Function name

HAL_StatusTypeDef HAL_TIM_OC_Start_IT (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Starts the TIM Output Compare signal generation in interrupt mode.

Parameters

- **htim:** TIM Output Compare handle
- **Channel:** TIM Channel to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIM_OC_Stop_IT

Function name

HAL_StatusTypeDef HAL_TIM_OC_Stop_IT (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the TIM Output Compare signal generation in interrupt mode.

Parameters

- **htim:** TIM Output Compare handle
- **Channel:** TIM Channel to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIM_OC_Start_DMA

Function name

HAL_StatusTypeDef HAL_TIM_OC_Start_DMA (TIM_HandleTypeDef * htim, uint32_t Channel, const uint32_t * pData, uint16_t Length)

Function description

Starts the TIM Output Compare signal generation in DMA mode.

Parameters

- **htim:** TIM Output Compare handle
- **Channel:** TIM Channel to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
- **pData:** The source Buffer address.
- **Length:** The length of data to be transferred from memory to TIM peripheral

Return values

- **HAL:** status

HAL_TIM_OC_Stop_DMA

Function name

HAL_StatusTypeDef HAL_TIM_OC_Stop_DMA (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the TIM Output Compare signal generation in DMA mode.

Parameters

- **htim:** TIM Output Compare handle
- **Channel:** TIM Channel to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIM_PWM_Init

Function name

HAL_StatusTypeDef HAL_TIM_PWM_Init (TIM_HandleTypeDef * htim)

Function description

Initializes the TIM PWM Time Base according to the specified parameters in the TIM_HandleTypeDef and initializes the associated handle.

Parameters

- **htim:** TIM PWM handle

Return values

- **HAL:** status

Notes

- Switching from Center Aligned counter mode to Edge counter mode (or reverse) requires a timer reset to avoid unexpected direction due to DIR bit readonly in center aligned mode. Ex: call HAL_TIM_PWM_DeInit() before HAL_TIM_PWM_Init()

HAL_TIM_PWM_DeInit

Function name

HAL_StatusTypeDef HAL_TIM_PWM_DeInit (TIM_HandleTypeDef * htim)

Function description

DeInitializes the TIM peripheral.

Parameters

- **htim:** TIM PWM handle

Return values

- **HAL:** status

HAL_TIM_PWM_MspInit

Function name

void HAL_TIM_PWM_MspInit (TIM_HandleTypeDef * htim)

Function description

Initializes the TIM PWM MSP.

Parameters

- **htim:** TIM PWM handle

Return values

- **None:**

HAL_TIM_PWM_MspDeInit

Function name

void HAL_TIM_PWM_MspDeInit (TIM_HandleTypeDef * htim)

Function description

DeInitializes TIM PWM MSP.

Parameters

- **htim:** TIM PWM handle

Return values

- **None:**

HAL_TIM_PWM_Start

Function name

HAL_StatusTypeDef HAL_TIM_PWM_Start (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Starts the PWM signal generation.

Parameters

- **htim:** TIM handle
- **Channel:** TIM Channels to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
  - TIM_CHANNEL_5: TIM Channel 5 selected
  - TIM_CHANNEL_6: TIM Channel 6 selected

Return values

- **HAL:** status

HAL_TIM_PWM_Stop

Function name

HAL_StatusTypeDef HAL_TIM_PWM_Stop (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the PWM signal generation.

Parameters

- **htim:** TIM PWM handle
- **Channel:** TIM Channels to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
  - TIM_CHANNEL_5: TIM Channel 5 selected
  - TIM_CHANNEL_6: TIM Channel 6 selected

Return values

- **HAL:** status

HAL_TIM_PWM_Start_IT

Function name

HAL_StatusTypeDef HAL_TIM_PWM_Start_IT (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Starts the PWM signal generation in interrupt mode.

Parameters

- **htim:** TIM PWM handle
- **Channel:** TIM Channel to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIM_PWM_Stop_IT

Function name

HAL_StatusTypeDef HAL_TIM_PWM_Stop_IT (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the PWM signal generation in interrupt mode.

Parameters

- **htim:** TIM PWM handle
- **Channel:** TIM Channels to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIM_PWM_Start_DMA

Function name

HAL_StatusTypeDef HAL_TIM_PWM_Start_DMA (TIM_HandleTypeDef * htim, uint32_t Channel, const uint32_t * pData, uint16_t Length)

Function description

Starts the TIM PWM signal generation in DMA mode.

Parameters

- **htim:** TIM PWM handle
- **Channel:** TIM Channels to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
- **pData:** The source Buffer address.
- **Length:** The length of data to be transferred from memory to TIM peripheral

Return values

- **HAL:** status

HAL_TIM_PWM_Stop_DMA

Function name

HAL_StatusTypeDef HAL_TIM_PWM_Stop_DMA (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the TIM PWM signal generation in DMA mode.

Parameters

- **htim:** TIM PWM handle
- **Channel:** TIM Channels to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIM_IC_Init

Function name

HAL_StatusTypeDef HAL_TIM_IC_Init (TIM_HandleTypeDef * htim)

Function description

Initializes the TIM Input Capture Time base according to the specified parameters in the TIM_HandleTypeDef and initializes the associated handle.

Parameters

- **htim:** TIM Input Capture handle

Return values

- **HAL:** status

Notes

- Switching from Center Aligned counter mode to Edge counter mode (or reverse) requires a timer reset to avoid unexpected direction due to DIR bit readonly in center aligned mode. Ex: call HAL_TIM_IC_DeInit() before HAL_TIM_IC_Init()

HAL_TIM_IC_DeInit

Function name

HAL_StatusTypeDef HAL_TIM_IC_DeInit (TIM_HandleTypeDef * htim)

Function description

DeInitializes the TIM peripheral.

Parameters

- **htim:** TIM Input Capture handle

Return values

- **HAL:** status

HAL_TIM_IC_MspInit

Function name

void HAL_TIM_IC_MspInit (TIM_HandleTypeDef * htim)

Function description

Initializes the TIM Input Capture MSP.

Parameters

- **htim:** TIM Input Capture handle

Return values

- **None:**

HAL_TIM_IC_MspDeInit

Function name

void HAL_TIM_IC_MspDeInit (TIM_HandleTypeDef * htim)

Function description

DeInitializes TIM Input Capture MSP.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIM_IC_Start

Function name

HAL_StatusTypeDef HAL_TIM_IC_Start (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Starts the TIM Input Capture measurement.

Parameters

- **htim:** TIM Input Capture handle
- **Channel:** TIM Channels to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIM_IC_Stop

Function name

HAL_StatusTypeDef HAL_TIM_IC_Stop (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the TIM Input Capture measurement.

Parameters

- **htim:** TIM Input Capture handle
- **Channel:** TIM Channels to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIM_IC_Start_IT

Function name

HAL_StatusTypeDef HAL_TIM_IC_Start_IT (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Starts the TIM Input Capture measurement in interrupt mode.

Parameters

- **htim:** TIM Input Capture handle
- **Channel:** TIM Channels to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIM_IC_Stop_IT

Function name

HAL_StatusTypeDef HAL_TIM_IC_Stop_IT (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the TIM Input Capture measurement in interrupt mode.

Parameters

- **htim:** TIM Input Capture handle
- **Channel:** TIM Channels to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIM_IC_Start_DMA

Function name

HAL_StatusTypeDef HAL_TIM_IC_Start_DMA (TIM_HandleTypeDef * htim, uint32_t Channel, uint32_t * pData, uint16_t Length)

Function description

Starts the TIM Input Capture measurement in DMA mode.

Parameters

- **htim:** TIM Input Capture handle
- **Channel:** TIM Channels to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
- **pData:** The destination Buffer address.
- **Length:** The length of data to be transferred from TIM peripheral to memory.

Return values

- **HAL:** status

HAL_TIM_IC_Stop_DMA

Function name

HAL_StatusTypeDef HAL_TIM_IC_Stop_DMA (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the TIM Input Capture measurement in DMA mode.

Parameters

- **htim:** TIM Input Capture handle
- **Channel:** TIM Channels to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIM_OnePulse_Init

Function name

HAL_StatusTypeDef HAL_TIM_OnePulse_Init (TIM_HandleTypeDef * htim, uint32_t OnePulseMode)

Function description

Initializes the TIM One Pulse Time Base according to the specified parameters in the TIM_HandleTypeDef and initializes the associated handle.

Parameters

- **htim:** TIM One Pulse handle
- **OnePulseMode:** Select the One pulse mode. This parameter can be one of the following values:
  - TIM_OPMODE_SINGLE: Only one pulse will be generated.
  - TIM_OPMODE_REPETITIVE: Repetitive pulses will be generated.

Return values

- **HAL:** status

Notes

- Switching from Center Aligned counter mode to Edge counter mode (or reverse) requires a timer reset to avoid unexpected direction due to DIR bit readonly in center aligned mode. Ex: call HAL_TIM_OnePulse_DeInit() before HAL_TIM_OnePulse_Init()
- When the timer instance is initialized in One Pulse mode, timer channels 1 and channel 2 are reserved and cannot be used for other purpose.

HAL_TIM_OnePulse_DeInit

Function name

HAL_StatusTypeDef HAL_TIM_OnePulse_DeInit (TIM_HandleTypeDef * htim)

Function description

DeInitializes the TIM One Pulse.

Parameters

- **htim:** TIM One Pulse handle

Return values

- **HAL:** status

HAL_TIM_OnePulse_MspInit

Function name

void HAL_TIM_OnePulse_MspInit (TIM_HandleTypeDef * htim)

Function description

Initializes the TIM One Pulse MSP.

Parameters

- **htim:** TIM One Pulse handle

Return values

- **None:**

HAL_TIM_OnePulse_MspDeInit

Function name

void HAL_TIM_OnePulse_MspDeInit (TIM_HandleTypeDef * htim)

Function description

DeInitializes TIM One Pulse MSP.

Parameters

- **htim:** TIM One Pulse handle

Return values

- **None:**

HAL_TIM_OnePulse_Start

Function name

HAL_StatusTypeDef HAL_TIM_OnePulse_Start (TIM_HandleTypeDef * htim, uint32_t OutputChannel)

Function description

Starts the TIM One Pulse signal generation.

Parameters

- **htim:** TIM One Pulse handle
- **OutputChannel:** See note above

Return values

- **HAL:** status

Notes

- Though OutputChannel parameter is deprecated and ignored by the function it has been kept to avoid HAL_TIM API compatibility break.
- The pulse output channel is determined when calling HAL_TIM_OnePulse_ConfigChannel().

HAL_TIM_OnePulse_Stop

Function name

HAL_StatusTypeDef HAL_TIM_OnePulse_Stop (TIM_HandleTypeDef * htim, uint32_t OutputChannel)

Function description

Stops the TIM One Pulse signal generation.

Parameters

- **htim:** TIM One Pulse handle
- **OutputChannel:** See note above

Return values

- **HAL:** status

Notes

- Though OutputChannel parameter is deprecated and ignored by the function it has been kept to avoid HAL_TIM API compatibility break.
- The pulse output channel is determined when calling HAL_TIM_OnePulse_ConfigChannel().

HAL_TIM_OnePulse_Start_IT

Function name

HAL_StatusTypeDef HAL_TIM_OnePulse_Start_IT (TIM_HandleTypeDef * htim, uint32_t OutputChannel)

Function description

Starts the TIM One Pulse signal generation in interrupt mode.

Parameters

- **htim:** TIM One Pulse handle
- **OutputChannel:** See note above

Return values

- **HAL:** status

Notes

- Though OutputChannel parameter is deprecated and ignored by the function it has been kept to avoid HAL_TIM API compatibility break.
- The pulse output channel is determined when calling HAL_TIM_OnePulse_ConfigChannel().

HAL_TIM_OnePulse_Stop_IT

Function name

HAL_StatusTypeDef HAL_TIM_OnePulse_Stop_IT (TIM_HandleTypeDef * htim, uint32_t OutputChannel)

Function description

Stops the TIM One Pulse signal generation in interrupt mode.

Parameters

- **htim:** TIM One Pulse handle
- **OutputChannel:** See note above

Return values

- **HAL:** status

Notes

- Though OutputChannel parameter is deprecated and ignored by the function it has been kept to avoid HAL_TIM API compatibility break.
- The pulse output channel is determined when calling HAL_TIM_OnePulse_ConfigChannel().

HAL_TIM_Encoder_Init

Function name

HAL_StatusTypeDef HAL_TIM_Encoder_Init (TIM_HandleTypeDef * htim, const TIM_Encoder_InitTypeDef * sConfig)

Function description

Initializes the TIM Encoder Interface and initialize the associated handle.

Parameters

- **htim:** TIM Encoder Interface handle
- **sConfig:** TIM Encoder Interface configuration structure

Return values

- **HAL:** status

Notes

- Switching from Center Aligned counter mode to Edge counter mode (or reverse) requires a timer reset to avoid unexpected direction due to DIR bit readonly in center aligned mode. Ex: call HAL_TIM_Encoder_DeInit() before HAL_TIM_Encoder_Init()
- Encoder mode and External clock mode 2 are not compatible and must not be selected together Ex: A call for HAL_TIM_Encoder_Init will erase the settings of HAL_TIM_ConfigClockSource using TIM_CLOCKSOURCE_ETRMODE2 and vice versa
- When the timer instance is initialized in Encoder mode, timer channels 1 and channel 2 are reserved and cannot be used for other purpose.

HAL_TIM_Encoder_DeInit

Function name

HAL_StatusTypeDef HAL_TIM_Encoder_DeInit (TIM_HandleTypeDef * htim)

Function description

DeInitializes the TIM Encoder interface.

Parameters

- **htim:** TIM Encoder Interface handle

Return values

- **HAL:** status

HAL_TIM_Encoder_MspInit

Function name

void HAL_TIM_Encoder_MspInit (TIM_HandleTypeDef * htim)

Function description

Initializes the TIM Encoder Interface MSP.

Parameters

- **htim:** TIM Encoder Interface handle

Return values

- **None:**

HAL_TIM_Encoder_MspDeInit

Function name

void HAL_TIM_Encoder_MspDeInit (TIM_HandleTypeDef * htim)

Function description

DeInitializes TIM Encoder Interface MSP.

Parameters

- **htim:** TIM Encoder Interface handle

Return values

- **None:**

HAL_TIM_Encoder_Start

Function name

HAL_StatusTypeDef HAL_TIM_Encoder_Start (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Starts the TIM Encoder Interface.

Parameters

- **htim:** TIM Encoder Interface handle
- **Channel:** TIM Channels to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_ALL: TIM Channel 1 and TIM Channel 2 are selected

Return values

- **HAL:** status

HAL_TIM_Encoder_Stop

Function name

HAL_StatusTypeDef HAL_TIM_Encoder_Stop (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the TIM Encoder Interface.

Parameters

- **htim:** TIM Encoder Interface handle
- **Channel:** TIM Channels to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_ALL: TIM Channel 1 and TIM Channel 2 are selected

Return values

- **HAL:** status

HAL_TIM_Encoder_Start_IT

Function name

HAL_StatusTypeDef HAL_TIM_Encoder_Start_IT (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Starts the TIM Encoder Interface in interrupt mode.

Parameters

- **htim:** TIM Encoder Interface handle
- **Channel:** TIM Channels to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_ALL: TIM Channel 1 and TIM Channel 2 are selected

Return values

- **HAL:** status

HAL_TIM_Encoder_Stop_IT

Function name

HAL_StatusTypeDef HAL_TIM_Encoder_Stop_IT (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the TIM Encoder Interface in interrupt mode.

Parameters

- **htim:** TIM Encoder Interface handle
- **Channel:** TIM Channels to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_ALL: TIM Channel 1 and TIM Channel 2 are selected

Return values

- **HAL:** status

HAL_TIM_Encoder_Start_DMA

Function name

HAL_StatusTypeDef HAL_TIM_Encoder_Start_DMA (TIM_HandleTypeDef * htim, uint32_t Channel, uint32_t * pData1, uint32_t * pData2, uint16_t Length)

Function description

Starts the TIM Encoder Interface in DMA mode.

Parameters

- **htim:** TIM Encoder Interface handle
- **Channel:** TIM Channels to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_ALL: TIM Channel 1 and TIM Channel 2 are selected
- **pData1:** The destination Buffer address for IC1.
- **pData2:** The destination Buffer address for IC2.
- **Length:** The length of data to be transferred from TIM peripheral to memory.

Return values

- **HAL:** status

HAL_TIM_Encoder_Stop_DMA

Function name

HAL_StatusTypeDef HAL_TIM_Encoder_Stop_DMA (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the TIM Encoder Interface in DMA mode.

Parameters

- **htim:** TIM Encoder Interface handle
- **Channel:** TIM Channels to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_ALL: TIM Channel 1 and TIM Channel 2 are selected

Return values

- **HAL:** status

HAL_TIM_IRQHandler

Function name

void HAL_TIM_IRQHandler (TIM_HandleTypeDef * htim)

Function description

This function handles TIM interrupts requests.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIM_OC_ConfigChannel

Function name

HAL_StatusTypeDef HAL_TIM_OC_ConfigChannel (TIM_HandleTypeDef * htim, const TIM_OC_InitTypeDef * sConfig, uint32_t Channel)

Function description

Initializes the TIM Output Compare Channels according to the specified parameters in the TIM_OC_InitTypeDef.

Parameters

- **htim:** TIM Output Compare handle
- **sConfig:** TIM Output Compare configuration structure
- **Channel:** TIM Channels to configure This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
  - TIM_CHANNEL_5: TIM Channel 5 selected
  - TIM_CHANNEL_6: TIM Channel 6 selected

Return values

- **HAL:** status

HAL_TIM_PWM_ConfigChannel

Function name

HAL_StatusTypeDef HAL_TIM_PWM_ConfigChannel (TIM_HandleTypeDef * htim, const TIM_OC_InitTypeDef * sConfig, uint32_t Channel)

Function description

Initializes the TIM PWM channels according to the specified parameters in the TIM_OC_InitTypeDef.

Parameters

- **htim:** TIM PWM handle
- **sConfig:** TIM PWM configuration structure
- **Channel:** TIM Channels to be configured This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
  - TIM_CHANNEL_5: TIM Channel 5 selected
  - TIM_CHANNEL_6: TIM Channel 6 selected

Return values

- **HAL:** status

HAL_TIM_IC_ConfigChannel

Function name

HAL_StatusTypeDef HAL_TIM_IC_ConfigChannel (TIM_HandleTypeDef * htim, const TIM_IC_InitTypeDef * sConfig, uint32_t Channel)

Function description

Initializes the TIM Input Capture Channels according to the specified parameters in the TIM_IC_InitTypeDef.

Parameters

- **htim:** TIM IC handle
- **sConfig:** TIM Input Capture configuration structure
- **Channel:** TIM Channel to configure This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIM_OnePulse_ConfigChannel

Function name

HAL_StatusTypeDef HAL_TIM_OnePulse_ConfigChannel (TIM_HandleTypeDef * htim, TIM_OnePulse_InitTypeDef * sConfig, uint32_t OutputChannel, uint32_t InputChannel)

Function description

Initializes the TIM One Pulse Channels according to the specified parameters in the TIM_OnePulse_InitTypeDef.

Parameters

- **htim:** TIM One Pulse handle
- **sConfig:** TIM One Pulse configuration structure
- **OutputChannel:** TIM output channel to configure This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
- **InputChannel:** TIM input Channel to configure This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected

Return values

- **HAL:** status

Notes

- To output a waveform with a minimum delay user can enable the fast mode by calling the __HAL_TIM_ENABLE_OCxFAST macro. Then CCx output is forced in response to the edge detection on TIx input, without taking in account the comparison.

HAL_TIM_ConfigOCrefClear

Function name

HAL_StatusTypeDef HAL_TIM_ConfigOCrefClear (TIM_HandleTypeDef * htim, const TIM_ClearInputConfigTypeDef * sClearInputConfig, uint32_t Channel)

Function description

Configures the OCRef clear feature.

Parameters

- **htim:** TIM handle
- **sClearInputConfig:** pointer to a TIM_ClearInputConfigTypeDef structure that contains the OCREF clear feature and parameters for the TIM peripheral.
- **Channel:** specifies the TIM Channel This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1
  - TIM_CHANNEL_2: TIM Channel 2
  - TIM_CHANNEL_3: TIM Channel 3
  - TIM_CHANNEL_4: TIM Channel 4
  - TIM_CHANNEL_5: TIM Channel 5
  - TIM_CHANNEL_6: TIM Channel 6

Return values

- **HAL:** status

HAL_TIM_ConfigClockSource

Function name

HAL_StatusTypeDef HAL_TIM_ConfigClockSource (TIM_HandleTypeDef * htim, const TIM_ClockConfigTypeDef * sClockSourceConfig)

Function description

Configures the clock source to be used.

Parameters

- **htim:** TIM handle
- **sClockSourceConfig:** pointer to a TIM_ClockConfigTypeDef structure that contains the clock source information for the TIM peripheral.

Return values

- **HAL:** status

HAL_TIM_ConfigTI1Input

Function name

HAL_StatusTypeDef HAL_TIM_ConfigTI1Input (TIM_HandleTypeDef * htim, uint32_t TI1_Selection)

Function description

Selects the signal connected to the TI1 input: direct from CH1_input or a XOR combination between CH1_input, CH2_input & CH3_input.

Parameters

- **htim:** TIM handle.
- **TI1_Selection:** Indicate whether or not channel 1 is connected to the output of a XOR gate. This parameter can be one of the following values:
  - TIM_TI1SELECTION_CH1: The TIMx_CH1 pin is connected to TI1 input
  - TIM_TI1SELECTION_XORCOMBINATION: The TIMx_CH1, CH2 and CH3 pins are connected to the TI1 input (XOR combination)

Return values

- **HAL:** status

HAL_TIM_SlaveConfigSynchro

Function name

HAL_StatusTypeDef HAL_TIM_SlaveConfigSynchro (TIM_HandleTypeDef * htim, const TIM_SlaveConfigTypeDef * sSlaveConfig)

Function description

Configures the TIM in Slave mode.

Parameters

- **htim:** TIM handle.
- **sSlaveConfig:** pointer to a TIM_SlaveConfigTypeDef structure that contains the selected trigger (internal trigger input, filtered timer input or external trigger input) and the Slave mode (Disable, Reset, Gated, Trigger, External clock mode 1, Reset + Trigger, Gated + Reset).

Return values

- **HAL:** status

HAL_TIM_SlaveConfigSynchro_IT

Function name

HAL_StatusTypeDef HAL_TIM_SlaveConfigSynchro_IT (TIM_HandleTypeDef * htim, const TIM_SlaveConfigTypeDef * sSlaveConfig)

Function description

Configures the TIM in Slave mode in interrupt mode.

Parameters

- **htim:** TIM handle.
- **sSlaveConfig:** pointer to a TIM_SlaveConfigTypeDef structure that contains the selected trigger (internal trigger input, filtered timer input or external trigger input) and the Slave mode (Disable, Reset, Gated, Trigger, External clock mode 1, Reset + Trigger, Gated + Reset).

Return values

- **HAL:** status

HAL_TIM_DMABurst_WriteStart

Function name

HAL_StatusTypeDef HAL_TIM_DMABurst_WriteStart (TIM_HandleTypeDef * htim, uint32_t BurstBaseAddress, uint32_t BurstRequestSrc, const uint32_t * BurstBuffer, uint32_t BurstLength)

Function description

Configure the DMA Burst to transfer Data from the memory to the TIM peripheral.

Parameters

- **htim:** TIM handle
- **BurstBaseAddress:** TIM Base address from where the DMA will start the Data write This parameter can be one of the following values:
  - TIM_DMABASE_CR1
  - TIM_DMABASE_CR2
  - TIM_DMABASE_SMCR
  - TIM_DMABASE_DIER
  - TIM_DMABASE_SR
  - TIM_DMABASE_EGR
  - TIM_DMABASE_CCMR1
  - TIM_DMABASE_CCMR2
  - TIM_DMABASE_CCER
  - TIM_DMABASE_CNT
  - TIM_DMABASE_PSC
  - TIM_DMABASE_ARR
  - TIM_DMABASE_RCR

  - TIM_DMABASE_ECR
  - TIM_DMABASE_TISEL
  - TIM_DMABASE_AF1
  - TIM_DMABASE_AF2
  - TIM_DMABASE_OR1
- **BurstRequestSrc:** TIM DMA Request sources This parameter can be one of the following values:
  - TIM_DMA_UPDATE: TIM update Interrupt source
  - TIM_DMA_CC1: TIM Capture Compare 1 DMA source
  - TIM_DMA_CC2: TIM Capture Compare 2 DMA source
  - TIM_DMA_CC3: TIM Capture Compare 3 DMA source
  - TIM_DMA_CC4: TIM Capture Compare 4 DMA source
  - TIM_DMA_COM: TIM Commutation DMA source
  - TIM_DMA_TRIGGER: TIM Trigger DMA source
- **BurstBuffer:** The Buffer address.
- **BurstLength:** DMA Burst length. This parameter can be one value between: TIM_DMABURSTLENGTH_1TRANSFER and TIM_DMABURSTLENGTH_27TRANSFERS.

Return values

- **HAL:** status

Notes

- This function should be used only when BurstLength is equal to DMA data transfer length.

HAL_TIM_DMABurst_MultiWriteStart

Function name

HAL_StatusTypeDef HAL_TIM_DMABurst_MultiWriteStart (TIM_HandleTypeDef * htim, uint32_t BurstBaseAddress, uint32_t BurstRequestSrc, const uint32_t * BurstBuffer, uint32_t BurstLength, uint32_t DataLength)

Function description

Configure the DMA Burst to transfer multiple Data from the memory to the TIM peripheral.

Parameters

- **htim:** TIM handle
- **BurstBaseAddress:** TIM Base address from where the DMA will start the Data write This parameter can be one of the following values:
  - TIM_DMABASE_CR1
  - TIM_DMABASE_CR2
  - TIM_DMABASE_SMCR
  - TIM_DMABASE_DIER
  - TIM_DMABASE_SR
  - TIM_DMABASE_EGR
  - TIM_DMABASE_CCMR1
  - TIM_DMABASE_CCMR2
  - TIM_DMABASE_CCER
  - TIM_DMABASE_CNT
  - TIM_DMABASE_PSC
  - TIM_DMABASE_ARR
  - TIM_DMABASE_RCR

  - TIM_DMABASE_CCR2
  - TIM_DMABASE_CCR3
  - TIM_DMABASE_CCR4
  - TIM_DMABASE_BDTR
  - TIM_DMABASE_CCMR3
  - TIM_DMABASE_CCR5
  - TIM_DMABASE_CCR6
  - TIM_DMABASE_DTR2
  - TIM_DMABASE_ECR
  - TIM_DMABASE_TISEL
  - TIM_DMABASE_AF1
  - TIM_DMABASE_AF2
  - TIM_DMABASE_OR1
- **BurstRequestSrc:** TIM DMA Request sources This parameter can be one of the following values:
  - TIM_DMA_UPDATE: TIM update Interrupt source
  - TIM_DMA_CC1: TIM Capture Compare 1 DMA source
  - TIM_DMA_CC2: TIM Capture Compare 2 DMA source
  - TIM_DMA_CC3: TIM Capture Compare 3 DMA source
  - TIM_DMA_CC4: TIM Capture Compare 4 DMA source
  - TIM_DMA_COM: TIM Commutation DMA source
  - TIM_DMA_TRIGGER: TIM Trigger DMA source
- **BurstBuffer:** The Buffer address.
- **BurstLength:** DMA Burst length. This parameter can be one value between: TIM_DMABURSTLENGTH_1TRANSFER and TIM_DMABURSTLENGTH_27TRANSFERS.
- **DataLength:** Data length. This parameter can be one value between 1 and 0xFFFF.

Return values

- **HAL:** status

HAL_TIM_DMABurst_WriteStop

Function name

HAL_StatusTypeDef HAL_TIM_DMABurst_WriteStop (TIM_HandleTypeDef * htim, uint32_t BurstRequestSrc)

Function description

Stops the TIM DMA Burst mode.

Parameters

- **htim:** TIM handle
- **BurstRequestSrc:** TIM DMA Request sources to disable

Return values

- **HAL:** status

HAL_TIM_DMABurst_ReadStart

Function name

HAL_StatusTypeDef HAL_TIM_DMABurst_ReadStart (TIM_HandleTypeDef * htim, uint32_t BurstBaseAddress, uint32_t BurstRequestSrc, uint32_t * BurstBuffer, uint32_t BurstLength)

Function description

Configure the DMA Burst to transfer Data from the TIM peripheral to the memory.

Parameters

- **htim:** TIM handle
- **BurstBaseAddress:** TIM Base address from where the DMA will start the Data read This parameter can be one of the following values:
  - TIM_DMABASE_CR1
  - TIM_DMABASE_CR2
  - TIM_DMABASE_SMCR
  - TIM_DMABASE_DIER
  - TIM_DMABASE_SR
  - TIM_DMABASE_EGR
  - TIM_DMABASE_CCMR1
  - TIM_DMABASE_CCMR2
  - TIM_DMABASE_CCER
  - TIM_DMABASE_CNT
  - TIM_DMABASE_PSC
  - TIM_DMABASE_ARR
  - TIM_DMABASE_RCR

  - TIM_DMABASE_CCR2
  - TIM_DMABASE_CCR3
  - TIM_DMABASE_CCR4
  - TIM_DMABASE_BDTR
  - TIM_DMABASE_CCMR3
  - TIM_DMABASE_CCR5
  - TIM_DMABASE_CCR6
  - TIM_DMABASE_DTR2
  - TIM_DMABASE_ECR
  - TIM_DMABASE_TISEL
  - TIM_DMABASE_AF1
  - TIM_DMABASE_AF2
  - TIM_DMABASE_OR1
- **BurstRequestSrc:** TIM DMA Request sources This parameter can be one of the following values:
  - TIM_DMA_UPDATE: TIM update Interrupt source
  - TIM_DMA_CC1: TIM Capture Compare 1 DMA source
  - TIM_DMA_CC2: TIM Capture Compare 2 DMA source
  - TIM_DMA_CC3: TIM Capture Compare 3 DMA source
  - TIM_DMA_CC4: TIM Capture Compare 4 DMA source
  - TIM_DMA_COM: TIM Commutation DMA source
  - TIM_DMA_TRIGGER: TIM Trigger DMA source
- **BurstBuffer:** The Buffer address.
- **BurstLength:** DMA Burst length. This parameter can be one value between: TIM_DMABURSTLENGTH_1TRANSFER and TIM_DMABURSTLENGTH_27TRANSFERS.

Return values

- **HAL:** status

Notes

- This function should be used only when BurstLength is equal to DMA data transfer length.

HAL_TIM_DMABurst_MultiReadStart

Function name

HAL_StatusTypeDef HAL_TIM_DMABurst_MultiReadStart (TIM_HandleTypeDef * htim, uint32_t BurstBaseAddress, uint32_t BurstRequestSrc, uint32_t * BurstBuffer, uint32_t BurstLength, uint32_t DataLength)

Function description

Configure the DMA Burst to transfer Data from the TIM peripheral to the memory.

Parameters

- **htim:** TIM handle
- **BurstBaseAddress:** TIM Base address from where the DMA will start the Data read This parameter can be one of the following values:
  - TIM_DMABASE_CR1
  - TIM_DMABASE_CR2
  - TIM_DMABASE_SMCR
  - TIM_DMABASE_DIER
  - TIM_DMABASE_SR
  - TIM_DMABASE_EGR
  - TIM_DMABASE_CCMR1
  - TIM_DMABASE_CCMR2
  - TIM_DMABASE_CCER
  - TIM_DMABASE_CNT
  - TIM_DMABASE_PSC
  - TIM_DMABASE_ARR
  - TIM_DMABASE_RCR
  - TIM_DMABASE_CCR1
  - TIM_DMABASE_CCR2
  - TIM_DMABASE_CCR3
  - TIM_DMABASE_CCR4
  - TIM_DMABASE_BDTR
  - TIM_DMABASE_CCMR3
  - TIM_DMABASE_CCR5
  - TIM_DMABASE_CCR6
  - TIM_DMABASE_DTR2
  - TIM_DMABASE_ECR
  - TIM_DMABASE_TISEL
  - TIM_DMABASE_AF1
  - TIM_DMABASE_AF2
  - TIM_DMABASE_OR1
- **BurstRequestSrc:** TIM DMA Request sources This parameter can be one of the following values:
  - TIM_DMA_UPDATE: TIM update Interrupt source
  - TIM_DMA_CC1: TIM Capture Compare 1 DMA source
  - TIM_DMA_CC2: TIM Capture Compare 2 DMA source
  - TIM_DMA_CC3: TIM Capture Compare 3 DMA source
  - TIM_DMA_CC4: TIM Capture Compare 4 DMA source
  - TIM_DMA_COM: TIM Commutation DMA source
  - TIM_DMA_TRIGGER: TIM Trigger DMA source
- **BurstBuffer:** The Buffer address.
- **BurstLength:** DMA Burst length. This parameter can be one value between: TIM_DMABURSTLENGTH_1TRANSFER and TIM_DMABURSTLENGTH_27TRANSFERS.
- **DataLength:** Data length. This parameter can be one value between 1 and 0xFFFF.

Return values

- **HAL:** status

HAL_TIM_DMABurst_ReadStop

Function name

HAL_StatusTypeDef HAL_TIM_DMABurst_ReadStop (TIM_HandleTypeDef * htim, uint32_t BurstRequestSrc)

Function description

Stop the DMA burst reading.

Parameters

- **htim:** TIM handle
- **BurstRequestSrc:** TIM DMA Request sources to disable.

Return values

- **HAL:** status

HAL_TIM_GenerateEvent

Function name

HAL_StatusTypeDef HAL_TIM_GenerateEvent (TIM_HandleTypeDef * htim, uint32_t EventSource)

Function description

Generate a software event.

Parameters

- **htim:** TIM handle
- **EventSource:** specifies the event source. This parameter can be one of the following values:
  - TIM_EVENTSOURCE_UPDATE: Timer update Event source
  - TIM_EVENTSOURCE_CC1: Timer Capture Compare 1 Event source
  - TIM_EVENTSOURCE_CC2: Timer Capture Compare 2 Event source
  - TIM_EVENTSOURCE_CC3: Timer Capture Compare 3 Event source
  - TIM_EVENTSOURCE_CC4: Timer Capture Compare 4 Event source
  - TIM_EVENTSOURCE_COM: Timer COM event source
  - TIM_EVENTSOURCE_TRIGGER: Timer Trigger Event source
  - TIM_EVENTSOURCE_BREAK: Timer Break event source
  - TIM_EVENTSOURCE_BREAK2: Timer Break2 event source

Return values

- **HAL:** status

Notes

- Basic timers can only generate an update event.
- TIM_EVENTSOURCE_COM is relevant only with advanced timer instances.
- TIM_EVENTSOURCE_BREAK and TIM_EVENTSOURCE_BREAK2 are relevant only for timer instances supporting break input(s).

HAL_TIM_ReadCapturedValue

Function name

uint32_t HAL_TIM_ReadCapturedValue (const TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Read the captured value from Capture Compare unit.

Parameters

- **htim:** TIM handle.
- **Channel:** TIM Channels to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **Captured:** value

HAL_TIM_PeriodElapsedCallback

Function name

void HAL_TIM_PeriodElapsedCallback (TIM_HandleTypeDef * htim)

Function description

Period elapsed callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIM_PeriodElapsedHalfCpltCallback

Function name

void HAL_TIM_PeriodElapsedHalfCpltCallback (TIM_HandleTypeDef * htim)

Function description

Period elapsed half complete callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIM_OC_DelayElapsedCallback

Function name

void HAL_TIM_OC_DelayElapsedCallback (TIM_HandleTypeDef * htim)

Function description

Output Compare callback in non-blocking mode.

Parameters

- **htim:** TIM OC handle

Return values

- **None:**

HAL_TIM_IC_CaptureCallback

Function name

void HAL_TIM_IC_CaptureCallback (TIM_HandleTypeDef * htim)

Function description

Input Capture callback in non-blocking mode.

Parameters

- **htim:** TIM IC handle

Return values

- **None:**

HAL_TIM_IC_CaptureHalfCpltCallback

Function name

void HAL_TIM_IC_CaptureHalfCpltCallback (TIM_HandleTypeDef * htim)

Function description

Input Capture half complete callback in non-blocking mode.

Parameters

- **htim:** TIM IC handle

Return values

- **None:**

HAL_TIM_PWM_PulseFinishedCallback

Function name

void HAL_TIM_PWM_PulseFinishedCallback (TIM_HandleTypeDef * htim)

Function description

PWM Pulse finished callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIM_PWM_PulseFinishedHalfCpltCallback

Function name

void HAL_TIM_PWM_PulseFinishedHalfCpltCallback (TIM_HandleTypeDef * htim)

Function description

PWM Pulse finished half complete callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIM_TriggerCallback

Function name

void HAL_TIM_TriggerCallback (TIM_HandleTypeDef * htim)

Function description

Hall Trigger detection callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIM_TriggerHalfCpltCallback

Function name

void HAL_TIM_TriggerHalfCpltCallback (TIM_HandleTypeDef * htim)

Function description

Hall Trigger detection half complete callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIM_ErrorCallback

Function name

void HAL_TIM_ErrorCallback (TIM_HandleTypeDef * htim)

Function description

Timer error callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIM_RegisterCallback

Function name

HAL_StatusTypeDef HAL_TIM_RegisterCallback (TIM_HandleTypeDef * htim, HAL_TIM_CallbackIDTypeDef CallbackID, pTIM_CallbackTypeDef pCallback)

Function description

Register a User TIM callback to be used instead of the weak predefined callback.

Parameters

- **htim:** tim handle
- **CallbackID:** ID of the callback to be registered This parameter can be one of the following values:
  - HAL_TIM_BASE_MSPINIT_CB_ID Base MspInit Callback ID
  - HAL_TIM_BASE_MSPDEINIT_CB_ID Base MspDeInit Callback ID
  - HAL_TIM_IC_MSPINIT_CB_ID IC MspInit Callback ID
  - HAL_TIM_IC_MSPDEINIT_CB_ID IC MspDeInit Callback ID
  - HAL_TIM_OC_MSPINIT_CB_ID OC MspInit Callback ID
  - HAL_TIM_OC_MSPDEINIT_CB_ID OC MspDeInit Callback ID
  - HAL_TIM_PWM_MSPINIT_CB_ID PWM MspInit Callback ID
  - HAL_TIM_PWM_MSPDEINIT_CB_ID PWM MspDeInit Callback ID
  - HAL_TIM_ONE_PULSE_MSPINIT_CB_ID One Pulse MspInit Callback ID
  - HAL_TIM_ONE_PULSE_MSPDEINIT_CB_ID One Pulse MspDeInit Callback ID
  - HAL_TIM_ENCODER_MSPINIT_CB_ID Encoder MspInit Callback ID
  - HAL_TIM_ENCODER_MSPDEINIT_CB_ID Encoder MspDeInit Callback ID
  - HAL_TIM_HALL_SENSOR_MSPINIT_CB_ID Hall Sensor MspInit Callback ID
  - HAL_TIM_HALL_SENSOR_MSPDEINIT_CB_ID Hall Sensor MspDeInit Callback ID
  - HAL_TIM_PERIOD_ELAPSED_CB_ID Period Elapsed Callback ID
  - HAL_TIM_PERIOD_ELAPSED_HALF_CB_ID Period Elapsed half complete Callback ID
  - HAL_TIM_TRIGGER_CB_ID Trigger Callback ID
  - HAL_TIM_TRIGGER_HALF_CB_ID Trigger half complete Callback ID
  - HAL_TIM_IC_CAPTURE_CB_ID Input Capture Callback ID
  - HAL_TIM_IC_CAPTURE_HALF_CB_ID Input Capture half complete Callback ID
  - HAL_TIM_OC_DELAY_ELAPSED_CB_ID Output Compare Delay Elapsed Callback ID
  - HAL_TIM_PWM_PULSE_FINISHED_CB_ID PWM Pulse Finished Callback ID
  - HAL_TIM_PWM_PULSE_FINISHED_HALF_CB_ID PWM Pulse Finished half complete Callback ID
  - HAL_TIM_ERROR_CB_ID Error Callback ID
  - HAL_TIM_COMMUTATION_CB_ID Commutation Callback ID
  - HAL_TIM_COMMUTATION_HALF_CB_ID Commutation half complete Callback ID
  - HAL_TIM_BREAK_CB_ID Break Callback ID
  - HAL_TIM_BREAK2_CB_ID Break2 Callback ID
  - HAL_TIM_ENCODER_INDEX_CB_ID Encoder Index Callback ID
  - HAL_TIM_DIRECTION_CHANGE_CB_ID Direction Change Callback ID
  - HAL_TIM_INDEX_ERROR_CB_ID Index Error Callback ID
  - HAL_TIM_TRANSITION_ERROR_CB_ID Transition Error Callback ID
- **pCallback:** pointer to the callback function

Return values

- **status:**

HAL_TIM_UnRegisterCallback

Function name

HAL_StatusTypeDef HAL_TIM_UnRegisterCallback (TIM_HandleTypeDef * htim, HAL_TIM_CallbackIDTypeDef CallbackID)

Function description

Unregister a TIM callback TIM callback is redirected to the weak predefined callback.

Parameters

- **htim:** tim handle
- **CallbackID:** ID of the callback to be unregistered This parameter can be one of the following values:
  - HAL_TIM_BASE_MSPINIT_CB_ID Base MspInit Callback ID
  - HAL_TIM_BASE_MSPDEINIT_CB_ID Base MspDeInit Callback ID
  - HAL_TIM_IC_MSPINIT_CB_ID IC MspInit Callback ID
  - HAL_TIM_IC_MSPDEINIT_CB_ID IC MspDeInit Callback ID
  - HAL_TIM_OC_MSPINIT_CB_ID OC MspInit Callback ID
  - HAL_TIM_OC_MSPDEINIT_CB_ID OC MspDeInit Callback ID
  - HAL_TIM_PWM_MSPINIT_CB_ID PWM MspInit Callback ID
  - HAL_TIM_PWM_MSPDEINIT_CB_ID PWM MspDeInit Callback ID
  - HAL_TIM_ONE_PULSE_MSPINIT_CB_ID One Pulse MspInit Callback ID
  - HAL_TIM_ONE_PULSE_MSPDEINIT_CB_ID One Pulse MspDeInit Callback ID
  - HAL_TIM_ENCODER_MSPINIT_CB_ID Encoder MspInit Callback ID
  - HAL_TIM_ENCODER_MSPDEINIT_CB_ID Encoder MspDeInit Callback ID
  - HAL_TIM_HALL_SENSOR_MSPINIT_CB_ID Hall Sensor MspInit Callback ID
  - HAL_TIM_HALL_SENSOR_MSPDEINIT_CB_ID Hall Sensor MspDeInit Callback ID
  - HAL_TIM_PERIOD_ELAPSED_CB_ID Period Elapsed Callback ID
  - HAL_TIM_PERIOD_ELAPSED_HALF_CB_ID Period Elapsed half complete Callback ID
  - HAL_TIM_TRIGGER_CB_ID Trigger Callback ID
  - HAL_TIM_TRIGGER_HALF_CB_ID Trigger half complete Callback ID
  - HAL_TIM_IC_CAPTURE_CB_ID Input Capture Callback ID
  - HAL_TIM_IC_CAPTURE_HALF_CB_ID Input Capture half complete Callback ID
  - HAL_TIM_OC_DELAY_ELAPSED_CB_ID Output Compare Delay Elapsed Callback ID
  - HAL_TIM_PWM_PULSE_FINISHED_CB_ID PWM Pulse Finished Callback ID
  - HAL_TIM_PWM_PULSE_FINISHED_HALF_CB_ID PWM Pulse Finished half complete Callback ID
  - HAL_TIM_ERROR_CB_ID Error Callback ID
  - HAL_TIM_COMMUTATION_CB_ID Commutation Callback ID
  - HAL_TIM_COMMUTATION_HALF_CB_ID Commutation half complete Callback ID
  - HAL_TIM_BREAK_CB_ID Break Callback ID
  - HAL_TIM_BREAK2_CB_ID Break2 Callback ID
  - HAL_TIM_ENCODER_INDEX_CB_ID Encoder Index Callback ID
  - HAL_TIM_DIRECTION_CHANGE_CB_ID Direction Change Callback ID
  - HAL_TIM_INDEX_ERROR_CB_ID Index Error Callback ID
  - HAL_TIM_TRANSITION_ERROR_CB_ID Transition Error Callback ID

Return values

- **status:**

HAL_TIM_Base_GetState

Function name

HAL_TIM_StateTypeDef HAL_TIM_Base_GetState (const TIM_HandleTypeDef * htim)

Function description

Return the TIM Base handle state.

Parameters

- **htim:** TIM Base handle

Return values

- **HAL:** state

HAL_TIM_OC_GetState

Function name

HAL_TIM_StateTypeDef HAL_TIM_OC_GetState (const TIM_HandleTypeDef * htim)

Function description

Return the TIM OC handle state.

Parameters

- **htim:** TIM Output Compare handle

Return values

- **HAL:** state

HAL_TIM_PWM_GetState

Function name

HAL_TIM_StateTypeDef HAL_TIM_PWM_GetState (const TIM_HandleTypeDef * htim)

Function description

Return the TIM PWM handle state.

Parameters

- **htim:** TIM handle

Return values

- **HAL:** state

HAL_TIM_IC_GetState

Function name

HAL_TIM_StateTypeDef HAL_TIM_IC_GetState (const TIM_HandleTypeDef * htim)

Function description

Return the TIM Input Capture handle state.

Parameters

- **htim:** TIM IC handle

Return values

- **HAL:** state

HAL_TIM_OnePulse_GetState

Function name

HAL_TIM_StateTypeDef HAL_TIM_OnePulse_GetState (const TIM_HandleTypeDef * htim)

Function description

Return the TIM One Pulse Mode handle state.

Parameters

- **htim:** TIM OPM handle

Return values

- **HAL:** state

HAL_TIM_Encoder_GetState

Function name

HAL_TIM_StateTypeDef HAL_TIM_Encoder_GetState (const TIM_HandleTypeDef * htim)

Function description

Return the TIM Encoder Mode handle state.

Parameters

- **htim:** TIM Encoder Interface handle

Return values

- **HAL:** state

HAL_TIM_GetActiveChannel

Function name

HAL_TIM_ActiveChannel HAL_TIM_GetActiveChannel (const TIM_HandleTypeDef * htim)

Function description

Return the TIM Encoder Mode handle state.

Parameters

- **htim:** TIM handle

Return values

- **Active:** channel

HAL_TIM_GetChannelState

Function name

HAL_TIM_ChannelStateTypeDef HAL_TIM_GetChannelState (const TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Return actual state of the TIM channel.

Parameters

- **htim:** TIM handle
- **Channel:** TIM Channel This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1
  - TIM_CHANNEL_2: TIM Channel 2
  - TIM_CHANNEL_3: TIM Channel 3
  - TIM_CHANNEL_4: TIM Channel 4
  - TIM_CHANNEL_5: TIM Channel 5
  - TIM_CHANNEL_6: TIM Channel 6

Return values

- **TIM:** Channel state

HAL_TIM_DMABurstState

Function name

HAL_TIM_DMABurstStateTypeDef HAL_TIM_DMABurstState (const TIM_HandleTypeDef * htim)

Function description

Return actual state of a DMA burst operation.

Parameters

- **htim:** TIM handle

Return values

- **DMA:** burst state

TIM_Base_SetConfig

Function name

void TIM_Base_SetConfig (TIM_TypeDef * TIMx, const TIM_Base_InitTypeDef * Structure)

Function description

Time Base configuration.

Parameters

- **TIMx:** TIM peripheral
- **Structure:** TIM Base configuration structure

Return values

- **None:**

TIM_TI1_SetConfig

Function name

void TIM_TI1_SetConfig (TIM_TypeDef * TIMx, uint32_t TIM_ICPolarity, uint32_t TIM_ICSelection, uint32_t TIM_ICFilter)

Function description

Configure the TI1 as Input.

Parameters

- **TIMx:** to select the TIM peripheral.
- **TIM_ICPolarity:** The Input Polarity. This parameter can be one of the following values:
  - TIM_ICPOLARITY_RISING
  - TIM_ICPOLARITY_FALLING
  - TIM_ICPOLARITY_BOTHEDGE
- **TIM_ICSelection:** specifies the input to be used. This parameter can be one of the following values:
  - TIM_ICSELECTION_DIRECTTI: TIM Input 1 is selected to be connected to IC1.
  - TIM_ICSELECTION_INDIRECTTI: TIM Input 1 is selected to be connected to IC2.
  - TIM_ICSELECTION_TRC: TIM Input 1 is selected to be connected to TRC.
- **TIM_ICFilter:** Specifies the Input Capture Filter. This parameter must be a value between 0x00 and 0x0F.

Return values

- **None:**

Notes

- TIM_ICFilter and TIM_ICPolarity are not used in INDIRECT mode as TI2FP1 (on channel2 path) is used as the input signal. Therefore CCMR1 must be protected against un-initialized filter and polarity values.

TIM_OC2_SetConfig

Function name

void TIM_OC2_SetConfig (TIM_TypeDef * TIMx, const TIM_OC_InitTypeDef * OC_Config)

Function description

Timer Output Compare 2 configuration.

Parameters

- **TIMx:** to select the TIM peripheral
- **OC_Config:** The output configuration structure

Return values

- **None:**

TIM_ETR_SetConfig

Function name

void TIM_ETR_SetConfig (TIM_TypeDef * TIMx, uint32_t TIM_ExtTRGPrescaler, uint32_t TIM_ExtTRGPolarity, uint32_t ExtTRGFilter)

Function description

Configures the TIMx External Trigger (ETR).

Parameters

- **TIMx:** to select the TIM peripheral
- **TIM_ExtTRGPrescaler:** The external Trigger Prescaler. This parameter can be one of the following values:
  - TIM_ETRPRESCALER_DIV1: ETRP Prescaler OFF.
  - TIM_ETRPRESCALER_DIV2: ETRP frequency divided by 2.
  - TIM_ETRPRESCALER_DIV4: ETRP frequency divided by 4.
  - TIM_ETRPRESCALER_DIV8: ETRP frequency divided by 8.
- **TIM_ExtTRGPolarity:** The external Trigger Polarity. This parameter can be one of the following values:
  - TIM_ETRPOLARITY_INVERTED: active low or falling edge active.
  - TIM_ETRPOLARITY_NONINVERTED: active high or rising edge active.
- **ExtTRGFilter:** External Trigger Filter. This parameter must be a value between 0x00 and 0x0F

Return values

- **None:**

TIM_DMADelayPulseHalfCplt

Function name

void TIM_DMADelayPulseHalfCplt (DMA_HandleTypeDef * hdma)

Function description

TIM DMA Delay Pulse half complete callback.

Parameters

- **hdma:** pointer to DMA handle.

Return values

- **None:**

TIM_DMAError

Function name

void TIM_DMAError (DMA_HandleTypeDef * hdma)

Function description

TIM DMA error callback.

Parameters

- **hdma:** pointer to DMA handle.

Return values

- **None:**

TIM_DMACaptureCplt

Function name

void TIM_DMACaptureCplt (DMA_HandleTypeDef * hdma)

Function description

TIM DMA Capture complete callback.

Parameters

- **hdma:** pointer to DMA handle.

Return values

- **None:**

TIM_DMACaptureHalfCplt

Function name

void TIM_DMACaptureHalfCplt (DMA_HandleTypeDef * hdma)

Function description

TIM DMA Capture half complete callback.

Parameters

- **hdma:** pointer to DMA handle.

Return values

- **None:**

TIM_CCxChannelCmd

Function name

void TIM_CCxChannelCmd (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t ChannelState)

Function description

Enables or disables the TIM Capture Compare Channel x.

Parameters

- **TIMx:** to select the TIM peripheral
- **Channel:** specifies the TIM Channel This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1
  - TIM_CHANNEL_2: TIM Channel 2
  - TIM_CHANNEL_3: TIM Channel 3
  - TIM_CHANNEL_4: TIM Channel 4
  - TIM_CHANNEL_5: TIM Channel 5 selected
  - TIM_CHANNEL_6: TIM Channel 6 selected
- **ChannelState:** specifies the TIM Channel CCxE bit new state. This parameter can be: TIM_CCx_ENABLE or TIM_CCx_DISABLE.

Return values

- **None:**

TIM_DMA_Start_IT

Function name

HAL_StatusTypeDef TIM_DMA_Start_IT (DMA_HandleTypeDef * hdma, uint32_t src, uint32_t dst, uint32_t length)

Function description

Start the DMA data transfer.

Parameters

- **hdma:** DMA handle
- **src:** : The source memory Buffer address.
- **dst:** : The destination memory Buffer address.
- **length:** : The size of a source block transfer in byte.

Return values

- **HAL:** status

TIM_ResetCallback

Function name

void TIM_ResetCallback (TIM_HandleTypeDef * htim)

Function description

Reset interrupt callbacks to the legacy weak callbacks.

Parameters

- **htim:** pointer to a TIM_HandleTypeDef structure that contains the configuration information for TIM module.

Return values

- **None:**

65.3 TIM Firmware driver defines

The following section lists the various define and macros of the module.

65.3.1 TIM

TIM

TIM Automatic Output Enable

TIM_AUTOMATICOUTPUT_DISABLE

MOE can be set only by software

TIM_AUTOMATICOUTPUT_ENABLE

MOE can be set by software or automatically at the next update event (if none of the break inputs BRK and BRK2 is active)

TIM Auto-Reload Preload

TIM_AUTORELOAD_PRELOAD_DISABLE

TIMx_ARR register is not buffered

TIM_AUTORELOAD_PRELOAD_ENABLE

TIMx_ARR register is buffered

TIM Break2 Input Alternate Function Mode

TIM_BREAK2_AFMODE_INPUT

Break2 input BRK2 in input mode

TIM_BREAK2_AFMODE_BIDIRECTIONAL

Break2 input BRK2 in bidirectional mode

TIM Break input 2 Enable

TIM_BREAK2_DISABLE

Break input BRK2 is disabled

TIM_BREAK2_ENABLE

Break input BRK2 is enabled

TIM Break Input 2 Polarity

TIM_BREAK2POLARITY_LOW

Break input BRK2 is active low

TIM_BREAK2POLARITY_HIGH

Break input BRK2 is active high

TIM Break Input Alternate Function Mode

TIM_BREAK_AFMODE_INPUT

Break input BRK in input mode

TIM_BREAK_AFMODE_BIDIRECTIONAL

Break input BRK in bidirectional mode

TIM Break Input Enable

TIM_BREAK_ENABLE

Break input BRK is enabled

TIM_BREAK_DISABLE

Break input BRK is disabled

TIM Break Input Polarity

TIM_BREAKPOLARITY_LOW

Break input BRK is active low

TIM_BREAKPOLARITY_HIGH

Break input BRK is active high

TIM Break System

TIM_BREAK_SYSTEM_ECC

Enables and locks the ECC error signal with Break Input of TIM1/8/15/16/17/20

TIM_BREAK_SYSTEM_PVD

Enables and locks the PVD connection with TIM1/8/15/16/17/20 Break Input and also the PVDE and PLS bits of the Power Control Interface

TIM_BREAK_SYSTEM_SRAM_PARITY_ERROR

Enables and locks the SRAM_PARITY error signal with Break Input of TIM1/8/15/16/17/20

TIM_BREAK_SYSTEM_LOCKUP

Enables and locks the LOCKUP output of CortexM4 with Break Input of TIM1/8/15/16/17/20

CCx DMA request selection

TIM_CCDMAREQUEST_CC

CCx DMA request sent when capture or compare match event occurs

TIM_CCDMAREQUEST_UPDATE

CCx DMA requests sent when update event occurs

TIM Channel

TIM_CHANNEL_1

Capture/compare channel 1 identifier

TIM_CHANNEL_2

Capture/compare channel 2 identifier

TIM_CHANNEL_3

Capture/compare channel 3 identifier

TIM_CHANNEL_4

Capture/compare channel 4 identifier

TIM_CHANNEL_5

Compare channel 5 identifier

TIM_CHANNEL_6

Compare channel 6 identifier

TIM_CHANNEL_ALL

Global Capture/compare channel identifier

TIM Clear Input Polarity

TIM_CLEARINPUTPOLARITY_INVERTED

Polarity for ETRx pin

TIM_CLEARINPUTPOLARITY_NONINVERTED

Polarity for ETRx pin

TIM Clear Input Prescaler

TIM_CLEARINPUTPRESCALER_DIV1

No prescaler is used

TIM_CLEARINPUTPRESCALER_DIV2

Prescaler for External ETR pin: Capture performed once every 2 events.

TIM_CLEARINPUTPRESCALER_DIV4

Prescaler for External ETR pin: Capture performed once every 4 events.

TIM_CLEARINPUTPRESCALER_DIV8

Prescaler for External ETR pin: Capture performed once every 8 events.

TIM Clear Input Source

TIM_CLEARINPUTSOURCE_NONE

OCREF_CLR is disabled

TIM_CLEARINPUTSOURCE_ETR

OCREF_CLR is connected to ETRF input

TIM_CLEARINPUTSOURCE_COMP1

OCREF_CLR_INT is connected to COMP1 output

TIM_CLEARINPUTSOURCE_COMP2

OCREF_CLR_INT is connected to COMP2 output

TIM Clock Division

TIM_CLOCKDIVISION_DIV1

Clock division: tDTS=tCK_INT

TIM_CLOCKDIVISION_DIV2

Clock division: tDTS=2*tCK_INT

TIM_CLOCKDIVISION_DIV4

Clock division: tDTS=4*tCK_INT

TIM Clock Polarity

TIM_CLOCKPOLARITY_INVERTED

Polarity for ETRx clock sources

TIM_CLOCKPOLARITY_NONINVERTED

Polarity for ETRx clock sources

TIM_CLOCKPOLARITY_RISING

Polarity for TIx clock sources

TIM_CLOCKPOLARITY_FALLING

Polarity for TIx clock sources

TIM_CLOCKPOLARITY_BOTHEDGE

Polarity for TIx clock sources

TIM Clock Prescaler

TIM_CLOCKPRESCALER_DIV1

No prescaler is used

TIM_CLOCKPRESCALER_DIV2

Prescaler for External ETR Clock: Capture performed once every 2 events.

TIM_CLOCKPRESCALER_DIV4

Prescaler for External ETR Clock: Capture performed once every 4 events.

TIM_CLOCKPRESCALER_DIV8

Prescaler for External ETR Clock: Capture performed once every 8 events.

TIM Clock Source

TIM_CLOCKSOURCE_INTERNAL

Internal clock source

TIM_CLOCKSOURCE_ETRMODE1

External clock source mode 1 (ETRF)

TIM_CLOCKSOURCE_ETRMODE2

External clock source mode 2

TIM_CLOCKSOURCE_TI1ED

External clock source mode 1 (TTI1FP1 + edge detect.)

TIM_CLOCKSOURCE_TI1

External clock source mode 1 (TTI1FP1)

TIM_CLOCKSOURCE_TI2

External clock source mode 1 (TTI2FP2)

TIM_CLOCKSOURCE_ITR0

External clock source mode 1 (ITR0)

TIM_CLOCKSOURCE_ITR1

External clock source mode 1 (ITR1)

TIM_CLOCKSOURCE_ITR2

External clock source mode 1 (ITR2)

TIM_CLOCKSOURCE_ITR3

External clock source mode 1 (ITR3)

TIM_CLOCKSOURCE_ITR6

External clock source mode 1 (ITR6)

TIM_CLOCKSOURCE_ITR7

External clock source mode 1 (ITR7)

TIM_CLOCKSOURCE_ITR8

External clock source mode 1 (ITR8)

TIM_CLOCKSOURCE_ITR11

External clock source mode 1 (ITR11)

TIM Commutation Source

TIM_COMMUTATION_TRGI

When Capture/compare control bits are preloaded, they are updated by setting the COMG bit or when an rising edge occurs on trigger input

TIM_COMMUTATION_SOFTWARE

When Capture/compare control bits are preloaded, they are updated by setting the COMG bit

TIM Counter Mode

TIM_COUNTERMODE_UP

Counter used as up-counter

TIM_COUNTERMODE_DOWN

Counter used as down-counter

TIM_COUNTERMODE_CENTERALIGNED1

Center-aligned mode 1

TIM_COUNTERMODE_CENTERALIGNED2

Center-aligned mode 2

TIM_COUNTERMODE_CENTERALIGNED3

Center-aligned mode 3

TIM DMA Base Address

TIM_DMABASE_CR1

TIM_DMABASE_CR2

TIM_DMABASE_SMCR

TIM_DMABASE_DIER

TIM_DMABASE_SR

TIM_DMABASE_EGR

TIM_DMABASE_CCMR1

TIM_DMABASE_CCMR2

TIM_DMABASE_CCER

TIM_DMABASE_CNT

TIM_DMABASE_PSC

TIM_DMABASE_ARR

TIM_DMABASE_RCR

TIM_DMABASE_CCR1

TIM_DMABASE_CCR2

TIM_DMABASE_CCR3

TIM_DMABASE_CCR4

TIM_DMABASE_BDTR

TIM_DMABASE_CCR5

TIM_DMABASE_CCR6

TIM_DMABASE_CCMR3

TIM_DMABASE_DTR2

TIM_DMABASE_ECR

TIM_DMABASE_TISEL

TIM_DMABASE_AF1

TIM_DMABASE_AF2

TIM_DMABASE_OR1

TIM DMA Burst Length

TIM_DMABURSTLENGTH_1TRANSFER

The transfer is done to 1 register starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_2TRANSFERS

The transfer is done to 2 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_3TRANSFERS

The transfer is done to 3 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_4TRANSFERS

The transfer is done to 4 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_5TRANSFERS

The transfer is done to 5 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_6TRANSFERS

The transfer is done to 6 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_7TRANSFERS

The transfer is done to 7 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_8TRANSFERS

The transfer is done to 8 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_9TRANSFERS

The transfer is done to 9 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_10TRANSFERS

The transfer is done to 10 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_11TRANSFERS

The transfer is done to 11 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_12TRANSFERS

The transfer is done to 12 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_13TRANSFERS

The transfer is done to 13 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_14TRANSFERS

The transfer is done to 14 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_15TRANSFERS

The transfer is done to 15 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_16TRANSFERS

The transfer is done to 16 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_17TRANSFERS

The transfer is done to 17 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_18TRANSFERS

The transfer is done to 18 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_19TRANSFERS

The transfer is done to 19 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_20TRANSFERS

The transfer is done to 20 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_21TRANSFERS

The transfer is done to 21 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_22TRANSFERS

The transfer is done to 22 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_23TRANSFERS

The transfer is done to 23 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_24TRANSFERS

The transfer is done to 24 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_25TRANSFERS

The transfer is done to 25 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_26TRANSFERS

The transfer is done to 26 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_27TRANSFERS

The transfer is done to 27 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM DMA Sources

TIM_DMA_UPDATE

DMA request is triggered by the update event

TIM_DMA_CC1

DMA request is triggered by the capture/compare macth 1 event

TIM_DMA_CC2

DMA request is triggered by the capture/compare macth 2 event event

TIM_DMA_CC3

DMA request is triggered by the capture/compare macth 3 event event

TIM_DMA_CC4

DMA request is triggered by the capture/compare macth 4 event event

TIM_DMA_COM

DMA request is triggered by the commutation event

TIM_DMA_TRIGGER

DMA request is triggered by the trigger event

TIM Encoder Input Polarity

TIM_ENCODERINPUTPOLARITY_RISING

Encoder input with rising edge polarity

TIM_ENCODERINPUTPOLARITY_FALLING

Encoder input with falling edge polarity

TIM Encoder Mode

TIM_ENCODERMODE_TI1

Quadrature encoder mode 1, x2 mode, counts up/down on TI1FP1 edge depending on TI2FP2 level

TIM_ENCODERMODE_TI2

Quadrature encoder mode 2, x2 mode, counts up/down on TI2FP2 edge depending on TI1FP1 level.

TIM_ENCODERMODE_TI12

Quadrature encoder mode 3, x4 mode, counts up/down on both TI1FP1 and TI2FP2 edges depending on the level of the other input.

TIM_ENCODERMODE_CLOCKPLUSDIRECTION_X2

Encoder mode: Clock plus direction, x2 mode

TIM_ENCODERMODE_CLOCKPLUSDIRECTION_X1

Encoder mode: Clock plus direction, x1 mode, TI2FP2 edge sensitivity is set by CC2P

TIM_ENCODERMODE_DIRECTIONALCLOCK_X2

Encoder mode: Directional Clock, x2 mode

TIM_ENCODERMODE_DIRECTIONALCLOCK_X1_TI12

Encoder mode: Directional Clock, x1 mode, TI1FP1 and TI2FP2 edge sensitivity is set by CC1P and CC2P

TIM_ENCODERMODE_X1_TI1

Quadrature encoder mode: x1 mode, counting on TI1FP1 edges only, edge sensitivity is set by CC1P

TIM_ENCODERMODE_X1_TI2

Quadrature encoder mode: x1 mode, counting on TI2FP2 edges only, edge sensitivity is set by CC1P

TIM ETR Polarity

TIM_ETRPOLARITY_INVERTED

Polarity for ETR source

TIM_ETRPOLARITY_NONINVERTED

Polarity for ETR source

TIM ETR Prescaler

TIM_ETRPRESCALER_DIV1

No prescaler is used

TIM_ETRPRESCALER_DIV2

ETR input source is divided by 2

TIM_ETRPRESCALER_DIV4

ETR input source is divided by 4

TIM_ETRPRESCALER_DIV8

ETR input source is divided by 8

TIM Event Source

TIM_EVENTSOURCE_UPDATE

Reinitialize the counter and generates an update of the registers

TIM_EVENTSOURCE_CC1

A capture/compare event is generated on channel 1

TIM_EVENTSOURCE_CC2

A capture/compare event is generated on channel 2

TIM_EVENTSOURCE_CC3

A capture/compare event is generated on channel 3

TIM_EVENTSOURCE_CC4

A capture/compare event is generated on channel 4

TIM_EVENTSOURCE_COM

A commutation event is generated

TIM_EVENTSOURCE_TRIGGER

A trigger event is generated

TIM_EVENTSOURCE_BREAK

A break event is generated

TIM_EVENTSOURCE_BREAK2

A break 2 event is generated

TIM Exported Macros

__HAL_TIM_RESET_HANDLE_STATE

Description:

- Reset TIM handle state.

