActiveFlag_RxHRST

LL_UCPD_IsActiveFlag_RxOrderSet

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsActiveFlag_RxOrderSet (UCPD_TypeDef const *const UCPDx)

Function description

Check if Rx orderset interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR RXORDDET LL_UCPD_IsActiveFlag_RxOrderSet

LL_UCPD_IsActiveFlag_RxNE

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsActiveFlag_RxNE (UCPD_TypeDef const *const UCPDx)

Function description

Check if Rx non empty interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR RXNE LL_UCPD_IsActiveFlag_RxNE

LL_UCPD_IsActiveFlag_TxUND

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsActiveFlag_TxUND (UCPD_TypeDef const *const UCPDx)

Function description

Check if TX underrun interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR TXUND LL_UCPD_IsActiveFlag_TxUND

LL_UCPD_IsActiveFlag_TxHRSTSENT

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsActiveFlag_TxHRSTSENT (UCPD_TypeDef const *const UCPDx)

Function description

Check if hard reset sent interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR HRSTSENT LL_UCPD_IsActiveFlag_TxHRSTSENT

LL_UCPD_IsActiveFlag_TxHRSTDISC

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsActiveFlag_TxHRSTDISC (UCPD_TypeDef const *const UCPDx)

Function description

Check if hard reset discard interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR HRSTDISC LL_UCPD_IsActiveFlag_TxHRSTDISC

LL_UCPD_IsActiveFlag_TxMSGABT

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsActiveFlag_TxMSGABT (UCPD_TypeDef const *const UCPDx)

Function description

Check if Tx message abort interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR TXMSGABT LL_UCPD_IsActiveFlag_TxMSGABT

LL_UCPD_IsActiveFlag_TxMSGSENT

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsActiveFlag_TxMSGSENT (UCPD_TypeDef const *const UCPDx)

Function description

Check if Tx message sent interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR TXMSGSENT LL_UCPD_IsActiveFlag_TxMSGSENT

LL_UCPD_IsActiveFlag_TxMSGDISC

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsActiveFlag_TxMSGDISC (UCPD_TypeDef const *const UCPDx)

Function description

Check if Tx message discarded interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR TXMSGDISC LL_UCPD_IsActiveFlag_TxMSGDISC

LL_UCPD_IsActiveFlag_TxIS

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsActiveFlag_TxIS (UCPD_TypeDef const *const UCPDx)

Function description

Check if Tx data receive interrupt.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR TXIS LL_UCPD_IsActiveFlag_TxIS

LL_UCPD_GetTypeCVstateCC2

Function name

__STATIC_INLINE uint32_t LL_UCPD_GetTypeCVstateCC2 (UCPD_TypeDef const *const UCPDx)

Function description

return the vstate value for CC2

Parameters

- **UCPDx:** UCPD Instance

Return values

- **val:**

Reference Manual to LL API cross reference:

- SR TXIS LL_UCPD_GetTypeCVstateCC2

LL_UCPD_GetTypeCVstateCC1

Function name

__STATIC_INLINE uint32_t LL_UCPD_GetTypeCVstateCC1 (UCPD_TypeDef const *const UCPDx)

Function description

return the vstate value for CC1

Parameters

- **UCPDx:** UCPD Instance

Return values

- **val:**

Reference Manual to LL API cross reference:

- SR TXIS LL_UCPD_GetTypeCVstateCC1

LL_UCPD_RxDMAEnable

Function name

__STATIC_INLINE void LL_UCPD_RxDMAEnable (UCPD_TypeDef * UCPDx)

Function description

Rx DMA Enable.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 RXDMAEN LL_UCPD_RxDMAEnable

LL_UCPD_RxDMADisable

Function name

__STATIC_INLINE void LL_UCPD_RxDMADisable (UCPD_TypeDef * UCPDx)

Function description

Rx DMA Disable.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 RXDMAEN LL_UCPD_RxDMADisable

LL_UCPD_TxDMAEnable

Function name

__STATIC_INLINE void LL_UCPD_TxDMAEnable (UCPD_TypeDef * UCPDx)

Function description

Tx DMA Enable.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 TXDMAEN LL_UCPD_TxDMAEnable

LL_UCPD_TxDMADisable

Function name

__STATIC_INLINE void LL_UCPD_TxDMADisable (UCPD_TypeDef * UCPDx)

Function description

Tx DMA Disable.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 TXDMAEN LL_UCPD_TxDMADisable

LL_UCPD_IsEnabledTxDMA

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsEnabledTxDMA (UCPD_TypeDef const *const UCPDx)

Function description

Check if DMA Tx is enabled.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR2 TXDMAEN LL_UCPD_IsEnabledTxDMA

LL_UCPD_IsEnabledRxDMA

Function name

__STATIC_INLINE uint32_t LL_UCPD_IsEnabledRxDMA (UCPD_TypeDef const *const UCPDx)

Function description

Check if DMA Rx is enabled.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR2 RXDMAEN LL_UCPD_IsEnabledRxDMA

LL_UCPD_WriteTxOrderSet

Function name

__STATIC_INLINE void LL_UCPD_WriteTxOrderSet (UCPD_TypeDef * UCPDx, uint32_t TxOrderSet)

Function description

write the orderset for Tx message

Parameters

- **UCPDx:** UCPD Instance
- **TxOrderSet:** one of the following value
  - LL_UCPD_ORDERED_SET_SOP
  - LL_UCPD_ORDERED_SET_SOP1
  - LL_UCPD_ORDERED_SET_SOP2
  - LL_UCPD_ORDERED_SET_HARD_RESET
  - LL_UCPD_ORDERED_SET_CABLE_RESET
  - LL_UCPD_ORDERED_SET_SOP1_DEBUG
  - LL_UCPD_ORDERED_SET_SOP2_DEBUG

Return values

- **None:**

Reference Manual to LL API cross reference:

- TX_ORDSET TXORDSET LL_UCPD_WriteTxOrderSet

LL_UCPD_WriteTxPaySize

Function name

__STATIC_INLINE void LL_UCPD_WriteTxPaySize (UCPD_TypeDef * UCPDx, uint32_t TxPaySize)

Function description

write the Tx paysize

Parameters

- **UCPDx:** UCPD Instance
- **TxPaySize:**

Return values

- **None.:**

Reference Manual to LL API cross reference:

- TX_PAYSZ TXPAYSZ LL_UCPD_WriteTxPaySize

LL_UCPD_WriteData

Function name

__STATIC_INLINE void LL_UCPD_WriteData (UCPD_TypeDef * UCPDx, uint8_t Data)

Function description

Write data.

Parameters

- **UCPDx:** UCPD Instance
- **Data:** Value between Min_Data=0x00 and Max_Data=0xFF

Return values

- **None.:**

Reference Manual to LL API cross reference:

- TXDR DR LL_UCPD_WriteData

LL_UCPD_ReadRxOrderSet

Function name

__STATIC_INLINE uint32_t LL_UCPD_ReadRxOrderSet (UCPD_TypeDef const *const UCPDx)

Function description

read RX the orderset

Parameters

- **UCPDx:** UCPD Instance

Return values

- **RxOrderSet:** one of the following value
  - LL_UCPD_RXORDSET_SOP
  - LL_UCPD_RXORDSET_SOP1
  - LL_UCPD_RXORDSET_SOP2
  - LL_UCPD_RXORDSET_SOP1_DEBUG
  - LL_UCPD_RXORDSET_SOP2_DEBUG
  - LL_UCPD_RXORDSET_CABLE_RESET
  - LL_UCPD_RXORDSET_SOPEXT1
  - LL_UCPD_RXORDSET_SOPEXT2

Reference Manual to LL API cross reference:

- RX_ORDSET RXORDSET LL_UCPD_ReadRxOrderSet

LL_UCPD_ReadRxPaySize

Function name

__STATIC_INLINE uint32_t LL_UCPD_ReadRxPaySize (UCPD_TypeDef const *const UCPDx)

Function description

Read the Rx paysize.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **RXPaysize.:**

Reference Manual to LL API cross reference:

- RX_PAYSZ RXPAYSZ LL_UCPD_ReadRxPaySize

LL_UCPD_ReadData

Function name

__STATIC_INLINE uint32_t LL_UCPD_ReadData (UCPD_TypeDef const *const UCPDx)

Function description

Read data.

Parameters

- **UCPDx:** UCPD Instance

Return values

- **RxData:** Value between Min_Data=0x00 and Max_Data=0xFF

Reference Manual to LL API cross reference:

- TXDR RXDATA LL_UCPD_ReadData

LL_UCPD_SetRxOrdExt1

Function name

__STATIC_INLINE void LL_UCPD_SetRxOrdExt1 (UCPD_TypeDef * UCPDx, uint32_t SOPExt)

Function description

Set Rx OrderSet Ext1.

Parameters

- **UCPDx:** UCPD Instance
- **SOPExt:** Value between Min_Data=0x00000 and Max_Data=0xFFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- RX_ORDEXT1 RXSOPX1 LL_UCPD_SetRxOrdExt1

LL_UCPD_SetRxOrdExt2

Function name

__STATIC_INLINE void LL_UCPD_SetRxOrdExt2 (UCPD_TypeDef * UCPDx, uint32_t SOPExt)

Function description

Set Rx OrderSet Ext2.

Parameters

- **UCPDx:** UCPD Instance
- **SOPExt:** Value between Min_Data=0x00000 and Max_Data=0xFFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- RX_ORDEXT2 RXSOPX2 LL_UCPD_SetRxOrdExt2

LL_UCPD_DeInit

Function name

ErrorStatus LL_UCPD_DeInit (UCPD_TypeDef * UCPDx)

Function description

De-initialize the UCPD registers to their default reset values.

Parameters

- **UCPDx:** ucpd Instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: ucpd registers are de-initialized
  - ERROR: ucpd registers are not de-initialized

LL_UCPD_Init

Function name

ErrorStatus LL_UCPD_Init (UCPD_TypeDef * UCPDx, LL_UCPD_InitTypeDef * UCPD_InitStruct)

Function description

Initialize the ucpd registers according to the specified parameters in UCPD_InitStruct.

Parameters

- **UCPDx:** UCPD Instance
- **UCPD_InitStruct:** pointer to a LL_UCPD_InitTypeDef structure that contains the configuration information for the UCPD peripheral.

Return values

- **An:** ErrorStatus enumeration value. (Return always SUCCESS)

Notes

- As some bits in ucpd configuration registers can only be written when the ucpd is disabled (ucpd_CR1_SPE bit =0), UCPD peripheral should be in disabled state prior calling this function. Otherwise, ERROR result will be returned.

LL_UCPD_StructInit

Function name

void LL_UCPD_StructInit (LL_UCPD_InitTypeDef * UCPD_InitStruct)

Function description

Set each LL_UCPD_InitTypeDef field to default value.

Parameters

- **UCPD_InitStruct:** pointer to a LL_UCPD_InitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

120.3 UCPD Firmware driver defines

The following section lists the various define and macros of the module.

120.3.1 UCPD

UCPD

CC pin enable

LL_UCPD_CCENABLE_NONE

Neither PHY is activated (e.g. disabled state of source)

LL_UCPD_CCENABLE_CC1

Controls apply to only CC1

LL_UCPD_CCENABLE_CC2

Controls apply to only CC1

LL_UCPD_CCENABLE_CC1CC2

Controls apply to both CC1 and CC2 (normal usage for sink/source)

CC pin selection

LL_UCPD_CCPIN_CC1

Use CC1 IO for power delivery communication

LL_UCPD_CCPIN_CC2

Use CC2 IO for power delivery communication

CCx event

LL_UCPD_SNK_CC1_VOPEN

CC1 Sink Open state

LL_UCPD_SNK_CC1_VRP

CC1 Sink vRP default state

LL_UCPD_SNK_CC1_VRP15A

CC1 Sink vRP 1.5A state

LL_UCPD_SNK_CC1_VRP30A

CC1 Sink vRP 3.0A state

LL_UCPD_SNK_CC2_VOPEN

CC2 Sink Open state

LL_UCPD_SNK_CC2_VRP

CC2 Sink vRP default state

LL_UCPD_SNK_CC2_VRP15A

CC2 Sink vRP 1.5A state

LL_UCPD_SNK_CC2_VRP30A

CC2 Sink vRP 3.0A state

LL_UCPD_SRC_CC1_VRA

CC1 Source vRA state

LL_UCPD_SRC_CC1_VRD

CC1 Source vRD state

LL_UCPD_SRC_CC1_OPEN

CC1 Source Open state

LL_UCPD_SRC_CC2_VRA

CC2 Source vRA state

LL_UCPD_SRC_CC2_VRD

CC2 Source vRD state

LL_UCPD_SRC_CC2_OPEN

CC2 Source Open state

SOP extension#2 code detected in receiver

Type of Tx packet

LL_UCPD_TXMODE_NORMAL

Initiate the transfer of a Tx message

LL_UCPD_TXMODE_CABLE_RESET

Trigger a the transfer of a Cable Reset sequence

LL_UCPD_TXMODE_BIST_CARRIER2

Trigger a BIST test sequence send (BIST Carrier Mode 2)

Common Write and read registers Macros

LL_UCPD_WriteReg

Description:

- Write a value in UCPD register.

Parameters:

- __INSTANCE__: UCPD Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_UCPD_ReadReg

Description:

- Read a value in UCPD register.

Parameters:

- __INSTANCE__: UCPD Instance
- __REG__: Register to be read

Return value:

- Register: value

121 LL USART Generic Driver

121.1 USART Firmware driver registers structures

121.1.1 LL_USART_InitTypeDef

LL_USART_InitTypeDef is defined in the stm32u5xx_ll_usart.h

Data Fields

- ***uint32_t PrescalerValue***
- ***uint32_t BaudRate***
- ***uint32_t DataWidth***
- ***uint32_t StopBits***
- ***uint32_t Parity***
- ***uint32_t TransferDirection***
- ***uint32_t HardwareFlowControl***
- ***uint32_t OverSampling***

Field Documentation

- ***uint32_t LL_USART_InitTypeDef::PrescalerValue***
  Specifies the Prescaler to compute the communication baud rate. This parameter can be a value of ***USART_LL_EC_PRESCALER***.This feature can be modified afterwards using unitary function **LL_USART_SetPrescaler()**.
- ***uint32_t LL_USART_InitTypeDef::BaudRate***
  This field defines expected Usart communication baud rate.This feature can be modified afterwards using unitary function **LL_USART_SetBaudRate()**.
- ***uint32_t LL_USART_InitTypeDef::DataWidth***
  Specifies the number of data bits transmitted or received in a frame. This parameter can be a value of ***USART_LL_EC_DATAWIDTH***.This feature can be modified afterwards using unitary function **LL_USART_SetDataWidth()**.
- ***uint32_t LL_USART_InitTypeDef::StopBits***
  Specifies the number of stop bits transmitted. This parameter can be a value of ***USART_LL_EC_STOPBITS***.This feature can be modified afterwards using unitary function **LL_USART_SetStopBitsLength()**.
- ***uint32_t LL_USART_InitTypeDef::Parity***
  Specifies the parity mode. This parameter can be a value of ***USART_LL_EC_PARITY***.This feature can be modified afterwards using unitary function **LL_USART_SetParity()**.
- ***uint32_t LL_USART_InitTypeDef::TransferDirection***
  Specifies whether the Receive and/or Transmit mode is enabled or disabled. This parameter can be a value of ***USART_LL_EC_DIRECTION***.This feature can be modified afterwards using unitary function **LL_USART_SetTransferDirection()**.
- ***uint32_t LL_USART_InitTypeDef::HardwareFlowControl***
  Specifies whether the hardware flow control mode is enabled or disabled. This parameter can be a value of ***USART_LL_EC_HWCONTROL***.This feature can be modified afterwards using unitary function **LL_USART_SetHWFlowCtrl()**.
- ***uint32_t LL_USART_InitTypeDef::OverSampling***
  Specifies whether USART oversampling mode is 16 or 8. This parameter can be a value of ***USART_LL_EC_OVERSAMPLING***.This feature can be modified afterwards using unitary function **LL_USART_SetOverSampling()**.

121.1.2 LL_USART_ClockInitTypeDef

LL_USART_ClockInitTypeDef is defined in the stm32u5xx_ll_usart.h

Data Fields

- ***uint32_t ClockOutput***
- ***uint32_t ClockPolarity***
- ***uint32_t ClockPhase***

- *uint32_t LastBitClockPulse*

Field Documentation

- ***uint32_t LL_USART_ClockInitTypeDef::ClockOutput***
Specifies whether the USART clock is enabled or disabled. This parameter can be a value of *USART_LL_EC_CLOCK*.USART HW configuration can be modified afterwards using unitary functions **LL_USART_EnableSCLKOutput()** or **LL_USART_DisableSCLKOutput()**. For more details, refer to description of this function.
- ***uint32_t LL_USART_ClockInitTypeDef::ClockPolarity***
Specifies the steady state of the serial clock. This parameter can be a value of *USART_LL_EC_POLARITY*.USART HW configuration can be modified afterwards using unitary functions **LL_USART_SetClockPolarity()**. For more details, refer to description of this function.
- ***uint32_t LL_USART_ClockInitTypeDef::ClockPhase***
Specifies the clock transition on which the bit capture is made. This parameter can be a value of *USART_LL_EC_PHASE*.USART HW configuration can be modified afterwards using unitary functions **LL_USART_SetClockPhase()**. For more details, refer to description of this function.
- ***uint32_t LL_USART_ClockInitTypeDef::LastBitClockPulse***
Specifies whether the clock pulse corresponding to the last transmitted data bit (MSB) has to be output on the SCLK pin in synchronous mode. This parameter can be a value of *USART_LL_EC_LASTCLKPULSE*.USART HW configuration can be modified afterwards using unitary functions **LL_USART_SetLastClkPulseOutput()**. For more details, refer to description of this function.

121.2 USART Firmware driver API description

The following section lists the various functions of the USART library.

121.2.1 Detailed description of functions

LL_USART_Enable

Function name

__STATIC_INLINE void LL_USART_Enable (USART_TypeDef * USARTx)

Function description

USART Enable.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 UE LL_USART_Enable

LL_USART_Disable

Function name

__STATIC_INLINE void LL_USART_Disable (USART_TypeDef * USARTx)

Function description

USART Disable (all USART prescalers and outputs are disabled)

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- When USART is disabled, USART prescalers and outputs are stopped immediately, and current operations are discarded. The configuration of the USART is kept, but all the status flags, in the USARTx_ISR are set to their default values.

Reference Manual to LL API cross reference:

- CR1 UE LL_USART_Disable

LL_USART_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabled (const USART_TypeDef * USARTx)

Function description

Indicate if USART is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 UE LL_USART_IsEnabled

LL_USART_EnableFIFO

Function name

__STATIC_INLINE void LL_USART_EnableFIFO (USART_TypeDef * USARTx)

Function description

FIFO Mode Enable.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 FIFOEN LL_USART_EnableFIFO

LL_USART_DisableFIFO

Function name

__STATIC_INLINE void LL_USART_DisableFIFO (USART_TypeDef * USARTx)

Function description

FIFO Mode Disable.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 FIFOEN LL_USART_DisableFIFO

LL_USART_IsEnabledFIFO

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledFIFO (const USART_TypeDef * USARTx)

Function description

Indicate if FIFO Mode is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 FIFOEN LL_USART_IsEnabledFIFO

LL_USART_SetTXFIFOThreshold

Function name

__STATIC_INLINE void LL_USART_SetTXFIFOThreshold (USART_TypeDef * USARTx, uint32_t Threshold)

Function description

Configure TX FIFO Threshold.

Parameters

- **USARTx:** USART Instance
- **Threshold:** This parameter can be one of the following values:
  – LL_USART_FIFOTHRESHOLD_1_8
  – LL_USART_FIFOTHRESHOLD_1_4
  – LL_USART_FIFOTHRESHOLD_1_2
  – LL_USART_FIFOTHRESHOLD_3_4
  – LL_USART_FIFOTHRESHOLD_7_8
  – LL_USART_FIFOTHRESHOLD_8_8

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 TXFTCFG LL_USART_SetTXFIFOThreshold

LL_USART_GetTXFIFOThreshold

Function name

__STATIC_INLINE uint32_t LL_USART_GetTXFIFOThreshold (const USART_TypeDef * USARTx)

Function description

Return TX FIFO Threshold Configuration.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_FIFOTHRESHOLD_1_8
  - LL_USART_FIFOTHRESHOLD_1_4
  - LL_USART_FIFOTHRESHOLD_1_2
  - LL_USART_FIFOTHRESHOLD_3_4
  - LL_USART_FIFOTHRESHOLD_7_8
  - LL_USART_FIFOTHRESHOLD_8_8

Notes

LL_USART_EnableInStopMode

Function name

__STATIC_INLINE void LL_USART_EnableInStopMode (USART_TypeDef * USARTx)

Function description

USART enabled in STOP Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- When this function is enabled, USART is able to wake up the MCU from Stop mode, provided that USART clock selection is HSI or LSE in RCC.
- Macro IS_UART_WAKEUP_FROMSTOP_INSTANCE(USARTx) can be used to check whether or not Wake-up from Stop mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 UESM LL_USART_EnableInStopMode

LL_USART_DisableInStopMode

Function name

__STATIC_INLINE void LL_USART_DisableInStopMode (USART_TypeDef * USARTx)

Function description

USART disabled in STOP Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- When this function is disabled, USART is not able to wake up the MCU from Stop mode
- Macro IS_UART_WAKEUP_FROMSTOP_INSTANCE(USARTx) can be used to check whether or not Wake-up from Stop mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 UESM LL_USART_DisableInStopMode

LL_USART_IsEnabledInStopMode

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledInStopMode (const USART_TypeDef * USARTx)

Function description

Indicate if USART is enabled in STOP Mode (able to wake up MCU from Stop mode or not)

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_WAKEUP_FROMSTOP_INSTANCE(USARTx) can be used to check whether or not Wake-up from Stop mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 UESM LL_USART_IsEnabledInStopMode

LL_USART_EnableDirectionRx

Function name

__STATIC_INLINE void LL_USART_EnableDirectionRx (USART_TypeDef * USARTx)

Function description

Receiver Enable (Receiver is enabled and begins searching for a start bit)

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RE LL_USART_EnableDirectionRx

LL_USART_DisableDirectionRx

Function name

__STATIC_INLINE void LL_USART_DisableDirectionRx (USART_TypeDef * USARTx)

Function description

Receiver Disable.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RE LL_USART_DisableDirectionRx

LL_USART_EnableDirectionTx

Function name

__STATIC_INLINE void LL_USART_EnableDirectionTx (USART_TypeDef * USARTx)

Function description

Transmitter Enable.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TE LL_USART_EnableDirectionTx

LL_USART_DisableDirectionTx

Function name

__STATIC_INLINE void LL_USART_DisableDirectionTx (USART_TypeDef * USARTx)

Function description

Transmitter Disable.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TE LL_USART_DisableDirectionTx

LL_USART_SetTransferDirection

Function name

__STATIC_INLINE void LL_USART_SetTransferDirection (USART_TypeDef * USARTx, uint32_t TransferDirection)

Function description

Configure simultaneously enabled/disabled states of Transmitter and Receiver.

Parameters

- **USARTx:** USART Instance
- **TransferDirection:** This parameter can be one of the following values:
  - LL_USART_DIRECTION_NONE
  - LL_USART_DIRECTION_RX
  - LL_USART_DIRECTION_TX
  - LL_USART_DIRECTION_TX_RX

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RE LL_USART_SetTransferDirection
- CR1 TE LL_USART_SetTransferDirection

LL_USART_GetTransferDirection

Function name

__STATIC_INLINE uint32_t LL_USART_GetTransferDirection (const USART_TypeDef * USARTx)

Function description

Return enabled/disabled states of Transmitter and Receiver.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_DIRECTION_NONE
  - LL_USART_DIRECTION_RX
  - LL_USART_DIRECTION_TX
  - LL_USART_DIRECTION_TX_RX

Reference Manual to LL API cross reference:

- CR1 RE LL_USART_GetTransferDirection
- CR1 TE LL_USART_GetTransferDirection

LL_USART_SetParity

Function name

__STATIC_INLINE void LL_USART_SetParity (USART_TypeDef * USARTx, uint32_t Parity)

Function description

Configure Parity (enabled/disabled and parity mode if enabled).

Parameters

- **USARTx:** USART Instance
- **Parity:** This parameter can be one of the following values:
  - LL_USART_PARITY_NONE
  - LL_USART_PARITY_EVEN
  - LL_USART_PARITY_ODD

Return values

- **None:**

Notes

- This function selects if hardware parity control (generation and detection) is enabled or disabled. When the parity control is enabled (Odd or Even), computed parity bit is inserted at the MSB position (9th or 8th bit depending on data width) and parity is checked on the received data.

Reference Manual to LL API cross reference:

- CR1 PS LL_USART_SetParity
- CR1 PCE LL_USART_SetParity

LL_USART_GetParity

Function name

__STATIC_INLINE uint32_t LL_USART_GetParity (const USART_TypeDef * USARTx)

Function description

Return Parity configuration (enabled/disabled and parity mode if enabled)

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_PARITY_NONE
  - LL_USART_PARITY_EVEN
  - LL_USART_PARITY_ODD

Reference Manual to LL API cross reference:

- CR1 PS LL_USART_GetParity
- CR1 PCE LL_USART_GetParity

LL_USART_SetWakeUpMethod

Function name

__STATIC_INLINE void LL_USART_SetWakeUpMethod (USART_TypeDef * USARTx, uint32_t Method)

Function description

Set Receiver Wake Up method from Mute mode.

Parameters

- **USARTx:** USART Instance
- **Method:** This parameter can be one of the following values:
  - LL_USART_WAKEUP_IDLELINE
  - LL_USART_WAKEUP_ADDRESSMARK

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 WAKE LL_USART_SetWakeUpMethod

LL_USART_GetWakeUpMethod

Function name

__STATIC_INLINE uint32_t LL_USART_GetWakeUpMethod (const USART_TypeDef * USARTx)

Function description

Return Receiver Wake Up method from Mute mode.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_WAKEUP_IDLELINE
  - LL_USART_WAKEUP_ADDRESSMARK

Reference Manual to LL API cross reference:

- CR1 WAKE LL_USART_GetWakeUpMethod

LL_USART_SetDataWidth

Function name

__STATIC_INLINE void LL_USART_SetDataWidth (USART_TypeDef * USARTx, uint32_t DataWidth)

Function description

Set Word length (i.e.

Parameters

- **USARTx:** USART Instance
- **DataWidth:** This parameter can be one of the following values:
  - LL_USART_DATAWIDTH_7B
  - LL_USART_DATAWIDTH_8B
  - LL_USART_DATAWIDTH_9B

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 M0 LL_USART_SetDataWidth
- CR1 M1 LL_USART_SetDataWidth

LL_USART_GetDataWidth

Function name

__STATIC_INLINE uint32_t LL_USART_GetDataWidth (const USART_TypeDef * USARTx)

Function description

Return Word length (i.e.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_DATAWIDTH_7B
  - LL_USART_DATAWIDTH_8B
  - LL_USART_DATAWIDTH_9B

Reference Manual to LL API cross reference:

- CR1 M0 LL_USART_GetDataWidth
- CR1 M1 LL_USART_GetDataWidth

LL_USART_EnableMuteMode

Function name

__STATIC_INLINE void LL_USART_EnableMuteMode (USART_TypeDef * USARTx)

Function description

Allow switch between Mute Mode and Active mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 MME LL_USART_EnableMuteMode

LL_USART_DisableMuteMode

Function name

__STATIC_INLINE void LL_USART_DisableMuteMode (USART_TypeDef * USARTx)

Function description

Prevent Mute Mode use.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 MME LL_USART_DisableMuteMode

LL_USART_IsEnabledMuteMode

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledMuteMode (const USART_TypeDef * USARTx)

Function description

Indicate if switch between Mute Mode and Active mode is allowed.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 MME LL_USART_IsEnabledMuteMode

LL_USART_SetOverSampling

Function name

__STATIC_INLINE void LL_USART_SetOverSampling (USART_TypeDef * USARTx, uint32_t OverSampling)

Function description

Set Oversampling to 8-bit or 16-bit mode.

Parameters

- **USARTx:** USART Instance
- **OverSampling:** This parameter can be one of the following values:
  – LL_USART_OVERSAMPLING_16
  – LL_USART_OVERSAMPLING_8

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 OVER8 LL_USART_SetOverSampling

LL_USART_GetOverSampling

Function name

__STATIC_INLINE uint32_t LL_USART_GetOverSampling (const USART_TypeDef * USARTx)

Function description

Return Oversampling mode.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_USART_OVERSAMPLING_16
  – LL_USART_OVERSAMPLING_8

Reference Manual to LL API cross reference:

- CR1 OVER8 LL_USART_GetOverSampling

LL_USART_SetLastClkPulseOutput

Function name

__STATIC_INLINE void LL_USART_SetLastClkPulseOutput (USART_TypeDef * USARTx, uint32_t LastBitClockPulse)

Function description

Configure if Clock pulse of the last data bit is output to the SCLK pin or not.

Parameters

- **USARTx:** USART Instance
- **LastBitClockPulse:** This parameter can be one of the following values:
  – LL_USART_LASTCLKPULSE_NO_OUTPUT
  – LL_USART_LASTCLKPULSE_OUTPUT

Return values

- **None:**

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LBCL LL_USART_SetLastClkPulseOutput

LL_USART_GetLastClkPulseOutput

Function name

__STATIC_INLINE uint32_t LL_USART_GetLastClkPulseOutput (const USART_TypeDef * USARTx)

Function description

Retrieve Clock pulse of the last data bit output configuration (Last bit Clock pulse output to the SCLK pin or not)

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_USART_LASTCLKPULSE_NO_OUTPUT
  – LL_USART_LASTCLKPULSE_OUTPUT

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LBCL LL_USART_GetLastClkPulseOutput

LL_USART_SetClockPhase

Function name

__STATIC_INLINE void LL_USART_SetClockPhase (USART_TypeDef * USARTx, uint32_t ClockPhase)

Function description

Select the phase of the clock output on the SCLK pin in synchronous mode.

Parameters

- **USARTx:** USART Instance
- **ClockPhase:** This parameter can be one of the following values:
  – LL_USART_PHASE_1EDGE
  – LL_USART_PHASE_2EDGE

Return values

- **None:**

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 CPHA LL_USART_SetClockPhase

LL_USART_GetClockPhase

Function name

__STATIC_INLINE uint32_t LL_USART_GetClockPhase (const USART_TypeDef * USARTx)

Function description

Return phase of the clock output on the SCLK pin in synchronous mode.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_PHASE_1EDGE
  - LL_USART_PHASE_2EDGE

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 CPHA LL_USART_GetClockPhase

LL_USART_SetClockPolarity

Function name

__STATIC_INLINE void LL_USART_SetClockPolarity (USART_TypeDef * USARTx, uint32_t ClockPolarity)

Function description

Select the polarity of the clock output on the SCLK pin in synchronous mode.

Parameters

- **USARTx:** USART Instance
- **ClockPolarity:** This parameter can be one of the following values:
  - LL_USART_POLARITY_LOW
  - LL_USART_POLARITY_HIGH

Return values

- **None:**

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 CPOL LL_USART_SetClockPolarity

LL_USART_GetClockPolarity

Function name

__STATIC_INLINE uint32_t LL_USART_GetClockPolarity (const USART_TypeDef * USARTx)

Function description

Return polarity of the clock output on the SCLK pin in synchronous mode.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_POLARITY_LOW
  - LL_USART_POLARITY_HIGH

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

LL_USART_ConfigClock

Function name

__STATIC_INLINE void LL_USART_ConfigClock (USART_TypeDef * USARTx, uint32_t Phase, uint32_t Polarity, uint32_t LBCPOutput)

Function description

Configure Clock signal format (Phase Polarity and choice about output of last bit clock pulse)

Parameters

- **USARTx:** USART Instance
- **Phase:** This parameter can be one of the following values:
  - LL_USART_PHASE_1EDGE
  - LL_USART_PHASE_2EDGE
- **Polarity:** This parameter can be one of the following values:
  - LL_USART_POLARITY_LOW
  - LL_USART_POLARITY_HIGH
- **LBCPOutput:** This parameter can be one of the following values:
  - LL_USART_LASTCLKPULSE_NO_OUTPUT
  - LL_USART_LASTCLKPULSE_OUTPUT

Return values

- **None:**

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.
- Call of this function is equivalent to following function call sequence : Clock Phase configuration using LL_USART_SetClockPhase() functionClock Polarity configuration using LL_USART_SetClockPolarity() functionOutput of Last bit Clock pulse configuration using LL_USART_SetLastClkPulseOutput() function

- CR2 LBCL LL_USART_ConfigClock

LL_USART_SetPrescaler

Function name

__STATIC_INLINE void LL_USART_SetPrescaler (USART_TypeDef * USARTx, uint32_t PrescalerValue)

Function description

Configure Clock source prescaler for baudrate generator and oversampling.

Parameters

- **USARTx:** USART Instance
- **PrescalerValue:** This parameter can be one of the following values:
  – LL_USART_PRESCALER_DIV1
  – LL_USART_PRESCALER_DIV2
  – LL_USART_PRESCALER_DIV4
  – LL_USART_PRESCALER_DIV6
  – LL_USART_PRESCALER_DIV8
  – LL_USART_PRESCALER_DIV10
  – LL_USART_PRESCALER_DIV12
  – LL_USART_PRESCALER_DIV16
  – LL_USART_PRESCALER_DIV32
  – LL_USART_PRESCALER_DIV64
  – LL_USART_PRESCALER_DIV128
  – LL_USART_PRESCALER_DIV256

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- PRESC PRESCALER LL_USART_SetPrescaler

LL_USART_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_USART_GetPrescaler (const USART_TypeDef * USARTx)

Function description

Retrieve the Clock source prescaler for baudrate generator and oversampling.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_PRESCALER_DIV1
  - LL_USART_PRESCALER_DIV2
  - LL_USART_PRESCALER_DIV4
  - LL_USART_PRESCALER_DIV6
  - LL_USART_PRESCALER_DIV8
  - LL_USART_PRESCALER_DIV10
  - LL_USART_PRESCALER_DIV12
  - LL_USART_PRESCALER_DIV16
  - LL_USART_PRESCALER_DIV32
  - LL_USART_PRESCALER_DIV64

Function description

Disable Clock output on SCLK pin.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 CLKEN LL_USART_DisableSCLKOutput

LL_USART_IsEnabledSCLKOutput

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledSCLKOutput (const USART_TypeDef * USARTx)

Function description

Indicate if Clock output on SCLK pin is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 CLKEN LL_USART_IsEnabledSCLKOutput

LL_USART_SetStopBitsLength

Function name

__STATIC_INLINE void LL_USART_SetStopBitsLength (USART_TypeDef * USARTx, uint32_t StopBits)

Function description

Set the length of the stop bits.

Parameters

- **USARTx:** USART Instance
- **StopBits:** This parameter can be one of the following values:
  – LL_USART_STOPBITS_0_5
  – LL_USART_STOPBITS_1
  – LL_USART_STOPBITS_1_5
  – LL_USART_STOPBITS_2

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 STOP LL_USART_SetStopBitsLength

LL_USART_GetStopBitsLength

Function name

__STATIC_INLINE uint32_t LL_USART_GetStopBitsLength (const USART_TypeDef * USARTx)

Function description

Retrieve the length of the stop bits.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_USART_STOPBITS_0_5
  – LL_USART_STOPBITS_1
  – LL_USART_STOPBITS_1_5
  – LL_USART_STOPBITS_2

Reference Manual to LL API cross reference:

- CR2 STOP LL_USART_GetStopBitsLength

LL_USART_ConfigCharacter

Function name

__STATIC_INLINE void LL_USART_ConfigCharacter (USART_TypeDef * USARTx, uint32_t DataWidth, uint32_t Parity, uint32_t StopBits)

Function description

Configure Character frame format (Datawidth, Parity control, Stop Bits)

Parameters

- **USARTx:** USART Instance
- **DataWidth:** This parameter can be one of the following values:
  – LL_USART_DATAWIDTH_7B
  – LL_USART_DATAWIDTH_8B
  – LL_USART_DATAWIDTH_9B
- **Parity:** This parameter can be one of the following values:
  – LL_USART_PARITY_NONE
  – LL_USART_PARITY_EVEN
  – LL_USART_PARITY_ODD
- **StopBits:** This parameter can be one of the following values:
  – LL_USART_STOPBITS_0_5
  – LL_USART_STOPBITS_1
  – LL_USART_STOPBITS_1_5
  – LL_USART_STOPBITS_2

Return values

- **None:**

Notes

- Call of this function is equivalent to following function call sequence : Data Width configuration using LL_USART_SetDataWidth() functionParity Control and mode configuration using LL_USART_SetParity() functionStop bits configuration using LL_USART_SetStopBitsLength() function

LL_USART_SetTXRXSwap

Function name

__STATIC_INLINE void LL_USART_SetTXRXSwap (USART_TypeDef * USARTx, uint32_t SwapConfig)

Function description

Configure TX/RX pins swapping setting.

Parameters

- **USARTx:** USART Instance
- **SwapConfig:** This parameter can be one of the following values:
  - LL_USART_TXRX_STANDARD
  - LL_USART_TXRX_SWAPPED

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 SWAP LL_USART_SetTXRXSwap

LL_USART_GetTXRXSwap

Function name

__STATIC_INLINE uint32_t LL_USART_GetTXRXSwap (const USART_TypeDef * USARTx)

Function description

Retrieve TX/RX pins swapping configuration.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_TXRX_STANDARD
  - LL_USART_TXRX_SWAPPED

Reference Manual to LL API cross reference:

- CR2 SWAP LL_USART_GetTXRXSwap

LL_USART_SetRXPinLevel

Function name

__STATIC_INLINE void LL_USART_SetRXPinLevel (USART_TypeDef * USARTx, uint32_t PinInvMethod)

Function description

Configure RX pin active level logic.

Parameters

- **USARTx:** USART Instance
- **PinInvMethod:** This parameter can be one of the following values:
  - LL_USART_RXPIN_LEVEL_STANDARD
  - LL_USART_RXPIN_LEVEL_INVERTED

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 RXINV LL_USART_SetRXPinLevel

LL_USART_GetRXPinLevel

Function name

__STATIC_INLINE uint32_t LL_USART_GetRXPinLevel (const USART_TypeDef * USARTx)

Function description

Retrieve RX pin active level logic configuration.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_RXPIN_LEVEL_STANDARD
  - LL_USART_RXPIN_LEVEL_INVERTED

Reference Manual to LL API cross reference:

- CR2 RXINV LL_USART_GetRXPinLevel

LL_USART_SetTXPinLevel

Function name

__STATIC_INLINE void LL_USART_SetTXPinLevel (USART_TypeDef * USARTx, uint32_t PinInvMethod)

Function description

Configure TX pin active level logic.

Parameters

- **USARTx:** USART Instance
- **PinInvMethod:** This parameter can be one of the following values:
  - LL_USART_TXPIN_LEVEL_STANDARD
  - LL_USART_TXPIN_LEVEL_INVERTED

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 TXINV LL_USART_SetTXPinLevel

LL_USART_GetTXPinLevel

Function name

__STATIC_INLINE uint32_t LL_USART_GetTXPinLevel (const USART_TypeDef * USARTx)

Function description

Retrieve TX pin active level logic configuration.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_USART_TXPIN_LEVEL_STANDARD
  – LL_USART_TXPIN_LEVEL_INVERTED

Reference Manual to LL API cross reference:

- CR2 TXINV LL_USART_GetTXPinLevel

LL_USART_SetBinaryDataLogic

Function name

__STATIC_INLINE void LL_USART_SetBinaryDataLogic (USART_TypeDef * USARTx, uint32_t DataLogic)

Function description

Configure Binary data logic.

Parameters

- **USARTx:** USART Instance
- **DataLogic:** This parameter can be one of the following values:
  – LL_USART_BINARY_LOGIC_POSITIVE
  – LL_USART_BINARY_LOGIC_NEGATIVE

Return values

- **None:**

Notes

- Allow to define how Logical data from the data register are send/received : either in positive/direct logic (1=H, 0=L) or in negative/inverse logic (1=L, 0=H)

Reference Manual to LL API cross reference:

- CR2 DATAINV LL_USART_SetBinaryDataLogic

LL_USART_GetBinaryDataLogic

Function name

__STATIC_INLINE uint32_t LL_USART_GetBinaryDataLogic (const USART_TypeDef * USARTx)

Function description

Retrieve Binary data configuration.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_USART_BINARY_LOGIC_POSITIVE
  – LL_USART_BINARY_LOGIC_NEGATIVE

Reference Manual to LL API cross reference:

- CR2 DATAINV LL_USART_GetBinaryDataLogic

LL_USART_SetTransferBitOrder

Function name

__STATIC_INLINE void LL_USART_SetTransferBitOrder (USART_TypeDef * USARTx, uint32_t BitOrder)

Function description

Configure transfer bit order (either Less or Most Significant Bit First)

Parameters

- **USARTx:** USART Instance
- **BitOrder:** This parameter can be one of the following values:
  - LL_USART_BITORDER_LSBFIRST
  - LL_USART_BITORDER_MSBFIRST

Return values

- **None:**

Notes

- MSB First means data is transmitted/received with the MSB first, following the start bit. LSB First means data is transmitted/received with data bit 0 first, following the start bit.

Reference Manual to LL API cross reference:

- CR2 MSBFIRST LL_USART_SetTransferBitOrder

LL_USART_GetTransferBitOrder

Function name

__STATIC_INLINE uint32_t LL_USART_GetTransferBitOrder (const USART_TypeDef * USARTx)

Function description

Return transfer bit order (either Less or Most Significant Bit First)

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_BITORDER_LSBFIRST
  - LL_USART_BITORDER_MSBFIRST

Notes

- MSB First means data is transmitted/received with the MSB first, following the start bit. LSB First means data is transmitted/received with data bit 0 first, following the start bit.