Parameters:

- __HANDLE__: TIM handle.

Return value:

- None

__HAL_TIM_ENABLE

Description:

- Enable the TIM peripheral.

Parameters:

- __HANDLE__: TIM handle

Return value:

- None

__HAL_TIM_MOE_ENABLE

Description:

- Enable the TIM main Output.

Parameters:

- __HANDLE__: TIM handle

Return value:

- None

__HAL_TIM_DISABLE

Description:

- Disable the TIM peripheral.

Parameters:

- __HANDLE__: TIM handle

Return value:

- None

__HAL_TIM_MOE_DISABLE

Description:

- Disable the TIM main Output.

Parameters:

- __HANDLE__: TIM handle

Return value:

- None

Notes:

- The Main Output Enable of a timer instance is disabled only if all the CCx and CCxN channels have been disabled

__HAL_TIM_MOE_DISABLE_UNCONDITIONALLY

Description:

- Disable the TIM main Output.

Parameters:

- __HANDLE__: TIM handle

Return value:

- None

Notes:

- The Main Output Enable of a timer instance is disabled unconditionally

__HAL_TIM_ENABLE_IT

Description:

- Enable the specified TIM interrupt.

Parameters:

- __HANDLE__: specifies the TIM Handle.
- __INTERRUPT__: specifies the TIM interrupt source to enable. This parameter can be one of the following values:
  - TIM_IT_UPDATE: Update interrupt
  - TIM_IT_CC1: Capture/Compare 1 interrupt
  - TIM_IT_CC2: Capture/Compare 2 interrupt
  - TIM_IT_CC3: Capture/Compare 3 interrupt
  - TIM_IT_CC4: Capture/Compare 4 interrupt
  - TIM_IT_COM: Commutation interrupt
  - TIM_IT_TRIGGER: Trigger interrupt
  - TIM_IT_BREAK: Break interrupt
  - TIM_IT_IDX: Index interrupt
  - TIM_IT_DIR: Direction change interrupt
  - TIM_IT_IERR: Index error interrupt
  - TIM_IT_TERR: Transition error interrupt

Return value:

- None

__HAL_TIM_DISABLE_IT

Description:

- Disable the specified TIM interrupt.

Parameters:

- __HANDLE__: specifies the TIM Handle.
- __INTERRUPT__: specifies the TIM interrupt source to disable. This parameter can be one of the following values:
  - TIM_IT_UPDATE: Update interrupt
  - TIM_IT_CC1: Capture/Compare 1 interrupt
  - TIM_IT_CC2: Capture/Compare 2 interrupt
  - TIM_IT_CC3: Capture/Compare 3 interrupt
  - TIM_IT_CC4: Capture/Compare 4 interrupt
  - TIM_IT_COM: Commutation interrupt
  - TIM_IT_TRIGGER: Trigger interrupt
  - TIM_IT_BREAK: Break interrupt
  - TIM_IT_IDX: Index interrupt
  - TIM_IT_DIR: Direction change interrupt
  - TIM_IT_IERR: Index error interrupt
  - TIM_IT_TERR: Transition error interrupt

Return value:

- None

__HAL_TIM_ENABLE_DMA

Description:

- Enable the specified DMA request.

Parameters:

- __HANDLE__: specifies the TIM Handle.
- __DMA__: specifies the TIM DMA request to enable. This parameter can be one of the following values:
  - TIM_DMA_UPDATE: Update DMA request
  - TIM_DMA_CC1: Capture/Compare 1 DMA request
  - TIM_DMA_CC2: Capture/Compare 2 DMA request
  - TIM_DMA_CC3: Capture/Compare 3 DMA request
  - TIM_DMA_CC4: Capture/Compare 4 DMA request
  - TIM_DMA_COM: Commutation DMA request
  - TIM_DMA_TRIGGER: Trigger DMA request

Return value:

- None

__HAL_TIM_DISABLE_DMA

Description:

- Disable the specified DMA request.

Parameters:

- __HANDLE__: specifies the TIM Handle.
- __DMA__: specifies the TIM DMA request to disable. This parameter can be one of the following values:
  - TIM_DMA_UPDATE: Update DMA request
  - TIM_DMA_CC1: Capture/Compare 1 DMA request
  - TIM_DMA_CC2: Capture/Compare 2 DMA request
  - TIM_DMA_CC3: Capture/Compare 3 DMA request
  - TIM_DMA_CC4: Capture/Compare 4 DMA request
  - TIM_DMA_COM: Commutation DMA request
  - TIM_DMA_TRIGGER: Trigger DMA request

Return value:

- None

__HAL_TIM_GET_FLAG

Description:

- Check whether the specified TIM interrupt flag is set or not.

Parameters:

- __HANDLE__: specifies the TIM Handle.
- __FLAG__: specifies the TIM interrupt flag to check. This parameter can be one of the following values:
  - TIM_FLAG_UPDATE: Update interrupt flag
  - TIM_FLAG_CC1: Capture/Compare 1 interrupt flag
  - TIM_FLAG_CC2: Capture/Compare 2 interrupt flag
  - TIM_FLAG_CC3: Capture/Compare 3 interrupt flag
  - TIM_FLAG_CC4: Capture/Compare 4 interrupt flag
  - TIM_FLAG_CC5: Compare 5 interrupt flag
  - TIM_FLAG_CC6: Compare 6 interrupt flag
  - TIM_FLAG_COM: Commutation interrupt flag
  - TIM_FLAG_TRIGGER: Trigger interrupt flag
  - TIM_FLAG_BREAK: Break interrupt flag
  - TIM_FLAG_BREAK2: Break 2 interrupt flag
  - TIM_FLAG_SYSTEM_BREAK: System Break interrupt flag
  - TIM_FLAG_CC1OF: Capture/Compare 1 overcapture flag
  - TIM_FLAG_CC2OF: Capture/Compare 2 overcapture flag
  - TIM_FLAG_CC3OF: Capture/Compare 3 overcapture flag
  - TIM_FLAG_CC4OF: Capture/Compare 4 overcapture flag
  - TIM_FLAG_IDX: Index interrupt flag
  - TIM_FLAG_DIR: Direction change interrupt flag
  - TIM_FLAG_IERR: Index error interrupt flag
  - TIM_FLAG_TERR: Transition error interrupt flag

Return value:

- The: new state of __FLAG__ (TRUE or FALSE).

__HAL_TIM_CLEAR_FLAG

Description:

- Clear the specified TIM interrupt flag.

Parameters:

- __HANDLE__: specifies the TIM Handle.
- __FLAG__: specifies the TIM interrupt flag to clear. This parameter can be one of the following values:
  - TIM_FLAG_UPDATE: Update interrupt flag
  - TIM_FLAG_CC1: Capture/Compare 1 interrupt flag
  - TIM_FLAG_CC2: Capture/Compare 2 interrupt flag
  - TIM_FLAG_CC3: Capture/Compare 3 interrupt flag
  - TIM_FLAG_CC4: Capture/Compare 4 interrupt flag
  - TIM_FLAG_CC5: Compare 5 interrupt flag
  - TIM_FLAG_CC6: Compare 6 interrupt flag
  - TIM_FLAG_COM: Commutation interrupt flag
  - TIM_FLAG_TRIGGER: Trigger interrupt flag
  - TIM_FLAG_BREAK: Break interrupt flag
  - TIM_FLAG_BREAK2: Break 2 interrupt flag
  - TIM_FLAG_SYSTEM_BREAK: System Break interrupt flag
  - TIM_FLAG_CC1OF: Capture/Compare 1 overcapture flag
  - TIM_FLAG_CC2OF: Capture/Compare 2 overcapture flag
  - TIM_FLAG_CC3OF: Capture/Compare 3 overcapture flag
  - TIM_FLAG_CC4OF: Capture/Compare 4 overcapture flag
  - TIM_FLAG_IDX: Index interrupt flag
  - TIM_FLAG_DIR: Direction change interrupt flag
  - TIM_FLAG_IERR: Index error interrupt flag
  - TIM_FLAG_TERR: Transition error interrupt flag

Return value:

- The: new state of __FLAG__ (TRUE or FALSE).

__HAL_TIM_GET_IT_SOURCE

Description:

- Check whether the specified TIM interrupt source is enabled or not.

Parameters:

- __HANDLE__: TIM handle
- __INTERRUPT__: specifies the TIM interrupt source to check. This parameter can be one of the following values:
  - TIM_IT_UPDATE: Update interrupt
  - TIM_IT_CC1: Capture/Compare 1 interrupt
  - TIM_IT_CC2: Capture/Compare 2 interrupt
  - TIM_IT_CC3: Capture/Compare 3 interrupt
  - TIM_IT_CC4: Capture/Compare 4 interrupt
  - TIM_IT_COM: Commutation interrupt
  - TIM_IT_TRIGGER: Trigger interrupt
  - TIM_IT_BREAK: Break interrupt
  - TIM_IT_IDX: Index interrupt
  - TIM_IT_DIR: Direction change interrupt
  - TIM_IT_IERR: Index error interrupt
  - TIM_IT_TERR: Transition error interrupt

Return value:

- The: state of TIM_IT (SET or RESET).

__HAL_TIM_CLEAR_IT

Description:

- Clear the TIM interrupt pending bits.

Parameters:

- __HANDLE__: TIM handle
- __INTERRUPT__: specifies the interrupt pending bit to clear. This parameter can be one of the following values:
  - TIM_IT_UPDATE: Update interrupt
  - TIM_IT_CC1: Capture/Compare 1 interrupt
  - TIM_IT_CC2: Capture/Compare 2 interrupt
  - TIM_IT_CC3: Capture/Compare 3 interrupt
  - TIM_IT_CC4: Capture/Compare 4 interrupt
  - TIM_IT_COM: Commutation interrupt
  - TIM_IT_TRIGGER: Trigger interrupt
  - TIM_IT_BREAK: Break interrupt
  - TIM_IT_IDX: Index interrupt
  - TIM_IT_DIR: Direction change interrupt
  - TIM_IT_IERR: Index error interrupt
  - TIM_IT_TERR: Transition error interrupt

Return value:

- None

__HAL_TIM_UIFREMAP_ENABLE

Description:

- Force a continuous copy of the update interrupt flag (UIF) into the timer counter register (bit 31).

Parameters:

- __HANDLE__: TIM handle.

Return value:

- None: mode.

Notes:

- This allows both the counter value and a potential roll-over condition signalled by the UIFCPY flag to be read in an atomic way.

__HAL_TIM_UIFREMAP_DISABLE

Description:

- Disable update interrupt flag (UIF) remapping.

Parameters:

- __HANDLE__: TIM handle.

Return value:

- None: mode.

__HAL_TIM_GET_UIFCPY

Description:

- Get update interrupt flag (UIF) copy status.

Parameters:

- __COUNTER__: Counter value.

Return value:

- The: state of UIFCPY (TRUE or FALSE). mode.

__HAL_TIM_IS_TIM_COUNTING_DOWN

Description:

- Indicates whether or not the TIM Counter is used as downcounter.

Parameters:

- __HANDLE__: TIM handle.

Return value:

- False: (Counter used as upcounter) or True (Counter used as downcounter)

Notes:

- This macro is particularly useful to get the counting mode when the timer operates in Center-aligned mode or Encoder mode.

__HAL_TIM_SET_PRESCALER

Description:

- Set the TIM Prescaler on runtime.

Parameters:

- __HANDLE__: TIM handle.
- __PRESC__: specifies the Prescaler new value.

Return value:

- None

__HAL_TIM_SET_COUNTER

Description:

- Set the TIM Counter Register value on runtime.

Parameters:

- __HANDLE__: TIM handle.
- __COUNTER__: specifies the Counter register new value.

Return value:

- None

__HAL_TIM_GET_COUNTER

Description:

- Get the TIM Counter Register value on runtime.

Parameters:

- __HANDLE__: TIM handle.

Return value:

- 16-bit: or 32-bit value of the timer counter register (TIMx_CNT)

__HAL_TIM_SET_AUTORELOAD

Description:

- Set the TIM Autoreload Register value on runtime without calling another time any Init function.

Parameters:

- __HANDLE__: TIM handle.
- __AUTORELOAD__: specifies the Counter register new value.

Return value:

- None

__HAL_TIM_GET_AUTORELOAD

Description:

- Get the TIM Autoreload Register value on runtime.

Parameters:

- __HANDLE__: TIM handle.

Return value:

- 16-bit: or 32-bit value of the timer auto-reload register(TIMx_ARR)

__HAL_TIM_SET_CLOCKDIVISION

Description:

- Set the TIM Clock Division value on runtime without calling another time any Init function.

Parameters:

- __HANDLE__: TIM handle.
- __CKD__: specifies the clock division value. This parameter can be one of the following value:
  - TIM_CLOCKDIVISION_DIV1: tDTS=tCK_INT
  - TIM_CLOCKDIVISION_DIV2: tDTS=2*tCK_INT
  - TIM_CLOCKDIVISION_DIV4: tDTS=4*tCK_INT

Return value:

- None

__HAL_TIM_GET_CLOCKDIVISION

Description:

- Get the TIM Clock Division value on runtime.

Parameters:

- __HANDLE__: TIM handle.

Return value:

- The: clock division can be one of the following values:
  - TIM_CLOCKDIVISION_DIV1: tDTS=tCK_INT
  - TIM_CLOCKDIVISION_DIV2: tDTS=2*tCK_INT
  - TIM_CLOCKDIVISION_DIV4: tDTS=4*tCK_INT

__HAL_TIM_SET_ICPRESCALER

Description:

- Set the TIM Input Capture prescaler on runtime without calling another time

Parameters:

- __HANDLE__: TIM handle.
- __CHANNEL__: TIM Channels to be configured. This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
- __ICPSC__: specifies the Input Capture4 prescaler new value. This parameter can be one of the following values:
  - TIM_ICPSC_DIV1: no prescaler
  - TIM_ICPSC_DIV2: capture is done once every 2 events
  - TIM_ICPSC_DIV4: capture is done once every 4 events
  - TIM_ICPSC_DIV8: capture is done once every 8 events

Return value:

- None

__HAL_TIM_GET_ICPRESCALER

Description:

- Get the TIM Input Capture prescaler on runtime.

Parameters:

- __HANDLE__: TIM handle.
- __CHANNEL__: TIM Channels to be configured. This parameter can be one of the following values:
  - TIM_CHANNEL_1: get input capture 1 prescaler value
  - TIM_CHANNEL_2: get input capture 2 prescaler value
  - TIM_CHANNEL_3: get input capture 3 prescaler value
  - TIM_CHANNEL_4: get input capture 4 prescaler value

Return value:

- The: input capture prescaler can be one of the following values:
  - TIM_ICPSC_DIV1: no prescaler
  - TIM_ICPSC_DIV2: capture is done once every 2 events
  - TIM_ICPSC_DIV4: capture is done once every 4 events
  - TIM_ICPSC_DIV8: capture is done once every 8 events

__HAL_TIM_SET_COMPARE

Description:

- Set the TIM Capture Compare Register value on runtime without calling another time ConfigChannel function.

Parameters:

- __HANDLE__: TIM handle.
- __CHANNEL__: TIM Channels to be configured. This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
  - TIM_CHANNEL_5: TIM Channel 5 selected
  - TIM_CHANNEL_6: TIM Channel 6 selected
- __COMPARE__: specifies the Capture Compare register new value.

Return value:

- None

__HAL_TIM_GET_COMPARE

Description:

- Get the TIM Capture Compare Register value on runtime.

Parameters:

- __HANDLE__: TIM handle.
- __CHANNEL__: TIM Channel associated with the capture compare register This parameter can be one of the following values:
  - TIM_CHANNEL_1: get capture/compare 1 register value
  - TIM_CHANNEL_2: get capture/compare 2 register value
  - TIM_CHANNEL_3: get capture/compare 3 register value
  - TIM_CHANNEL_4: get capture/compare 4 register value
  - TIM_CHANNEL_5: get capture/compare 5 register value
  - TIM_CHANNEL_6: get capture/compare 6 register value

Return value:

- 16-bit: or 32-bit value of the capture/compare register (TIMx_CCRy)

__HAL_TIM_ENABLE_OCxPRELOAD

Description:

- Set the TIM Output compare preload.

Parameters:

- __HANDLE__: TIM handle.
- __CHANNEL__: TIM Channels to be configured. This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
  - TIM_CHANNEL_5: TIM Channel 5 selected
  - TIM_CHANNEL_6: TIM Channel 6 selected

Return value:

- None

__HAL_TIM_DISABLE_OCxPRELOAD

Description:

- Reset the TIM Output compare preload.

Parameters:

- __HANDLE__: TIM handle.
- __CHANNEL__: TIM Channels to be configured. This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
  - TIM_CHANNEL_5: TIM Channel 5 selected
  - TIM_CHANNEL_6: TIM Channel 6 selected

Return value:

- None

__HAL_TIM_ENABLE_OCxFAST

Description:

- Enable fast mode for a given channel.

Parameters:

- __HANDLE__: TIM handle.
- __CHANNEL__: TIM Channels to be configured. This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
  - TIM_CHANNEL_5: TIM Channel 5 selected
  - TIM_CHANNEL_6: TIM Channel 6 selected

Return value:

- None

Notes:

- When fast mode is enabled an active edge on the trigger input acts like a compare match on CCx output. Delay to sample the trigger input and to activate CCx output is reduced to 3 clock cycles. Fast mode acts only if the channel is configured in PWM1 or PWM2 mode.

__HAL_TIM_DISABLE_OCxFAST

Description:

- Disable fast mode for a given channel.

Parameters:

- __HANDLE__: TIM handle.
- __CHANNEL__: TIM Channels to be configured. This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
  - TIM_CHANNEL_5: TIM Channel 5 selected
  - TIM_CHANNEL_6: TIM Channel 6 selected

Return value:

- None

Notes:

- When fast mode is disabled CCx output behaves normally depending on counter and CCRx values even when the trigger is ON. The minimum delay to activate CCx output when an active edge occurs on the trigger input is 5 clock cycles.

__HAL_TIM_URS_ENABLE

Description:

- Set the Update Request Source (URS) bit of the TIMx_CR1 register.

Parameters:

- __HANDLE__: TIM handle.

Return value:

- None

Notes:

- When the URS bit of the TIMx_CR1 register is set, only counter overflow/underflow generates an update interrupt or DMA request (if enabled)

__HAL_TIM_URS_DISABLE

Description:

- Reset the Update Request Source (URS) bit of the TIMx_CR1 register.

Parameters:

- __HANDLE__: TIM handle.

Return value:

- None

Notes:

- When the URS bit of the TIMx_CR1 register is reset, any of the following events generate an update interrupt or DMA request (if enabled): _ Counter overflow underflow _ Setting the UG bit _ Update generation through the slave mode controller

__HAL_TIM_SET_CAPTUREPOLARITY

Description:

- Set the TIM Capture x input polarity on runtime.

Parameters:

- __HANDLE__: TIM handle.
- __CHANNEL__: TIM Channels to be configured. This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
- __POLARITY__: Polarity for TIx source
  - TIM_INPUTCHANNELPOLARITY_RISING: Rising Edge
  - TIM_INPUTCHANNELPOLARITY_FALLING: Falling Edge
  - TIM_INPUTCHANNELPOLARITY_BOTHEDGE: Rising and Falling Edge

Return value:

- None

__HAL_TIM_SELECT_CCDMAREQUEST

Description:

- Select the Capture/compare DMA request source.

Parameters:

- __HANDLE__: specifies the TIM Handle.
- __CCDMA__: specifies Capture/compare DMA request source This parameter can be one of the following values:
  - TIM_CCDMAREQUEST_CC: CCx DMA request generated on Capture/Compare event
  - TIM_CCDMAREQUEST_UPDATE: CCx DMA request generated on Update event

Return value:

- None

TIM Flag Definition

TIM_FLAG_UPDATE

Update interrupt flag

TIM_FLAG_CC1

Capture/Compare 1 interrupt flag

TIM_FLAG_CC2

Capture/Compare 2 interrupt flag

TIM_FLAG_CC3

Capture/Compare 3 interrupt flag

TIM_FLAG_CC4

Capture/Compare 4 interrupt flag

TIM_FLAG_CC5

Capture/Compare 5 interrupt flag

TIM_FLAG_CC6

Capture/Compare 6 interrupt flag

TIM_FLAG_COM

Commutation interrupt flag

TIM_FLAG_TRIGGER

Trigger interrupt flag

TIM_FLAG_BREAK

Break interrupt flag

TIM_FLAG_BREAK2

Break 2 interrupt flag

TIM_FLAG_SYSTEM_BREAK

System Break interrupt flag

TIM_FLAG_CC1OF

Capture 1 overcapture flag

TIM_FLAG_CC2OF

Capture 2 overcapture flag

TIM_FLAG_CC3OF

Capture 3 overcapture flag

TIM_FLAG_CC4OF

Capture 4 overcapture flag

TIM_FLAG_IDX

Encoder index flag

TIM_FLAG_DIR

Direction change flag

TIM_FLAG_IERR

Index error flag

TIM_FLAG_TERR

Transition error flag

TIM Group Channel 5 and Channel 1, 2 or 3

TIM_GROUPCH5_NONE

No effect of OC5REF on OC1REFC, OC2REFC and OC3REFC

TIM_GROUPCH5_OC1REFC

OC1REFC is the logical AND of OC1REFC and OC5REF

TIM_GROUPCH5_OC2REFC

OC2REFC is the logical AND of OC2REFC and OC5REF

TIM_GROUPCH5_OC3REFC

OC3REFC is the logical AND of OC3REFC and OC5REF

TIM Input Capture Polarity

TIM_ICPOLARITY_RISING

Capture triggered by rising edge on timer input

TIM_ICPOLARITY_FALLING

Capture triggered by falling edge on timer input

TIM_ICPOLARITY_BOTHEDGE

Capture triggered by both rising and falling edges on timer input

TIM Input Capture Prescaler

TIM_ICPSC_DIV1

Capture performed each time an edge is detected on the capture input

TIM_ICPSC_DIV2

Capture performed once every 2 events

TIM_ICPSC_DIV4

Capture performed once every 4 events

TIM_ICPSC_DIV8

Capture performed once every 8 events

TIM Input Capture Selection

TIM_ICSELECTION_DIRECTTI

TIM Input 1, 2, 3 or 4 is selected to be connected to IC1, IC2, IC3 or IC4, respectively

TIM_ICSELECTION_INDIRECTTI

TIM Input 1, 2, 3 or 4 is selected to be connected to IC2, IC1, IC4 or IC3, respectively

TIM_ICSELECTION_TRC

TIM Input 1, 2, 3 or 4 is selected to be connected to TRC

TIM Input Channel polarity

TIM_INPUTCHANNELPOLARITY_RISING

Polarity for TIx source

TIM_INPUTCHANNELPOLARITY_FALLING

Polarity for TIx source

TIM_INPUTCHANNELPOLARITY_BOTHEDGE

Polarity for TIx source

TIM interrupt Definition

TIM_IT_UPDATE

Update interrupt

LOCK Level 1

TIM_LOCKLEVEL_2

LOCK Level 2

TIM_LOCKLEVEL_3

LOCK Level 3

TIM Master Mode Selection

TIM_TRGO_RESET

TIMx_EGR.UG bit is used as trigger output (TRGO)

TIM_TRGO_ENABLE

TIMx_CR1.CEN bit is used as trigger output (TRGO)

TIM_TRGO_UPDATE

Update event is used as trigger output (TRGO)

TIM_TRGO_OC1

Capture or a compare match 1 is used as trigger output (TRGO)

TIM_TRGO_OC1REF

OC1REF signal is used as trigger output (TRGO)

TIM_TRGO_OC2REF

OC2REF signal is used as trigger output(TRGO)

TIM_TRGO_OC3REF

OC3REF signal is used as trigger output(TRGO)

TIM_TRGO_OC4REF

OC4REF signal is used as trigger output(TRGO)

TIM_TRGO_ENCODER_CLK

Encoder clock is used as trigger output(TRGO)

TIM Master Mode Selection 2 (TRGO2)

TIM_TRGO2_RESET

TIMx_EGR.UG bit is used as trigger output (TRGO2)

TIM_TRGO2_ENABLE

TIMx_CR1.CEN bit is used as trigger output (TRGO2)

TIM_TRGO2_UPDATE

Update event is used as trigger output (TRGO2)

TIM_TRGO2_OC1

Capture or a compare match 1 is used as trigger output (TRGO2)

TIM_TRGO2_OC1REF

OC1REF signal is used as trigger output (TRGO2)

TIM_TRGO2_OC2REF

OC2REF signal is used as trigger output (TRGO2)

TIM_TRGO2_OC3REF

OC3REF signal is used as trigger output (TRGO2)

TIM_TRGO2_OC4REF

OC4REF signal is used as trigger output (TRGO2)

TIM_TRGO2_OC5REF

OC5REF signal is used as trigger output (TRGO2)

TIM_TRGO2_OC6REF

OC6REF signal is used as trigger output (TRGO2)

TIM_TRGO2_OC4REF_RISINGFALLING

OC4REF rising or falling edges generate pulses on TRGO2

TIM_TRGO2_OC6REF_RISINGFALLING

OC6REF rising or falling edges generate pulses on TRGO2

TIM_TRGO2_OC4REF_RISING_OC6REF_RISING

OC4REF or OC6REF rising edges generate pulses on TRGO2

TIM_TRGO2_OC4REF_RISING_OC6REF_FALLING

OC4REF rising or OC6REF falling edges generate pulses on TRGO2

TIM_TRGO2_OC5REF_RISING_OC6REF_RISING

OC5REF or OC6REF rising edges generate pulses on TRGO2

TIM_TRGO2_OC5REF_RISING_OC6REF_FALLING

OC5REF or OC6REF rising edges generate pulses on TRGO2

TIM Master/Slave Mode

TIM_MASTERSLAVEMODE_ENABLE

No action

TIM_MASTERSLAVEMODE_DISABLE

Master/slave mode is selected

TIM One Pulse Mode

TIM_OPMODE_SINGLE

Counter stops counting at the next update event

TIM_OPMODE_REPETITIVE

Counter is not stopped at update event

TIM OSSI OffState Selection for Idle mode state

TIM_OSSI_ENABLE

When inactive, OC/OCN outputs are enabled (still controlled by the timer)

TIM_OSSI_DISABLE

When inactive, OC/OCN outputs are disabled (not controlled any longer by the timer)

TIM OSSR OffState Selection for Run mode state

TIM_OSSR_ENABLE

When inactive, OC/OCN outputs are enabled (still controlled by the timer)

TIM_OSSR_DISABLE

When inactive, OC/OCN outputs are disabled (not controlled any longer by the timer)

TIM Output Compare and PWM Modes

TIM_OCMODE_TIMING

Frozen

TIM_OCMODE_ACTIVE

Set channel to active level on match

TIM_OCMODE_INACTIVE

Set channel to inactive level on match

TIM_OCMODE_TOGGLE

Toggle

TIM_OCMODE_PWM1

PWM mode 1

TIM_OCMODE_PWM2

PWM mode 2

TIM_OCMODE_FORCED_ACTIVE

Force active level

TIM_OCMODE_FORCED_INACTIVE

Force inactive level

TIM_OCMODE_RETRIGERRABLE_OPM1

Retrigerrable OPM mode 1

TIM_OCMODE_RETRIGERRABLE_OPM2

Retrigerrable OPM mode 2

TIM_OCMODE_COMBINED_PWM1

Combined PWM mode 1

TIM_OCMODE_COMBINED_PWM2

Combined PWM mode 2

TIM_OCMODE_ASYMMETRIC_PWM1

Asymmetric PWM mode 1

TIM_OCMODE_ASYMMETRIC_PWM2

Asymmetric PWM mode 2

TIM_OCMODE_PULSE_ON_COMPARE

Pulse on compare (CH3&CH4 only)

TIM_OCMODE_DIRECTION_OUTPUT

Direction output (CH3&CH4 only)

TIM Output Compare Idle State

TIM_OCIDLESTATE_SET

Output Idle state: OCx=1 when MOE=0

TIM_OCIDLESTATE_RESET

Output Idle state: OCx=0 when MOE=0

TIM Complementary Output Compare Idle State

TIM_OCNIDLESTATE_SET

Complementary output Idle state: OCxN=1 when MOE=0

TIM_OCNIDLESTATE_RESET

Complementary output Idle state: OCxN=0 when MOE=0

TIM Complementary Output Compare Polarity

TIM_OCNPOLARITY_HIGH

Capture/Compare complementary output polarity

TIM_OCNPOLARITY_LOW

Capture/Compare complementary output polarity

TIM Complementary Output Compare State

TIM_OUTPUTNSTATE_DISABLE

OCxN is disabled

TIM_OUTPUTNSTATE_ENABLE

OCxN is enabled

TIM Output Compare Polarity

TIM_OCPOLARITY_HIGH

Capture/Compare output polarity

TIM_OCPOLARITY_LOW

Capture/Compare output polarity

TIM Output Compare State

TIM_OUTPUTSTATE_DISABLE

Capture/Compare 1 output disabled

TIM_OUTPUTSTATE_ENABLE

Capture/Compare 1 output enabled

TIM Output Fast State

TIM_OCFAST_DISABLE

Output Compare fast disable

TIM_OCFAST_ENABLE

Output Compare fast enable

TIM Slave mode

TIM_SLAVEMODE_DISABLE

Slave mode disabled

TIM_SLAVEMODE_RESET

Reset Mode

TIM_SLAVEMODE_GATED

Gated Mode

TIM_SLAVEMODE_TRIGGER

Trigger Mode

TIM_SLAVEMODE_EXTERNAL1

External Clock Mode 1

TIM_SLAVEMODE_COMBINED_RESETTRIGGER

Combined reset + trigger mode

TIM_SLAVEMODE_COMBINED_GATEDRESET

Combined gated + reset mode

TIM TI1 Input Selection

TIM_TI1SELECTION_CH1

The TIMx_CH1 pin is connected to TI1 input

TIM_TI1SELECTION_XORCOMBINATION

The TIMx_CH1, CH2 and CH3 pins are connected to the TI1 input (XOR combination)

TIM Trigger Polarity

TIM_TRIGGERPOLARITY_INVERTED

Polarity for ETRx trigger sources

TIM_TRIGGERPOLARITY_NONINVERTED

Polarity for ETRx trigger sources

TIM_TRIGGERPOLARITY_RISING

Polarity for TIxFPx or TI1_ED trigger sources

TIM_TRIGGERPOLARITY_FALLING

Polarity for TIxFPx or TI1_ED trigger sources

TIM_TRIGGERPOLARITY_BOTHEDGE

Polarity for TIxFPx or TI1_ED trigger sources

TIM Trigger Prescaler

TIM_TRIGGERPRESCALER_DIV1

No prescaler is used

TIM_TRIGGERPRESCALER_DIV2

Prescaler for External ETR Trigger: Capture performed once every 2 events.

TIM_TRIGGERPRESCALER_DIV4

Prescaler for External ETR Trigger: Capture performed once every 4 events.

TIM_TRIGGERPRESCALER_DIV8

Prescaler for External ETR Trigger: Capture performed once every 8 events.

TIM Trigger Selection

TIM_TS_ITR0

Internal Trigger 0 (ITR0)

TIM_TS_ITR1

Internal Trigger 1 (ITR1)

TIM_TS_ITR2

Internal Trigger 2 (ITR2)

TIM_TS_ITR3

Internal Trigger 3 (ITR3)

TIM_TS_ITR6

Internal Trigger 6 (ITR6)

TIM_TS_ITR7

Internal Trigger 7 (ITR7)

TIM_TS_ITR8

Internal Trigger 8 (ITR8)

TIM_TS_ITR11

Internal Trigger 11 (ITR11)

TIM_TS_TI1F_ED

TI1 Edge Detector (TI1F_ED)

TIM_TS_TI1FP1

Filtered Timer Input 1 (TI1FP1)

TIM_TS_TI2FP2

Filtered Timer Input 2 (TI2FP2)

TIM_TS_ETRF

Filtered External Trigger input (ETRF)

TIM_TS_NONE

No trigger selected

TIM Update Interrupt Flag Remap

TIM_UIFREMAP_DISABLE

Update interrupt flag remap disabled

TIM_UIFREMAP_ENABLE

Update interrupt flag remap enabled

66 HAL TIM Extension Driver

66.1 TIMEx Firmware driver registers structures

66.1.1 TIM_HallSensor_InitTypeDef

TIM_HallSensor_InitTypeDef is defined in the stm32u3xx_hal_tim_ex.h

Data Fields

- ***uint32_t IC1Polarity***
- ***uint32_t IC1Prescaler***
- ***uint32_t IC1Filter***
- ***uint32_t Commutation_Delay***

Field Documentation

- ***uint32_t TIM_HallSensor_InitTypeDef::IC1Polarity***
  Specifies the active edge of the input signal. This parameter can be a value of ***TIM_Input_Capture_Polarity***
- ***uint32_t TIM_HallSensor_InitTypeDef::IC1Prescaler***
  Specifies the Input Capture Prescaler. This parameter can be a value of ***TIM_Input_Capture_Prescaler***
- ***uint32_t TIM_HallSensor_InitTypeDef::IC1Filter***
  Specifies the input capture filter. This parameter can be a number between Min_Data = 0x0 and Max_Data = 0xF
- ***uint32_t TIM_HallSensor_InitTypeDef::Commutation_Delay***
  Specifies the pulse value to be loaded into the Capture Compare Register. This parameter can be a number between Min_Data = 0x0000 and Max_Data = 0xFFFF

66.1.2 TIMEx_BreakInputConfigTypeDef

TIMEx_BreakInputConfigTypeDef is defined in the stm32u3xx_hal_tim_ex.h

Data Fields

- ***uint32_t Source***
- ***uint32_t Enable***
- ***uint32_t Polarity***

Field Documentation

- ***uint32_t TIMEx_BreakInputConfigTypeDef::Source***
  Specifies the source of the timer break input. This parameter can be a value of ***TIMEx_Break_Input_Source***
- ***uint32_t TIMEx_BreakInputConfigTypeDef::Enable***
  Specifies whether or not the break input source is enabled. This parameter can be a value of ***TIMEx_Break_Input_Source_Enable***
- ***uint32_t TIMEx_BreakInputConfigTypeDef::Polarity***
  Specifies the break input source polarity. This parameter can be a value of ***TIMEx_Break_Input_Source_Polarity***

66.1.3 TIMEx_EncoderIndexConfigTypeDef

TIMEx_EncoderIndexConfigTypeDef is defined in the stm32u3xx_hal_tim_ex.h

Data Fields

- ***uint32_t Polarity***
- ***uint32_t Prescaler***
- ***uint32_t Filter***
- ***uint32_t Blanking***
- ***FunctionalState FirstIndexEnable***
- ***uint32_t Position***
- ***uint32_t Direction***

Field Documentation

- ***uint32_t TIMEx_EncoderIndexConfigTypeDef::Polarity***
  TIM Encoder index polarity.This parameter can be a value of ***TIMEx_Encoder_Index_Polarity***
- ***uint32_t TIMEx_EncoderIndexConfigTypeDef::Prescaler***
  TIM Encoder index prescaler.This parameter can be a value of ***TIMEx_Encoder_Index_Prescaler***
- ***uint32_t TIMEx_EncoderIndexConfigTypeDef::Filter***
  TIM Encoder index filter.This parameter can be a number between Min_Data = 0x0 and Max_Data = 0xF
- ***uint32_t TIMEx_EncoderIndexConfigTypeDef::Blanking***
  Specifies whether or not the encoder index event is conditioned by TI3 or TI4 input.This parameter can be a value of ***TIMEx_Encoder_Index_Blanking***
- ***FunctionalState TIMEx_EncoderIndexConfigTypeDef::FirstIndexEnable***
  Specifies whether or not the encoder first index is enabled.This parameter value can be ENABLE or DISABLE.
- ***uint32_t TIMEx_EncoderIndexConfigTypeDef::Position***
  Specifies in which AB input configuration the index event resets the counter.This parameter can be a value of ***TIMEx_Encoder_Index_Position***
- ***uint32_t TIMEx_EncoderIndexConfigTypeDef::Direction***
  Specifies in which counter direction the index event resets the counter.This parameter can be a value of ***TIMEx_Encoder_Index_Direction***

66.2 TIMEx Firmware driver API description

The following section lists the various functions of the TIMEx library.

66.2.1 TIMER Extended features

The Timer Extended features include:

1. Complementary outputs with programmable dead-time for :
   – Output Compare
   – PWM generation (Edge and Center-aligned Mode)
   – One-pulse mode output
2. Synchronization circuit to control the timer with external signals and to interconnect several timers together.
3. Break input to put the timer output signals in reset state or in a known state.
4. Supports incremental (quadrature) encoder and hall-sensor circuitry for positioning purposes
5. In case of Pulse on compare, configure pulse length and delay
6. Encoder index configuration

66.2.2 How to use this driver

1. Initialize the TIM low level resources by implementing the following functions depending on the selected feature:
   – Hall Sensor output : HAL_TIMEx_HallSensor_MspInit()
2. Initialize the TIM low level resources :
   a. Enable the TIM interface clock using __HAL_RCC_TIMx_CLK_ENABLE();
   b. TIM pins configuration
      ◦ Enable the clock for the TIM GPIOs using the following function: __HAL_RCC_GPIOx_CLK_ENABLE();
      ◦ Configure these TIM pins in Alternate function mode using HAL_GPIO_Init();
3. The external Clock can be configured, if needed (the default clock is the internal clock from the APBx), using the following function: HAL_TIM_ConfigClockSource, the clock configuration should be done before any start function.
4. Configure the TIM in the desired functioning mode using one of the initialization function of this driver:
   – HAL_TIMEx_HallSensor_Init() and HAL_TIMEx_ConfigCommutEvent(): to use the Timer Hall Sensor Interface and the commutation event with the corresponding Interrupt and DMA request if needed (Note that One Timer is used to interface with the Hall sensor Interface and another Timer should be used to use the commutation event).

5. In case of Pulse On Compare:
   – HAL_TIMEx_OC_ConfigPulseOnCompare(): to configure pulse width and prescaler
6. Activate the TIM peripheral using one of the start functions:
   – Complementary Output Compare : HAL_TIMEx_OCN_Start(), HAL_TIMEx_OCN_Start_DMA(), HAL_TIMEx_OCN_Start_IT()
   – Complementary PWM generation : HAL_TIMEx_PWMN_Start(), HAL_TIMEx_PWMN_Start_DMA(), HAL_TIMEx_PWMN_Start_IT()
   – Complementary One-pulse mode output : HAL_TIMEx_OnePulseN_Start(), HAL_TIMEx_OnePulseN_Start_IT()
   – Hall Sensor output : HAL_TIMEx_HallSensor_Start(), HAL_TIMEx_HallSensor_Start_DMA(), HAL_TIMEx_HallSensor_Start_IT().

66.2.3 Timer Hall Sensor functions

This section provides functions allowing to:

- Initialize and configure TIM HAL Sensor.
- De-initialize TIM HAL Sensor.
- Start the Hall Sensor Interface.
- Stop the Hall Sensor Interface.
- Start the Hall Sensor Interface and enable interrupts.
- Stop the Hall Sensor Interface and disable interrupts.
- Start the Hall Sensor Interface and enable DMA transfers.
- Stop the Hall Sensor Interface and disable DMA transfers.

This section contains the following APIs:

- ***HAL_TIMEx_HallSensor_Init()***
- ***HAL_TIMEx_HallSensor_DeInit()***
- ***HAL_TIMEx_HallSensor_MspInit()***
- ***HAL_TIMEx_HallSensor_MspDeInit()***
- ***HAL_TIMEx_HallSensor_Start()***
- ***HAL_TIMEx_HallSensor_Stop()***
- ***HAL_TIMEx_HallSensor_Start_IT()***
- ***HAL_TIMEx_HallSensor_Stop_IT()***
- ***HAL_TIMEx_HallSensor_Start_DMA()***
- ***HAL_TIMEx_HallSensor_Stop_DMA()***

66.2.4 Timer Complementary Output Compare functions

This section provides functions allowing to:

- Start the Complementary Output Compare/PWM.
- Stop the Complementary Output Compare/PWM.
- Start the Complementary Output Compare/PWM and enable interrupts.
- Stop the Complementary Output Compare/PWM and disable interrupts.
- Start the Complementary Output Compare/PWM and enable DMA transfers.
- Stop the Complementary Output Compare/PWM and disable DMA transfers.

This section contains the following APIs:

- ***HAL_TIMEx_OCN_Start()***
- ***HAL_TIMEx_OCN_Stop()***
- ***HAL_TIMEx_OCN_Start_IT()***
- ***HAL_TIMEx_OCN_Stop_IT()***
- ***HAL_TIMEx_OCN_Start_DMA()***
- ***HAL_TIMEx_OCN_Stop_DMA()***

66.2.5 Timer Complementary PWM functions

This section provides functions allowing to:

- Start the Complementary PWM.
- Stop the Complementary PWM.
- Start the Complementary PWM and enable interrupts.
- Stop the Complementary PWM and disable interrupts.
- Start the Complementary PWM and enable DMA transfers.
- Stop the Complementary PWM and disable DMA transfers.

This section contains the following APIs:

- ***HAL_TIMEx_PWMN_Start()***
- ***HAL_TIMEx_PWMN_Stop()***
- ***HAL_TIMEx_PWMN_Start_IT()***
- ***HAL_TIMEx_PWMN_Stop_IT()***
- ***HAL_TIMEx_PWMN_Start_DMA()***
- ***HAL_TIMEx_PWMN_Stop_DMA()***

66.2.6 Timer Complementary One Pulse functions

This section provides functions allowing to:

- Start the Complementary One Pulse generation.
- Stop the Complementary One Pulse.
- Start the Complementary One Pulse and enable interrupts.
- Stop the Complementary One Pulse and disable interrupts.

This section contains the following APIs:

- ***HAL_TIMEx_OnePulseN_Start()***
- ***HAL_TIMEx_OnePulseN_Stop()***
- ***HAL_TIMEx_OnePulseN_Start_IT()***
- ***HAL_TIMEx_OnePulseN_Stop_IT()***

66.2.7 Peripheral Control functions

This section provides functions allowing to:

- Configure the commutation event in case of use of the Hall sensor interface.
- Configure Output channels for OC and PWM mode.
- Configure Complementary channels, break features and dead time.
- Configure Master synchronization.
- Configure timer remapping capabilities.
- Select timer input source.
- Enable or disable channel grouping.
- Configure Pulse on compare.
- Configure Encoder index.

This section contains the following APIs:

- ***HAL_TIMEx_ConfigCommutEvent()***
- ***HAL_TIMEx_ConfigCommutEvent_IT()***
- ***HAL_TIMEx_ConfigCommutEvent_DMA()***
- ***HAL_TIMEx_MasterConfigSynchronization()***
- ***HAL_TIMEx_ConfigBreakDeadTime()***
- ***HAL_TIMEx_ConfigBreakInput()***
- ***HAL_TIMEx_RemapConfig()***
- ***HAL_TIMEx_TISelection()***
- ***HAL_TIMEx_GroupChannel5()***

- *HAL_TIMEx_DisarmBreakInput()*
- *HAL_TIMEx_ReArmBreakInput()*
- *HAL_TIMEx_DitheringEnable()*
- *HAL_TIMEx_DitheringDisable()*
- *HAL_TIMEx_OC_ConfigPulseOnCompare()*
- *HAL_TIMEx_ConfigSlaveModePreload()*

66.2.8 Extended Callbacks functions

This section provides Extended TIM callback functions:

- Timer Commutation callback
- Timer Break callback

This section contains the following APIs:

- *HAL_TIMEx_CommutCallback()*
- *HAL_TIMEx_CommutHalfCpltCallback()*
- *HAL_TIMEx_BreakCallback()*
- *HAL_TIMEx_Break2Callback()*
- *HAL_TIMEx_EncoderIndexCallback()*
- *HAL_TIMEx_DirectionChangeCallback()*
- *HAL_TIMEx_IndexErrorCallback()*
- *HAL_TIMEx_TransitionErrorCallback()*

66.2.9 Extended Peripheral State functions

This subsection permits to get in run-time the status of the peripheral and the data flow.

This section contains the following APIs:

- *HAL_TIMEx_HallSensor_GetState()*
- *HAL_TIMEx_GetChannelNState()*

66.2.10 Detailed description of functions

HAL_TIMEx_HallSensor_Init

Function name

HAL_StatusTypeDef HAL_TIMEx_HallSensor_Init (TIM_HandleTypeDef * htim, const TIM_HallSensor_InitTypeDef * sConfig)

Function description

Initializes the TIM Hall Sensor Interface and initialize the associated handle.

Parameters

- **htim:** TIM Hall Sensor Interface handle
- **sConfig:** TIM Hall Sensor configuration structure

Return values

- **HAL:** status

Notes

- When the timer instance is initialized in Hall Sensor Interface mode, timer channels 1 and channel 2 are reserved and cannot be used for other purpose.

HAL_TIMEx_HallSensor_DeInit

Function name

HAL_StatusTypeDef HAL_TIMEx_HallSensor_DeInit (TIM_HandleTypeDef * htim)

Function description

DeInitializes the TIM Hall Sensor interface.

Parameters

- **htim:** TIM Hall Sensor Interface handle

Return values

- **HAL:** status

HAL_TIMEx_HallSensor_MspInit

Function name

void HAL_TIMEx_HallSensor_MspInit (TIM_HandleTypeDef * htim)

Function description

Initializes the TIM Hall Sensor MSP.

Parameters

- **htim:** TIM Hall Sensor Interface handle

Return values

- **None:**

HAL_TIMEx_HallSensor_MspDeInit

Function name

void HAL_TIMEx_HallSensor_MspDeInit (TIM_HandleTypeDef * htim)

Function description

DeInitializes TIM Hall Sensor MSP.

Parameters

- **htim:** TIM Hall Sensor Interface handle

Return values

- **None:**

HAL_TIMEx_HallSensor_Start

Function name

HAL_StatusTypeDef HAL_TIMEx_HallSensor_Start (TIM_HandleTypeDef * htim)

Function description

Starts the TIM Hall Sensor Interface.

Parameters

- **htim:** TIM Hall Sensor Interface handle

Return values

- **HAL:** status

HAL_TIMEx_HallSensor_Stop

Function name

HAL_StatusTypeDef HAL_TIMEx_HallSensor_Stop (TIM_HandleTypeDef * htim)

Function description

Stops the TIM Hall sensor Interface.

Parameters

- **htim:** TIM Hall Sensor Interface handle

Return values

- **HAL:** status

HAL_TIMEx_HallSensor_Start_IT

Function name

HAL_StatusTypeDef HAL_TIMEx_HallSensor_Start_IT (TIM_HandleTypeDef * htim)

Function description

Starts the TIM Hall Sensor Interface in interrupt mode.

Parameters

- **htim:** TIM Hall Sensor Interface handle

Return values

- **HAL:** status

HAL_TIMEx_HallSensor_Stop_IT

Function name

HAL_StatusTypeDef HAL_TIMEx_HallSensor_Stop_IT (TIM_HandleTypeDef * htim)

Function description

Stops the TIM Hall Sensor Interface in interrupt mode.

Parameters

- **htim:** TIM Hall Sensor Interface handle

Return values

- **HAL:** status

HAL_TIMEx_HallSensor_Start_DMA

Function name

HAL_StatusTypeDef HAL_TIMEx_HallSensor_Start_DMA (TIM_HandleTypeDef * htim, uint32_t * pData, uint16_t Length)

Function description

Starts the TIM Hall Sensor Interface in DMA mode.

Parameters

- **htim:** TIM Hall Sensor Interface handle
- **pData:** The destination Buffer address.
- **Length:** The length of data to be transferred from TIM peripheral to memory.

Return values

- **HAL:** status

HAL_TIMEx_HallSensor_Stop_DMA

Function name

HAL_StatusTypeDef HAL_TIMEx_HallSensor_Stop_DMA (TIM_HandleTypeDef * htim)

Function description

Stops the TIM Hall Sensor Interface in DMA mode.

Parameters

- **htim:** TIM Hall Sensor Interface handle

Return values

- **HAL:** status

HAL_TIMEx_OCN_Start

Function name

HAL_StatusTypeDef HAL_TIMEx_OCN_Start (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Starts the TIM Output Compare signal generation on the complementary output.

Parameters

- **htim:** TIM Output Compare handle
- **Channel:** TIM Channel to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIMEx_OCN_Stop

Function name

HAL_StatusTypeDef HAL_TIMEx_OCN_Stop (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the TIM Output Compare signal generation on the complementary output.

Parameters

- **htim:** TIM handle
- **Channel:** TIM Channel to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIMEx_OCN_Start_IT

Function name

HAL_StatusTypeDef HAL_TIMEx_OCN_Start_IT (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Starts the TIM Output Compare signal generation in interrupt mode on the complementary output.

Parameters

- **htim:** TIM OC handle
- **Channel:** TIM Channel to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIMEx_OCN_Stop_IT

Function name

HAL_StatusTypeDef HAL_TIMEx_OCN_Stop_IT (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the TIM Output Compare signal generation in interrupt mode on the complementary output.

Parameters

- **htim:** TIM Output Compare handle
- **Channel:** TIM Channel to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIMEx_OCN_Start_DMA

Function name

HAL_StatusTypeDef HAL_TIMEx_OCN_Start_DMA (TIM_HandleTypeDef * htim, uint32_t Channel, const uint32_t * pData, uint16_t Length)

Function description

Starts the TIM Output Compare signal generation in DMA mode on the complementary output.

Parameters

- **htim:** TIM Output Compare handle
- **Channel:** TIM Channel to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
- **pData:** The source Buffer address.
- **Length:** The length of data to be transferred from memory to TIM peripheral

Return values

- **HAL:** status

HAL_TIMEx_OCN_Stop_DMA

Function name

HAL_StatusTypeDef HAL_TIMEx_OCN_Stop_DMA (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the TIM Output Compare signal generation in DMA mode on the complementary output.

Parameters

- **htim:** TIM Output Compare handle
- **Channel:** TIM Channel to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIMEx_PWMN_Start

Function name

HAL_StatusTypeDef HAL_TIMEx_PWMN_Start (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Starts the PWM signal generation on the complementary output.

Parameters

- **htim:** TIM handle
- **Channel:** TIM Channel to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIMEx_PWMN_Stop

Function name

HAL_StatusTypeDef HAL_TIMEx_PWMN_Stop (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the PWM signal generation on the complementary output.

Parameters

- **htim:** TIM handle
- **Channel:** TIM Channel to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIMEx_PWMN_Start_IT

Function name

HAL_StatusTypeDef HAL_TIMEx_PWMN_Start_IT (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Starts the PWM signal generation in interrupt mode on the complementary output.

Parameters

- **htim:** TIM handle
- **Channel:** TIM Channel to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIMEx_PWMN_Stop_IT

Function name

HAL_StatusTypeDef HAL_TIMEx_PWMN_Stop_IT (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the PWM signal generation in interrupt mode on the complementary output.

Parameters

- **htim:** TIM handle
- **Channel:** TIM Channel to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIMEx_PWMN_Start_DMA

Function name

HAL_StatusTypeDef HAL_TIMEx_PWMN_Start_DMA (TIM_HandleTypeDef * htim, uint32_t Channel, const uint32_t * pData, uint16_t Length)

Function description

Starts the TIM PWM signal generation in DMA mode on the complementary output.

Parameters

- **htim:** TIM handle
- **Channel:** TIM Channel to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
- **pData:** The source Buffer address.
- **Length:** The length of data to be transferred from memory to TIM peripheral

Return values

- **HAL:** status

HAL_TIMEx_PWMN_Stop_DMA

Function name

HAL_StatusTypeDef HAL_TIMEx_PWMN_Stop_DMA (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the TIM PWM signal generation in DMA mode on the complementary output.

Parameters

- **htim:** TIM handle
- **Channel:** TIM Channel to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIMEx_OnePulseN_Start

Function name

HAL_StatusTypeDef HAL_TIMEx_OnePulseN_Start (TIM_HandleTypeDef * htim, uint32_t OutputChannel)

Function description

Starts the TIM One Pulse signal generation on the complementary output.

Parameters

- **htim:** TIM One Pulse handle
- **OutputChannel:** pulse output channel to enable This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected

Return values

- **HAL:** status

Notes

- OutputChannel must match the pulse output channel chosen when calling HAL_TIM_OnePulse_ConfigChannel().

HAL_TIMEx_OnePulseN_Stop

Function name

HAL_StatusTypeDef HAL_TIMEx_OnePulseN_Stop (TIM_HandleTypeDef * htim, uint32_t OutputChannel)

Function description

Stops the TIM One Pulse signal generation on the complementary output.

Parameters

- **htim:** TIM One Pulse handle
- **OutputChannel:** pulse output channel to disable This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected

Return values

- **HAL:** status

Notes

- OutputChannel must match the pulse output channel chosen when calling HAL_TIM_OnePulse_ConfigChannel().

HAL_TIMEx_OnePulseN_Start_IT

Function name

HAL_StatusTypeDef HAL_TIMEx_OnePulseN_Start_IT (TIM_HandleTypeDef * htim, uint32_t OutputChannel)

Function description

Starts the TIM One Pulse signal generation in interrupt mode on the complementary channel.

Parameters

- **htim:** TIM One Pulse handle
- **OutputChannel:** pulse output channel to enable This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected

Return values

- **HAL:** status

Notes

- OutputChannel must match the pulse output channel chosen when calling HAL_TIM_OnePulse_ConfigChannel().

HAL_TIMEx_OnePulseN_Stop_IT

Function name

HAL_StatusTypeDef HAL_TIMEx_OnePulseN_Stop_IT (TIM_HandleTypeDef * htim, uint32_t OutputChannel)

Function description

Stops the TIM One Pulse signal generation in interrupt mode on the complementary channel.

Parameters

- **htim:** TIM One Pulse handle
- **OutputChannel:** pulse output channel to disable This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected

Return values

- **HAL:** status

Notes

- OutputChannel must match the pulse output channel chosen when calling HAL_TIM_OnePulse_ConfigChannel().

HAL_TIMEx_ConfigCommutEvent

Function name

HAL_StatusTypeDef HAL_TIMEx_ConfigCommutEvent (TIM_HandleTypeDef * htim, uint32_t InputTrigger, uint32_t CommutationSource)

Function description

Configure the TIM commutation event sequence.

Parameters

- **htim:** TIM handle
- **InputTrigger:** the Internal trigger corresponding to the Timer Interfacing with the Hall sensor This parameter can be one of the following values:
  - TIM_TS_ITR0: Internal trigger 0 selected
  - TIM_TS_ITR1: Internal trigger 1 selected
  - TIM_TS_ITR2: Internal trigger 2 selected
  - TIM_TS_ITR3: Internal trigger 3 selected
  - TIM_TS_ITR6: Internal trigger 6 selected
  - TIM_TS_ITR7: Internal trigger 7 selected
  - TIM_TS_ITR8: Internal trigger 8 selected
  - TIM_TS_ITR11: Internal trigger 11 selected
  - TIM_TS_NONE: No trigger is needed
- **CommutationSource:** the Commutation Event source This parameter can be one of the following values:
  - TIM_COMMUTATION_TRGI: Commutation source is the TRGI of the Interface Timer
  - TIM_COMMUTATION_SOFTWARE: Commutation source is set by software using the COMG bit

Return values

- **HAL:** status

Notes

- This function is mandatory to use the commutation event in order to update the configuration at each commutation detection on the TRGI input of the Timer, the typical use of this feature is with the use of another Timer(interface Timer) configured in Hall sensor interface, this interface Timer will generate the commutation at its TRGO output (connected to Timer used in this function) each time the TI1 of the Interface Timer detect a commutation at its input TI1.

HAL_TIMEx_ConfigCommutEvent_IT

Function name

HAL_StatusTypeDef HAL_TIMEx_ConfigCommutEvent_IT (TIM_HandleTypeDef * htim, uint32_t InputTrigger, uint32_t CommutationSource)

Function description

Configure the TIM commutation event sequence with interrupt.

Parameters

- **htim:** TIM handle
- **InputTrigger:** the Internal trigger corresponding to the Timer Interfacing with the Hall sensor This parameter can be one of the following values:
  - TIM_TS_ITR0: Internal trigger 0 selected
  - TIM_TS_ITR1: Internal trigger 1 selected
  - TIM_TS_ITR2: Internal trigger 2 selected
  - TIM_TS_ITR3: Internal trigger 3 selected
  - TIM_TS_ITR6: Internal trigger 6 selected
  - TIM_TS_ITR7: Internal trigger 7 selected
  - TIM_TS_ITR8: Internal trigger 8 selected
  - TIM_TS_ITR11: Internal trigger 11 selected
  - TIM_TS_NONE: No trigger is needed
- **CommutationSource:** the Commutation Event source This parameter can be one of the following values:
  - TIM_COMMUTATION_TRGI: Commutation source is the TRGI of the Interface Timer
  - TIM_COMMUTATION_SOFTWARE: Commutation source is set by software using the COMG bit

Return values

- **HAL:** status

Notes

- This function is mandatory to use the commutation event in order to update the configuration at each commutation detection on the TRGI input of the Timer, the typical use of this feature is with the use of another Timer(interface Timer) configured in Hall sensor interface, this interface Timer will generate the commutation at its TRGO output (connected to Timer used in this function) each time the TI1 of the Interface Timer detect a commutation at its input TI1.

HAL_TIMEx_ConfigCommutEvent_DMA

Function name

HAL_StatusTypeDef HAL_TIMEx_ConfigCommutEvent_DMA (TIM_HandleTypeDef * htim, uint32_t InputTrigger, uint32_t CommutationSource)

Function description

Configure the TIM commutation event sequence with DMA.

Parameters

- **htim:** TIM handle
- **InputTrigger:** the Internal trigger corresponding to the Timer Interfacing with the Hall sensor This parameter can be one of the following values:
  - TIM_TS_ITR0: Internal trigger 0 selected
  - TIM_TS_ITR1: Internal trigger 1 selected
  - TIM_TS_ITR2: Internal trigger 2 selected
  - TIM_TS_ITR3: Internal trigger 3 selected
  - TIM_TS_ITR6: Internal trigger 6 selected
  - TIM_TS_ITR7: Internal trigger 7 selected
  - TIM_TS_ITR8: Internal trigger 8 selected
  - TIM_TS_ITR11: Internal trigger 11 selected
  - TIM_TS_NONE: No trigger is needed
- **CommutationSource:** the Commutation Event source This parameter can be one of the following values:
  - TIM_COMMUTATION_TRGI: Commutation source is the TRGI of the Interface Timer
  - TIM_COMMUTATION_SOFTWARE: Commutation source is set by software using the COMG bit

Return values

- **HAL:** status

Notes

- This function is mandatory to use the commutation event in order to update the configuration at each commutation detection on the TRGI input of the Timer, the typical use of this feature is with the use of another Timer(interface Timer) configured in Hall sensor interface, this interface Timer will generate the commutation at its TRGO output (connected to Timer used in this function) each time the TI1 of the Interface Timer detect a commutation at its input TI1.
- The user should configure the DMA in his own software, in This function only the COMDE bit is set

HAL_TIMEx_MasterConfigSynchronization

Function name

HAL_StatusTypeDef HAL_TIMEx_MasterConfigSynchronization (TIM_HandleTypeDef * htim, const TIM_MasterConfigTypeDef * sMasterConfig)

Function description

Configures the TIM in master mode.

Parameters

- **htim:** TIM handle.
- **sMasterConfig:** pointer to a TIM_MasterConfigTypeDef structure that contains the selected trigger output (TRGO) and the Master/Slave mode.

Return values

- **HAL:** status

HAL_TIMEx_ConfigBreakDeadTime

Function name

HAL_StatusTypeDef HAL_TIMEx_ConfigBreakDeadTime (TIM_HandleTypeDef * htim, const TIM_BreakDeadTimeConfigTypeDef * sBreakDeadTimeConfig)

Function description

Configures the Break feature, dead time, Lock level, OSSI/OSSR State and the AOE(automatic output enable).

Parameters

- **htim:** TIM handle
- **sBreakDeadTimeConfig:** pointer to a TIM_ConfigBreakDeadConfigTypeDef structure that contains the BDTR Register configuration information for the TIM peripheral.

Return values

- **HAL:** status

Notes

- Interrupts can be generated when an active level is detected on the break input, the break 2 input or the system break input. Break interrupt can be enabled by calling the __HAL_TIM_ENABLE_IT macro.

HAL_TIMEx_ConfigBreakInput

Function name

HAL_StatusTypeDef HAL_TIMEx_ConfigBreakInput (TIM_HandleTypeDef * htim, uint32_t BreakInput, const TIMEx_BreakInputConfigTypeDef * sBreakInputConfig)

Function description

Configures the break input source.

Parameters

- **htim:** TIM handle.
- **BreakInput:** Break input to configure This parameter can be one of the following values:
  - TIM_BREAKINPUT_BRK: Timer break input
  - TIM_BREAKINPUT_BRK2: Timer break 2 input
- **sBreakInputConfig:** Break input source configuration

Return values

- **HAL:** status

HAL_TIMEx_GroupChannel5

Function name

HAL_StatusTypeDef HAL_TIMEx_GroupChannel5 (TIM_HandleTypeDef * htim, uint32_t Channels)

Function description

Group channel 5 and channel 1, 2 or 3.

Parameters

- **htim:** TIM handle.
- **Channels:** specifies the reference signal(s) the OC5REF is combined with. This parameter can be any combination of the following values: TIM_GROUPCH5_NONE: No effect of OC5REF on OC1REFC, OC2REFC and OC3REFC TIM_GROUPCH5_OC1REFC: OC1REFC is the logical AND of OC1REFC and OC5REF TIM_GROUPCH5_OC2REFC: OC2REFC is the logical AND of OC2REFC and OC5REF TIM_GROUPCH5_OC3REFC: OC3REFC is the logical AND of OC3REFC and OC5REF

Return values

- **HAL:** status

HAL_TIMEx_RemapConfig

Function name

HAL_StatusTypeDef HAL_TIMEx_RemapConfig (TIM_HandleTypeDef * htim, uint32_t Remap)

Function description

Configures the TIMx Remapping input capabilities.

Parameters

- **htim:** TIM handle.
- **Remap:** specifies the TIM remapping source. For TIM1, the parameter can take one of the following values:
  - TIM_TIM1_ETR_GPIO TIM1 ETR is connected to GPIO
  - TIM_TIM1_ETR_COMP1 TIM1 ETR is connected to COMP1 OUT
  - TIM_TIM1_ETR_COMP2 TIM1 ETR is connected to COMP2 OUT
  - TIM_TIM1_ETR_MSIK TIM1 ETR is connected to MSIK
  - TIM_TIM1_ETR_HSI TIM1 ETR is connected to HSI
  - TIM_TIM1_ETR_ADC1_AWD1 TIM1 ETR is connected to ADC1 AWD1
  - TIM_TIM1_ETR_ADC1_AWD2 TIM1 ETR is connected to ADC1 AWD2
  - TIM_TIM1_ETR_ADC1_AWD3 TIM1 ETR is connected to ADC1 AWD3
  - TIM_TIM1_ETR_ADC2_AWD1 TIM1 ETR is connected to ADC2 AWD1
  - TIM_TIM1_ETR_ADC2_AWD2 TIM1 ETR is connected to ADC2 AWD2
  - TIM_TIM1_ETR_ADC2_AWD3 TIM1 ETR is connected to ADC2 AWD3

  For TIM2, the parameter can take one of the following values:
  - TIM_TIM2_ETR_GPIO TIM2 ETR is connected to GPIO
  - TIM_TIM2_ETR_COMP1 TIM2 ETR is connected to COMP1 OUT
  - TIM_TIM2_ETR_COMP2 TIM2 ETR is connected to COMP2 OUT
  - TIM_TIM2_ETR_MSIK TIM2 ETR is connected to MSIK
  - TIM_TIM2_ETR_HSI TIM2 ETR is connected to HSI
  - TIM_TIM2_ETR_TIM3_ETR TIM2_ETR is connected to TIM3_ETR
  - TIM_TIM2_ETR_TIM4_ETR TIM2_ETR is connected to TIM4_ETR
  - TIM_TIM2_ETR_LSE TIM2_ETR is connected to LSE
  - TIM_TIM2_ETR_USBFS_SOF TIM2_ETR is connected to USBFS OTG SOF

  For TIM3, the parameter can take one of the following values:
  - TIM_TIM3_ETR_GPIO TIM3 ETR is connected to GPIO
  - TIM_TIM3_ETR_COMP1 TIM3 ETR is connected to COMP1 OUT
  - TIM_TIM3_ETR_COMP2 TIM3 ETR is connected to COMP2 OUT
  - TIM_TIM3_ETR_MSIK TIM3 ETR is connected to MSIK
  - TIM_TIM3_ETR_HSI TIM3 ETR is connected to HSI
  - TIM_TIM3_ETR_TIM2_ETR TIM3 ETR is connected to TIM2 ETR
  - TIM_TIM3_ETR_TIM4_ETR TIM3 ETR is connected to TIM4_ETR
  - TIM_TIM3_ETR_ADC1_AWD1 TIM3 ETR is connected to ADC1 AWD1
  - TIM_TIM3_ETR_ADC1_AWD2 TIM3 ETR is connected to ADC1 AWD2
  - TIM_TIM3_ETR_ADC1_AWD3 TIM3 ETR is connected to ADC1 AWD3

  For TIM4, the parameter can take one of the following values:
  - TIM_TIM4_ETR_GPIO TIM4 ETR is connected to GPIO
  - TIM_TIM4_ETR_COMP1 TIM4 ETR is connected to COMP1 OUT
  - TIM_TIM4_ETR_COMP2 TIM4 ETR is connected to COMP2 OUT
  - TIM_TIM4_ETR_MSIK TIM4 ETR is connected to MSIK
  - TIM_TIM4_ETR_HSI TIM4 ETR is connected to HSI
  - TIM_TIM4_ETR_MSIS TIM4_ETR is connected to MSIS
  - TIM_TIM4_ETR_TIM3_ETR TIM4_ETR is connected to TIM3_ETR

Return values

- **HAL:** status

HAL_TIMEx_TISelection

Function name

HAL_StatusTypeDef HAL_TIMEx_TISelection (TIM_HandleTypeDef * htim, uint32_t TISelection, uint32_t Channel)

Function description

Select the timer input source.