Reference Manual to LL API cross reference:

- CR2 MSBFIRST LL_USART_GetTransferBitOrder

LL_USART_EnableAutoBaudRate

Function name

__STATIC_INLINE void LL_USART_EnableAutoBaudRate (USART_TypeDef * USARTx)

Function description

Enable Auto Baud-Rate Detection.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_USART_AUTOBAUDRATE_DETECTION_INSTANCE(USARTx) can be used to check whether or not Auto Baud Rate detection feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 ABREN LL_USART_EnableAutoBaudRate

LL_USART_DisableAutoBaudRate

Function name

__STATIC_INLINE void LL_USART_DisableAutoBaudRate (USART_TypeDef * USARTx)

Function description

Disable Auto Baud-Rate Detection.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_USART_AUTOBAUDRATE_DETECTION_INSTANCE(USARTx) can be used to check whether or not Auto Baud Rate detection feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 ABREN LL_USART_DisableAutoBaudRate

LL_USART_IsEnabledAutoBaud

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledAutoBaud (const USART_TypeDef * USARTx)

Function description

Indicate if Auto Baud-Rate Detection mechanism is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_USART_AUTOBAUDRATE_DETECTION_INSTANCE(USARTx) can be used to check whether or not Auto Baud Rate detection feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 ABREN LL_USART_IsEnabledAutoBaud

LL_USART_SetAutoBaudRateMode

Function name

__STATIC_INLINE void LL_USART_SetAutoBaudRateMode (USART_TypeDef * USARTx, uint32_t AutoBaudRateMode)

Function description

Set Auto Baud-Rate mode bits.

Parameters

- **USARTx:** USART Instance
- **AutoBaudRateMode:** This parameter can be one of the following values:
  - LL_USART_AUTOBAUD_DETECT_ON_STARTBIT
  - LL_USART_AUTOBAUD_DETECT_ON_FALLINGEDGE
  - LL_USART_AUTOBAUD_DETECT_ON_7F_FRAME
  - LL_USART_AUTOBAUD_DETECT_ON_55_FRAME

Return values

- **None:**

Notes

- Macro IS_USART_AUTOBAUDRATE_DETECTION_INSTANCE(USARTx) can be used to check whether or not Auto Baud Rate detection feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 ABRMODE LL_USART_SetAutoBaudRateMode

LL_USART_GetAutoBaudRateMode

Function name

__STATIC_INLINE uint32_t LL_USART_GetAutoBaudRateMode (const USART_TypeDef * USARTx)

Function description

Return Auto Baud-Rate mode.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_AUTOBAUD_DETECT_ON_STARTBIT
  - LL_USART_AUTOBAUD_DETECT_ON_FALLINGEDGE
  - LL_USART_AUTOBAUD_DETECT_ON_7F_FRAME
  - LL_USART_AUTOBAUD_DETECT_ON_55_FRAME

Notes

- Macro IS_USART_AUTOBAUDRATE_DETECTION_INSTANCE(USARTx) can be used to check whether or not Auto Baud Rate detection feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 ABRMODE LL_USART_GetAutoBaudRateMode

LL_USART_EnableRxTimeout

Function name

__STATIC_INLINE void LL_USART_EnableRxTimeout (USART_TypeDef * USARTx)

Function description

Enable Receiver Timeout.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 RTOEN LL_USART_EnableRxTimeout

LL_USART_DisableRxTimeout

Function name

__STATIC_INLINE void LL_USART_DisableRxTimeout (USART_TypeDef * USARTx)

Function description

Disable Receiver Timeout.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 RTOEN LL_USART_DisableRxTimeout

LL_USART_IsEnabledRxTimeout

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledRxTimeout (const USART_TypeDef * USARTx)

Function description

Indicate if Receiver Timeout feature is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR2 RTOEN LL_USART_IsEnabledRxTimeout

LL_USART_ConfigNodeAddress

Function name

__STATIC_INLINE void LL_USART_ConfigNodeAddress (USART_TypeDef * USARTx, uint32_t AddressLen, uint32_t NodeAddress)

Function description

Set Address of the USART node.

Parameters

- **USARTx:** USART Instance
- **AddressLen:** This parameter can be one of the following values:
  – LL_USART_ADDRESS_DETECT_4B
  – LL_USART_ADDRESS_DETECT_7B
- **NodeAddress:** 4 or 7 bit Address of the USART node.

Return values

- **None:**

Notes

- This is used in multiprocessor communication during Mute mode or Stop mode, for wake up with address mark detection.
- 4bits address node is used when 4-bit Address Detection is selected in ADDM7. (b7-b4 should be set to 0) 8bits address node is used when 7-bit Address Detection is selected in ADDM7. (This is used in multiprocessor communication during Mute mode or Stop mode, for wake up with 7-bit address mark detection. The MSB of the character sent by the transmitter should be equal to 1. It may also be used for character detection during normal reception, Mute mode inactive (for example, end of block detection in ModBus protocol). In this case, the whole received character (8-bit) is compared to the ADD[7:0] value and CMF flag is set on match)

Reference Manual to LL API cross reference:

- CR2 ADD LL_USART_ConfigNodeAddress
- CR2 ADDM7 LL_USART_ConfigNodeAddress

LL_USART_GetNodeAddress

Function name

__STATIC_INLINE uint32_t LL_USART_GetNodeAddress (const USART_TypeDef * USARTx)

Function description

Return 8 bit Address of the USART node as set in ADD field of CR2.

Parameters

- **USARTx:** USART Instance

Return values

- **Address:** of the USART node (Value between Min_Data=0 and Max_Data=255)

Notes

- If 4-bit Address Detection is selected in ADDM7, only 4bits (b3-b0) of returned value are relevant (b31-b4 are not relevant) If 7-bit Address Detection is selected in ADDM7, only 8bits (b7-b0) of returned value are relevant (b31-b8 are not relevant)

Reference Manual to LL API cross reference:

- CR2 ADD LL_USART_GetNodeAddress

LL_USART_GetNodeAddressLen

Function name

__STATIC_INLINE uint32_t LL_USART_GetNodeAddressLen (const USART_TypeDef * USARTx)

Function description

Return Length of Node Address used in Address Detection mode (7-bit or 4-bit)

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_USART_ADDRESS_DETECT_4B
  – LL_USART_ADDRESS_DETECT_7B

Reference Manual to LL API cross reference:

- CR2 ADDM7 LL_USART_GetNodeAddressLen

LL_USART_EnableRTSHWFlowCtrl

Function name

__STATIC_INLINE void LL_USART_EnableRTSHWFlowCtrl (USART_TypeDef * USARTx)

Function description

Enable RTS HW Flow Control.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 RTSE LL_USART_EnableRTSHWFlowCtrl

LL_USART_DisableRTSHWFlowCtrl

Function name

__STATIC_INLINE void LL_USART_DisableRTSHWFlowCtrl (USART_TypeDef * USARTx)

Function description

Disable RTS HW Flow Control.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 RTSE LL_USART_DisableRTSHWFlowCtrl

LL_USART_EnableCTSHWFlowCtrl

Function name

__STATIC_INLINE void LL_USART_EnableCTSHWFlowCtrl (USART_TypeDef * USARTx)

Function description

Enable CTS HW Flow Control.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 CTSE LL_USART_EnableCTSHWFlowCtrl

LL_USART_DisableCTSHWFlowCtrl

Function name

__STATIC_INLINE void LL_USART_DisableCTSHWFlowCtrl (USART_TypeDef * USARTx)

Function description

Disable CTS HW Flow Control.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 CTSE LL_USART_DisableCTSHWFlowCtrl

LL_USART_SetHWFlowCtrl

Function name

__STATIC_INLINE void LL_USART_SetHWFlowCtrl (USART_TypeDef * USARTx, uint32_t HardwareFlowControl)

Function description

Configure HW Flow Control mode (both CTS and RTS)

Parameters

- **USARTx:** USART Instance
- **HardwareFlowControl:** This parameter can be one of the following values:
  – LL_USART_HWCONTROL_NONE
  – LL_USART_HWCONTROL_RTS
  – LL_USART_HWCONTROL_CTS
  – LL_USART_HWCONTROL_RTS_CTS

Return values

- **None:**

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 RTSE LL_USART_SetHWFlowCtrl
- CR3 CTSE LL_USART_SetHWFlowCtrl

LL_USART_GetHWFlowCtrl

Function name

__STATIC_INLINE uint32_t LL_USART_GetHWFlowCtrl (const USART_TypeDef * USARTx)

Function description

Return HW Flow Control configuration (both CTS and RTS)

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_HWCONTROL_NONE
  - LL_USART_HWCONTROL_RTS
  - LL_USART_HWCONTROL_CTS
  - LL_USART_HWCONTROL_RTS_CTS

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 RTSE LL_USART_GetHWFlowCtrl
- CR3 CTSE LL_USART_GetHWFlowCtrl

LL_USART_EnableOneBitSamp

Function name

__STATIC_INLINE void LL_USART_EnableOneBitSamp (USART_TypeDef * USARTx)

Function description

Enable One bit sampling method.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 ONEBIT LL_USART_EnableOneBitSamp

LL_USART_DisableOneBitSamp

Function name

__STATIC_INLINE void LL_USART_DisableOneBitSamp (USART_TypeDef * USARTx)

Function description

Disable One bit sampling method.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 ONEBIT LL_USART_DisableOneBitSamp

LL_USART_IsEnabledOneBitSamp

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledOneBitSamp (const USART_TypeDef * USARTx)

Function description

Indicate if One bit sampling method is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 ONEBIT LL_USART_IsEnabledOneBitSamp

LL_USART_EnableOverrunDetect

Function name

__STATIC_INLINE void LL_USART_EnableOverrunDetect (USART_TypeDef * USARTx)

Function description

Enable Overrun detection.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 OVRDIS LL_USART_EnableOverrunDetect

LL_USART_DisableOverrunDetect

Function name

__STATIC_INLINE void LL_USART_DisableOverrunDetect (USART_TypeDef * USARTx)

Function description

Disable Overrun detection.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 OVRDIS LL_USART_DisableOverrunDetect

LL_USART_IsEnabledOverrunDetect

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledOverrunDetect (const USART_TypeDef * USARTx)

Function description

Indicate if Overrun detection is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 OVRDIS LL_USART_IsEnabledOverrunDetect

LL_USART_SetBaudRate

Function name

__STATIC_INLINE void LL_USART_SetBaudRate (USART_TypeDef * USARTx, uint32_t PeriphClk, uint32_t PrescalerValue, uint32_t OverSampling, uint32_t BaudRate)

Function description

Configure USART BRR register for achieving expected Baud Rate value.

Parameters

- **USARTx:** USART Instance
- **PeriphClk:** Peripheral Clock
- **PrescalerValue:** This parameter can be one of the following values:
  - LL_USART_PRESCALER_DIV1
  - LL_USART_PRESCALER_DIV2
  - LL_USART_PRESCALER_DIV4
  - LL_USART_PRESCALER_DIV6
  - LL_USART_PRESCALER_DIV8
  - LL_USART_PRESCALER_DIV10
  - LL_USART_PRESCALER_DIV12
  - LL_USART_PRESCALER_DIV16
  - LL_USART_PRESCALER_DIV32
  - LL_USART_PRESCALER_DIV64
  - LL_USART_PRESCALER_DIV128
  - LL_USART_PRESCALER_DIV256
- **OverSampling:** This parameter can be one of the following values:
  - LL_USART_OVERSAMPLING_16
  - LL_USART_OVERSAMPLING_8
- **BaudRate:** Baud Rate

Return values

- **None:**

Notes

- Compute and set USARTDIV value in BRR Register (full BRR content) according to used Peripheral Clock, Oversampling mode, and expected Baud Rate values
- Peripheral clock and Baud rate values provided as function parameters should be valid (Baud rate value != 0)
- In case of oversampling by 16 and 8, BRR content must be greater than or equal to 16d.

Reference Manual to LL API cross reference:

- BRR BRR LL_USART_SetBaudRate

LL_USART_GetBaudRate

Function name

__STATIC_INLINE uint32_t LL_USART_GetBaudRate (const USART_TypeDef * USARTx, uint32_t PeriphClk, uint32_t PrescalerValue, uint32_t OverSampling)

Function description

Return current Baud Rate value, according to USARTDIV present in BRR register (full BRR content), and to used Peripheral Clock and Oversampling mode values.

Parameters

- **USARTx:** USART Instance
- **PeriphClk:** Peripheral Clock
- **PrescalerValue:** This parameter can be one of the following values:
  - LL_USART_PRESCALER_DIV1
  - LL_USART_PRESCALER_DIV2
  - LL_USART_PRESCALER_DIV4
  - LL_USART_PRESCALER_DIV6
  - LL_USART_PRESCALER_DIV8
  - LL_USART_PRESCALER_DIV10
  - LL_USART_PRESCALER_DIV12
  - LL_USART_PRESCALER_DIV16
  - LL_USART_PRESCALER_DIV32
  - LL_USART_PRESCALER_DIV64
  - LL_USART_PRESCALER_DIV128
  - LL_USART_PRESCALER_DIV256
- **OverSampling:** This parameter can be one of the following values:
  - LL_USART_OVERSAMPLING_16
  - LL_USART_OVERSAMPLING_8

Return values

- **Baud:** Rate

Notes

- In case of non-initialized or invalid value stored in BRR register, value 0 will be returned.
- In case of oversampling by 16 and 8, BRR content must be greater than or equal to 16d.

Reference Manual to LL API cross reference:

- BRR BRR LL_USART_GetBaudRate

LL_USART_SetRxTimeout

Function name

__STATIC_INLINE void LL_USART_SetRxTimeout (USART_TypeDef * USARTx, uint32_t Timeout)

Function description

Set Receiver Time Out Value (expressed in nb of bits duration)

Parameters

- **USARTx:** USART Instance
- **Timeout:** Value between Min_Data=0x00 and Max_Data=0x00FFFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTOR RTO LL_USART_SetRxTimeout

LL_USART_GetRxTimeout

Function name

__STATIC_INLINE uint32_t LL_USART_GetRxTimeout (const USART_TypeDef * USARTx)

Function description

Get Receiver Time Out Value (expressed in nb of bits duration)

Parameters

- **USARTx:** USART Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x00FFFFFF

Reference Manual to LL API cross reference:

- RTOR RTO LL_USART_GetRxTimeout

LL_USART_SetBlockLength

Function name

__STATIC_INLINE void LL_USART_SetBlockLength (USART_TypeDef * USARTx, uint32_t BlockLength)

Function description

Set Block Length value in reception.

Parameters

- **USARTx:** USART Instance
- **BlockLength:** Value between Min_Data=0x00 and Max_Data=0xFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTOR BLEN LL_USART_SetBlockLength

LL_USART_GetBlockLength

Function name

__STATIC_INLINE uint32_t LL_USART_GetBlockLength (const USART_TypeDef * USARTx)

Function description

Get Block Length value in reception.

Parameters

- **USARTx:** USART Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0xFF

Reference Manual to LL API cross reference:

- RTOR BLEN LL_USART_GetBlockLength

LL_USART_EnableIrda

Function name

__STATIC_INLINE void LL_USART_EnableIrda (USART_TypeDef * USARTx)

Function description

Enable IrDA mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_IRDA_INSTANCE(USARTx) can be used to check whether or not IrDA feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 IREN LL_USART_EnableIrda

LL_USART_DisableIrda

Function name

__STATIC_INLINE void LL_USART_DisableIrda (USART_TypeDef * USARTx)

Function description

Disable IrDA mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_IRDA_INSTANCE(USARTx) can be used to check whether or not IrDA feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 IREN LL_USART_DisableIrda

LL_USART_IsEnabledIrda

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIrda (const USART_TypeDef * USARTx)

Function description

Indicate if IrDA mode is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_IRDA_INSTANCE(USARTx) can be used to check whether or not IrDA feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 IREN LL_USART_IsEnabledIrda

LL_USART_SetIrdaPowerMode

Function name

__STATIC_INLINE void LL_USART_SetIrdaPowerMode (USART_TypeDef * USARTx, uint32_t PowerMode)

Function description

Configure IrDA Power Mode (Normal or Low Power)

Parameters

- **USARTx:** USART Instance
- **PowerMode:** This parameter can be one of the following values:
  – LL_USART_IRDA_POWER_NORMAL
  – LL_USART_IRDA_POWER_LOW

Return values

- **None:**

Notes

- Macro IS_IRDA_INSTANCE(USARTx) can be used to check whether or not IrDA feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 IRLP LL_USART_SetIrdaPowerMode

LL_USART_GetIrdaPowerMode

Function name

__STATIC_INLINE uint32_t LL_USART_GetIrdaPowerMode (const USART_TypeDef * USARTx)

Function description

Retrieve IrDA Power Mode configuration (Normal or Low Power)

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_USART_IRDA_POWER_NORMAL
  – LL_USART_PHASE_2EDGE

Notes

- Macro IS_IRDA_INSTANCE(USARTx) can be used to check whether or not IrDA feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 IRLP LL_USART_GetIrdaPowerMode

LL_USART_SetIrdaPrescaler

Function name

__STATIC_INLINE void LL_USART_SetIrdaPrescaler (USART_TypeDef * USARTx, uint32_t PrescalerValue)

Function description

Set Irda prescaler value, used for dividing the USART clock source to achieve the Irda Low Power frequency (8 bits value)

Parameters

- **USARTx:** USART Instance
- **PrescalerValue:** Value between Min_Data=0x00 and Max_Data=0xFF

Return values

- **None:**

Notes

- Macro IS_IRDA_INSTANCE(USARTx) can be used to check whether or not IrDA feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- GTPR PSC LL_USART_SetIrdaPrescaler

LL_USART_GetIrdaPrescaler

Function name

__STATIC_INLINE uint32_t LL_USART_GetIrdaPrescaler (const USART_TypeDef * USARTx)

Function description

Return Irda prescaler value, used for dividing the USART clock source to achieve the Irda Low Power frequency (8 bits value)

Parameters

- **USARTx:** USART Instance

Return values

- **Irda:** prescaler value (Value between Min_Data=0x00 and Max_Data=0xFF)

Notes

- Macro IS_IRDA_INSTANCE(USARTx) can be used to check whether or not IrDA feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- GTPR PSC LL_USART_GetIrdaPrescaler

LL_USART_EnableSmartcardNACK

Function name

__STATIC_INLINE void LL_USART_EnableSmartcardNACK (USART_TypeDef * USARTx)

Function description

Enable Smartcard NACK transmission.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 NACK LL_USART_EnableSmartcardNACK

LL_USART_DisableSmartcardNACK

Function name

__STATIC_INLINE void LL_USART_DisableSmartcardNACK (USART_TypeDef * USARTx)

Function description

Disable Smartcard NACK transmission.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 NACK LL_USART_DisableSmartcardNACK

LL_USART_IsEnabledSmartcardNACK

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledSmartcardNACK (const USART_TypeDef * USARTx)

Function description

Indicate if Smartcard NACK transmission is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 NACK LL_USART_IsEnabledSmartcardNACK

LL_USART_EnableSmartcard

Function name

__STATIC_INLINE void LL_USART_EnableSmartcard (USART_TypeDef * USARTx)

Function description

Enable Smartcard mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 SCEN LL_USART_EnableSmartcard

LL_USART_DisableSmartcard

Function name

__STATIC_INLINE void LL_USART_DisableSmartcard (USART_TypeDef * USARTx)

Function description

Disable Smartcard mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 SCEN LL_USART_DisableSmartcard

LL_USART_IsEnabledSmartcard

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledSmartcard (const USART_TypeDef * USARTx)

Function description

Indicate if Smartcard mode is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 SCEN LL_USART_IsEnabledSmartcard

LL_USART_SetSmartcardAutoRetryCount

Function name

__STATIC_INLINE void LL_USART_SetSmartcardAutoRetryCount (USART_TypeDef * USARTx, uint32_t AutoRetryCount)

Function description

Set Smartcard Auto-Retry Count value (SCARCNT[2:0] bits)

Parameters

- **USARTx:** USART Instance
- **AutoRetryCount:** Value between Min_Data=0 and Max_Data=7

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.
- This bit-field specifies the number of retries in transmit and receive, in Smartcard mode. In transmission mode, it specifies the number of automatic retransmission retries, before generating a transmission error (FE bit set). In reception mode, it specifies the number or erroneous reception trials, before generating a reception error (RXNE and PE bits set)

Reference Manual to LL API cross reference:

- CR3 SCARCNT LL_USART_SetSmartcardAutoRetryCount

LL_USART_GetSmartcardAutoRetryCount

Function name

__STATIC_INLINE uint32_t LL_USART_GetSmartcardAutoRetryCount (const USART_TypeDef * USARTx)

Function description

Return Smartcard Auto-Retry Count value (SCARCNT[2:0] bits)

Parameters

- **USARTx:** USART Instance

Return values

- **Smartcard:** Auto-Retry Count value (Value between Min_Data=0 and Max_Data=7)

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 SCARCNT LL_USART_GetSmartcardAutoRetryCount

LL_USART_SetSmartcardPrescaler

Function name

__STATIC_INLINE void LL_USART_SetSmartcardPrescaler (USART_TypeDef * USARTx, uint32_t PrescalerValue)

Function description

Set Smartcard prescaler value, used for dividing the USART clock source to provide the SMARTCARD Clock (5 bits value)

Parameters

- **USARTx:** USART Instance
- **PrescalerValue:** Value between Min_Data=0 and Max_Data=31

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- GTPR PSC LL_USART_SetSmartcardPrescaler

LL_USART_GetSmartcardPrescaler

Function name

__STATIC_INLINE uint32_t LL_USART_GetSmartcardPrescaler (const USART_TypeDef * USARTx)

Function description

Return Smartcard prescaler value, used for dividing the USART clock source to provide the SMARTCARD Clock (5 bits value)

Parameters

- **USARTx:** USART Instance

Return values

- **Smartcard:** prescaler value (Value between Min_Data=0 and Max_Data=31)

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- GTPR PSC LL_USART_GetSmartcardPrescaler

LL_USART_SetSmartcardGuardTime

Function name

__STATIC_INLINE void LL_USART_SetSmartcardGuardTime (USART_TypeDef * USARTx, uint32_t GuardTime)

Function description

Set Smartcard Guard time value, expressed in nb of baud clocks periods (GT[7:0] bits : Guard time value)

Parameters

- **USARTx:** USART Instance
- **GuardTime:** Value between Min_Data=0x00 and Max_Data=0xFF

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- GTPR GT LL_USART_SetSmartcardGuardTime

LL_USART_GetSmartcardGuardTime

Function name

__STATIC_INLINE uint32_t LL_USART_GetSmartcardGuardTime (const USART_TypeDef * USARTx)

Function description

Return Smartcard Guard time value, expressed in nb of baud clocks periods (GT[7:0] bits : Guard time value)

Parameters

- **USARTx:** USART Instance

Return values

- **Smartcard:** Guard time value (Value between Min_Data=0x00 and Max_Data=0xFF)

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- GTPR GT LL_USART_GetSmartcardGuardTime

LL_USART_EnableHalfDuplex

Function name

__STATIC_INLINE void LL_USART_EnableHalfDuplex (USART_TypeDef * USARTx)

Function description

Enable Single Wire Half-Duplex mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_HALFDUPLEX_INSTANCE(USARTx) can be used to check whether or not Half-Duplex mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 HDSEL LL_USART_EnableHalfDuplex

LL_USART_DisableHalfDuplex

Function name

__STATIC_INLINE void LL_USART_DisableHalfDuplex (USART_TypeDef * USARTx)

Function description

Disable Single Wire Half-Duplex mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_HALFDUPLEX_INSTANCE(USARTx) can be used to check whether or not Half-Duplex mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 HDSEL LL_USART_DisableHalfDuplex

LL_USART_IsEnabledHalfDuplex

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledHalfDuplex (const USART_TypeDef * USARTx)

Function description

Indicate if Single Wire Half-Duplex mode is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_HALFDUPLEX_INSTANCE(USARTx) can be used to check whether or not Half-Duplex mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 HDSEL LL_USART_IsEnabledHalfDuplex

LL_USART_EnableSPISlave

Function name

__STATIC_INLINE void LL_USART_EnableSPISlave (USART_TypeDef * USARTx)

Function description

Enable SPI Synchronous Slave mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_SPI_SLAVE_INSTANCE(USARTx) can be used to check whether or not SPI Slave mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 SLVEN LL_USART_EnableSPISlave

LL_USART_DisableSPISlave

Function name

__STATIC_INLINE void LL_USART_DisableSPISlave (USART_TypeDef * USARTx)

Function description

Disable SPI Synchronous Slave mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_SPI_SLAVE_INSTANCE(USARTx) can be used to check whether or not SPI Slave mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 SLVEN LL_USART_DisableSPISlave

LL_USART_IsEnabledSPISlave

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledSPISlave (const USART_TypeDef * USARTx)

Function description

Indicate if SPI Synchronous Slave mode is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_SPI_SLAVE_INSTANCE(USARTx) can be used to check whether or not SPI Slave mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 SLVEN LL_USART_IsEnabledSPISlave

LL_USART_EnableSPISlaveSelect

Function name

__STATIC_INLINE void LL_USART_EnableSPISlaveSelect (USART_TypeDef * USARTx)

Function description

Enable SPI Slave Selection using NSS input pin.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_SPI_SLAVE_INSTANCE(USARTx) can be used to check whether or not SPI Slave mode feature is supported by the USARTx instance.
- SPI Slave Selection depends on NSS input pin (The slave is selected when NSS is low and deselected when NSS is high).

Reference Manual to LL API cross reference:

- CR2 DIS_NSS LL_USART_EnableSPISlaveSelect

LL_USART_DisableSPISlaveSelect

Function name

__STATIC_INLINE void LL_USART_DisableSPISlaveSelect (USART_TypeDef * USARTx)

Function description

Disable SPI Slave Selection using NSS input pin.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_SPI_SLAVE_INSTANCE(USARTx) can be used to check whether or not SPI Slave mode feature is supported by the USARTx instance.
- SPI Slave will be always selected and NSS input pin will be ignored.

Reference Manual to LL API cross reference:

- CR2 DIS_NSS LL_USART_DisableSPISlaveSelect

LL_USART_IsEnabledSPISlaveSelect

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledSPISlaveSelect (const USART_TypeDef * USARTx)

Function description

Indicate if SPI Slave Selection depends on NSS input pin.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_SPI_SLAVE_INSTANCE(USARTx) can be used to check whether or not SPI Slave mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 DIS_NSS LL_USART_IsEnabledSPISlaveSelect

LL_USART_SetLINBrkDetectionLen

Function name

__STATIC_INLINE void LL_USART_SetLINBrkDetectionLen (USART_TypeDef * USARTx, uint32_t LINBDLength)

Function description

Set LIN Break Detection Length.

Parameters

- **USARTx:** USART Instance
- **LINBDLength:** This parameter can be one of the following values:
  – LL_USART_LINBREAK_DETECT_10B
  – LL_USART_LINBREAK_DETECT_11B

Return values

- **None:**

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LBDL LL_USART_SetLINBrkDetectionLen

LL_USART_GetLINBrkDetectionLen

Function name

__STATIC_INLINE uint32_t LL_USART_GetLINBrkDetectionLen (const USART_TypeDef * USARTx)

Function description

Return LIN Break Detection Length.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_LINBREAK_DETECT_10B
  - LL_USART_LINBREAK_DETECT_11B

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LBDL LL_USART_GetLINBrkDetectionLen

LL_USART_EnableLIN

Function name

__STATIC_INLINE void LL_USART_EnableLIN (USART_TypeDef * USARTx)

Function description

Enable LIN mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LINEN LL_USART_EnableLIN

LL_USART_DisableLIN

Function name

__STATIC_INLINE void LL_USART_DisableLIN (USART_TypeDef * USARTx)

Function description

Disable LIN mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LINEN LL_USART_DisableLIN

LL_USART_IsEnabledLIN

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledLIN (const USART_TypeDef * USARTx)

Function description

Indicate if LIN mode is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LINEN LL_USART_IsEnabledLIN

LL_USART_SetDEDeassertionTime

Function name

__STATIC_INLINE void LL_USART_SetDEDeassertionTime (USART_TypeDef * USARTx, uint32_t Time)

Function description

Set DEDT (Driver Enable De-Assertion Time), Time value expressed on 5 bits ([4:0] bits).

Parameters

- **USARTx:** USART Instance
- **Time:** Value between Min_Data=0 and Max_Data=31

Return values

- **None:**

Notes

- Macro IS_UART_DRIVER_ENABLE_INSTANCE(USARTx) can be used to check whether or not Driver Enable feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 DEDT LL_USART_SetDEDeassertionTime

LL_USART_GetDEDeassertionTime

Function name

__STATIC_INLINE uint32_t LL_USART_GetDEDeassertionTime (const USART_TypeDef * USARTx)

Function description

Return DEDT (Driver Enable De-Assertion Time)

Parameters

- **USARTx:** USART Instance

Return values

- **Time:** value expressed on 5 bits ([4:0] bits) : Value between Min_Data=0 and Max_Data=31

Notes

- Macro IS_UART_DRIVER_ENABLE_INSTANCE(USARTx) can be used to check whether or not Driver Enable feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 DEDT LL_USART_GetDEDeassertionTime

LL_USART_SetDEAssertionTime

Function name

__STATIC_INLINE void LL_USART_SetDEAssertionTime (USART_TypeDef * USARTx, uint32_t Time)

Function description

Set DEAT (Driver Enable Assertion Time), Time value expressed on 5 bits ([4:0] bits).

Parameters

- **USARTx:** USART Instance
- **Time:** Value between Min_Data=0 and Max_Data=31

Return values

- **None:**

Notes

- Macro IS_UART_DRIVER_ENABLE_INSTANCE(USARTx) can be used to check whether or not Driver Enable feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 DEAT LL_USART_SetDEAssertionTime

LL_USART_GetDEAssertionTime

Function name

__STATIC_INLINE uint32_t LL_USART_GetDEAssertionTime (const USART_TypeDef * USARTx)

Function description

Return DEAT (Driver Enable Assertion Time)

Parameters

- **USARTx:** USART Instance

Return values

- **Time:** value expressed on 5 bits ([4:0] bits) : Value between Min_Data=0 and Max_Data=31

Notes

- Macro IS_UART_DRIVER_ENABLE_INSTANCE(USARTx) can be used to check whether or not Driver Enable feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 DEAT LL_USART_GetDEAssertionTime

LL_USART_EnableDEMode

Function name

__STATIC_INLINE void LL_USART_EnableDEMode (USART_TypeDef * USARTx)

Function description

Enable Driver Enable (DE) Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_DRIVER_ENABLE_INSTANCE(USARTx) can be used to check whether or not Driver Enable feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 DEM LL_USART_EnableDEMode

LL_USART_DisableDEMode

Function name

__STATIC_INLINE void LL_USART_DisableDEMode (USART_TypeDef * USARTx)

Function description

Disable Driver Enable (DE) Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_DRIVER_ENABLE_INSTANCE(USARTx) can be used to check whether or not Driver Enable feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 DEM LL_USART_DisableDEMode

LL_USART_IsEnabledDEMode

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledDEMode (const USART_TypeDef * USARTx)

Function description

Indicate if Driver Enable (DE) Mode is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_DRIVER_ENABLE_INSTANCE(USARTx) can be used to check whether or not Driver Enable feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 DEM LL_USART_IsEnabledDEMode

LL_USART_SetDESignalPolarity

Function name

__STATIC_INLINE void LL_USART_SetDESignalPolarity (USART_TypeDef * USARTx, uint32_t Polarity)

Function description

Select Driver Enable Polarity.

Parameters

- **USARTx:** USART Instance
- **Polarity:** This parameter can be one of the following values:
  – LL_USART_DE_POLARITY_HIGH
  – LL_USART_DE_POLARITY_LOW

Return values

- **None:**

Notes

- Macro IS_UART_DRIVER_ENABLE_INSTANCE(USARTx) can be used to check whether or not Driver Enable feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 DEP LL_USART_SetDESignalPolarity

LL_USART_GetDESignalPolarity

Function name

__STATIC_INLINE uint32_t LL_USART_GetDESignalPolarity (const USART_TypeDef * USARTx)

Function description

Return Driver Enable Polarity.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_USART_DE_POLARITY_HIGH
  – LL_USART_DE_POLARITY_LOW

Notes

- Macro IS_UART_DRIVER_ENABLE_INSTANCE(USARTx) can be used to check whether or not Driver Enable feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 DEP LL_USART_GetDESignalPolarity

LL_USART_ConfigAsyncMode

Function name

__STATIC_INLINE void LL_USART_ConfigAsyncMode (USART_TypeDef * USARTx)

Function description

Perform basic configuration of USART for enabling use in Asynchronous Mode (UART)

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- In UART mode, the following bits must be kept cleared: LINEN bit in the USART_CR2 register,CLKEN bit in the USART_CR2 register,SCEN bit in the USART_CR3 register,IREN bit in the USART_CR3 register,HDSEL bit in the USART_CR3 register.
- Call of this function is equivalent to following function call sequence : Clear LINEN in CR2 using LL_USART_DisableLIN() functionClear CLKEN in CR2 using LL_USART_DisableSCLKOutput() functionClear SCEN in CR3 using LL_USART_DisableSmartcard() functionClear IREN in CR3 using LL_USART_DisableIrda() functionClear HDSEL in CR3 using LL_USART_DisableHalfDuplex() function
- Other remaining configurations items related to Asynchronous Mode (as Baud Rate, Word length, Parity, ...) should be set using dedicated functions

Reference Manual to LL API cross reference:

- CR2 LINEN LL_USART_ConfigAsyncMode
- CR2 CLKEN LL_USART_ConfigAsyncMode
- CR3 SCEN LL_USART_ConfigAsyncMode
- CR3 IREN LL_USART_ConfigAsyncMode
- CR3 HDSEL LL_USART_ConfigAsyncMode

LL_USART_ConfigSyncMode

Function name

__STATIC_INLINE void LL_USART_ConfigSyncMode (USART_TypeDef * USARTx)

Function description

Perform basic configuration of USART for enabling use in Synchronous Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- In Synchronous mode, the following bits must be kept cleared: LINEN bit in the USART_CR2 register,SCEN bit in the USART_CR3 register,IREN bit in the USART_CR3 register,HDSEL bit in the USART_CR3 register. This function also sets the USART in Synchronous mode.
- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.
- Call of this function is equivalent to following function call sequence : Clear LINEN in CR2 using LL_USART_DisableLIN() functionClear IREN in CR3 using LL_USART_DisableIrda() functionClear SCEN in CR3 using LL_USART_DisableSmartcard() functionClear HDSEL in CR3 using LL_USART_DisableHalfDuplex() functionSet CLKEN in CR2 using LL_USART_EnableSCLKOutput() function
- Other remaining configurations items related to Synchronous Mode (as Baud Rate, Word length, Parity, Clock Polarity, ...) should be set using dedicated functions

Reference Manual to LL API cross reference:

- CR2 LINEN LL_USART_ConfigSyncMode
- CR2 CLKEN LL_USART_ConfigSyncMode
- CR3 SCEN LL_USART_ConfigSyncMode
- CR3 IREN LL_USART_ConfigSyncMode
- CR3 HDSEL LL_USART_ConfigSyncMode

LL_USART_ConfigLINMode

Function name

__STATIC_INLINE void LL_USART_ConfigLINMode (USART_TypeDef * USARTx)

Function description

Perform basic configuration of USART for enabling use in LIN Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- In LIN mode, the following bits must be kept cleared: STOP and CLKEN bits in the USART_CR2 register,SCEN bit in the USART_CR3 register,IREN bit in the USART_CR3 register,HDSEL bit in the USART_CR3 register. This function also set the UART/USART in LIN mode.
- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.
- Call of this function is equivalent to following function call sequence : Clear CLKEN in CR2 using LL_USART_DisableSCLKOutput() functionClear STOP in CR2 using LL_USART_SetStopBitsLength() functionClear SCEN in CR3 using LL_USART_DisableSmartcard() functionClear IREN in CR3 using LL_USART_DisableIrda() functionClear HDSEL in CR3 using LL_USART_DisableHalfDuplex() functionSet LINEN in CR2 using LL_USART_EnableLIN() function
- Other remaining configurations items related to LIN Mode (as Baud Rate, Word length, LIN Break Detection Length, ...) should be set using dedicated functions

Reference Manual to LL API cross reference:

- CR2 CLKEN LL_USART_ConfigLINMode
- CR2 STOP LL_USART_ConfigLINMode
- CR2 LINEN LL_USART_ConfigLINMode
- CR3 IREN LL_USART_ConfigLINMode
- CR3 SCEN LL_USART_ConfigLINMode
- CR3 HDSEL LL_USART_ConfigLINMode

LL_USART_ConfigHalfDuplexMode

Function name

__STATIC_INLINE void LL_USART_ConfigHalfDuplexMode (USART_TypeDef * USARTx)

Function description

Perform basic configuration of USART for enabling use in Half Duplex Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- In Half Duplex mode, the following bits must be kept cleared: LINEN bit in the USART_CR2 register,CLKEN bit in the USART_CR2 register,SCEN bit in the USART_CR3 register,IREN bit in the USART_CR3 register, This function also sets the UART/USART in Half Duplex mode.
- Macro IS_UART_HALFDUPLEX_INSTANCE(USARTx) can be used to check whether or not Half-Duplex mode is supported by the USARTx instance.
- Call of this function is equivalent to following function call sequence : Clear LINEN in CR2 using LL_USART_DisableLIN() functionClear CLKEN in CR2 using LL_USART_DisableSCLKOutput() functionClear SCEN in CR3 using LL_USART_DisableSmartcard() functionClear IREN in CR3 using LL_USART_DisableIrda() functionSet HDSEL in CR3 using LL_USART_EnableHalfDuplex() function
- Other remaining configurations items related to Half Duplex Mode (as Baud Rate, Word length, Parity, ...) should be set using dedicated functions

- CR2 LINEN LL_USART_ConfigHalfDuplexMode
- CR2 CLKEN LL_USART_ConfigHalfDuplexMode
- CR3 HDSEL LL_USART_ConfigHalfDuplexMode
- CR3 SCEN LL_USART_ConfigHalfDuplexMode
- CR3 IREN LL_USART_ConfigHalfDuplexMode

LL_USART_ConfigSmartcardMode

Function name

__STATIC_INLINE void LL_USART_ConfigSmartcardMode (USART_TypeDef * USARTx)

Function description

Perform basic configuration of USART for enabling use in Smartcard Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- In Smartcard mode, the following bits must be kept cleared: LINEN bit in the USART_CR2 register,IREN bit in the USART_CR3 register,HDSEL bit in the USART_CR3 register. This function also configures Stop bits to 1.5 bits and sets the USART in Smartcard mode (SCEN bit). Clock Output is also enabled (CLKEN).
- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.
- Call of this function is equivalent to following function call sequence : Clear LINEN in CR2 using LL_USART_DisableLIN() functionClear IREN in CR3 using LL_USART_DisableIrda() functionClear HDSEL in CR3 using LL_USART_DisableHalfDuplex() functionConfigure STOP in CR2 using LL_USART_SetStopBitsLength() functionSet CLKEN in CR2 using LL_USART_EnableSCLKOutput() functionSet SCEN in CR3 using LL_USART_EnableSmartcard() function
- Other remaining configurations items related to Smartcard Mode (as Baud Rate, Word length, Parity, ...) should be set using dedicated functions

Reference Manual to LL API cross reference:

- CR2 LINEN LL_USART_ConfigSmartcardMode
- CR2 STOP LL_USART_ConfigSmartcardMode
- CR2 CLKEN LL_USART_ConfigSmartcardMode
- CR3 HDSEL LL_USART_ConfigSmartcardMode
- CR3 SCEN LL_USART_ConfigSmartcardMode

LL_USART_ConfigIrdaMode

Function name

__STATIC_INLINE void LL_USART_ConfigIrdaMode (USART_TypeDef * USARTx)

Function description

Perform basic configuration of USART for enabling use in Irda Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- In IRDA mode, the following bits must be kept cleared: LINEN bit in the USART_CR2 register,STOP and CLKEN bits in the USART_CR2 register,SCEN bit in the USART_CR3 register,HDSEL bit in the USART_CR3 register. This function also sets the UART/USART in IRDA mode (IREN bit).
- Macro IS_IRDA_INSTANCE(USARTx) can be used to check whether or not IrDA feature is supported by the USARTx instance.
- Call of this function is equivalent to following function call sequence : Clear LINEN in CR2 using LL_USART_DisableLIN() functionClear CLKEN in CR2 using LL_USART_DisableSCLKOutput() functionClear SCEN in CR3 using LL_USART_DisableSmartcard() functionClear HDSEL in CR3 using LL_USART_DisableHalfDuplex() functionConfigure STOP in CR2 using LL_USART_SetStopBitsLength() functionSet IREN in CR3 using LL_USART_EnableIrda() function
- Other remaining configurations items related to Irda Mode (as Baud Rate, Word length, Power mode, ...) should be set using dedicated functions

Reference Manual to LL API cross reference:

- CR2 CLKEN LL_USART_ConfigIrdaMode
- CR2 STOP LL_USART_ConfigIrdaMode
- CR3 SCEN LL_USART_ConfigIrdaMode
- CR3 HDSEL LL_USART_ConfigIrdaMode
- CR3 IREN LL_USART_ConfigIrdaMode

LL_USART_ConfigMultiProcessMode

Function name

__STATIC_INLINE void LL_USART_ConfigMultiProcessMode (USART_TypeDef * USARTx)

Function description

Perform basic configuration of USART for enabling use in Multi processor Mode (several USARTs connected in a network, one of the USARTs can be the master, its TX output connected to the RX inputs of the other slaves USARTs).

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- In MultiProcessor mode, the following bits must be kept cleared: LINEN bit in the USART_CR2 register,CLKEN bit in the USART_CR2 register,SCEN bit in the USART_CR3 register,IREN bit in the USART_CR3 register,HDSEL bit in the USART_CR3 register.
- Call of this function is equivalent to following function call sequence : Clear LINEN in CR2 using LL_USART_DisableLIN() functionClear CLKEN in CR2 using LL_USART_DisableSCLKOutput() functionClear SCEN in CR3 using LL_USART_DisableSmartcard() functionClear IREN in CR3 using LL_USART_DisableIrda() functionClear HDSEL in CR3 using LL_USART_DisableHalfDuplex() function
- Other remaining configurations items related to Multi processor Mode (as Baud Rate, Wake Up Method, Node address, ...) should be set using dedicated functions

Reference Manual to LL API cross reference:

- CR2 CLKEN LL_USART_ConfigMultiProcessMode
- CR3 SCEN LL_USART_ConfigMultiProcessMode
- CR3 HDSEL LL_USART_ConfigMultiProcessMode
- CR3 IREN LL_USART_ConfigMultiProcessMode

LL_USART_IsActiveFlag_PE

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_PE (const USART_TypeDef * USARTx)

Function description

Check if the USART Parity Error Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:
- ISR PE LL_USART_IsActiveFlag_PE

LL_USART_IsActiveFlag_FE

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_FE (const USART_TypeDef * USARTx)

Function description

Check if the USART Framing Error Flag is set or not.