Parameters

- **htim:** TIM handle.
- **Channel:** specifies the TIM Channel This parameter can be one of the following values:
  - TIM_CHANNEL_1: TI1 input channel
  - TIM_CHANNEL_2: TI2 input channel
  - TIM_CHANNEL_4: TI4 input channel

- **TISelection:** parameter of the TIM_TISelectionStruct structure is detailed as follows: For TIM1, the parameter is one of the following values:
  - TIM_TIM1_TI1_GPIO: TIM1 TI1 is connected to GPIO
  - TIM_TIM1_TI1_COMP1: TIM1 TI1 is connected to COMP1 OUT
  - TIM_TIM1_TI1_COMP2: TIM1 TI1 is connected to COMP2 OUT

  For TIM2, the parameter is one of the following values:
  - TIM_TIM2_TI1_GPIO: TIM2 TI1 is connected to GPIO
  - TIM_TIM2_TI1_COMP1: TIM2 TI1 is connected to COMP1 OUT
  - TIM_TIM2_TI1_COMP2: TIM2 TI1 is connected to COMP2 OUT
  - TIM_TIM2_TI2_GPIO: TIM2 TI2 is connected to GPIO
  - TIM_TIM2_TI2_COMP1: TIM2 TI2 is connected to COMP1 OUT
  - TIM_TIM2_TI2_COMP2: TIM2 TI2 is connected to COMP2 OUT
  - TIM_TIM2_TI4_GPIO: TIM2 TI4 is connected to GPIO
  - TIM_TIM2_TI4_COMP1: TIM2 TI4 is connected to COMP1 OUT
  - TIM_TIM2_TI4_COMP2: TIM2 TI4 is connected to COMP2 OUT

  For TIM3, the parameter is one of the following values:
  - TIM_TIM3_TI1_GPIO: TIM3 TI1 is connected to GPIO
  - TIM_TIM3_TI1_COMP1: TIM3 TI1 is connected to COMP1 OUT
  - TIM_TIM3_TI1_COMP2: TIM3 TI1 is connected to COMP2 OUT
  - TIM_TIM3_TI2_GPIO: TIM3 TI2 is connected to GPIO
  - TIM_TIM3_TI2_COMP1: TIM3 TI2 is connected to COMP1 OUT
  - TIM_TIM3_TI2_COMP2: TIM3 TI2 is connected to COMP2 OUT

  For TIM4, the parameter is one of the following values:
  - TIM_TIM4_TI1_GPIO: TIM4 TI1 is connected to GPIO
  - TIM_TIM4_TI1_COMP1: TIM4 TI1 is connected to COMP1 OUT
  - TIM_TIM4_TI1_COMP2: TIM4 TI1 is connected to COMP2 OUT
  - TIM_TIM4_TI2_GPIO: TIM4 TI2 is connected to GPIO
  - TIM_TIM3_TI2_COMP1: TIM3 TI2 is connected to COMP1 OUT
  - TIM_TIM3_TI2_COMP2: TIM3 sTI2 is connected to COMP2 OUT

  For TIM15, the parameter is one of the following values:
  - TIM_TIM15_TI1_GPIO: TIM15 TI1 is connected to GPIO
  - TIM_TIM15_TI1_LSE TIM15 TI1 is connected to LSE
  - TIM_TIM15_TI1_COMP1: TIM15 TI1 is connected to COMP1 OUT
  - TIM_TIM15_TI1_COMP2: TIM15 TI1 is connected to COMP2 OUT
  - TIM_TIM15_TI1_I3C1_IBIACK TIM15 TI1 is connected to I3C1 IBIACK
  - TIM_TIM15_TI2_GPIO: TIM15 TI2 is connected to GPIO
  - TIM_TIM15_TI2_COMP2: TIM15 TI1 is connected to COMP2 OUT
  - TIM_TIM15_TI2_I3C2: TIM15 TI1 is connected to I3C2 IBIACK

  For TIM16, the parameter is one of the following values:
  - TIM_TIM16_TI1_GPIO: TIM16 TI1 is connected to GPIO
  - TIM_TIM16_TI1_MCO: TIM16 TI1 is connected to MCO
  - TIM_TIM16_TI1_HSE_32: TIM16 TI1 is connected to HSE DIV 32
  - TIM_TIM16_TI1_RTC_WKUP: TIM16 TI1 is connected to RTC wakeup interrupt
  - TIM_TIM16_TI1_LSE: TIM16 TI1 is connected to LSE
  - TIM_TIM16_TI1_LSI: TIM16 TI1 is connected to LSI
  - TIM_TIM16_TI1_MSI_1024: TIM16 TI1 is connected to MSI DIV 1024
  - TIM_TIM16_TI1_MSI_4: TIM16 TI1 is connected to MSI DIV 4
  - TIM_TIM16_TI1_HSI_256: TIM16 TI1 is connected to MSI DIV 256
  - TIM_TIM16_TI1_I3C1_IBIACK: TIM16 TI1 is connected to I3C1 IBIACK

  For TIM17, the parameter is one of the following values:

- TIM_TIM17_TI1_GPIO: TIM17 TI1 is connected to GPIO
- TIM_TIM17_TI1_MCO: TIM17 TI1 is connected to MCO
- TIM_TIM17_TI1_HSE_32: TIM17 TI1 is connected to HSE DIV 32
- TIM_TIM17_TI1_RTC_WKUP: TIM17 TI1 is connected to RTC wakeup interrupt
- TIM_TIM17_TI1_LSE: TIM17 TI1 is connected to LSE
- TIM_TIM17_TI1_LSI: TIM17 TI1 is connected to LSI
- TIM_TIM17_TI1_MSI_1024: TIM17 TI1 is connected to MSI DIV 1024
- TIM_TIM17_TI1_MSI_4: TIM17 TI1 is connected to MSI DIV 4
- TIM_TIM17_TI1_HSI_256: TIM17 TI1 is connected to MSI DIV 256
- TIM_TIM17_TI1_I3C2_IBIACK: TIM17 TI1 is connected to I3C2 IBIACK

Return values

- **HAL:** status

HAL_TIMEx_DisarmBreakInput

Function name

HAL_StatusTypeDef HAL_TIMEx_DisarmBreakInput (TIM_HandleTypeDef * htim, uint32_t BreakInput)

Function description

Disarm the designated break input (when it operates in bidirectional mode).

Parameters

- **htim:** TIM handle.
- **BreakInput:** Break input to disarm This parameter can be one of the following values:
  - TIM_BREAKINPUT_BRK: Timer break input
  - TIM_BREAKINPUT_BRK2: Timer break 2 input

Return values

- **HAL:** status

Notes

- The break input can be disarmed only when it is configured in bidirectional mode and when when MOE is reset.
- Purpose is to be able to have the input voltage back to high-state, whatever the time constant on the output .

HAL_TIMEx_ReArmBreakInput

Function name

HAL_StatusTypeDef HAL_TIMEx_ReArmBreakInput (const TIM_HandleTypeDef * htim, uint32_t BreakInput)

Function description

Arm the designated break input (when it operates in bidirectional mode).

Parameters

- **htim:** TIM handle.
- **BreakInput:** Break input to arm This parameter can be one of the following values:
  - TIM_BREAKINPUT_BRK: Timer break input
  - TIM_BREAKINPUT_BRK2: Timer break 2 input

Return values

- **HAL:** status

Notes

- Arming is possible at anytime, even if fault is present.
- Break input is automatically armed as soon as MOE bit is set.

HAL_TIMEx_DitheringEnable

Function name

HAL_StatusTypeDef HAL_TIMEx_DitheringEnable (TIM_HandleTypeDef * htim)

Function description

Enable dithering.

Parameters

- **htim:** TIM handle

Return values

- **HAL:** status

Notes

- Main usage is PWM mode
- This function must be called when timer is stopped or disabled (CEN =0)
- If dithering is activated, pay attention to ARR, CCRx, CNT interpretation: CNT: only CNT[11:0] holds the non-dithered part for 16b timers (or CNT[26:0] for 32b timers)ARR: ARR[15:4] holds the non-dithered part, and ARR[3:0] the dither part for 16b timersCCRx: CCRx[15:4] holds the non-dithered part, and CCRx[3:0] the dither part for 16b timersARR and CCRx values are limited to 0xFFEF in dithering mode for 16b timers (corresponds to 4094 for the integer part and 15 for the dithered part).
- Macros __HAL_TIM_CALC_PERIOD_DITHER() __HAL_TIM_CALC_DELAY_DITHER() __HAL_TIM_CALC_PULSE_DITHER() can be used to calculate period (ARR) and delay (CCRx) value.
- Enabling dithering, modifies automatically values of registers ARR/CCRx to keep the same integer part.
- Enabling dithering, modifies automatically values of registers ARR/CCRx to keep the same integer part. So it may be necessary to read ARR value or CCRx value with macros __HAL_TIM_GET_AUTORELOAD() __HAL_TIM_GET_COMPARE() and if necessary update Init structure field htim->Init.Period .

HAL_TIMEx_DitheringDisable

Function name

HAL_StatusTypeDef HAL_TIMEx_DitheringDisable (TIM_HandleTypeDef * htim)

Function description

Disable dithering.

Parameters

- **htim:** TIM handle

Return values

- **HAL:** status

Notes

- This function must be called when timer is stopped or disabled (CEN =0)
- If dithering is activated, pay attention to ARR, CCRx, CNT interpretation: CNT: only CNT[11:0] holds the non-dithered part for 16b timers (or CNT[26:0] for 32b timers)ARR: ARR[15:4] holds the non-dithered part, and ARR[3:0] the dither part for 16b timersCCRx: CCRx[15:4] holds the non-dithered part, and CCRx[3:0] the dither part for 16b timersARR and CCRx values are limited to 0xFFEF in dithering mode (corresponds to 4094 for the integer part and 15 for the dithered part).
- Disabling dithering, modifies automatically values of registers ARR/CCRx to keep the same integer part. So it may be necessary to read ARR value or CCRx value with macros __HAL_TIM_GET_AUTORELOAD() __HAL_TIM_GET_COMPARE() and if necessary update Init structure field htim->Init.Period .

HAL_TIMEx_OC_ConfigPulseOnCompare

Function name

HAL_StatusTypeDef HAL_TIMEx_OC_ConfigPulseOnCompare (TIM_HandleTypeDef * htim, uint32_t PulseWidthPrescaler, uint32_t PulseWidth)

Function description

Initializes the pulse on compare pulse width and pulse prescaler.

Parameters

- **htim:** TIM Output Compare handle
- **PulseWidthPrescaler:** Pulse width prescaler This parameter can be a number between Min_Data = 0x0 and Max_Data = 0x7
- **PulseWidth:** Pulse width This parameter can be a number between Min_Data = 0x00 and Max_Data = 0xFF

Return values

- **HAL:** status

HAL_TIMEx_ConfigSlaveModePreload

Function name

HAL_StatusTypeDef HAL_TIMEx_ConfigSlaveModePreload (TIM_HandleTypeDef * htim, uint32_t Source)

Function description

Configure preload source of Slave Mode Selection bitfield (SMS in SMCR register)

Parameters

- **htim:** TIM handle
- **Source:** Source of slave mode selection preload This parameter can be one of the following values:
  - TIM_SMS_PRELOAD_SOURCE_UPDATE: Timer update event is used as source of Slave Mode Selection preload
  - TIM_SMS_PRELOAD_SOURCE_INDEX: Timer index event is used as source of Slave Mode Selection preload

Return values

- **HAL:** status

HAL_TIMEx_EnableSlaveModePreload

Function name

HAL_StatusTypeDef HAL_TIMEx_EnableSlaveModePreload (TIM_HandleTypeDef * htim)

Function description

Enable preload of Slave Mode Selection bitfield (SMS in SMCR register)

Parameters

- **htim:** TIM handle

Return values

- **HAL:** status

HAL_TIMEx_DisableSlaveModePreload

Function name

HAL_StatusTypeDef HAL_TIMEx_DisableSlaveModePreload (TIM_HandleTypeDef * htim)

Function description

Disable preload of Slave Mode Selection bitfield (SMS in SMCR register)

Parameters

- **htim:** TIM handle

Return values

- **HAL:** status

HAL_TIMEx_EnableDeadTimePreload

Function name

HAL_StatusTypeDef HAL_TIMEx_EnableDeadTimePreload (TIM_HandleTypeDef * htim)

Function description

Enable deadtime preload.

Parameters

- **htim:** TIM handle

Return values

- **HAL:** status

HAL_TIMEx_DisableDeadTimePreload

Function name

HAL_StatusTypeDef HAL_TIMEx_DisableDeadTimePreload (TIM_HandleTypeDef * htim)

Function description

Disable deadtime preload.

Parameters

- **htim:** TIM handle

Return values

- **HAL:** status

HAL_TIMEx_ConfigDeadTime

Function name

HAL_StatusTypeDef HAL_TIMEx_ConfigDeadTime (TIM_HandleTypeDef * htim, uint32_t Deadtime)

Function description

Configure deadtime.

Parameters

- **htim:** TIM handle
- **Deadtime:** Deadtime value

Return values

- **HAL:** status

Notes

- This parameter can be a number between Min_Data = 0x00 and Max_Data = 0xFF

HAL_TIMEx_ConfigAsymmetricalDeadTime

Function name

HAL_StatusTypeDef HAL_TIMEx_ConfigAsymmetricalDeadTime (TIM_HandleTypeDef * htim, uint32_t FallingDeadtime)

Function description

Configure asymmetrical deadtime.

Parameters

- **htim:** TIM handle
- **FallingDeadtime:** Falling edge deadtime value

Return values

- **HAL:** status

Notes

- This parameter can be a number between Min_Data = 0x00 and Max_Data = 0xFF

HAL_TIMEx_EnableAsymmetricalDeadTime

Function name

HAL_StatusTypeDef HAL_TIMEx_EnableAsymmetricalDeadTime (TIM_HandleTypeDef * htim)

Function description

Enable asymmetrical deadtime.

Parameters

- **htim:** TIM handle

Return values

- **HAL:** status

HAL_TIMEx_DisableAsymmetricalDeadTime

Function name

HAL_StatusTypeDef HAL_TIMEx_DisableAsymmetricalDeadTime (TIM_HandleTypeDef * htim)

Function description

Disable asymmetrical deadtime.

Parameters

- **htim:** TIM handle

Return values

- **HAL:** status

HAL_TIMEx_ConfigEncoderIndex

Function name

HAL_StatusTypeDef HAL_TIMEx_ConfigEncoderIndex (TIM_HandleTypeDef * htim, TIMEx_EncoderIndexConfigTypeDef * sEncoderIndexConfig)

Function description

Configures the encoder index.

Parameters

- **htim:** TIM handle.
- **sEncoderIndexConfig:** Encoder index configuration

Return values

- **HAL:** status

Notes

- warning in case of encoder mode clock plus direction TIM_ENCODERMODE_CLOCKPLUSDIRECTION_X1 or TIM_ENCODERMODE_CLOCKPLUSDIRECTION_X2 Direction must be set to TIM_ENCODERINDEX_DIRECTION_UP_DOWN

HAL_TIMEx_EnableEncoderIndex

Function name

HAL_StatusTypeDef HAL_TIMEx_EnableEncoderIndex (TIM_HandleTypeDef * htim)

Function description

Enable encoder index.

Parameters

- **htim:** TIM handle

Return values

- **HAL:** status

HAL_TIMEx_DisableEncoderIndex

Function name

HAL_StatusTypeDef HAL_TIMEx_DisableEncoderIndex (TIM_HandleTypeDef * htim)

Function description

Disable encoder index.

Parameters

- **htim:** TIM handle

Return values

- **HAL:** status

HAL_TIMEx_EnableEncoderFirstIndex

Function name

HAL_StatusTypeDef HAL_TIMEx_EnableEncoderFirstIndex (TIM_HandleTypeDef * htim)

Function description

Enable encoder first index.

Parameters

- **htim:** TIM handle

Return values

- **HAL:** status

HAL_TIMEx_DisableEncoderFirstIndex

Function name

HAL_StatusTypeDef HAL_TIMEx_DisableEncoderFirstIndex (TIM_HandleTypeDef * htim)

Function description

Disable encoder first index.

Parameters

- **htim:** TIM handle

Return values

- **HAL:** status

HAL_TIMEx_EnableADCSynchronization

Function name

HAL_StatusTypeDef HAL_TIMEx_EnableADCSynchronization (TIM_HandleTypeDef * htim)

Function description

Enable ADC synchronization.

Parameters

- **htim:** TIM handle

Return values

- **HAL:** status

Notes

- This mode can be enabled only when the counter period or the compare value - as per configured ADC trigger - is a multiple of the ADC clock period.

HAL_TIMEx_DisableADCSynchronization

Function name

HAL_StatusTypeDef HAL_TIMEx_DisableADCSynchronization (TIM_HandleTypeDef * htim)

Function description

Disable ADC synchronization.

Parameters

- **htim:** TIM handle

Return values

- **HAL:** status

HAL_TIMEx_CommutCallback

Function name

void HAL_TIMEx_CommutCallback (TIM_HandleTypeDef * htim)

Function description

Commutation callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIMEx_CommutHalfCpltCallback

Function name

void HAL_TIMEx_CommutHalfCpltCallback (TIM_HandleTypeDef * htim)

Function description

Commutation half complete callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIMEx_BreakCallback

Function name

void HAL_TIMEx_BreakCallback (TIM_HandleTypeDef * htim)

Function description

Break detection callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIMEx_Break2Callback

Function name

void HAL_TIMEx_Break2Callback (TIM_HandleTypeDef * htim)

Function description

Break2 detection callback in non blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIMEx_EncoderIndexCallback

Function name

void HAL_TIMEx_EncoderIndexCallback (TIM_HandleTypeDef * htim)

Function description

Encoder index callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIMEx_DirectionChangeCallback

Function name

void HAL_TIMEx_DirectionChangeCallback (TIM_HandleTypeDef * htim)

Function description

Direction change callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIMEx_IndexErrorCallback

Function name

void HAL_TIMEx_IndexErrorCallback (TIM_HandleTypeDef * htim)

Function description

Index error callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIMEx_TransitionErrorCallback

Function name

void HAL_TIMEx_TransitionErrorCallback (TIM_HandleTypeDef * htim)

Function description

Transition error callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIMEx_HallSensor_GetState

Function name

HAL_TIM_StateTypeDef HAL_TIMEx_HallSensor_GetState (const TIM_HandleTypeDef * htim)

Function description

Return the TIM Hall Sensor interface handle state.

Parameters

- **htim:** TIM Hall Sensor handle

Return values

- **HAL:** state

HAL_TIMEx_GetChannelNState

Function name

HAL_TIM_ChannelStateTypeDef HAL_TIMEx_GetChannelNState (const TIM_HandleTypeDef * htim, uint32_t ChannelN)

Function description

Return actual state of the TIM complementary channel.

Parameters

- **htim:** TIM handle
- **ChannelN:** TIM Complementary channel This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1
  - TIM_CHANNEL_2: TIM Channel 2
  - TIM_CHANNEL_3: TIM Channel 3
  - TIM_CHANNEL_4: TIM Channel 4

Return values

- **TIM:** Complementary channel state

TIMEx_DMACommutationCplt

Function name

void TIMEx_DMACommutationCplt (DMA_HandleTypeDef * hdma)

Function description

TIM DMA Commutation callback.

Parameters

- **hdma:** pointer to DMA handle.

Return values

- **None:**

TIMEx_DMACommutationHalfCplt

Function name

void TIMEx_DMACommutationHalfCplt (DMA_HandleTypeDef * hdma)

Function description

TIM DMA Commutation half complete callback.

Parameters

- **hdma:** pointer to DMA handle.

Return values

- **None:**

66.3 TIMEx Firmware driver defines

The following section lists the various define and macros of the module.

66.3.1 TIMEx

TIMEx

TIM Extended Break input

TIM_BREAKINPUT_BRK

Timer break input

TIM_BREAKINPUT_BRK2

Timer break2 input

TIM Extended Break input source

TIM_BREAKINPUTSOURCE_BKIN

An external source (GPIO) is connected to the BKIN pin

TIM_BREAKINPUTSOURCE_COMP1

The COMP1 output is connected to the break input

TIM_BREAKINPUTSOURCE_COMP2

The COMP2 output is connected to the break input

TIM Extended Break input source enabling

TIM_BREAKINPUTSOURCE_DISABLE

Break input source is disabled

TIM_BREAKINPUTSOURCE_ENABLE

Break input source is enabled

TIM Extended Break input polarity

TIM_BREAKINPUTSOURCE_POLARITY_LOW

Break input source is active low

TIM_BREAKINPUTSOURCE_POLARITY_HIGH

Break input source is active_high

TIM Extended Encoder index blanking

TIM_ENCODERINDEX_BLANKING_DISABLE

Encoder index blanking is disabled

TIM_ENCODERINDEX_BLANKING_TI3

Encoder index blanking is enabled on TI3

TIM_ENCODERINDEX_BLANKING_TI4

Encoder index blanking is enabled on TI4

TIM Extended Encoder index direction

TIM_ENCODERINDEX_DIRECTION_UP_DOWN

Index resets the counter whatever the direction

TIM_ENCODERINDEX_DIRECTION_UP

Index resets the counter when up-counting only

TIM_ENCODERINDEX_DIRECTION_DOWN

Index resets the counter when down-counting only

TIM Extended Encoder index polarity

TIM_ENCODERINDEX_POLARITY_INVERTED

Polarity for ETRx pin

TIM_ENCODERINDEX_POLARITY_NONINVERTED

Polarity for ETRx pin

TIM Extended Encoder index position

TIM_ENCODERINDEX_POSITION_00

Encoder index position is AB=00

TIM_ENCODERINDEX_POSITION_01

Encoder index position is AB=01

TIM_ENCODERINDEX_POSITION_10

Encoder index position is AB=10

TIM_ENCODERINDEX_POSITION_11

Encoder index position is AB=11

TIM_ENCODERINDEX_POSITION_0

In directional clock mode or clock plus direction mode, index resets the counter when clock is 0

TIM_ENCODERINDEX_POSITION_1

In directional clock mode or clock plus direction mode, index resets the counter when clock is 1

TIM Extended Encodder index prescaler

TIM_ENCODERINDEX_PRESCALER_DIV1

No prescaler is used

TIM_ENCODERINDEX_PRESCALER_DIV2

Prescaler for External ETR pin: Capture performed once every 2 events.

TIM_ENCODERINDEX_PRESCALER_DIV4

Prescaler for External ETR pin: Capture performed once every 4 events.

TIM_ENCODERINDEX_PRESCALER_DIV8

Prescaler for External ETR pin: Capture performed once every 8 events.

TIM Extended Exported Macros

__HAL_TIM_CALC_PSC

Description:

- HELPER macro calculating the prescaler value to achieve the required counter clock frequency.

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __CNTCLK__: counter clock frequency (in Hz)

Return value:

- Prescaler: value (between Min_Data=0 and Max_Data=65535)

Notes:

- ex: __HAL_TIM_CALC_PSC(80000000, 1000000);

__HAL_TIM_CALC_PERIOD

Description:

- HELPER macro calculating the auto-reload value to achieve the required output signal frequency.

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __PSC__: prescaler
- __FREQ__: output signal frequency (in Hz)

Return value:

- Auto-reload: value (between Min_Data=0 and Max_Data=65535)

Notes:

- ex: __HAL_TIM_CALC_PERIOD(1000000, 0, 10000);

__HAL_TIM_CALC_PERIOD_DITHER

Description:

- HELPER macro calculating the auto-reload value, with dithering feature enabled, to achieve the required output signal frequency.

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __PSC__: prescaler
- __FREQ__: output signal frequency (in Hz)

Return value:

- Auto-reload: value (between Min_Data=0 and Max_Data=65519)

Notes:

- ex: __HAL_TIM_CALC_PERIOD_DITHER(1000000, 0, 10000); This macro should be used only if dithering is already enabled

__HAL_TIM_CALC_PULSE

Description:

- HELPER macro calculating the compare value required to achieve the required timer output compare active/inactive delay.

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __PSC__: prescaler
- __DELAY__: timer output compare active/inactive delay (in us)

Return value:

- Compare: value (between Min_Data=0 and Max_Data=65535)

Notes:

- ex: __HAL_TIM_CALC_PULSE(1000000, 0, 10);

__HAL_TIM_CALC_PULSE_DITHER

Description:

- HELPER macro calculating the compare value, with dithering feature enabled, to achieve the required timer output compare active/inactive delay.

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __PSC__: prescaler
- __DELAY__: timer output compare active/inactive delay (in us)

Return value:

- Compare: value (between Min_Data=0 and Max_Data=65519)

Notes:

- ex: __HAL_TIM_CALC_PULSE_DITHER(1000000, 0, 10); This macro should be used only if dithering is already enabled

__HAL_TIM_CALC_PERIOD_BY_DELAY

Description:

- HELPER macro calculating the auto-reload value to achieve the required pulse duration (when the timer operates in one pulse mode).

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __PSC__: prescaler
- __DELAY__: timer output compare active/inactive delay (in us)
- __PULSE__: pulse duration (in us)

Return value:

- Auto-reload: value (between Min_Data=0 and Max_Data=65535)

Notes:

- ex: __HAL_TIM_CALC_PERIOD_BY_DELAY(1000000, 0, 10, 20);

__HAL_TIM_CALC_PERIOD_DITHER_BY_DELAY

Description:

- HELPER macro calculating the auto-reload value, with dithering feature enabled, to achieve the required pulse duration (when the timer operates in one pulse mode).

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __PSC__: prescaler
- __DELAY__: timer output compare active/inactive delay (in us)
- __PULSE__: pulse duration (in us)

Return value:

- Auto-reload: value (between Min_Data=0 and Max_Data=65519)

Notes:

- ex: __HAL_TIM_CALC_PERIOD_DITHER_BY_DELAY(1000000, 0, 10, 20); This macro should be used only if dithering is already enabled

  TSC Msp DeInit callback

67.2 TSC Firmware driver API description

The following section lists the various functions of the TSC library.

67.2.1 TSC specific features

1. Proven and robust surface charge transfer acquisition principle
2. Supports up to 3 capacitive sensing channels per group

3. Capacitive sensing channels can be acquired in parallel offering a very good response time
4. Spread spectrum feature to improve system robustness in noisy environments
5. Full hardware management of the charge transfer acquisition sequence
6. Programmable charge transfer frequency
7. Programmable sampling capacitor I/O pin
8. Programmable channel I/O pin
9. Programmable max count value to avoid long acquisition when a channel is faulty
10. Dedicated end of acquisition and max count error flags with interrupt capability
11. One sampling capacitor for up to 3 capacitive sensing channels to reduce the system components
12. Compatible with proximity, touchkey, linear and rotary touch sensor implementation

67.2.2 How to use this driver

1. Enable the TSC interface clock using __HAL_RCC_TSC_CLK_ENABLE() macro.
2. GPIO pins configuration
   - Enable the clock for the TSC GPIOs using __HAL_RCC_GPIOx_CLK_ENABLE() macro.
   - Configure the TSC pins used as sampling IOs in alternate function output Open-Drain mode, and TSC pins used as channel/shield IOs in alternate function output Push-Pull mode using HAL_GPIO_Init() function.
3. Interrupts configuration
   - Configure the NVIC (if the interrupt model is used) using HAL_NVIC_SetPriority() and HAL_NVIC_EnableIRQ() and function.
4. TSC configuration
   - Configure all TSC parameters and used TSC IOs using HAL_TSC_Init() function.

TSC peripheral alternate functions are mapped on AF9.

Acquisition sequence

- Discharge all IOs using HAL_TSC_IODischarge() function.
- Wait a certain time allowing a good discharge of all capacitors. This delay depends of the sampling capacitor and electrodes design.
- Select the channel IOs to be acquired using HAL_TSC_IOConfig() function.
- Launch the acquisition using either HAL_TSC_Start() or HAL_TSC_Start_IT() function. If the synchronized mode is selected, the acquisition will start as soon as the signal is received on the synchro pin.
- Wait the end of acquisition using either HAL_TSC_PollForAcquisition() or HAL_TSC_GetState() function or using WFI instruction for example.
- Check the group acquisition status using HAL_TSC_GroupGetStatus() function.
- Read the acquisition value using HAL_TSC_GroupGetValue() function.

Callback registration

The compilation flag USE_HAL_TSC_REGISTER_CALLBACKS when set to 1 allows the user to configure dynamically the driver callbacks. Use Functions HAL_TSC_RegisterCallback() to register an interrupt callback.

Function HAL_TSC_RegisterCallback() allows to register following callbacks:

- ConvCpltCallback : callback for conversion complete process.
- ErrorCallback : callback for error detection.
- MspInitCallback : callback for Msp Init.
- MspDeInitCallback : callback for Msp DeInit.

This function takes as parameters the HAL peripheral handle, the Callback ID and a pointer to the user callback function.

Use function HAL_TSC_UnRegisterCallback to reset a callback to the default weak function. HAL_TSC_UnRegisterCallback takes as parameters the HAL peripheral handle, and the Callback ID.

This function allows to reset following callbacks:

- ConvCpltCallback : callback for conversion complete process.

- ErrorCallback : callback for error detection.
- MspInitCallback : callback for Msp Init.
- MspDeInitCallback : callback for Msp DeInit.

By default, after the HAL_TSC_Init() and when the state is HAL_TSC_STATE_RESET all callbacks are set to the corresponding weak functions: examples HAL_TSC_ConvCpltCallback(), HAL_TSC_ErrorCallback(). Exception done for MspInit and MspDeInit functions that are reset to the legacy weak functions in the HAL_TSC_Init()/ HAL_TSC_DeInit() only when these callbacks are null (not registered beforehand). If MspInit or MspDeInit are not null, the HAL_TSC_Init()/ HAL_TSC_DeInit() keep and use the user MspInit/MspDeInit callbacks (registered beforehand) whatever the state.

Callbacks can be registered/unregistered in HAL_TSC_STATE_READY state only. Exception done MspInit/ MspDeInit functions that can be registered/unregistered in HAL_TSC_STATE_READY or HAL_TSC_STATE_RESET state, thus registered (user) MspInit/DeInit callbacks can be used during the Init/ DeInit. Then, the user first registers the MspInit/MspDeInit user callbacks using HAL_TSC_RegisterCallback() before calling HAL_TSC_DeInit() or HAL_TSC_Init() function.

When the compilation flag USE_HAL_TSC_REGISTER_CALLBACKS is set to 0 or not defined, the callback registration feature is not available and all callbacks are set to the corresponding weak functions.

67.2.3 Initialization and de-initialization functions

This section provides functions allowing to:

- Initialize and configure the TSC.
- De-initialize the TSC.

This section contains the following APIs:

- ***HAL_TSC_Init()***
- ***HAL_TSC_DeInit()***
- ***HAL_TSC_MspInit()***
- ***HAL_TSC_MspDeInit()***
- ***HAL_TSC_RegisterCallback()***
- ***HAL_TSC_UnRegisterCallback()***

67.2.4 IO Operation functions

This section provides functions allowing to:

- Start acquisition in polling mode.
- Start acquisition in interrupt mode.
- Stop conversion in polling mode.
- Stop conversion in interrupt mode.
- Poll for acquisition completed.
- Get group acquisition status.
- Get group acquisition value.

This section contains the following APIs:

- ***HAL_TSC_Start()***
- ***HAL_TSC_Start_IT()***
- ***HAL_TSC_Stop()***
- ***HAL_TSC_Stop_IT()***
- ***HAL_TSC_PollForAcquisition()***
- ***HAL_TSC_GroupGetStatus()***
- ***HAL_TSC_GroupGetValue()***

67.2.5 Peripheral Control functions

This section provides functions allowing to:

- Configure TSC IOs
- Discharge TSC IOs

This section contains the following APIs:

- *HAL_TSC_IOConfig()*
- *HAL_TSC_IODischarge()*

67.2.6 State and Errors functions

This subsection provides functions allowing to

- Get TSC state.

This section contains the following APIs:

- *HAL_TSC_GetState()*

67.2.7 Detailed description of functions

HAL_TSC_Init

Function name

HAL_StatusTypeDef HAL_TSC_Init (TSC_HandleTypeDef * htsc)

Function description

Initialize the TSC peripheral according to the specified parameters in the TSC_InitTypeDef structure and initialize the associated handle.

Parameters

- **htsc:** TSC handle

Return values

- **HAL:** status

HAL_TSC_DeInit

Function name

HAL_StatusTypeDef HAL_TSC_DeInit (TSC_HandleTypeDef * htsc)

Function description

Deinitialize the TSC peripheral registers to their default reset values.

Parameters

- **htsc:** TSC handle

Return values

- **HAL:** status

HAL_TSC_MspInit

Function name

void HAL_TSC_MspInit (TSC_HandleTypeDef * htsc)

Function description

Initialize the TSC MSP.

Parameters

- **htsc:** Pointer to a TSC_HandleTypeDef structure that contains the configuration information for the specified TSC.

Return values

- **None:**

HAL_TSC_MspDeInit

Function name

void HAL_TSC_MspDeInit (TSC_HandleTypeDef * htsc)

Function description

DeInitialize the TSC MSP.

Parameters

- **htsc:** Pointer to a TSC_HandleTypeDef structure that contains the configuration information for the specified TSC.

Return values

- **None:**

HAL_TSC_RegisterCallback

Function name

HAL_StatusTypeDef HAL_TSC_RegisterCallback (TSC_HandleTypeDef * htsc, HAL_TSC_CallbackIDTypeDef CallbackID, pTSC_CallbackTypeDef pCallback)

Function description

Register a User TSC Callback To be used instead of the weak predefined callback.

Parameters

- **htsc:** Pointer to a TSC_HandleTypeDef structure that contains the configuration information for the specified TSC.
- **CallbackID:** ID of the callback to be registered This parameter can be one of the following values:
  - HAL_TSC_CONV_COMPLETE_CB_ID Conversion completed callback ID
  - HAL_TSC_ERROR_CB_ID Error callback ID
  - HAL_TSC_MSPINIT_CB_ID MspInit callback ID
  - HAL_TSC_MSPDEINIT_CB_ID MspDeInit callback ID
- **pCallback:** pointer to the Callback function

Return values

- **HAL:** status

HAL_TSC_UnRegisterCallback

Function name

HAL_StatusTypeDef HAL_TSC_UnRegisterCallback (TSC_HandleTypeDef * htsc, HAL_TSC_CallbackIDTypeDef CallbackID)

Function description

Unregister an TSC Callback TSC callback is redirected to the weak predefined callback.

Parameters

- **htsc:** Pointer to a TSC_HandleTypeDef structure that contains the configuration information for the specified TSC.
- **CallbackID:** ID of the callback to be unregistered This parameter can be one of the following values: This parameter can be one of the following values:
  - HAL_TSC_CONV_COMPLETE_CB_ID Conversion completed callback ID
  - HAL_TSC_ERROR_CB_ID Error callback ID
  - HAL_TSC_MSPINIT_CB_ID MspInit callback ID
  - HAL_TSC_MSPDEINIT_CB_ID MspDeInit callback ID

Return values

- **HAL:** status

HAL_TSC_Start

Function name

HAL_StatusTypeDef HAL_TSC_Start (TSC_HandleTypeDef * htsc)

Function description

Start the acquisition.

Parameters

- **htsc:** Pointer to a TSC_HandleTypeDef structure that contains the configuration information for the specified TSC.

Return values

- **HAL:** status

HAL_TSC_Start_IT

Function name

HAL_StatusTypeDef HAL_TSC_Start_IT (TSC_HandleTypeDef * htsc)

Function description

Start the acquisition in interrupt mode.

Parameters

- **htsc:** Pointer to a TSC_HandleTypeDef structure that contains the configuration information for the specified TSC.

Return values

- **HAL:** status.

HAL_TSC_Stop

Function name

HAL_StatusTypeDef HAL_TSC_Stop (TSC_HandleTypeDef * htsc)

Function description

Stop the acquisition previously launched in polling mode.

Parameters

- **htsc:** Pointer to a TSC_HandleTypeDef structure that contains the configuration information for the specified TSC.

Return values

- **HAL:** status

HAL_TSC_Stop_IT

Function name

HAL_StatusTypeDef HAL_TSC_Stop_IT (TSC_HandleTypeDef * htsc)

Function description

Stop the acquisition previously launched in interrupt mode.

Parameters

- **htsc:** Pointer to a TSC_HandleTypeDef structure that contains the configuration information for the specified TSC.

Return values

- **HAL:** status

HAL_TSC_PollForAcquisition

Function name

HAL_StatusTypeDef HAL_TSC_PollForAcquisition (TSC_HandleTypeDef * htsc)

Function description

Start acquisition and wait until completion.

Parameters

- **htsc:** Pointer to a TSC_HandleTypeDef structure that contains the configuration information for the specified TSC.

Return values

- **HAL:** state

Notes

- There is no need of a timeout parameter as the max count error is already managed by the TSC peripheral.

HAL_TSC_GroupGetStatus

Function name

TSC_GroupStatusTypeDef HAL_TSC_GroupGetStatus (const TSC_HandleTypeDef * htsc, uint32_t gx_index)

Function description

Get the acquisition status for a group.

Parameters

- **htsc:** Pointer to a TSC_HandleTypeDef structure that contains the configuration information for the specified TSC.
- **gx_index:** Index of the group

Return values

- **Group:** status

HAL_TSC_GroupGetValue

Function name

uint32_t HAL_TSC_GroupGetValue (const TSC_HandleTypeDef * htsc, uint32_t gx_index)

Function description

Get the acquisition measure for a group.

Parameters

- **htsc:** Pointer to a TSC_HandleTypeDef structure that contains the configuration information for the specified TSC.
- **gx_index:** Index of the group

Return values

- **Acquisition:** measure

HAL_TSC_IOConfig

Function name

HAL_StatusTypeDef HAL_TSC_IOConfig (TSC_HandleTypeDef * htsc, const TSC_IOConfigTypeDef * config)

Function description

Configure TSC IOs.

Parameters

- **htsc:** Pointer to a TSC_HandleTypeDef structure that contains the configuration information for the specified TSC.
- **config:** Pointer to the configuration structure.

Return values

- **HAL:** status

HAL_TSC_IODischarge

Function name

HAL_StatusTypeDef HAL_TSC_IODischarge (TSC_HandleTypeDef * htsc, FunctionalState choice)

Function description

Discharge TSC IOs.

Parameters

- **htsc:** Pointer to a TSC_HandleTypeDef structure that contains the configuration information for the specified TSC.
- **choice:** This parameter can be set to ENABLE or DISABLE.

Return values

- **HAL:** status

HAL_TSC_GetState

Function name

HAL_TSC_StateTypeDef HAL_TSC_GetState (TSC_HandleTypeDef * htsc)

Function description

Return the TSC handle state.

Parameters

- **htsc:** Pointer to a TSC_HandleTypeDef structure that contains the configuration information for the specified TSC.

Return values

- **HAL:** state

HAL_TSC_IRQHandler

Function name

void HAL_TSC_IRQHandler (TSC_HandleTypeDef * htsc)

Function description

Handle TSC interrupt request.

Parameters

- **htsc:** Pointer to a TSC_HandleTypeDef structure that contains the configuration information for the specified TSC.

Return values

- **None:**

HAL_TSC_ConvCpltCallback

Function name

void HAL_TSC_ConvCpltCallback (TSC_HandleTypeDef * htsc)

Function description

Acquisition completed callback in non-blocking mode.

Parameters

- **htsc:** Pointer to a TSC_HandleTypeDef structure that contains the configuration information for the specified TSC.

Return values

- **None:**

HAL_TSC_ErrorCallback

Function name

void HAL_TSC_ErrorCallback (TSC_HandleTypeDef * htsc)

Function description

Error callback in non-blocking mode.

Parameters

- **htsc:** Pointer to a TSC_HandleTypeDef structure that contains the configuration information for the specified TSC.

Return values

- **None:**

67.3 TSC Firmware driver defines

The following section lists the various define and macros of the module.

67.3.1 TSC

TSC

Acquisition Mode

TSC_ACQ_MODE_NORMAL

Normal acquisition mode (acquisition starts as soon as START bit is set)

TSC_ACQ_MODE_SYNCHRO

Synchronized acquisition mode (acquisition starts if START bit is set and when the selected signal is detected on the SYNC input pin)

CTPulse High Length

TSC_CTPH_1CYCLE

Charge transfer pulse high during 1 cycle (PGCLK)

TSC_CTPH_2CYCLES

Charge transfer pulse high during 2 cycles (PGCLK)

TSC_CTPH_3CYCLES

Charge transfer pulse high during 3 cycles (PGCLK)

TSC_CTPH_4CYCLES

Charge transfer pulse high during 4 cycles (PGCLK)

TSC_CTPH_5CYCLES

Charge transfer pulse high during 5 cycles (PGCLK)

TSC_CTPH_6CYCLES

Charge transfer pulse high during 6 cycles (PGCLK)

TSC_CTPH_7CYCLES

Charge transfer pulse high during 7 cycles (PGCLK)

TSC_CTPH_8CYCLES

Charge transfer pulse high during 8 cycles (PGCLK)

TSC_CTPH_9CYCLES

Charge transfer pulse high during 9 cycles (PGCLK)

TSC_CTPH_10CYCLES

Charge transfer pulse high during 10 cycles (PGCLK)

TSC_CTPH_11CYCLES

Charge transfer pulse high during 11 cycles (PGCLK)

TSC_CTPH_12CYCLES

Charge transfer pulse high during 12 cycles (PGCLK)

TSC_CTPH_13CYCLES

Charge transfer pulse high during 13 cycles (PGCLK)

TSC_CTPH_14CYCLES

Charge transfer pulse high during 14 cycles (PGCLK)

TSC_CTPH_15CYCLES

Charge transfer pulse high during 15 cycles (PGCLK)

TSC_CTPH_16CYCLES

Charge transfer pulse high during 16 cycles (PGCLK)

CTPulse Low Length

TSC_CTPL_1CYCLE

Charge transfer pulse low during 1 cycle (PGCLK)

TSC_CTPL_2CYCLES

Charge transfer pulse low during 2 cycles (PGCLK)

TSC_CTPL_3CYCLES

Charge transfer pulse low during 3 cycles (PGCLK)

TSC_CTPL_4CYCLES

Charge transfer pulse low during 4 cycles (PGCLK)

TSC_CTPL_5CYCLES

Charge transfer pulse low during 5 cycles (PGCLK)

TSC_CTPL_6CYCLES

Charge transfer pulse low during 6 cycles (PGCLK)

TSC_CTPL_7CYCLES

Charge transfer pulse low during 7 cycles (PGCLK)

TSC_CTPL_8CYCLES

Charge transfer pulse low during 8 cycles (PGCLK)

TSC_CTPL_9CYCLES

Charge transfer pulse low during 9 cycles (PGCLK)

TSC_CTPL_10CYCLES

Charge transfer pulse low during 10 cycles (PGCLK)

TSC_CTPL_11CYCLES

Charge transfer pulse low during 11 cycles (PGCLK)

TSC_CTPL_12CYCLES

Charge transfer pulse low during 12 cycles (PGCLK)

TSC_CTPL_13CYCLES

Charge transfer pulse low during 13 cycles (PGCLK)

TSC_CTPL_14CYCLES

Charge transfer pulse low during 14 cycles (PGCLK)

TSC_CTPL_15CYCLES

Charge transfer pulse low during 15 cycles (PGCLK)

TSC_CTPL_16CYCLES

Charge transfer pulse low during 16 cycles (PGCLK)

TSC Error Code definition

HAL_TSC_ERROR_NONE

No error

HAL_TSC_ERROR_INVALID_CALLBACK

Invalid Callback error

TSC Exported Macros

__HAL_TSC_RESET_HANDLE_STATE

Description:

- Reset TSC handle state.

Parameters:

- __HANDLE__: TSC handle

Return value:

- None

__HAL_TSC_ENABLE

Description:

- Enable the TSC peripheral.

Parameters:

- __HANDLE__: TSC handle

Return value:

- None

__HAL_TSC_DISABLE

Description:

- Disable the TSC peripheral.

Parameters:

- __HANDLE__: TSC handle

Return value:

- None

__HAL_TSC_START_ACQ

Description:

- Start acquisition.

Parameters:

- __HANDLE__: TSC handle

Return value:

- None

__HAL_TSC_STOP_ACQ

Description:

- Stop acquisition.

Parameters:

- __HANDLE__: TSC handle

Return value:

- None

__HAL_TSC_SET_IODEF_OUTPPLOW

Description:

- Set IO default mode to output push-pull low.

Parameters:

- __HANDLE__: TSC handle

Return value:

- None

__HAL_TSC_SET_IODEF_INFLOAT

Description:

- Set IO default mode to input floating.

Parameters:

- __HANDLE__: TSC handle

Return value:

- None

__HAL_TSC_SET_SYNC_POL_FALL

Description:

- Set synchronization polarity to falling edge.

Parameters:

- __HANDLE__: TSC handle

Return value:

- None

__HAL_TSC_SET_SYNC_POL_RISE_HIGH

Description:

- Set synchronization polarity to rising edge and high level.

Parameters:

- __HANDLE__: TSC handle

Return value:

- None

__HAL_TSC_ENABLE_IT

Description:

- Enable TSC interrupt.

Parameters:

- __HANDLE__: TSC handle
- __INTERRUPT__: TSC interrupt

Return value:

- None

__HAL_TSC_DISABLE_IT

Description:

- Disable TSC interrupt.

Parameters:

- __HANDLE__: TSC handle
- __INTERRUPT__: TSC interrupt

Return value:

- None

__HAL_TSC_GET_IT_SOURCE

Description:

- Check whether the specified TSC interrupt source is enabled or not.

Parameters:

- __HANDLE__: TSC Handle
- __INTERRUPT__: TSC interrupt

Return value:

- SET: or RESET

__HAL_TSC_GET_FLAG

Description:

- Check whether the specified TSC flag is set or not.

Parameters:

- __HANDLE__: TSC handle
- __FLAG__: TSC flag

Return value:

- SET: or RESET

__HAL_TSC_CLEAR_FLAG

Description:

- Clear the TSC's pending flag.

Parameters:

- __HANDLE__: TSC handle
- __FLAG__: TSC flag

Return value:

- None

__HAL_TSC_ENABLE_HYSTERESIS

Description:

- Enable schmitt trigger hysteresis on a group of IOs.

Parameters:

- __HANDLE__: TSC handle
- __GX_IOY_MASK__: IOs mask

Return value:

- None

__HAL_TSC_DISABLE_HYSTERESIS

Description:

- Disable schmitt trigger hysteresis on a group of IOs.

Parameters:

- __HANDLE__: TSC handle
- __GX_IOY_MASK__: IOs mask

Return value:

- None

__HAL_TSC_OPEN_ANALOG_SWITCH

Description:

- Open analog switch on a group of IOs.

Parameters:

- __HANDLE__: TSC handle
- __GX_IOY_MASK__: IOs mask

Return value:

- None

__HAL_TSC_CLOSE_ANALOG_SWITCH

Description:

- Close analog switch on a group of IOs.

Parameters:

- __HANDLE__: TSC handle
- __GX_IOY_MASK__: IOs mask

Return value:

- None

__HAL_TSC_ENABLE_CHANNEL

Description:

- Enable a group of IOs in channel mode.

Parameters:

- __HANDLE__: TSC handle
- __GX_IOY_MASK__: IOs mask

Return value:

- None

__HAL_TSC_DISABLE_CHANNEL

Description:

- Disable a group of channel IOs.

Parameters:

- __HANDLE__: TSC handle
- __GX_IOY_MASK__: IOs mask

Return value:

- None

__HAL_TSC_ENABLE_SAMPLING

Description:

- Enable a group of IOs in sampling mode.

Parameters:

- __HANDLE__: TSC handle
- __GX_IOY_MASK__: IOs mask

Return value:

- None

__HAL_TSC_DISABLE_SAMPLING

Description:

- Disable a group of sampling IOs.

Parameters:

- __HANDLE__: TSC handle
- __GX_IOY_MASK__: IOs mask

Return value:

- None

__HAL_TSC_ENABLE_GROUP

Description:

- Enable acquisition groups.

Parameters:

- __HANDLE__: TSC handle
- __GX_MASK__: Groups mask

Return value:

- None

__HAL_TSC_DISABLE_GROUP

Description:

- Disable acquisition groups.

Parameters:

- __HANDLE__: TSC handle
- __GX_MASK__: Groups mask

Return value:

- None

__HAL_TSC_GET_GROUP_STATUS

Description:

- Gets acquisition group status.

Parameters:

- __HANDLE__: TSC Handle
- __GX_INDEX__: Group index

Return value:

- SET: or RESET

68 HAL UART Generic Driver

68.1 UART Firmware driver registers structures

68.1.1 UART_InitTypeDef

UART_InitTypeDef is defined in the stm32u3xx_hal_uart.h

Data Fields

- ***uint32_t BaudRate***
- ***uint32_t WordLength***
- ***uint32_t StopBits***
- ***uint32_t Parity***
- ***uint32_t Mode***
- ***uint32_t HwFlowCtl***
- ***uint32_t OverSampling***
- ***uint32_t OneBitSampling***
- ***uint32_t ClockPrescaler***

Field Documentation

- ***uint32_t UART_InitTypeDef::BaudRate***
  This member configures the UART communication baud rate. The baud rate register is computed using the following formula: UART: Baud Rate Register = ((256 * uart_ker_ckpres) / ((huart->Init.BaudRate))) where uart_ker_ck_pres is the UART input clock divided by a prescaler UART:
  - If oversampling is 16 or in LIN mode, Baud Rate Register = ((uart_ker_ckpres) / ((huart->Init.BaudRate)))
  - If oversampling is 8, Baud Rate Register[15:4] = ((2 * uart_ker_ckpres) / ((huart->Init.BaudRate))) [15:4] Baud Rate Register[3] = 0 Baud Rate Register[2:0] = (((2 * uart_ker_ckpres) / ((huart->Init.BaudRate)))[3:0]) >> 1 where uart_ker_ck_pres is the UART input clock divided by a prescaler
- ***uint32_t UART_InitTypeDef::WordLength***
  Specifies the number of data bits transmitted or received in a frame. This parameter can be a value of ***UARTEx_Word_Length***.
- ***uint32_t UART_InitTypeDef::StopBits***
  Specifies the number of stop bits transmitted. This parameter can be a value of ***UART_Stop_Bits***.
- ***uint32_t UART_InitTypeDef::Parity***
  Specifies the parity mode. This parameter can be a value of ***UART_Parity***
  Note:
  - When parity is enabled, the computed parity is inserted at the MSB position of the transmitted data (9th bit when the word length is set to 9 data bits; 8th bit when the word length is set to 8 data bits).
- ***uint32_t UART_InitTypeDef::Mode***
  Specifies whether the Receive or Transmit mode is enabled or disabled. This parameter can be a value of ***UART_Mode***.
- ***uint32_t UART_InitTypeDef::HwFlowCtl***
  Specifies whether the hardware flow control mode is enabled or disabled. This parameter can be a value of ***UART_Hardware_Flow_Control***.
- ***uint32_t UART_InitTypeDef::OverSampling***
  Specifies whether the Over sampling 8 is enabled or disabled, to achieve higher speed (up to f_PCLK/8). This parameter can be a value of ***UART_Over_Sampling***.
- ***uint32_t UART_InitTypeDef::OneBitSampling***
  Specifies whether a single sample or three samples' majority vote is selected. Selecting the single sample method increases the receiver tolerance to clock deviations. This parameter can be a value of ***UART_OneBit_Sampling***.
- ***uint32_t UART_InitTypeDef::ClockPrescaler***
  Specifies the prescaler value used to divide the UART clock source. This parameter can be a value of ***UART_ClockPrescaler***.

68.1.2 UART_AdvFeatureInitTypeDef

UART_AdvFeatureInitTypeDef is defined in the stm32u3xx_hal_uart.h

Data Fields

- ***uint32_t AdvFeatureInit***
- ***uint32_t TxPinLevelInvert***
- ***uint32_t RxPinLevelInvert***
- ***uint32_t DataInvert***
- ***uint32_t Swap***
- ***uint32_t OverrunDisable***
- ***uint32_t DMADisableonRxError***
- ***uint32_t AutoBaudRateEnable***
- ***uint32_t AutoBaudRateMode***
- ***uint32_t MSBFirst***

Field Documentation

- ***uint32_t UART_AdvFeatureInitTypeDef::AdvFeatureInit***
  Specifies which advanced UART features is initialized. Several Advanced Features may be initialized at the same time . This parameter can be a value of ***UART_Advanced_Features_Initialization_Type***.
- ***uint32_t UART_AdvFeatureInitTypeDef::TxPinLevelInvert***
  Specifies whether the TX pin active level is inverted. This parameter can be a value of ***UART_Tx_Inv***.
- ***uint32_t UART_AdvFeatureInitTypeDef::RxPinLevelInvert***
  Specifies whether the RX pin active level is inverted. This parameter can be a value of ***UART_Rx_Inv***.
- ***uint32_t UART_AdvFeatureInitTypeDef::DataInvert***
  Specifies whether data are inverted (positive/direct logic vs negative/inverted logic). This parameter can be a value of ***UART_Data_Inv***.
- ***uint32_t UART_AdvFeatureInitTypeDef::Swap***
  Specifies whether TX and RX pins are swapped. This parameter can be a value of ***UART_Rx_Tx_Swap***.
- ***uint32_t UART_AdvFeatureInitTypeDef::OverrunDisable***
  Specifies whether the reception overrun detection is disabled. This parameter can be a value of ***UART_Overrun_Disable***.
- ***uint32_t UART_AdvFeatureInitTypeDef::DMADisableonRxError***
  Specifies whether the DMA is disabled in case of reception error. This parameter can be a value of ***UART_DMA_Disable_on_Rx_Error***.
- ***uint32_t UART_AdvFeatureInitTypeDef::AutoBaudRateEnable***
  Specifies whether auto Baud rate detection is enabled. This parameter can be a value of ***UART_AutoBaudRate_Enable***.
- ***uint32_t UART_AdvFeatureInitTypeDef::AutoBaudRateMode***
  If auto Baud rate detection is enabled, specifies how the rate detection is carried out. This parameter can be a value of ***UART_AutoBaud_Rate_Mode***.
- ***uint32_t UART_AdvFeatureInitTypeDef::MSBFirst***
  Specifies whether MSB is sent first on UART line. This parameter can be a value of ***UART_MSB_First***.

68.1.3 __UART_HandleTypeDef

__UART_HandleTypeDef is defined in the stm32u3xx_hal_uart.h

Data Fields

- ***USART_TypeDef * Instance***
- ***UART_InitTypeDef Init***
- ***UART_AdvFeatureInitTypeDef AdvancedInit***
- ***const uint8_t * pTxBuffPtr***
- ***uint16_t TxXferSize***
- ***__IO uint16_t TxXferCount***
- ***uint8_t * pRxBuffPtr***
- ***uint16_t RxXferSize***
- ***__IO uint16_t RxXferCount***

- ***void(* __UART_HandleTypeDef::AbortReceiveCpltCallback)(struct __UART_HandleTypeDef *huart)***
  UART Abort Receive Complete Callback
- ***void(* __UART_HandleTypeDef::RxFifoFullCallback)(struct __UART_HandleTypeDef *huart)***
  UART Rx Fifo Full Callback
- ***void(* __UART_HandleTypeDef::TxFifoEmptyCallback)(struct __UART_HandleTypeDef *huart)***
  UART Tx Fifo Empty Callback
- ***void(* __UART_HandleTypeDef::RxEventCallback)(struct __UART_HandleTypeDef *huart, uint16_t Pos)***
  UART Reception Event Callback
- ***void(* __UART_HandleTypeDef::MspInitCallback)(struct __UART_HandleTypeDef *huart)***
  UART Msp Init callback
- ***void(* __UART_HandleTypeDef::MspDeInitCallback)(struct __UART_HandleTypeDef *huart)***
  UART Msp DeInit callback

68.2 UART Firmware driver API description

The following section lists the various functions of the UART library.

68.2.1 How to use this driver

The UART HAL driver can be used as follows:

1. Declare a UART_HandleTypeDef handle structure (eg. UART_HandleTypeDef huart).
2. Initialize the UART low level resources by implementing the HAL_UART_MspInit() API:
   - Enable the USARTx interface clock.
   - UART pins configuration:
     - Enable the clock for the UART GPIOs.
     - Configure these UART pins as alternate function pull-up.
   - NVIC configuration if you need to use interrupt process (HAL_UART_Transmit_IT() and HAL_UART_Receive_IT() APIs):
     - Configure the USARTx interrupt priority.
     - Enable the NVIC USART IRQ handle.
   - UART interrupts handling:

   Note: The specific UART interrupts (Transmission complete interrupt, RXNE interrupt, RX/TX FIFOs related interrupts and Error Interrupts) are managed using the macros __HAL_UART_ENABLE_IT() and __HAL_UART_DISABLE_IT() inside the transmit and receive processes.

   - DMA Configuration if you need to use DMA process (HAL_UART_Transmit_DMA() and HAL_UART_Receive_DMA() APIs):
     - Declare a DMA handle structure for the Tx/Rx channel.
     - Enable the DMAx interface clock.
     - Configure the declared DMA handle structure with the required Tx/Rx parameters.
     - Configure the DMA Tx/Rx channel.
     - Associate the initialized DMA handle to the UART DMA Tx/Rx handle.
     - Configure the priority and enable the NVIC for the transfer complete interrupt on the DMA Tx/Rx channel.
3. Program the Baud Rate, Word Length, Stop Bit, Parity, Prescaler value , Hardware flow control and Mode (Receiver/Transmitter) in the huart handle Init structure.
4. If required, program UART advanced features (TX/RX pins swap, auto Baud rate detection,...) in the huart handle AdvancedInit structure.
5. For the UART asynchronous mode, initialize the UART registers by calling the HAL_UART_Init() API.
6. For the UART Half duplex mode, initialize the UART registers by calling the HAL_HalfDuplex_Init() API.
7. For the UART LIN (Local Interconnection Network) mode, initialize the UART registers by calling the HAL_LIN_Init() API.
8. For the UART Multiprocessor mode, initialize the UART registers by calling the HAL_MultiProcessor_Init() API.
9. For the UART RS485 Driver Enabled mode, initialize the UART registers by calling the HAL_RS485Ex_Init() API.

Note: These API's (HAL_UART_Init(), HAL_HalfDuplex_Init(), HAL_LIN_Init(), HAL_MultiProcessor_Init(), also configure the low level Hardware GPIO, CLOCK, CORTEX...etc) by calling the customized HAL_UART_MspInit() API.

68.2.2 Callback registration

The compilation define USE_HAL_UART_REGISTER_CALLBACKS when set to 1 allows the user to configure dynamically the driver callbacks.

Use Function HAL_UART_RegisterCallback() to register a user callback. Function HAL_UART_RegisterCallback() allows to register following callbacks:

- TxHalfCpltCallback : Tx Half Complete Callback.
- TxCpltCallback : Tx Complete Callback.
- RxHalfCpltCallback : Rx Half Complete Callback.
- RxCpltCallback : Rx Complete Callback.
- ErrorCallback : Error Callback.
- AbortCpltCallback : Abort Complete Callback.
- AbortTransmitCpltCallback : Abort Transmit Complete Callback.

- AbortReceiveCpltCallback : Abort Receive Complete Callback.
- WakeupCallback : Wakeup Callback.
- RxFifoFullCallback : Rx Fifo Full Callback.
- TxFifoEmptyCallback : Tx Fifo Empty Callback.
- MspInitCallback : UART MspInit.
- MspDeInitCallback : UART MspDeInit. This function takes as parameters the HAL peripheral handle, the Callback ID and a pointer to the user callback function.

Use function HAL_UART_UnRegisterCallback() to reset a callback to the default weak function. HAL_UART_UnRegisterCallback() takes as parameters the HAL peripheral handle, and the Callback ID. This function allows to reset following callbacks:

- TxHalfCpltCallback : Tx Half Complete Callback.
- TxCpltCallback : Tx Complete Callback.
- RxHalfCpltCallback : Rx Half Complete Callback.
- RxCpltCallback : Rx Complete Callback.
- ErrorCallback : Error Callback.
- AbortCpltCallback : Abort Complete Callback.
- AbortTransmitCpltCallback : Abort Transmit Complete Callback.
- AbortReceiveCpltCallback : Abort Receive Complete Callback.
- WakeupCallback : Wakeup Callback.
- RxFifoFullCallback : Rx Fifo Full Callback.
- TxFifoEmptyCallback : Tx Fifo Empty Callback.
- MspInitCallback : UART MspInit.
- MspDeInitCallback : UART MspDeInit.

For specific callback RxEventCallback, use dedicated registration/reset functions: respectively HAL_UART_RegisterRxEventCallback() , HAL_UART_UnRegisterRxEventCallback().

By default, after the HAL_UART_Init() and when the state is HAL_UART_STATE_RESET all callbacks are set to the corresponding weak functions: examples HAL_UART_TxCpltCallback(), HAL_UART_RxHalfCpltCallback(). Exception done for MspInit and MspDeInit functions that are respectively reset to the legacy weak functions in the HAL_UART_Init() and HAL_UART_DeInit() only when these callbacks are null (not registered beforehand). If not, MspInit or MspDeInit are not null, the HAL_UART_Init() and HAL_UART_DeInit() keep and use the user MspInit/MspDeInit callbacks (registered beforehand).

Callbacks can be registered/unregistered in HAL_UART_STATE_READY state only. Exception done MspInit/MspDeInit that can be registered/unregistered in HAL_UART_STATE_READY or HAL_UART_STATE_RESET state, thus registered (user) MspInit/DeInit callbacks can be used during the Init/DeInit. In that case first register the MspInit/MspDeInit user callbacks using HAL_UART_RegisterCallback() before calling HAL_UART_DeInit() or HAL_UART_Init() function.

When The compilation define USE_HAL_UART_REGISTER_CALLBACKS is set to 0 or not defined, the callback registration feature is not available and weak callbacks are used.

68.2.3 Initialization and Configuration functions

This subsection provides a set of functions allowing to initialize the USARTx or the UARTy in asynchronous mode.

- For the asynchronous mode the parameters below can be configured:
  - Baud Rate
  - Word Length
  - Stop Bit
  - Parity: If the parity is enabled, then the MSB bit of the data written in the data register is transmitted but is changed by the parity bit.
  - Hardware flow control
  - Receiver/transmitter modes
  - Over Sampling Method
  - One-Bit Sampling Method

- For the asynchronous mode, the following advanced features can be configured as well:
  - TX and/or RX pin level inversion
  - data logical level inversion
  - RX and TX pins swap
  - RX overrun detection disabling
  - DMA disabling on RX error
  - MSB first on communication line
  - auto Baud rate detection

The HAL_UART_Init(), HAL_HalfDuplex_Init(), HAL_LIN_Init()and HAL_MultiProcessor_Init()API follow respectively the UART asynchronous, UART Half duplex, UART LIN mode and UART multiprocessor mode configuration procedures (details for the procedures are available in reference manual).

This section contains the following APIs:

- ***HAL_UART_Init()***
- ***HAL_HalfDuplex_Init()***
- ***HAL_LIN_Init()***
- ***HAL_MultiProcessor_Init()***
- ***HAL_UART_DeInit()***
- ***HAL_UART_MspInit()***
- ***HAL_UART_MspDeInit()***
- ***HAL_UART_RegisterCallback()***
- ***HAL_UART_UnRegisterCallback()***
- ***HAL_UART_RegisterRxEventCallback()***
- ***HAL_UART_UnRegisterRxEventCallback()***

68.2.4 IO operation functions

This section contains the following APIs:

- ***HAL_UART_Transmit()***
- ***HAL_UART_Receive()***
- ***HAL_UART_Transmit_IT()***
- ***HAL_UART_Receive_IT()***
- ***HAL_UART_Transmit_DMA()***
- ***HAL_UART_Receive_DMA()***
- ***HAL_UART_DMAPause()***
- ***HAL_UART_DMAResume()***
- ***HAL_UART_DMAStop()***
- ***HAL_UART_Abort()***
- ***HAL_UART_AbortTransmit()***
- ***HAL_UART_AbortReceive()***
- ***HAL_UART_Abort_IT()***
- ***HAL_UART_AbortTransmit_IT()***
- ***HAL_UART_AbortReceive_IT()***
- ***HAL_UART_IRQHandler()***
- ***HAL_UART_TxCpltCallback()***
- ***HAL_UART_TxHalfCpltCallback()***
- ***HAL_UART_RxCpltCallback()***
- ***HAL_UART_RxHalfCpltCallback()***
- ***HAL_UART_ErrorCallback()***
- ***HAL_UART_AbortCpltCallback()***
- ***HAL_UART_AbortTransmitCpltCallback()***
- ***HAL_UART_AbortReceiveCpltCallback()***

- *HAL_UARTEx_RxEventCallback()*

68.2.5 Peripheral Control functions

This subsection provides a set of functions allowing to control the UART.

- HAL_UART_ReceiverTimeout_Config() API allows to configure the receiver timeout value on the fly
- HAL_UART_EnableReceiverTimeout() API enables the receiver timeout feature
- HAL_UART_DisableReceiverTimeout() API disables the receiver timeout feature
- HAL_MultiProcessor_EnableMuteMode() API enables mute mode
- HAL_MultiProcessor_DisableMuteMode() API disables mute mode
- HAL_MultiProcessor_EnterMuteMode() API enters mute mode
- UART_SetConfig() API configures the UART peripheral
- UART_AdvFeatureConfig() API optionally configures the UART advanced features
- UART_CheckIdleState() API ensures that TEACK and/or REACK are set after initialization
- HAL_HalfDuplex_EnableTransmitter() API disables receiver and enables transmitter
- HAL_HalfDuplex_EnableReceiver() API disables transmitter and enables receiver
- HAL_LIN_SendBreak() API transmits the break characters

This section contains the following APIs:

- *HAL_UART_ReceiverTimeout_Config()*
- *HAL_UART_EnableReceiverTimeout()*
- *HAL_UART_DisableReceiverTimeout()*
- *HAL_MultiProcessor_EnableMuteMode()*
- *HAL_MultiProcessor_DisableMuteMode()*
- *HAL_MultiProcessor_EnterMuteMode()*
- *HAL_HalfDuplex_EnableTransmitter()*
- *HAL_HalfDuplex_EnableReceiver()*
- *HAL_LIN_SendBreak()*

68.2.6 Peripheral State and Error functions

This subsection provides functions allowing to :

- Return the UART handle state.
- Return the UART handle error code

This section contains the following APIs:

- *HAL_UART_GetState()*
- *HAL_UART_GetError()*

68.2.7 Detailed description of functions

HAL_UART_Init

Function name

HAL_StatusTypeDef HAL_UART_Init (UART_HandleTypeDef * huart)

Function description

Initialize the UART mode according to the specified parameters in the UART_InitTypeDef and initialize the associated handle.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

HAL_HalfDuplex_Init

Function name

HAL_StatusTypeDef HAL_HalfDuplex_Init (UART_HandleTypeDef * huart)

Function description

Initialize the half-duplex mode according to the specified parameters in the UART_InitTypeDef and creates the associated handle.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

HAL_LIN_Init

Function name

HAL_StatusTypeDef HAL_LIN_Init (UART_HandleTypeDef * huart, uint32_t BreakDetectLength)

Function description

Initialize the LIN mode according to the specified parameters in the UART_InitTypeDef and creates the associated handle.

Parameters

- **huart:** UART handle.
- **BreakDetectLength:** Specifies the LIN break detection length. This parameter can be one of the following values:
  - UART_LINBREAKDETECTLENGTH_10B 10-bit break detection
  - UART_LINBREAKDETECTLENGTH_11B 11-bit break detection

Return values

- **HAL:** status

HAL_MultiProcessor_Init

Function name

HAL_StatusTypeDef HAL_MultiProcessor_Init (UART_HandleTypeDef * huart, uint8_t Address, uint32_t WakeUpMethod)

Function description

Initialize the multiprocessor mode according to the specified parameters in the UART_InitTypeDef and initialize the associated handle.

Parameters

- **huart:** UART handle.
- **Address:** UART node address (4-, 6-, 7- or 8-bit long).
- **WakeUpMethod:** Specifies the UART wakeup method. This parameter can be one of the following values:
  - UART_WAKEUPMETHOD_IDLELINE WakeUp by an idle line detection
  - UART_WAKEUPMETHOD_ADDRESSMARK WakeUp by an address mark

Return values

- **HAL:** status

Notes

- If the user resorts to idle line detection wake up, the Address parameter is useless and ignored by the initialization function.
- If the user resorts to address mark wake up, the address length detection is configured by default to 4 bits only. For the UART to be able to manage 6-, 7- or 8-bit long addresses detection, the API HAL_MultiProcessorEx_AddressLength_Set() must be called after HAL_MultiProcessor_Init().

HAL_UART_DeInit

Function name

HAL_StatusTypeDef HAL_UART_DeInit (UART_HandleTypeDef * huart)

Function description

DeInitialize the UART peripheral.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

HAL_UART_MspInit

Function name

void HAL_UART_MspInit (UART_HandleTypeDef * huart)

Function description

Initialize the UART MSP.

Parameters

- **huart:** UART handle.

Return values

- **None:**

HAL_UART_MspDeInit

Function name

void HAL_UART_MspDeInit (UART_HandleTypeDef * huart)

Function description

DeInitialize the UART MSP.

Parameters

- **huart:** UART handle.

Return values

- **None:**

HAL_UART_RegisterCallback

Function name

HAL_StatusTypeDef HAL_UART_RegisterCallback (UART_HandleTypeDef * huart, HAL_UART_CallbackIDTypeDef CallbackID, pUART_CallbackTypeDef pCallback)

Function description

Register a User UART Callback To be used to override the weak predefined callback.

Parameters

- **huart:** uart handle
- **CallbackID:** ID of the callback to be registered This parameter can be one of the following values:
  - HAL_UART_TX_HALFCOMPLETE_CB_ID Tx Half Complete Callback ID
  - HAL_UART_TX_COMPLETE_CB_ID Tx Complete Callback ID
  - HAL_UART_RX_HALFCOMPLETE_CB_ID Rx Half Complete Callback ID
  - HAL_UART_RX_COMPLETE_CB_ID Rx Complete Callback ID
  - HAL_UART_ERROR_CB_ID Error Callback ID
  - HAL_UART_ABORT_COMPLETE_CB_ID Abort Complete Callback ID
  - HAL_UART_ABORT_TRANSMIT_COMPLETE_CB_ID Abort Transmit Complete Callback ID
  - HAL_UART_ABORT_RECEIVE_COMPLETE_CB_ID Abort Receive Complete Callback ID
  - HAL_UART_RX_FIFO_FULL_CB_ID Rx Fifo Full Callback ID
  - HAL_UART_TX_FIFO_EMPTY_CB_ID Tx Fifo Empty Callback ID
  - HAL_UART_MSPINIT_CB_ID MspInit Callback ID
  - HAL_UART_MSPDEINIT_CB_ID MspDeInit Callback ID
- **pCallback:** pointer to the Callback function

Return values

- **HAL:** status

Notes

- The HAL_UART_RegisterCallback() may be called before HAL_UART_Init(), HAL_HalfDuplex_Init(), HAL_LIN_Init(), HAL_MultiProcessor_Init() or HAL_RS485Ex_Init() in HAL_UART_STATE_RESET to register callbacks for HAL_UART_MSPINIT_CB_ID and HAL_UART_MSPDEINIT_CB_ID

HAL_UART_UnRegisterCallback

Function name

HAL_StatusTypeDef HAL_UART_UnRegisterCallback (UART_HandleTypeDef * huart, HAL_UART_CallbackIDTypeDef CallbackID)

Function description

Unregister an UART Callback UART callaback is redirected to the weak predefined callback.

Parameters

- **huart:** uart handle
- **CallbackID:** ID of the callback to be unregistered This parameter can be one of the following values:
  - HAL_UART_TX_HALFCOMPLETE_CB_ID Tx Half Complete Callback ID
  - HAL_UART_TX_COMPLETE_CB_ID Tx Complete Callback ID
  - HAL_UART_RX_HALFCOMPLETE_CB_ID Rx Half Complete Callback ID
  - HAL_UART_RX_COMPLETE_CB_ID Rx Complete Callback ID
  - HAL_UART_ERROR_CB_ID Error Callback ID
  - HAL_UART_ABORT_COMPLETE_CB_ID Abort Complete Callback ID
  - HAL_UART_ABORT_TRANSMIT_COMPLETE_CB_ID Abort Transmit Complete Callback ID
  - HAL_UART_ABORT_RECEIVE_COMPLETE_CB_ID Abort Receive Complete Callback ID
  - HAL_UART_RX_FIFO_FULL_CB_ID Rx Fifo Full Callback ID
  - HAL_UART_TX_FIFO_EMPTY_CB_ID Tx Fifo Empty Callback ID
  - HAL_UART_MSPINIT_CB_ID MspInit Callback ID
  - HAL_UART_MSPDEINIT_CB_ID MspDeInit Callback ID

Return values

- **HAL:** status

Notes

- The HAL_UART_UnRegisterCallback() may be called before HAL_UART_Init(), HAL_HalfDuplex_Init(), HAL_LIN_Init(), HAL_MultiProcessor_Init() or HAL_RS485Ex_Init() in HAL_UART_STATE_RESET to un-register callbacks for HAL_UART_MSPINIT_CB_ID and HAL_UART_MSPDEINIT_CB_ID

HAL_UART_RegisterRxEventCallback

Function name

HAL_StatusTypeDef HAL_UART_RegisterRxEventCallback (UART_HandleTypeDef * huart, pUART_RxEventCallbackTypeDef pCallback)

Function description

Register a User UART Rx Event Callback To be used instead of the weak predefined callback.

Parameters

- **huart:** Uart handle
- **pCallback:** Pointer to the Rx Event Callback function

Return values

- **HAL:** status

HAL_UART_UnRegisterRxEventCallback

Function name

HAL_StatusTypeDef HAL_UART_UnRegisterRxEventCallback (UART_HandleTypeDef * huart)

Function description

UnRegister the UART Rx Event Callback UART Rx Event Callback is redirected to the weak HAL_UARTEx_RxEventCallback() predefined callback.

Parameters

- **huart:** Uart handle

Return values

- **HAL:** status

HAL_UART_Transmit

Function name

HAL_StatusTypeDef HAL_UART_Transmit (UART_HandleTypeDef * huart, const uint8_t * pData, uint16_t Size, uint32_t Timeout)

Function description

Send an amount of data in blocking mode.

Parameters

- **huart:** UART handle.
- **pData:** Pointer to data buffer (u8 or u16 data elements).
- **Size:** Amount of data elements (u8 or u16) to be sent.
- **Timeout:** Timeout duration.

Return values

- **HAL:** status

Notes

- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the sent data is handled as a set of u16. In this case, Size must indicate the number of u16 provided through pData.
- When FIFO mode is enabled, writing a data in the TDR register adds one data to the TXFIFO. Write operations to the TDR register are performed when TXFNF flag is set. From hardware perspective, TXFNF flag and TXE are mapped on the same bit-field.

HAL_UART_Receive

Function name

HAL_StatusTypeDef HAL_UART_Receive (UART_HandleTypeDef * huart, uint8_t * pData, uint16_t Size, uint32_t Timeout)

Function description

Receive an amount of data in blocking mode.

Parameters

- **huart:** UART handle.
- **pData:** Pointer to data buffer (u8 or u16 data elements).
- **Size:** Amount of data elements (u8 or u16) to be received.
- **Timeout:** Timeout duration.

Return values

- **HAL:** status

Notes

- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the received data is handled as a set of u16. In this case, Size must indicate the number of u16 available through pData.
- When FIFO mode is enabled, the RXFNE flag is set as long as the RXFIFO is not empty. Read operations from the RDR register are performed when RXFNE flag is set. From hardware perspective, RXFNE flag and RXNE are mapped on the same bit-field.

HAL_UART_Transmit_IT

Function name

HAL_StatusTypeDef HAL_UART_Transmit_IT (UART_HandleTypeDef * huart, const uint8_t * pData, uint16_t Size)

Function description

Send an amount of data in interrupt mode.

Parameters

- **huart:** UART handle.
- **pData:** Pointer to data buffer (u8 or u16 data elements).
- **Size:** Amount of data elements (u8 or u16) to be sent.

Return values

- **HAL:** status

Notes

- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the sent data is handled as a set of u16. In this case, Size must indicate the number of u16 provided through pData.

HAL_UART_Receive_IT

Function name

HAL_StatusTypeDef HAL_UART_Receive_IT (UART_HandleTypeDef * huart, uint8_t * pData, uint16_t Size)

Function description

Receive an amount of data in interrupt mode.

Parameters

- **huart:** UART handle.
- **pData:** Pointer to data buffer (u8 or u16 data elements).
- **Size:** Amount of data elements (u8 or u16) to be received.

Return values

- **HAL:** status

Notes

- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the received data is handled as a set of u16. In this case, Size must indicate the number of u16 available through pData.

HAL_UART_Transmit_DMA

Function name

HAL_StatusTypeDef HAL_UART_Transmit_DMA (UART_HandleTypeDef * huart, const uint8_t * pData, uint16_t Size)

Function description

Send an amount of data in DMA mode.

Parameters

- **huart:** UART handle.
- **pData:** Pointer to data buffer (u8 or u16 data elements).
- **Size:** Amount of data elements (u8 or u16) to be sent.

Return values

- **HAL:** status

Notes

- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the sent data is handled as a set of u16. In this case, Size must indicate the number of u16 provided through pData.

HAL_UART_Receive_DMA

Function name

HAL_StatusTypeDef HAL_UART_Receive_DMA (UART_HandleTypeDef * huart, uint8_t * pData, uint16_t Size)

Function description

Receive an amount of data in DMA mode.

Parameters

- **huart:** UART handle.
- **pData:** Pointer to data buffer (u8 or u16 data elements).
- **Size:** Amount of data elements (u8 or u16) to be received.

Return values

- **HAL:** status

Notes

- When the UART parity is enabled (PCE = 1), the received data contain the parity bit (MSB position).
- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the received data is handled as a set of u16. In this case, Size must indicate the number of u16 available through pData.

HAL_UART_DMAPause

Function name

HAL_StatusTypeDef HAL_UART_DMAPause (UART_HandleTypeDef * huart)

Function description

Pause the DMA Transfer.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

HAL_UART_DMAResume

Function name

HAL_StatusTypeDef HAL_UART_DMAResume (UART_HandleTypeDef * huart)

Function description

Resume the DMA Transfer.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

HAL_UART_DMAStop

Function name

HAL_StatusTypeDef HAL_UART_DMAStop (UART_HandleTypeDef * huart)

Function description

Stop the DMA Transfer.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

HAL_UART_Abort

Function name

HAL_StatusTypeDef HAL_UART_Abort (UART_HandleTypeDef * huart)

Function description

Abort ongoing transfers (blocking mode).

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable UART Interrupts (Tx and Rx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort (in case of transfer in DMA mode)Set handle State to READY
- This procedure is executed in blocking mode : when exiting function, Abort is considered as completed.

HAL_UART_AbortTransmit

Function name

HAL_StatusTypeDef HAL_UART_AbortTransmit (UART_HandleTypeDef * huart)

Function description

Abort ongoing Transmit transfer (blocking mode).

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing Tx transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable UART Interrupts (Tx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort (in case of transfer in DMA mode)Set handle State to READY
- This procedure is executed in blocking mode : when exiting function, Abort is considered as completed.

HAL_UART_AbortReceive

Function name

HAL_StatusTypeDef HAL_UART_AbortReceive (UART_HandleTypeDef * huart)

Function description

Abort ongoing Receive transfer (blocking mode).

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing Rx transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable UART Interrupts (Rx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort (in case of transfer in DMA mode)Set handle State to READY
- This procedure is executed in blocking mode : when exiting function, Abort is considered as completed.

HAL_UART_Abort_IT

Function name

HAL_StatusTypeDef HAL_UART_Abort_IT (UART_HandleTypeDef * huart)

Function description

Abort ongoing transfers (Interrupt mode).

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable UART Interrupts (Tx and Rx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort_IT (in case of transfer in DMA mode)Set handle State to READYAt abort completion, call user abort complete callback
- This procedure is executed in Interrupt mode, meaning that abort procedure could be considered as completed only when user abort complete callback is executed (not when exiting function).

HAL_UART_AbortTransmit_IT

Function name

HAL_StatusTypeDef HAL_UART_AbortTransmit_IT (UART_HandleTypeDef * huart)

Function description

Abort ongoing Transmit transfer (Interrupt mode).

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing Tx transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable UART Interrupts (Tx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort_IT (in case of transfer in DMA mode)Set handle State to READYAt abort completion, call user abort complete callback
- This procedure is executed in Interrupt mode, meaning that abort procedure could be considered as completed only when user abort complete callback is executed (not when exiting function).

HAL_UART_AbortReceive_IT

Function name

HAL_StatusTypeDef HAL_UART_AbortReceive_IT (UART_HandleTypeDef * huart)

Function description

Abort ongoing Receive transfer (Interrupt mode).

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing Rx transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable UART Interrupts (Rx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort_IT (in case of transfer in DMA mode)Set handle State to READYAt abort completion, call user abort complete callback
- This procedure is executed in Interrupt mode, meaning that abort procedure could be considered as completed only when user abort complete callback is executed (not when exiting function).

HAL_UART_IRQHandler

Function name

void HAL_UART_IRQHandler (UART_HandleTypeDef * huart)

Function description

Handle UART interrupt request.

Parameters

- **huart:** UART handle.

Return values

- **None:**

HAL_UART_TxHalfCpltCallback

Function name

void HAL_UART_TxHalfCpltCallback (UART_HandleTypeDef * huart)

Function description

Tx Half Transfer completed callback.

Parameters

- **huart:** UART handle.

Return values

- **None:**

HAL_UART_TxCpltCallback

Function name

void HAL_UART_TxCpltCallback (UART_HandleTypeDef * huart)

Function description

Tx Transfer completed callback.

Parameters

- **huart:** UART handle.

Return values

- **None:**

HAL_UART_RxHalfCpltCallback

Function name

void HAL_UART_RxHalfCpltCallback (UART_HandleTypeDef * huart)

Function description

Rx Half Transfer completed callback.

Parameters

- **huart:** UART handle.

Return values

- **None:**

HAL_UART_RxCpltCallback

Function name

void HAL_UART_RxCpltCallback (UART_HandleTypeDef * huart)

Function description

Rx Transfer completed callback.

Parameters

- **huart:** UART handle.

Return values

- **None:**

HAL_UART_ErrorCallback

Function name

void HAL_UART_ErrorCallback (UART_HandleTypeDef * huart)

Function description

UART error callback.

Parameters

- **huart:** UART handle.

Return values

- **None:**

HAL_UART_AbortCpltCallback

Function name

void HAL_UART_AbortCpltCallback (UART_HandleTypeDef * huart)

Function description

UART Abort Complete callback.

Parameters

- **huart:** UART handle.

Return values

- **None:**

HAL_UART_AbortTransmitCpltCallback

Function name

void HAL_UART_AbortTransmitCpltCallback (UART_HandleTypeDef * huart)

Function description

UART Abort Complete callback.

Parameters

- **huart:** UART handle.

Return values

- **None:**

HAL_UART_AbortReceiveCpltCallback

Function name

void HAL_UART_AbortReceiveCpltCallback (UART_HandleTypeDef * huart)

Function description

UART Abort Receive Complete callback.

Parameters

- **huart:** UART handle.

Return values

- **None:**

HAL_UARTEx_RxEventCallback

Function name

void HAL_UARTEx_RxEventCallback (UART_HandleTypeDef * huart, uint16_t Size)

Function description

Reception Event Callback (Rx event notification called after use of advanced reception service).

Parameters

- **huart:** UART handle
- **Size:** Number of data available in application reception buffer (indicates a position in reception buffer until which, data are available)

Return values

- **None:**

HAL_UART_ReceiverTimeout_Config

Function name

void HAL_UART_ReceiverTimeout_Config (UART_HandleTypeDef * huart, uint32_t TimeoutValue)

Function description

Update on the fly the receiver timeout value in RTOR register.

Parameters

- **huart:** Pointer to a UART_HandleTypeDef structure that contains the configuration information for the specified UART module.
- **TimeoutValue:** receiver timeout value in number of baud blocks. The timeout value must be less or equal to 0x0FFFFFFF.

Return values

- **None:**

HAL_UART_EnableReceiverTimeout

Function name

HAL_StatusTypeDef HAL_UART_EnableReceiverTimeout (UART_HandleTypeDef * huart)

Function description

Enable the UART receiver timeout feature.

Parameters

- **huart:** Pointer to a UART_HandleTypeDef structure that contains the configuration information for the specified UART module.

Return values

- **HAL:** status

HAL_UART_DisableReceiverTimeout

Function name

HAL_StatusTypeDef HAL_UART_DisableReceiverTimeout (UART_HandleTypeDef * huart)

Function description

Disable the UART receiver timeout feature.

Parameters

- **huart:** Pointer to a UART_HandleTypeDef structure that contains the configuration information for the specified UART module.

Return values

- **HAL:** status

HAL_LIN_SendBreak

Function name

HAL_StatusTypeDef HAL_LIN_SendBreak (UART_HandleTypeDef * huart)

Function description

Transmit break characters.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

HAL_MultiProcessor_EnableMuteMode

Function name

HAL_StatusTypeDef HAL_MultiProcessor_EnableMuteMode (UART_HandleTypeDef * huart)

Function description

Enable UART in mute mode (does not mean UART enters mute mode; to enter mute mode, HAL_MultiProcessor_EnterMuteMode() API must be called).

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

HAL_MultiProcessor_DisableMuteMode

Function name

HAL_StatusTypeDef HAL_MultiProcessor_DisableMuteMode (UART_HandleTypeDef * huart)

Function description

Disable UART mute mode (does not mean the UART actually exits mute mode as it may not have been in mute mode at this very moment).

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

HAL_MultiProcessor_EnterMuteMode

Function name

void HAL_MultiProcessor_EnterMuteMode (UART_HandleTypeDef * huart)

Function description

Enter UART mute mode (means UART actually enters mute mode).

Parameters

- **huart:** UART handle.

Return values

- **None:**

Notes

- To exit from mute mode, HAL_MultiProcessor_DisableMuteMode() API must be called.

HAL_HalfDuplex_EnableTransmitter

Function name

HAL_StatusTypeDef HAL_HalfDuplex_EnableTransmitter (UART_HandleTypeDef * huart)

Function description

Enable the UART transmitter and disable the UART receiver.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

HAL_HalfDuplex_EnableReceiver

Function name

HAL_StatusTypeDef HAL_HalfDuplex_EnableReceiver (UART_HandleTypeDef * huart)

Function description

Enable the UART receiver and disable the UART transmitter.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status.

HAL_UART_GetState

Function name

HAL_UART_StateTypeDef HAL_UART_GetState (const UART_HandleTypeDef * huart)

Function description

Return the UART handle state.

Parameters

- **huart:** Pointer to a UART_HandleTypeDef structure that contains the configuration information for the specified UART.

Return values

- **HAL:** state

HAL_UART_GetError

Function name

uint32_t HAL_UART_GetError (const UART_HandleTypeDef * huart)

Function description

Return the UART handle error code.

Parameters

- **huart:** Pointer to a UART_HandleTypeDef structure that contains the configuration information for the specified UART.

Return values

- **UART:** Error Code

UART_InitCallbacksToDefault

Function name

void UART_InitCallbacksToDefault (UART_HandleTypeDef * huart)

Function description

Initialize the callbacks to their default values.

Parameters

- **huart:** UART handle.

Return values

- **none:**

UART_SetConfig

Function name

HAL_StatusTypeDef UART_SetConfig (UART_HandleTypeDef * huart)

Function description

Configure the UART peripheral.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

UART_CheckIdleState

Function name

HAL_StatusTypeDef UART_CheckIdleState (UART_HandleTypeDef * huart)

Function description

Check the UART Idle State.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

UART_WaitOnFlagUntilTimeout

Function name

HAL_StatusTypeDef UART_WaitOnFlagUntilTimeout (UART_HandleTypeDef * huart, uint32_t Flag, FlagStatus Status, uint32_t Tickstart, uint32_t Timeout)

Function description

This function handles UART Communication Timeout.

Parameters

- **huart:** UART handle.
- **Flag:** Specifies the UART flag to check
- **Status:** The actual Flag status (SET or RESET)
- **Tickstart:** Tick start value
- **Timeout:** Timeout duration

Return values

- **HAL:** status

UART_AdvFeatureConfig

Function name

void UART_AdvFeatureConfig (UART_HandleTypeDef * huart)

Function description

Configure the UART peripheral advanced features.

Parameters

- **huart:** UART handle.

Return values

- **None:**

UART_Start_Receive_IT

Function name

HAL_StatusTypeDef UART_Start_Receive_IT (UART_HandleTypeDef * huart, uint8_t * pData, uint16_t Size)

Function description

Start Receive operation in interrupt mode.

Parameters

- **huart:** UART handle.
- **pData:** Pointer to data buffer (u8 or u16 data elements).
- **Size:** Amount of data elements (u8 or u16) to be received.

Return values

- **HAL:** status

Notes

- This function could be called by all HAL UART API providing reception in Interrupt mode.
- When calling this function, parameters validity is considered as already checked, i.e. Rx State, buffer address, ... UART Handle is assumed as Locked.

UART_Start_Receive_DMA

Function name

HAL_StatusTypeDef UART_Start_Receive_DMA (UART_HandleTypeDef * huart, uint8_t * pData, uint16_t Size)

Function description

Start Receive operation in DMA mode.

Parameters

- **huart:** UART handle.
- **pData:** Pointer to data buffer (u8 or u16 data elements).
- **Size:** Amount of data elements (u8 or u16) to be received.

Return values

- **HAL:** status

Notes

- This function could be called by all HAL UART API providing reception in DMA mode.
- When calling this function, parameters validity is considered as already checked, i.e. Rx State, buffer address, ... UART Handle is assumed as Locked.

68.3 UART Firmware driver defines

The following section lists the various define and macros of the module.

68.3.1 UART

UART

UART Advanced Feature Initialization Type

UART_ADVFEATURE_NO_INIT

No advanced feature initialization

UART_ADVFEATURE_TXINVERT_INIT

TX pin active level inversion

UART_ADVFEATURE_RXINVERT_INIT

RX pin active level inversion

UART_ADVFEATURE_DATAINVERT_INIT

Binary data inversion

UART_ADVFEATURE_SWAP_INIT

TX/RX pins swap

UART_ADVFEATURE_RXOVERRUNDISABLE_INIT

RX overrun disable

UART_ADVFEATURE_DMADISABLEONERROR_INIT

DMA disable on Reception Error

UART_ADVFEATURE_AUTOBAUDRATE_INIT

Auto Baud rate detection initialization

UART_ADVFEATURE_MSBFIRST_INIT

Most significant bit sent/received first

UART Advanced Feature Auto BaudRate Enable

UART_ADVFEATURE_AUTOBAUDRATE_DISABLE

RX Auto Baud rate detection enable

UART_ADVFEATURE_AUTOBAUDRATE_ENABLE

RX Auto Baud rate detection disable

UART Advanced Feature AutoBaud Rate Mode

UART_ADVFEATURE_AUTOBAUDRATE_ONSTARTBIT

Auto Baud rate detection on start bit

UART_ADVFEATURE_AUTOBAUDRATE_ONFALLINGEDGE

Auto Baud rate detection on falling edge

UART_ADVFEATURE_AUTOBAUDRATE_ON0X7FFRAME

Auto Baud rate detection on 0x7F frame detection

UART_ADVFEATURE_AUTOBAUDRATE_ON0X55FRAME

Auto Baud rate detection on 0x55 frame detection

UART Clock Prescaler

UART_PRESCALER_DIV1

fclk_pres = fclk

UART_PRESCALER_DIV2

fclk_pres = fclk/2

UART_PRESCALER_DIV4

fclk_pres = fclk/4

UART_PRESCALER_DIV6

fclk_pres = fclk/6

UART_PRESCALER_DIV8

fclk_pres = fclk/8

UART_PRESCALER_DIV10

fclk_pres = fclk/10

UART_PRESCALER_DIV12

fclk_pres = fclk/12

UART_PRESCALER_DIV16

fclk_pres = fclk/16

UART_PRESCALER_DIV32

fclk_pres = fclk/32

UART_PRESCALER_DIV64

fclk_pres = fclk/64

UART_PRESCALER_DIV128

fclk_pres = fclk/128

UART_PRESCALER_DIV256

fclk_pres = fclk/256

UART Driver Enable Assertion Time LSB Position In CR1 Register

UART_CR1_DEAT_ADDRESS_LSB_POS

UART Driver Enable assertion time LSB position in CR1 register

UART Driver Enable DeAssertion Time LSB Position In CR1 Register

UART_CR1_DEDT_ADDRESS_LSB_POS

UART Driver Enable de-assertion time LSB position in CR1 register

UART Address-matching LSB Position In CR2 Register

UART_CR2_ADDRESS_LSB_POS

UART address-matching LSB position in CR2 register

UART Advanced Feature Binary Data Inversion

UART_ADVFEATURE_DATAINV_DISABLE

Binary data inversion disable

UART_ADVFEATURE_DATAINV_ENABLE

Binary data inversion enable

UART Advanced Feature DMA Disable On Rx Error

UART_ADVFEATURE_DMA_ENABLEONRXERROR

DMA enable on Reception Error

UART_ADVFEATURE_DMA_DISABLEONRXERROR

DMA disable on Reception Error

UART DMA Rx

UART_DMA_RX_DISABLE

UART DMA RX disabled

UART_DMA_RX_ENABLE

UART DMA RX enabled

UART DMA Tx

UART_DMA_TX_DISABLE

UART DMA TX disabled

UART_DMA_TX_ENABLE

UART DMA TX enabled

UART DriverEnable Polarity

UART_DE_POLARITY_HIGH

Driver enable signal is active high

UART_DE_POLARITY_LOW

Driver enable signal is active low

UART Error Definition

HAL_UART_ERROR_NONE

No error

HAL_UART_ERROR_PE

Parity error

HAL_UART_ERROR_NE

Noise error

HAL_UART_ERROR_FE

Frame error

HAL_UART_ERROR_ORE

Overrun error

HAL_UART_ERROR_DMA

DMA transfer error

HAL_UART_ERROR_RTO

Receiver Timeout error

HAL_UART_ERROR_INVALID_CALLBACK

Invalid Callback error

UART Exported Macros

__HAL_UART_RESET_HANDLE_STATE

Description:

- Reset UART handle states.

Parameters:

- __HANDLE__: UART handle.

Return value:

- None

__HAL_UART_FLUSH_DRREGISTER

Description:

- Flush the UART Data registers.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

__HAL_UART_CLEAR_FLAG

Description:

- Clear the specified UART pending flag.

Parameters:

- __HANDLE__: specifies the UART Handle.
- __FLAG__: specifies the flag to check. This parameter can be any combination of the following values:
  - UART_CLEAR_PEF Parity Error Clear Flag
  - UART_CLEAR_FEF Framing Error Clear Flag
  - UART_CLEAR_NEF Noise detected Clear Flag
  - UART_CLEAR_OREF Overrun Error Clear Flag
  - UART_CLEAR_IDLEF IDLE line detected Clear Flag
  - UART_CLEAR_TXFECF TXFIFO empty clear Flag
  - UART_CLEAR_TCF Transmission Complete Clear Flag
  - UART_CLEAR_RTOF Receiver Timeout clear flag
  - UART_CLEAR_LBDF LIN Break Detection Clear Flag
  - UART_CLEAR_CTSF CTS Interrupt Clear Flag
  - UART_CLEAR_CMF Character Match Clear Flag

Return value:

- None

__HAL_UART_CLEAR_PEFLAG

Description:

- Clear the UART PE pending flag.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

__HAL_UART_CLEAR_FEFLAG

Description:

- Clear the UART FE pending flag.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

__HAL_UART_CLEAR_NEFLAG

Description:

- Clear the UART NE pending flag.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

__HAL_UART_CLEAR_OREFLAG

Description:

- Clear the UART ORE pending flag.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

__HAL_UART_CLEAR_IDLEFLAG

Description:

- Clear the UART IDLE pending flag.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

__HAL_UART_CLEAR_TXFECF

Description:

- Clear the UART TX FIFO empty clear flag.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

__HAL_UART_GET_FLAG

Description:

- Check whether the specified UART flag is set or not.

Parameters:

- __HANDLE__: specifies the UART Handle.
- __FLAG__: specifies the flag to check. This parameter can be one of the following values:
  - UART_FLAG_TXFT TXFIFO threshold flag
  - UART_FLAG_RXFT RXFIFO threshold flag
  - UART_FLAG_RXFF RXFIFO Full flag
  - UART_FLAG_TXFE TXFIFO Empty flag
  - UART_FLAG_REACK Receive enable acknowledge flag
  - UART_FLAG_TEACK Transmit enable acknowledge flag
  - UART_FLAG_RWU Receiver wake up flag (if the UART in mute mode)
  - UART_FLAG_SBKF Send Break flag
  - UART_FLAG_CMF Character match flag
  - UART_FLAG_BUSY Busy flag
  - UART_FLAG_ABRF Auto Baud rate detection flag
  - UART_FLAG_ABRE Auto Baud rate detection error flag
  - UART_FLAG_CTS CTS Change flag
  - UART_FLAG_LBDF LIN Break detection flag
  - UART_FLAG_TXE Transmit data register empty flag
  - UART_FLAG_TXFNF UART TXFIFO not full flag
  - UART_FLAG_TC Transmission Complete flag
  - UART_FLAG_RXNE Receive data register not empty flag
  - UART_FLAG_RXFNE UART RXFIFO not empty flag
  - UART_FLAG_RTOF Receiver Timeout flag
  - UART_FLAG_IDLE Idle Line detection flag
  - UART_FLAG_ORE Overrun Error flag
  - UART_FLAG_NE Noise Error flag
  - UART_FLAG_FE Framing Error flag
  - UART_FLAG_PE Parity Error flag

Return value:

- The: new state of __FLAG__ (TRUE or FALSE).

__HAL_UART_ENABLE_IT

Description:

- Enable the specified UART interrupt.

Parameters:

- __HANDLE__: specifies the UART Handle.
- __INTERRUPT__: specifies the UART interrupt source to enable. This parameter can be one of the following values:
  - UART_IT_RXFF RXFIFO Full interrupt
  - UART_IT_TXFE TXFIFO Empty interrupt
  - UART_IT_RXFT RXFIFO threshold interrupt
  - UART_IT_TXFT TXFIFO threshold interrupt
  - UART_IT_CM Character match interrupt
  - UART_IT_CTS CTS change interrupt
  - UART_IT_LBD LIN Break detection interrupt
  - UART_IT_TXE Transmit Data Register empty interrupt
  - UART_IT_TXFNF TX FIFO not full interrupt
  - UART_IT_TC Transmission complete interrupt
  - UART_IT_RXNE Receive Data register not empty interrupt
  - UART_IT_RXFNE RXFIFO not empty interrupt
  - UART_IT_RTO Receive Timeout interrupt
  - UART_IT_IDLE Idle line detection interrupt
  - UART_IT_PE Parity Error interrupt
  - UART_IT_ERR Error interrupt (frame error, noise error, overrun error)

Return value:

- None

__HAL_UART_DISABLE_IT

Description:

- Disable the specified UART interrupt.

Parameters:

- __HANDLE__: specifies the UART Handle.
- __INTERRUPT__: specifies the UART interrupt source to disable. This parameter can be one of the following values:
  - UART_IT_RXFF RXFIFO Full interrupt
  - UART_IT_TXFE TXFIFO Empty interrupt
  - UART_IT_RXFT RXFIFO threshold interrupt
  - UART_IT_TXFT TXFIFO threshold interrupt
  - UART_IT_CM Character match interrupt
  - UART_IT_CTS CTS change interrupt
  - UART_IT_LBD LIN Break detection interrupt
  - UART_IT_TXE Transmit Data Register empty interrupt
  - UART_IT_TXFNF TX FIFO not full interrupt
  - UART_IT_TC Transmission complete interrupt
  - UART_IT_RXNE Receive Data register not empty interrupt
  - UART_IT_RXFNE RXFIFO not empty interrupt
  - UART_IT_RTO Receive Timeout interrupt
  - UART_IT_IDLE Idle line detection interrupt
  - UART_IT_PE Parity Error interrupt
  - UART_IT_ERR Error interrupt (Frame error, noise error, overrun error)

Return value:

- None

__HAL_UART_GET_IT

Description:

- Check whether the specified UART interrupt has occurred or not.

Parameters:

- __HANDLE__: specifies the UART Handle.
- __INTERRUPT__: specifies the UART interrupt to check. This parameter can be one of the following values:
  - UART_IT_RXFF RXFIFO Full interrupt
  - UART_IT_TXFE TXFIFO Empty interrupt
  - UART_IT_RXFT RXFIFO threshold interrupt
  - UART_IT_TXFT TXFIFO threshold interrupt
  - UART_IT_CM Character match interrupt
  - UART_IT_CTS CTS change interrupt
  - UART_IT_LBD LIN Break detection interrupt
  - UART_IT_TXE Transmit Data Register empty interrupt
  - UART_IT_TXFNF TX FIFO not full interrupt
  - UART_IT_TC Transmission complete interrupt
  - UART_IT_RXNE Receive Data register not empty interrupt
  - UART_IT_RXFNE RXFIFO not empty interrupt
  - UART_IT_RTO Receive Timeout interrupt
  - UART_IT_IDLE Idle line detection interrupt
  - UART_IT_PE Parity Error interrupt
  - UART_IT_ERR Error interrupt (Frame error, noise error, overrun error)

Return value:

- The: new state of __INTERRUPT__ (SET or RESET).

__HAL_UART_GET_IT_SOURCE

Description:

- Check whether the specified UART interrupt source is enabled or not.

Parameters:

- __HANDLE__: specifies the UART Handle.
- __INTERRUPT__: specifies the UART interrupt source to check. This parameter can be one of the following values:
  - UART_IT_RXFF RXFIFO Full interrupt
  - UART_IT_TXFE TXFIFO Empty interrupt
  - UART_IT_RXFT RXFIFO threshold interrupt
  - UART_IT_TXFT TXFIFO threshold interrupt
  - UART_IT_CM Character match interrupt
  - UART_IT_CTS CTS change interrupt
  - UART_IT_LBD LIN Break detection interrupt
  - UART_IT_TXE Transmit Data Register empty interrupt
  - UART_IT_TXFNF TX FIFO not full interrupt
  - UART_IT_TC Transmission complete interrupt
  - UART_IT_RXNE Receive Data register not empty interrupt
  - UART_IT_RXFNE RXFIFO not empty interrupt
  - UART_IT_RTO Receive Timeout interrupt
  - UART_IT_IDLE Idle line detection interrupt
  - UART_IT_PE Parity Error interrupt
  - UART_IT_ERR Error interrupt (Frame error, noise error, overrun error)

Return value:

- The: new state of __INTERRUPT__ (SET or RESET).

__HAL_UART_CLEAR_IT

Description:

- Clear the specified UART ISR flag, in setting the proper ICR register flag.

Parameters:

- __HANDLE__: specifies the UART Handle.
- __IT_CLEAR__: specifies the interrupt clear register flag that needs to be set to clear the corresponding interrupt This parameter can be one of the following values:
  - UART_CLEAR_PEF Parity Error Clear Flag
  - UART_CLEAR_FEF Framing Error Clear Flag
  - UART_CLEAR_NEF Noise detected Clear Flag
  - UART_CLEAR_OREF Overrun Error Clear Flag
  - UART_CLEAR_IDLEF IDLE line detected Clear Flag
  - UART_CLEAR_RTOF Receiver timeout clear flag
  - UART_CLEAR_TXFECF TXFIFO empty Clear Flag
  - UART_CLEAR_TCF Transmission Complete Clear Flag
  - UART_CLEAR_LBDF LIN Break Detection Clear Flag
  - UART_CLEAR_CTSF CTS Interrupt Clear Flag
  - UART_CLEAR_CMF Character Match Clear Flag

Return value:

- None

__HAL_UART_SEND_REQ

Description:

- Set a specific UART request flag.

Parameters:

- __HANDLE__: specifies the UART Handle.
- __REQ__: specifies the request flag to set This parameter can be one of the following values:
  - UART_AUTOBAUD_REQUEST Auto-Baud Rate Request
  - UART_SENDBREAK_REQUEST Send Break Request
  - UART_MUTE_MODE_REQUEST Mute Mode Request
  - UART_RXDATA_FLUSH_REQUEST Receive Data flush Request
  - UART_TXDATA_FLUSH_REQUEST Transmit data flush Request

Return value:

- None

__HAL_UART_ONE_BIT_SAMPLE_ENABLE

Description:

- Enable the UART one bit sample method.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

__HAL_UART_ONE_BIT_SAMPLE_DISABLE

Description:

- Disable the UART one bit sample method.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

__HAL_UART_ENABLE

Description:

- Enable UART.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

__HAL_UART_DISABLE

Description:

- Disable UART.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

__HAL_UART_HWCONTROL_CTS_ENABLE

Description:

- Enable CTS flow control.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

Notes:

- This macro allows to enable CTS hardware flow control for a given UART instance, without need to call HAL_UART_Init() function. As involving direct access to UART registers, usage of this macro should be fully endorsed by user. As macro is expected to be used for modifying CTS Hw flow control feature activation, without need for USART instance Deinit/Init, following conditions for macro call should be fulfilled : UART instance should have already been initialised (through call of HAL_UART_Init())macro could only be called when corresponding UART instance is disabled (i.e. __HAL_UART_DISABLE(__HANDLE__)) and should be followed by an Enable macro (i.e. __HAL_UART_ENABLE(__HANDLE__)).

__HAL_UART_HWCONTROL_CTS_DISABLE

Description:

- Disable CTS flow control.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

Notes:

- This macro allows to disable CTS hardware flow control for a given UART instance, without need to call HAL_UART_Init() function. As involving direct access to UART registers, usage of this macro should be fully endorsed by user. As macro is expected to be used for modifying CTS Hw flow control feature activation, without need for USART instance Deinit/Init, following conditions for macro call should be fulfilled : UART instance should have already been initialised (through call of HAL_UART_Init())macro could only be called when corresponding UART instance is disabled (i.e. __HAL_UART_DISABLE(__HANDLE__)) and should be followed by an Enable macro (i.e. __HAL_UART_ENABLE(__HANDLE__)).

__HAL_UART_HWCONTROL_RTS_ENABLE

Description:

- Enable RTS flow control.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

Notes:

- This macro allows to enable RTS hardware flow control for a given UART instance, without need to call HAL_UART_Init() function. As involving direct access to UART registers, usage of this macro should be fully endorsed by user. As macro is expected to be used for modifying RTS Hw flow control feature activation, without need for USART instance Deinit/Init, following conditions for macro call should be fulfilled : UART instance should have already been initialised (through call of HAL_UART_Init())macro could only be called when corresponding UART instance is disabled (i.e. __HAL_UART_DISABLE(__HANDLE__)) and should be followed by an Enable macro (i.e. __HAL_UART_ENABLE(__HANDLE__)).

__HAL_UART_HWCONTROL_RTS_DISABLE

Description:

- Disable RTS flow control.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

Notes:

- This macro allows to disable RTS hardware flow control for a given UART instance, without need to call HAL_UART_Init() function. As involving direct access to UART registers, usage of this macro should be fully endorsed by user. As macro is expected to be used for modifying RTS Hw flow control feature activation, without need for USART instance Deinit/Init, following conditions for macro call should be fulfilled : UART instance should have already been initialised (through call of HAL_UART_Init())macro could only be called when corresponding UART instance is disabled (i.e. __HAL_UART_DISABLE(__HANDLE__)) and should be followed by an Enable macro (i.e. __HAL_UART_ENABLE(__HANDLE__)).

UART State Code Definition

HAL_UART_STATE_RESET

Peripheral is not initialized Value is allowed for gState and RxState

HAL_UART_STATE_READY

Peripheral Initialized and ready for use Value is allowed for gState and RxState

HAL_UART_STATE_BUSY

an internal process is ongoing Value is allowed for gState only

HAL_UART_STATE_BUSY_TX

Data Transmission process is ongoing Value is allowed for gState only

HAL_UART_STATE_BUSY_RX

Data Reception process is ongoing Value is allowed for RxState only

HAL_UART_STATE_BUSY_TX_RX

Data Transmission and Reception process is ongoing Not to be used for neither gState nor RxState.Value is result of combination (Or) between gState and RxState values

HAL_UART_STATE_TIMEOUT

Timeout state Value is allowed for gState only

HAL_UART_STATE_ERROR

Error Value is allowed for gState only

UART Number of Stop Bits

UART_STOPBITS_0_5

UART frame with 0.5 stop bit

UART_STOPBITS_1

UART frame with 1 stop bit

UART_STOPBITS_1_5

UART frame with 1.5 stop bits

UART_STOPBITS_2

UART frame with 2 stop bits

UART Advanced Feature Stop Mode Enable

UART_ADVFEATURE_STOPMODE_DISABLE

UART stop mode disable

UART_ADVFEATURE_STOPMODE_ENABLE

UART stop mode enable

UART polling-based communications time-out value

HAL_UART_TIMEOUT_VALUE

UART polling-based communications time-out value

UART Advanced Feature TX Pin Active Level Inversion

UART_ADVFEATURE_TXINV_DISABLE

TX pin active level inversion disable

UART_ADVFEATURE_TXINV_ENABLE

TX pin active level inversion enable

UART WakeUp From Stop Selection

UART_WAKEUP_ON_ADDRESS

UART wake-up on address

UART_WAKEUP_ON_READDATA_NONEMPTY

UART wake-up on receive data register not empty or RXFIFO is not empty

UART WakeUp Methods

UART_WAKEUPMETHOD_IDLELINE

UART wake-up on idle line

UART_WAKEUPMETHOD_ADDRESSMARK

UART wake-up on address mark

69 HAL UART Extension Driver

69.1 UARTEx Firmware driver registers structures

69.1.1 UART_WakeUpTypeDef

UART_WakeUpTypeDef is defined in the stm32u3xx_hal_uart_ex.h

Data Fields

- ***uint32_t WakeUpEvent***
- ***uint16_t AddressLength***
- ***uint8_t Address***

Field Documentation

- ***uint32_t UART_WakeUpTypeDef::WakeUpEvent***
  Specifies which event will activate the Wakeup from Stop mode flag (WUF). This parameter can be a value of ***UART_WakeUp_from_Stop_Selection***. If set to UART_WAKEUP_ON_ADDRESS, the two other fields below must be filled up.
- ***uint16_t UART_WakeUpTypeDef::AddressLength***
  Specifies whether the address is 4 or 7-bit long. This parameter can be a value of ***UARTEx_WakeUp_Address_Length***.
- ***uint8_t UART_WakeUpTypeDef::Address***
  UART/USART node address (7-bit long max).

69.1.2 UART_AutonomousModeConfTypeDef

UART_AutonomousModeConfTypeDef is defined in the stm32u3xx_hal_uart_ex.h

Data Fields

- ***uint32_t AutonomousModeState***
- ***uint32_t TriggerSelection***
- ***uint32_t TriggerPolarity***
- ***uint32_t DataSize***
- ***uint32_t IdleFrame***

Field Documentation

- ***uint32_t UART_AutonomousModeConfTypeDef::AutonomousModeState***
  Specifies the autonomous mode state.This parameter can be a value of ***UARTEx_Autonomous_mode***.
- ***uint32_t UART_AutonomousModeConfTypeDef::TriggerSelection***
  Specifies which trigger will activate the Transmission automatically. This parameter can be a value of ***UARTEx_Autonomous_Trigger_selection*** or ***UARTEx_Low_Power_Autonomous_Trigger_selection***.
- ***uint32_t UART_AutonomousModeConfTypeDef::TriggerPolarity***
  Specifies the autonomous mode trigger signal polarity. This parameter can be a value of ***UARTEx_Autonomous_Trigger_Polarity***
- ***uint32_t UART_AutonomousModeConfTypeDef::DataSize***
  Specifies the transmitted data size in byte
- ***uint32_t UART_AutonomousModeConfTypeDef::IdleFrame***
  Specifies whether the IDLE frame transmission is enabled or disabled. This parameter can be a value of ***UARTEx_Autonomous_IDLE_FRAME***.

69.2 UARTEx Firmware driver API description

The following section lists the various functions of the UARTEx library.

69.2.1 UART peripheral extended features

69.2.2 Initialization and Configuration functions

This subsection provides a set of functions allowing to initialize the USARTx or the UARTy in asynchronous mode.

- For the asynchronous mode the parameters below can be configured:
  - Baud Rate
  - Word Length
  - Stop Bit
  - Parity: If the parity is enabled, then the MSB bit of the data written in the data register is transmitted but is changed by the parity bit.
  - Hardware flow control
  - Receiver/transmitter modes
  - Over Sampling Method
  - One-Bit Sampling Method
- For the asynchronous mode, the following advanced features can be configured as well:
  - TX and/or RX pin level inversion
  - data logical level inversion
  - RX and TX pins swap
  - RX overrun detection disabling
  - DMA disabling on RX error
  - MSB first on communication line
  - auto Baud rate detection

The HAL_RS485Ex_Init() API follows the UART RS485 mode configuration procedures (details for the procedures are available in reference manual).

This section contains the following APIs:

- ***HAL_RS485Ex_Init()***

69.2.3 IO operation functions

This section contains the following APIs:

- ***HAL_UARTEx_RxFifoFullCallback()***
- ***HAL_UARTEx_TxFifoEmptyCallback()***

69.2.4 Peripheral Control functions

This section provides the following functions:

- HAL_MultiProcessorEx_AddressLength_Set() API optionally sets the UART node address detection length to more than 4 bits for multiprocessor address mark wake up.
- HAL_UARTEx_StopModeWakeUpSourceConfig() API defines the wake-up from stop mode trigger: address match, Start Bit detection or RXNE bit status.
- HAL_UARTEx_EnableStopMode() API enables the UART to wake up the MCU from stop mode
- HAL_UARTEx_DisableStopMode() API disables the above functionality
- HAL_UARTEx_EnableFifoMode() API enables the FIFO mode
- HAL_UARTEx_DisableFifoMode() API disables the FIFO mode
- HAL_UARTEx_SetTxFifoThreshold() API sets the TX FIFO threshold
- HAL_UARTEx_SetRxFifoThreshold() API sets the RX FIFO threshold

This subsection also provides a set of additional functions providing enhanced reception services to user. (For example, these functions allow application to handle use cases where number of data to be received is unknown).

1. Compared to standard reception services which only consider number of received data elements as reception completion criteria, these functions also consider additional events as triggers for updating reception status to caller :
   – Detection of inactivity period (RX line has not been active for a given period).
     ◦ RX inactivity detected by IDLE event, i.e. RX line has been in idle state (normally high state) for 1 frame time, after last received byte.
     ◦ RX inactivity detected by RTO, i.e. line has been in idle state for a programmable time, after last received byte.
   – Detection that a specific character has been received.
2. There are two mode of transfer:
   – Blocking mode: The reception is performed in polling mode, until either expected number of data is received, or till IDLE event occurs. Reception is handled only during function execution. When function exits, no data reception could occur. HAL status and number of actually received data elements, are returned by function after finishing transfer.
   – Non-Blocking mode: The reception is performed using Interrupts or DMA. These API's return the HAL status. The end of the data processing will be indicated through the dedicated UART IRQ when using Interrupt mode or the DMA IRQ when using DMA mode. The HAL_UARTEx_RxEventCallback() user callback will be executed during Receive process The HAL_UART_ErrorCallback()user callback will be executed when a reception error is detected.
3. Blocking mode API:
   – HAL_UARTEx_ReceiveToIdle()
4. Non-Blocking mode API with Interrupt:
   – HAL_UARTEx_ReceiveToIdle_IT()
5. Non-Blocking mode API with DMA:
   – HAL_UARTEx_ReceiveToIdle_DMA()

This section contains the following APIs:

- ***HAL_MultiProcessorEx_AddressLength_Set()***
- ***HAL_UARTEx_StopModeWakeUpSourceConfig()***
- ***HAL_UARTEx_EnableStopMode()***
- ***HAL_UARTEx_DisableStopMode()***
- ***HAL_UARTEx_EnableFifoMode()***
- ***HAL_UARTEx_DisableFifoMode()***
- ***HAL_UARTEx_SetTxFifoThreshold()***
- ***HAL_UARTEx_SetRxFifoThreshold()***
- ***HAL_UARTEx_ReceiveToIdle()***
- ***HAL_UARTEx_ReceiveToIdle_IT()***
- ***HAL_UARTEx_ReceiveToIdle_DMA()***
- ***HAL_UARTEx_GetRxEventType()***
- ***HAL_UARTEx_SetConfigAutonomousMode()***
- ***HAL_UARTEx_GetConfigAutonomousMode()***
- ***HAL_UARTEx_ClearConfigAutonomousMode()***

69.2.5 Detailed description of functions

HAL_RS485Ex_Init

Function name

HAL_StatusTypeDef HAL_RS485Ex_Init (UART_HandleTypeDef * huart, uint32_t Polarity, uint32_t AssertionTime, uint32_t DeassertionTime)

Function description

Initialize the RS485 Driver enable feature according to the specified parameters in the UART_InitTypeDef and creates the associated handle.

Parameters

- **huart:** UART handle.
- **Polarity:** Select the driver enable polarity. This parameter can be one of the following values:
  - UART_DE_POLARITY_HIGH DE signal is active high
  - UART_DE_POLARITY_LOW DE signal is active low
- **AssertionTime:** Driver Enable assertion time: 5-bit value defining the time between the activation of the DE (Driver Enable) signal and the beginning of the start bit. It is expressed in sample time units (1/8 or 1/16 bit time, depending on the oversampling rate)
- **DeassertionTime:** Driver Enable deassertion time: 5-bit value defining the time between the end of the last stop bit, in a transmitted message, and the de-activation of the DE (Driver Enable) signal. It is expressed in sample time units (1/8 or 1/16 bit time, depending on the oversampling rate).

Return values

- **HAL:** status

HAL_UARTEx_RxFifoFullCallback

Function name

void HAL_UARTEx_RxFifoFullCallback (UART_HandleTypeDef * huart)

Function description

UART RX Fifo full callback.

Parameters

- **huart:** UART handle.

Return values

- **None:**

HAL_UARTEx_TxFifoEmptyCallback

Function name

void HAL_UARTEx_TxFifoEmptyCallback (UART_HandleTypeDef * huart)

Function description

UART TX Fifo empty callback.

Parameters

- **huart:** UART handle.

Return values

- **None:**

HAL_UARTEx_StopModeWakeUpSourceConfig

Function name

HAL_StatusTypeDef HAL_UARTEx_StopModeWakeUpSourceConfig (UART_HandleTypeDef * huart, UART_WakeUpTypeDef WakeUpSelection)

Function description

Set Wakeup from Stop mode interrupt flag selection.

Parameters

- **huart:** UART handle.
- **WakeUpSelection:** Address match, Start Bit detection or RXNE/RXFNE bit status. This parameter can be one of the following values:
  - UART_WAKEUP_ON_ADDRESS
  - UART_WAKEUP_ON_READDATA_NONEMPTY

Return values

- **HAL:** status

Notes

- It is the application responsibility to enable the interrupt used as usart_wkup interrupt source before entering low-power mode.

HAL_UARTEx_EnableStopMode

Function name

HAL_StatusTypeDef HAL_UARTEx_EnableStopMode (UART_HandleTypeDef * huart)

Function description

Enable UART Stop Mode.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

Notes

- The UART is able to wake up the MCU from Stop 1 mode as long as UART clock is HSI or LSE.

HAL_UARTEx_DisableStopMode

Function name

HAL_StatusTypeDef HAL_UARTEx_DisableStopMode (UART_HandleTypeDef * huart)

Function description

Disable UART Stop Mode.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

HAL_MultiProcessorEx_AddressLength_Set

Function name

HAL_StatusTypeDef HAL_MultiProcessorEx_AddressLength_Set (UART_HandleTypeDef * huart, uint32_t AddressLength)

Function description

By default in multiprocessor mode, when the wake up method is set to address mark, the UART handles only 4-bit long addresses detection; this API allows to enable longer addresses detection (6-, 7- or 8-bit long).

Parameters

- **huart:** UART handle.
- **AddressLength:** This parameter can be one of the following values:
  - UART_ADDRESS_DETECT_4B 4-bit long address
  - UART_ADDRESS_DETECT_7B 6-, 7- or 8-bit long address

Return values

- **HAL:** status

Notes

- Addresses detection lengths are: 6-bit address detection in 7-bit data mode, 7-bit address detection in 8-bit data mode, 8-bit address detection in 9-bit data mode.

HAL_UARTEx_EnableFifoMode

Function name

HAL_StatusTypeDef HAL_UARTEx_EnableFifoMode (UART_HandleTypeDef * huart)

Function description

Enable the FIFO mode.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

HAL_UARTEx_DisableFifoMode

Function name

HAL_StatusTypeDef HAL_UARTEx_DisableFifoMode (UART_HandleTypeDef * huart)

Function description

Disable the FIFO mode.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

HAL_UARTEx_SetTxFifoThreshold

Function name

HAL_StatusTypeDef HAL_UARTEx_SetTxFifoThreshold (UART_HandleTypeDef * huart, uint32_t Threshold)

Function description

Set the TXFIFO threshold.

Parameters

- **huart:** UART handle.
- **Threshold:** TX FIFO threshold value This parameter can be one of the following values:
  - UART_TXFIFO_THRESHOLD_1_8
  - UART_TXFIFO_THRESHOLD_1_4
  - UART_TXFIFO_THRESHOLD_1_2
  - UART_TXFIFO_THRESHOLD_3_4
  - UART_TXFIFO_THRESHOLD_7_8
  - UART_TXFIFO_THRESHOLD_8_8

Return values

- **HAL:** status

HAL_UARTEx_SetRxFifoThreshold

Function name

HAL_StatusTypeDef HAL_UARTEx_SetRxFifoThreshold (UART_HandleTypeDef * huart, uint32_t Threshold)

Function description

Set the RXFIFO threshold.

Parameters

- **huart:** UART handle.
- **Threshold:** RX FIFO threshold value This parameter can be one of the following values:
  - UART_RXFIFO_THRESHOLD_1_8
  - UART_RXFIFO_THRESHOLD_1_4
  - UART_RXFIFO_THRESHOLD_1_2
  - UART_RXFIFO_THRESHOLD_3_4
  - UART_RXFIFO_THRESHOLD_7_8
  - UART_RXFIFO_THRESHOLD_8_8

Return values

- **HAL:** status

HAL_UARTEx_ReceiveToIdle

Function name

HAL_StatusTypeDef HAL_UARTEx_ReceiveToIdle (UART_HandleTypeDef * huart, uint8_t * pData, uint16_t Size, uint16_t * RxLen, uint32_t Timeout)

Function description

Receive an amount of data in blocking mode till either the expected number of data is received or an IDLE event occurs.

Parameters

- **huart:** UART handle.
- **pData:** Pointer to data buffer (uint8_t or uint16_t data elements).
- **Size:** Amount of data elements (uint8_t or uint16_t) to be received.
- **RxLen:** Number of data elements finally received (could be lower than Size, in case reception ends on IDLE event)
- **Timeout:** Timeout duration expressed in ms (covers the whole reception sequence).

Return values

- **HAL:** status

Notes

- HAL_OK is returned if reception is completed (expected number of data has been received) or if reception is stopped after IDLE event (less than the expected number of data has been received) In this case, RxLen output parameter indicates number of data available in reception buffer.
- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the received data is handled as a set of uint16_t. In this case, Size must indicate the number of uint16_t available through pData.
- When FIFO mode is enabled, the RXFNE flag is set as long as the RXFIFO is not empty. Read operations from the RDR register are performed when RXFNE flag is set. From hardware perspective, RXFNE flag and RXNE are mapped on the same bit-field.

HAL_UARTEx_ReceiveToIdle_IT

Function name

HAL_StatusTypeDef HAL_UARTEx_ReceiveToIdle_IT (UART_HandleTypeDef * huart, uint8_t * pData, uint16_t Size)

Function description

Receive an amount of data in interrupt mode till either the expected number of data is received or an IDLE event occurs.

Parameters

- **huart:** UART handle.
- **pData:** Pointer to data buffer (uint8_t or uint16_t data elements).
- **Size:** Amount of data elements (uint8_t or uint16_t) to be received.

Return values

- **HAL:** status

Notes

- Reception is initiated by this function call. Further progress of reception is achieved thanks to UART interrupts raised by RXNE and IDLE events. Callback is called at end of reception indicating number of received data elements.
- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the received data is handled as a set of uint16_t. In this case, Size must indicate the number of uint16_t available through pData.

HAL_UARTEx_ReceiveToIdle_DMA

Function name

HAL_StatusTypeDef HAL_UARTEx_ReceiveToIdle_DMA (UART_HandleTypeDef * huart, uint8_t * pData, uint16_t Size)

Function description

Receive an amount of data in DMA mode till either the expected number of data is received or an IDLE event occurs.

Parameters

- **huart:** UART handle.
- **pData:** Pointer to data buffer (uint8_t or uint16_t data elements).
- **Size:** Amount of data elements (uint8_t or uint16_t) to be received.

Return values

- **HAL:** status

Notes

- Reception is initiated by this function call. Further progress of reception is achieved thanks to DMA services, transferring automatically received data elements in user reception buffer and calling registered callbacks at half/end of reception. UART IDLE events are also used to consider reception phase as ended. In all cases, callback execution will indicate number of received data elements.
- When the UART parity is enabled (PCE = 1), the received data contain the parity bit (MSB position).
- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the received data is handled as a set of uint16_t. In this case, Size must indicate the number of uint16_t available through pData.

HAL_UARTEx_GetRxEventType

Function name

HAL_UART_RxEventTypeTypeDef HAL_UARTEx_GetRxEventType (const UART_HandleTypeDef * huart)

Function description

Provide Rx Event type that has lead to RxEvent callback execution.

Parameters

- **huart:** UART handle.

Return values

- **Rx:** Event Type (return vale will be a value of UART RxEvent type values)

Notes

- When HAL_UARTEx_ReceiveToIdle_IT() or HAL_UARTEx_ReceiveToIdle_DMA() API are called, progress of reception process is provided to application through calls of Rx Event callback (either default one HAL_UARTEx_RxEventCallback() or user registered one). As several types of events could occur (IDLE event, Half Transfer, or Transfer Complete), this function allows to retrieve the Rx Event type that has lead to Rx Event callback execution.
- This function is expected to be called within the user implementation of Rx Event Callback, in order to provide the accurate value : In Interrupt Mode : HAL_UART_RXEVENT_TC : when Reception has been completed (expected nb of data has been received)HAL_UART_RXEVENT_IDLE : when Idle event occurred prior reception has been completed (nb of received data is lower than expected one) In DMA Mode :HAL_UART_RXEVENT_TC : when Reception has been completed (expected nb of data has been received)HAL_UART_RXEVENT_HT : when half of expected nb of data has been receivedHAL_UART_RXEVENT_IDLE : when Idle event occurred prior reception has been completed (nb of received data is lower than expected one). In DMA mode, RxEvent callback could be called several times; When DMA is configured in Normal Mode, HT event does not stop Reception process; When DMA is configured in Circular Mode, HT, TC or IDLE events don't stop Reception process;

HAL_UARTEx_SetConfigAutonomousMode

Function name

HAL_StatusTypeDef HAL_UARTEx_SetConfigAutonomousMode (UART_HandleTypeDef * huart, const UART_AutonomousModeConfTypeDef * sConfig)

Function description

Set autonomous mode Configuration.

Parameters

- **huart:** UART handle.
- **sConfig:** Autonomous mode structure parameters.

Return values

- **HAL:** status

HAL_UARTEx_GetConfigAutonomousMode

Function name

HAL_StatusTypeDef HAL_UARTEx_GetConfigAutonomousMode (const UART_HandleTypeDef * huart, UART_AutonomousModeConfTypeDef * sConfig)

Function description

Get autonomous mode Configuration.

Parameters

- **huart:** UART handle.
- **sConfig:** Autonomous mode structure parameters.

Return values

- **HAL:** status

HAL_UARTEx_ClearConfigAutonomousMode

Function name

HAL_StatusTypeDef HAL_UARTEx_ClearConfigAutonomousMode (UART_HandleTypeDef * huart)

Function description

Clear autonomous mode Configuration.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

69.3 UARTEx Firmware driver defines

The following section lists the various define and macros of the module.