Parameters
- **USARTx:** USART Instance

Return values
- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:
- ISR FE LL_USART_IsActiveFlag_FE

LL_USART_IsActiveFlag_NE

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_NE (const USART_TypeDef * USARTx)

Function description

Check if the USART Noise error detected Flag is set or not.

Parameters
- **USARTx:** USART Instance

Return values
- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:
- ISR NE LL_USART_IsActiveFlag_NE

LL_USART_IsActiveFlag_ORE

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_ORE (const USART_TypeDef * USARTx)

Function description

Check if the USART OverRun Error Flag is set or not.

Parameters
- **USARTx:** USART Instance

Return values
- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:
- ISR ORE LL_USART_IsActiveFlag_ORE

LL_USART_IsActiveFlag_IDLE

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_IDLE (const USART_TypeDef * USARTx)

Function description

Check if the USART IDLE line detected Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR IDLE LL_USART_IsActiveFlag_IDLE

LL_USART_IsActiveFlag_RXNE_RXFNE

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_RXNE_RXFNE (const USART_TypeDef * USARTx)

Function description

Check if the USART Read Data Register or USART RX FIFO Not Empty Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR RXNE_RXFNE LL_USART_IsActiveFlag_RXNE_RXFNE

LL_USART_IsActiveFlag_TC

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_TC (const USART_TypeDef * USARTx)

Function description

Check if the USART Transmission Complete Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TC LL_USART_IsActiveFlag_TC

LL_USART_IsActiveFlag_TXE_TXFNF

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_TXE_TXFNF (const USART_TypeDef * USARTx)

Function description

Check if the USART Transmit Data Register Empty or USART TX FIFO Not Full Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR TXE_TXFNF LL_USART_IsActiveFlag_TXE_TXFNF

LL_USART_IsActiveFlag_LBD

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_LBD (const USART_TypeDef * USARTx)

Function description

Check if the USART LIN Break Detection Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR LBDF LL_USART_IsActiveFlag_LBD

LL_USART_IsActiveFlag_nCTS

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_nCTS (const USART_TypeDef * USARTx)

Function description

Check if the USART CTS interrupt Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR CTSIF LL_USART_IsActiveFlag_nCTS

LL_USART_IsActiveFlag_CTS

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_CTS (const USART_TypeDef * USARTx)

Function description

Check if the USART CTS Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR CTS LL_USART_IsActiveFlag_CTS

LL_USART_IsActiveFlag_RTO

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_RTO (const USART_TypeDef * USARTx)

Function description

Check if the USART Receiver Time Out Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR RTOF LL_USART_IsActiveFlag_RTO

LL_USART_IsActiveFlag_EOB

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_EOB (const USART_TypeDef * USARTx)

Function description

Check if the USART End Of Block Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR EOBF LL_USART_IsActiveFlag_EOB

LL_USART_IsActiveFlag_UDR

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_UDR (const USART_TypeDef * USARTx)

Function description

Check if the SPI Slave Underrun error flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_SPI_SLAVE_INSTANCE(USARTx) can be used to check whether or not SPI Slave mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR UDR LL_USART_IsActiveFlag_UDR

LL_USART_IsActiveFlag_ABRE

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_ABRE (const USART_TypeDef * USARTx)

Function description

Check if the USART Auto-Baud Rate Error Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_USART_AUTOBAUDRATE_DETECTION_INSTANCE(USARTx) can be used to check whether or not Auto Baud Rate detection feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR ABRE LL_USART_IsActiveFlag_ABRE

LL_USART_IsActiveFlag_ABR

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_ABR (const USART_TypeDef * USARTx)

Function description

Check if the USART Auto-Baud Rate Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_USART_AUTOBAUDRATE_DETECTION_INSTANCE(USARTx) can be used to check whether or not Auto Baud Rate detection feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR ABRF LL_USART_IsActiveFlag_ABR

LL_USART_IsActiveFlag_BUSY

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_BUSY (const USART_TypeDef * USARTx)

Function description

Check if the USART Busy Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR BUSY LL_USART_IsActiveFlag_BUSY

LL_USART_IsActiveFlag_CM

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_CM (const USART_TypeDef * USARTx)

Function description

Check if the USART Character Match Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR CMF LL_USART_IsActiveFlag_CM

LL_USART_IsActiveFlag_SBK

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_SBK (const USART_TypeDef * USARTx)

Function description

Check if the USART Send Break Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR SBKF LL_USART_IsActiveFlag_SBK

LL_USART_IsActiveFlag_RWU

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_RWU (const USART_TypeDef * USARTx)

Function description

Check if the USART Receive Wake Up from mute mode Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR RWU LL_USART_IsActiveFlag_RWU

LL_USART_IsActiveFlag_TEACK

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_TEACK (const USART_TypeDef * USARTx)

Function description

Check if the USART Transmit Enable Acknowledge Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TEACK LL_USART_IsActiveFlag_TEACK

LL_USART_IsActiveFlag_REACK

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_REACK (const USART_TypeDef * USARTx)

Function description

Check if the USART Receive Enable Acknowledge Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR REACK LL_USART_IsActiveFlag_REACK

LL_USART_IsActiveFlag_TXFE

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_TXFE (const USART_TypeDef * USARTx)

Function description

Check if the USART TX FIFO Empty Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR TXFE LL_USART_IsActiveFlag_TXFE

LL_USART_IsActiveFlag_RXFF

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_RXFF (const USART_TypeDef * USARTx)

Function description

Check if the USART RX FIFO Full Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR RXFF LL_USART_IsActiveFlag_RXFF

LL_USART_IsActiveFlag_TCBGT

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_TCBGT (const USART_TypeDef * USARTx)

Function description

Check if the Smartcard Transmission Complete Before Guard Time Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TCBGT LL_USART_IsActiveFlag_TCBGT

LL_USART_IsActiveFlag_TXFT

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_TXFT (const USART_TypeDef * USARTx)

Function description

Check if the USART TX FIFO Threshold Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR TXFT LL_USART_IsActiveFlag_TXFT

LL_USART_IsActiveFlag_RXFT

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_RXFT (const USART_TypeDef * USARTx)

Function description

Check if the USART RX FIFO Threshold Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR RXFT LL_USART_IsActiveFlag_RXFT

LL_USART_ClearFlag_PE

Function name

__STATIC_INLINE void LL_USART_ClearFlag_PE (USART_TypeDef * USARTx)

Function description

Clear Parity Error Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR PECF LL_USART_ClearFlag_PE

LL_USART_ClearFlag_FE

Function name

__STATIC_INLINE void LL_USART_ClearFlag_FE (USART_TypeDef * USARTx)

Function description

Clear Framing Error Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR FECF LL_USART_ClearFlag_FE

LL_USART_ClearFlag_NE

Function name

__STATIC_INLINE void LL_USART_ClearFlag_NE (USART_TypeDef * USARTx)

Function description

Clear Noise Error detected Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR NECF LL_USART_ClearFlag_NE

LL_USART_ClearFlag_ORE

Function name

__STATIC_INLINE void LL_USART_ClearFlag_ORE (USART_TypeDef * USARTx)

Function description

Clear OverRun Error Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR ORECF LL_USART_ClearFlag_ORE

LL_USART_ClearFlag_IDLE

Function name

__STATIC_INLINE void LL_USART_ClearFlag_IDLE (USART_TypeDef * USARTx)

Function description

Clear IDLE line detected Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR IDLECF LL_USART_ClearFlag_IDLE

LL_USART_ClearFlag_TXFE

Function name

__STATIC_INLINE void LL_USART_ClearFlag_TXFE (USART_TypeDef * USARTx)

Function description

Clear TX FIFO Empty Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ICR TXFECF LL_USART_ClearFlag_TXFE

LL_USART_ClearFlag_TC

Function name

__STATIC_INLINE void LL_USART_ClearFlag_TC (USART_TypeDef * USARTx)

Function description

Clear Transmission Complete Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR TCCF LL_USART_ClearFlag_TC

LL_USART_ClearFlag_TCBGT

Function name

__STATIC_INLINE void LL_USART_ClearFlag_TCBGT (USART_TypeDef * USARTx)

Function description

Clear Smartcard Transmission Complete Before Guard Time Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR TCBGTCF LL_USART_ClearFlag_TCBGT

LL_USART_ClearFlag_LBD

Function name

__STATIC_INLINE void LL_USART_ClearFlag_LBD (USART_TypeDef * USARTx)

Function description

Clear LIN Break Detection Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ICR LBDCF LL_USART_ClearFlag_LBD

LL_USART_ClearFlag_nCTS

Function name

__STATIC_INLINE void LL_USART_ClearFlag_nCTS (USART_TypeDef * USARTx)

Function description

Clear CTS Interrupt Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ICR CTSCF LL_USART_ClearFlag_nCTS

LL_USART_ClearFlag_RTO

Function name

__STATIC_INLINE void LL_USART_ClearFlag_RTO (USART_TypeDef * USARTx)

Function description

Clear Receiver Time Out Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR RTOCF LL_USART_ClearFlag_RTO

LL_USART_ClearFlag_EOB

Function name

__STATIC_INLINE void LL_USART_ClearFlag_EOB (USART_TypeDef * USARTx)

Function description

Clear End Of Block Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ICR EOBCF LL_USART_ClearFlag_EOB

LL_USART_ClearFlag_UDR

Function name

__STATIC_INLINE void LL_USART_ClearFlag_UDR (USART_TypeDef * USARTx)

Function description

Clear SPI Slave Underrun Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_SPI_SLAVE_INSTANCE(USARTx) can be used to check whether or not SPI Slave mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ICR UDRCF LL_USART_ClearFlag_UDR

LL_USART_ClearFlag_CM

Function name

__STATIC_INLINE void LL_USART_ClearFlag_CM (USART_TypeDef * USARTx)

Function description

Clear Character Match Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CMCF LL_USART_ClearFlag_CM

LL_USART_EnableIT_IDLE

Function name

__STATIC_INLINE void LL_USART_EnableIT_IDLE (USART_TypeDef * USARTx)

Function description

Enable IDLE Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 IDLEIE LL_USART_EnableIT_IDLE

LL_USART_EnableIT_RXNE_RXFNE

Function name

__STATIC_INLINE void LL_USART_EnableIT_RXNE_RXFNE (USART_TypeDef * USARTx)

Function description

Enable RX Not Empty and RX FIFO Not Empty Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 RXNEIE_RXFNEIE LL_USART_EnableIT_RXNE_RXFNE

LL_USART_EnableIT_TC

Function name

__STATIC_INLINE void LL_USART_EnableIT_TC (USART_TypeDef * USARTx)

Function description

Enable Transmission Complete Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TCIE LL_USART_EnableIT_TC

LL_USART_EnableIT_TXE_TXFNF

Function name

__STATIC_INLINE void LL_USART_EnableIT_TXE_TXFNF (USART_TypeDef * USARTx)

Function description

Enable TX Empty and TX FIFO Not Full Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 TXEIE_TXFNFIE LL_USART_EnableIT_TXE_TXFNF

LL_USART_EnableIT_PE

Function name

__STATIC_INLINE void LL_USART_EnableIT_PE (USART_TypeDef * USARTx)

Function description

Enable Parity Error Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 PEIE LL_USART_EnableIT_PE

LL_USART_EnableIT_CM

Function name

__STATIC_INLINE void LL_USART_EnableIT_CM (USART_TypeDef * USARTx)

Function description

Enable Character Match Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CMIE LL_USART_EnableIT_CM

LL_USART_EnableIT_RTO

Function name

__STATIC_INLINE void LL_USART_EnableIT_RTO (USART_TypeDef * USARTx)

Function description

Enable Receiver Timeout Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RTOIE LL_USART_EnableIT_RTO

LL_USART_EnableIT_EOB

Function name

__STATIC_INLINE void LL_USART_EnableIT_EOB (USART_TypeDef * USARTx)

Function description

Enable End Of Block Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 EOBIE LL_USART_EnableIT_EOB

LL_USART_EnableIT_TXFE

Function name

__STATIC_INLINE void LL_USART_EnableIT_TXFE (USART_TypeDef * USARTx)

Function description

Enable TX FIFO Empty Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 TXFEIE LL_USART_EnableIT_TXFE

LL_USART_EnableIT_RXFF

Function name

__STATIC_INLINE void LL_USART_EnableIT_RXFF (USART_TypeDef * USARTx)

Function description

Enable RX FIFO Full Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RXFFIE LL_USART_EnableIT_RXFF

LL_USART_EnableIT_LBD

Function name

__STATIC_INLINE void LL_USART_EnableIT_LBD (USART_TypeDef * USARTx)

Function description

Enable LIN Break Detection Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LBDIE LL_USART_EnableIT_LBD

LL_USART_EnableIT_ERROR

Function name

__STATIC_INLINE void LL_USART_EnableIT_ERROR (USART_TypeDef * USARTx)

Function description

Enable Error Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- When set, Error Interrupt Enable Bit is enabling interrupt generation in case of a framing error, overrun error or noise flag (FE=1 or ORE=1 or NF=1 in the USARTx_ISR register). 0: Interrupt is inhibited 1: An interrupt is generated when FE=1 or ORE=1 or NF=1 in the USARTx_ISR register.

Reference Manual to LL API cross reference:

- CR3 EIE LL_USART_EnableIT_ERROR

LL_USART_EnableIT_CTS

Function name

__STATIC_INLINE void LL_USART_EnableIT_CTS (USART_TypeDef * USARTx)

Function description

Enable CTS Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 CTSIE LL_USART_EnableIT_CTS

LL_USART_EnableIT_TXFT

Function name

__STATIC_INLINE void LL_USART_EnableIT_TXFT (USART_TypeDef * USARTx)

Function description

Enable TX FIFO Threshold Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 TXFTIE LL_USART_EnableIT_TXFT

LL_USART_EnableIT_TCBGT

Function name

__STATIC_INLINE void LL_USART_EnableIT_TCBGT (USART_TypeDef * USARTx)

Function description

Enable Smartcard Transmission Complete Before Guard Time Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 TCBGTIE LL_USART_EnableIT_TCBGT

LL_USART_EnableIT_RXFT

Function name

__STATIC_INLINE void LL_USART_EnableIT_RXFT (USART_TypeDef * USARTx)

Function description

Enable RX FIFO Threshold Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 RXFTIE LL_USART_EnableIT_RXFT

LL_USART_DisableIT_IDLE

Function name

__STATIC_INLINE void LL_USART_DisableIT_IDLE (USART_TypeDef * USARTx)

Function description

Disable IDLE Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 IDLEIE LL_USART_DisableIT_IDLE

LL_USART_DisableIT_RXNE_RXFNE

Function name

__STATIC_INLINE void LL_USART_DisableIT_RXNE_RXFNE (USART_TypeDef * USARTx)

Function description

Disable RX Not Empty and RX FIFO Not Empty Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 RXNEIE_RXFNEIE LL_USART_DisableIT_RXNE_RXFNE

LL_USART_DisableIT_TC

Function name

__STATIC_INLINE void LL_USART_DisableIT_TC (USART_TypeDef * USARTx)

Function description

Disable Transmission Complete Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TCIE LL_USART_DisableIT_TC

LL_USART_DisableIT_TXE_TXFNF

Function name

__STATIC_INLINE void LL_USART_DisableIT_TXE_TXFNF (USART_TypeDef * USARTx)

Function description

Disable TX Empty and TX FIFO Not Full Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 TXEIE_TXFNFIE LL_USART_DisableIT_TXE_TXFNF

LL_USART_DisableIT_PE

Function name

__STATIC_INLINE void LL_USART_DisableIT_PE (USART_TypeDef * USARTx)

Function description

Disable Parity Error Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 PEIE LL_USART_DisableIT_PE

LL_USART_DisableIT_CM

Function name

__STATIC_INLINE void LL_USART_DisableIT_CM (USART_TypeDef * USARTx)

Function description

Disable Character Match Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CMIE LL_USART_DisableIT_CM

LL_USART_DisableIT_RTO

Function name

__STATIC_INLINE void LL_USART_DisableIT_RTO (USART_TypeDef * USARTx)

Function description

Disable Receiver Timeout Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RTOIE LL_USART_DisableIT_RTO

LL_USART_DisableIT_EOB

Function name

__STATIC_INLINE void LL_USART_DisableIT_EOB (USART_TypeDef * USARTx)

Function description

Disable End Of Block Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 EOBIE LL_USART_DisableIT_EOB

LL_USART_DisableIT_TXFE

Function name

__STATIC_INLINE void LL_USART_DisableIT_TXFE (USART_TypeDef * USARTx)

Function description

Disable TX FIFO Empty Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 TXFEIE LL_USART_DisableIT_TXFE

LL_USART_DisableIT_RXFF

Function name

__STATIC_INLINE void LL_USART_DisableIT_RXFF (USART_TypeDef * USARTx)

Function description

Disable RX FIFO Full Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 RXFFIE LL_USART_DisableIT_RXFF

LL_USART_DisableIT_LBD

Function name

__STATIC_INLINE void LL_USART_DisableIT_LBD (USART_TypeDef * USARTx)

Function description

Disable LIN Break Detection Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LBDIE LL_USART_DisableIT_LBD

LL_USART_DisableIT_ERROR

Function name

__STATIC_INLINE void LL_USART_DisableIT_ERROR (USART_TypeDef * USARTx)

Function description

Disable Error Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- When set, Error Interrupt Enable Bit is enabling interrupt generation in case of a framing error, overrun error or noise flag (FE=1 or ORE=1 or NF=1 in the USARTx_ISR register). 0: Interrupt is inhibited 1: An interrupt is generated when FE=1 or ORE=1 or NF=1 in the USARTx_ISR register.

Reference Manual to LL API cross reference:

- CR3 EIE LL_USART_DisableIT_ERROR

LL_USART_DisableIT_CTS

Function name

__STATIC_INLINE void LL_USART_DisableIT_CTS (USART_TypeDef * USARTx)

Function description

Disable CTS Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 CTSIE LL_USART_DisableIT_CTS

LL_USART_DisableIT_TXFT

Function name

__STATIC_INLINE void LL_USART_DisableIT_TXFT (USART_TypeDef * USARTx)

Function description

Disable TX FIFO Threshold Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 TXFTIE LL_USART_DisableIT_TXFT

LL_USART_DisableIT_TCBGT

Function name

__STATIC_INLINE void LL_USART_DisableIT_TCBGT (USART_TypeDef * USARTx)

Function description

Disable Smartcard Transmission Complete Before Guard Time Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 TCBGTIE LL_USART_DisableIT_TCBGT

LL_USART_DisableIT_RXFT

Function name

__STATIC_INLINE void LL_USART_DisableIT_RXFT (USART_TypeDef * USARTx)

Function description

Disable RX FIFO Threshold Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 RXFTIE LL_USART_DisableIT_RXFT

LL_USART_IsEnabledIT_IDLE

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_IDLE (const USART_TypeDef * USARTx)

Function description

Check if the USART IDLE Interrupt source is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 IDLEIE LL_USART_IsEnabledIT_IDLE

LL_USART_IsEnabledIT_RXNE_RXFNE

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_RXNE_RXFNE (const USART_TypeDef * USARTx)

Function description

Check if the USART RX Not Empty and USART RX FIFO Not Empty Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 RXNEIE_RXFNEIE LL_USART_IsEnabledIT_RXNE_RXFNE

LL_USART_IsEnabledIT_TC

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_TC (const USART_TypeDef * USARTx)

Function description

Check if the USART Transmission Complete Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 TCIE LL_USART_IsEnabledIT_TC

LL_USART_IsEnabledIT_TXE_TXFNF

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_TXE_TXFNF (const USART_TypeDef * USARTx)

Function description

Check if the USART TX Empty and USART TX FIFO Not Full Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 TXEIE_TXFNFIE LL_USART_IsEnabledIT_TXE_TXFNF

LL_USART_IsEnabledIT_PE

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_PE (const USART_TypeDef * USARTx)

Function description

Check if the USART Parity Error Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 PEIE LL_USART_IsEnabledIT_PE

LL_USART_IsEnabledIT_CM

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_CM (const USART_TypeDef * USARTx)

Function description

Check if the USART Character Match Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 CMIE LL_USART_IsEnabledIT_CM

LL_USART_IsEnabledIT_RTO

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_RTO (const USART_TypeDef * USARTx)

Function description

Check if the USART Receiver Timeout Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 RTOIE LL_USART_IsEnabledIT_RTO

LL_USART_IsEnabledIT_EOB

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_EOB (const USART_TypeDef * USARTx)

Function description

Check if the USART End Of Block Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 EOBIE LL_USART_IsEnabledIT_EOB

LL_USART_IsEnabledIT_TXFE

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_TXFE (const USART_TypeDef * USARTx)

Function description

Check if the USART TX FIFO Empty Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 TXFEIE LL_USART_IsEnabledIT_TXFE

LL_USART_IsEnabledIT_RXFF

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_RXFF (const USART_TypeDef * USARTx)

Function description

Check if the USART RX FIFO Full Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 RXFFIE LL_USART_IsEnabledIT_RXFF