69.3.1 UARTEx

UARTEx

UARTEx Autonomous IDLE Frame

UART_IDLE_FRAME_ENABLE

IDLE Frame sent after enabling the transmitter

UART_IDLE_FRAME_DISABLE

IDLE Frame not sent after enabling the transmitter

UARTEx Autonomous Mode

UART_AUTONOMOUS_MODE_DISABLE

Autonomous mode disable

UART_AUTONOMOUS_MODE_ENABLE

Autonomous mode enable

UARTEx Autonomous Trigger Polarity

UART_TRIG_POLARITY_RISING

UART triggered on rising edge

UART_TRIG_POLARITY_FALLING

UART triggered on falling edge

UARTEx Autonomous trigger selection

UART_GPDMA1_CH0_TCF_TRG

UART GPDMA1 channel0 Internal Trigger

UART_GPDMA1_CH1_TCF_TRG

UART GPDMA1 channel1 Internal Trigger

UART_GPDMA1_CH2_TCF_TRG

UART GPDMA1 channel2 Internal Trigger

UART_GPDMA1_CH3_TCF_TRG

UART GPDMA1 channel3 Internal Trigger

UART_EXTI_LINE6_TRG

UART EXTI line 6 Internal Trigger

UART_EXTI_LINE9_TRG

UART EXTI line 9 Internal Trigger

UART_LPTIM1_OUT_TRG

LPUART RTC alarm Internal Trigger

LPUART_RTC_WUT_TRG

LPUART RTC wakeup Internal Trigger

UARTEx RXFIFO threshold level

UART_RXFIFO_THRESHOLD_1_8

RX FIFO reaches 1/8 of its depth

UART_RXFIFO_THRESHOLD_1_4

RX FIFO reaches 1/4 of its depth

UART_RXFIFO_THRESHOLD_1_2

RX FIFO reaches 1/2 of its depth

UART_RXFIFO_THRESHOLD_3_4

RX FIFO reaches 3/4 of its depth

UART_RXFIFO_THRESHOLD_7_8

RX FIFO reaches 7/8 of its depth

UART_RXFIFO_THRESHOLD_8_8

RX FIFO becomes full

UARTEx TXFIFO threshold level

UART_TXFIFO_THRESHOLD_1_8

TX FIFO reaches 1/8 of its depth

UART_TXFIFO_THRESHOLD_1_4

TX FIFO reaches 1/4 of its depth

UART_TXFIFO_THRESHOLD_1_2

TX FIFO reaches 1/2 of its depth

UART_TXFIFO_THRESHOLD_3_4

TX FIFO reaches 3/4 of its depth

UART_TXFIFO_THRESHOLD_7_8

TX FIFO reaches 7/8 of its depth

UART_TXFIFO_THRESHOLD_8_8

TX FIFO becomes empty

UARTEx WakeUp Address Length

UART_ADDRESS_DETECT_4B

4-bit long wake-up address

UART_ADDRESS_DETECT_7B

7-bit long wake-up address

UARTEx Word Length

UART_WORDLENGTH_7B

7-bit long UART frame

UART_WORDLENGTH_8B

8-bit long UART frame

UART_WORDLENGTH_9B

9-bit long UART frame

70 HAL USART Generic Driver

70.1 USART Firmware driver registers structures

70.1.1 USART_InitTypeDef

USART_InitTypeDef is defined in the stm32u3xx_hal_usart.h

Data Fields

- ***uint32_t BaudRate***
- ***uint32_t WordLength***
- ***uint32_t StopBits***
- ***uint32_t Parity***
- ***uint32_t Mode***
- ***uint32_t CLKPolarity***
- ***uint32_t CLKPhase***
- ***uint32_t CLKLastBit***
- ***uint32_t ClockPrescaler***

Field Documentation

- ***uint32_t USART_InitTypeDef::BaudRate***
  This member configures the Usart communication baud rate. The baud rate is computed using the following formula: Baud Rate Register[15:4] = ((2 * fclk_pres) / ((huart->Init.BaudRate)))[15:4] Baud Rate Register[3] = 0 Baud Rate Register[2:0] = (((2 * fclk_pres) / ((huart->Init.BaudRate)))[3:0]) >> 1 where fclk_pres is the USART input clock frequency (fclk) divided by a prescaler.
  Note:
  – Oversampling by 8 is systematically applied to achieve high baud rates.
- ***uint32_t USART_InitTypeDef::WordLength***
  Specifies the number of data bits transmitted or received in a frame. This parameter can be a value of ***USARTEx_Word_Length***.
- ***uint32_t USART_InitTypeDef::StopBits***
  Specifies the number of stop bits transmitted. This parameter can be a value of ***USART_Stop_Bits***.
- ***uint32_t USART_InitTypeDef::Parity***
  Specifies the parity mode. This parameter can be a value of ***USART_Parity***
  Note:
  – When parity is enabled, the computed parity is inserted at the MSB position of the transmitted data (9th bit when the word length is set to 9 data bits; 8th bit when the word length is set to 8 data bits).
- ***uint32_t USART_InitTypeDef::Mode***
  Specifies whether the Receive or Transmit mode is enabled or disabled. This parameter can be a value of ***USART_Mode***.
- ***uint32_t USART_InitTypeDef::CLKPolarity***
  Specifies the steady state of the serial clock. This parameter can be a value of ***USART_Clock_Polarity***.
- ***uint32_t USART_InitTypeDef::CLKPhase***
  Specifies the clock transition on which the bit capture is made. This parameter can be a value of ***USART_Clock_Phase***.
- ***uint32_t USART_InitTypeDef::CLKLastBit***
  Specifies whether the clock pulse corresponding to the last transmitted data bit (MSB) has to be output on the SCLK pin in synchronous mode. This parameter can be a value of ***USART_Last_Bit***.
- ***uint32_t USART_InitTypeDef::ClockPrescaler***
  Specifies the prescaler value used to divide the USART clock source. This parameter can be a value of ***USART_ClockPrescaler***.

70.1.2 __USART_HandleTypeDef

__USART_HandleTypeDef is defined in the stm32u3xx_hal_usart.h

Data Fields

- ***USART_TypeDef * Instance***
- ***USART_InitTypeDef Init***

  USART Rx Transfer Counter
- ***uint16_t __USART_HandleTypeDef::Mask***
  USART Rx RDR register mask
- ***uint16_t __USART_HandleTypeDef::NbRxDataToProcess***
  Number of data to process during RX ISR execution

- ***uint16_t __USART_HandleTypeDef::NbTxDataToProcess***
  Number of data to process during TX ISR execution
- ***uint32_t __USART_HandleTypeDef::SlaveMode***
  Enable/Disable USART SPI Slave Mode. This parameter can be a value of ***USARTEx_Slave_Mode***
- ***uint32_t __USART_HandleTypeDef::FifoMode***
  Specifies if the FIFO mode will be used. This parameter can be a value of ***USARTEx_FIFO_mode***.
- ***void(* __USART_HandleTypeDef::RxISR)(struct __USART_HandleTypeDef *husart)***
  Function pointer on Rx IRQ handler
- ***void(* __USART_HandleTypeDef::TxISR)(struct __USART_HandleTypeDef *husart)***
  Function pointer on Tx IRQ handler
- ***DMA_HandleTypeDef* __USART_HandleTypeDef::hdmatx***
  USART Tx DMA Handle parameters
- ***DMA_HandleTypeDef* __USART_HandleTypeDef::hdmarx***
  USART Rx DMA Handle parameters
- ***HAL_LockTypeDef __USART_HandleTypeDef::Lock***
  Locking object
- ***__IO HAL_USART_StateTypeDef __USART_HandleTypeDef::State***
  USART communication state
- ***__IO uint32_t __USART_HandleTypeDef::ErrorCode***
  USART Error code
- ***void(* __USART_HandleTypeDef::TxHalfCpltCallback)(struct __USART_HandleTypeDef *husart)***
  USART Tx Half Complete Callback
- ***void(* __USART_HandleTypeDef::TxCpltCallback)(struct __USART_HandleTypeDef *husart)***
  USART Tx Complete Callback
- ***void(* __USART_HandleTypeDef::RxHalfCpltCallback)(struct __USART_HandleTypeDef *husart)***
  USART Rx Half Complete Callback
- ***void(* __USART_HandleTypeDef::RxCpltCallback)(struct __USART_HandleTypeDef *husart)***
  USART Rx Complete Callback
- ***void(* __USART_HandleTypeDef::TxRxCpltCallback)(struct __USART_HandleTypeDef *husart)***
  USART Tx Rx Complete Callback
- ***void(* __USART_HandleTypeDef::ErrorCallback)(struct __USART_HandleTypeDef *husart)***
  USART Error Callback
- ***void(* __USART_HandleTypeDef::AbortCpltCallback)(struct __USART_HandleTypeDef *husart)***
  USART Abort Complete Callback
- ***void(* __USART_HandleTypeDef::RxFifoFullCallback)(struct __USART_HandleTypeDef *husart)***
  USART Rx Fifo Full Callback
- ***void(* __USART_HandleTypeDef::TxFifoEmptyCallback)(struct __USART_HandleTypeDef *husart)***
  USART Tx Fifo Empty Callback
- ***void(* __USART_HandleTypeDef::MspInitCallback)(struct __USART_HandleTypeDef *husart)***
  USART Msp Init callback
- ***void(* __USART_HandleTypeDef::MspDeInitCallback)(struct __USART_HandleTypeDef *husart)***
  USART Msp DeInit callback

70.2 USART Firmware driver API description

The following section lists the various functions of the USART library.

70.2.1 How to use this driver

The USART HAL driver can be used as follows:

1. Declare a USART_HandleTypeDef handle structure (eg. USART_HandleTypeDef husart).

2. Initialize the USART low level resources by implementing the HAL_USART_MspInit() API:
   - Enable the USARTx interface clock.
   - USART pins configuration:
     - Enable the clock for the USART GPIOs.
     - Configure these USART pins as alternate function pull-up.
   - NVIC configuration if you need to use interrupt process (HAL_USART_Transmit_IT(), HAL_USART_Receive_IT() and HAL_USART_TransmitReceive_IT() APIs):
     - Configure the USARTx interrupt priority.
     - Enable the NVIC USART IRQ handle.
   - USART interrupts handling:

Note: The specific USART interrupts (Transmission complete interrupt, RXNE interrupt and Error Interrupts) will be managed using the macros __HAL_USART_ENABLE_IT() and __HAL_USART_DISABLE_IT() inside the transmit and receive process.

   - DMA Configuration if you need to use DMA process (HAL_USART_Transmit_DMA() HAL_USART_Receive_DMA() and HAL_USART_TransmitReceive_DMA() APIs):
     - Declare a DMA handle structure for the Tx/Rx channel.
     - Enable the DMAx interface clock.
     - Configure the declared DMA handle structure with the required Tx/Rx parameters.
     - Configure the DMA Tx/Rx channel.
     - Associate the initialized DMA handle to the USART DMA Tx/Rx handle.
     - Configure the priority and enable the NVIC for the transfer complete interrupt on the DMA Tx/Rx channel.
3. Program the Baud Rate, Word Length, Stop Bit, Parity, and Mode (Receiver/Transmitter) in the husart handle Init structure.
4. Initialize the USART registers by calling the HAL_USART_Init() API:
   - This API configures also the low level Hardware GPIO, CLOCK, CORTEX...etc) by calling the customized HAL_USART_MspInit(&husart) API.

Note: To configure and enable/disable the USART to wake up the MCU from stop mode, resort to UART API's HAL_UARTEx_StopModeWakeUpSourceConfig(), HAL_UARTEx_EnableStopMode() and HAL_UARTEx_DisableStopMode() in casting the USART handle to UART type UART_HandleTypeDef.

70.2.2 Callback registration

The compilation define USE_HAL_USART_REGISTER_CALLBACKS when set to 1 allows the user to configure dynamically the driver callbacks.

Use Function HAL_USART_RegisterCallback() to register a user callback. Function HAL_USART_RegisterCallback() allows to register following callbacks:

- TxHalfCpltCallback : Tx Half Complete Callback.
- TxCpltCallback : Tx Complete Callback.
- RxHalfCpltCallback : Rx Half Complete Callback.
- RxCpltCallback : Rx Complete Callback.
- TxRxCpltCallback : Tx Rx Complete Callback.
- ErrorCallback : Error Callback.
- AbortCpltCallback : Abort Complete Callback.
- RxFifoFullCallback : Rx Fifo Full Callback.
- TxFifoEmptyCallback : Tx Fifo Empty Callback.
- MspInitCallback : USART MspInit.
- MspDeInitCallback : USART MspDeInit. This function takes as parameters the HAL peripheral handle, the Callback ID and a pointer to the user callback function.

Use function HAL_USART_UnRegisterCallback() to reset a callback to the default weak function. HAL_USART_UnRegisterCallback() takes as parameters the HAL peripheral handle, and the Callback ID. This function allows to reset following callbacks:

- TxHalfCpltCallback : Tx Half Complete Callback.

- TxCpltCallback : Tx Complete Callback.
- RxHalfCpltCallback : Rx Half Complete Callback.
- RxCpltCallback : Rx Complete Callback.
- TxRxCpltCallback : Tx Rx Complete Callback.
- ErrorCallback : Error Callback.
- AbortCpltCallback : Abort Complete Callback.
- RxFifoFullCallback : Rx Fifo Full Callback.
- TxFifoEmptyCallback : Tx Fifo Empty Callback.
- MspInitCallback : USART MspInit.
- MspDeInitCallback : USART MspDeInit.

By default, after the HAL_USART_Init() and when the state is HAL_USART_STATE_RESET all callbacks are set to the corresponding weak functions: examples HAL_USART_TxCpltCallback(), HAL_USART_RxHalfCpltCallback(). Exception done for MspInit and MspDeInit functions that are respectively reset to the legacy weak functions in the HAL_USART_Init() and HAL_USART_DeInit() only when these callbacks are null (not registered beforehand). If not, MspInit or MspDeInit are not null, the HAL_USART_Init() and HAL_USART_DeInit() keep and use the user MspInit/MspDeInit callbacks (registered beforehand).

Callbacks can be registered/unregistered in HAL_USART_STATE_READY state only. Exception done MspInit/ MspDeInit that can be registered/unregistered in HAL_USART_STATE_READY or HAL_USART_STATE_RESET state, thus registered (user) MspInit/DeInit callbacks can be used during the Init/DeInit. In that case first register the MspInit/MspDeInit user callbacks using HAL_USART_RegisterCallback() before calling HAL_USART_DeInit() or HAL_USART_Init() function.

When The compilation define USE_HAL_USART_REGISTER_CALLBACKS is set to 0 or not defined, the callback registration feature is not available and weak callbacks are used.

70.2.3 Initialization and Configuration functions

This subsection provides a set of functions allowing to initialize the USART in synchronous SPI master/slave mode.

- For the synchronous SPI mode only these parameters can be configured:
  - Baud Rate
  - Word Length
  - Stop Bit
  - Parity: If the parity is enabled, then the MSB bit of the data written in the data register is transmitted but is changed by the parity bit.
  - USART polarity
  - USART phase
  - USART LastBit
  - Receiver/transmitter modes

The HAL_USART_Init() function follows the USART synchronous SPI configuration procedure (details for the procedure are available in reference manual).

This section contains the following APIs:

- ***HAL_USART_Init()***
- ***HAL_USART_DeInit()***
- ***HAL_USART_MspInit()***
- ***HAL_USART_MspDeInit()***
- ***HAL_USART_RegisterCallback()***
- ***HAL_USART_UnRegisterCallback()***

70.2.4 IO operation functions

This subsection provides a set of functions allowing to manage the USART synchronous SPI data transfers.

The USART Synchronous SPI supports master and slave modes (SCLK as output or input).

1. There are two modes of transfer:
   - Blocking mode: The communication is performed in polling mode. The HAL status of all data processing is returned by the same function after finishing transfer.
   - No-Blocking mode: The communication is performed using Interrupts or DMA, These API's return the HAL status. The end of the data processing will be indicated through the dedicated USART IRQ when using Interrupt mode or the DMA IRQ when using DMA mode. The HAL_USART_TxCpltCallback(), HAL_USART_RxCpltCallback() and HAL_USART_TxRxCpltCallback() user callbacks will be executed respectively at the end of the transmit or Receive process The HAL_USART_ErrorCallback()user callback will be executed when a communication error is detected
2. Blocking mode API's are :
   - HAL_USART_Transmit() in simplex mode
   - HAL_USART_Receive() in full duplex receive only
   - HAL_USART_TransmitReceive() in full duplex mode
3. Non-Blocking mode API's with Interrupt are :
   - HAL_USART_Transmit_IT() in simplex mode
   - HAL_USART_Receive_IT() in full duplex receive only
   - HAL_USART_TransmitReceive_IT() in full duplex mode
   - HAL_USART_IRQHandler()
4. No-Blocking mode API's with DMA are :
   - HAL_USART_Transmit_DMA() in simplex mode
   - HAL_USART_Receive_DMA() in full duplex receive only
   - HAL_USART_TransmitReceive_DMA() in full duplex mode
   - HAL_USART_DMAPause()
   - HAL_USART_DMAResume()
   - HAL_USART_DMAStop()
5. A set of Transfer Complete Callbacks are provided in Non_Blocking mode:
   - HAL_USART_TxCpltCallback()
   - HAL_USART_RxCpltCallback()
   - HAL_USART_TxHalfCpltCallback()
   - HAL_USART_RxHalfCpltCallback()
   - HAL_USART_ErrorCallback()
   - HAL_USART_TxRxCpltCallback()
6. Non-Blocking mode transfers could be aborted using Abort API's :
   - HAL_USART_Abort()
   - HAL_USART_Abort_IT()
7. For Abort services based on interrupts (HAL_USART_Abort_IT), a Abort Complete Callbacks is provided:
   - HAL_USART_AbortCpltCallback()
8. In Non-Blocking mode transfers, possible errors are split into 2 categories. Errors are handled as follows :
   - Error is considered as Recoverable and non blocking : Transfer could go till end, but error severity is to be evaluated by user : this concerns Frame Error, Parity Error or Noise Error in Interrupt mode reception . Received character is then retrieved and stored in Rx buffer, Error code is set to allow user to identify error type, and HAL_USART_ErrorCallback() user callback is executed. Transfer is kept ongoing on USART side. If user wants to abort it, Abort services should be called by user.
   - Error is considered as Blocking : Transfer could not be completed properly and is aborted. This concerns Overrun Error In Interrupt mode reception and all errors in DMA mode. Error code is set to allow user to identify error type, and HAL_USART_ErrorCallback() user callback is executed.

This section contains the following APIs:

- ***HAL_USART_Transmit()***
- ***HAL_USART_Receive()***
- ***HAL_USART_TransmitReceive()***
- ***HAL_USART_Transmit_IT()***
- ***HAL_USART_Receive_IT()***

- *HAL_USART_TransmitReceive_IT()*
- *HAL_USART_Transmit_DMA()*
- *HAL_USART_Receive_DMA()*
- *HAL_USART_TransmitReceive_DMA()*
- *HAL_USART_DMAPause()*
- *HAL_USART_DMAResume()*
- *HAL_USART_DMAStop()*
- *HAL_USART_Abort()*
- *HAL_USART_Abort_IT()*
- *HAL_USART_IRQHandler()*
- *HAL_USART_TxCpltCallback()*
- *HAL_USART_TxHalfCpltCallback()*
- *HAL_USART_RxCpltCallback()*
- *HAL_USART_RxHalfCpltCallback()*
- *HAL_USART_TxRxCpltCallback()*
- *HAL_USART_ErrorCallback()*
- *HAL_USART_AbortCpltCallback()*

70.2.5 Peripheral State and Error functions

This subsection provides functions allowing to :

- Return the USART handle state
- Return the USART handle error code

This section contains the following APIs:

- *HAL_USART_GetState()*
- *HAL_USART_GetError()*

70.2.6 Detailed description of functions

HAL_USART_Init

Function name

HAL_StatusTypeDef HAL_USART_Init (USART_HandleTypeDef * husart)

Function description

Initialize the USART mode according to the specified parameters in the USART_InitTypeDef and initialize the associated handle.

Parameters

- **husart:** USART handle.

Return values

- **HAL:** status

HAL_USART_DeInit

Function name

HAL_StatusTypeDef HAL_USART_DeInit (USART_HandleTypeDef * husart)

Function description

DeInitialize the USART peripheral.

Parameters

- **husart:** USART handle.

Return values

- **HAL:** status

HAL_USART_MspInit

Function name

void HAL_USART_MspInit (USART_HandleTypeDef * husart)

Function description

Initialize the USART MSP.

Parameters

- **husart:** USART handle.

Return values

- **None:**

HAL_USART_MspDeInit

Function name

void HAL_USART_MspDeInit (USART_HandleTypeDef * husart)

Function description

DeInitialize the USART MSP.

Parameters

- **husart:** USART handle.

Return values

- **None:**

HAL_USART_RegisterCallback

Function name

HAL_StatusTypeDef HAL_USART_RegisterCallback (USART_HandleTypeDef * husart, HAL_USART_CallbackIDTypeDef CallbackID, pUSART_CallbackTypeDef pCallback)

Function description

Register a User USART Callback To be used to override the weak predefined callback.

Parameters

- **husart:** usart handle
- **CallbackID:** ID of the callback to be registered This parameter can be one of the following values:
  - HAL_USART_TX_HALFCOMPLETE_CB_ID Tx Half Complete Callback ID
  - HAL_USART_TX_COMPLETE_CB_ID Tx Complete Callback ID
  - HAL_USART_RX_HALFCOMPLETE_CB_ID Rx Half Complete Callback ID
  - HAL_USART_RX_COMPLETE_CB_ID Rx Complete Callback ID
  - HAL_USART_TX_RX_COMPLETE_CB_ID Rx Complete Callback ID
  - HAL_USART_ERROR_CB_ID Error Callback ID
  - HAL_USART_ABORT_COMPLETE_CB_ID Abort Complete Callback ID
  - HAL_USART_RX_FIFO_FULL_CB_ID Rx Fifo Full Callback ID
  - HAL_USART_TX_FIFO_EMPTY_CB_ID Tx Fifo Empty Callback ID
  - HAL_USART_MSPINIT_CB_ID MspInit Callback ID
  - HAL_USART_MSPDEINIT_CB_ID MspDeInit Callback ID
- **pCallback:** pointer to the Callback function

Return values

- **HAL:** status +

Notes

- The HAL_USART_RegisterCallback() may be called before HAL_USART_Init() in HAL_USART_STATE_RESET to register callbacks for HAL_USART_MSPINIT_CB_ID and HAL_USART_MSPDEINIT_CB_ID

HAL_USART_UnRegisterCallback

Function name

HAL_StatusTypeDef HAL_USART_UnRegisterCallback (USART_HandleTypeDef * husart, HAL_USART_CallbackIDTypeDef CallbackID)

Function description

Unregister an USART Callback USART callaback is redirected to the weak predefined callback.

Parameters

- **husart:** usart handle
- **CallbackID:** ID of the callback to be unregistered This parameter can be one of the following values:
  - HAL_USART_TX_HALFCOMPLETE_CB_ID Tx Half Complete Callback ID
  - HAL_USART_TX_COMPLETE_CB_ID Tx Complete Callback ID
  - HAL_USART_RX_HALFCOMPLETE_CB_ID Rx Half Complete Callback ID
  - HAL_USART_RX_COMPLETE_CB_ID Rx Complete Callback ID
  - HAL_USART_TX_RX_COMPLETE_CB_ID Rx Complete Callback ID
  - HAL_USART_ERROR_CB_ID Error Callback ID
  - HAL_USART_ABORT_COMPLETE_CB_ID Abort Complete Callback ID
  - HAL_USART_RX_FIFO_FULL_CB_ID Rx Fifo Full Callback ID
  - HAL_USART_TX_FIFO_EMPTY_CB_ID Tx Fifo Empty Callback ID
  - HAL_USART_MSPINIT_CB_ID MspInit Callback ID
  - HAL_USART_MSPDEINIT_CB_ID MspDeInit Callback ID

Return values

- **HAL:** status

Notes

- The HAL_USART_UnRegisterCallback() may be called before HAL_USART_Init() in HAL_USART_STATE_RESET to un-register callbacks for HAL_USART_MSPINIT_CB_ID and HAL_USART_MSPDEINIT_CB_ID

HAL_USART_Transmit

Function name

HAL_StatusTypeDef HAL_USART_Transmit (USART_HandleTypeDef * husart, const uint8_t * pTxData, uint16_t Size, uint32_t Timeout)

Function description

Simplex send an amount of data in blocking mode.

Parameters

- **husart:** USART handle.
- **pTxData:** Pointer to data buffer (u8 or u16 data elements).
- **Size:** Amount of data elements (u8 or u16) to be sent.
- **Timeout:** Timeout duration.

Return values

- **HAL:** status

Notes

- When USART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the sent data is handled as a set of u16. In this case, Size must indicate the number of u16 provided through pTxData.

HAL_USART_Receive

Function name

HAL_StatusTypeDef HAL_USART_Receive (USART_HandleTypeDef * husart, uint8_t * pRxData, uint16_t Size, uint32_t Timeout)

Function description

Receive an amount of data in blocking mode.

Parameters

- **husart:** USART handle.
- **pRxData:** Pointer to data buffer (u8 or u16 data elements).
- **Size:** Amount of data elements (u8 or u16) to be received.
- **Timeout:** Timeout duration.

Return values

- **HAL:** status

Notes

- To receive synchronous data, dummy data are simultaneously transmitted.
- When USART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the received data is handled as a set of u16. In this case, Size must indicate the number of u16 available through pRxData.

HAL_USART_TransmitReceive

Function name

HAL_StatusTypeDef HAL_USART_TransmitReceive (USART_HandleTypeDef * husart, const uint8_t * pTxData, uint8_t * pRxData, uint16_t Size, uint32_t Timeout)

Function description

Full-Duplex Send and Receive an amount of data in blocking mode.

Parameters

- **husart:** USART handle.
- **pTxData:** pointer to TX data buffer (u8 or u16 data elements).
- **pRxData:** pointer to RX data buffer (u8 or u16 data elements).
- **Size:** amount of data elements (u8 or u16) to be sent (same amount to be received).
- **Timeout:** Timeout duration.

Return values

- **HAL:** status

Notes

- When USART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the sent data and the received data are handled as sets of u16. In this case, Size must indicate the number of u16 available through pTxData and through pRxData.

HAL_USART_Transmit_IT

Function name

HAL_StatusTypeDef HAL_USART_Transmit_IT (USART_HandleTypeDef * husart, const uint8_t * pTxData, uint16_t Size)

Function description

Send an amount of data in interrupt mode.

Parameters

- **husart:** USART handle.
- **pTxData:** pointer to data buffer (u8 or u16 data elements).
- **Size:** amount of data elements (u8 or u16) to be sent.

Return values

- **HAL:** status

Notes

- When USART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the sent data is handled as a set of u16. In this case, Size must indicate the number of u16 provided through pTxData.

HAL_USART_Receive_IT

Function name

HAL_StatusTypeDef HAL_USART_Receive_IT (USART_HandleTypeDef * husart, uint8_t * pRxData, uint16_t Size)

Function description

Receive an amount of data in interrupt mode.

Parameters

- **husart:** USART handle.
- **pRxData:** pointer to data buffer (u8 or u16 data elements).
- **Size:** amount of data elements (u8 or u16) to be received.

Return values

- **HAL:** status

Notes

- To receive synchronous data, dummy data are simultaneously transmitted.
- When USART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the received data is handled as a set of u16. In this case, Size must indicate the number of u16 available through pRxData.

HAL_USART_TransmitReceive_IT

Function name

HAL_StatusTypeDef HAL_USART_TransmitReceive_IT (USART_HandleTypeDef * husart, const uint8_t * pTxData, uint8_t * pRxData, uint16_t Size)

Function description

Full-Duplex Send and Receive an amount of data in interrupt mode.

Parameters

- **husart:** USART handle.
- **pTxData:** pointer to TX data buffer (u8 or u16 data elements).
- **pRxData:** pointer to RX data buffer (u8 or u16 data elements).
- **Size:** amount of data elements (u8 or u16) to be sent (same amount to be received).

Return values

- **HAL:** status

Notes

- When USART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the sent data and the received data are handled as sets of u16. In this case, Size must indicate the number of u16 available through pTxData and through pRxData.

HAL_USART_Transmit_DMA

Function name

HAL_StatusTypeDef HAL_USART_Transmit_DMA (USART_HandleTypeDef * husart, const uint8_t * pTxData, uint16_t Size)

Function description

Send an amount of data in DMA mode.

Parameters

- **husart:** USART handle.
- **pTxData:** pointer to data buffer (u8 or u16 data elements).
- **Size:** amount of data elements (u8 or u16) to be sent.

Return values

- **HAL:** status

Notes

- When USART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the sent data is handled as a set of u16. In this case, Size must indicate the number of u16 provided through pTxData.

HAL_USART_Receive_DMA

Function name

HAL_StatusTypeDef HAL_USART_Receive_DMA (USART_HandleTypeDef * husart, uint8_t * pRxData, uint16_t Size)

Function description

Receive an amount of data in DMA mode.

Parameters

- **husart:** USART handle.
- **pRxData:** pointer to data buffer (u8 or u16 data elements).
- **Size:** amount of data elements (u8 or u16) to be received.

Return values

- **HAL:** status

Notes

- When the USART parity is enabled (PCE = 1), the received data contain the parity bit (MSB position).
- The USART DMA transmit channel must be configured in order to generate the clock for the slave.
- When USART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the received data is handled as a set of u16. In this case, Size must indicate the number of u16 available through pRxData.

HAL_USART_TransmitReceive_DMA

Function name

HAL_StatusTypeDef HAL_USART_TransmitReceive_DMA (USART_HandleTypeDef * husart, const uint8_t * pTxData, uint8_t * pRxData, uint16_t Size)

Function description

Full-Duplex Transmit Receive an amount of data in non-blocking mode.

Parameters

- **husart:** USART handle.
- **pTxData:** pointer to TX data buffer (u8 or u16 data elements).
- **pRxData:** pointer to RX data buffer (u8 or u16 data elements).
- **Size:** amount of data elements (u8 or u16) to be received/sent.

Return values

- **HAL:** status

Notes

- When the USART parity is enabled (PCE = 1) the data received contain the parity bit.
- When USART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the sent data and the received data are handled as sets of u16. In this case, Size must indicate the number of u16 available through pTxData and through pRxData.

HAL_USART_DMAPause

Function name

HAL_StatusTypeDef HAL_USART_DMAPause (USART_HandleTypeDef * husart)

Function description

Pause the DMA Transfer.

Parameters

- **husart:** USART handle.

Return values

- **HAL:** status

HAL_USART_DMAResume

Function name

HAL_StatusTypeDef HAL_USART_DMAResume (USART_HandleTypeDef * husart)

Function description

Resume the DMA Transfer.

Parameters

- **husart:** USART handle.

Return values

- **HAL:** status

HAL_USART_DMAStop

Function name

HAL_StatusTypeDef HAL_USART_DMAStop (USART_HandleTypeDef * husart)

Function description

Stop the DMA Transfer.

Parameters

- **husart:** USART handle.

Return values

- **HAL:** status

HAL_USART_Abort

Function name

HAL_StatusTypeDef HAL_USART_Abort (USART_HandleTypeDef * husart)

Function description

Abort ongoing transfers (blocking mode).

Parameters

- **husart:** USART handle.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable USART Interrupts (Tx and Rx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort (in case of transfer in DMA mode)Set handle State to READY
- This procedure is executed in blocking mode : when exiting function, Abort is considered as completed.

HAL_USART_Abort_IT

Function name

HAL_StatusTypeDef HAL_USART_Abort_IT (USART_HandleTypeDef * husart)

Function description

Abort ongoing transfers (Interrupt mode).

Parameters

- **husart:** USART handle.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable USART Interrupts (Tx and Rx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort_IT (in case of transfer in DMA mode)Set handle State to READYAt abort completion, call user abort complete callback
- This procedure is executed in Interrupt mode, meaning that abort procedure could be considered as completed only when user abort complete callback is executed (not when exiting function).

HAL_USART_IRQHandler

Function name

void HAL_USART_IRQHandler (USART_HandleTypeDef * husart)

Function description

Handle USART interrupt request.

Parameters

- **husart:** USART handle.

Return values

- **None:**

HAL_USART_TxHalfCpltCallback

Function name

void HAL_USART_TxHalfCpltCallback (USART_HandleTypeDef * husart)

Function description

Tx Half Transfer completed callback.

Parameters

- **husart:** USART handle.

Return values

- **None:**

HAL_USART_TxCpltCallback

Function name

void HAL_USART_TxCpltCallback (USART_HandleTypeDef * husart)

Function description

Tx Transfer completed callback.

Parameters

- **husart:** USART handle.

Return values

- **None:**

HAL_USART_RxCpltCallback

Function name

void HAL_USART_RxCpltCallback (USART_HandleTypeDef * husart)

Function description

Rx Transfer completed callback.

Parameters

- **husart:** USART handle.

Return values

- **None:**

HAL_USART_RxHalfCpltCallback

Function name

void HAL_USART_RxHalfCpltCallback (USART_HandleTypeDef * husart)

Function description

Rx Half Transfer completed callback.

Parameters

- **husart:** USART handle.

Return values

- **None:**

HAL_USART_TxRxCpltCallback

Function name

void HAL_USART_TxRxCpltCallback (USART_HandleTypeDef * husart)

Function description

Tx/Rx Transfers completed callback for the non-blocking process.

Parameters

- **husart:** USART handle.

Return values

- **None:**

HAL_USART_ErrorCallback

Function name

void HAL_USART_ErrorCallback (USART_HandleTypeDef * husart)

Function description

USART error callback.

Parameters

- **husart:** USART handle.

Return values

- **None:**

HAL_USART_AbortCpltCallback

Function name

void HAL_USART_AbortCpltCallback (USART_HandleTypeDef * husart)

Function description

USART Abort Complete callback.

Parameters

- **husart:** USART handle.

Return values

- **None:**

HAL_USART_GetState

Function name

HAL_USART_StateTypeDef HAL_USART_GetState (const USART_HandleTypeDef * husart)

Function description

Return the USART handle state.

Parameters

- **husart:** pointer to a USART_HandleTypeDef structure that contains the configuration information for the specified USART.

Return values

- **USART:** handle state

HAL_USART_GetError

Function name

uint32_t HAL_USART_GetError (const USART_HandleTypeDef * husart)

Function description

Return the USART error code.

Parameters

- **husart:** pointer to a USART_HandleTypeDef structure that contains the configuration information for the specified USART.

Return values

- **USART:** handle Error Code

70.3 USART Firmware driver defines

The following section lists the various define and macros of the module.

70.3.1 USART

USART

USART Clock

USART_CLOCK_DISABLE

USART clock disable

USART_CLOCK_ENABLE

USART clock enable

USART Clock Prescaler

USART_PRESCALER_DIV1

fclk_pres = fclk

USART_PRESCALER_DIV2

fclk_pres = fclk/2

USART_PRESCALER_DIV4

fclk_pres = fclk/4

USART_PRESCALER_DIV6

fclk_pres = fclk/6

USART_PRESCALER_DIV8

fclk_pres = fclk/8

USART_PRESCALER_DIV10

fclk_pres = fclk/10

USART_PRESCALER_DIV12

fclk_pres = fclk/12

USART_PRESCALER_DIV16

fclk_pres = fclk/16

USART_PRESCALER_DIV32

fclk_pres = fclk/32

USART_PRESCALER_DIV64

fclk_pres = fclk/64

USART_PRESCALER_DIV128

fclk_pres = fclk/128

USART_PRESCALER_DIV256

fclk_pres = fclk/256

USART Clock Phase

USART_PHASE_1EDGE

USART frame phase on first clock transition

USART_PHASE_2EDGE

USART frame phase on second clock transition

USART Clock Polarity

USART_POLARITY_LOW

Driver enable signal is active high

USART_POLARITY_HIGH

Driver enable signal is active low

USART Error Definition

HAL_USART_ERROR_NONE

No error

HAL_USART_ERROR_PE

Parity error

HAL_USART_ERROR_NE

Noise error

HAL_USART_ERROR_FE

Frame error

HAL_USART_ERROR_ORE

Overrun error

HAL_USART_ERROR_DMA

DMA transfer error

HAL_USART_ERROR_UDR

SPI slave underrun error

HAL_USART_ERROR_INVALID_CALLBACK

Invalid Callback error

HAL_USART_ERROR_RTO

Receiver Timeout error

USART Exported Macros

__HAL_USART_RESET_HANDLE_STATE

Description:

- Reset USART handle state.

Parameters:

- __HANDLE__: USART handle.

Return value:

- None

__HAL_USART_GET_FLAG

Description:

- Check whether the specified USART flag is set or not.

Parameters:

- __HANDLE__: specifies the USART Handle
- __FLAG__: specifies the flag to check. This parameter can be one of the following values:
  - USART_FLAG_TXFT TXFIFO threshold flag
  - USART_FLAG_RXFT RXFIFO threshold flag
  - USART_FLAG_RXFF RXFIFO Full flag
  - USART_FLAG_TXFE TXFIFO Empty flag
  - USART_FLAG_REACK Receive enable acknowledge flag
  - USART_FLAG_TEACK Transmit enable acknowledge flag
  - USART_FLAG_BUSY Busy flag
  - USART_FLAG_UDR SPI slave underrun error flag
  - USART_FLAG_TXE Transmit data register empty flag
  - USART_FLAG_TXFNF TXFIFO not full flag
  - USART_FLAG_TC Transmission Complete flag
  - USART_FLAG_RXNE Receive data register not empty flag
  - USART_FLAG_RXFNE RXFIFO not empty flag
  - USART_FLAG_RTOF Receiver Timeout flag
  - USART_FLAG_IDLE Idle Line detection flag
  - USART_FLAG_ORE OverRun Error flag
  - USART_FLAG_NE Noise Error flag
  - USART_FLAG_FE Framing Error flag
  - USART_FLAG_PE Parity Error flag

Return value:

- The: new state of __FLAG__ (TRUE or FALSE).

__HAL_USART_CLEAR_FLAG

Description:

- Clear the specified USART pending flag.

Parameters:

- __HANDLE__: specifies the USART Handle.
- __FLAG__: specifies the flag to check. This parameter can be any combination of the following values:
  - USART_CLEAR_PEF Parity Error Clear Flag
  - USART_CLEAR_FEF Framing Error Clear Flag
  - USART_CLEAR_NEF Noise detected Clear Flag
  - USART_CLEAR_OREF Overrun Error Clear Flag
  - USART_CLEAR_IDLEF IDLE line detected Clear Flag
  - USART_CLEAR_TXFECF TXFIFO empty clear Flag
  - USART_CLEAR_TCF Transmission Complete Clear Flag
  - USART_CLEAR_RTOF Receiver Timeout clear flag
  - USART_CLEAR_UDRF SPI slave underrun error Clear Flag

Return value:

- None

__HAL_USART_CLEAR_PEFLAG

Description:

- Clear the USART PE pending flag.

Parameters:

- __HANDLE__: specifies the USART Handle.

Return value:

- None

__HAL_USART_CLEAR_FEFLAG

Description:

- Clear the USART FE pending flag.

Parameters:

- __HANDLE__: specifies the USART Handle.

Return value:

- None

__HAL_USART_CLEAR_NEFLAG

Description:

- Clear the USART NE pending flag.

Parameters:

- __HANDLE__: specifies the USART Handle.

Return value:

- None

__HAL_USART_CLEAR_OREFLAG

Description:

- Clear the USART ORE pending flag.

Parameters:

- __HANDLE__: specifies the USART Handle.

Return value:

- None

__HAL_USART_CLEAR_IDLEFLAG

Description:

- Clear the USART IDLE pending flag.

Parameters:

- __HANDLE__: specifies the USART Handle.

Return value:

- None

__HAL_USART_CLEAR_TXFECF

Description:

- Clear the USART TX FIFO empty clear flag.

Parameters:

- __HANDLE__: specifies the USART Handle.

Return value:

- None

__HAL_USART_CLEAR_UDRFLAG

Description:

- Clear SPI slave underrun error flag.

Parameters:

- __HANDLE__: specifies the USART Handle.

Return value:

- None

__HAL_USART_ENABLE_IT

Description:

- Enable the specified USART interrupt.

Parameters:

- __HANDLE__: specifies the USART Handle.
- __INTERRUPT__: specifies the USART interrupt source to enable. This parameter can be one of the following values:
  - USART_IT_RXFF RXFIFO Full interrupt
  - USART_IT_TXFE TXFIFO Empty interrupt
  - USART_IT_RXFT RXFIFO threshold interrupt
  - USART_IT_TXFT TXFIFO threshold interrupt
  - USART_IT_TXE Transmit Data Register empty interrupt
  - USART_IT_TXFNF TX FIFO not full interrupt
  - USART_IT_TC Transmission complete interrupt
  - USART_IT_RXNE Receive Data register not empty interrupt
  - USART_IT_RXFNE RXFIFO not empty interrupt
  - USART_IT_IDLE Idle line detection interrupt
  - USART_IT_PE Parity Error interrupt
  - USART_IT_ERR Error interrupt(Frame error, noise error, overrun error)

Return value:

- None

__HAL_USART_DISABLE_IT

Description:

- Disable the specified USART interrupt.

Parameters:

- __HANDLE__: specifies the USART Handle.
- __INTERRUPT__: specifies the USART interrupt source to disable. This parameter can be one of the following values:
  - USART_IT_RXFF RXFIFO Full interrupt
  - USART_IT_TXFE TXFIFO Empty interrupt
  - USART_IT_RXFT RXFIFO threshold interrupt
  - USART_IT_TXFT TXFIFO threshold interrupt
  - USART_IT_TXE Transmit Data Register empty interrupt
  - USART_IT_TXFNF TX FIFO not full interrupt
  - USART_IT_TC Transmission complete interrupt
  - USART_IT_RXNE Receive Data register not empty interrupt
  - USART_IT_RXFNE RXFIFO not empty interrupt
  - USART_IT_IDLE Idle line detection interrupt
  - USART_IT_PE Parity Error interrupt
  - USART_IT_ERR Error interrupt(Frame error, noise error, overrun error)

Return value:

- None

__HAL_USART_GET_IT

Description:

- Check whether the specified USART interrupt has occurred or not.

Parameters:

- __HANDLE__: specifies the USART Handle.
- __INTERRUPT__: specifies the USART interrupt source to check. This parameter can be one of the following values:
  - USART_IT_RXFF RXFIFO Full interrupt
  - USART_IT_TXFE TXFIFO Empty interrupt
  - USART_IT_RXFT RXFIFO threshold interrupt
  - USART_IT_TXFT TXFIFO threshold interrupt
  - USART_IT_TXE Transmit Data Register empty interrupt
  - USART_IT_TXFNF TX FIFO not full interrupt
  - USART_IT_TC Transmission complete interrupt
  - USART_IT_RXNE Receive Data register not empty interrupt
  - USART_IT_RXFNE RXFIFO not empty interrupt
  - USART_IT_IDLE Idle line detection interrupt
  - USART_IT_ORE OverRun Error interrupt
  - USART_IT_NE Noise Error interrupt
  - USART_IT_FE Framing Error interrupt
  - USART_IT_PE Parity Error interrupt

Return value:

- The: new state of __INTERRUPT__ (SET or RESET).

__HAL_USART_GET_IT_SOURCE

Description:

- Check whether the specified USART interrupt source is enabled or not.

Parameters:

- __HANDLE__: specifies the USART Handle.
- __INTERRUPT__: specifies the USART interrupt source to check. This parameter can be one of the following values:
  - USART_IT_RXFF RXFIFO Full interrupt
  - USART_IT_TXFE TXFIFO Empty interrupt
  - USART_IT_RXFT RXFIFO threshold interrupt
  - USART_IT_TXFT TXFIFO threshold interrupt
  - USART_IT_TXE Transmit Data Register empty interrupt
  - USART_IT_TXFNF TX FIFO not full interrupt
  - USART_IT_TC Transmission complete interrupt
  - USART_IT_RXNE Receive Data register not empty interrupt
  - USART_IT_RXFNE RXFIFO not empty interrupt
  - USART_IT_IDLE Idle line detection interrupt
  - USART_IT_ORE OverRun Error interrupt
  - USART_IT_NE Noise Error interrupt
  - USART_IT_FE Framing Error interrupt
  - USART_IT_PE Parity Error interrupt

Return value:

- The: new state of __INTERRUPT__ (SET or RESET).

__HAL_USART_CLEAR_IT

Description:

- Clear the specified USART ISR flag, in setting the proper ICR register flag.

Parameters:

- __HANDLE__: specifies the USART Handle.
- __IT_CLEAR__: specifies the interrupt clear register flag that needs to be set to clear the corresponding interrupt. This parameter can be one of the following values:
  - USART_CLEAR_PEF Parity Error Clear Flag
  - USART_CLEAR_FEF Framing Error Clear Flag
  - USART_CLEAR_NEF Noise detected Clear Flag
  - USART_CLEAR_OREF Overrun Error Clear Flag
  - USART_CLEAR_IDLEF IDLE line detected Clear Flag
  - USART_CLEAR_RTOF Receiver timeout clear flag
  - USART_CLEAR_TXFECF TXFIFO empty clear Flag
  - USART_CLEAR_TCF Transmission Complete Clear Flag

Return value:

- None

__HAL_USART_SEND_REQ

Description:

- Set a specific USART request flag.

Parameters:

- __HANDLE__: specifies the USART Handle.
- __REQ__: specifies the request flag to set. This parameter can be one of the following values:
  - USART_RXDATA_FLUSH_REQUEST Receive Data flush Request
  - USART_TXDATA_FLUSH_REQUEST Transmit data flush Request

Return value:

- None

__HAL_USART_ONE_BIT_SAMPLE_ENABLE

Description:

- Enable the USART one bit sample method.

Parameters:

- __HANDLE__: specifies the USART Handle.

Return value:

- None

__HAL_USART_ONE_BIT_SAMPLE_DISABLE

Description:

- Disable the USART one bit sample method.

Parameters:

- __HANDLE__: specifies the USART Handle.

Return value:

- None

__HAL_USART_ENABLE

Description:

- Enable USART.

Parameters:

- __HANDLE__: specifies the USART Handle.

Return value:

- None

__HAL_USART_DISABLE

Description:

- Disable USART.

Parameters:

- __HANDLE__: specifies the USART Handle.

Return value:

- None

USART Flags

USART_FLAG_TXFT

USART TXFIFO threshold flag

USART_FLAG_RXFT

USART RXFIFO threshold flag

USART_FLAG_RXFF

USART RXFIFO Full flag

USART_FLAG_TXFE

USART TXFIFO Empty flag

USART_FLAG_REACK

USART receive enable acknowledge flag

USART_FLAG_TEACK

USART transmit enable acknowledge flag

RX mode

USART_MODE_TX

TX mode

USART_MODE_TX_RX

RX and TX mode

USART Parity

USART_PARITY_NONE

No parity

USART_PARITY_EVEN

Even parity

USART_PARITY_ODD

Odd parity

USART Request Parameters

USART_RXDATA_FLUSH_REQUEST

Receive Data flush Request

USART_TXDATA_FLUSH_REQUEST

Transmit data flush Request

USART Number of Stop Bits

USART_STOPBITS_0_5

USART frame with 0.5 stop bit

USART_STOPBITS_1

USART frame with 1 stop bit

USART_STOPBITS_1_5

USART frame with 1.5 stop bits

USART_STOPBITS_2

USART frame with 2 stop bits

71 HAL USART Extension Driver

71.1 USARTEx Firmware driver registers structures

71.1.1 USART_AutonomousModeConfTypeDef

USART_AutonomousModeConfTypeDef is defined in the stm32u3xx_hal_usart_ex.h

Data Fields

- ***uint32_t AutonomousModeState***
- ***uint32_t TriggerSelection***
- ***uint32_t TriggerPolarity***
- ***uint32_t DataSize***
- ***uint32_t IdleFrame***

Field Documentation

- ***uint32_t USART_AutonomousModeConfTypeDef::AutonomousModeState***
  Specifies the autonomous mode state.This parameter can be a value of ***USARTEx_Autonomous_mode***.
- ***uint32_t USART_AutonomousModeConfTypeDef::TriggerSelection***
  Specifies which trigger will activate the Transmission automatically. This parameter can be a value of ***USARTEx_Autonomous_Trigger_selection***
- ***uint32_t USART_AutonomousModeConfTypeDef::TriggerPolarity***
  Specifies the autonomous mode trigger signal polarity. This parameter can be a value of ***USARTEx_Autonomous_Trigger_Polarity***
- ***uint32_t USART_AutonomousModeConfTypeDef::DataSize***
  Specifies the transmitted data size in byte
- ***uint32_t USART_AutonomousModeConfTypeDef::IdleFrame***
  Specifies whether the IDLE frame transmission is enabled or disabled. This parameter can be a value of ***USARTEx_Autonomous_IDLE_FRAME***.

71.2 USARTEx Firmware driver API description

The following section lists the various functions of the USARTEx library.

71.2.1 USART peripheral extended features

71.2.2 IO operation functions

This section contains the following APIs:

- ***HAL_USARTEx_RxFifoFullCallback()***
- ***HAL_USARTEx_TxFifoEmptyCallback()***

71.2.3 Peripheral Control functions

This section provides the following functions:

- HAL_USARTEx_EnableSPISlaveMode() API enables the SPI slave mode
- HAL_USARTEx_DisableSPISlaveMode() API disables the SPI slave mode
- HAL_USARTEx_ConfigNSS API configures the Slave Select input pin (NSS)
- HAL_USARTEx_EnableFifoMode() API enables the FIFO mode
- HAL_USARTEx_DisableFifoMode() API disables the FIFO mode
- HAL_USARTEx_SetTxFifoThreshold() API sets the TX FIFO threshold
- HAL_USARTEx_SetRxFifoThreshold() API sets the RX FIFO threshold

This section contains the following APIs:

- ***HAL_USARTEx_EnableSlaveMode()***
- ***HAL_USARTEx_DisableSlaveMode()***

- *HAL_USARTEx_ConfigNSS()*
- *HAL_USARTEx_EnableFifoMode()*
- *HAL_USARTEx_DisableFifoMode()*
- *HAL_USARTEx_SetTxFifoThreshold()*
- *HAL_USARTEx_SetRxFifoThreshold()*
- *HAL_USARTEx_SetConfigAutonomousMode()*
- *HAL_USARTEx_GetConfigAutonomousMode()*
- *HAL_USARTEx_ClearConfigAutonomousMode()*

71.2.4 Detailed description of functions

HAL_USARTEx_RxFifoFullCallback

Function name

void HAL_USARTEx_RxFifoFullCallback (USART_HandleTypeDef * husart)

Function description

USART RX Fifo full callback.

Parameters

- **husart:** USART handle.

Return values

- **None:**

HAL_USARTEx_TxFifoEmptyCallback

Function name

void HAL_USARTEx_TxFifoEmptyCallback (USART_HandleTypeDef * husart)

Function description

USART TX Fifo empty callback.

Parameters

- **husart:** USART handle.

Return values

- **None:**

HAL_USARTEx_EnableSlaveMode

Function name

HAL_StatusTypeDef HAL_USARTEx_EnableSlaveMode (USART_HandleTypeDef * husart)

Function description

Enable the SPI slave mode.

Parameters

- **husart:** USART handle.

Return values

- **HAL:** status

Notes

- When the USART operates in SPI slave mode, it handles data flow using the serial interface clock derived from the external SCLK signal provided by the external master SPI device.
- In SPI slave mode, the USART must be enabled before starting the master communications (or between frames while the clock is stable). Otherwise, if the USART slave is enabled while the master is in the middle of a frame, it will become desynchronized with the master.
- The data register of the slave needs to be ready before the first edge of the communication clock or before the end of the ongoing communication, otherwise the SPI slave will transmit zeros.

HAL_USARTEx_DisableSlaveMode

Function name

HAL_StatusTypeDef HAL_USARTEx_DisableSlaveMode (USART_HandleTypeDef * husart)

Function description

Disable the SPI slave mode.

Parameters

- **husart:** USART handle.

Return values

- **HAL:** status

HAL_USARTEx_ConfigNSS

Function name

HAL_StatusTypeDef HAL_USARTEx_ConfigNSS (USART_HandleTypeDef * husart, uint32_t NSSConfig)

Function description

Configure the Slave Select input pin (NSS).

Parameters

- **husart:** USART handle.
- **NSSConfig:** NSS configuration. This parameter can be one of the following values:
  - USART_NSS_HARD
  - USART_NSS_SOFT

Return values

- **HAL:** status

Notes

- Software NSS management: SPI slave will always be selected and NSS input pin will be ignored.
- Hardware NSS management: the SPI slave selection depends on NSS input pin. The slave is selected when NSS is low and deselected when NSS is high.

HAL_USARTEx_EnableFifoMode

Function name

HAL_StatusTypeDef HAL_USARTEx_EnableFifoMode (USART_HandleTypeDef * husart)

Function description

Enable the FIFO mode.

Parameters

- **husart:** USART handle.

Return values

- **HAL:** status

HAL_USARTEx_DisableFifoMode

Function name

HAL_StatusTypeDef HAL_USARTEx_DisableFifoMode (USART_HandleTypeDef * husart)

Function description

Disable the FIFO mode.

Parameters

- **husart:** USART handle.

Return values

- **HAL:** status

HAL_USARTEx_SetTxFifoThreshold

Function name

HAL_StatusTypeDef HAL_USARTEx_SetTxFifoThreshold (USART_HandleTypeDef * husart, uint32_t Threshold)

Function description

Set the TXFIFO threshold.

Parameters

- **husart:** USART handle.
- **Threshold:** TX FIFO threshold value This parameter can be one of the following values:
  - USART_TXFIFO_THRESHOLD_1_8
  - USART_TXFIFO_THRESHOLD_1_4
  - USART_TXFIFO_THRESHOLD_1_2
  - USART_TXFIFO_THRESHOLD_3_4
  - USART_TXFIFO_THRESHOLD_7_8
  - USART_TXFIFO_THRESHOLD_8_8

Return values

- **HAL:** status

HAL_USARTEx_SetRxFifoThreshold

Function name

HAL_StatusTypeDef HAL_USARTEx_SetRxFifoThreshold (USART_HandleTypeDef * husart, uint32_t Threshold)

Function description

Set the RXFIFO threshold.

Parameters

- **husart:** USART handle.
- **Threshold:** RX FIFO threshold value This parameter can be one of the following values:
  - USART_RXFIFO_THRESHOLD_1_8
  - USART_RXFIFO_THRESHOLD_1_4
  - USART_RXFIFO_THRESHOLD_1_2
  - USART_RXFIFO_THRESHOLD_3_4
  - USART_RXFIFO_THRESHOLD_7_8
  - USART_RXFIFO_THRESHOLD_8_8

Return values

- **HAL:** status

HAL_USARTEx_SetConfigAutonomousMode

Function name

HAL_StatusTypeDef HAL_USARTEx_SetConfigAutonomousMode (USART_HandleTypeDef * husart, const USART_AutonomousModeConfTypeDef * sConfig)

Function description

Set autonomous mode Configuration.

Parameters

- **husart:** USART handle.
- **sConfig:** Autonomous mode structure parameters.

Return values

- **HAL:** status

HAL_USARTEx_GetConfigAutonomousMode

Function name

HAL_StatusTypeDef HAL_USARTEx_GetConfigAutonomousMode (const USART_HandleTypeDef * husart, USART_AutonomousModeConfTypeDef * sConfig)

Function description

Get autonomous mode Configuration.

Parameters

- **husart:** USART handle.
- **sConfig:** Autonomous mode structure parameters.

Return values

- **HAL:** status

HAL_USARTEx_ClearConfigAutonomousMode

Function name

HAL_StatusTypeDef HAL_USARTEx_ClearConfigAutonomousMode (USART_HandleTypeDef * husart)

Function description

Clear autonomous mode Configuration.

Parameters

- **husart:** USART handle.

Return values

- **HAL:** status

71.3 USARTEx Firmware driver defines

The following section lists the various define and macros of the module.

71.3.1 USARTEx

USARTEx

USARTEx Autonomous IDLE Frame

USART_IDLE_FRAME_ENABLE

IDLE Frame sent after enabling the transmitter

USART_IDLE_FRAME_DISABLE

IDLE Frame not sent after enabling the transmitter

USARTEx Autonomous Mode

USART_AUTONOMOUS_MODE_DISABLE

Autonomous mode disable

USART_AUTONOMOUS_MODE_ENABLE

Autonomous mode enable

USARTEx Autonomous Trigger Polarity

USART_TRIG_POLARITY_RISING

USART triggered on rising edge

USART_TRIG_POLARITY_FALLING

USART triggered on falling edge

USARTEx Autonomous trigger selection

USART_GPDMA1_CH0_TCF_TRG

USART GPDMA1 channel0 Internal Trigger

USART_GPDMA1_CH1_TCF_TRG

USART GPDMA1 channel1 Internal Trigger

USART_GPDMA1_CH2_TCF_TRG

USART GPDMA1 channel2 Internal Trigger

USART_GPDMA1_CH3_TCF_TRG

USART GPDMA1 channel3 Internal Trigger

USART_EXTI_LINE6_TRG

USART EXTI line 6 Internal Trigger

USART_EXTI_LINE9_TRG

USART EXTI line 9 Internal Trigger

USART_LPTIM1_OUT_TRG

USART LPTIM1 out Internal Trigger

USART_LPTIM2_OUT_TRG

USART LPTIM2 out Internal Trigger

USART_COMP1_OUT_TRG

USART COMP1 out Internal Trigger

USART_COMP2_OUT_TRG

USART COMP2 out Internal Trigger

USART_RTC_ALRA_TRG

USART RTC alarm Internal Trigger

USART_RTC_WUT_TRG

USART RTC wakeup Internal Trigger

USARTEx FIFO mode

USART_FIFOMODE_DISABLE

FIFO mode disable

USART_FIFOMODE_ENABLE

FIFO mode enable

USARTEx RXFIFO threshold level

USART_RXFIFO_THRESHOLD_1_8

RXFIFO FIFO reaches 1/8 of its depth

USART_RXFIFO_THRESHOLD_1_4

RXFIFO FIFO reaches 1/4 of its depth

USART_RXFIFO_THRESHOLD_1_2

RXFIFO FIFO reaches 1/2 of its depth

USART_RXFIFO_THRESHOLD_3_4

RXFIFO FIFO reaches 3/4 of its depth

USART_RXFIFO_THRESHOLD_7_8

RXFIFO FIFO reaches 7/8 of its depth

USART_RXFIFO_THRESHOLD_8_8

RXFIFO FIFO becomes full

USARTEx Synchronous Slave mode enable

USART_SLAVEMODE_DISABLE

USART SPI Slave Mode Enable

USART_SLAVEMODE_ENABLE

USART SPI Slave Mode Disable

USARTEx Slave Select Management

USART_NSS_HARD

SPI slave selection depends on NSS input pin

USART_NSS_SOFT

SPI slave is always selected and NSS input pin is ignored

USARTEx TXFIFO threshold level

USART_TXFIFO_THRESHOLD_1_8

TXFIFO reaches 1/8 of its depth

USART_TXFIFO_THRESHOLD_1_4

TXFIFO reaches 1/4 of its depth

USART_TXFIFO_THRESHOLD_1_2

TXFIFO reaches 1/2 of its depth

USART_TXFIFO_THRESHOLD_3_4

TXFIFO reaches 3/4 of its depth

USART_TXFIFO_THRESHOLD_7_8

TXFIFO reaches 7/8 of its depth

USART_TXFIFO_THRESHOLD_8_8

TXFIFO becomes empty

USARTEx Word Length

USART_WORDLENGTH_7B

7-bit long USART frame

USART_WORDLENGTH_8B

8-bit long USART frame

USART_WORDLENGTH_9B

9-bit long USART frame

72 HAL WWDG Generic Driver

72.1 WWDG Firmware driver registers structures

72.1.1 WWDG_InitTypeDef

WWDG_InitTypeDef is defined in the stm32u3xx_hal_wwdg.h

Data Fields

- ***uint32_t Prescaler***
- ***uint32_t Window***
- ***uint32_t Counter***
- ***uint32_t EWIMode***

Field Documentation

- ***uint32_t WWDG_InitTypeDef::Prescaler***
  Specifies the prescaler value of the WWDG. This parameter can be a value of ***WWDG_Prescaler***
- ***uint32_t WWDG_InitTypeDef::Window***
  Specifies the WWDG window value to be compared to the downcounter. This parameter must be a number Min_Data = 0x40 and Max_Data = 0x7F
- ***uint32_t WWDG_InitTypeDef::Counter***
  Specifies the WWDG free-running downcounter value. This parameter must be a number between Min_Data = 0x40 and Max_Data = 0x7F
- ***uint32_t WWDG_InitTypeDef::EWIMode***
  Specifies if WWDG Early Wakeup Interrupt is enable or not. This parameter can be a value of ***WWDG_EWI_Mode***

72.1.2 __WWDG_HandleTypeDef

__WWDG_HandleTypeDef is defined in the stm32u3xx_hal_wwdg.h

Data Fields

- ***WWDG_TypeDef * Instance***
- ***WWDG_InitTypeDef Init***
- ***void(* EwiCallback***
- ***void(* MspInitCallback***

Field Documentation

- ***WWDG_TypeDef* __WWDG_HandleTypeDef::Instance***
  Register base address
- ***WWDG_InitTypeDef __WWDG_HandleTypeDef::Init***
  WWDG required parameters
- ***void(* __WWDG_HandleTypeDef::EwiCallback)(struct __WWDG_HandleTypeDef *hwwdg)***
  WWDG Early WakeUp Interrupt callback
- ***void(* __WWDG_HandleTypeDef::MspInitCallback)(struct __WWDG_HandleTypeDef *hwwdg)***
  WWDG Msp Init callback

72.2 WWDG Firmware driver API description

The following section lists the various functions of the WWDG library.

72.2.1 WWDG Specific features

Once enabled the WWDG generates a system reset on expiry of a programmed time period, unless the program refreshes the counter (T[6;0] downcounter) before reaching 0x3F value (i.e. a reset is generated when the counter value rolls down from 0x40 to 0x3F).

- An MCU reset is also generated if the counter value is refreshed before the counter has reached the refresh window value. This implies that the counter must be refreshed in a limited window.

- Once enabled the WWDG cannot be disabled except by a system reset.
- If required by application, an Early Wakeup Interrupt can be triggered in order to be warned before WWDG expiration. The Early Wakeup Interrupt (EWI) can be used if specific safety operations or data logging must be performed before the actual reset is generated. When the downcounter reaches 0x40, interrupt occurs. This mechanism requires WWDG interrupt line to be enabled in NVIC. Once enabled, EWI interrupt cannot be disabled except by a system reset.
- WWDGRST flag in RCC CSR register can be used to inform when a WWDG reset occurs.
- The WWDG counter input clock is derived from the APB clock divided by a programmable prescaler.
- WWDG clock (Hz) = PCLK1 / (4096 * Prescaler)
- WWDG timeout (mS) = 1000 * (T[5;0] + 1) / WWDG clock (Hz) where T[5;0] are the lowest 6 bits of Counter.
- WWDG Counter refresh is allowed between the following limits :
  - min time (mS) = 1000 * (Counter - Window) / WWDG clock
  - max time (mS) = 1000 * (Counter - 0x40) / WWDG clock
- Typical values:
  - Counter min (T[5;0] = 0x00) at 96MHz (PCLK1) with zero prescaler: max timeout before reset: approximately 73.14us
  - Counter max (T[5;0] = 0x3F) at 96MHz (PCLK1) with prescaler dividing by 128: max timeout before reset: approximately 599.18ms

72.2.2 How to use this driver

Common driver usage

- Enable WWDG APB1 clock using __HAL_RCC_WWDG_CLK_ENABLE().
- Configure the WWDG prescaler, refresh window value, counter value and early interrupt status using HAL_WWDG_Init() function. This will automatically enable WWDG and start its downcounter. Time reference can be taken from function exit. Care must be taken to provide a counter value greater than 0x40 to prevent generation of immediate reset.
- If the Early Wakeup Interrupt (EWI) feature is enabled, an interrupt is generated when the counter reaches 0x40. When HAL_WWDG_IRQHandler is triggered by the interrupt service routine, flag will be automatically cleared and HAL_WWDG_WakeupCallback user callback will be executed. User can add his own code by customization of callback HAL_WWDG_WakeupCallback.
- Then the application program must refresh the WWDG counter at regular intervals during normal operation to prevent an MCU reset, using HAL_WWDG_Refresh() function. This operation must occur only when the counter is lower than the refresh window value already programmed.

Callback registration

The compilation define USE_HAL_WWDG_REGISTER_CALLBACKS when set to 1 allows the user to configure dynamically the driver callbacks. Use Functions HAL_WWDG_RegisterCallback() to register a user callback.

- Function HAL_WWDG_RegisterCallback() allows to register following callbacks:
  - EwiCallback : callback for Early WakeUp Interrupt.
  - MspInitCallback : WWDG MspInit. This function takes as parameters the HAL peripheral handle, the Callback ID and a pointer to the user callback function.
- Use function HAL_WWDG_UnRegisterCallback() to reset a callback to the default weak function. HAL_WWDG_UnRegisterCallback() takes as parameters the HAL peripheral handle and the Callback ID. This function allows to reset following callbacks:
  - EwiCallback : callback for Early WakeUp Interrupt.
  - MspInitCallback : WWDG MspInit.

When calling HAL_WWDG_Init function, callbacks are reset to the corresponding legacy weak functions: HAL_WWDG_EarlyWakeupCallback() and HAL_WWDG_MspInit() only if they have not been registered before.

When compilation define USE_HAL_WWDG_REGISTER_CALLBACKS is set to 0 or not defined, the callback registering feature is not available and weak (overridden) callbacks are used.

WWDG HAL driver macros list

Below the list of available macros in WWDG HAL driver.

- __HAL_WWDG_ENABLE: Enable the WWDG peripheral
- __HAL_WWDG_GET_FLAG: Get the selected WWDG's flag status
- __HAL_WWDG_CLEAR_FLAG: Clear the WWDG's pending flags
- __HAL_WWDG_ENABLE_IT: Enable the WWDG early wakeup interrupt

72.2.3 Initialization and Configuration functions

This section provides functions allowing to:

- Initialize and start the WWDG according to the specified parameters in the WWDG_InitTypeDef of associated handle.
- Initialize the WWDG MSP.

This section contains the following APIs:

- ***HAL_WWDG_Init()***
- ***HAL_WWDG_MspInit()***
- ***HAL_WWDG_RegisterCallback()***
- ***HAL_WWDG_UnRegisterCallback()***

72.2.4 IO operation functions

This section provides functions allowing to:

- Refresh the WWDG.
- Handle WWDG interrupt request and associated function callback.

This section contains the following APIs:

- ***HAL_WWDG_Refresh()***
- ***HAL_WWDG_IRQHandler()***
- ***HAL_WWDG_EarlyWakeupCallback()***

72.2.5 Detailed description of functions

HAL_WWDG_Init

Function name

HAL_StatusTypeDef HAL_WWDG_Init (WWDG_HandleTypeDef * hwwdg)

Function description

Initialize the WWDG according to the specified.

Parameters

- **hwwdg:** pointer to a WWDG_HandleTypeDef structure that contains the configuration information for the specified WWDG module.

Return values

- **HAL:** status

HAL_WWDG_MspInit

Function name

void HAL_WWDG_MspInit (WWDG_HandleTypeDef * hwwdg)

Function description

Initialize the WWDG MSP.

Parameters

- **hwwdg:** pointer to a WWDG_HandleTypeDef structure that contains the configuration information for the specified WWDG module.

Return values

- **None:**

Notes

- When rewriting this function in user file, mechanism may be added to avoid multiple initialize when HAL_WWDG_Init function is called again to change parameters.

HAL_WWDG_RegisterCallback

Function name

HAL_StatusTypeDef HAL_WWDG_RegisterCallback (WWDG_HandleTypeDef * hwwdg, HAL_WWDG_CallbackIDTypeDef CallbackID, pWWDG_CallbackTypeDef pCallback)

Function description

Register a User WWDG Callback To be used instead of the weak (overridden) predefined callback.

Parameters

- **hwwdg:** WWDG handle
- **CallbackID:** ID of the callback to be registered This parameter can be one of the following values:
  - HAL_WWDG_EWI_CB_ID Early WakeUp Interrupt Callback ID
  - HAL_WWDG_MSPINIT_CB_ID MspInit callback ID
- **pCallback:** pointer to the Callback function

Return values

- **status:**

HAL_WWDG_UnRegisterCallback

Function name

HAL_StatusTypeDef HAL_WWDG_UnRegisterCallback (WWDG_HandleTypeDef * hwwdg, HAL_WWDG_CallbackIDTypeDef CallbackID)

Function description

Unregister a WWDG Callback WWDG Callback is redirected to the weak (overridden) predefined callback.

Parameters

- **hwwdg:** WWDG handle
- **CallbackID:** ID of the callback to be registered This parameter can be one of the following values:
  - HAL_WWDG_EWI_CB_ID Early WakeUp Interrupt Callback ID
  - HAL_WWDG_MSPINIT_CB_ID MspInit callback ID

Return values

- **status:**

HAL_WWDG_Refresh

Function name

HAL_StatusTypeDef HAL_WWDG_Refresh (WWDG_HandleTypeDef * hwwdg)

Function description

Refresh the WWDG.

Parameters

- **hwwdg:** pointer to a WWDG_HandleTypeDef structure that contains the configuration information for the specified WWDG module.

Return values

- **HAL:** status

HAL_WWDG_IRQHandler

Function name

void HAL_WWDG_IRQHandler (WWDG_HandleTypeDef * hwwdg)

Function description

Handle WWDG interrupt request.

Parameters

- **hwwdg:** pointer to a WWDG_HandleTypeDef structure that contains the configuration information for the specified WWDG module.

Return values

- **None:**

Notes

- The Early Wakeup Interrupt (EWI) can be used if specific safety operations or data logging must be performed before the actual reset is generated. The EWI interrupt is enabled by calling HAL_WWDG_Init function with EWIMode set to WWDG_EWI_ENABLE. When the downcounter reaches the value 0x40, and EWI interrupt is generated and the corresponding Interrupt Service Routine (ISR) can be used to trigger specific actions (such as communications or data logging), before resetting the device.

HAL_WWDG_EarlyWakeupCallback

Function name

void HAL_WWDG_EarlyWakeupCallback (WWDG_HandleTypeDef * hwwdg)

Function description

WWDG Early Wakeup callback.

Parameters

- **hwwdg:** pointer to a WWDG_HandleTypeDef structure that contains the configuration information for the specified WWDG module.

Return values

- **None:**

72.3 WWDG Firmware driver defines

The following section lists the various define and macros of the module.

72.3.1 WWDG

WWDG

WWDG Early Wakeup Interrupt Mode

WWDG_EWI_DISABLE

EWI Disable

WWDG_EWI_ENABLE

EWI Enable

WWDG Exported Macros

__HAL_WWDG_ENABLE

Description:

- Enable the WWDG peripheral.

Parameters:

- __HANDLE__: WWDG handle

Return value:

- None

__HAL_WWDG_ENABLE_IT

Description:

- Enable the WWDG early wakeup interrupt.

Parameters:

- __HANDLE__: WWDG handle
- __INTERRUPT__: specifies the interrupt to enable. This parameter can be one of the following values:
  - WWDG_IT_EWI: Early wakeup interrupt

Return value:

- None

Notes:

- Once enabled this interrupt cannot be disabled except by a system reset.

__HAL_WWDG_GET_IT

Description:

- Check whether the selected WWDG interrupt has occurred or not.

Parameters:

- __HANDLE__: WWDG handle
- __INTERRUPT__: specifies the it to check. This parameter can be one of the following values:
  - WWDG_FLAG_EWIF: Early wakeup interrupt IT

Return value:

- The: new state of WWDG_FLAG (SET or RESET).

__HAL_WWDG_CLEAR_IT

Description:

- Clear the WWDG interrupt pending bits.

Parameters:

- __HANDLE__: WWDG handle
- __INTERRUPT__: specifies the interrupt pending bit to clear. This parameter can be one of the following values:
  - WWDG_FLAG_EWIF: Early wakeup interrupt flag

__HAL_WWDG_GET_FLAG

Description:

- Check whether the specified WWDG flag is set or not.

Parameters:

- __HANDLE__: WWDG handle
- __FLAG__: specifies the flag to check. This parameter can be one of the following values:
  - WWDG_FLAG_EWIF: Early wakeup interrupt flag

Return value:

- The: new state of WWDG_FLAG (SET or RESET).

__HAL_WWDG_CLEAR_FLAG

Description:

- Clear the WWDG's pending flags.

Parameters:

- __HANDLE__: WWDG handle
- __FLAG__: specifies the flag to clear. This parameter can be one of the following values:
  - WWDG_FLAG_EWIF: Early wakeup interrupt flag

Return value:

- None

__HAL_WWDG_GET_IT_SOURCE

Description:

- Check whether the specified WWDG interrupt source is enabled or not.

Parameters:

- __HANDLE__: WWDG Handle.
- __INTERRUPT__: specifies the WWDG interrupt source to check. This parameter can be one of the following values:
  - WWDG_IT_EWI: Early Wakeup Interrupt

Return value:

- state: of __INTERRUPT__ (TRUE or FALSE).

WWDG Flag definition

WWDG_FLAG_EWIF

Early wakeup interrupt flag

WWDG Interrupt definition

WWDG_IT_EWI

Early wakeup interrupt

WWDG Prescaler

WWDG_PRESCALER_1

WWDG counter clock = (PCLK1/4096)/1

WWDG_PRESCALER_2

WWDG counter clock = (PCLK1/4096)/2

WWDG_PRESCALER_4

WWDG counter clock = (PCLK1/4096)/4

WWDG_PRESCALER_8

WWDG counter clock = (PCLK1/4096)/8

WWDG_PRESCALER_16

WWDG counter clock = (PCLK1/4096)/16

WWDG_PRESCALER_32

WWDG counter clock = (PCLK1/4096)/32

WWDG_PRESCALER_64

WWDG counter clock = (PCLK1/4096)/64

WWDG_PRESCALER_128

WWDG counter clock = (PCLK1/4096)/128

73 HAL XSPI Generic Driver

73.1 XSPI Firmware driver registers structures

73.1.1 XSPI_InitTypeDef

XSPI_InitTypeDef is defined in the stm32u3xx_hal_xspi.h

Data Fields

- ***uint32_t FifoThresholdByte***
- ***uint32_t MemoryMode***
- ***uint32_t MemoryType***
- ***uint32_t MemorySize***
- ***uint32_t ChipSelectHighTimeCycle***
- ***uint32_t FreeRunningClock***
- ***uint32_t ClockMode***
- ***uint32_t WrapSize***
- ***uint32_t ClockPrescaler***
- ***uint32_t SampleShifting***
- ***uint32_t DelayHoldQuarterCycle***
- ***uint32_t ChipSelectBoundary***
- ***uint32_t DelayBlockBypass***
- ***uint32_t MaxTran***
- ***uint32_t Refresh***

Field Documentation

- ***uint32_t XSPI_InitTypeDef::FifoThresholdByte***
  This is the threshold used by the Peripheral to generate the interrupt indicating that data are available in reception or free place is available in transmission. For OCTOSPI, this parameter can be a value between 1 and 32
- ***uint32_t XSPI_InitTypeDef::MemoryMode***
  It Specifies the memory mode. This parameter can be a value of ***XSPI_MemoryMode***
- ***uint32_t XSPI_InitTypeDef::MemoryType***
  It indicates the external device type connected to the XSPI. This parameter can be a value of ***XSPI_MemoryType***
- ***uint32_t XSPI_InitTypeDef::MemorySize***
  It defines the size of the external device connected to the XSPI, it corresponds to the number of address bits required to access the external device. This parameter can be a value of ***XSPI_MemorySize***
- ***uint32_t XSPI_InitTypeDef::ChipSelectHighTimeCycle***
  It defines the minimum number of clocks which the chip select must remain high between commands. This parameter can be a value between 1 and 64U
- ***uint32_t XSPI_InitTypeDef::FreeRunningClock***
  It enables or not the free running clock. This parameter can be a value of ***XSPI_FreeRunningClock***
- ***uint32_t XSPI_InitTypeDef::ClockMode***
  It indicates the level of clock when the chip select is released. This parameter can be a value of ***XSPI_ClockMode***
- ***uint32_t XSPI_InitTypeDef::WrapSize***
  It indicates the wrap-size corresponding the external device configuration. This parameter can be a value of ***XSPI_WrapSize***
- ***uint32_t XSPI_InitTypeDef::ClockPrescaler***
  It specifies the prescaler factor used for generating the external clock based on the AHB clock. This parameter can be a value between 0 and 255U
- ***uint32_t XSPI_InitTypeDef::SampleShifting***
  It allows to delay to 1/2 cycle the data sampling in order to take in account external signal delays. This parameter can be a value of ***XSPI_SampleShifting***

- ***uint32_t XSPI_InitTypeDef::DelayHoldQuarterCycle***
  It allows to hold to 1/4 cycle the data. This parameter can be a value of ***XSPI_DelayHoldQuarterCycle***
- ***uint32_t XSPI_InitTypeDef::ChipSelectBoundary***
  It enables the transaction boundary feature and defines the boundary of bytes to release the chip select. This parameter can be a value of ***XSPI_ChipSelectBoundary***
- ***uint32_t XSPI_InitTypeDef::DelayBlockBypass***
  It enables the delay block bypass, so the sampling is not affected by the delay block. This parameter can be a value of ***XSPI_DelayBlockBypass***
- ***uint32_t XSPI_InitTypeDef::MaxTran***
  It enables the communication regulation feature. The chip select is released every MaxTran+1 bytes when the other XSPI request the access to the bus. This parameter can be a value between 0 and 255U
- ***uint32_t XSPI_InitTypeDef::Refresh***
  It enables the refresh rate feature. The chip select is released every Refresh+1 clock cycles. This parameter can be a value between 0 and 0xFFFFFFFF

73.1.2 __XSPI_HandleTypeDef

__XSPI_HandleTypeDef is defined in the stm32u3xx_hal_xspi.h

Data Fields

- ***XSPI_TypeDef * Instance***
- ***XSPI_InitTypeDef Init***
- ***uint8_t * pBuffPtr***
- ***__IO uint32_t XferSize***
- ***__IO uint32_t XferCount***
- ***DMA_HandleTypeDef * hdmatx***
- ***DMA_HandleTypeDef * hdmarx***
- ***__IO uint32_t State***
- ***__IO uint32_t ErrorCode***

73.1.3 XSPI_RegularCmdTypeDef

XSPI_RegularCmdTypeDef is defined in the stm32u3xx_hal_xspi.h

Data Fields

- ***uint32_t OperationType***
- ***uint32_t IOSelect***
- ***uint32_t Instruction***
- ***uint32_t InstructionMode***
- ***uint32_t InstructionWidth***
- ***uint32_t InstructionDTRMode***
- ***uint32_t Address***
- ***uint32_t AddressMode***
- ***uint32_t AddressWidth***
- ***uint32_t AddressDTRMode***
- ***uint32_t AlternateBytes***
- ***uint32_t AlternateBytesMode***
- ***uint32_t AlternateBytesWidth***
- ***uint32_t AlternateBytesDTRMode***
- ***uint32_t DataMode***
- ***uint32_t DataLength***
- ***uint32_t DataDTRMode***
- ***uint32_t DummyCycles***
- ***uint32_t DQSMode***
- ***uint32_t SIOOMode***

Field Documentation

- ***uint32_t XSPI_RegularCmdTypeDef::OperationType***
  It indicates if the configuration applies to the common registers or to the registers for the write operation (these registers are only used for memory-mapped mode). This parameter can be a value of ***XSPI_OperationType***
- ***uint32_t XSPI_RegularCmdTypeDef::IOSelect***
  It indicates the IOs used to exchange data with external memory. This parameter can be a value of ***XSPI_IOSelect***

- ***uint32_t XSPI_RegularCmdTypeDef::Instruction***
  It contains the instruction to be sent to the device. This parameter can be a value between 0 and 0xFFFFFFFFU
- ***uint32_t XSPI_RegularCmdTypeDef::InstructionMode***
  It indicates the mode of the instruction. This parameter can be a value of ***XSPI_InstructionMode***
- ***uint32_t XSPI_RegularCmdTypeDef::InstructionWidth***
  It indicates the width of the instruction. This parameter can be a value of ***XSPI_InstructionWidth***
- ***uint32_t XSPI_RegularCmdTypeDef::InstructionDTRMode***
  It enables or not the DTR mode for the instruction phase. This parameter can be a value of ***XSPI_InstructionDTRMode***
- ***uint32_t XSPI_RegularCmdTypeDef::Address***
  It contains the address to be sent to the device. This parameter can be a value between 0 and 0xFFFFFFFF
- ***uint32_t XSPI_RegularCmdTypeDef::AddressMode***
  It indicates the address mode. Address mode precises number of lines for address (except no address). This parameter can be a value of ***XSPI_AddressMode***
- ***uint32_t XSPI_RegularCmdTypeDef::AddressWidth***
  It indicates the width of the address. This parameter can be a value of ***XSPI_AddressWidth***
- ***uint32_t XSPI_RegularCmdTypeDef::AddressDTRMode***
  It enables or not the DTR mode for the address phase. This parameter can be a value of ***XSPI_AddressDTRMode***
- ***uint32_t XSPI_RegularCmdTypeDef::AlternateBytes***
  It contains the alternate bytes to be sent to the device. This parameter can be a value between 0 and 0xFFFFFFFF
- ***uint32_t XSPI_RegularCmdTypeDef::AlternateBytesMode***
  It indicates the mode of the alternate bytes. This parameter can be a value of ***XSPI_AlternateBytesMode***
- ***uint32_t XSPI_RegularCmdTypeDef::AlternateBytesWidth***
  It indicates the width of the alternate bytes. This parameter can be a value of ***XSPI_AlternateBytesWidth***
- ***uint32_t XSPI_RegularCmdTypeDef::AlternateBytesDTRMode***
  It enables or not the DTR mode for the alternate bytes phase. This parameter can be a value of ***XSPI_AlternateBytesDTRMode***
- ***uint32_t XSPI_RegularCmdTypeDef::DataMode***
  It indicates the data mode. Data mode precises number of lines for data exchange (except no data). This parameter can be a value of ***XSPI_DataMode***
- ***uint32_t XSPI_RegularCmdTypeDef::DataLength***
  It indicates the number of data transferred with this command. This field is only used for indirect mode. This parameter can be a value between 1 and 0xFFFFFFFFU
- ***uint32_t XSPI_RegularCmdTypeDef::DataDTRMode***
  It enables or not the DTR mode for the data phase. This parameter can be a value of ***XSPI_DataDTRMode***
- ***uint32_t XSPI_RegularCmdTypeDef::DummyCycles***
  It indicates the number of dummy cycles inserted before data phase. This parameter can be a value between 0 and 31U
- ***uint32_t XSPI_RegularCmdTypeDef::DQSMode***
  It enables or not the data strobe management. This parameter can be a value of ***XSPI_DQSMode***
- ***uint32_t XSPI_RegularCmdTypeDef::SIOOMode***
  It enables or not the SIOO mode. When SIOO mode enabled, instruction will be sent only once. This parameter can be a value of ***XSPI_SIOOMode***

73.1.4 XSPI_HyperbusCfgTypeDef

XSPI_HyperbusCfgTypeDef is defined in the stm32u3xx_hal_xspi.h

Data Fields

- ***uint32_t RWRecoveryTimeCycle***
- ***uint32_t AccessTimeCycle***
- ***uint32_t WriteZeroLatency***
- ***uint32_t LatencyMode***

Field Documentation

- ***uint32_t XSPI_HyperbusCfgTypeDef::RWRecoveryTimeCycle***
  It indicates the number of cycles for the device read write recovery time. This parameter can be a value between 0 and 255U
- ***uint32_t XSPI_HyperbusCfgTypeDef::AccessTimeCycle***
  It indicates the number of cycles for the device access time. This parameter can be a value between 0 and 255U
- ***uint32_t XSPI_HyperbusCfgTypeDef::WriteZeroLatency***
  It enables or not the latency for the write access. This parameter can be a value of ***XSPI_WriteZeroLatency***
- ***uint32_t XSPI_HyperbusCfgTypeDef::LatencyMode***
  It configures the latency mode. This parameter can be a value of ***XSPI_LatencyMode***

73.1.5 XSPI_HyperbusCmdTypeDef

XSPI_HyperbusCmdTypeDef is defined in the stm32u3xx_hal_xspi.h

Data Fields

- ***uint32_t AddressSpace***
- ***uint32_t Address***
- ***uint32_t AddressWidth***
- ***uint32_t DataLength***
- ***uint32_t DQSMode***

Field Documentation

- ***uint32_t XSPI_HyperbusCmdTypeDef::AddressSpace***
  It indicates the address space accessed by the command. This parameter can be a value of ***XSPI_AddressSpace***
- ***uint32_t XSPI_HyperbusCmdTypeDef::Address***
  It contains the address to be sent to the device. This parameter can be a value between 0 and 0xFFFFFFFF
- ***uint32_t XSPI_HyperbusCmdTypeDef::AddressWidth***
  It indicates the width of the address. This parameter can be a value of ***XSPI_AddressWidth***
- ***uint32_t XSPI_HyperbusCmdTypeDef::DataLength***
  It indicates the number of data transferred with this command. This field is only used for indirect mode. This parameter can be a value between 1 and 0xFFFFFFFF In case of autopolling mode, this parameter can be any value between 1 and 4
- ***uint32_t XSPI_HyperbusCmdTypeDef::DQSMode***
  It enables or not the data strobe management. This parameter can be a value of ***XSPI_DQSMode***

73.1.6 XSPI_AutoPollingTypeDef

XSPI_AutoPollingTypeDef is defined in the stm32u3xx_hal_xspi.h

Data Fields

- ***uint32_t MatchValue***
- ***uint32_t MatchMask***
- ***uint32_t MatchMode***
- ***uint32_t AutomaticStop***
- ***uint32_t IntervalTime***

Field Documentation

- ***uint32_t XSPI_AutoPollingTypeDef::MatchValue***
  Specifies the value to be compared with the masked status register to get a match. This parameter can be any value between 0 and 0xFFFFFFFFU
- ***uint32_t XSPI_AutoPollingTypeDef::MatchMask***
  Specifies the mask to be applied to the status bytes received. This parameter can be any value between 0 and 0xFFFFFFFFU
- ***uint32_t XSPI_AutoPollingTypeDef::MatchMode***
  Specifies the method used for determining a match. This parameter can be a value of ***XSPI_MatchMode***

- ***uint32_t XSPI_AutoPollingTypeDef::AutomaticStop***
  Specifies if automatic polling is stopped after a match. This parameter can be a value of ***XSPI_AutomaticStop***
- ***uint32_t XSPI_AutoPollingTypeDef::IntervalTime***
  Specifies the number of clock cycles between two read during automatic polling phases. This parameter can be any value between 0 and 0xFFFFU

73.1.7 XSPI_MemoryMappedTypeDef

XSPI_MemoryMappedTypeDef is defined in the stm32u3xx_hal_xspi.h

Data Fields

- ***uint32_t TimeOutActivation***
- ***uint32_t TimeoutPeriodClock***

Field Documentation

- ***uint32_t XSPI_MemoryMappedTypeDef::TimeOutActivation***
  Specifies if the timeout counter is enabled to release the chip select. This parameter can be a value of ***XSPI_TimeOutActivation***
- ***uint32_t XSPI_MemoryMappedTypeDef::TimeoutPeriodClock***
  Specifies the number of clock to wait when the FIFO is full before to release the chip select. This parameter can be any value between 0 and 0xFFFFU

73.2 XSPI Firmware driver API description

The following section lists the various functions of the XSPI library.

73.2.1 How to use this driver

Initialization

As prerequisite, fill in the HAL_XSPI_MspInit() :

- Enable OctoSPI clocks interface with __HAL_RCC_XSPI_CLK_ENABLE().
- Reset OctoSPI Peripheral with __HAL_RCC_XSPI_FORCE_RESET() and __HAL_RCC_XSPI_RELEASE_RESET().
- Enable the clocks for the OctoSPI GPIOS with __HAL_RCC_GPIOx_CLK_ENABLE().
- Configure these OctoSPI pins in alternate mode using HAL_GPIO_Init().
- If interrupt or DMA mode is used, enable and configure OctoSPI global interrupt with HAL_NVIC_SetPriority() and HAL_NVIC_EnableIRQ().
- If DMA mode is used, enable the clocks for the OctoSPI DMA channel with __HAL_RCC_DMAx_CLK_ENABLE(), configure DMA with HAL_DMA_Init(), link it with OctoSPI handle using __HAL_LINKDMA(), enable and configure DMA channel global interrupt with HAL_NVIC_SetPriority() and HAL_NVIC_EnableIRQ().

Configure the fifo threshold, the memory mode, the memory type, the device size, the CS high time, the free running clock, the clock mode, the wrap size, the clock prescaler, the sample shifting, the hold delay and the CS boundary using the HAL_XSPI_Init() function.

When using Hyperbus, configure the RW recovery time, the access time, the write latency and the latency mode using the HAL_XSPI_HyperbusCfg() function.

Indirect functional mode

In regular mode, configure the command sequence using the HAL_XSPI_Command() or HAL_XSPI_Command_IT() functions :

- Instruction phase : the mode used and if present the size, the instruction opcode and the DTR mode.
- Address phase : the mode used and if present the size, the address value and the DTR mode.
- Alternate-bytes phase : the mode used and if present the size, the alternate bytes values and the DTR mode.
- Dummy-cycles phase : the number of dummy cycles (mode used is same as data phase).
- Data phase : the mode used and if present the number of bytes and the DTR mode.

- Data strobe (DQS) mode : the activation (or not) of this mode
- Sending Instruction Only Once (SIOO) mode : the activation (or not) of this mode.
- IO selection : to access external memory.
- Operation type : always common configuration.

In Hyperbus mode, configure the command sequence using the HAL_XSPI_HyperbusCmd() function :

- Address space : indicate if the access will be done in register or memory
- Address size
- Number of data
- Data strobe (DQS) mode : the activation (or not) of this mode

If no data is required for the command (only for regular mode, not for Hyperbus mode), it is sent directly to the memory :

- In polling mode, the output of the function is done when the transfer is complete.
- In interrupt mode, HAL_XSPI_CmdCpltCallback() will be called when the transfer is complete.

For the indirect write mode, use HAL_XSPI_Transmit(), HAL_XSPI_Transmit_DMA() or HAL_XSPI_Transmit_IT() after the command configuration :

- In polling mode, the output of the function is done when the transfer is complete.
- In interrupt mode, HAL_XSPI_FifoThresholdCallback() will be called when the fifo threshold is reached and HAL_XSPI_TxCpltCallback() will be called when the transfer is complete.
- In DMA mode, HAL_XSPI_TxHalfCpltCallback() will be called at the half transfer and HAL_XSPI_TxCpltCallback() will be called when the transfer is complete.

For the indirect read mode, use HAL_XSPI_Receive(), HAL_XSPI_Receive_DMA() or HAL_XSPI_Receive_IT() after the command configuration :

- In polling mode, the output of the function is done when the transfer is complete.
- In interrupt mode, HAL_XSPI_FifoThresholdCallback() will be called when the fifo threshold is reached and HAL_XSPI_RxCpltCallback() will be called when the transfer is complete.
- In DMA mode, HAL_XSPI_RxHalfCpltCallback() will be called at the half transfer and HAL_XSPI_RxCpltCallback() will be called when the transfer is complete.

Auto-polling functional mode

Configure the command sequence by the same way than the indirect mode

Configure the auto-polling functional mode using the HAL_XSPI_AutoPolling() or HAL_XSPI_AutoPolling_IT() functions :

- The size of the status bytes, the match value, the mask used, the match mode (OR/AND), the polling interval and the automatic stop activation.

After the configuration :

- In polling mode, the output of the function is done when the status match is reached. The automatic stop is activated to avoid an infinite loop.
- In interrupt mode, HAL_XSPI_StatusMatchCallback() will be called each time the status match is reached.

Memory-mapped functional mode

Configure the command sequence by the same way than the indirect mode except for the operation type in regular mode :

- Operation type equals to read configuration : the command configuration applies to read access in memory-mapped mode
- Operation type equals to write configuration : the command configuration applies to write access in memory-mapped mode
- Both read and write configuration should be performed before activating memory-mapped mode

Configure the memory-mapped functional mode using the HAL_XSPI_MemoryMapped() functions :

- The timeout activation and the timeout period.

After the configuration, the OctoSPI will be used as soon as an access on the AHB is done on the address range. HAL_XSPI_TimeOutCallback() will be called when the timeout expires.

Errors management and abort functionality

HAL_XSPI_GetError() function gives the error raised during the last operation.

HAL_XSPI_Abort() and HAL_XSPI_AbortIT() functions aborts any on-going operation and flushes the fifo :

- In polling mode, the output of the function is done when the transfer complete bit is set and the busy bit cleared.
- In interrupt mode, HAL_XSPI_AbortCpltCallback() will be called when the transfer complete bit is set.

Control functions

HAL_XSPI_GetState() function gives the current state of the HAL XSPI driver.

HAL_XSPI_SetTimeout() function configures the timeout value used in the driver.

HAL_XSPI_SetFifoThreshold() function configures the threshold on the Fifo of the OctoSPI Peripheral.

HAL_XSPI_SetMemoryType() function configures the type of the external memory.

HAL_XSPI_SetDeviceSize() function configures the size of the external memory.

HAL_XSPI_SetClockPrescaler() function configures the clock prescaler of the OctoSPI Peripheral.

HAL_XSPI_GetFifoThreshold() function gives the current of the Fifo's threshold

Delay Block functions

The delay block (DLYB) is used to generate an output clock that is dephased from the input clock.

- The delay line length can be Configure to one period of the Input clock with HAL_XSPI_DLYB_GetClockPeriod().
- The phase of the output clock can be programmed directly with HAL_XSPI_DLYB_SetConfig().
- The phase of the output clock can be got with HAL_XSPI_DLYB_GetConfig().

High-speed interface and calibration functions

The purpose of High-speed interface is primary to shift data or data strobe by one quarter of octal bus clock period, with a correct timing accuracy. DLL must be calibrated versus this clock period. The calibration process is automatically enabled when one of the three conditions below is met:

- The HSPI exits Reset state.
- The Prescaler is set.
- The configuration of communication is set.

HAL_XSPI_GetDelayValue() function Get the delay values of the high-speed interface DLLs..

HAL_XSPI_SetDelayValue() function Set the delay values of the high-speed interface DLLs..

Callback registration

The compilation define USE_HAL_XSPI_REGISTER_CALLBACKS when set to 1 allows the user to configure dynamically the driver callbacks.

Use function HAL_XSPI_RegisterCallback() to register a user callback, it allows to register following callbacks:

- ErrorCallback : callback when error occurs.
- AbortCpltCallback : callback when abort is completed.
- FifoThresholdCallback : callback when the fifo threshold is reached.
- CmdCpltCallback : callback when a command without data is completed.
- RxCpltCallback : callback when a reception transfer is completed.
- TxCpltCallback : callback when a transmission transfer is completed.
- RxHalfCpltCallback : callback when half of the reception transfer is completed.
- TxHalfCpltCallback : callback when half of the transmission transfer is completed.
- StatusMatchCallback : callback when a status match occurs.
- TimeOutCallback : callback when the timeout perioed expires.
- MspInitCallback : XSPI MspInit.
- MspDeInitCallback : XSPI MspDeInit.

This function takes as parameters the HAL peripheral handle, the Callback ID and a pointer to the user callback function.

Use function HAL_XSPI_UnRegisterCallback() to reset a callback to the default weak (overridden) function. It allows to reset following callbacks:

- ErrorCallback : callback when error occurs.
- AbortCpltCallback : callback when abort is completed.
- FifoThresholdCallback : callback when the fifo threshold is reached.
- CmdCpltCallback : callback when a command without data is completed.
- RxCpltCallback : callback when a reception transfer is completed.
- TxCpltCallback : callback when a transmission transfer is completed.
- RxHalfCpltCallback : callback when half of the reception transfer is completed.
- TxHalfCpltCallback : callback when half of the transmission transfer is completed.
- StatusMatchCallback : callback when a status match occurs.
- TimeOutCallback : callback when the timeout perioed expires.
- MspInitCallback : XSPI MspInit.
- MspDeInitCallback : XSPI MspDeInit.

This function) takes as parameters the HAL peripheral handle and the Callback ID.

By default, after the HAL_XSPI_Init() and if the state is HAL_XSPI_STATE_RESET all callbacks are reset to the corresponding legacy weak (overridden) functions. Exception done for MspInit and MspDeInit callbacks that are respectively reset to the legacy weak (overridden) functions in the HAL_XSPI_Init() and HAL_XSPI_DeInit() only when these callbacks are null (not registered beforehand). If not, MspInit or MspDeInit are not null, the HAL_XSPI_Init() and HAL_XSPI_DeInit() keep and use the user MspInit/MspDeInit callbacks (registered beforehand)

Callbacks can be registered/unregistered in READY state only. Exception done for MspInit/MspDeInit callbacks that can be registered/unregistered in READY or RESET state, thus registered (user) MspInit/DeInit callbacks can be used during the Init/DeInit. In that case first register the MspInit/MspDeInit user callbacks using HAL_XSPI_RegisterCallback() before calling HAL_XSPI_DeInit() or HAL_XSPI_Init() function.

When The compilation define USE_HAL_XSPI_REGISTER_CALLBACKS is set to 0 or not defined, the callback registering feature is not available and weak (overridden) callbacks are used.

73.2.2 Initialization and Configuration functions

This subsection provides a set of functions allowing to :

- Initialize the XSPI.
- De-initialize the XSPI.

This section contains the following APIs:

- ***HAL_XSPI_Init()***
- ***HAL_XSPI_MspInit()***
- ***HAL_XSPI_DeInit()***
- ***HAL_XSPI_MspDeInit()***

73.2.3 IO operation functions

This subsection provides a set of functions allowing to :

- Handle the interrupts.
- Handle the command sequence (regular and Hyperbus).
- Handle the Hyperbus configuration.
- Transmit data in blocking, interrupt or DMA mode.
- Receive data in blocking, interrupt or DMA mode.
- Manage the auto-polling functional mode.
- Manage the memory-mapped functional mode.

This section contains the following APIs:

- ***HAL_XSPI_IRQHandler()***
- ***HAL_XSPI_Command()***

- *HAL_XSPI_Command_IT()*
- *HAL_XSPI_HyperbusCfg()*
- *HAL_XSPI_HyperbusCmd()*
- *HAL_XSPI_Transmit()*
- *HAL_XSPI_Receive()*
- *HAL_XSPI_Transmit_IT()*
- *HAL_XSPI_Receive_IT()*
- *HAL_XSPI_Transmit_DMA()*
- *HAL_XSPI_Receive_DMA()*
- *HAL_XSPI_AutoPolling()*
- *HAL_XSPI_AutoPolling_IT()*
- *HAL_XSPI_MemoryMapped()*
- *HAL_XSPI_ErrorCallback()*
- *HAL_XSPI_AbortCpltCallback()*
- *HAL_XSPI_FifoThresholdCallback()*
- *HAL_XSPI_CmdCpltCallback()*
- *HAL_XSPI_RxCpltCallback()*
- *HAL_XSPI_TxCpltCallback()*
- *HAL_XSPI_RxHalfCpltCallback()*
- *HAL_XSPI_TxHalfCpltCallback()*
- *HAL_XSPI_StatusMatchCallback()*
- *HAL_XSPI_TimeOutCallback()*
- *HAL_XSPI_RegisterCallback()*
- *HAL_XSPI_UnRegisterCallback()*

73.2.4 Peripheral Control and State functions

This subsection provides a set of functions allowing to :

- Check in run-time the state of the driver.
- Check the error code set during last operation.
- Abort any operation.
- Manage the Fifo threshold.
- Configure the timeout duration used in the driver.

This section contains the following APIs:

- *HAL_XSPI_Abort()*
- *HAL_XSPI_Abort_IT()*
- *HAL_XSPI_SetFifoThreshold()*
- *HAL_XSPI_GetFifoThreshold()*
- *HAL_XSPI_SetMemoryType()*
- *HAL_XSPI_SetDeviceSize()*
- *HAL_XSPI_SetClockPrescaler()*
- *HAL_XSPI_SetTimeout()*
- *HAL_XSPI_GetError()*
- *HAL_XSPI_GetState()*

73.2.5 Delay Block function

This subsection provides a set of functions allowing to :

- Configure the delay block.

This section contains the following APIs:

- *HAL_XSPI_DLYB_SetConfig()*

- *HAL_XSPI_DLYB_GetConfig()*
- *HAL_XSPI_DLYB_GetClockPeriod()*

73.2.6 Detailed description of functions

HAL_XSPI_Init

Function name

HAL_StatusTypeDef HAL_XSPI_Init (XSPI_HandleTypeDef * hxspi)

Function description

Initialize the XSPI mode according to the specified parameters in the XSPI_InitTypeDef and initialize the associated handle.

Parameters

- **hxspi:** : XSPI handle

Return values

- **HAL:** status

HAL_XSPI_MspInit

Function name

void HAL_XSPI_MspInit (XSPI_HandleTypeDef * hxspi)

Function description

Initialize the XSPI MSP.

Parameters

- **hxspi:** : XSPI handle

Return values

- **None:**

HAL_XSPI_DeInit

Function name

HAL_StatusTypeDef HAL_XSPI_DeInit (XSPI_HandleTypeDef * hxspi)

Function description

De-Initialize the XSPI peripheral.

Parameters

- **hxspi:** : XSPI handle

Return values

- **HAL:** status

HAL_XSPI_MspDeInit

Function name

void HAL_XSPI_MspDeInit (XSPI_HandleTypeDef * hxspi)

Function description

DeInitialize the XSPI MSP.

Parameters

- **hxspi:** : XSPI handle

Return values

- **None:**

HAL_XSPI_IRQHandler

Function name

void HAL_XSPI_IRQHandler (XSPI_HandleTypeDef * hxspi)

Function description

Handle XSPI interrupt request.

Parameters

- **hxspi:** : XSPI handle

Return values

- **None:**

HAL_XSPI_Command

Function name

HAL_StatusTypeDef HAL_XSPI_Command (XSPI_HandleTypeDef * hxspi, XSPI_RegularCmdTypeDef *const pCmd, uint32_t Timeout)

Function description

Set the command configuration.

Parameters

- **hxspi:** : XSPI handle
- **pCmd:** : structure that contains the command configuration information
- **Timeout:** : Timeout duration

Return values

- **HAL:** status

HAL_XSPI_Command_IT

Function name

HAL_StatusTypeDef HAL_XSPI_Command_IT (XSPI_HandleTypeDef * hxspi, XSPI_RegularCmdTypeDef *const pCmd)

Function description

Set the command configuration in interrupt mode.

Parameters

- **hxspi:** : XSPI handle
- **pCmd:** : structure that contains the command configuration information

Return values

- **HAL:** status

Notes

- This function is used only in Indirect Read or Write Modes

HAL_XSPI_HyperbusCfg

Function name

HAL_StatusTypeDef HAL_XSPI_HyperbusCfg (XSPI_HandleTypeDef * hxspi, XSPI_HyperbusCfgTypeDef *const pCfg, uint32_t Timeout)

Function description

Configure the Hyperbus parameters.

Parameters

- **hxspi:** : XSPI handle
- **pCfg:** : Pointer to Structure containing the Hyperbus configuration
- **Timeout:** : Timeout duration

Return values

- **HAL:** status

HAL_XSPI_HyperbusCmd

Function name

HAL_StatusTypeDef HAL_XSPI_HyperbusCmd (XSPI_HandleTypeDef * hxspi, XSPI_HyperbusCmdTypeDef *const pCmd, uint32_t Timeout)

Function description

Set the Hyperbus command configuration.

Parameters

- **hxspi:** : XSPI handle
- **pCmd:** : Structure containing the Hyperbus command
- **Timeout:** : Timeout duration

Return values

- **HAL:** status

HAL_XSPI_Transmit

Function name

HAL_StatusTypeDef HAL_XSPI_Transmit (XSPI_HandleTypeDef * hxspi, const uint8_t * pData, uint32_t Timeout)

Function description

Transmit an amount of data in blocking mode.

Parameters

- **hxspi:** : XSPI handle
- **pData:** : pointer to data buffer
- **Timeout:** : Timeout duration

Return values

- **HAL:** status

Notes

- This function is used only in Indirect Write Mode

HAL_XSPI_Receive

Function name

HAL_StatusTypeDef HAL_XSPI_Receive (XSPI_HandleTypeDef * hxspi, uint8_t *const pData, uint32_t Timeout)

Function description

Receive an amount of data in blocking mode.

Parameters

- **hxspi:** : XSPI handle
- **pData:** : pointer to data buffer
- **Timeout:** : Timeout duration

Return values

- **HAL:** status

Notes

- This function is used only in Indirect Read Mode

HAL_XSPI_Transmit_IT

Function name

HAL_StatusTypeDef HAL_XSPI_Transmit_IT (XSPI_HandleTypeDef * hxspi, const uint8_t * pData)

Function description

Send an amount of data in non-blocking mode with interrupt.

Parameters

- **hxspi:** : XSPI handle
- **pData:** : pointer to data buffer

Return values

- **HAL:** status

Notes

- This function is used only in Indirect Write Mode

HAL_XSPI_Receive_IT

Function name

HAL_StatusTypeDef HAL_XSPI_Receive_IT (XSPI_HandleTypeDef * hxspi, uint8_t *const pData)

Function description

Receive an amount of data in non-blocking mode with interrupt.

Parameters

- **hxspi:** : XSPI handle
- **pData:** : pointer to data buffer

Return values

- **HAL:** status

Notes

- This function is used only in Indirect Read Mode

HAL_XSPI_Transmit_DMA

Function name

HAL_StatusTypeDef HAL_XSPI_Transmit_DMA (XSPI_HandleTypeDef * hxspi, const uint8_t * pData)

Function description

Send an amount of data in non-blocking mode with DMA.

Parameters

- **hxspi:** : XSPI handle
- **pData:** : pointer to data buffer

Return values

- **HAL:** status

Notes

- This function is used only in Indirect Write Mode
- If DMA peripheral access is configured as halfword, the number of data and the fifo threshold should be aligned on halfword
- If DMA peripheral access is configured as word, the number of data and the fifo threshold should be aligned on word

HAL_XSPI_Receive_DMA

Function name

HAL_StatusTypeDef HAL_XSPI_Receive_DMA (XSPI_HandleTypeDef * hxspi, uint8_t *const pData)

Function description

Receive an amount of data in non-blocking mode with DMA.

Parameters

- **hxspi:** : XSPI handle
- **pData:** : pointer to data buffer.

Return values

- **HAL:** status

Notes

- This function is used only in Indirect Read Mode
- If DMA peripheral access is configured as halfword, the number of data and the fifo threshold should be aligned on halfword
- If DMA peripheral access is configured as word, the number of data and the fifo threshold should be aligned on word

HAL_XSPI_AutoPolling

Function name

HAL_StatusTypeDef HAL_XSPI_AutoPolling (XSPI_HandleTypeDef * hxspi, XSPI_AutoPollingTypeDef *const pCfg, uint32_t Timeout)

Function description

Configure the XSPI Automatic Polling Mode in blocking mode.

Parameters

- **hxspi:** : XSPI handle
- **pCfg:** : Pointer to structure that contains the polling configuration information.
- **Timeout:** : Timeout duration

Return values

- **HAL:** status

Notes

- This function is used only in Automatic Polling Mode

HAL_XSPI_AutoPolling_IT

Function name

HAL_StatusTypeDef HAL_XSPI_AutoPolling_IT (XSPI_HandleTypeDef * hxspi, XSPI_AutoPollingTypeDef *const pCfg)

Function description

Configure the XSPI Automatic Polling Mode in non-blocking mode.

Parameters

- **hxspi:** : XSPI handle
- **pCfg:** : Pointer to structure that contains the polling configuration information.

Return values

- **HAL:** status

Notes

- This function is used only in Automatic Polling Mode

HAL_XSPI_MemoryMapped

Function name

HAL_StatusTypeDef HAL_XSPI_MemoryMapped (XSPI_HandleTypeDef * hxspi, XSPI_MemoryMappedTypeDef *const pCfg)

Function description

Configure the Memory Mapped mode.

Parameters

- **hxspi:** : XSPI handle
- **pCfg:** : Pointer to structure that contains the memory mapped configuration information.

Return values

- **HAL:** status

Notes

- This function is used only in Memory mapped Mode

HAL_XSPI_ErrorCallback

Function name

void HAL_XSPI_ErrorCallback (XSPI_HandleTypeDef * hxspi)

Function description

Transfer Error callback.

Parameters

- **hxspi:** : XSPI handle

Return values

- **None:**

HAL_XSPI_AbortCpltCallback

Function name

void HAL_XSPI_AbortCpltCallback (XSPI_HandleTypeDef * hxspi)

Function description

Abort completed callback.

Parameters

- **hxspi:** : XSPI handle

Return values

- **None:**

HAL_XSPI_FifoThresholdCallback

Function name

void HAL_XSPI_FifoThresholdCallback (XSPI_HandleTypeDef * hxspi)

Function description

FIFO Threshold callback.

Parameters

- **hxspi:** : XSPI handle

Return values

- **None:**

HAL_XSPI_CmdCpltCallback

Function name

void HAL_XSPI_CmdCpltCallback (XSPI_HandleTypeDef * hxspi)

Function description

Command completed callback.

Parameters

- **hxspi:** : XSPI handle

Return values

- **None:**

HAL_XSPI_RxCpltCallback

Function name

void HAL_XSPI_RxCpltCallback (XSPI_HandleTypeDef * hxspi)

Function description

Rx Transfer completed callback.

Parameters

- **hxspi:** : XSPI handle

Return values

- **None:**

HAL_XSPI_TxCpltCallback

Function name

void HAL_XSPI_TxCpltCallback (XSPI_HandleTypeDef * hxspi)

Function description

Tx Transfer completed callback.

Parameters

- **hxspi:** : XSPI handle

Return values

- **None:**

HAL_XSPI_RxHalfCpltCallback

Function name

void HAL_XSPI_RxHalfCpltCallback (XSPI_HandleTypeDef * hxspi)

Function description

Rx Half Transfer completed callback.

Parameters

- **hxspi:** : XSPI handle

Return values

- **None:**

HAL_XSPI_TxHalfCpltCallback

Function name

void HAL_XSPI_TxHalfCpltCallback (XSPI_HandleTypeDef * hxspi)

Function description

Tx Half Transfer completed callback.

Parameters

- **hxspi:** : XSPI handle

Return values

- **None:**

HAL_XSPI_StatusMatchCallback

Function name

void HAL_XSPI_StatusMatchCallback (XSPI_HandleTypeDef * hxspi)

Function description

Status Match callback.

Parameters

- **hxspi:** : XSPI handle

Return values

- **None:**

HAL_XSPI_TimeOutCallback

Function name

void HAL_XSPI_TimeOutCallback (XSPI_HandleTypeDef * hxspi)

Function description

Timeout callback.

Parameters

- **hxspi:** : XSPI handle

Return values

- **None:**

HAL_XSPI_RegisterCallback

Function name

HAL_StatusTypeDef HAL_XSPI_RegisterCallback (XSPI_HandleTypeDef * hxspi, HAL_XSPI_CallbackIDTypeDef CallbackID, pXSPI_CallbackTypeDef pCallback)

Function description

Register a User XSPI Callback To be used to override the weak predefined callback.

Parameters

- **hxspi:** : XSPI handle
- **CallbackID:** : ID of the callback to be registered This parameter can be one of the following values:
  - HAL_XSPI_ERROR_CB_ID XSPI Error Callback ID
  - HAL_XSPI_ABORT_CB_ID XSPI Abort Callback ID
  - HAL_XSPI_FIFO_THRESHOLD_CB_ID XSPI FIFO Threshold Callback ID
  - HAL_XSPI_CMD_CPLT_CB_ID XSPI Command Complete Callback ID
  - HAL_XSPI_RX_CPLT_CB_ID XSPI Rx Complete Callback ID
  - HAL_XSPI_TX_CPLT_CB_ID XSPI Tx Complete Callback ID
  - HAL_XSPI_RX_HALF_CPLT_CB_ID XSPI Rx Half Complete Callback ID
  - HAL_XSPI_TX_HALF_CPLT_CB_ID XSPI Tx Half Complete Callback ID
  - HAL_XSPI_STATUS_MATCH_CB_ID XSPI Status Match Callback ID
  - HAL_XSPI_TIMEOUT_CB_ID XSPI Timeout Callback ID
  - HAL_XSPI_MSP_INIT_CB_ID XSPI MspInit callback ID
  - HAL_XSPI_MSP_DEINIT_CB_ID XSPI MspDeInit callback ID
- **pCallback:** : pointer to the Callback function

Return values

- **status:**

HAL_XSPI_UnRegisterCallback

Function name

HAL_StatusTypeDef HAL_XSPI_UnRegisterCallback (XSPI_HandleTypeDef * hxspi, HAL_XSPI_CallbackIDTypeDef CallbackID)

Function description

Unregister a User XSPI Callback XSPI Callback is redirected to the weak predefined callback.

Parameters

- **hxspi:** : XSPI handle
- **CallbackID:** : ID of the callback to be unregistered This parameter can be one of the following values:
  - HAL_XSPI_ERROR_CB_ID XSPI Error Callback ID
  - HAL_XSPI_ABORT_CB_ID XSPI Abort Callback ID
  - HAL_XSPI_FIFO_THRESHOLD_CB_ID XSPI FIFO Threshold Callback ID
  - HAL_XSPI_CMD_CPLT_CB_ID XSPI Command Complete Callback ID
  - HAL_XSPI_RX_CPLT_CB_ID XSPI Rx Complete Callback ID
  - HAL_XSPI_TX_CPLT_CB_ID XSPI Tx Complete Callback ID
  - HAL_XSPI_RX_HALF_CPLT_CB_ID XSPI Rx Half Complete Callback ID
  - HAL_XSPI_TX_HALF_CPLT_CB_ID XSPI Tx Half Complete Callback ID
  - HAL_XSPI_STATUS_MATCH_CB_ID XSPI Status Match Callback ID
  - HAL_XSPI_TIMEOUT_CB_ID XSPI Timeout Callback ID
  - HAL_XSPI_MSP_INIT_CB_ID XSPI MspInit callback ID
  - HAL_XSPI_MSP_DEINIT_CB_ID XSPI MspDeInit callback ID

Return values

- **status:**

HAL_XSPI_Abort

Function name

HAL_StatusTypeDef HAL_XSPI_Abort (XSPI_HandleTypeDef * hxspi)

Function description

Abort the current operation, return to the indirect mode.

Parameters

- **hxspi:** : XSPI handle

Return values

- **HAL:** status

HAL_XSPI_Abort_IT

Function name

HAL_StatusTypeDef HAL_XSPI_Abort_IT (XSPI_HandleTypeDef * hxspi)

Function description

Abort the current operation, return to the indirect mode.

Parameters

- **hxspi:** : XSPI handle

Return values

- **HAL:** status

HAL_XSPI_SetFifoThreshold

Function name

HAL_StatusTypeDef HAL_XSPI_SetFifoThreshold (XSPI_HandleTypeDef * hxspi, uint32_t Threshold)

Function description

Set XSPI Fifo threshold.

Parameters

- **hxspi:** : XSPI handle.
- **Threshold:** : Threshold of the Fifo.

Return values

- **HAL:** status

HAL_XSPI_GetFifoThreshold

Function name

uint32_t HAL_XSPI_GetFifoThreshold (const XSPI_HandleTypeDef * hxspi)

Function description

Get XSPI Fifo threshold.

Parameters

- **hxspi:** : XSPI handle.

Return values

- **Fifo:** threshold

HAL_XSPI_SetMemoryType

Function name

HAL_StatusTypeDef HAL_XSPI_SetMemoryType (XSPI_HandleTypeDef * hxspi, uint32_t Type)

Function description

Set XSPI Memory Type.

Parameters

- **hxspi:** : XSPI handle.
- **Type:** : Memory Type.

Return values

- **HAL:** status

HAL_XSPI_SetDeviceSize

Function name

HAL_StatusTypeDef HAL_XSPI_SetDeviceSize (XSPI_HandleTypeDef * hxspi, uint32_t Size)

Function description

Set XSPI Device Size.

Parameters

- **hxspi:** : XSPI handle.
- **Size:** : Device Size.

Return values

- **HAL:** status

HAL_XSPI_SetClockPrescaler

Function name

HAL_StatusTypeDef HAL_XSPI_SetClockPrescaler (XSPI_HandleTypeDef * hxspi, uint32_t Prescaler)

Function description

Set XSPI Clock prescaler.

Parameters

- **hxspi:** : XSPI handle.
- **Prescaler:** : Clock prescaler.

Return values

- **HAL:** status

HAL_XSPI_SetTimeout

Function name

HAL_StatusTypeDef HAL_XSPI_SetTimeout (XSPI_HandleTypeDef * hxspi, uint32_t Timeout)

Function description

Set XSPI timeout.

Parameters

- **hxspi:** : XSPI handle.
- **Timeout:** : Timeout for the memory access.

Return values

- **HAL:** state

HAL_XSPI_GetError

Function name

uint32_t HAL_XSPI_GetError (const XSPI_HandleTypeDef * hxspi)

Function description

Return the XSPI error code.

Parameters

- **hxspi:** : XSPI handle

Return values

- **XSPI:** Error Code

HAL_XSPI_GetState

Function name

uint32_t HAL_XSPI_GetState (const XSPI_HandleTypeDef * hxspi)

Function description

Return the XSPI handle state.

Parameters

- **hxspi:** : XSPI handle

Return values

- **HAL:** state

HAL_XSPI_DLYB_SetConfig

Function name

HAL_StatusTypeDef HAL_XSPI_DLYB_SetConfig (XSPI_HandleTypeDef * hxspi, HAL_XSPI_DLYB_CfgTypeDef *const pdlyb_cfg)

Function description

Set the Delay Block configuration.

Parameters

- **hxspi:** : XSPI handle.
- **pdlyb_cfg:** Pointer to DLYB configuration structure.

Return values

- **HAL:** status.

HAL_XSPI_DLYB_GetConfig

Function name

HAL_StatusTypeDef HAL_XSPI_DLYB_GetConfig (XSPI_HandleTypeDef * hxspi, HAL_XSPI_DLYB_CfgTypeDef *const pdlyb_cfg)

Function description

Get the Delay Block configuration.

Parameters

- **hxspi:** : XSPI handle.
- **pdlyb_cfg:** Pointer to DLYB configuration structure.

Return values

- **HAL:** status.

HAL_XSPI_DLYB_GetClockPeriod

Function name

HAL_StatusTypeDef HAL_XSPI_DLYB_GetClockPeriod (XSPI_HandleTypeDef * hxspi, HAL_XSPI_DLYB_CfgTypeDef *const pdlyb_cfg)

Function description

Get the Delay line length value.

Parameters

- **hxspi:** : XSPI handle.
- **pdlyb_cfg:** Pointer to DLYB configuration structure.

Return values

- **HAL:** status.

73.3 XSPI Firmware driver defines

The following section lists the various define and macros of the module.

73.3.1 XSPI

XSPI

XSPI Address DTR Mode

HAL_XSPI_ADDRESS_DTR_DISABLE

DTR mode disabled for address phase

HAL_XSPI_ADDRESS_DTR_ENABLE

DTR mode enabled for address phase

XSPI Address Mode

HAL_XSPI_ADDRESS_NONE

No address

HAL_XSPI_ADDRESS_1_LINE

Address on a single line

HAL_XSPI_ADDRESS_2_LINES

Address on two lines

HAL_XSPI_ADDRESS_4_LINES

Address on four lines

HAL_XSPI_ADDRESS_8_LINES

Address on eight lines

XSPI Hyperbus Address Space

HAL_XSPI_MEMORY_ADDRESS_SPACE

HyperBus memory mode

HAL_XSPI_REGISTER_ADDRESS_SPACE

HyperBus register mode

XSPI Address width

HAL_XSPI_ADDRESS_8_BITS

8-bit address

HAL_XSPI_ADDRESS_16_BITS

16-bit address

HAL_XSPI_ADDRESS_24_BITS

24-bit address

HAL_XSPI_ADDRESS_32_BITS

32-bit address

XSPI Alternate Bytes DTR Mode

HAL_XSPI_ALT_BYTES_DTR_DISABLE

DTR mode disabled for alternate bytes phase

HAL_XSPI_ALT_BYTES_DTR_ENABLE

DTR mode enabled for alternate bytes phase

XSPI Alternate Bytes Mode

HAL_XSPI_ALT_BYTES_NONE

No alternate bytes

HAL_XSPI_ALT_BYTES_1_LINE

Alternate bytes on a single line

HAL_XSPI_ALT_BYTES_2_LINES

Alternate bytes on two lines

HAL_XSPI_ALT_BYTES_4_LINES

Alternate bytes on four lines

HAL_XSPI_ALT_BYTES_8_LINES

Alternate bytes on eight lines

XSPI Alternate Bytes Width

HAL_XSPI_ALT_BYTES_8_BITS

8-bit alternate bytes

HAL_XSPI_ALT_BYTES_16_BITS

16-bit alternate bytes

HAL_XSPI_ALT_BYTES_24_BITS

24-bit alternate bytes

HAL_XSPI_ALT_BYTES_32_BITS

32-bit alternate bytes

XSPI Automatic Stop

HAL_XSPI_AUTOMATIC_STOP_DISABLE

AutoPolling stops only with abort or XSPI disabling

HAL_XSPI_AUTOMATIC_STOP_ENABLE

AutoPolling stops as soon as there is a match

XSPI Chip Select Boundary

HAL_XSPI_BONDARYOF_NONE

HAL_XSPI_BONDARYOF_16B

16 bits (2 Bytes = 2^(1))

HAL_XSPI_BONDARYOF_32B

32 bits (4 Bytes = 2^(2))

HAL_XSPI_BONDARYOF_64B

64 bits (8 Bytes = 2^(3))

HAL_XSPI_BONDARYOF_128B

128 bits (16 Bytes = 2^(4))

HAL_XSPI_BONDARYOF_256B

256 bits (32 Bytes = 2^(5))

HAL_XSPI_BONDARYOF_512B

512 bits (64 Bytes = 2^(6))

HAL_XSPI_BONDARYOF_1KB

1 Kbits (128 Bytes = 2^(7))

HAL_XSPI_BONDARYOF_2KB

2 Kbits (256 Bytes = 2^(8))

HAL_XSPI_BONDARYOF_4KB

4 Kbits (512 Bytes = 2^(9))

HAL_XSPI_BONDARYOF_8KB

8 Kbits (1 KBytes = 2^(10))

HAL_XSPI_BONDARYOF_16KB

16 Kbits (2 KBytes = 2^(11))

HAL_XSPI_BONDARYOF_32KB

32 Kbits (4 KBytes = 2^(12))

HAL_XSPI_BONDARYOF_64KB

64 Kbits (8 KBytes = 2^(13))

HAL_XSPI_BONDARYOF_128KB

128 Kbits (16 KBytes = 2^(14))

HAL_XSPI_BONDARYOF_256KB

256 Kbits (32 KBytes = 2^(15))

HAL_XSPI_BONDARYOF_512KB

512 Kbits (64 KBytes = 2^(16))

HAL_XSPI_BONDARYOF_1MB

1 Mbits (128 KBytes = 2^(17))

HAL_XSPI_BONDARYOF_2MB

2 Mbits (256 KBytes = 2^(18))

HAL_XSPI_BONDARYOF_4MB

4 Mbits (512 KBytes = 2^(19))

HAL_XSPI_BONDARYOF_8MB

8 Mbits (1 MBytes = 2^(20))

HAL_XSPI_BONDARYOF_16MB

16 Mbits (2 MBytes = 2^(21))

HAL_XSPI_BONDARYOF_32MB

32 Mbits (4 MBytes = 2^(22))

HAL_XSPI_BONDARYOF_64MB

64 Mbits (8 MBytes = 2^(23))

HAL_XSPI_BONDARYOF_128MB

128 Mbits (16 MBytes = 2^(24))

HAL_XSPI_BONDARYOF_256MB

256 Mbits (32 MBytes = 2^(25))

HAL_XSPI_BONDARYOF_512MB

512 Mbits (64 MBytes = 2^(26))

HAL_XSPI_BONDARYOF_1GB

1 Gbits (128 MBytes = 2^(27))

HAL_XSPI_BONDARYOF_2GB

2 Gbits (256 MBytes = 2^(28))

HAL_XSPI_BONDARYOF_4GB

4 Gbits (512 MBytes = 2^(29))

HAL_XSPI_BONDARYOF_8GB

8 Gbits (1 GBytes = 2^(30))

HAL_XSPI_BONDARYOF_16GB

16 Gbits (2 GBytes = 2^(31))

XSPI Clock Mode

HAL_XSPI_CLOCK_MODE_0

CLK must stay low while nCS is high

HAL_XSPI_CLOCK_MODE_3

CLK must stay high while nCS is high

XSPI Data DTR Mode

HAL_XSPI_DATA_DTR_DISABLE

DTR mode disabled for data phase

HAL_XSPI_DATA_DTR_ENABLE

DTR mode enabled for data phase

XSPI Data Mode

HAL_XSPI_DATA_NONE

No data

HAL_XSPI_DATA_1_LINE

Data on a single line

HAL_XSPI_DATA_2_LINES

Data on two lines

HAL_XSPI_DATA_4_LINES

Data on four lines

HAL_XSPI_DATA_8_LINES

Data on eight lines

XSPI Delay Block Bypaas

HAL_XSPI_DELAY_BLOCK_ON

Sampling clock is delayed by the delay block

HAL_XSPI_DELAY_BLOCK_BYPASS

Delay block is bypassed

XSPI Delay Hold Quarter Cycle

HAL_XSPI_DHQC_DISABLE

No Delay

HAL_XSPI_DHQC_ENABLE

Delay Hold 1/4 cycle

XSPI DQS Mode

HAL_XSPI_DQS_DISABLE

DQS disabled

HAL_XSPI_DQS_ENABLE

DQS enabled

XSPI Error Code

HAL_XSPI_ERROR_NONE

No error

HAL_XSPI_ERROR_TIMEOUT

Timeout error

HAL_XSPI_ERROR_TRANSFER

Transfer error

HAL_XSPI_ERROR_DMA

DMA transfer error

HAL_XSPI_ERROR_INVALID_PARAM

Invalid parameters error

HAL_XSPI_ERROR_INVALID_SEQUENCE

Sequence is incorrect

HAL_XSPI_ERROR_INVALID_CALLBACK

Invalid callback error

XSPI Exported Macros

HAL_XSPI_RESET_HANDLE_STATE

Description:

- Reset XSPI handle state.

Parameters:

- __HANDLE__: specifies the XSPI Handle.

Return value:

- None

HAL_XSPI_ENABLE

Description:

- Enable the XSPI peripheral.

Parameters:

- __HANDLE__: specifies the XSPI Handle.

Return value:

- None

HAL_XSPI_DISABLE

Description:

- Disable the XSPI peripheral.

Parameters:

- __HANDLE__: specifies the XSPI Handle.

Return value:

- None

HAL_XSPI_ENABLE_IT

Description:

- Enable the specified XSPI interrupt.

Parameters:

- __HANDLE__: specifies the XSPI Handle.
- __INTERRUPT__: specifies the XSPI interrupt source to enable. This parameter can be one of the following values:
  - HAL_XSPI_IT_TO: XSPI Timeout interrupt
  - HAL_XSPI_IT_SM: XSPI Status match interrupt
  - HAL_XSPI_IT_FT: XSPI FIFO threshold interrupt
  - HAL_XSPI_IT_TC: XSPI Transfer complete interrupt
  - HAL_XSPI_IT_TE: XSPI Transfer error interrupt

Return value:

- None

HAL_XSPI_DISABLE_IT

Description:

- Disable the specified XSPI interrupt.

Parameters:

- __HANDLE__: specifies the XSPI Handle.
- __INTERRUPT__: specifies the XSPI interrupt source to disable. This parameter can be one of the following values:
  - HAL_XSPI_IT_TO: XSPI Timeout interrupt
  - HAL_XSPI_IT_SM: XSPI Status match interrupt
  - HAL_XSPI_IT_FT: XSPI FIFO threshold interrupt
  - HAL_XSPI_IT_TC: XSPI Transfer complete interrupt
  - HAL_XSPI_IT_TE: XSPI Transfer error interrupt

Return value:

- None

HAL_XSPI_GET_IT_SOURCE

Description:

- Check whether the specified XSPI interrupt source is enabled or not.

Parameters:

- __HANDLE__: specifies the XSPI Handle.
- __INTERRUPT__: specifies the XSPI interrupt source to check. This parameter can be one of the following values:
  - HAL_XSPI_IT_TO: XSPI Timeout interrupt
  - HAL_XSPI_IT_SM: XSPI Status match interrupt
  - HAL_XSPI_IT_FT: XSPI FIFO threshold interrupt
  - HAL_XSPI_IT_TC: XSPI Transfer complete interrupt
  - HAL_XSPI_IT_TE: XSPI Transfer error interrupt

Return value:

- The: new state of __INTERRUPT__ (TRUE or FALSE).

HAL_XSPI_GET_FLAG

Description:

- Check whether the selected XSPI flag is set or not.

Parameters:

- __HANDLE__: specifies the XSPI Handle.
- __FLAG__: specifies the XSPI flag to check. This parameter can be one of the following values:
  - HAL_XSPI_FLAG_BUSY: XSPI Busy flag
  - HAL_XSPI_FLAG_TO: XSPI Timeout flag
  - HAL_XSPI_FLAG_SM: XSPI Status match flag
  - HAL_XSPI_FLAG_FT: XSPI FIFO threshold flag
  - HAL_XSPI_FLAG_TC: XSPI Transfer complete flag
  - HAL_XSPI_FLAG_TE: XSPI Transfer error flag

Return value:

- None

HAL_XSPI_CLEAR_FLAG

Description:

- Clears the specified XSPI's flag status.