LL_USART_IsEnabledIT_LBD

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_LBD (const USART_TypeDef * USARTx)

Function description

Check if the USART LIN Break Detection Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LBDIE LL_USART_IsEnabledIT_LBD

LL_USART_IsEnabledIT_ERROR

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_ERROR (const USART_TypeDef * USARTx)

Function description

Check if the USART Error Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 EIE LL_USART_IsEnabledIT_ERROR

LL_USART_IsEnabledIT_CTS

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_CTS (const USART_TypeDef * USARTx)

Function description

Check if the USART CTS Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 CTSIE LL_USART_IsEnabledIT_CTS

LL_USART_IsEnabledIT_TXFT

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_TXFT (const USART_TypeDef * USARTx)

Function description

Check if USART TX FIFO Threshold Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 TXFTIE LL_USART_IsEnabledIT_TXFT

LL_USART_IsEnabledIT_TCBGT

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_TCBGT (const USART_TypeDef * USARTx)

Function description

Check if the Smartcard Transmission Complete Before Guard Time Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 TCBGTIE LL_USART_IsEnabledIT_TCBGT

LL_USART_IsEnabledIT_RXFT

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_RXFT (const USART_TypeDef * USARTx)

Function description

Check if USART RX FIFO Threshold Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 RXFTIE LL_USART_IsEnabledIT_RXFT

LL_USART_EnableDMAReq_RX

Function name

__STATIC_INLINE void LL_USART_EnableDMAReq_RX (USART_TypeDef * USARTx)

Function description

Enable DMA Mode for reception.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DMAR LL_USART_EnableDMAReq_RX

LL_USART_DisableDMAReq_RX

Function name

__STATIC_INLINE void LL_USART_DisableDMAReq_RX (USART_TypeDef * USARTx)

Function description

Disable DMA Mode for reception.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DMAR LL_USART_DisableDMAReq_RX

LL_USART_IsEnabledDMAReq_RX

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledDMAReq_RX (const USART_TypeDef * USARTx)

Function description

Check if DMA Mode is enabled for reception.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 DMAR LL_USART_IsEnabledDMAReq_RX

LL_USART_EnableDMAReq_TX

Function name

__STATIC_INLINE void LL_USART_EnableDMAReq_TX (USART_TypeDef * USARTx)

Function description

Enable DMA Mode for transmission.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DMAT LL_USART_EnableDMAReq_TX

LL_USART_DisableDMAReq_TX

Function name

__STATIC_INLINE void LL_USART_DisableDMAReq_TX (USART_TypeDef * USARTx)

Function description

Disable DMA Mode for transmission.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DMAT LL_USART_DisableDMAReq_TX

LL_USART_IsEnabledDMAReq_TX

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledDMAReq_TX (const USART_TypeDef * USARTx)

Function description

Check if DMA Mode is enabled for transmission.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 DMAT LL_USART_IsEnabledDMAReq_TX

LL_USART_EnableDMADeactOnRxErr

Function name

__STATIC_INLINE void LL_USART_EnableDMADeactOnRxErr (USART_TypeDef * USARTx)

Function description

Enable DMA Disabling on Reception Error.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DDRE LL_USART_EnableDMADeactOnRxErr

LL_USART_DisableDMADeactOnRxErr

Function name

__STATIC_INLINE void LL_USART_DisableDMADeactOnRxErr (USART_TypeDef * USARTx)

Function description

Disable DMA Disabling on Reception Error.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DDRE LL_USART_DisableDMADeactOnRxErr

LL_USART_IsEnabledDMADeactOnRxErr

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledDMADeactOnRxErr (const USART_TypeDef * USARTx)

Function description

Indicate if DMA Disabling on Reception Error is disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 DDRE LL_USART_IsEnabledDMADeactOnRxErr

LL_USART_DMA_GetRegAddr

Function name

__STATIC_INLINE uint32_t LL_USART_DMA_GetRegAddr (const USART_TypeDef * USARTx, uint32_t Direction)

Function description

Get the data register address used for DMA transfer.

Parameters

- **USARTx:** USART Instance
- **Direction:** This parameter can be one of the following values:
  - LL_USART_DMA_REG_DATA_TRANSMIT
  - LL_USART_DMA_REG_DATA_RECEIVE

Return values

- **Address:** of data register

Reference Manual to LL API cross reference:

- RDR RDR LL_USART_DMA_GetRegAddr
-
- TDR TDR LL_USART_DMA_GetRegAddr

LL_USART_ReceiveData8

Function name

__STATIC_INLINE uint8_t LL_USART_ReceiveData8 (const USART_TypeDef * USARTx)

Function description

Read Receiver Data register (Receive Data value, 8 bits)

Parameters

- **USARTx:** USART Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0xFF

Reference Manual to LL API cross reference:

- RDR RDR LL_USART_ReceiveData8

LL_USART_ReceiveData9

Function name

__STATIC_INLINE uint16_t LL_USART_ReceiveData9 (const USART_TypeDef * USARTx)

Function description

Read Receiver Data register (Receive Data value, 9 bits)

Parameters

- **USARTx:** USART Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x1FF

Reference Manual to LL API cross reference:

- RDR RDR LL_USART_ReceiveData9

LL_USART_TransmitData8

Function name

__STATIC_INLINE void LL_USART_TransmitData8 (USART_TypeDef * USARTx, uint8_t Value)

Function description

Write in Transmitter Data Register (Transmit Data value, 8 bits)

Parameters

- **USARTx:** USART Instance
- **Value:** between Min_Data=0x00 and Max_Data=0xFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TDR TDR LL_USART_TransmitData8

LL_USART_TransmitData9

Function name

__STATIC_INLINE void LL_USART_TransmitData9 (USART_TypeDef * USARTx, uint16_t Value)

Function description

Write in Transmitter Data Register (Transmit Data value, 9 bits)

Parameters

- **USARTx:** USART Instance
- **Value:** between Min_Data=0x00 and Max_Data=0x1FF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TDR TDR LL_USART_TransmitData9

LL_USART_RequestAutoBaudRate

Function name

__STATIC_INLINE void LL_USART_RequestAutoBaudRate (USART_TypeDef * USARTx)

Function description

Request an Automatic Baud Rate measurement on next received data frame.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_USART_AUTOBAUDRATE_DETECTION_INSTANCE(USARTx) can be used to check whether or not Auto Baud Rate detection feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- RQR ABRRQ LL_USART_RequestAutoBaudRate

LL_USART_RequestBreakSending

Function name

__STATIC_INLINE void LL_USART_RequestBreakSending (USART_TypeDef * USARTx)

Function description

Request Break sending.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RQR SBKRQ LL_USART_RequestBreakSending

LL_USART_RequestEnterMuteMode

Function name

__STATIC_INLINE void LL_USART_RequestEnterMuteMode (USART_TypeDef * USARTx)

Function description

Put USART in mute mode and set the RWU flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RQR MMRQ LL_USART_RequestEnterMuteMode

LL_USART_RequestRxDataFlush

Function name

__STATIC_INLINE void LL_USART_RequestRxDataFlush (USART_TypeDef * USARTx)

Function description

Request a Receive Data and FIFO flush.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.
- Allows to discard the received data without reading them, and avoid an overrun condition.

Reference Manual to LL API cross reference:

- RQR RXFRQ LL_USART_RequestRxDataFlush

LL_USART_RequestTxDataFlush

Function name

__STATIC_INLINE void LL_USART_RequestTxDataFlush (USART_TypeDef * USARTx)

Function description

Request a Transmit data and FIFO flush.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- RQR TXFRQ LL_USART_RequestTxDataFlush

LL_USART_Enable_SelectedTrigger

Function name

__STATIC_INLINE void LL_USART_Enable_SelectedTrigger (USART_TypeDef * USARTx)

Function description

Enable Selected Trigger.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGEN LL_USART_Enable_SelectedTrigger

LL_USART_Disable_SelectedTrigger

Function name

__STATIC_INLINE void LL_USART_Disable_SelectedTrigger (USART_TypeDef * USARTx)

Function description

Disable Selected Trigger.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGEN LL_USART_Disable_SelectedTrigger

LL_USART_IsEnabled_SelectedTrigger

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabled_SelectedTrigger (const USART_TypeDef * USARTx)

Function description

Indicate if Selected Trigger is disabled or enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- AUTOCR TRIGEN LL_USART_IsEnabled_SelectedTrigger

LL_USART_Enable_AutonomousSendIdleFrame

Function name

__STATIC_INLINE void LL_USART_Enable_AutonomousSendIdleFrame (USART_TypeDef * USARTx)

Function description

Enable Autonomous Send Idle Frame feature.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR IDLEDIS LL_USART_Enable_AutonomousSendIdleFrame

LL_USART_Disable_AutonomousSendIdleFrame

Function name

__STATIC_INLINE void LL_USART_Disable_AutonomousSendIdleFrame (USART_TypeDef * USARTx)

Function description

Disable Autonomous Send Idle Frame feature.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR IDLEDIS LL_USART_Disable_AutonomousSendIdleFrame

LL_USART_IsEnabled_AutonomousSendIdleFrame

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabled_AutonomousSendIdleFrame (const USART_TypeDef * USARTx)

Function description

Indicate if Autonomous send Idle Frame feature is disabled or enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- AUTOCR IDLEDIS LL_USART_IsEnabled_AutonomousSendIdleFrame

LL_USART_SetNbTxData

Function name

__STATIC_INLINE void LL_USART_SetNbTxData (USART_TypeDef * USARTx, uint32_t Nbdata)

Function description

Configure the Number of transferred data in bytes.

Parameters

- **USARTx:** USART Instance
- **Nbdata:** This parameter can be a value between 0 and 0xFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TDN LL_USART_SetNbTxData

LL_USART_GetNbTxData

Function name

__STATIC_INLINE uint32_t LL_USART_GetNbTxData (const USART_TypeDef * USARTx)

Function description

Retrieve the Number of transferred data in bytes.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be a value between 0 and 0xFFFF

Reference Manual to LL API cross reference:

- AUTOCR TDN LL_USART_GetNbTxData

LL_USART_SetTriggerPolarity

Function name

__STATIC_INLINE void LL_USART_SetTriggerPolarity (USART_TypeDef * USARTx, uint32_t Polarity)

Function description

Set the trigger polarity.

Parameters

- **USARTx:** USART Instance
- **Polarity:** This parameter can be one of the following values:
  – LL_USART_TRIG_POLARITY_RISING
  – LL_USART_TRIG_POLARITY_FALLING

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGPOL LL_USART_SetTriggerPolarity

LL_USART_GetTriggerPolarity

Function name

__STATIC_INLINE uint32_t LL_USART_GetTriggerPolarity (const USART_TypeDef * USARTx)

Function description

Get the trigger polarity.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  – LL_USART_TRIG_POLARITY_RISING
  – LL_USART_TRIG_POLARITY_FALLING

Reference Manual to LL API cross reference:

- AUTOCR TRIGPOL LL_USART_GetTriggerPolarity

LL_USART_SetSelectedTrigger

Function name

__STATIC_INLINE void LL_USART_SetSelectedTrigger (USART_TypeDef * USARTx, uint32_t Trigger)

Function description

Set the selected trigger.

Parameters

- **USARTx:** USART Instance
- **Trigger:** This parameter can be one of the following values:
  - LL_USART_GPDMA1_CH0_TCF_TRG
  - LL_USART_GPDMA1_CH1_TCF_TRG
  - LL_USART_GPDMA1_CH2_TCF_TRG
  - LL_USART_GPDMA1_CH3_TCF_TRG
  - LL_USART_EXTI_LINE6_TRG
  - LL_USART_EXTI_LINE9_TRG
  - LL_USART_LPTIM1_OUT_TRG
  - LL_USART_LPTIM2_OUT_TRG
  - LL_USART_COMP1_OUT_TRG
  - LL_USART_COMP2_OUT_TRG
  - LL_USART_RTC_ALRA_TRG
  - LL_USART_RTC_WUT_TRG

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGSEL LL_USART_SetSelectedTrigger

LL_USART_GetSelectedTrigger

Function name

__STATIC_INLINE uint32_t LL_USART_GetSelectedTrigger (const USART_TypeDef * USARTx)

Function description

Get the selected trigger.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_GPDMA1_CH0_TCF_TRG
  - LL_USART_GPDMA1_CH1_TCF_TRG
  - LL_USART_GPDMA1_CH2_TCF_TRG
  - LL_USART_GPDMA1_CH3_TCF_TRG
  - LL_USART_EXTI_LINE6_TRG
  - LL_USART_EXTI_LINE9_TRG
  - LL_USART_LPTIM1_OUT_TRG
  - LL_USART_LPTIM2_OUT_TRG
  - LL_USART_COMP1_OUT_TRG
  - LL_USART_COMP2_OUT_TRG
  - LL_USART_RTC_ALRA_TRG
  - LL_USART_RTC_WUT_TRG

Reference Manual to LL API cross reference:

- AUTOCR TRIGSEL LL_USART_GetSelectedTrigger

LL_USART_DeInit

Function name

ErrorStatus LL_USART_DeInit (const USART_TypeDef * USARTx)

Function description

De-initialize USART registers (Registers restored to their default values).

Parameters

- **USARTx:** USART Instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: USART registers are de-initialized
  - ERROR: USART registers are not de-initialized

LL_USART_Init

Function name

ErrorStatus LL_USART_Init (USART_TypeDef * USARTx, const LL_USART_InitTypeDef * USART_InitStruct)

Function description

Initialize USART registers according to the specified parameters in USART_InitStruct.

Parameters

- **USARTx:** USART Instance
- **USART_InitStruct:** pointer to a LL_USART_InitTypeDef structure that contains the configuration information for the specified USART peripheral.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: USART registers are initialized according to USART_InitStruct content
  - ERROR: Problem occurred during USART Registers initialization

Notes

- As some bits in USART configuration registers can only be written when the USART is disabled (USART_CR1_UE bit =0), USART Peripheral should be in disabled state prior calling this function. Otherwise, ERROR result will be returned.
- Baud rate value stored in USART_InitStruct BaudRate field, should be valid (different from 0).

LL_USART_StructInit

Function name

void LL_USART_StructInit (LL_USART_InitTypeDef * USART_InitStruct)

Function description

Set each LL_USART_InitTypeDef field to default value.

Parameters

- **USART_InitStruct:** pointer to a LL_USART_InitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

LL_USART_ClockInit

Function name

ErrorStatus LL_USART_ClockInit (USART_TypeDef * USARTx, const LL_USART_ClockInitTypeDef * USART_ClockInitStruct)

Function description

Initialize USART Clock related settings according to the specified parameters in the USART_ClockInitStruct.

Parameters

- **USARTx:** USART Instance
- **USART_ClockInitStruct:** pointer to a LL_USART_ClockInitTypeDef structure that contains the Clock configuration information for the specified USART peripheral.

Return values

- **An:** ErrorStatus enumeration value:
  – SUCCESS: USART registers related to Clock settings are initialized according to USART_ClockInitStruct content
  – ERROR: Problem occurred during USART Registers initialization

Notes

- As some bits in USART configuration registers can only be written when the USART is disabled (USART_CR1_UE bit =0), USART Peripheral should be in disabled state prior calling this function. Otherwise, ERROR result will be returned.

LL_USART_ClockStructInit

Function name

void LL_USART_ClockStructInit (LL_USART_ClockInitTypeDef * USART_ClockInitStruct)

Function description

Set each field of a LL_USART_ClockInitTypeDef type structure to default value.

Parameters

- **USART_ClockInitStruct:** pointer to a LL_USART_ClockInitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

121.3 USART Firmware driver defines

The following section lists the various define and macros of the module.

121.3.1 USART

USART

Address Length Detection

LL_USART_ADDRESS_DETECT_4B

4-bit address detection method selected

LL_USART_ADDRESS_DETECT_7B

7-bit address detection (in 8-bit data mode) method selected

Autobaud Detection

LL_USART_AUTOBAUD_DETECT_ON_STARTBIT

Measurement of the start bit is used to detect the baud rate

LL_USART_AUTOBAUD_DETECT_ON_FALLINGEDGE

Falling edge to falling edge measurement. Received frame must start with a single bit = 1 -> Frame = Start10xxxxxx

LL_USART_AUTOBAUD_DETECT_ON_7F_FRAME

0x7F frame detection

LL_USART_AUTOBAUD_DETECT_ON_55_FRAME

0x55 frame detection

Autonomous Trigger Polarity

LL_USART_TRIG_POLARITY_RISING

USART triggered on rising edge

LL_USART_TRIG_POLARITY_FALLING

USART triggered on falling edge

Autonomous Trigger Selection

LL_USART_GPDMA1_CH0_TCF_TRG

USART GPDMA1 channel0 Internal Trigger

LL_USART_GPDMA1_CH1_TCF_TRG

USART GPDMA1 channel1 Internal Trigger

LL_USART_GPDMA1_CH2_TCF_TRG

USART GPDMA1 channel2 Internal Trigger

LL_USART_GPDMA1_CH3_TCF_TRG

USART GPDMA1 channel3 Internal Trigger

LL_USART_EXTI_LINE6_TRG

USART EXTI line 6 Internal Trigger

LL_USART_EXTI_LINE9_TRG

USART EXTI line 9 Internal Trigger

LL_USART_LPTIM1_OUT_TRG

USART LPTIM1 out Internal Trigger

LL_USART_LPTIM2_OUT_TRG

USART LPTIM2 out Internal Trigger

LL_USART_COMP1_OUT_TRG

USART COMP1 out Internal Trigger

LL_USART_COMP2_OUT_TRG

USART COMP2 out Internal Trigger

LL_USART_RTC_ALRA_TRG

USART RTC alarm Internal Trigger

LL_USART_RTC_WUT_TRG

USART RTC wakeup Internal Trigger

Binary Data Inversion

LL_USART_BINARY_LOGIC_POSITIVE

Logical data from the data register are send/received in positive/direct logic. (1=H, 0=L)

LL_USART_BINARY_LOGIC_NEGATIVE

Logical data from the data register are send/received in negative/inverse logic. (1=L, 0=H). The parity bit is also inverted.

Bit Order

LL_USART_BITORDER_LSBFIRST

data is transmitted/received with data bit 0 first, following the start bit

LL_USART_BITORDER_MSBFIRST

data is transmitted/received with the MSB first, following the start bit

Clear Flags Defines

LL_USART_ICR_PECF

Parity error clear flag

LL_USART_ICR_FECF

Framing error clear flag

LL_USART_ICR_NECF

Noise error detected clear flag

LL_USART_ICR_ORECF

Overrun error clear flag

LL_USART_ICR_IDLECF

Idle line detected clear flag

LL_USART_ICR_TXFECF

TX FIFO Empty clear flag

LL_USART_ICR_TCCF

Transmission complete clear flag

LL_USART_ICR_TCBGTCF

Transmission completed before guard time clear flag

LL_USART_ICR_LBDCF

LIN break detection clear flag

LL_USART_ICR_CTSCF

CTS clear flag

LL_USART_ICR_RTOCF

Receiver timeout clear flag

LL_USART_ICR_EOBCF

End of block clear flag

LL_USART_ICR_UDRCF

SPI Slave Underrun clear flag

LL_USART_ICR_CMCF

Character match clear flag

Clock Signal

LL_USART_CLOCK_DISABLE

Clock signal not provided

LL_USART_CLOCK_ENABLE

Clock signal provided

Datawidth

LL_USART_DATAWIDTH_7B

7 bits word length : Start bit, 7 data bits, n stop bits

LL_USART_DATAWIDTH_8B

8 bits word length : Start bit, 8 data bits, n stop bits

LL_USART_DATAWIDTH_9B

9 bits word length : Start bit, 9 data bits, n stop bits

Driver Enable Polarity

LL_USART_DE_POLARITY_HIGH

DE signal is active high

LL_USART_DE_POLARITY_LOW

DE signal is active low

Communication Direction

LL_USART_DIRECTION_NONE

Transmitter and Receiver are disabled

LL_USART_DIRECTION_RX

Transmitter is disabled and Receiver is enabled

LL_USART_DIRECTION_TX

Transmitter is enabled and Receiver is disabled

LL_USART_DIRECTION_TX_RX

Transmitter and Receiver are enabled

DMA Register Data

LL_USART_DMA_REG_DATA_TRANSMIT

Get address of data register used for transmission

LL_USART_DMA_REG_DATA_RECEIVE

Get address of data register used for reception

FIFO Threshold

LL_USART_FIFOTHRESHOLD_1_8

FIFO reaches 1/8 of its depth

LL_USART_FIFOTHRESHOLD_1_4

FIFO reaches 1/4 of its depth

LL_USART_FIFOTHRESHOLD_1_2

FIFO reaches 1/2 of its depth

LL_USART_FIFOTHRESHOLD_3_4

FIFO reaches 3/4 of its depth

LL_USART_FIFOTHRESHOLD_7_8

FIFO reaches 7/8 of its depth

LL_USART_FIFOTHRESHOLD_8_8

FIFO becomes empty for TX and full for RX

Get Flags Defines

LL_USART_ISR_PE

Parity error flag

LL_USART_ISR_FE

Framing error flag

LL_USART_ISR_NE

Noise detected flag

LL_USART_ISR_ORE

Overrun error flag

LL_USART_ISR_IDLE

Idle line detected flag

LL_USART_ISR_RXNE_RXFNE

Read data register or RX FIFO not empty flag

LL_USART_ISR_TC

Transmission complete flag

LL_USART_ISR_TXE_TXFNF

Transmit data register empty or TX FIFO Not Full flag

LL_USART_ISR_LBDF

LIN break detection flag

LL_USART_ISR_CTSIF

CTS interrupt flag

LL_USART_ISR_CTS

CTS flag

LL_USART_ISR_RTOF

Receiver timeout flag

LL_USART_ISR_EOBF

End of block flag

LL_USART_ISR_UDR

SPI Slave underrun error flag

LL_USART_ISR_ABRE

Auto baud rate error flag

LL_USART_ISR_ABRF

Auto baud rate flag

LL_USART_ISR_BUSY

Busy flag

LL_USART_ISR_CMF

Character match flag

LL_USART_ISR_SBKF

Send break flag

LL_USART_ISR_RWU

Receiver wakeup from Mute mode flag

LL_USART_ISR_TEACK

Transmit enable acknowledge flag

LL_USART_ISR_REACK

Receive enable acknowledge flag

LL_USART_ISR_TXFE

TX FIFO empty flag

LL_USART_ISR_RXFF

RX FIFO full flag

LL_USART_ISR_TCBGT

Transmission complete before guard time completion flag

LL_USART_ISR_RXFT

RX FIFO threshold flag

LL_USART_ISR_TXFT

TX FIFO threshold flag

Hardware Control

LL_USART_HWCONTROL_NONE

CTS and RTS hardware flow control disabled

LL_USART_HWCONTROL_RTS

RTS output enabled, data is only requested when there is space in the receive buffer