Parameters:

- __HANDLE__: specifies the XSPI Handle.
- __FLAG__: specifies the XSPI clear register flag that needs to be set This parameter can be one of the following values:
  - HAL_XSPI_FLAG_TO: XSPI Timeout flag
  - HAL_XSPI_FLAG_SM: XSPI Status match flag
  - HAL_XSPI_FLAG_TC: XSPI Transfer complete flag
  - HAL_XSPI_FLAG_TE: XSPI Transfer error flag

Return value:

- None

XSPI Exported Types

HAL_XSPI_DLYB_CfgTypeDef

XSPI Flags

HAL_XSPI_FLAG_BUSY

Busy flag: operation is ongoing

HAL_XSPI_FLAG_TO

Timeout flag: timeout occurs in memory-mapped mode

HAL_XSPI_FLAG_SM

Status match flag: received data matches in autopolling mode

HAL_XSPI_FLAG_FT

Fifo threshold flag: Fifo threshold reached or data left after read from memory is complete

HAL_XSPI_FLAG_TC

Transfer complete flag: programmed number of data have been transferred or the transfer has been aborted

HAL_XSPI_FLAG_TE

Transfer error flag: invalid address is being accessed

XSPI Free Running Clock

HAL_XSPI_FREERUNCLK_DISABLE

CLK is not free running

HAL_XSPI_FREERUNCLK_ENABLE

CLK is always provided (running)

XSPI Instruction DTR Mode

HAL_XSPI_INSTRUCTION_DTR_DISABLE

DTR mode disabled for instruction phase

HAL_XSPI_INSTRUCTION_DTR_ENABLE

DTR mode enabled for instruction phase

XSPI Instruction Mode

HAL_XSPI_INSTRUCTION_NONE

No instruction

HAL_XSPI_INSTRUCTION_1_LINE

Instruction on a single line

HAL_XSPI_INSTRUCTION_2_LINES

Instruction on two lines

HAL_XSPI_INSTRUCTION_4_LINES

Instruction on four lines

HAL_XSPI_INSTRUCTION_8_LINES

Instruction on eight lines

XSPI Instruction Width

HAL_XSPI_INSTRUCTION_8_BITS

8-bit instruction

HAL_XSPI_INSTRUCTION_16_BITS

16-bit instruction

HAL_XSPI_INSTRUCTION_24_BITS

24-bit instruction

HAL_XSPI_INSTRUCTION_32_BITS

32-bit instruction

XSPI Interrupts

HAL_XSPI_IT_TO

Interrupt on the timeout flag

HAL_XSPI_IT_SM

Interrupt on the status match flag

HAL_XSPI_IT_FT

Interrupt on the fifo threshold flag

HAL_XSPI_IT_TC

Interrupt on the transfer complete flag

HAL_XSPI_IT_TE

Interrupt on the transfer error flag

XSPI IO Select

HAL_XSPI_SELECT_IO_3_0

Data exchanged over IO[3:0]

HAL_XSPI_SELECT_IO_7_4

Data exchanged over IO[7:4]

HAL_XSPI_SELECT_IO_7_0

Data exchanged over IO[7:0]

XSPI Hyperbus Latency Mode

HAL_XSPI_VARIABLE_LATENCY

Variable initial latency

HAL_XSPI_FIXED_LATENCY

Fixed latency

XSPI Match Mode

HAL_XSPI_MATCH_MODE_AND

AND match mode between unmasked bits

HAL_XSPI_MATCH_MODE_OR

OR match mode between unmasked bits

XSPI Memory Mode

HAL_XSPI_SINGLE_MEM

Dual-memory mode disabled

HAL_XSPI_DUAL_MEM

Dual mode enabled

XSPI Memory Size

HAL_XSPI_SIZE_16B

16 bits (2 Bytes = 2^(0+1))

HAL_XSPI_SIZE_32B

32 bits (4 Bytes = 2^(1+1))

HAL_XSPI_SIZE_64B

64 bits (8 Bytes = 2^(2+1))

HAL_XSPI_SIZE_128B

128 bits (16 Bytes = 2^(3+1))

HAL_XSPI_SIZE_256B

256 bits (32 Bytes = 2^(4+1))

HAL_XSPI_SIZE_512B

512 bits (64 Bytes = 2^(5+1))

HAL_XSPI_SIZE_1KB

1 Kbits (128 Bytes = 2^(6+1))

HAL_XSPI_SIZE_2KB

2 Kbits (256 Bytes = 2^(7+1))

HAL_XSPI_SIZE_4KB

4 Kbits (512 Bytes = 2^(8+1))

HAL_XSPI_SIZE_8KB

8 Kbits (1 KBytes = 2^(9+1))

HAL_XSPI_SIZE_16KB

16 Kbits (2 KBytes = 2^(10+1))

HAL_XSPI_SIZE_32KB

32 Kbits (4 KBytes = 2^(11+1))

HAL_XSPI_SIZE_64KB

64 Kbits (8 KBytes = 2^(12+1))

HAL_XSPI_SIZE_128KB

128 Kbits (16 KBytes = 2^(13+1))

HAL_XSPI_SIZE_256KB

256 Kbits (32 KBytes = 2^(14+1))

HAL_XSPI_SIZE_512KB

512 Kbits (64 KBytes = 2^(15+1))

HAL_XSPI_SIZE_1MB

1 Mbits (128 KBytes = 2^(16+1))

HAL_XSPI_SIZE_2MB

2 Mbits (256 KBytes = 2^(17+1))

HAL_XSPI_SIZE_4MB

4 Mbits (512 KBytes = 2^(18+1))

HAL_XSPI_SIZE_8MB

8 Mbits (1 MBytes = 2^(19+1))

HAL_XSPI_SIZE_16MB

16 Mbits (2 MBytes = 2^(20+1))

HAL_XSPI_SIZE_32MB

32 Mbits (4 MBytes = 2^(21+1))

HAL_XSPI_SIZE_64MB

64 Mbits (8 MBytes = 2^(22+1))

HAL_XSPI_SIZE_128MB

128 Mbits (16 MBytes = 2^(23+1))

HAL_XSPI_SIZE_256MB

256 Mbits (32 MBytes = 2^(24+1))

HAL_XSPI_SIZE_512MB

512 Mbits (64 MBytes = 2^(25+1))

HAL_XSPI_SIZE_1GB

1 Gbits (128 MBytes = 2^(26+1))

HAL_XSPI_SIZE_2GB

2 Gbits (256 MBytes = 2^(27+1))

HAL_XSPI_SIZE_4GB

4 Gbits (512 MBytes = 2^(28+1))

HAL_XSPI_SIZE_8GB

8 Gbits (1 GBytes = 2^(29+1))

HAL_XSPI_SIZE_16GB

16 Gbits (2 GBytes = 2^(30+1))

HAL_XSPI_SIZE_32GB

32 Gbits (4 GBytes = 2^(31+1))

XSPI Memory Type

HAL_XSPI_MEMTYPE_MICRON

Micron mode

HAL_XSPI_MEMTYPE_MACRONIX

Macronix mode

HAL_XSPI_MEMTYPE_APMEM

AP Memory mode

HAL_XSPI_MEMTYPE_MACRONIX_RAM

Macronix RAM mode

HAL_XSPI_MEMTYPE_HYPERBUS

Hyperbus mode

HAL_XSPI_MEMTYPE_APMEM_16BITS

AP Memory mode

XSPI Operation Type

HAL_XSPI_OPTYPE_COMMON_CFG

Common configuration (indirect or auto-polling mode)

HAL_XSPI_OPTYPE_READ_CFG

Read configuration (memory-mapped mode)

HAL_XSPI_OPTYPE_WRITE_CFG

Write configuration (memory-mapped mode)

HAL_XSPI_OPTYPE_WRAP_CFG

Wrap configuration (memory-mapped mode)

XSPI Sample Shifting

HAL_XSPI_SAMPLE_SHIFT_NONE

No shift

HAL_XSPI_SAMPLE_SHIFT_HALFCYCLE

1/2 cycle shift

XSPI SIOO Mode

HAL_XSPI_SIOO_INST_EVERY_CMD

Send instruction on every transaction

HAL_XSPI_SIOO_INST_ONLY_FIRST_CMD

Send instruction only for the first command

XSPI State

HAL_XSPI_STATE_RESET

Initial state

HAL_XSPI_STATE_READY

Driver ready to be used

HAL_XSPI_STATE_HYPERBUS_INIT

Initialization done in hyperbus mode but timing configuration not done

HAL_XSPI_STATE_CMD_CFG

Command (regular or hyperbus) configured, ready for an action

HAL_XSPI_STATE_READ_CMD_CFG

Read command configuration done, not the write command configuration

HAL_XSPI_STATE_WRITE_CMD_CFG

Write command configuration done, not the read command configuration

HAL_XSPI_STATE_BUSY_CMD

Command without data on-going

HAL_XSPI_STATE_BUSY_TX

Indirect Tx on-going

HAL_XSPI_STATE_BUSY_RX

Indirect Rx on-going

HAL_XSPI_STATE_BUSY_AUTO_POLLING

Auto-polling on-going

HAL_XSPI_STATE_BUSY_MEM_MAPPED

Memory-mapped on-going

HAL_XSPI_STATE_ABORT

Abort on-going

HAL_XSPI_STATE_ERROR

Blocking error, driver should be re-initialized

XSPI Timeout Activation

HAL_XSPI_TIMEOUT_COUNTER_DISABLE

Timeout counter disabled, nCS remains active

HAL_XSPI_TIMEOUT_COUNTER_ENABLE

Timeout counter enabled, nCS released when timeout expires

XSPI Timeout definition

HAL_XSPI_TIMEOUT_DEFAULT_VALUE

XSPI Wrap-Size

HAL_XSPI_WRAP_NOT_SUPPORTED

wrapped reads are not supported by the memory

HAL_XSPI_WRAP_16_BYTES

external memory supports wrap size of 16 bytes

HAL_XSPI_WRAP_32_BYTES

external memory supports wrap size of 32 bytes

HAL_XSPI_WRAP_64_BYTES

external memory supports wrap size of 64 bytes

HAL_XSPI_WRAP_128_BYTES

external memory supports wrap size of 128 bytes

XSPI Hyperbus Write Zero Latency Activation

HAL_XSPI_LATENCY_ON_WRITE

Latency on write accesses

HAL_XSPI_NO_LATENCY_ON_WRITE

No latency on write accesses

74 LL ADC Generic Driver

74.1 ADC Firmware driver registers structures

74.1.1 LL_ADC_CommonInitTypeDef

LL_ADC_CommonInitTypeDef is defined in the stm32u3xx_ll_adc.h

Data Fields

- ***uint32_t Multimode***
- ***uint32_t MultiDataFormat***
- ***uint32_t MultiTwoSamplingDelay***

Field Documentation

- ***uint32_t LL_ADC_CommonInitTypeDef::Multimode***
  Set ADC multimode configuration to operate in independent mode or multimode (for devices with several ADC instances). This parameter can be a value of ***ADC_LL_EC_MULTI_MODE*** This feature can be modified afterwards using unitary function **LL_ADC_SetMultimode()**.
- ***uint32_t LL_ADC_CommonInitTypeDef::MultiDataFormat***
  Set ADC multimode conversion data format of ADC group regular: conversion data in data register of each ADC instance or ADC common instance. This parameter can be a value of ***ADC_LL_EC_MULTI_DATA_FORMAT*** This feature can be modified afterwards using unitary function **LL_ADC_SetMultiDataFormat()**.
- ***uint32_t LL_ADC_CommonInitTypeDef::MultiTwoSamplingDelay***
  Set ADC multimode delay between 2 sampling phases. Relevant only for multimode modes: interleaved based modes. This parameter can be a value of ***ADC_LL_EC_MULTI_TWOSMP_DELAY*** This feature can be modified afterwards using unitary function **LL_ADC_SetMultiTwoSamplingDelay()**.

74.1.2 LL_ADC_InitTypeDef

LL_ADC_InitTypeDef is defined in the stm32u3xx_ll_adc.h

Data Fields

- ***uint32_t Resolution***
- ***uint32_t LeftBitShift***
- ***uint32_t LowPowerMode***

Field Documentation

- ***uint32_t LL_ADC_InitTypeDef::Resolution***
  Set ADC resolution. This parameter can be a value of ***ADC_LL_EC_RESOLUTION*** This feature can be modified afterwards using unitary function **LL_ADC_SetResolution()**.
- ***uint32_t LL_ADC_InitTypeDef::LeftBitShift***
  Configures the left shifting applied to the final result with or without oversampling. This parameter can be a value of ***ADC_LL_EC_LEFT_BIT_SHIFT***.
- ***uint32_t LL_ADC_InitTypeDef::LowPowerMode***
  Set ADC low power mode. This parameter can be a value of ***ADC_LL_EC_LP_MODE*** This feature can be modified afterwards using unitary function **LL_ADC_SetLPModeAutoWait()**.

74.1.3 LL_ADC_REG_InitTypeDef

LL_ADC_REG_InitTypeDef is defined in the stm32u3xx_ll_adc.h

Data Fields

- ***uint32_t TriggerSource***
- ***uint32_t SequencerLength***
- ***uint32_t SequencerDiscont***
- ***uint32_t ContinuousMode***
- ***uint32_t DataTransferMode***
- ***uint32_t Overrun***

Field Documentation

- ***uint32_t LL_ADC_REG_InitTypeDef::TriggerSource***
  Set ADC group regular conversion trigger source: internal (SW start) or from external peripheral (timer event, external interrupt line). This parameter can be a value of ***ADC_LL_EC_REG_TRIGGER_SOURCE***
  Note:
  – On this STM32 series, setting trigger source to external trigger also set trigger polarity to rising edge(default setting for compatibility with some ADC on other STM32 series having this setting set by HW default value). In case of need to modify trigger edge, use function **LL_ADC_REG_SetTriggerEdge()**. This feature can be modified afterwards using unitary function **LL_ADC_REG_SetTriggerSource()**.
- ***uint32_t LL_ADC_REG_InitTypeDef::SequencerLength***
  Set ADC group regular sequencer length. This parameter can be a value of ***ADC_LL_EC_REG_SEQ_SCAN_LENGTH*** This feature can be modified afterwards using unitary function **LL_ADC_REG_SetSequencerLength()**.
- ***uint32_t LL_ADC_REG_InitTypeDef::SequencerDiscont***
  Set ADC group regular sequencer discontinuous mode: sequence subdivided and scan conversions interrupted every selected number of ranks. This parameter can be a value of ***ADC_LL_EC_REG_SEQ_DISCONT_MODE***
  Note:
  – This parameter has an effect only if group regular sequencer is enabled (scan length of 2 ranks or more). This feature can be modified afterwards using unitary function **LL_ADC_REG_SetSequencerDiscont()**.
- ***uint32_t LL_ADC_REG_InitTypeDef::ContinuousMode***
  Set ADC continuous conversion mode on ADC group regular, whether ADC conversions are performed in single mode (one conversion per trigger) or in continuous mode (after the first trigger, following conversions launched successively automatically). This parameter can be a value of ***ADC_LL_EC_REG_CONTINUOUS_MODE*** Note: It is not possible to enable both ADC group regular continuous mode and discontinuous mode. This feature can be modified afterwards using unitary function **LL_ADC_REG_SetContinuousMode()**.
- ***uint32_t LL_ADC_REG_InitTypeDef::DataTransferMode***
  Set ADC group regular conversion data transfer: no transfer, transfer by DMA or other peripherals. This parameter can be a value of ***ADC_LL_EC_REG_DATA_TRANSFER*** This feature can be modified afterwards using unitary function **LL_ADC_REG_SetDataTransferMode()**.
- ***uint32_t LL_ADC_REG_InitTypeDef::Overrun***
  Set ADC group regular behavior in case of overrun: data preserved or overwritten. This parameter can be a value of ***ADC_LL_EC_REG_OVR_DATA_BEHAVIOR*** This feature can be modified afterwards using unitary function **LL_ADC_REG_SetOverrun()**.

74.1.4 LL_ADC_INJ_InitTypeDef

LL_ADC_INJ_InitTypeDef is defined in the stm32u3xx_ll_adc.h

Data Fields

- ***uint32_t TriggerSource***
- ***uint32_t SequencerLength***
- ***uint32_t SequencerDiscont***
- ***uint32_t TrigAuto***

Field Documentation

- ***uint32_t LL_ADC_INJ_InitTypeDef::TriggerSource***
  Set ADC group injected conversion trigger source: internal (SW start) or from external peripheral (timer event, external interrupt line). This parameter can be a value of ***ADC_LL_EC_INJ_TRIGGER_SOURCE***
  Note:
  – On this STM32 series, setting trigger source to external trigger also set trigger polarity to rising edge (default setting for compatibility with some ADC on other STM32 series having this setting set by HW default value). In case of need to modify trigger edge, use function **LL_ADC_INJ_SetTriggerEdge()**. This feature can be modified afterwards using unitary function **LL_ADC_INJ_SetTriggerSource()**.

- ***uint32_t LL_ADC_INJ_InitTypeDef::SequencerLength***
  Set ADC group injected sequencer length. This parameter can be a value of ***ADC_LL_EC_INJ_SEQ_SCAN_LENGTH*** This feature can be modified afterwards using unitary function **LL_ADC_INJ_SetSequencerLength()**.
- ***uint32_t LL_ADC_INJ_InitTypeDef::SequencerDiscont***
  Set ADC group injected sequencer discontinuous mode: sequence subdivided and scan conversions interrupted every selected number of ranks. This parameter can be a value of ***ADC_LL_EC_INJ_SEQ_DISCONT_MODE***
  Note:
  – This parameter has an effect only if group injected sequencer is enabled (scan length of 2 ranks or more). This feature can be modified afterwards using unitary function **LL_ADC_INJ_SetSequencerDiscont()**.
- ***uint32_t LL_ADC_INJ_InitTypeDef::TrigAuto***
  Set ADC group injected conversion trigger: independent or from ADC group regular. This parameter can be a value of ***ADC_LL_EC_INJ_TRIG_AUTO*** Note: This parameter must be set to set to independent trigger if injected trigger source is set to an external trigger. This feature can be modified afterwards using unitary function **LL_ADC_INJ_SetTrigAuto()**.

74.2 ADC Firmware driver API description

The following section lists the various functions of the ADC library.

74.2.1 Detailed description of functions

LL_ADC_DMA_GetRegAddr

Function name

__STATIC_INLINE uint32_t LL_ADC_DMA_GetRegAddr (const ADC_TypeDef * ADCx, uint32_t Register)

Function description

Function to help to configure DMA transfer from ADC: retrieve the ADC register address from ADC instance and a list of ADC registers intended to be used (most commonly) with DMA transfer.

Parameters

- **ADCx:** ADC instance
- **Register:** This parameter can be one of the following values:
  – LL_ADC_DMA_REG_REGULAR_DATA
  – LL_ADC_DMA_REG_REGULAR_MULTI_NO_PACKING (1)
  – LL_ADC_DMA_REG_REGULAR_MULTI_PACKING (1)

  (1) Available on devices with several ADC instances.

Return values

- **ADC:** register address

Notes

- These ADC registers are data registers: when ADC conversion data is available in ADC data registers, ADC generates a DMA transfer request.
- This macro is intended to be used with LL DMA driver, refer to function "LL_DMA_ConfigAddresses()". Example: LL_DMA_ConfigAddresses(DMA1, LL_DMA_CHANNEL_1, LL_ADC_DMA_GetRegAddr(ADC1, LL_ADC_DMA_REG_REGULAR_DATA), (uint32_t)&< array or variable >, LL_DMA_DIRECTION_PERIPH_TO_MEMORY);
- For devices with several ADC: in multimode, some devices use a different data register outside of ADC instance scope (common data register). This macro manages this register difference, only ADC instance has to be set as parameter.

Reference Manual to LL API cross reference:

- DR RDATA LL_ADC_DMA_GetRegAddr
- CDR RDATA_MST LL_ADC_DMA_GetRegAddr
- CDR RDATA_SLV LL_ADC_DMA_GetRegAddr

LL_ADC_SetCommonPathInternalCh

Function name

__STATIC_INLINE void LL_ADC_SetCommonPathInternalCh (ADC_Common_TypeDef * ADCxy_COMMON, uint32_t PathInternal)

Function description

Set parameter common to several ADC: measurement path to internal channels (VrefInt, temperature sensor, ...).

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())
- **PathInternal:** This parameter can be a combination of the following values:
  - LL_ADC_PATH_INTERNAL_NONE
  - LL_ADC_PATH_INTERNAL_VREFINT
  - LL_ADC_PATH_INTERNAL_VBAT

Return values

- **None:**

Notes

- One or several values can be selected. Example: (LL_ADC_PATH_INTERNAL_VREFINT | LL_ADC_PATH_INTERNAL_TEMPSENSOR) The values not selected are removed from configuration.
- Stabilization time of measurement path to internal channel: After enabling internal paths, before starting ADC conversion, a delay is required for internal voltage reference and temperature sensor stabilization time. Refer to device datasheet. Refer to literal LL_ADC_DELAY_VREFINT_STAB_US.
- ADC internal channel sampling time constraint: For ADC conversion of internal channels, a sampling time minimum value is required. Refer to device datasheet.
- On this STM32 series, setting of this feature is conditioned to ADC state: All ADC instances of the ADC common group must be disabled. This check can be done with function LL_ADC_IsEnabled() for each ADC instance or by using helper macro helper macro __LL_ADC_IS_ENABLED_ALL_COMMON_INSTANCE().

Reference Manual to LL API cross reference:

- CCR TSEN LL_ADC_SetCommonPathInternalCh
- CCR VBATEN LL_ADC_SetCommonPathInternalCh

LL_ADC_SetCommonPathInternalChAdd

Function name

__STATIC_INLINE void LL_ADC_SetCommonPathInternalChAdd (ADC_Common_TypeDef * ADCxy_COMMON, uint32_t PathInternal)

Function description

Set parameter common to several ADC: measurement path to internal channels (VrefInt, temperature sensor, ...).

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())
- **PathInternal:** This parameter can be a combination of the following values:
  - LL_ADC_PATH_INTERNAL_NONE
  - LL_ADC_PATH_INTERNAL_VREFINT
  - LL_ADC_PATH_INTERNAL_TEMPSENSOR
  - LL_ADC_PATH_INTERNAL_VBAT

Return values

- **None:**

Notes

- One or several values can be selected. Example: (LL_ADC_PATH_INTERNAL_VREFINT | LL_ADC_PATH_INTERNAL_TEMPSENSOR)
- Stabilization time of measurement path to internal channel: After enabling internal paths, before starting ADC conversion, a delay is required for internal voltage reference and temperature sensor stabilization time. Refer to device datasheet. Refer to literal LL_ADC_DELAY_VREFINT_STAB_US.
- ADC internal channel sampling time constraint: For ADC conversion of internal channels, a sampling time minimum value is required. Refer to device datasheet.
- On this STM32 series, setting of this feature is conditioned to ADC state: All ADC instances of the ADC common group must be disabled. This check can be done with function LL_ADC_IsEnabled() for each ADC instance or by using helper macro helper macro __LL_ADC_IS_ENABLED_ALL_COMMON_INSTANCE().

LL_ADC_SetCommonPathInternalChRem

Function name

__STATIC_INLINE void LL_ADC_SetCommonPathInternalChRem (ADC_Common_TypeDef * ADCxy_COMMON, uint32_t PathInternal)

Function description

Set parameter common to several ADC: measurement path to internal channels (VrefInt, temperature sensor, ...).

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())
- **PathInternal:** This parameter can be a combination of the following values:
  - LL_ADC_PATH_INTERNAL_NONE
  - LL_ADC_PATH_INTERNAL_VREFINT
  - LL_ADC_PATH_INTERNAL_TEMPSENSOR
  - LL_ADC_PATH_INTERNAL_VBAT

Return values

- **None:**

Notes

- One or several values can be selected. Example: (LL_ADC_PATH_INTERNAL_VREFINT | LL_ADC_PATH_INTERNAL_TEMPSENSOR)
- On this STM32 series, setting of this feature is conditioned to ADC state: All ADC instances of the ADC common group must be disabled. This check can be done with function LL_ADC_IsEnabled() for each ADC instance or by using helper macro helper macro __LL_ADC_IS_ENABLED_ALL_COMMON_INSTANCE().

- CCR VBATEN LL_ADC_SetCommonPathInternalChRem

LL_ADC_GetCommonPathInternalCh

Function name

__STATIC_INLINE uint32_t LL_ADC_GetCommonPathInternalCh (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get parameter common to several ADC: measurement path to internal channels (VrefInt, temperature sensor, ...).

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **Returned:** value can be a combination of the following values:
  - LL_ADC_PATH_INTERNAL_NONE
  - LL_ADC_PATH_INTERNAL_VREFINT
  - LL_ADC_PATH_INTERNAL_TEMPSENSOR
  - LL_ADC_PATH_INTERNAL_VBAT

Notes

- One or several values can be selected. Example: (LL_ADC_PATH_INTERNAL_VREFINT | LL_ADC_PATH_INTERNAL_TEMPSENSOR)

Reference Manual to LL API cross reference:

- CCR VREFEN LL_ADC_GetCommonPathInternalCh
- CCR TSEN LL_ADC_GetCommonPathInternalCh
- CCR VBATEN LL_ADC_GetCommonPathInternalCh

LL_ADC_SetPathInternalCh

Function name

__STATIC_INLINE void LL_ADC_SetPathInternalCh (ADC_TypeDef * ADCx, uint32_t PathInternal)

Function description

Set parameter on ADC instance scope: measurement path to internal channels (Vcore, Vcpu...).

Parameters

- **ADCx:** ADC instance
- **PathInternal:** This parameter can be a combination of the following values:
  - LL_ADC_PATH_INTERNAL_NONE
  - LL_ADC_PATH_INTERNAL_VDDCORE

Return values

- **None:**

Notes

- One or several values can be selected. Example: (LL_ADC_PATH_INTERNAL_VDDCORE | LL_ADC_PATH_INTERNAL_...) The values not selected are removed from configuration.
- Stabilization time of measurement path to internal channel: After enabling internal paths, before starting ADC conversion, a delay may be required required for analog stabilization. Refer to device datasheet.
- ADC internal channel sampling time constraint: For ADC conversion of internal channels, a sampling time minimum value is required. Refer to device datasheet.

Reference Manual to LL API cross reference:

- OR VDDCOREEN LL_ADC_SetPathInternalCh

LL_ADC_SetPathInternalChAdd

Function name

__STATIC_INLINE void LL_ADC_SetPathInternalChAdd (ADC_TypeDef * ADCx, uint32_t PathInternal)

Function description

Set parameter on ADC instance scope: measurement path to internal channels (Vcore, Vcpu...).

Parameters

- **ADCx:** ADC instance
- **PathInternal:** This parameter can be a combination of the following values:
  - LL_ADC_PATH_INTERNAL_NONE
  - LL_ADC_PATH_INTERNAL_VDDCORE

Return values

- **None:**

Notes

- One or several values can be selected. Example: (LL_ADC_PATH_INTERNAL_VDDCORE | LL_ADC_PATH_INTERNAL_...) The values not selected are removed from configuration.
- Stabilization time of measurement path to internal channel: After enabling internal paths, before starting ADC conversion, a delay may be required required for analog stabilization. Refer to device datasheet.
- ADC internal channel sampling time constraint: For ADC conversion of internal channels, a sampling time minimum value is required. Refer to device datasheet.

Reference Manual to LL API cross reference:

- OR VDDCOREEN LL_ADC_SetPathInternalChAdd

LL_ADC_SetPathInternalChRem

Function name

__STATIC_INLINE void LL_ADC_SetPathInternalChRem (ADC_TypeDef * ADCx, uint32_t PathInternal)

Function description

Set parameter on ADC instance scope: measurement path to internal channels (Vcore, Vcpu...).

Parameters

- **ADCx:** ADC instance
- **PathInternal:** This parameter can be a combination of the following values:
  - LL_ADC_PATH_INTERNAL_NONE
  - LL_ADC_PATH_INTERNAL_VDDCORE

Return values

- **None:**

Notes

- One or several values can be selected. Example: (LL_ADC_PATH_INTERNAL_VDDCORE | LL_ADC_PATH_INTERNAL_...) The values not selected are removed from configuration.
- Stabilization time of measurement path to internal channel: After enabling internal paths, before starting ADC conversion, a delay may be required required for analog stabilization. Refer to device datasheet.
- ADC internal channel sampling time constraint: For ADC conversion of internal channels, a sampling time minimum value is required. Refer to device datasheet.

Reference Manual to LL API cross reference:

- OR VDDCOREEN LL_ADC_SetPathInternalChRem

LL_ADC_GetPathInternalCh

Function name

__STATIC_INLINE uint32_t LL_ADC_GetPathInternalCh (const ADC_TypeDef * ADCx)

Function description

Get parameter on ADC instance scope: measurement path to internal channels (Vcore, Vcpu...).

Parameters

- **ADCx:** ADC instance

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_PATH_INTERNAL_NONE
  - LL_ADC_PATH_INTERNAL_VDDCORE

Notes

- One or several values can be selected. Example: (LL_ADC_PATH_INTERNAL_VDDCORE | LL_ADC_PATH_INTERNAL_...)

Reference Manual to LL API cross reference:

- OR VDDCOREEN LL_ADC_GetPathInternalCh

LL_ADC_SetCalibrationFactor

Function name

__STATIC_INLINE void LL_ADC_SetCalibrationFactor (ADC_TypeDef * ADCx, uint32_t SingleDiff, uint32_t CalibrationFactor)

Function description

Set ADC calibration factor in the mode single-ended or differential (for devices with differential mode available).

Parameters

- **ADCx:** ADC instance
- **SingleDiff:** This parameter can be one of the following values:
  - LL_ADC_SINGLE_ENDED
- **CalibrationFactor:** Value between Min_Data=0x00 and Max_Data=0x7F

Return values

- **None:**

Notes

- This function is intended to set calibration parameters without having to perform a new calibration using LL_ADC_StartCalibration().
- In case of setting calibration factors of both modes single ended and differential (parameter LL_ADC_BOTH_SINGLE_DIFF_ENDED): both calibration factors must be concatenated. To perform this processing, use helper macro __LL_ADC_CALIB_FACTOR_SINGLE_DIFF().
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be enabled, without calibration on going, without conversion on going on group regular and group injected.

Reference Manual to LL API cross reference:

- CALFACT CALFACT_S LL_ADC_SetCalibrationFactor
- CALFACT CALFACT_D LL_ADC_SetCalibrationFactor

LL_ADC_GetCalibrationFactor

Function name

__STATIC_INLINE uint32_t LL_ADC_GetCalibrationFactor (const ADC_TypeDef * ADCx, uint32_t SingleDiff)

Function description

Get ADC calibration factor in the mode single-ended or differential (for devices with differential mode available).

Parameters

- **ADCx:** ADC instance
- **SingleDiff:** This parameter can be one of the following values:
  - LL_ADC_SINGLE_ENDED

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x1FF

Notes

- Calibration factors are set by hardware after performing a calibration run using function LL_ADC_StartCalibration().
- For devices with differential mode available: Calibration of offset is specific to each of single-ended and differential modes

Reference Manual to LL API cross reference:

- CALFACT CALFACT_S LL_ADC_GetCalibrationFactor
- CALFACT CALFACT_D LL_ADC_GetCalibrationFactor

LL_ADC_SetResolution

Function name

__STATIC_INLINE void LL_ADC_SetResolution (ADC_TypeDef * ADCx, uint32_t Resolution)

Function description

Set ADC resolution.

Parameters

- **ADCx:** ADC instance
- **Resolution:** This parameter can be one of the following values:
  - LL_ADC_RESOLUTION_12B
  - LL_ADC_RESOLUTION_10B
  - LL_ADC_RESOLUTION_8B
  - LL_ADC_RESOLUTION_6B

Return values

- **None:**

Notes

- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on either groups regular or injected.

Reference Manual to LL API cross reference:

- CFGR1 RES LL_ADC_SetResolution

LL_ADC_GetResolution

Function name

__STATIC_INLINE uint32_t LL_ADC_GetResolution (const ADC_TypeDef * ADCx)

Function description

Get ADC resolution.

Parameters

- **ADCx:** ADC instance

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_RESOLUTION_12B
  - LL_ADC_RESOLUTION_10B
  - LL_ADC_RESOLUTION_8B
  - LL_ADC_RESOLUTION_6B

Reference Manual to LL API cross reference:

- CFGR1 RES LL_ADC_GetResolution

LL_ADC_SetLPModeAutoWait

Function name

__STATIC_INLINE void LL_ADC_SetLPModeAutoWait (ADC_TypeDef * ADCx, uint32_t LowPowerMode)

Function description

Set ADC low power mode.

Parameters

- **ADCx:** ADC instance
- **LowPowerMode:** This parameter can be one of the following values:
  - LL_ADC_LP_AUTOWAIT_DISABLE
  - LL_ADC_LP_AUTOWAIT_ENABLE

Return values

- **None:**

Notes

- Description of ADC low power modes: ADC low power mode "auto wait": Dynamic low power mode, ADC conversions occurrences are limited to the minimum necessary in order to reduce power consumption. New ADC conversion starts only when the previous unitary conversion data (for ADC group regular) or previous sequence conversions data (for ADC group injected) has been retrieved by user software. In the meantime, ADC remains idle: does not performs any other conversion. This mode allows to automatically adapt the ADC conversions triggers to the speed of the software that reads the data. Moreover, this avoids risk of overrun for low frequency applications. How to use this low power mode: It is not recommended to use with interruption or DMA since these modes have to clear immediately the EOC flag (by CPU to free the IRQ pending event or by DMA). Auto wait will work but fort a very short time, discarding its intended benefit (except specific case of high load of CPU or DMA transfers which can justify usage of auto wait).Do use with polling: 1. Start conversion, 2. Later on, when conversion data is needed: poll for end of conversion to ensure that conversion is completed and retrieve ADC conversion data. This will trig another ADC conversion start. ADC low power mode "auto power-off" (feature available on this device if parameter LL_ADC_LP_AUTOPOWEROFF is available): the ADC automatically powers-off after a conversion and automatically wakes up when a new conversion is triggered (with startup time between trigger and start of sampling). This feature can be combined with low power mode "auto wait".
- With ADC low power mode "auto wait", the ADC conversion data read is corresponding to previous ADC conversion start, independently of delay during which ADC was idle. Therefore, the ADC conversion data may be outdated: does not correspond to the current voltage level on the selected ADC channel.
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on either groups regular or injected.

Reference Manual to LL API cross reference:

- CFGR1 AUTDLY LL_ADC_SetLPModeAutoWait

LL_ADC_GetLPModeAutoWait

Function name

__STATIC_INLINE uint32_t LL_ADC_GetLPModeAutoWait (const ADC_TypeDef * ADCx)

Function description

Get ADC low power mode:

Parameters

- **ADCx:** ADC instance

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_LP_AUTOWAIT_DISABLE
  - LL_ADC_LP_AUTOWAIT_ENABLE

Notes

- Description of ADC low power modes: ADC low power mode "auto wait": Dynamic low power mode, ADC conversions occurrences are limited to the minimum necessary in order to reduce power consumption. New ADC conversion starts only when the previous unitary conversion data (for ADC group regular) or previous sequence conversions data (for ADC group injected) has been retrieved by user software. In the meantime, ADC remains idle: does not performs any other conversion. This mode allows to automatically adapt the ADC conversions triggers to the speed of the software that reads the data. Moreover, this avoids risk of overrun for low frequency applications. How to use this low power mode: It is not recommended to use with interruption or DMA since these modes have to clear immediately the EOC flag (by CPU to free the IRQ pending event or by DMA). Auto wait will work but fort a very short time, discarding its intended benefit (except specific case of high load of CPU or DMA transfers which can justify usage of auto wait).Do use with polling: 1. Start conversion, 2. Later on, when conversion data is needed: poll for end of conversion to ensure that conversion is completed and retrieve ADC conversion data. This will trig another ADC conversion start. ADC low power mode "auto power-off" (feature available on this device if parameter LL_ADC_LP_AUTOPOWEROFF is available): the ADC automatically powers-off after a conversion and automatically wakes up when a new conversion is triggered (with startup time between trigger and start of sampling). This feature can be combined with low power mode "auto wait".
- With ADC low power mode "auto wait", the ADC conversion data read is corresponding to previous ADC conversion start, independently of delay during which ADC was idle. Therefore, the ADC conversion data may be outdated: does not correspond to the current voltage level on the selected ADC channel.

Reference Manual to LL API cross reference:

- CFGR1 AUTDLY LL_ADC_GetLPModeAutoWait

LL_ADC_SetOffsetChannel

Function name

__STATIC_INLINE void LL_ADC_SetOffsetChannel (ADC_TypeDef * ADCx, uint32_t Offsety, uint32_t Channel)

Function description

Set for the ADC selected offset number 1, 2, 3 or 4: Channel to which the offset programmed will be applied (independently of channel mapped on ADC group regular or group injected)

Parameters

- **ADCx:** ADC instance
- **Offsety:** This parameter can be one of the following values:
  - LL_ADC_OFFSET_1
  - LL_ADC_OFFSET_2
  - LL_ADC_OFFSET_3
  - LL_ADC_OFFSET_4
- **Channel:** This parameter can be one of the following values:
  - LL_ADC_CHANNEL_0
  - LL_ADC_CHANNEL_1
  - LL_ADC_CHANNEL_2
  - LL_ADC_CHANNEL_3
  - LL_ADC_CHANNEL_4
  - LL_ADC_CHANNEL_5
  - LL_ADC_CHANNEL_6
  - LL_ADC_CHANNEL_7
  - LL_ADC_CHANNEL_8
  - LL_ADC_CHANNEL_9
  - LL_ADC_CHANNEL_10
  - LL_ADC_CHANNEL_11
  - LL_ADC_CHANNEL_12
  - LL_ADC_CHANNEL_13
  - LL_ADC_CHANNEL_14
  - LL_ADC_CHANNEL_15
  - LL_ADC_CHANNEL_16
  - LL_ADC_CHANNEL_17
  - LL_ADC_CHANNEL_18
  - LL_ADC_CHANNEL_VDDCORE
  - LL_ADC_CHANNEL_VREFINT (1)
  - LL_ADC_CHANNEL_TEMPSENSOR (1)
  - LL_ADC_CHANNEL_VBAT (1)
  - LL_ADC_CHANNEL_DAC1CH1_ADC2 (1)
  - LL_ADC_CHANNEL_DAC1CH2_ADC2 (1)

  (1) On this STM32 series, parameter available only on ADC instance: ADC2.
-

Return values

- **None:**

Notes

- If a channel is mapped on several offsets numbers, only the offset with the lowest value is considered for the subtraction.
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on either groups regular or injected.

Reference Manual to LL API cross reference:

- OFR1 OFFSET_CH LL_ADC_SetOffsetChannel
- OFR2 OFFSET_CH LL_ADC_SetOffsetChannel
- OFR3 OFFSET_CH LL_ADC_SetOffsetChannel
- OFR4 OFFSET_CH LL_ADC_SetOffsetChannel

LL_ADC_GetOffsetChannel

Function name

__STATIC_INLINE uint32_t LL_ADC_GetOffsetChannel (const ADC_TypeDef * ADCx, uint32_t Offsety)

Function description

Get for the ADC selected offset instance 1, 2, 3 or 4: Channel to which the offset programmed will be applied (independently of channel mapped on ADC group regular or group injected)

Parameters

- **ADCx:** ADC instance
- **Offsety:** This parameter can be one of the following values:
  - LL_ADC_OFFSET_1
  - LL_ADC_OFFSET_2
  - LL_ADC_OFFSET_3
  - LL_ADC_OFFSET_4

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_CHANNEL_0
  - LL_ADC_CHANNEL_1
  - LL_ADC_CHANNEL_2
  - LL_ADC_CHANNEL_3
  - LL_ADC_CHANNEL_4
  - LL_ADC_CHANNEL_5
  - LL_ADC_CHANNEL_6
  - LL_ADC_CHANNEL_7
  - LL_ADC_CHANNEL_8
  - LL_ADC_CHANNEL_9
  - LL_ADC_CHANNEL_10
  - LL_ADC_CHANNEL_11
  - LL_ADC_CHANNEL_12
  - LL_ADC_CHANNEL_13
  - LL_ADC_CHANNEL_14
  - LL_ADC_CHANNEL_15
  - LL_ADC_CHANNEL_16
  - LL_ADC_CHANNEL_17
  - LL_ADC_CHANNEL_18
  - LL_ADC_CHANNEL_VREFINT (1)(3)
  - LL_ADC_CHANNEL_VBAT (1)(3)
  - LL_ADC_CHANNEL_TEMPSENSOR (1)(3)
  - LL_ADC_CHANNEL_VDDCORE (1)(3)
  - LL_ADC_CHANNEL_DAC1CH1_ADC2 (2)(3)
  - LL_ADC_CHANNEL_DAC1CH2_ADC2 (2)(3)

  (1) On this STM32 series, parameter available only on ADC instance: ADC1.
- (2) On this STM32 series, parameter available only on ADC instance: ADC2.
- (3) For ADC channel read back from ADC register, comparison with internal channel parameter to be done using helper macro __LL_ADC_CHANNEL_INTERNAL_TO_EXTERNAL().

Notes

- Usage of the returned channel number: To reinject this channel into another function LL_ADC_xxx: the returned channel number is only partly formatted on definition of literals LL_ADC_CHANNEL_x. Therefore, it has to be compared with parts of literals LL_ADC_CHANNEL_x or using helper macro __LL_ADC_CHANNEL_TO_DECIMAL_NB(). Then the selected literal LL_ADC_CHANNEL_x can be used as parameter for another function.To get the channel number in decimal format: process the returned value with the helper macro __LL_ADC_CHANNEL_TO_DECIMAL_NB().

Reference Manual to LL API cross reference:

- OFR1 OFFSET_CH LL_ADC_SetOffsetChannel
- OFR2 OFFSET_CH LL_ADC_SetOffsetChannel
- OFR3 OFFSET_CH LL_ADC_SetOffsetChannel
- OFR4 OFFSET_CH LL_ADC_SetOffsetChannel

LL_ADC_SetOffsetLevel

Function name

__STATIC_INLINE void LL_ADC_SetOffsetLevel (ADC_TypeDef * ADCx, uint32_t Offsety, uint32_t OffsetLevel)

Function description

Set for the ADC selected offset number 1, 2, 3 or 4: Offset level (offset to be subtracted from the raw converted data).

Parameters

- **ADCx:** ADC instance
- **Offsety:** This parameter can be one of the following values:
  - LL_ADC_OFFSET_1
  - LL_ADC_OFFSET_2
  - LL_ADC_OFFSET_3
  - LL_ADC_OFFSET_4
- **OffsetLevel:** Value between Min_Data=0x000 and Max_Data=0x00FFFFFF

Return values

- **None:**

Notes

- Caution: Offset format is dependent to ADC resolution: offset has to be left-aligned on bit 11, the LSB (right bits) are set to 0.
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on either groups regular or injected.

Reference Manual to LL API cross reference:

- OFR1 OFFSET1 LL_ADC_SetOffsetLevel
- OFR2 OFFSET2 LL_ADC_SetOffsetLevel
- OFR3 OFFSET3 LL_ADC_SetOffsetLevel
- OFR4 OFFSET4 LL_ADC_SetOffsetLevel

LL_ADC_GetOffsetLevel

Function name

__STATIC_INLINE uint32_t LL_ADC_GetOffsetLevel (const ADC_TypeDef * ADCx, uint32_t Offsety)

Function description

Get for the ADC selected offset instance 1, 2, 3 or 4: Offset level (offset to be subtracted from the raw converted data).

Parameters

- **ADCx:** ADC instance
- **Offsety:** This parameter can be one of the following values:
  - LL_ADC_OFFSET_1
  - LL_ADC_OFFSET_2
  - LL_ADC_OFFSET_3
  - LL_ADC_OFFSET_4

Return values

- **Value:** between Min_Data=0x000 and Max_Data=0x00FFFFFF

Notes

- Caution: Offset format is dependent to ADC resolution: offset has to be left-aligned on bit 11, the LSB (right bits) are set to 0.

Reference Manual to LL API cross reference:

- OFR1 OFFSET1 LL_ADC_GetOffsetLevel
- OFR2 OFFSET2 LL_ADC_GetOffsetLevel
- OFR3 OFFSET3 LL_ADC_GetOffsetLevel
- OFR4 OFFSET4 LL_ADC_GetOffsetLevel

LL_ADC_SetOffsetSign

Function name

__STATIC_INLINE void LL_ADC_SetOffsetSign (ADC_TypeDef * ADCx, uint32_t Offsety, uint32_t OffsetSign)

Function description

Set for the ADC selected offset instance 1, 2, 3 or 4: force offset state disable or enable without modifying offset channel or offset value.

Parameters

- **ADCx:** ADC instance
- **Offsety:** This parameter can be one of the following values:
  - LL_ADC_OFFSET_1
  - LL_ADC_OFFSET_2
  - LL_ADC_OFFSET_3
  - LL_ADC_OFFSET_4
- **OffsetSign:** This parameter can be one of the following values:
  - LL_ADC_OFFSET_SIGN_NEGATIVE
  - LL_ADC_OFFSET_SIGN_POSITIVE

Return values

- **None:**

Notes

- This function should be needed only in case of offset to be enabled-disabled dynamically, and should not be needed in other cases: function LL_ADC_SetOffset() automatically enables the offset.
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on either groups regular or injected.

Reference Manual to LL API cross reference:

LL_ADC_GetOffsetSign

Function name

__STATIC_INLINE uint32_t LL_ADC_GetOffsetSign (const ADC_TypeDef * ADCx, uint32_t Offsety)

Function description

Get for the ADC selected offset instance 1, 2, 3 or 4: offset sign if positive or negative.

Parameters

- **ADCx:** ADC instance
- **Offsety:** This parameter can be one of the following values:
  - LL_ADC_OFFSET_1
  - LL_ADC_OFFSET_2
  - LL_ADC_OFFSET_3
  - LL_ADC_OFFSET_4

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_OFFSET_SIGN_NEGATIVE
  - LL_ADC_OFFSET_SIGN_POSITIVE

Reference Manual to LL API cross reference:

- OFCFGR1 OFFSETPOS LL_ADC_GetOffsetSign
- OFCFGR2 OFFSETPOS LL_ADC_GetOffsetSign
- OFCFGR3 OFFSETPOS LL_ADC_GetOffsetSign
- OFCFGR4 OFFSETPOS LL_ADC_GetOffsetSign

LL_ADC_SetOffsetSignedSaturation

Function name

__STATIC_INLINE void LL_ADC_SetOffsetSignedSaturation (ADC_TypeDef * ADCx, uint32_t Offsety, uint32_t OffsetSignedSaturation)

Function description

Set Signed saturation for the ADC selected offset instance 1, 2, 3 or 4: signed offset saturation if enabled or disabled.

Parameters

- **ADCx:** ADC instance
- **Offsety:** This parameter can be one of the following values:
  - LL_ADC_OFFSET_1
  - LL_ADC_OFFSET_2
  - LL_ADC_OFFSET_3
  - LL_ADC_OFFSET_4
- **OffsetSignedSaturation:** This parameter can be one of the following values:
  - LL_ADC_OFFSET_SIGNED_SAT_ENABLE
  - LL_ADC_OFFSET_SIGNED_SAT_DISABLE

Return values

- **None:**

Reference Manual to LL API cross reference:

- OFCFGR1 SSAT LL_ADC_SetOffsetSignedSaturation
- OFCFGR2 SSAT LL_ADC_SetOffsetSignedSaturation
- OFCFGR3 SSAT LL_ADC_SetOffsetSignedSaturation

LL_ADC_GetOffsetSignedSaturation

Function name

__STATIC_INLINE uint32_t LL_ADC_GetOffsetSignedSaturation (const ADC_TypeDef * ADCx, uint32_t Offsety)

Function description

Get Signed saturation for the ADC selected offset number 1, 2, 3 or 4: signed offset saturation if enabled or disabled.

Parameters

- **ADCx:** ADC instance
- **Offsety:** This parameter can be one of the following values:
  - LL_ADC_OFFSET_1
  - LL_ADC_OFFSET_2
  - LL_ADC_OFFSET_3
  - LL_ADC_OFFSET_4

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_OFFSET_SIGNED_SAT_ENABLE
  - LL_ADC_OFFSET_SIGNED_SAT_DISABLE

Reference Manual to LL API cross reference:

- OFCFGR1 SSAT LL_ADC_GetOffsetSignedSaturation

- OFCFGR4 SSAT LL_ADC_GetOffsetSignedSaturation

LL_ADC_SetOffsetUnsignedSaturation

Function name

__STATIC_INLINE void LL_ADC_SetOffsetUnsignedSaturation (ADC_TypeDef * ADCx, uint32_t Offsety, uint32_t OffsetUnsignedSaturation)

Function description

Set Unsigned saturation for the ADC selected offset instance 1, 2, 3 or 4: signed offset saturation if enabled or disabled.

Parameters

- **ADCx:** ADC instance
- **Offsety:** This parameter can be one of the following values:
  - LL_ADC_OFFSET_1
  - LL_ADC_OFFSET_2
  - LL_ADC_OFFSET_3
  - LL_ADC_OFFSET_4
- **OffsetUnsignedSaturation:** This parameter can be one of the following values:
  - LL_ADC_OFFSET_UNSIGNED_SAT_ENABLE
  - LL_ADC_OFFSET_UNSIGNED_SAT_DISABLE

Return values

- **None:**

Reference Manual to LL API cross reference:

- OFCFGR1 USAT LL_ADC_SetOffsetUnsignedSaturation
- OFCFGR2 USAT LL_ADC_SetOffsetUnsignedSaturation
- OFCFGR3 USAT LL_ADC_SetOffsetUnsignedSaturation
- OFCFGR4 USAT LL_ADC_SetOffsetUnsignedSaturation

LL_ADC_GetOffsetUnsignedSaturation

Function name

__STATIC_INLINE uint32_t LL_ADC_GetOffsetUnsignedSaturation (const ADC_TypeDef * ADCx, uint32_t Offsety)

Function description

Get Unsigned saturation for the ADC selected offset instance 1, 2, 3 or 4: signed offset saturation if enabled or disabled.

Parameters

- **ADCx:** ADC instance
- **Offsety:** This parameter can be one of the following values:
  - LL_ADC_OFFSET_1
  - LL_ADC_OFFSET_2
  - LL_ADC_OFFSET_3
  - LL_ADC_OFFSET_4

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_OFFSET_UNSIGNED_SAT_ENABLE
  - LL_ADC_OFFSET_UNSIGNED_SAT_DISABLE

Reference Manual to LL API cross reference:

- OFCFGR1 USAT LL_ADC_GetOffsetUnsignedSaturation
- OFCFGR2 USAT LL_ADC_GetOffsetUnsignedSaturation
- OFCFGR3 USAT LL_ADC_GetOffsetUnsignedSaturation
- OFCFGR4 USAT LL_ADC_GetOffsetUnsignedSaturation

LL_ADC_SetGainCompensation

Function name

__STATIC_INLINE void LL_ADC_SetGainCompensation (ADC_TypeDef * ADCx, uint32_t GainCompensation)

Function description

Set ADC gain compensation.

Parameters

- **ADCx:** ADC instance
- **GainCompensation:** This parameter can be: 0 Gain compensation will be disabled and value set to 0 1 -> 16393 Gain compensation will be enabled with specified value

Return values

- **None:**

Notes

- This function set the gain compensation coefficient that is applied to raw converted data using the formula: DATA = DATA(raw) * (gain compensation coef) / 4096
- This function enables the gain compensation if given coefficient is above 0, otherwise it disables it.
- Gain compensation when enabled is applied to all channels.
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on either groups regular or injected.

Reference Manual to LL API cross reference:

- GCOMP GCOMPCOEFF LL_ADC_SetGainCompensation
- CFGR2 GCOMP LL_ADC_SetGainCompensation

LL_ADC_GetGainCompensation

Function name

__STATIC_INLINE uint32_t LL_ADC_GetGainCompensation (const ADC_TypeDef * ADCx)

Function description

Get the ADC gain compensation value.

Parameters

- **ADCx:** ADC instance

Return values

- **Returned:** value can be: 0 Gain compensation is disabled 1 -> 16393 Gain compensation is enabled with returned value

Reference Manual to LL API cross reference:

- GCOMP GCOMPCOEFF LL_ADC_GetGainCompensation
- CFGR2 GCOMP LL_ADC_GetGainCompensation

LL_ADC_REG_SetTriggerSource

Function name

__STATIC_INLINE void LL_ADC_REG_SetTriggerSource (ADC_TypeDef * ADCx, uint32_t TriggerSource)

Function description

Set ADC group regular conversion trigger source: internal (SW start) or from external peripheral (timer event, external interrupt line).

Parameters

- **ADCx:** ADC instance
- **TriggerSource:** This parameter can be one of the following values:
  - LL_ADC_REG_TRIG_SOFTWARE
  - LL_ADC_REG_TRIG_EXT_TIM1_CH1
  - LL_ADC_REG_TRIG_EXT_TIM1_CH2
  - LL_ADC_REG_TRIG_EXT_TIM1_CH3
  - LL_ADC_REG_TRIG_EXT_TIM2_CH2
  - LL_ADC_REG_TRIG_EXT_TIM3_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM4_CH4
  - LL_ADC_REG_TRIG_EXT_EXTI_LINE11
  - LL_ADC_REG_TRIG_EXT_TIM1_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM1_TRGO2
  - LL_ADC_REG_TRIG_EXT_TIM2_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM4_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM6_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM15_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM3_CH4
  - LL_ADC_REG_TRIG_EXT_EXTI_LINE15
  - LL_ADC_REG_TRIG_EXT_LPTIM1_CH1
  - LL_ADC_REG_TRIG_EXT_LPTIM2_CH1
  - LL_ADC_REG_TRIG_EXT_LPTIM3_CH1
  - LL_ADC_REG_TRIG_EXT_LPTIM4_OUT

Return values

- **None:**

Notes

- On this STM32 series, setting trigger source to external trigger also set trigger polarity to rising edge (default setting for compatibility with some ADC on other STM32 series having this setting set by HW default value). In case of need to modify trigger edge, use function LL_ADC_REG_SetTriggerEdge().
- Availability of parameters of trigger sources from timer depends on timers availability on the selected device.
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on group regular.

Reference Manual to LL API cross reference:

- CFGR1 EXTSEL LL_ADC_REG_SetTriggerSource
- CFGR1 EXTEN LL_ADC_REG_SetTriggerSource

LL_ADC_REG_GetTriggerSource

Function name

__STATIC_INLINE uint32_t LL_ADC_REG_GetTriggerSource (const ADC_TypeDef * ADCx)

Function description

Get ADC group regular conversion trigger source: internal (SW start) or from external peripheral (timer event, external interrupt line).

Parameters

- **ADCx:** ADC instance

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_REG_TRIG_SOFTWARE
  - LL_ADC_REG_TRIG_EXT_TIM1_CH1
  - LL_ADC_REG_TRIG_EXT_TIM1_CH2
  - LL_ADC_REG_TRIG_EXT_TIM1_CH3
  - LL_ADC_REG_TRIG_EXT_TIM2_CH2
  - LL_ADC_REG_TRIG_EXT_TIM3_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM4_CH4
  - LL_ADC_REG_TRIG_EXT_EXTI_LINE11
  - LL_ADC_REG_TRIG_EXT_TIM1_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM1_TRGO2
  - LL_ADC_REG_TRIG_EXT_TIM2_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM4_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM6_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM15_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM3_CH4
  - LL_ADC_REG_TRIG_EXT_EXTI_LINE15
  - LL_ADC_REG_TRIG_EXT_LPTIM1_CH1
  - LL_ADC_REG_TRIG_EXT_LPTIM2_CH1
  - LL_ADC_REG_TRIG_EXT_LPTIM3_CH1
  - LL_ADC_REG_TRIG_EXT_LPTIM4_OUT

Notes

- To determine whether group regular trigger source is internal (SW start) or external, without detail of which peripheral is selected as external trigger, (equivalent to "if(LL_ADC_REG_GetTriggerSource(ADC1) == LL_ADC_REG_TRIG_SOFTWARE)") use function LL_ADC_REG_IsTriggerSourceSWStart.
- Availability of parameters of trigger sources from timer depends on timers availability on the selected device.

Reference Manual to LL API cross reference:

- CFGR1 EXTSEL LL_ADC_REG_GetTriggerSource
- CFGR1 EXTEN LL_ADC_REG_GetTriggerSource

LL_ADC_REG_IsTriggerSourceSWStart

Function name

__STATIC_INLINE uint32_t LL_ADC_REG_IsTriggerSourceSWStart (const ADC_TypeDef * ADCx)

Function description

Get ADC group regular conversion trigger source internal (SW start) or external.

Parameters

- **ADCx:** ADC instance

Return values

- **Value:** "0" if trigger source external trigger Value "1" if trigger source SW start.

Notes

- In case of group regular trigger source set to external trigger, to determine which peripheral is selected as external trigger, use function LL_ADC_REG_GetTriggerSource().

Reference Manual to LL API cross reference:

- CFGR1 EXTEN LL_ADC_REG_IsTriggerSourceSWStart

LL_ADC_REG_SetTriggerEdge

Function name

__STATIC_INLINE void LL_ADC_REG_SetTriggerEdge (ADC_TypeDef * ADCx, uint32_t ExternalTriggerEdge)

Function description

Set ADC group regular conversion trigger polarity.

Parameters

- **ADCx:** ADC instance
- **ExternalTriggerEdge:** This parameter can be one of the following values:
  - LL_ADC_REG_TRIG_EXT_RISING
  - LL_ADC_REG_TRIG_EXT_FALLING
  - LL_ADC_REG_TRIG_EXT_RISINGFALLING

Return values

- **None:**

Notes

- Applicable only for trigger source set to external trigger.
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on group regular.

Reference Manual to LL API cross reference:

- CFGR1 EXTEN LL_ADC_REG_SetTriggerEdge

LL_ADC_REG_GetTriggerEdge

Function name

__STATIC_INLINE uint32_t LL_ADC_REG_GetTriggerEdge (const ADC_TypeDef * ADCx)

Function description

Get ADC group regular conversion trigger polarity.

Parameters

- **ADCx:** ADC instance

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_REG_TRIG_EXT_RISING
  - LL_ADC_REG_TRIG_EXT_FALLING
  - LL_ADC_REG_TRIG_EXT_RISINGFALLING

Notes

- Applicable only for trigger source set to external trigger.

Reference Manual to LL API cross reference:

- CFGR1 EXTEN LL_ADC_REG_GetTriggerEdge

LL_ADC_REG_SetSamplingMode

Function name

__STATIC_INLINE void LL_ADC_REG_SetSamplingMode (ADC_TypeDef * ADCx, uint32_t SamplingMode)

Function description

Set ADC sampling mode.

Parameters

- **ADCx:** ADC instance
- **SamplingMode:** This parameter can be one of the following values:
  - LL_ADC_REG_SAMPLING_MODE_NORMAL
  - LL_ADC_REG_SAMPLING_MODE_BULB
  - LL_ADC_REG_SAMPLING_MODE_TRIGGER_CONTROLED

Return values

- **None:**

Notes

- This function set the ADC conversion sampling mode
- This mode applies to regular group only.
- Set sampling mode is applied to all conversion of regular group.
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on group regular.

Reference Manual to LL API cross reference:

- CFGR2 SMPTRIG LL_ADC_REG_SetSamplingMode

LL_ADC_REG_GetSamplingMode

Function name

__STATIC_INLINE uint32_t LL_ADC_REG_GetSamplingMode (const ADC_TypeDef * ADCx)

Function description

Get the ADC sampling mode.

Parameters

- **ADCx:** ADC instance

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_REG_SAMPLING_MODE_NORMAL
  - LL_ADC_REG_SAMPLING_MODE_BULB
  - LL_ADC_REG_SAMPLING_MODE_TRIGGER_CONTROLED

Reference Manual to LL API cross reference:

- CFGR2 BULB LL_ADC_REG_GetSamplingMode
- CFGR2 SMPTRIG LL_ADC_REG_GetSamplingMode

LL_ADC_REG_StartSamplingPhase

Function name

__STATIC_INLINE void LL_ADC_REG_StartSamplingPhase (ADC_TypeDef * ADCx)

Function description

Start ADC sampling phase for sampling time trigger mode.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Notes

- This function is relevant only when LL_ADC_REG_SAMPLING_MODE_TRIGGER_CONTROLED has been set using LL_ADC_REG_SetSamplingModeLL_ADC_REG_TRIG_SOFTWARE is used as trigger source
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be enabled without conversion on going on group regular, without conversion stop command on going on group regular, without ADC disable command on going.

Reference Manual to LL API cross reference:

- CFGR2 SWTRIG LL_ADC_REG_StartSamplingPhase

LL_ADC_REG_StopSamplingPhase

Function name

__STATIC_INLINE void LL_ADC_REG_StopSamplingPhase (ADC_TypeDef * ADCx)

Function description

Stop ADC sampling phase for sampling time trigger mode and start conversion.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Notes

- This function is relevant only when LL_ADC_REG_SAMPLING_MODE_TRIGGER_CONTROLED has been set using LL_ADC_REG_SetSamplingModeLL_ADC_REG_TRIG_SOFTWARE is used as trigger sourceLL_ADC_REG_StartSamplingPhase has been called to start the sampling phase
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be enabled without conversion on going on group regular, without conversion stop command on going on group regular, without ADC disable command on going.

Reference Manual to LL API cross reference:

- CFGR2 SWTRIG LL_ADC_REG_StopSamplingPhase

LL_ADC_REG_SetSequencerLength

Function name

__STATIC_INLINE void LL_ADC_REG_SetSequencerLength (ADC_TypeDef * ADCx, uint32_t SequencerNbRanks)

Function description

Set ADC group regular sequencer length and scan direction.

Parameters

- **ADCx:** ADC instance
- **SequencerNbRanks:** This parameter can be one of the following values:
  - LL_ADC_REG_SEQ_SCAN_DISABLE
  - LL_ADC_REG_SEQ_SCAN_ENABLE_2RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_3RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_4RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_5RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_6RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_7RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_8RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_9RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_10RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_11RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_12RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_13RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_14RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_15RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_16RANKS

Return values

- **None:**

Notes

- Description of ADC group regular sequencer features: For devices with sequencer fully configurable (function "LL_ADC_REG_SetSequencerRanks()" available): sequencer length and each rank affectation to a channel are configurable. This function performs configuration of: Sequence length: Number of ranks in the scan sequence.Sequence direction: Unless specified in parameters, sequencer scan direction is forward (from rank 1 to rank n). Sequencer ranks are selected using function "LL_ADC_REG_SetSequencerRanks()". For devices with sequencer not fully configurable (function "LL_ADC_REG_SetSequencerChannels()" available): sequencer length and each rank affectation to a channel are defined by channel number. This function performs configuration of: Sequence length: Number of ranks in the scan sequence is defined by number of channels set in the sequence, rank of each channel is fixed by channel HW number. (channel 0 fixed on rank 0, channel 1 fixed on rank1, ...).Sequence direction: Unless specified in parameters, sequencer scan direction is forward (from lowest channel number to highest channel number). Sequencer ranks are selected using function "LL_ADC_REG_SetSequencerChannels()".
- Sequencer disabled is equivalent to sequencer of 1 rank: ADC conversion on only 1 channel.
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on group regular.

Reference Manual to LL API cross reference:

- SQR1 L LL_ADC_REG_SetSequencerLength

LL_ADC_REG_GetSequencerLength

Function name

__STATIC_INLINE uint32_t LL_ADC_REG_GetSequencerLength (const ADC_TypeDef * ADCx)

Function description

Get ADC group regular sequencer length and scan direction.

Parameters

- **ADCx:** ADC instance

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_REG_SEQ_SCAN_DISABLE
  - LL_ADC_REG_SEQ_SCAN_ENABLE_2RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_3RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_4RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_5RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_6RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_7RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_8RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_9RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_10RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_11RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_12RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_13RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_14RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_15RANKS
  - LL_ADC_REG_SEQ_SCAN_ENABLE_16RANKS

Notes

- Description of ADC group regular sequencer features: For devices with sequencer fully configurable (function "LL_ADC_REG_SetSequencerRanks()" available): sequencer length and each rank affectation to a channel are configurable. This function retrieves: Sequence length: Number of ranks in the scan sequence.Sequence direction: Unless specified in parameters, sequencer scan direction is forward (from rank 1 to rank n). Sequencer ranks are selected using function "LL_ADC_REG_SetSequencerRanks()". For devices with sequencer not fully configurable (function "LL_ADC_REG_SetSequencerChannels()" available): sequencer length and each rank affectation to a channel are defined by channel number. This function retrieves: Sequence length: Number of ranks in the scan sequence is defined by number of channels set in the sequence, rank of each channel is fixed by channel HW number. (channel 0 fixed on rank 0, channel 1 fixed on rank1, ...).Sequence direction: Unless specified in parameters, sequencer scan direction is forward (from lowest channel number to highest channel number). Sequencer ranks are selected using function "LL_ADC_REG_SetSequencerChannels()".
- Sequencer disabled is equivalent to sequencer of 1 rank: ADC conversion on only 1 channel.

Reference Manual to LL API cross reference:

- SQR1 L LL_ADC_REG_GetSequencerLength

LL_ADC_REG_SetSequencerDiscont

Function name

__STATIC_INLINE void LL_ADC_REG_SetSequencerDiscont (ADC_TypeDef * ADCx, uint32_t SeqDiscont)

Function description

Set ADC group regular sequencer discontinuous mode: sequence subdivided and scan conversions interrupted every selected number of ranks.

Parameters

- **ADCx:** ADC instance
- **SeqDiscont:** This parameter can be one of the following values:
  - LL_ADC_REG_SEQ_DISCONT_DISABLE
  - LL_ADC_REG_SEQ_DISCONT_1RANK
  - LL_ADC_REG_SEQ_DISCONT_2RANKS
  - LL_ADC_REG_SEQ_DISCONT_3RANKS
  - LL_ADC_REG_SEQ_DISCONT_4RANKS
  - LL_ADC_REG_SEQ_DISCONT_5RANKS
  - LL_ADC_REG_SEQ_DISCONT_6RANKS
  - LL_ADC_REG_SEQ_DISCONT_7RANKS
  - LL_ADC_REG_SEQ_DISCONT_8RANKS

Return values

- **None:**

Notes

- It is not possible to enable both ADC group regular continuous mode and sequencer discontinuous mode.
- It is not possible to enable both ADC auto-injected mode and ADC group regular sequencer discontinuous mode.
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on group regular.

Reference Manual to LL API cross reference:

- CFGR1 DISCEN LL_ADC_REG_SetSequencerDiscont
- CFGR1 DISCNUM LL_ADC_REG_SetSequencerDiscont

LL_ADC_REG_GetSequencerDiscont

Function name

__STATIC_INLINE uint32_t LL_ADC_REG_GetSequencerDiscont (const ADC_TypeDef * ADCx)

Function description

Get ADC group regular sequencer discontinuous mode: sequence subdivided and scan conversions interrupted every selected number of ranks.

Parameters

- **ADCx:** ADC instance

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_REG_SEQ_DISCONT_DISABLE
  - LL_ADC_REG_SEQ_DISCONT_1RANK
  - LL_ADC_REG_SEQ_DISCONT_2RANKS
  - LL_ADC_REG_SEQ_DISCONT_3RANKS
  - LL_ADC_REG_SEQ_DISCONT_4RANKS
  - LL_ADC_REG_SEQ_DISCONT_5RANKS
  - LL_ADC_REG_SEQ_DISCONT_6RANKS

LL_ADC_REG_SetSequencerRanks

Function name

__STATIC_INLINE void LL_ADC_REG_SetSequencerRanks (ADC_TypeDef * ADCx, uint32_t Rank, uint32_t Channel)

Function description

Set ADC group regular sequence: channel on the selected scan sequence rank.