LL_USART_HWCONTROL_CTS

CTS mode enabled, data is only transmitted when the nCTS input is asserted (tied to 0)

LL_USART_HWCONTROL_RTS_CTS

CTS and RTS hardware flow control enabled

IrDA Power

LL_USART_IRDA_POWER_NORMAL

IrDA normal power mode

LL_USART_IRDA_POWER_LOW

IrDA low power mode

IT Defines

LL_USART_CR1_IDLEIE

IDLE interrupt enable

LL_USART_CR1_RXNEIE_RXFNEIE

Read data register and RXFIFO not empty interrupt enable

LL_USART_CR1_TCIE

Transmission complete interrupt enable

LL_USART_CR1_TXEIE_TXFNFIE

Transmit data register empty and TX FIFO not full interrupt enable

LL_USART_CR1_PEIE

Parity error

LL_USART_CR1_CMIE

Character match interrupt enable

LL_USART_CR1_RTOIE

Receiver timeout interrupt enable

LL_USART_CR1_EOBIE

End of Block interrupt enable

LL_USART_CR1_TXFEIE

TX FIFO empty interrupt enable

LL_USART_CR1_RXFFIE

RX FIFO full interrupt enable

LL_USART_CR2_LBDIE

LIN break detection interrupt enable

LL_USART_CR3_EIE

Error interrupt enable

LL_USART_CR3_CTSIE

CTS interrupt enable

LL_USART_CR3_TXFTIE

TX FIFO threshold interrupt enable

LL_USART_CR3_TCBGTIE

Transmission complete before guard time interrupt enable

LL_USART_CR3_RXFTIE

RX FIFO threshold interrupt enable

Last Clock Pulse

LL_USART_LASTCLKPULSE_NO_OUTPUT

The clock pulse of the last data bit is not output to the SCLK pin

LL_USART_LASTCLKPULSE_OUTPUT

The clock pulse of the last data bit is output to the SCLK pin

LIN Break Detection Length

LL_USART_LINBREAK_DETECT_10B

10-bit break detection method selected

LL_USART_LINBREAK_DETECT_11B

11-bit break detection method selected

Oversampling

LL_USART_OVERSAMPLING_16

Oversampling by 16

LL_USART_OVERSAMPLING_8

Oversampling by 8

Parity Control

LL_USART_PARITY_NONE

Parity control disabled

LL_USART_PARITY_EVEN

Parity control enabled and Even Parity is selected

LL_USART_PARITY_ODD

Parity control enabled and Odd Parity is selected

Clock Phase

LL_USART_PHASE_1EDGE

The first clock transition is the first data capture edge

LL_USART_PHASE_2EDGE

The second clock transition is the first data capture edge

Clock Polarity

LL_USART_POLARITY_LOW

Steady low value on SCLK pin outside transmission window

LL_USART_POLARITY_HIGH

Steady high value on SCLK pin outside transmission window

Clock Source Prescaler

LL_USART_PRESCALER_DIV1

Input clock not divided

LL_USART_PRESCALER_DIV2

Input clock divided by 2

LL_USART_PRESCALER_DIV4

Input clock divided by 4

LL_USART_PRESCALER_DIV6

Input clock divided by 6

LL_USART_PRESCALER_DIV8

Input clock divided by 8

LL_USART_PRESCALER_DIV10

Input clock divided by 10

LL_USART_PRESCALER_DIV12

Input clock divided by 12

LL_USART_PRESCALER_DIV16

Input clock divided by 16

LL_USART_PRESCALER_DIV32

Input clock divided by 32

LL_USART_PRESCALER_DIV64

Input clock divided by 64

LL_USART_PRESCALER_DIV128

Input clock divided by 128

LL_USART_PRESCALER_DIV256

Input clock divided by 256

RX Pin Active Level Inversion

LL_USART_RXPIN_LEVEL_STANDARD

RX pin signal works using the standard logic levels

LL_USART_RXPIN_LEVEL_INVERTED

RX pin signal values are inverted.

Stop Bits

LL_USART_STOPBITS_0_5

0.5 stop bit

LL_USART_STOPBITS_1

1 stop bit

LL_USART_STOPBITS_1_5

1.5 stop bits

LL_USART_STOPBITS_2

2 stop bits

TX Pin Active Level Inversion

LL_USART_TXPIN_LEVEL_STANDARD

TX pin signal works using the standard logic levels

LL_USART_TXPIN_LEVEL_INVERTED

TX pin signal values are inverted.

TX RX Pins Swap

LL_USART_TXRX_STANDARD

TX/RX pins are used as defined in standard pinout

LL_USART_TXRX_SWAPPED

TX and RX pins functions are swapped.

Wakeup

LL_USART_WAKEUP_IDLELINE

USART wake up from Mute mode on Idle Line

LL_USART_WAKEUP_ADDRESSMARK

USART wake up from Mute mode on Address Mark

FLAG_Management

LL_USART_IsActiveFlag_RXNE

LL_USART_IsActiveFlag_TXE

IT_Management

LL_USART_EnableIT_RXNE

LL_USART_EnableIT_TXE

LL_USART_DisableIT_RXNE

LL_USART_DisableIT_TXE

LL_USART_IsEnabledIT_RXNE

LL_USART_IsEnabledIT_TXE

Exported_Macros_Helper

__LL_USART_DIV_SAMPLING8

Description:

- Compute USARTDIV value according to Peripheral Clock and expected Baud Rate in 8 bits sampling mode (32 bits value of USARTDIV is returned)

Parameters:

- __PERIPHCLK__: Peripheral Clock frequency used for USART instance
- __PRESCALER__: This parameter can be one of the following values:
  – LL_USART_PRESCALER_DIV1
  – LL_USART_PRESCALER_DIV2
  – LL_USART_PRESCALER_DIV4
  – LL_USART_PRESCALER_DIV6
  – LL_USART_PRESCALER_DIV8
  – LL_USART_PRESCALER_DIV10
  – LL_USART_PRESCALER_DIV12
  – LL_USART_PRESCALER_DIV16
  – LL_USART_PRESCALER_DIV32
  – LL_USART_PRESCALER_DIV64
  – LL_USART_PRESCALER_DIV128
  – LL_USART_PRESCALER_DIV256
- __BAUDRATE__: Baud rate value to achieve

Return value:

- USARTDIV: value to be used for BRR register filling in OverSampling_8 case

__LL_USART_DIV_SAMPLING16

Description:

- Compute USARTDIV value according to Peripheral Clock and expected Baud Rate in 16 bits sampling mode (32 bits value of USARTDIV is returned)

Parameters:

- __PERIPHCLK__: Peripheral Clock frequency used for USART instance
- __PRESCALER__: This parameter can be one of the following values:
  – LL_USART_PRESCALER_DIV1
  – LL_USART_PRESCALER_DIV2
  – LL_USART_PRESCALER_DIV4
  – LL_USART_PRESCALER_DIV6
  – LL_USART_PRESCALER_DIV8
  – LL_USART_PRESCALER_DIV10
  – LL_USART_PRESCALER_DIV12
  – LL_USART_PRESCALER_DIV16
  – LL_USART_PRESCALER_DIV32
  – LL_USART_PRESCALER_DIV64
  – LL_USART_PRESCALER_DIV128
  – LL_USART_PRESCALER_DIV256
- __BAUDRATE__: Baud rate value to achieve

Return value:

- USARTDIV: value to be used for BRR register filling in OverSampling_16 case

Common Write and read registers Macros

LL_USART_WriteReg

Description:

- Write a value in USART register.

Parameters:

- __INSTANCE__: USART Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_USART_ReadReg

Description:

- Read a value in USART register.

Parameters:

- __INSTANCE__: USART Instance
- __REG__: Register to be read

Return value:

- Register: value

122 LL UTILS Generic Driver

122.1 UTILS Firmware driver registers structures

122.1.1 LL_UTILS_PLLInitTypeDef

LL_UTILS_PLLInitTypeDef is defined in the stm32u5xx_ll_utils.h

Data Fields

- ***uint32_t PLLM***
- ***uint32_t PLLN***
- ***uint32_t PLLR***

Field Documentation

- ***uint32_t LL_UTILS_PLLInitTypeDef::PLLM***
  Division factor for PLL VCO input clock. This parameter can be a value of ***RCC_LL_EC_PLL1MBOOST_DIV***This feature can be modified afterwards using unitary function **LL_RCC_PLL1_ConfigDomain_SYS()**.
- ***uint32_t LL_UTILS_PLLInitTypeDef::PLLN***
  Multiplication factor for PLL VCO output clock. This parameter must be a number between Min_Data = 8 and Max_Data = 86This feature can be modified afterwards using unitary function **LL_RCC_PLL1_ConfigDomain_SYS()**.
- ***uint32_t LL_UTILS_PLLInitTypeDef::PLLR***
  Division for the main system clock. This parameter must be a number between Min_Data = 1 and Max_Data = 128This feature can be modified afterwards using unitary function **LL_RCC_PLL1_ConfigDomain_SYS()**.

122.1.2 LL_UTILS_ClkInitTypeDef

LL_UTILS_ClkInitTypeDef is defined in the stm32u5xx_ll_utils.h

Data Fields

- ***uint32_t AHBCLKDivider***
- ***uint32_t APB1CLKDivider***
- ***uint32_t APB2CLKDivider***
- ***uint32_t APB3CLKDivider***

Field Documentation

- ***uint32_t LL_UTILS_ClkInitTypeDef::AHBCLKDivider***
  The AHB clock (HCLK) divider. This clock is derived from the system clock (SYSCLK). This parameter can be a value of ***RCC_LL_EC_SYSCLK_DIV***This feature can be modified afterwards using unitary function **LL_RCC_SetAHBPrescaler()**.
- ***uint32_t LL_UTILS_ClkInitTypeDef::APB1CLKDivider***
  The APB1 clock (PCLK1) divider. This clock is derived from the AHB clock (HCLK). This parameter can be a value of ***RCC_LL_EC_APB1_DIV***This feature can be modified afterwards using unitary function **LL_RCC_SetAPB1Prescaler()**.
- ***uint32_t LL_UTILS_ClkInitTypeDef::APB2CLKDivider***
  The APB2 clock (PCLK2) divider. This clock is derived from the AHB clock (HCLK). This parameter can be a value of ***RCC_LL_EC_APB2_DIV***This feature can be modified afterwards using unitary function **LL_RCC_SetAPB2Prescaler()**.
- ***uint32_t LL_UTILS_ClkInitTypeDef::APB3CLKDivider***
  The APB3 clock (PCLK3) divider. This clock is derived from the AHB clock (HCLK). This parameter can be a value of ***RCC_LL_EC_APB3_DIV***This feature can be modified afterwards using unitary function **LL_RCC_SetAPB3Prescaler()**.

122.2 UTILS Firmware driver API description

The following section lists the various functions of the UTILS library.

122.2.1 System Configuration functions

System, AHB and APB buses clocks configuration

- The maximum frequency of the SYSCLK, HCLK, PCLK1 and PCLK2, PCLK3 is 160000000 Hz.

This section contains the following APIs:

- *LL_SetSystemCoreClock()*
- *LL_SetFlashLatency()*
- *LL_PLL_ConfigSystemClock_MSI()*
- *LL_PLL_ConfigSystemClock_HSI()*
- *LL_PLL_ConfigSystemClock_HSE()*

122.2.2 Detailed description of functions

LL_GetUID_Word0

Function name

__STATIC_INLINE uint32_t LL_GetUID_Word0 (void)

Function description

Get Word0 of the unique device identifier (UID based on 96 bits)

Return values

- **UID[31:0]:** X and Y coordinates on the wafer expressed in BCD format

LL_GetUID_Word1

Function name

__STATIC_INLINE uint32_t LL_GetUID_Word1 (void)

Function description

Get Word1 of the unique device identifier (UID based on 96 bits)

Return values

- **UID[63:32]:** Wafer number (UID[39:32]) & LOT_NUM[23:0] (UID[63:40])

LL_GetUID_Word2

Function name

__STATIC_INLINE uint32_t LL_GetUID_Word2 (void)

Function description

Get Word2 of the unique device identifier (UID based on 96 bits)

Return values

- **UID[95:64]:** Lot number (ASCII encoded) - LOT_NUM[55:24]

LL_GetFlashSize

Function name

__STATIC_INLINE uint32_t LL_GetFlashSize (void)

Function description

Get Flash memory size.

Return values

- **FLASH_SIZE[15:0]:** Flash memory size

Notes

- This bitfield indicates the size of the device Flash memory expressed in Kbytes. As an example, 0x040 corresponds to 64 Kbytes.

LL_GetPackageType

Function name

__STATIC_INLINE uint32_t LL_GetPackageType (void)

Function description

Get Package type.

Return values

- **Returned:** value can be one of the following values:
  - LL_UTILS_PACKAGETYPE_LQFP64
  - LL_UTILS_PACKAGETYPE_LQFP100
  - LL_UTILS_PACKAGETYPE_UFBGA132
  - LL_UTILS_PACKAGETYPE_LQFP144
  - LL_UTILS_PACKAGETYPE_LQFP48
  - LL_UTILS_PACKAGETYPE_UFBGA169
  - LL_UTILS_PACKAGETYPE_LQFP64_SMPS
  - LL_UTILS_PACKAGETYPE_WLSCP90_SMPS
  - LL_UTILS_PACKAGETYPE_LQFP100_SMPS
  - LL_UTILS_PACKAGETYPE_UFBGA132_SMPS
  - LL_UTILS_PACKAGETYPE_LQFP144_SMPS
  - LL_UTILS_PACKAGETYPE_LQFP48_SMPS
  - LL_UTILS_PACKAGETYPE_UFBGA169_SMPS
  - LL_UTILS_PACKAGETYPE_WLCSP144
  - LL_UTILS_PACKAGETYPE_UFBGA144
  - LL_UTILS_PACKAGETYPE_WLCSP144_SMPS
  - LL_UTILS_PACKAGETYPE_UFBGA144_SMPS
  - LL_UTILS_PACKAGETYPE_WLCSP208_SMPS
  - LL_UTILS_PACKAGETYPE_TFBGA216_SMPS

LL_InitTick

Function name

__STATIC_INLINE void LL_InitTick (uint32_t HCLKFrequency, uint32_t Ticks)

Function description

This function configures the Cortex-M SysTick source of the time base.

Parameters

- **HCLKFrequency:** HCLK frequency in Hz (can be calculated thanks to RCC helper macro)
- **Ticks:** Number of ticks

Return values

- **None:**

Notes

- When a RTOS is used, it is recommended to avoid changing the SysTick configuration by calling this function, for a delay use rather osDelay RTOS service.

LL_Init1msTick

Function name

void LL_Init1msTick (uint32_t HCLKFrequency)

Function description

This function configures the Cortex-M SysTick source to have 1ms time base with HCLK as SysTick clock source.

Parameters

- **HCLKFrequency:** HCLK frequency in Hz

Return values

- **None:**

Notes

- When a RTOS is used, it is recommended to avoid changing the Systick configuration by calling this function, for a delay use rather osDelay RTOS service.
- HCLK frequency can be calculated thanks to RCC helper macro or function LL_RCC_GetSystemClocksFreq

LL_Init1msTick_HCLK_Div8

Function name

void LL_Init1msTick_HCLK_Div8 (uint32_t HCLKFrequency)

Function description

This function configures the Cortex-M SysTick source to have 1ms time base with HCLK/8 as SysTick clock source.

Parameters

- **HCLKFrequency:** HCLK frequency in Hz

Return values

- **None:**

Notes

- When a RTOS is used, it is recommended to avoid changing the Systick configuration by calling this function, for a delay use rather osDelay RTOS service.

LL_Init1msTick_LSE

Function name

void LL_Init1msTick_LSE (void)

Function description

This function configures the Cortex-M SysTick source to have 1ms time base with LSE as SysTick clock source.

Return values

- **None:**

Notes

- When a RTOS is used, it is recommended to avoid changing the Systick configuration by calling this function, for a delay use rather osDelay RTOS service. LSESYS needs to be enabled to get LSE working as SysTick clock source.

LL_Init1msTick_LSI

Function name

void LL_Init1msTick_LSI (void)

Function description

This function configures the Cortex-M SysTick source to have 1ms time base with LSI as SysTick clock source.

Return values

- **None:**

Notes

- When a RTOS is used, it is recommended to avoid changing the Systick configuration by calling this function, for a delay use rather osDelay RTOS service.

LL_mDelay

Function name

void LL_mDelay (uint32_t Delay)

Function description

This function provides minimum delay (in milliseconds) based on SysTick counter flag.

Parameters

- **Delay:** specifies the minimum delay time length, in milliseconds.

Return values

- **None:**

Notes

- When a RTOS is used, it is recommended to avoid using blocking delay and use rather osDelay service.
- To respect 1ms timebase, user should call LL_Init1msTick function which will configure Systick to 1ms

LL_SetSystemCoreClock

Function name

void LL_SetSystemCoreClock (uint32_t HCLKFrequency)

Function description

This function sets directly SystemCoreClock CMSIS variable.

Parameters

- **HCLKFrequency:** HCLK frequency in Hz (can be calculated thanks to RCC helper macro)

Return values

- **None:**

Notes

- Variable can be calculated also through SystemCoreClockUpdate function.

LL_PLL_ConfigSystemClock_MSI

Function name

ErrorStatus LL_PLL_ConfigSystemClock_MSI (LL_UTILS_PLLInitTypeDef * UTILS_PLLInitStruct, LL_UTILS_ClkInitTypeDef * UTILS_ClkInitStruct)

Function description

This function configures system clock with MSI as clock source of the PLL.

Parameters

- **UTILS_PLLInitStruct:** pointer to a LL_UTILS_PLLInitTypeDef structure that contains the configuration information for the PLL1.
- **UTILS_ClkInitStruct:** pointer to a LL_UTILS_ClkInitTypeDef structure that contains the configuration information for the BUS prescalers.

Return values

- **An:** ErrorStatus enumeration value:
  – SUCCESS: Max frequency configuration done
  – ERROR: Max frequency configuration not done

Notes

- The application needs to ensure that PLL1, PLL2 and/or PLL3 are disabled.
- Function is based on the following formula: PLL1 output frequency = (((MSI frequency / PLL1M) * PLL1N) / PLL1R)PLL1M: ensure that the VCO input frequency ranges from 1 to 16 MHz (PLL1VCO_input = MSI frequency / PLL1M)PLL1N: ensure that the VCO output frequency is between 4 and 512 MHz (PLL1VCO_output = PLL1VCO_input * PLL1N)PLL1R: ensure that max frequency at 160 MHz is reached (PLL1VCO_output / PLL1R)

LL_PLL_ConfigSystemClock_HSI

Function name

ErrorStatus LL_PLL_ConfigSystemClock_HSI (LL_UTILS_PLLInitTypeDef * UTILS_PLLInitStruct, LL_UTILS_ClkInitTypeDef * UTILS_ClkInitStruct)

Function description

This function configures system clock at maximum frequency with HSI as clock source of the PLL.

Parameters

- **UTILS_PLLInitStruct:** pointer to a LL_UTILS_PLLInitTypeDef structure that contains the configuration information for the PLL.
- **UTILS_ClkInitStruct:** pointer to a LL_UTILS_ClkInitTypeDef structure that contains the configuration information for the BUS prescalers.

Return values

- **An:** ErrorStatus enumeration value:
  – SUCCESS: Max frequency configuration done
  – ERROR: Max frequency configuration not done

Notes

- The application need to ensure that PLL1, PLL2 and/or PLL3 are disabled.
- Function is based on the following formula: PLL output frequency = (((HSI frequency / PLLM) * PLLN) / PLLR)PLL1M: ensure that the VCO input frequency ranges from 1 to 16 MHz (PLL1VCO_input = MSI frequency / PLL1M)PLL1N: ensure that the VCO output frequency is between 4 and 512 MHz (PLL1VCO_output = PLL1VCO_input * PLL1N)PLL1R: ensure that max frequency at 160 MHz is reached (PLL1VCO_output / PLL1R)

LL_PLL_ConfigSystemClock_HSE

Function name

ErrorStatus LL_PLL_ConfigSystemClock_HSE (uint32_t HSEFrequency, uint32_t HSEBypass, LL_UTILS_PLLInitTypeDef * UTILS_PLLInitStruct, LL_UTILS_ClkInitTypeDef * UTILS_ClkInitStruct)

Function description

This function configures system clock with HSE as clock source of the PLL.

Parameters

- **HSEFrequency:** Value between Min_Data = 4000000 and Max_Data = 50000000
- **HSEBypass:** This parameter can be one of the following values:
  – LL_UTILS_HSEBYPASS_ON
  – LL_UTILS_HSEBYPASS_OFF
- **UTILS_PLLInitStruct:** pointer to a LL_UTILS_PLLInitTypeDef structure that contains the configuration information for the PLL.
- **UTILS_ClkInitStruct:** pointer to a LL_UTILS_ClkInitTypeDef structure that contains the configuration information for the BUS prescalers.

Return values

- **An:** ErrorStatus enumeration value:
  – SUCCESS: Max frequency configuration done
  – ERROR: Max frequency configuration not done

Notes

- The application need to ensure that PLL, PLLSAI1 and/or PLLSAI2 are disabled.
- Function is based on the following formula: PLL output frequency = (((HSE frequency / PLLM) * PLLN) / PLLR)PLL1M: ensure that the VCO input frequency ranges from 1 to 16 MHz (PLL1VCO_input = MSI frequency / PLL1M)PLL1N: ensure that the VCO output frequency is between 4 and 512 MHz (PLL1VCO_output = PLL1VCO_input * PLL1N)PLL1R: ensure that max frequency at 160 MHz is reached (PLL1VCO_output / PLL1R)

LL_SetFlashLatency

Function name

ErrorStatus LL_SetFlashLatency (uint32_t HCLK_Frequency)

Function description

Update number of Flash wait states in line with new frequency and current voltage range.

Parameters

- **HCLK_Frequency:** HCLK frequency

Return values

- **An:** ErrorStatus enumeration value:
  – SUCCESS: Latency has been modified
  – ERROR: Latency cannot be modified

122.3 UTILS Firmware driver defines

The following section lists the various define and macros of the module.

122.3.1 UTILS

UTILS

HSE Bypass activation

LL_UTILS_HSEBYPASS_OFF

HSE Bypass is not enabled

LL_UTILS_HSEBYPASS_ON

HSE Bypass is enabled

PACKAGE TYPE

123 LL WWDG Generic Driver

123.1 WWDG Firmware driver API description

The following section lists the various functions of the WWDG library.

123.1.1 Detailed description of functions

LL_WWDG_Enable

Function name

__STATIC_INLINE void LL_WWDG_Enable (WWDG_TypeDef * WWDGx)

Function description

Enable Window Watchdog.

Parameters

- **WWDGx:** WWDG Instance

Return values

- **None:**

Notes

- It is enabled by setting the WDGA bit in the WWDG_CR register, then it cannot be disabled again except by a reset. This bit is set by software and only cleared by hardware after a reset. When WDGA = 1, the watchdog can generate a reset.

Reference Manual to LL API cross reference:

- CR WDGA LL_WWDG_Enable

LL_WWDG_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_WWDG_IsEnabled (const WWDG_TypeDef * WWDGx)

Function description

Checks if Window Watchdog is enabled.

Parameters

- **WWDGx:** WWDG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR WDGA LL_WWDG_IsEnabled

LL_WWDG_SetCounter

Function name

__STATIC_INLINE void LL_WWDG_SetCounter (WWDG_TypeDef * WWDGx, uint32_t Counter)

Function description

Set the Watchdog counter value to provided value (7-bits T[6:0])

Parameters

- **WWDGx:** WWDG Instance
- **Counter:** 0..0x7F (7 bit counter value)

Return values

- **None:**

Notes

- When writing to the WWDG_CR register, always write 1 in the MSB b6 to avoid generating an immediate reset This counter is decremented every (4096 x 2expWDGTB) PCLK cycles A reset is produced when it rolls over from 0x40 to 0x3F (bit T6 becomes cleared) Setting the counter lower then 0x40 causes an immediate reset (if WWDG enabled)

Reference Manual to LL API cross reference:

- CR T LL_WWDG_SetCounter

LL_WWDG_GetCounter

Function name

__STATIC_INLINE uint32_t LL_WWDG_GetCounter (const WWDG_TypeDef * WWDGx)

Function description

Return current Watchdog Counter Value (7 bits counter value)

Parameters

- **WWDGx:** WWDG Instance

Return values

- **7:** bit Watchdog Counter value

Reference Manual to LL API cross reference:

- CR T LL_WWDG_GetCounter

LL_WWDG_SetPrescaler

Function name

__STATIC_INLINE void LL_WWDG_SetPrescaler (WWDG_TypeDef * WWDGx, uint32_t Prescaler)

Function description

Set the time base of the prescaler (WDGTB).

Parameters

- **WWDGx:** WWDG Instance
- **Prescaler:** This parameter can be one of the following values:
  - LL_WWDG_PRESCALER_1
  - LL_WWDG_PRESCALER_2
  - LL_WWDG_PRESCALER_4
  - LL_WWDG_PRESCALER_8
  - LL_WWDG_PRESCALER_16
  - LL_WWDG_PRESCALER_32
  - LL_WWDG_PRESCALER_64
  - LL_WWDG_PRESCALER_128

Return values

- **None:**

Notes

- Prescaler is used to apply ratio on PCLK clock, so that Watchdog counter is decremented every (4096 x 2expWDGTB) PCLK cycles

Reference Manual to LL API cross reference:

- CFR WDGTB LL_WWDG_SetPrescaler

LL_WWDG_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_WWDG_GetPrescaler (const WWDG_TypeDef * WWDGx)

Function description

Return current Watchdog Prescaler Value.

Parameters

- **WWDGx:** WWDG Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_WWDG_PRESCALER_1
  - LL_WWDG_PRESCALER_2
  - LL_WWDG_PRESCALER_4
  - LL_WWDG_PRESCALER_8
  - LL_WWDG_PRESCALER_16
  - LL_WWDG_PRESCALER_32
  - LL_WWDG_PRESCALER_64
  - LL_WWDG_PRESCALER_128

Reference Manual to LL API cross reference:

- CFR WDGTB LL_WWDG_GetPrescaler

LL_WWDG_SetWindow

Function name

__STATIC_INLINE void LL_WWDG_SetWindow (WWDG_TypeDef * WWDGx, uint32_t Window)

Function description

Set the Watchdog Window value to be compared to the downcounter (7-bits W[6:0]).

Parameters

- **WWDGx:** WWDG Instance
- **Window:** 0x00..0x7F (7 bit Window value)

Return values

- **None:**

Notes

- This window value defines when write in the WWDG_CR register to program Watchdog counter is allowed. Watchdog counter value update must occur only when the counter value is lower than the Watchdog window register value. Otherwise, a MCU reset is generated if the 7-bit Watchdog counter value (in the control register) is refreshed before the downcounter has reached the watchdog window register value. Physically is possible to set the Window lower then 0x40 but it is not recommended. To generate an immediate reset, it is possible to set the Counter lower than 0x40.

Reference Manual to LL API cross reference:

- CFR W LL_WWDG_SetWindow

LL_WWDG_GetWindow

Function name

__STATIC_INLINE uint32_t LL_WWDG_GetWindow (const WWDG_TypeDef * WWDGx)

Function description

Return current Watchdog Window Value (7 bits value)

Parameters

- **WWDGx:** WWDG Instance

Return values

- **7:** bit Watchdog Window value

Reference Manual to LL API cross reference:

- CFR W LL_WWDG_GetWindow

LL_WWDG_IsActiveFlag_EWKUP

Function name

__STATIC_INLINE uint32_t LL_WWDG_IsActiveFlag_EWKUP (const WWDG_TypeDef * WWDGx)

Function description

Indicates if the WWDG Early Wakeup Interrupt Flag is set or not.

Parameters

- **WWDGx:** WWDG Instance

Return values

- **State:** of bit (1 or 0).

Notes

- This bit is set by hardware when the counter has reached the value 0x40. It must be cleared by software by writing 0. A write of 1 has no effect. This bit is also set if the interrupt is not enabled.

Reference Manual to LL API cross reference:

- SR EWIF LL_WWDG_IsActiveFlag_EWKUP

LL_WWDG_ClearFlag_EWKUP

Function name

__STATIC_INLINE void LL_WWDG_ClearFlag_EWKUP (WWDG_TypeDef * WWDGx)

Function description

Clear WWDG Early Wakeup Interrupt Flag (EWIF)

Parameters

- **WWDGx:** WWDG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR EWIF LL_WWDG_ClearFlag_EWKUP

LL_WWDG_EnableIT_EWKUP

Function name

__STATIC_INLINE void LL_WWDG_EnableIT_EWKUP (WWDG_TypeDef * WWDGx)

Function description

Enable the Early Wakeup Interrupt.

Parameters

- **WWDGx:** WWDG Instance

Return values

- **None:**

Notes

- When set, an interrupt occurs whenever the counter reaches value 0x40. This interrupt is only cleared by hardware after a reset

Reference Manual to LL API cross reference:

- CFR EWI LL_WWDG_EnableIT_EWKUP

LL_WWDG_IsEnabledIT_EWKUP

Function name

__STATIC_INLINE uint32_t LL_WWDG_IsEnabledIT_EWKUP (const WWDG_TypeDef * WWDGx)

Function description

Check if Early Wakeup Interrupt is enabled.

Parameters

- **WWDGx:** WWDG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CFR EWI LL_WWDG_IsEnabledIT_EWKUP

123.2 WWDG Firmware driver defines

The following section lists the various define and macros of the module.

123.2.1 WWDG

WWDG

IT Defines

LL_WWDG_CFR_EWI

PRESCALER

LL_WWDG_PRESCALER_1

WWDG counter clock = (PCLK1/4096)/1

LL_WWDG_PRESCALER_2

WWDG counter clock = (PCLK1/4096)/2

LL_WWDG_PRESCALER_4

WWDG counter clock = (PCLK1/4096)/4

LL_WWDG_PRESCALER_8

WWDG counter clock = (PCLK1/4096)/8

LL_WWDG_PRESCALER_16

WWDG counter clock = (PCLK1/4096)/16

LL_WWDG_PRESCALER_32

WWDG counter clock = (PCLK1/4096)/32

LL_WWDG_PRESCALER_64

WWDG counter clock = (PCLK1/4096)/64

LL_WWDG_PRESCALER_128

WWDG counter clock = (PCLK1/4096)/128

Common Write and read registers macros

LL_WWDG_WriteReg

Description:
- Write a value in WWDG register.

Parameters:
- __INSTANCE__: WWDG Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:
- None

LL_WWDG_ReadReg

Description:
- Read a value in WWDG register.

Parameters:
- __INSTANCE__: WWDG Instance
- __REG__: Register to be read

Return value:
- Register: value

124 Correspondence between API registers and API low-layer driver functions

This appendix contains the correspondence table between the register or bit name, as mentioned inside the reference manual of the component, and the name of the LL functions to modify or read this register or bit.

124.1 ADC

Table 25. **Correspondence between ADC registers and ADC low-layer driver functions**

Register	Field	Function
AWD2CR	AWD2CH	LL_ADC_GetAnalogWDMonitChannels
		LL_ADC_SetAnalogWDMonitChannels
AWD3CR	AWD3CH	LL_ADC_GetAnalogWDMonitChannels
		LL_ADC_SetAnalogWDMonitChannels
CALFACT2	LINCALFACT	LL_ADC_GetCalibrationLinearFactor
		LL_ADC_SetCalibrationLinearFactor
CCR	CKMODE	LL_ADC_GetCommonClock

125 FAQs

General subjects

Why should I use the HAL drivers?

There are many advantages in using the HAL drivers:

- Ease of use: you can use the HAL drivers to configure and control any peripheral embedded within your STM32 MCU without prior in-depth knowledge of the product.
- HAL drivers provide intuitive and ready-to-use APIs to configure the peripherals and support polling, interrupt and DMA programming model to accommodate all application requirements, thus allowing the end-user to build a complete application by calling a few APIs.
- Higher level of abstraction than a standard peripheral library allowing to transparently manage:
  - Data transfers and processing using blocking mode (polling) or non-blocking mode (interrupt or DMA)
  - Error management through peripheral error detection and timeout mechanism.
- Generic architecture speeding up initialization and porting, thus allowing customers to focus on innovation.
- Generic set of APIs with full compatibility across the STM32 Series/lines, to ease the porting task between STM32 MCUs.
- The APIs provided within the HAL drivers are feature-oriented and do not require in-depth knowledge of peripheral operation.
- The APIs provided are modular. They include initialization, IO operation and control functions. The end-user has to call init function, then start the process by calling one IO operation functions (write, read, transmit, receive, …). Most of the peripherals have the same architecture.
- The number of functions required to build a complete and useful application is very reduced. As an example, to build a UART communication process, the user only has to call HAL_UART_Init() then HAL_UART_Transmit() or HAL_UART_Receive().

Which devices are supported by the HAL drivers?

The HAL drivers are developed to support all STM32U5 devices. To ensure compatibility between all devices and portability with others Series and lines, the API is split into the generic and the extension APIs . For more details, please refer to *section* ***Devices supported by the HAL drivers***.

What is the cost of using HAL drivers in term of code size and performance?

Like generic architecture drivers, the HAL drivers may induce firmware overhead.

This is due to the high abstraction level and ready-to-use APIs which allow data transfers, errors management and offloads the user application from implementation details.

Architecture

How many files should I modify to configure the HAL drivers?

Only one file needs to be modified: stm32u5xx_hal_conf.h. You can modify this file by disabling unused modules, or adjusting some parameters (i.e. HSE value, System configuration…)

A template is provided in the HAL drivers folders (stm32u5xx_hal_conf_template.c).

Which header files should I include in my application to use the HAL drivers?

Only stm32u5xx_hal.h file has to be included.

What is the difference between xx_hal_ppp.c/.h and xx_hal_ppp_ *ex* .c/.h?

The HAL driver architecture supports common features across STM32 Series/lines. To support specific features, the drivers are split into two groups.

- The generic APIs (stm32u5xx_hal_ppp.c): It includes the common set of APIs across all the STM32 product lines
- The extension APIs (stm32u5xx_hal_ppp_ex.c): It includes the specific APIs for specific device part number or family.

Initialization and I/O operation functions

How do I configure the system clock?

Unlike the standard library, the system clock configuration is not performed in CMSIS drivers file (system_stm32u5xx.c) but in the main user application by calling the two main functions, HAL_RCC_OscConfig() and HAL_RCC_ClockConfig(). It can be modified in any user application section.

What is the purpose of the *PPP_HandleTypeDef *pHandle* structure located in each driver in addition to the Initialization structure

PPP_HandleTypeDef *pHandle is the main structure implemented in the HAL drivers. It handles the peripheral configuration and registers, and embeds all the structures and variables required to follow the peripheral device flow (pointer to buffer, Error code, State,...)

However, this structure is not required to service peripherals such as GPIO, SYSTICK, PWR, and RCC.

What is the purpose of HAL_PPP_MspInit() and HAL_PPP_MspDeInit() functions?

These function are called within HAL_PPP_Init() and HAL_PPP_DeInit(), respectively. They are used to perform the low level Initialization/de-initialization related to the additional hardware resources (RCC, GPIO, NVIC and DMA).

These functions are declared in stm32u5xx_hal_msp.c. A template is provided in the HAL driver folders (stm32u5xx_hal_msp_template.c).

When and how should I use callbacks functions (functions declared with the attribute *__weak*)?

Use callback functions for the I/O operations used in DMA or interrupt mode. The PPP process complete callbacks are called to inform the user about process completion in real-time event mode (interrupts).

The Errors callbacks are called when a processing error occurs in DMA or interrupt mode. These callbacks are customized by the user to add user proprietary code. They can be declared in the application. Note that the same process completion callbacks are used for DMA and interrupt mode.

Is it mandatory to use HAL_Init() function at the beginning of the user application?

It is mandatory to use HAL_Init() function to enable the system configuration (Prefetch, Data instruction cache,…), configure the systTick and the NVIC priority grouping and the hardware low level initialization.

The SysTick configuration shall be adjusted by calling ***HAL_RCC_ClockConfig()*** function, to obtain 1 ms whatever the system clock.

Why do I need to configure the SysTick timer to use the HAL drivers?

The SysTick timer is configured to be used to generate variable increments by calling *HAL_IncTick()* function in SysTick ISR and retrieve the value of this variable by calling *HAL_GetTick()* function.

The call HAL_GetTick() function is mandatory when using HAL drivers with Polling Process or when using HAL_Delay().

Why is the SysTick timer configured to have 1 ms?

This is mandatory to ensure correct IO operation in particular for polling mode operation where the 1 ms is required as timebase.

Could HAL_Delay() function block my application under certain conditions?

Care must be taken when using HAL_Delay() since this function provides accurate delay based on a variable incremented in SysTick ISR. This implies that if HAL_Delay() is called from a peripheral ISR process, then the SysTick interrupt must have higher priority (numerically lower) than the peripheral interrupt, otherwise the caller ISR process will be blocked. Use HAL_NVIC_SetPriority() function to change the SysTick interrupt priority.

What programming model sequence should I follow to use HAL drivers ?

Follow the sequence below to use the APIs provided in the HAL drivers:

1. Call HAL_Init() function to initialize the system (data cache, NVIC priority,…).

2. Initialize the system clock by calling HAL_RCC_OscConfig() followed by HAL_RCC_ClockConfig().
3. Add HAL_IncTick() function under SysTick_Handler() ISR function to enable polling process when using HAL_Delay() function
4. Start initializing your peripheral by calling HAL_PPP_Init().
5. Implement the hardware low level initialization (Peripheral clock, GPIO, DMA,..) by calling HAL_PPP_MspInit() in stm32u5xx_hal_msp.c
6. Start your process operation by calling IO operation functions.

What is the purpose of HAL_PPP_IRQHandler() function and when should I use it?

HAL_PPP_IRQHandler() is used to handle interrupt process. It is called under PPP_IRQHandler() function in stm32u5xx_it.c. In this case, the end-user has to implement only the callbacks functions (prefixed by __weak) to perform the appropriate action when an interrupt is detected. Advanced users can implement their own code in PPP_IRQHandler() without calling HAL_PPP_IRQHandler().

Can I use directly the macros defined in xx_hal_ppp.h ?

Yes, you can: a set of macros is provided with the APIs. They allow accessing directly some specific features using peripheral flags.

Where must PPP_HandleTypedef structure peripheral handler be declared?

PPP_HandleTypedef structure peripheral handler must be declared as a global variable, so that all the structure fields are set to 0 by default. In this way, the peripheral handler default state are set to HAL_PPP_STATE_RESET, which is the default state for each peripheral after a system reset.

When should I use HAL versus LL drivers?

HAL drivers offer high-level and function-oriented APIs, with a high level of portability. Product/IPs complexity is hidden for end users. LL drivers offer low-level APIs at registers level, with a better optimization but less portability. They require a deep knowledge of product/IPs specifications.

How can I include LL drivers in my environment? Is there any LL configuration file as for HAL?

There is no configuration file. Source code shall directly include the necessary stm32u5xx_ll_ppp.h file(s).

Can I use HAL and LL drivers together? If yes, what are the constraints?

It is possible to use both HAL and LL drivers. One can handle the IP initialization phase with HAL and then manage the I/O operations with LL drivers. The major difference between HAL and LL is that HAL drivers require to create and use handles for operation management while LL drivers operates directly on peripheral registers. Mixing HAL and LL is illustrated in Examples_MIX example.

Is there any LL APIs which are not available with HAL?

Yes, there are. A few Cortex® APIs have been added in stm32u5xx_ll_cortex.h e.g. for accessing SCB or SysTick registers.

Why are SysTick interrupts not enabled on LL drivers?

When using LL drivers in standalone mode, you do not need to enable SysTick interrupts because they are not used in LL APIs, while HAL functions requires SysTick interrupts to manage timeouts.

Revision history

Table 57. Document revision history

Date	Revision	Changes
28-Sep-2021	1	Initial release.
22-Feb-2023	2	Removed details on the status bit and flag read from registers from Section 3.5.2: HAL general naming rules. Updated Section 3.12.4.1: Timeout management Document updated to cover all HAL and low-lower drivers for the STM32U5 series: • STM32U535/545 • STM32U575/585 revision W • STM32U59x/5Ax revision X
07-Aug-2023	3	Updated document to cover all HAL and low-lower drivers for the following STM32U5 part numbers: • STM32U535/545 revision Z • STM32U575/585 revision W • STM32U59x/5Ax revision X • STM32U5Fx/5Gx revision Z
20-Mar-2024	4	Removed section *Updating existing common APIs* from Section 3.7.2: HAL extension model cases. Updated document to cover all HAL and low-lower drivers for the following STM32U5 part numbers: • STM32U535/545 revision Y • STM32U575/585 revision W • STM32U59x/5Ax revision W • STM32U5Fx/5Gx revision Z