Parameters

- **ADCx:** ADC instance
- **Rank:** This parameter can be one of the following values:
  - LL_ADC_REG_RANK_1
  - LL_ADC_REG_RANK_2
  - LL_ADC_REG_RANK_3
  - LL_ADC_REG_RANK_4
  - LL_ADC_REG_RANK_5
  - LL_ADC_REG_RANK_6
  - LL_ADC_REG_RANK_7
  - LL_ADC_REG_RANK_8
  - LL_ADC_REG_RANK_9
  - LL_ADC_REG_RANK_10
  - LL_ADC_REG_RANK_11
  - LL_ADC_REG_RANK_12
  - LL_ADC_REG_RANK_13
  - LL_ADC_REG_RANK_14
  - LL_ADC_REG_RANK_15
  - LL_ADC_REG_RANK_16
- **Channel:** This parameter can be one of the following values:
  - LL_ADC_CHANNEL_0
  - LL_ADC_CHANNEL_1
  - LL_ADC_CHANNEL_2
  - LL_ADC_CHANNEL_3
  - LL_ADC_CHANNEL_4
  - LL_ADC_CHANNEL_5
  - LL_ADC_CHANNEL_6
  - LL_ADC_CHANNEL_7
  - LL_ADC_CHANNEL_8
  - LL_ADC_CHANNEL_9
  - LL_ADC_CHANNEL_10

  - LL_ADC_CHANNEL_VBAT (1)
  - LL_ADC_CHANNEL_DAC1CH1_ADC2 (1)
  - LL_ADC_CHANNEL_DAC1CH2_ADC2 (1)

  (1) On this STM32 series, parameter available only on ADC instance: ADC2.
-

Return values

- **None:**

Notes

- This function performs configuration of: Channels ordering into each rank of scan sequence: whatever channel can be placed into whatever rank.
- On this STM32 series, ADC group regular sequencer is fully configurable: sequencer length and each rank affectation to a channel are configurable. Refer to description of function LL_ADC_REG_SetSequencerLength().
- Depending on devices and packages, some channels may not be available. Refer to device datasheet for channels availability.
- On this STM32 series, to measure internal channels (VrefInt, TempSensor, ...), measurement paths to internal channels must be enabled separately. This can be done using function LL_ADC_SetCommonPathInternalCh().
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on group regular.

LL_ADC_REG_GetSequencerRanks

Function name

__STATIC_INLINE uint32_t LL_ADC_REG_GetSequencerRanks (const ADC_TypeDef * ADCx, uint32_t Rank)

Function description

Get ADC group regular sequence: channel on the selected scan sequence rank.

Parameters

- **ADCx:** ADC instance
- **Rank:** This parameter can be one of the following values:
  - LL_ADC_REG_RANK_1
  - LL_ADC_REG_RANK_2
  - LL_ADC_REG_RANK_3
  - LL_ADC_REG_RANK_4
  - LL_ADC_REG_RANK_5
  - LL_ADC_REG_RANK_6
  - LL_ADC_REG_RANK_7
  - LL_ADC_REG_RANK_8
  - LL_ADC_REG_RANK_9
  - LL_ADC_REG_RANK_10
  - LL_ADC_REG_RANK_11
  - LL_ADC_REG_RANK_12
  - LL_ADC_REG_RANK_13
  - LL_ADC_REG_RANK_14
  - LL_ADC_REG_RANK_15
  - LL_ADC_REG_RANK_16

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_CHANNEL_0
  - LL_ADC_CHANNEL_1
  - LL_ADC_CHANNEL_2
  - LL_ADC_CHANNEL_3
  - LL_ADC_CHANNEL_4
  - LL_ADC_CHANNEL_5
  - LL_ADC_CHANNEL_6
  - LL_ADC_CHANNEL_7
  - LL_ADC_CHANNEL_8
  - LL_ADC_CHANNEL_9
  - LL_ADC_CHANNEL_10
  - LL_ADC_CHANNEL_11
  - LL_ADC_CHANNEL_12

  - LL_ADC_CHANNEL_16
  - LL_ADC_CHANNEL_17
  - LL_ADC_CHANNEL_18
  - LL_ADC_CHANNEL_VREFINT (1)(3)
  - LL_ADC_CHANNEL_VBAT (1)(3)
  - LL_ADC_CHANNEL_TEMPSENSOR (1)(3)
  - LL_ADC_CHANNEL_VDDCORE (1)(3)
  - LL_ADC_CHANNEL_DAC1CH1_ADC2 (2)(3)
  - LL_ADC_CHANNEL_DAC1CH2_ADC2 (2)(3)

  (1) On this STM32 series, parameter available only on ADC instance: ADC1.
- (2) On this STM32 series, parameter available only on ADC instance: ADC2.
- (3) For ADC channel read back from ADC register, comparison with internal channel parameter to be done using helper macro __LL_ADC_CHANNEL_INTERNAL_TO_EXTERNAL().

Notes

- On this STM32 series, ADC group regular sequencer is fully configurable: sequencer length and each rank affectation to a channel are configurable. Refer to description of function LL_ADC_REG_SetSequencerLength().
- Depending on devices and packages, some channels may not be available. Refer to device datasheet for channels availability.
- Usage of the returned channel number: To reinject this channel into another function LL_ADC_xxx: the returned channel number is only partly formatted on definition of literals LL_ADC_CHANNEL_x. Therefore, it has to be compared with parts of literals LL_ADC_CHANNEL_x or using helper macro __LL_ADC_CHANNEL_TO_DECIMAL_NB(). Then the selected literal LL_ADC_CHANNEL_x can be used as parameter for another function.To get the channel number in decimal format: process the returned value with the helper macro __LL_ADC_CHANNEL_TO_DECIMAL_NB().

LL_ADC_SetChannelPreselection

Function name

__STATIC_INLINE void LL_ADC_SetChannelPreselection (ADC_TypeDef * ADCx, uint32_t Channel)

Function description

Set ADC Channel Preselection to LL_ADC_CHANNEL_x, x = 0 to 19.

Parameters

- **ADCx:** ADC instance.
- **Channel:** This parameter can be one of the following values:
  - LL_ADC_CHANNEL_0
  - LL_ADC_CHANNEL_1
  - LL_ADC_CHANNEL_2
  - LL_ADC_CHANNEL_3
  - LL_ADC_CHANNEL_4
  - LL_ADC_CHANNEL_5
  - LL_ADC_CHANNEL_6
  - LL_ADC_CHANNEL_7
  - LL_ADC_CHANNEL_8
  - LL_ADC_CHANNEL_9
  - LL_ADC_CHANNEL_10
  - LL_ADC_CHANNEL_11
  - LL_ADC_CHANNEL_12
  - LL_ADC_CHANNEL_13
  - LL_ADC_CHANNEL_14
  - LL_ADC_CHANNEL_15
  - LL_ADC_CHANNEL_16
  - LL_ADC_CHANNEL_17
  - LL_ADC_CHANNEL_18
  - LL_ADC_CHANNEL_VDDCORE
  - LL_ADC_CHANNEL_VREFINT (1)
  - LL_ADC_CHANNEL_TEMPSENSOR (1)
  - LL_ADC_CHANNEL_VBAT (1)
  - LL_ADC_CHANNEL_DAC1CH1_ADC2 (1)
  - LL_ADC_CHANNEL_DAC1CH2_ADC2 (1)

  (1) On this STM32 series, parameter available only on ADC instance: ADC2.
-

Return values

- **None:**

Notes

- This function set the the value for the channel preselection register corresponding to ADC channel to be selected.

Reference Manual to LL API cross reference:

- PCSEL PCSEL LL_ADC_SetChannelPreselection

LL_ADC_GetChannelPreselection

Function name

__STATIC_INLINE uint32_t LL_ADC_GetChannelPreselection (const ADC_TypeDef * ADCx)

Function description

Get ADC Channel Preselection register value.

Parameters

- **ADCx:** ADC instance.

Return values

- **Returned:** decimal value that can correspond to one or multiple channels:

Notes

- This function set the the value for the channel preselection register corresponding to ADC channel to be selected.

Reference Manual to LL API cross reference:

- PCSEL PCSEL LL_ADC_GetChannelPreselection

LL_ADC_REG_SetContinuousMode

Function name

__STATIC_INLINE void LL_ADC_REG_SetContinuousMode (ADC_TypeDef * ADCx, uint32_t Continuous)

Function description

Set ADC continuous conversion mode on ADC group regular.

Parameters

- **ADCx:** ADC instance
- **Continuous:** This parameter can be one of the following values:
  - LL_ADC_REG_CONV_SINGLE
  - LL_ADC_REG_CONV_CONTINUOUS

Return values

- **None:**

Notes

- Description of ADC continuous conversion mode: single mode: one conversion per triggercontinuous mode: after the first trigger, following conversions launched successively automatically.
- It is not possible to enable both ADC group regular continuous mode and sequencer discontinuous mode.
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on group regular.

Reference Manual to LL API cross reference:

- CFGR1 CONT LL_ADC_REG_SetContinuousMode

LL_ADC_REG_GetContinuousMode

Function name

__STATIC_INLINE uint32_t LL_ADC_REG_GetContinuousMode (const ADC_TypeDef * ADCx)

Function description

Get ADC continuous conversion mode on ADC group regular.

Parameters

- **ADCx:** ADC instance

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_REG_CONV_SINGLE
  - LL_ADC_REG_CONV_CONTINUOUS

Notes

- Description of ADC continuous conversion mode: single mode: one conversion per triggercontinuous mode: after the first trigger, following conversions launched successively automatically.

Reference Manual to LL API cross reference:

- CFGR1 CONT LL_ADC_REG_GetContinuousMode

LL_ADC_REG_SetDataTransferMode

Function name

__STATIC_INLINE void LL_ADC_REG_SetDataTransferMode (ADC_TypeDef * ADCx, uint32_t DataTransferMode)

Function description

Set ADC data transfer mode.

Parameters

- **ADCx:** ADC instance
- **DataTransferMode:** Select Data Management configuration
  - LL_ADC_REG_DR_TRANSFER
  - LL_ADC_REG_DMA_TRANSFER_LIMITED
  - LL_ADC_REG_DMA_TRANSFER_UNLIMITED
  - LL_ADC_REG_MDF_TRANSFER

Return values

- **None:**

Notes

- Conversion data can be either: Available in Data RegisterTransferred by DMA in one shot modeTransferred by DMA in circular modeTransferred to MDF data register

Reference Manual to LL API cross reference:

- CFGR1 DMNGT LL_ADC_REG_SetDataTransferMode

LL_ADC_REG_GetDataTransferMode

Function name

__STATIC_INLINE uint32_t LL_ADC_REG_GetDataTransferMode (const ADC_TypeDef * ADCx)

Function description

Get ADC data transfer mode.

Parameters

- **ADCx:** ADC instance

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_REG_DR_TRANSFER
  - LL_ADC_REG_DMA_TRANSFER_LIMITED
  - LL_ADC_REG_DMA_TRANSFER_UNLIMITED
  - LL_ADC_REG_MDF_TRANSFER

Notes

- Conversion data can be either: Available in Data RegisterTransferred by DMA in one shot modeTransferred by DMA in circular modeTransferred to DFSDM data register

Reference Manual to LL API cross reference:

- CFGR1 DMNGT LL_ADC_REG_GetDataTransferMode

LL_ADC_REG_SetOverrun

Function name

__STATIC_INLINE void LL_ADC_REG_SetOverrun (ADC_TypeDef * ADCx, uint32_t Overrun)

Function description

Set ADC group regular behavior in case of overrun: data preserved or overwritten.

Parameters

- **ADCx:** ADC instance
- **Overrun:** This parameter can be one of the following values:
  - LL_ADC_REG_OVR_DATA_PRESERVED
  - LL_ADC_REG_OVR_DATA_OVERWRITTEN

Return values

- **None:**

Notes

- Compatibility with devices without feature overrun: other devices without this feature have a behavior equivalent to data overwritten. The default setting of overrun is data preserved. Therefore, for compatibility with all devices, parameter overrun should be set to data overwritten.
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on group regular.

Reference Manual to LL API cross reference:

- CFGR1 OVRMOD LL_ADC_REG_SetOverrun

LL_ADC_REG_GetOverrun

Function name

__STATIC_INLINE uint32_t LL_ADC_REG_GetOverrun (const ADC_TypeDef * ADCx)

Function description

Get ADC group regular behavior in case of overrun: data preserved or overwritten.

Parameters

- **ADCx:** ADC instance

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_REG_OVR_DATA_PRESERVED
  - LL_ADC_REG_OVR_DATA_OVERWRITTEN

Reference Manual to LL API cross reference:

- CFGR1 OVRMOD LL_ADC_REG_GetOverrun

LL_ADC_INJ_SetTriggerSource

Function name

__STATIC_INLINE void LL_ADC_INJ_SetTriggerSource (ADC_TypeDef * ADCx, uint32_t TriggerSource)

Function description

Set ADC group injected conversion trigger source: internal (SW start) or from external peripheral (timer event, external interrupt line).

Parameters

- **ADCx:** ADC instance
- **TriggerSource:** This parameter can be one of the following values:
  - LL_ADC_INJ_TRIG_SOFTWARE
  - LL_ADC_INJ_TRIG_EXT_TIM1_TRGO
  - LL_ADC_INJ_TRIG_EXT_TIM1_CH4
  - LL_ADC_INJ_TRIG_EXT_TIM2_TRGO
  - LL_ADC_INJ_TRIG_EXT_TIM2_CH1
  - LL_ADC_INJ_TRIG_EXT_TIM3_CH4
  - LL_ADC_INJ_TRIG_EXT_TIM4_TRGO
  - LL_ADC_INJ_TRIG_EXT_EXTI_LINE15
  - LL_ADC_INJ_TRIG_EXT_TIM1_TRGO2
  - LL_ADC_INJ_TRIG_EXT_TIM3_CH3
  - LL_ADC_INJ_TRIG_EXT_TIM3_TRGO
  - LL_ADC_INJ_TRIG_EXT_TIM3_CH1
  - LL_ADC_INJ_TRIG_EXT_TIM6_TRGO
  - LL_ADC_INJ_TRIG_EXT_TIM15_TRGO
  - LL_ADC_INJ_TRIG_EXT_LPTIM1_CH2
  - LL_ADC_INJ_TRIG_EXT_LPTIM2_CH2
  - LL_ADC_INJ_TRIG_EXT_LPTIM3_CH1
  - LL_ADC_INJ_TRIG_EXT_LPTIM4_OUT

Return values

- **None:**

Notes

- On this STM32 series, setting trigger source to external trigger also set trigger polarity to rising edge (default setting for compatibility with some ADC on other STM32 series having this setting set by HW default value). In case of need to modify trigger edge, use function LL_ADC_INJ_SetTriggerEdge().
- Availability of parameters of trigger sources from timer depends on timers availability on the selected device.
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must not be disabled. Can be enabled with or without conversion on going on either groups regular or injected.

Reference Manual to LL API cross reference:

- JSQR JEXTSEL LL_ADC_INJ_SetTriggerSource
- JSQR JEXTEN LL_ADC_INJ_SetTriggerSource

LL_ADC_INJ_GetTriggerSource

Function name

__STATIC_INLINE uint32_t LL_ADC_INJ_GetTriggerSource (const ADC_TypeDef * ADCx)

Function description

Get ADC group injected conversion trigger source: internal (SW start) or from external peripheral (timer event, external interrupt line).

Parameters

- **ADCx:** ADC instance

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_INJ_TRIG_SOFTWARE
  - LL_ADC_INJ_TRIG_EXT_TIM1_TRGO
  - LL_ADC_INJ_TRIG_EXT_TIM1_CH4
  - LL_ADC_INJ_TRIG_EXT_TIM2_TRGO
  - LL_ADC_INJ_TRIG_EXT_TIM2_CH1
  - LL_ADC_INJ_TRIG_EXT_TIM3_CH4
  - LL_ADC_INJ_TRIG_EXT_TIM4_TRGO
  - LL_ADC_INJ_TRIG_EXT_EXTI_LINE15
  - LL_ADC_INJ_TRIG_EXT_TIM1_TRGO2
  - LL_ADC_INJ_TRIG_EXT_TIM3_CH3
  - LL_ADC_INJ_TRIG_EXT_TIM3_TRGO
  - LL_ADC_INJ_TRIG_EXT_TIM3_CH1
  - LL_ADC_INJ_TRIG_EXT_TIM6_TRGO
  - LL_ADC_INJ_TRIG_EXT_TIM15_TRGO
  - LL_ADC_INJ_TRIG_EXT_LPTIM1_CH2
  - LL_ADC_INJ_TRIG_EXT_LPTIM2_CH2
  - LL_ADC_INJ_TRIG_EXT_LPTIM3_CH1
  - LL_ADC_INJ_TRIG_EXT_LPTIM4_OUT

Notes

- To determine whether group injected trigger source is internal (SW start) or external, without detail of which peripheral is selected as external trigger, (equivalent to "if(LL_ADC_INJ_GetTriggerSource(ADC1) == LL_ADC_INJ_TRIG_SOFTWARE)") use function LL_ADC_INJ_IsTriggerSourceSWStart.
- Availability of parameters of trigger sources from timer depends on timers availability on the selected device.

Reference Manual to LL API cross reference:

- JSQR JEXTSEL LL_ADC_INJ_GetTriggerSource
- JSQR JEXTEN LL_ADC_INJ_GetTriggerSource

LL_ADC_INJ_IsTriggerSourceSWStart

Function name

__STATIC_INLINE uint32_t LL_ADC_INJ_IsTriggerSourceSWStart (const ADC_TypeDef * ADCx)

Function description

Get ADC group injected conversion trigger source internal (SW start) or external.

Parameters

- **ADCx:** ADC instance

Return values

- **Value:** "0" if trigger source external trigger Value "1" if trigger source SW start.

Notes

- In case of group injected trigger source set to external trigger, to determine which peripheral is selected as external trigger, use function LL_ADC_INJ_GetTriggerSource.

Reference Manual to LL API cross reference:

- JSQR JEXTEN LL_ADC_INJ_IsTriggerSourceSWStart

LL_ADC_INJ_SetTriggerEdge

Function name

__STATIC_INLINE void LL_ADC_INJ_SetTriggerEdge (ADC_TypeDef * ADCx, uint32_t ExternalTriggerEdge)

Function description

Set ADC group injected conversion trigger polarity.

Parameters

- **ADCx:** ADC instance
- **ExternalTriggerEdge:** This parameter can be one of the following values:
  - LL_ADC_INJ_TRIG_EXT_RISING
  - LL_ADC_INJ_TRIG_EXT_FALLING
  - LL_ADC_INJ_TRIG_EXT_RISINGFALLING

Return values

- **None:**

Notes

- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must not be disabled. Can be enabled with or without conversion on going on either groups regular or injected.

Reference Manual to LL API cross reference:

- JSQR JEXTEN LL_ADC_INJ_SetTriggerEdge

LL_ADC_INJ_GetTriggerEdge

Function name

__STATIC_INLINE uint32_t LL_ADC_INJ_GetTriggerEdge (const ADC_TypeDef * ADCx)

Function description

Get ADC group injected conversion trigger polarity.

Parameters

- **ADCx:** ADC instance

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_INJ_TRIG_EXT_RISING
  - LL_ADC_INJ_TRIG_EXT_FALLING
  - LL_ADC_INJ_TRIG_EXT_RISINGFALLING

Reference Manual to LL API cross reference:

- JSQR JEXTEN LL_ADC_INJ_GetTriggerEdge

LL_ADC_INJ_SetSequencerLength

Function name

__STATIC_INLINE void LL_ADC_INJ_SetSequencerLength (ADC_TypeDef * ADCx, uint32_t SequencerNbRanks)

Function description

Set ADC group injected sequencer length and scan direction.

Parameters

- **ADCx:** ADC instance
- **SequencerNbRanks:** This parameter can be one of the following values:
  - LL_ADC_INJ_SEQ_SCAN_DISABLE
  - LL_ADC_INJ_SEQ_SCAN_ENABLE_2RANKS
  - LL_ADC_INJ_SEQ_SCAN_ENABLE_3RANKS
  - LL_ADC_INJ_SEQ_SCAN_ENABLE_4RANKS

Return values

- **None:**

Notes

- This function performs configuration of: Sequence length: Number of ranks in the scan sequence.Sequence direction: Unless specified in parameters, sequencer scan direction is forward (from rank 1 to rank n).
- Sequencer disabled is equivalent to sequencer of 1 rank: ADC conversion on only 1 channel.
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must not be disabled. Can be enabled with or without conversion on going on either groups regular or injected.

Reference Manual to LL API cross reference:

- JSQR JL LL_ADC_INJ_SetSequencerLength

LL_ADC_INJ_GetSequencerLength

Function name

__STATIC_INLINE uint32_t LL_ADC_INJ_GetSequencerLength (const ADC_TypeDef * ADCx)

Function description

Get ADC group injected sequencer length and scan direction.

Parameters

- **ADCx:** ADC instance

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_INJ_SEQ_SCAN_DISABLE
  - LL_ADC_INJ_SEQ_SCAN_ENABLE_2RANKS
  - LL_ADC_INJ_SEQ_SCAN_ENABLE_3RANKS
  - LL_ADC_INJ_SEQ_SCAN_ENABLE_4RANKS

Notes

- This function retrieves: Sequence length: Number of ranks in the scan sequence.Sequence direction: Unless specified in parameters, sequencer scan direction is forward (from rank 1 to rank n).
- Sequencer disabled is equivalent to sequencer of 1 rank: ADC conversion on only 1 channel.

Reference Manual to LL API cross reference:

- JSQR JL LL_ADC_INJ_GetSequencerLength

LL_ADC_INJ_SetSequencerDiscont

Function name

__STATIC_INLINE void LL_ADC_INJ_SetSequencerDiscont (ADC_TypeDef * ADCx, uint32_t SeqDiscont)

Function description

Set ADC group injected sequencer discontinuous mode: sequence subdivided and scan conversions interrupted every selected number of ranks.

Parameters

- **ADCx:** ADC instance
- **SeqDiscont:** This parameter can be one of the following values:
  - LL_ADC_INJ_SEQ_DISCONT_DISABLE
  - LL_ADC_INJ_SEQ_DISCONT_1RANK

Return values

- **None:**

Notes

- It is not possible to enable both ADC group injected auto-injected mode and sequencer discontinuous mode.

Reference Manual to LL API cross reference:

- CFGR1 JDISCEN LL_ADC_INJ_SetSequencerDiscont

LL_ADC_INJ_GetSequencerDiscont

Function name

__STATIC_INLINE uint32_t LL_ADC_INJ_GetSequencerDiscont (const ADC_TypeDef * ADCx)

Function description

Get ADC group injected sequencer discontinuous mode: sequence subdivided and scan conversions interrupted every selected number of ranks.

Parameters

- **ADCx:** ADC instance

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_INJ_SEQ_DISCONT_DISABLE
  - LL_ADC_INJ_SEQ_DISCONT_1RANK

Reference Manual to LL API cross reference:

- CFGR1 JDISCEN LL_ADC_INJ_GetSequencerDiscont

LL_ADC_INJ_SetSequencerRanks

Function name

__STATIC_INLINE void LL_ADC_INJ_SetSequencerRanks (ADC_TypeDef * ADCx, uint32_t Rank, uint32_t Channel)

Function description

Set ADC group injected sequence: channel on the selected sequence rank.

Parameters

- **ADCx:** ADC instance
- **Rank:** This parameter can be one of the following values:
  - LL_ADC_INJ_RANK_1
  - LL_ADC_INJ_RANK_2
  - LL_ADC_INJ_RANK_3
  - LL_ADC_INJ_RANK_4
- **Channel:** This parameter can be one of the following values:
  - LL_ADC_CHANNEL_0
  - LL_ADC_CHANNEL_1
  - LL_ADC_CHANNEL_2
  - LL_ADC_CHANNEL_3
  - LL_ADC_CHANNEL_4
  - LL_ADC_CHANNEL_5
  - LL_ADC_CHANNEL_6
  - LL_ADC_CHANNEL_7
  - LL_ADC_CHANNEL_8
  - LL_ADC_CHANNEL_9
  - LL_ADC_CHANNEL_10
  - LL_ADC_CHANNEL_11
  - LL_ADC_CHANNEL_12
  - LL_ADC_CHANNEL_13
  - LL_ADC_CHANNEL_14
  - LL_ADC_CHANNEL_15
  - LL_ADC_CHANNEL_16
  - LL_ADC_CHANNEL_17
  - LL_ADC_CHANNEL_18
  - LL_ADC_CHANNEL_VDDCORE
  - LL_ADC_CHANNEL_VREFINT (1)
  - LL_ADC_CHANNEL_TEMPSENSOR (1)
  - LL_ADC_CHANNEL_VBAT (1)
  - LL_ADC_CHANNEL_DAC1CH1_ADC2 (1)
  - LL_ADC_CHANNEL_DAC1CH2_ADC2 (1)

  (1) On this STM32 series, parameter available only on ADC instance: ADC2.
-

Return values

- **None:**

Notes

- Depending on devices and packages, some channels may not be available. Refer to device datasheet for channels availability.
- On this STM32 series, to measure internal channels (VrefInt, TempSensor, ...), measurement paths to internal channels must be enabled separately. This can be done using function LL_ADC_SetCommonPathInternalCh().
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must not be disabled. Can be enabled with or without conversion on going on either groups regular or injected.

Reference Manual to LL API cross reference:

LL_ADC_INJ_GetSequencerRanks

Function name

__STATIC_INLINE uint32_t LL_ADC_INJ_GetSequencerRanks (const ADC_TypeDef * ADCx, uint32_t Rank)

Function description

Get ADC group injected sequence: channel on the selected sequence rank.

Parameters

- **ADCx:** ADC instance
- **Rank:** This parameter can be one of the following values:
  - LL_ADC_INJ_RANK_1
  - LL_ADC_INJ_RANK_2
  - LL_ADC_INJ_RANK_3
  - LL_ADC_INJ_RANK_4

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_CHANNEL_0
  - LL_ADC_CHANNEL_1
  - LL_ADC_CHANNEL_2
  - LL_ADC_CHANNEL_3
  - LL_ADC_CHANNEL_4
  - LL_ADC_CHANNEL_5
  - LL_ADC_CHANNEL_6
  - LL_ADC_CHANNEL_7
  - LL_ADC_CHANNEL_8
  - LL_ADC_CHANNEL_9
  - LL_ADC_CHANNEL_10
  - LL_ADC_CHANNEL_11
  - LL_ADC_CHANNEL_12
  - LL_ADC_CHANNEL_13
  - LL_ADC_CHANNEL_14
  - LL_ADC_CHANNEL_15
  - LL_ADC_CHANNEL_16
  - LL_ADC_CHANNEL_17
  - LL_ADC_CHANNEL_18
  - LL_ADC_CHANNEL_VREFINT (1)(3)
  - LL_ADC_CHANNEL_VBAT (1)(3)
  - LL_ADC_CHANNEL_TEMPSENSOR (1)(3)
  - LL_ADC_CHANNEL_VDDCORE (1)(3)
  - LL_ADC_CHANNEL_DAC1CH1_ADC2 (2)(3)
  - LL_ADC_CHANNEL_DAC1CH2_ADC2 (2)(3)

  (1) On this STM32 series, parameter available only on ADC instance: ADC1.
- (2) On this STM32 series, parameter available only on ADC instance: ADC2.
- (3) For ADC channel read back from ADC register, comparison with internal channel parameter to be done using helper macro __LL_ADC_CHANNEL_INTERNAL_TO_EXTERNAL().

Notes

- Depending on devices and packages, some channels may not be available. Refer to device datasheet for channels availability.
- Usage of the returned channel number: To reinject this channel into another function LL_ADC_xxx: the returned channel number is only partly formatted on definition of literals LL_ADC_CHANNEL_x. Therefore, it has to be compared with parts of literals LL_ADC_CHANNEL_x or using helper macro __LL_ADC_CHANNEL_TO_DECIMAL_NB(). Then the selected literal LL_ADC_CHANNEL_x can be used as parameter for another function.To get the channel number in decimal format: process the returned value with the helper macro __LL_ADC_CHANNEL_TO_DECIMAL_NB().

LL_ADC_INJ_SetTrigAuto

Function name

__STATIC_INLINE void LL_ADC_INJ_SetTrigAuto (ADC_TypeDef * ADCx, uint32_t TrigAuto)

Function description

Set ADC group injected conversion trigger: independent or from ADC group regular.

Parameters

- **ADCx:** ADC instance
- **TrigAuto:** This parameter can be one of the following values:
  - LL_ADC_INJ_TRIG_INDEPENDENT
  - LL_ADC_INJ_TRIG_FROM_GRP_REGULAR

Return values

- **None:**

Notes

- This mode can be used to extend number of data registers updated after one ADC conversion trigger and with data permanently kept (not erased by successive conversions of scan of ADC sequencer ranks), up to 5 data registers: 1 data register on ADC group regular, 4 data registers on ADC group injected.
- If ADC group injected injected trigger source is set to an external trigger, this feature must be must be set to independent trigger. ADC group injected automatic trigger is compliant only with group injected trigger source set to SW start, without any further action on ADC group injected conversion start or stop: in this case, ADC group injected is controlled only from ADC group regular.
- It is not possible to enable both ADC group injected auto-injected mode and sequencer discontinuous mode.
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on either groups regular or injected.

Reference Manual to LL API cross reference:

- CFGR1 JAUTO LL_ADC_INJ_SetTrigAuto

LL_ADC_INJ_GetTrigAuto

Function name

__STATIC_INLINE uint32_t LL_ADC_INJ_GetTrigAuto (const ADC_TypeDef * ADCx)

Function description

Get ADC group injected conversion trigger: independent or from ADC group regular.

Parameters

- **ADCx:** ADC instance

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_INJ_TRIG_INDEPENDENT
  - LL_ADC_INJ_TRIG_FROM_GRP_REGULAR

Reference Manual to LL API cross reference:

- CFGR1 JAUTO LL_ADC_INJ_GetTrigAuto

LL_ADC_INJ_SetQueueMode

Function name

__STATIC_INLINE void LL_ADC_INJ_SetQueueMode (ADC_TypeDef * ADCx, uint32_t QueueMode)

Function description

Set ADC group injected contexts queue mode.

Parameters

- **ADCx:** ADC instance
- **QueueMode:** This parameter can be one of the following values:
  - LL_ADC_INJ_QUEUE_DISABLE
  - LL_ADC_INJ_QUEUE_2CONTEXTS_LAST_ACTIVE
  - LL_ADC_INJ_QUEUE_2CONTEXTS_END_EMPTY

Return values

- **None:**

Notes

- A context is a setting of group injected sequencer: group injected triggersequencer lengthsequencer ranks If contexts queue is disabled:only 1 sequence can be configured and is active perpetually. If contexts queue is enabled:up to 2 contexts can be queued and are checked in and out as a FIFO stack (first-in, first-out).If a new context is set when queues is full, error is triggered by interruption "Injected Queue Overflow".Two behaviors are possible when all contexts have been processed: the contexts queue can maintain the last context active perpetually or can be empty and injected group triggers are disabled.Triggers can be only external (not internal SW start)Caution: The sequence must be fully configured in one time (one write of register JSQR makes a check-in of a new context into the queue). Therefore functions to set separately injected trigger and sequencer channels cannot be used, register JSQR must be set using function LL_ADC_INJ_ConfigQueueContext().
- This parameter can be modified only when no conversion is on going on either groups regular or injected.
- A modification of the context mode (bit JQDIS) causes the contexts queue to be flushed and the register JSQR is cleared.
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on either groups regular or injected.

- CFGR1 JQDIS LL_ADC_INJ_SetQueueMode

LL_ADC_INJ_GetQueueMode

Function name

__STATIC_INLINE uint32_t LL_ADC_INJ_GetQueueMode (const ADC_TypeDef * ADCx)

Function description

Get ADC group injected context queue mode.

Parameters

- **ADCx:** ADC instance

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_INJ_QUEUE_DISABLE
  - LL_ADC_INJ_QUEUE_2CONTEXTS_LAST_ACTIVE
  - LL_ADC_INJ_QUEUE_2CONTEXTS_END_EMPTY

Reference Manual to LL API cross reference:

- CFGR1 JQM LL_ADC_INJ_GetQueueMode
- CFGR1 JQDIS LL_ADC_INJ_GetQueueMode

LL_ADC_INJ_ConfigQueueContext

Function name

__STATIC_INLINE void LL_ADC_INJ_ConfigQueueContext (ADC_TypeDef * ADCx, uint32_t TriggerSource, uint32_t ExternalTriggerEdge, uint32_t SequencerNbRanks, uint32_t Rank1_Channel, uint32_t Rank2_Channel, uint32_t Rank3_Channel, uint32_t Rank4_Channel)

Function description

Set one context on ADC group injected that will be checked in contexts queue.

Parameters

- **ADCx:** ADC instance
- **TriggerSource:** This parameter can be one of the following values:
  - LL_ADC_INJ_TRIG_SOFTWARE
  - LL_ADC_INJ_TRIG_SOFTWARE
  - LL_ADC_INJ_TRIG_EXT_TIM1_TRGO
  - LL_ADC_INJ_TRIG_EXT_TIM1_CH4
  - LL_ADC_INJ_TRIG_EXT_TIM2_TRGO
  - LL_ADC_INJ_TRIG_EXT_TIM2_CH1
  - LL_ADC_INJ_TRIG_EXT_TIM3_CH4
  - LL_ADC_INJ_TRIG_EXT_TIM4_TRGO
  - LL_ADC_INJ_TRIG_EXT_EXTI_LINE15
  - LL_ADC_INJ_TRIG_EXT_TIM1_TRGO2
  - LL_ADC_INJ_TRIG_EXT_TIM3_CH3
  - LL_ADC_INJ_TRIG_EXT_TIM3_TRGO
  - LL_ADC_INJ_TRIG_EXT_TIM3_CH1
  - LL_ADC_INJ_TRIG_EXT_TIM6_TRGO
  - LL_ADC_INJ_TRIG_EXT_TIM15_TRGO
  - LL_ADC_INJ_TRIG_EXT_LPTIM1_CH2
  - LL_ADC_INJ_TRIG_EXT_LPTIM2_CH2
  - LL_ADC_INJ_TRIG_EXT_LPTIM3_CH1
  - LL_ADC_INJ_TRIG_EXT_LPTIM4_OUT
- **ExternalTriggerEdge:** This parameter can be one of the following values:
  - LL_ADC_INJ_TRIG_EXT_RISING
  - LL_ADC_INJ_TRIG_EXT_FALLING
  - LL_ADC_INJ_TRIG_EXT_RISINGFALLING

  Note: This parameter is discarded in case of SW start: parameter "TriggerSource" set to "LL_ADC_INJ_TRIG_SOFTWARE".
- **SequencerNbRanks:** This parameter can be one of the following values:
  - LL_ADC_INJ_SEQ_SCAN_DISABLE
  - LL_ADC_INJ_SEQ_SCAN_ENABLE_2RANKS
  - LL_ADC_INJ_SEQ_SCAN_ENABLE_3RANKS
  - LL_ADC_INJ_SEQ_SCAN_ENABLE_4RANKS

- **Rank1_Channel:** This parameter can be one of the following values:
  - LL_ADC_CHANNEL_0
  - LL_ADC_CHANNEL_1
  - LL_ADC_CHANNEL_2
  - LL_ADC_CHANNEL_3
  - LL_ADC_CHANNEL_4
  - LL_ADC_CHANNEL_5
  - LL_ADC_CHANNEL_6
  - LL_ADC_CHANNEL_7
  - LL_ADC_CHANNEL_8
  - LL_ADC_CHANNEL_9
  - LL_ADC_CHANNEL_10
  - LL_ADC_CHANNEL_11
  - LL_ADC_CHANNEL_12
  - LL_ADC_CHANNEL_13
  - LL_ADC_CHANNEL_14
  - LL_ADC_CHANNEL_15
  - LL_ADC_CHANNEL_16
  - LL_ADC_CHANNEL_17
  - LL_ADC_CHANNEL_18
  - LL_ADC_CHANNEL_VDDCORE
  - LL_ADC_CHANNEL_VREFINT (1)
  - LL_ADC_CHANNEL_TEMPSENSOR (1)
  - LL_ADC_CHANNEL_VBAT (1)
  - LL_ADC_CHANNEL_DAC1CH1_ADC2 (1)
  - LL_ADC_CHANNEL_DAC1CH2_ADC2 (1)

  (1) On this STM32 series, parameter available only on ADC instance: ADC2.
-

- **Rank2_Channel:** This parameter can be one of the following values:
  - LL_ADC_CHANNEL_0
  - LL_ADC_CHANNEL_1
  - LL_ADC_CHANNEL_2
  - LL_ADC_CHANNEL_3
  - LL_ADC_CHANNEL_4
  - LL_ADC_CHANNEL_5
  - LL_ADC_CHANNEL_6
  - LL_ADC_CHANNEL_7
  - LL_ADC_CHANNEL_8
  - LL_ADC_CHANNEL_9
  - LL_ADC_CHANNEL_10
  - LL_ADC_CHANNEL_11
  - LL_ADC_CHANNEL_12
  - LL_ADC_CHANNEL_13
  - LL_ADC_CHANNEL_14
  - LL_ADC_CHANNEL_15
  - LL_ADC_CHANNEL_16
  - LL_ADC_CHANNEL_17
  - LL_ADC_CHANNEL_18
  - LL_ADC_CHANNEL_VDDCORE
  - LL_ADC_CHANNEL_VREFINT (1)
  - LL_ADC_CHANNEL_TEMPSENSOR (1)
  - LL_ADC_CHANNEL_VBAT (1)
  - LL_ADC_CHANNEL_DAC1CH1_ADC2 (1)
  - LL_ADC_CHANNEL_DAC1CH2_ADC2 (1)

  (1) On this STM32 series, parameter available only on ADC instance: ADC2.
-

- **Rank3_Channel:** This parameter can be one of the following values:
  - LL_ADC_CHANNEL_0
  - LL_ADC_CHANNEL_1
  - LL_ADC_CHANNEL_2
  - LL_ADC_CHANNEL_3
  - LL_ADC_CHANNEL_4
  - LL_ADC_CHANNEL_5
  - LL_ADC_CHANNEL_6
  - LL_ADC_CHANNEL_7
  - LL_ADC_CHANNEL_8
  - LL_ADC_CHANNEL_9
  - LL_ADC_CHANNEL_10
  - LL_ADC_CHANNEL_11
  - LL_ADC_CHANNEL_12
  - LL_ADC_CHANNEL_13
  - LL_ADC_CHANNEL_14
  - LL_ADC_CHANNEL_15
  - LL_ADC_CHANNEL_16
  - LL_ADC_CHANNEL_17
  - LL_ADC_CHANNEL_18
  - LL_ADC_CHANNEL_VDDCORE
  - LL_ADC_CHANNEL_VREFINT (1)
  - LL_ADC_CHANNEL_TEMPSENSOR (1)
  - LL_ADC_CHANNEL_VBAT (1)
  - LL_ADC_CHANNEL_DAC1CH1_ADC2 (1)
  - LL_ADC_CHANNEL_DAC1CH2_ADC2 (1)

  (1) On this STM32 series, parameter available only on ADC instance: ADC2.
-

- **Rank4_Channel:** This parameter can be one of the following values:
  - LL_ADC_CHANNEL_0
  - LL_ADC_CHANNEL_1
  - LL_ADC_CHANNEL_2
  - LL_ADC_CHANNEL_3
  - LL_ADC_CHANNEL_4
  - LL_ADC_CHANNEL_5
  - LL_ADC_CHANNEL_6
  - LL_ADC_CHANNEL_7
  - LL_ADC_CHANNEL_8
  - LL_ADC_CHANNEL_9
  - LL_ADC_CHANNEL_10
  - LL_ADC_CHANNEL_11
  - LL_ADC_CHANNEL_12
  - LL_ADC_CHANNEL_13
  - LL_ADC_CHANNEL_14
  - LL_ADC_CHANNEL_15
  - LL_ADC_CHANNEL_16
  - LL_ADC_CHANNEL_17
  - LL_ADC_CHANNEL_18
  - LL_ADC_CHANNEL_VDDCORE
  - LL_ADC_CHANNEL_VREFINT (1)
  - LL_ADC_CHANNEL_TEMPSENSOR (1)
  - LL_ADC_CHANNEL_VBAT (1)
  - LL_ADC_CHANNEL_DAC1CH1_ADC2 (1)
  - LL_ADC_CHANNEL_DAC1CH2_ADC2 (1)

  (1) On this STM32 series, parameter available only on ADC instance: ADC2.
-

Return values

- **None:**

Notes

- A context is a setting of group injected sequencer: group injected triggersequencer lengthsequencer ranks This function is intended to be used when contexts queue is enabled, because the sequence must be fully configured in one time (functions to set separately injected trigger and sequencer channels cannot be used): Refer to function LL_ADC_INJ_SetQueueMode().
- In the contexts queue, only the active context can be read. The parameters of this function can be read using functions: LL_ADC_INJ_GetTriggerSource() LL_ADC_INJ_GetTriggerEdge() LL_ADC_INJ_GetSequencerRanks()
- On this STM32 series, to measure internal channels (VrefInt, TempSensor, ...), measurement paths to internal channels must be enabled separately. This can be done using function LL_ADC_SetCommonPathInternalCh().
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must not be disabled. Can be enabled with or without conversion on going on either groups regular or injected.

LL_ADC_SetChannelSamplingTime

Function name

__STATIC_INLINE void LL_ADC_SetChannelSamplingTime (ADC_TypeDef * ADCx, uint32_t Channel, uint32_t SamplingTime)

Function description

Set sampling time of the selected ADC channel Unit: ADC clock cycles.

Parameters

- **ADCx:** ADC instance
- **Channel:** This parameter can be one of the following values:
  - LL_ADC_CHANNEL_0
  - LL_ADC_CHANNEL_1
  - LL_ADC_CHANNEL_2
  - LL_ADC_CHANNEL_3
  - LL_ADC_CHANNEL_4
  - LL_ADC_CHANNEL_5
  - LL_ADC_CHANNEL_6
  - LL_ADC_CHANNEL_7
  - LL_ADC_CHANNEL_8
  - LL_ADC_CHANNEL_9
  - LL_ADC_CHANNEL_10
  - LL_ADC_CHANNEL_11
  - LL_ADC_CHANNEL_12
  - LL_ADC_CHANNEL_13
  - LL_ADC_CHANNEL_14
  - LL_ADC_CHANNEL_15
  - LL_ADC_CHANNEL_16
  - LL_ADC_CHANNEL_17
  - LL_ADC_CHANNEL_18
  - LL_ADC_CHANNEL_VDDCORE
  - LL_ADC_CHANNEL_VREFINT (1)
  - LL_ADC_CHANNEL_TEMPSENSOR (1)
  - LL_ADC_CHANNEL_VBAT (1)
  - LL_ADC_CHANNEL_DAC1CH1_ADC2 (1)
  - LL_ADC_CHANNEL_DAC1CH2_ADC2 (1)

  (1) On this STM32 series, parameter available only on ADC instance: ADC2.
-
- **SamplingTime:** This parameter can be one of the following values:
  - LL_ADC_SAMPLINGTIME_1CYCLE_5
  - LL_ADC_SAMPLINGTIME_2CYCLES_5
  - LL_ADC_SAMPLINGTIME_6CYCLES_5
  - LL_ADC_SAMPLINGTIME_11CYCLES_5
  - LL_ADC_SAMPLINGTIME_23CYCLES_5
  - LL_ADC_SAMPLINGTIME_46CYCLES_5
  - LL_ADC_SAMPLINGTIME_246CYCLES_5
  - LL_ADC_SAMPLINGTIME_1499CYCLES_5

Return values

- **None:**

Notes

- On this device, sampling time is on channel scope: independently of channel mapped on ADC group regular or injected.
- In case of internal channel (VrefInt, TempSensor, ...) to be converted: sampling time constraints must be respected (sampling time can be adjusted in function of ADC clock frequency and sampling time setting). Refer to device datasheet for timings values (parameters TS_vrefint, TS_temp, ...).
- Conversion time is the addition of sampling time and processing time. On this STM32 series, ADC processing time is: 13.5 ADC clock cycles at ADC resolution 12 bits11.5 ADC clock cycles at ADC resolution 10 bits8.5 ADC clock cycles at ADC resolution 8 bits6.5 ADC clock cycles at ADC resolution 6 bits
- In case of ADC conversion of internal channel (VrefInt, temperature sensor, ...), a sampling time minimum value is required. Refer to device datasheet.
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on either groups regular or injected.

LL_ADC_SetAnalogWDMonitChannels

Function name

__STATIC_INLINE void LL_ADC_SetAnalogWDMonitChannels (ADC_TypeDef * ADCx, uint32_t AWDy, uint32_t AWDChannelGroup)

Function description

Set ADC analog watchdog monitored channels: a single channel, multiple channels or all channels, on ADC groups regular and-or injected.

Parameters

- **ADCx:** ADC instance
- **AWDy:** This parameter can be one of the following values:
  - LL_ADC_AWD1
  - LL_ADC_AWD2
  - LL_ADC_AWD3

- **AWDChannelGroup:** This parameter can be one of the following values:
  - LL_ADC_AWD_DISABLE
  - LL_ADC_AWD_ALL_CHANNELS_REG (0)
  - LL_ADC_AWD_ALL_CHANNELS_INJ (0)
  - LL_ADC_AWD_ALL_CHANNELS_REG_INJ
  - LL_ADC_AWD_CHANNEL_0_REG (0)
  - LL_ADC_AWD_CHANNEL_0_INJ (0)
  - LL_ADC_AWD_CHANNEL_0_REG_INJ
  - LL_ADC_AWD_CHANNEL_1_REG (0)

  (0) On this STM32 series, parameter available only on analog watchdog instance: AWD1.

- (1) On this STM32 series, parameter available only on ADC instance: ADC2.

Return values

- **None:**

Notes

- Once monitored channels are selected, analog watchdog is enabled.
- In case of need to define a single channel to monitor with analog watchdog from sequencer channel definition, use helper macro __LL_ADC_ANALOGWD_CHANNEL_GROUP().
- On this STM32 series, there are 2 kinds of analog watchdog instance: AWD standard (instance AWD1): channels monitored: can monitor 1 channel or all channels.groups monitored: ADC groups regular and-or injected. AWD flexible (instances AWD2, AWD3): channels monitored: flexible on channels monitored, selection is channel wise, from from 1 to all channels. Specificity of this analog watchdog: Multiple channels can be selected. For example: (LL_ADC_AWD_CHANNEL4_REG_INJ | LL_ADC_AWD_CHANNEL5_REG_INJ | ...)groups monitored: not selection possible (monitoring on both groups regular and injected). Channels selected are monitored on groups regular and injected: LL_ADC_AWD_CHANNELxx_REG_INJ (do not use parameters LL_ADC_AWD_CHANNELxx_REG and LL_ADC_AWD_CHANNELxx_INJ)
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on either groups regular or injected.

LL_ADC_GetAnalogWDMonitChannels

Function name

__STATIC_INLINE uint32_t LL_ADC_GetAnalogWDMonitChannels (const ADC_TypeDef * ADCx, uint32_t AWDy)

Function description

Get ADC analog watchdog monitored channel.

Parameters

- **ADCx:** ADC instance
- **AWDy:** This parameter can be one of the following values:
  - LL_ADC_AWD1
  - LL_ADC_AWD2 (1)
  - LL_ADC_AWD3 (1)

  (1) On this AWD number, monitored channel can be retrieved if only 1 channel is programmed (or none or all channels). This function cannot retrieve monitored channel if multiple channels are programmed simultaneously by bitfield.

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_AWD_DISABLE
  - LL_ADC_AWD_ALL_CHANNELS_REG (0)
  - LL_ADC_AWD_ALL_CHANNELS_INJ (0)
  - LL_ADC_AWD_ALL_CHANNELS_REG_INJ
  - LL_ADC_AWD_CHANNEL_0_REG (0)
  - LL_ADC_AWD_CHANNEL_0_INJ (0)
  - LL_ADC_AWD_CHANNEL_0_REG_INJ

  - LL_ADC_AWD_CHANNEL_12_REG_INJ
  - LL_ADC_AWD_CHANNEL_13_REG (0)
  - LL_ADC_AWD_CHANNEL_13_INJ (0)
  - LL_ADC_AWD_CHANNEL_13_REG_INJ
  - LL_ADC_AWD_CHANNEL_14_REG (0)
  - LL_ADC_AWD_CHANNEL_14_INJ (0)

- LL_ADC_AWD_CHANNEL_14_REG_INJ
- LL_ADC_AWD_CHANNEL_15_REG (0)
- LL_ADC_AWD_CHANNEL_15_INJ (0)
- LL_ADC_AWD_CHANNEL_15_REG_INJ
- LL_ADC_AWD_CHANNEL_16_REG (0)
- LL_ADC_AWD_CHANNEL_16_INJ (0)
- LL_ADC_AWD_CHANNEL_16_REG_INJ
- LL_ADC_AWD_CHANNEL_17_REG (0)
- LL_ADC_AWD_CHANNEL_17_INJ (0)
- LL_ADC_AWD_CHANNEL_17_REG_INJ
- LL_ADC_AWD_CHANNEL_18_REG (0)
- LL_ADC_AWD_CHANNEL_18_INJ (0)
- LL_ADC_AWD_CHANNEL_18_REG_INJ

(0) On this STM32 series, parameter available only on analog watchdog number: AWD1.

Notes

- Usage of the returned channel number: To reinject this channel into another function LL_ADC_xxx: the returned channel number is only partly formatted on definition of literals LL_ADC_CHANNEL_x. Therefore, it has to be compared with parts of literals LL_ADC_CHANNEL_x or using helper macro __LL_ADC_CHANNEL_TO_DECIMAL_NB(). Then the selected literal LL_ADC_CHANNEL_x can be used as parameter for another function.To get the channel number in decimal format: process the returned value with the helper macro __LL_ADC_CHANNEL_TO_DECIMAL_NB(). Applicable only when the analog watchdog is set to monitor one channel.
- On this STM32 series, there are 2 kinds of analog watchdog instance: AWD standard (instance AWD1): channels monitored: can monitor 1 channel or all channels.groups monitored: ADC groups regular and-or injected. AWD flexible (instances AWD2, AWD3): channels monitored: flexible on channels monitored, selection is channel wise, from from 1 to all channels. Specificity of this analog watchdog: Multiple channels can be selected. For example: (LL_ADC_AWD_CHANNEL4_REG_INJ | LL_ADC_AWD_CHANNEL5_REG_INJ | ...)groups monitored: not selection possible (monitoring on both groups regular and injected). Channels selected are monitored on groups regular and injected: LL_ADC_AWD_CHANNELxx_REG_INJ (do not use parameters LL_ADC_AWD_CHANNELxx_REG and LL_ADC_AWD_CHANNELxx_INJ)
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on either groups regular or injected.

LL_ADC_SetAnalogWDThresholds

Function name

__STATIC_INLINE void LL_ADC_SetAnalogWDThresholds (ADC_TypeDef * ADCx, uint32_t AWDy, uint32_t AWDThresholdsHighLow, uint32_t AWDThresholdValue)

Function description

Set ADC analog watchdog threshold value of threshold high or low.

Parameters

- **ADCx:** ADC instance
- **AWDy:** This parameter can be one of the following values:
  - LL_ADC_AWD1
  - LL_ADC_AWD2
  - LL_ADC_AWD3
- **AWDThresholdsHighLow:** This parameter can be one of the following values:
  - LL_ADC_AWD_THRESHOLD_HIGH
  - LL_ADC_AWD_THRESHOLD_LOW
- **AWDThresholdValue:** Value between Min_Data=0x000 and Max_Data=0xFFF

Return values

- **None:**

Notes

- In case of ADC resolution different of 12 bits, specific threshold data formatting is required: analog watchdog thresholds data must be aligned to left side (bit 11).bits out of resolution range (LSB) must be set to value "0". To perform this formatting automatically, use helper macro __LL_ADC_ANALOGWD_SET_THRESHOLD_RESOLUTION().
- On this STM32 series, there are 2 kinds of analog watchdog instance: AWD standard (instance AWD1): channels monitored: can monitor 1 channel or all channels.groups monitored: ADC groups regular and-or injected.resolution: resolution is not limited (corresponds to ADC resolution configured). AWD flexible (instances AWD2, AWD3): channels monitored: flexible on channels monitored, selection is channel wise, from from 1 to all channels. Specificity of this analog watchdog: Multiple channels can be selected. For example: (LL_ADC_AWD_CHANNEL4_REG_INJ | LL_ADC_AWD_CHANNEL5_REG_INJ | ...)groups monitored: not selection possible (monitoring on both groups regular and injected). Channels selected are monitored on groups regular and injected: LL_ADC_AWD_CHANNELxx_REG_INJ (do not use parameters LL_ADC_AWD_CHANNELxx_REG and LL_ADC_AWD_CHANNELxx_INJ)
- If ADC oversampling is enabled, ADC analog watchdog thresholds are impacted: the comparison of analog watchdog thresholds is done on oversampling intermediate computation (after ratio, before shift application): intermediate register bitfield [32:7] (26 most significant bits).
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC can be disabled, enabled with or without conversion on going on either ADC groups regular or injected.

LL_ADC_GetAnalogWDThresholds

Function name

__STATIC_INLINE uint32_t LL_ADC_GetAnalogWDThresholds (const ADC_TypeDef * ADCx, uint32_t AWDy, uint32_t AWDThresholdsHighLow)

Function description

Get ADC analog watchdog threshold value of threshold high, threshold low or raw data with ADC thresholds high and low concatenated.

Parameters

- **ADCx:** ADC instance
- **AWDy:** This parameter can be one of the following values:
  - LL_ADC_AWD1
  - LL_ADC_AWD2
  - LL_ADC_AWD3
- **AWDThresholdsHighLow:** This parameter can be one of the following values:
  - LL_ADC_AWD_THRESHOLD_HIGH
  - LL_ADC_AWD_THRESHOLD_LOW

Return values

- **Value:** between Min_Data=0x000 and Max_Data=0xFFF

Notes

- In case of ADC resolution different of 12 bits, specific threshold data formatting is required: analog watchdog thresholds data must be aligned to left side (bit 11).bits out of resolution range (LSB) must be set to value "0". To perform this formatting automatically, use helper macro __LL_ADC_ANALOGWD_SET_THRESHOLD_RESOLUTION().

LL_ADC_SetAWDFilteringConfiguration

Function name

__STATIC_INLINE void LL_ADC_SetAWDFilteringConfiguration (ADC_TypeDef * ADCx, uint32_t AWDy, uint32_t FilteringConfig)

Function description

Set ADC analog watchdog filtering configuration.

Parameters

- **ADCx:** ADC instance
- **AWDy:** This parameter can be one of the following values:
  - LL_ADC_AWD1
- **FilteringConfig:** This parameter can be one of the following values:
  - LL_ADC_AWD_FILTERING_NONE
  - LL_ADC_AWD_FILTERING_2SAMPLES
  - LL_ADC_AWD_FILTERING_3SAMPLES
  - LL_ADC_AWD_FILTERING_4SAMPLES
  - LL_ADC_AWD_FILTERING_5SAMPLES
  - LL_ADC_AWD_FILTERING_6SAMPLES
  - LL_ADC_AWD_FILTERING_7SAMPLES
  - LL_ADC_AWD_FILTERING_8SAMPLES

Return values

- **None:**

Notes

- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on either groups regular or injected.
- On this STM32 series, this feature is only available on first analog watchdog (AWD1)

Reference Manual to LL API cross reference:

- AWD1HTR AWDFILT LL_ADC_SetAWDFilteringConfiguration

LL_ADC_GetAWDFilteringConfiguration

Function name

__STATIC_INLINE uint32_t LL_ADC_GetAWDFilteringConfiguration (const ADC_TypeDef * ADCx, uint32_t AWDy)

Function description

Get ADC analog watchdog filtering configuration.

Parameters

- **ADCx:** ADC instance
- **AWDy:** This parameter can be one of the following values:
  - LL_ADC_AWD1

Return values

- **Returned:** value can be:
  - LL_ADC_AWD_FILTERING_NONE
  - LL_ADC_AWD_FILTERING_2SAMPLES
  - LL_ADC_AWD_FILTERING_3SAMPLES
  - LL_ADC_AWD_FILTERING_4SAMPLES
  - LL_ADC_AWD_FILTERING_5SAMPLES
  - LL_ADC_AWD_FILTERING_6SAMPLES
  - LL_ADC_AWD_FILTERING_7SAMPLES
  - LL_ADC_AWD_FILTERING_8SAMPLES

Notes

- On this STM32 series, this feature is only available on first analog watchdog (AWD1)

Reference Manual to LL API cross reference:

- AWD1HTR AWDFILT LL_ADC_GetAWDFilteringConfiguration

LL_ADC_SetOverSamplingScope

Function name

__STATIC_INLINE void LL_ADC_SetOverSamplingScope (ADC_TypeDef * ADCx, uint32_t OvsScope)

Function description

Set ADC oversampling scope: ADC groups regular and-or injected (availability of ADC group injected depends on STM32 series).

Parameters

- **ADCx:** ADC instance
- **OvsScope:** This parameter can be one of the following values:
  - LL_ADC_OVS_DISABLE
  - LL_ADC_OVS_GRP_REGULAR_CONTINUED
  - LL_ADC_OVS_GRP_REGULAR_RESUMED
  - LL_ADC_OVS_GRP_INJECTED
  - LL_ADC_OVS_GRP_INJ_REG_RESUMED

Return values

- **None:**

Notes

- If both groups regular and injected are selected, specify behavior of ADC group injected interrupting group regular: when ADC group injected is triggered, the oversampling on ADC group regular is either temporary stopped and continued, or resumed from start (oversampler buffer reset).
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on either groups regular or injected.

Reference Manual to LL API cross reference:

LL_ADC_GetOverSamplingScope

Function name

__STATIC_INLINE uint32_t LL_ADC_GetOverSamplingScope (const ADC_TypeDef * ADCx)

Function description

Get ADC oversampling scope: ADC groups regular and-or injected (availability of ADC group injected depends on STM32 series).

Parameters

- **ADCx:** ADC instance

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_OVS_DISABLE
  - LL_ADC_OVS_GRP_REGULAR_CONTINUED
  - LL_ADC_OVS_GRP_REGULAR_RESUMED
  - LL_ADC_OVS_GRP_INJECTED
  - LL_ADC_OVS_GRP_INJ_REG_RESUMED

Notes

- If both groups regular and injected are selected, specify behavior of ADC group injected interrupting group regular: when ADC group injected is triggered, the oversampling on ADC group regular is either temporary stopped and continued, or resumed from start (oversampler buffer reset).

LL_ADC_SetOverSamplingDiscont

Function name

__STATIC_INLINE void LL_ADC_SetOverSamplingDiscont (ADC_TypeDef * ADCx, uint32_t OverSamplingDiscont)

Function description

Set ADC oversampling discontinuous mode (triggered mode) on the selected ADC group.

Parameters

- **ADCx:** ADC instance
- **OverSamplingDiscont:** This parameter can be one of the following values:
  - LL_ADC_OVS_REG_CONT
  - LL_ADC_OVS_REG_DISCONT

Return values

- **None:**

Notes

- Number of oversampled conversions are done either in: continuous mode (all conversions of oversampling ratio are done from 1 trigger)discontinuous mode (each conversion of oversampling ratio needs a trigger)
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on group regular.
- On this STM32 series, oversampling discontinuous mode (triggered mode) can be used only when oversampling is set on group regular only and in resumed mode.

Reference Manual to LL API cross reference:

- CFGR2 TROVS LL_ADC_SetOverSamplingDiscont

LL_ADC_GetOverSamplingDiscont

Function name

__STATIC_INLINE uint32_t LL_ADC_GetOverSamplingDiscont (const ADC_TypeDef * ADCx)

Function description

Get ADC oversampling discontinuous mode (triggered mode) on the selected ADC group.

Parameters

- **ADCx:** ADC instance

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_OVS_REG_CONT
  - LL_ADC_OVS_REG_DISCONT

Notes

- Number of oversampled conversions are done either in: continuous mode (all conversions of oversampling ratio are done from 1 trigger)discontinuous mode (each conversion of oversampling ratio needs a trigger)

Reference Manual to LL API cross reference:

- CFGR2 TROVS LL_ADC_GetOverSamplingDiscont

LL_ADC_ConfigOverSamplingRatioShift

Function name

__STATIC_INLINE void LL_ADC_ConfigOverSamplingRatioShift (ADC_TypeDef * ADCx, uint32_t Ratio, uint32_t Shift)

Function description

Set ADC oversampling (impacting both ADC groups regular and injected)

Parameters

- **ADCx:** ADC instance
- **Ratio:** This parameter can be in the range from 1 to 1024
- **Shift:** This parameter can be one of the following values:
  - LL_ADC_OVS_SHIFT_NONE
  - LL_ADC_OVS_SHIFT_RIGHT_1
  - LL_ADC_OVS_SHIFT_RIGHT_2
  - LL_ADC_OVS_SHIFT_RIGHT_3
  - LL_ADC_OVS_SHIFT_RIGHT_4
  - LL_ADC_OVS_SHIFT_RIGHT_5
  - LL_ADC_OVS_SHIFT_RIGHT_6
  - LL_ADC_OVS_SHIFT_RIGHT_7
  - LL_ADC_OVS_SHIFT_RIGHT_8
  - LL_ADC_OVS_SHIFT_RIGHT_9
  - LL_ADC_OVS_SHIFT_RIGHT_10

Return values

- **None:**

Notes

- This function set the 2 items of oversampling configuration: ratioshift
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on either groups regular or injected.

Reference Manual to LL API cross reference:

- CFGR2 OVSR LL_ADC_ConfigOverSamplingRatioShift

LL_ADC_GetOverSamplingRatio

Function name

__STATIC_INLINE uint32_t LL_ADC_GetOverSamplingRatio (const ADC_TypeDef * ADCx)

Function description

Get ADC oversampling ratio (impacting both ADC groups regular and injected)

Parameters

- **ADCx:** ADC instance

Return values

- **Ratio:** This parameter can be in the from 1 to 1024.

Reference Manual to LL API cross reference:

- CFGR2 OVSR LL_ADC_GetOverSamplingRatio

LL_ADC_GetOverSamplingShift

Function name

__STATIC_INLINE uint32_t LL_ADC_GetOverSamplingShift (const ADC_TypeDef * ADCx)

Function description

Get ADC oversampling shift (impacting both ADC groups regular and injected)

Parameters

- **ADCx:** ADC instance

Return values

- **Shift:** This parameter can be one of the following values:
  - LL_ADC_OVS_SHIFT_NONE
  - LL_ADC_OVS_SHIFT_RIGHT_1
  - LL_ADC_OVS_SHIFT_RIGHT_2
  - LL_ADC_OVS_SHIFT_RIGHT_3
  - LL_ADC_OVS_SHIFT_RIGHT_4
  - LL_ADC_OVS_SHIFT_RIGHT_5
  - LL_ADC_OVS_SHIFT_RIGHT_6
  - LL_ADC_OVS_SHIFT_RIGHT_7
  - LL_ADC_OVS_SHIFT_RIGHT_8
  - LL_ADC_OVS_SHIFT_RIGHT_9

LL_ADC_SetMultimode

Function name

__STATIC_INLINE void LL_ADC_SetMultimode (ADC_Common_TypeDef * ADCxy_COMMON, uint32_t Multimode)

Function description

Set ADC multimode configuration to operate in independent mode or multimode (for devices with several ADC instances).

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())
- **Multimode:** This parameter can be one of the following values:
  - LL_ADC_MULTI_INDEPENDENT
  - LL_ADC_MULTI_DUAL_REG_SIMULT
  - LL_ADC_MULTI_DUAL_REG_INTERL
  - LL_ADC_MULTI_DUAL_INJ_SIMULT
  - LL_ADC_MULTI_DUAL_INJ_ALTERN
  - LL_ADC_MULTI_DUAL_REG_SIM_INJ_SIM
  - LL_ADC_MULTI_DUAL_REG_SIM_INJ_ALT
  - LL_ADC_MULTI_DUAL_REG_INT_INJ_SIM

Return values

- **None:**

Notes

- If multimode configuration: the selected ADC instance is either master or slave depending on hardware. Refer to reference manual.
- On this STM32 series, setting of this feature is conditioned to ADC state: All ADC instances of the ADC common group must be disabled. This check can be done with function LL_ADC_IsEnabled() for each ADC instance or by using helper macro __LL_ADC_IS_ENABLED_ALL_COMMON_INSTANCE().

Reference Manual to LL API cross reference:

- CCR DUAL LL_ADC_SetMultimode

LL_ADC_GetMultimode

Function name

__STATIC_INLINE uint32_t LL_ADC_GetMultimode (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get ADC multimode configuration to operate in independent mode or multimode (for devices with several ADC instances).

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_MULTI_INDEPENDENT
  - LL_ADC_MULTI_DUAL_REG_SIMULT

  - LL_ADC_MULTI_DUAL_REG_SIM_INJ_SIM
  - LL_ADC_MULTI_DUAL_REG_SIM_INJ_ALT
  - LL_ADC_MULTI_DUAL_REG_INT_INJ_SIM

Notes

- If multimode configuration: the selected ADC instance is either master or slave depending on hardware. Refer to reference manual.

Reference Manual to LL API cross reference:

- CCR DUAL LL_ADC_GetMultimode

LL_ADC_SetMultiDataFormat

Function name

__STATIC_INLINE void LL_ADC_SetMultiDataFormat (ADC_Common_TypeDef * ADCxy_COMMON, uint32_t MultiDataFormat)

Function description

Set ADC multimode conversion data format: conversion data in data register of each ADC instance or ADC common instance.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())
- **MultiDataFormat:** This parameter can be one of the following values:
  - LL_ADC_MULTI_REG_DATA_EACH_ADC
  - LL_ADC_MULTI_REG_DATA_COMMON_32B
  - LL_ADC_MULTI_REG_DATA_COMMON_16B

Return values

- **None:**

Notes

- If ADC data transfer by DMA is used: data register as DMA source and number of DMA requests is impacted, refer to description of parameters of this function.
- How to retrieve multimode conversion data: For multimode data transfer setting 16 bit resolution or less, using functions LL_ADC_REG_ReadMultiConvPacking() or LL_ADC_REG_ReadMultiConvNoPacking(). Conversion data is a raw data with ADC master and slave concatenated. A macro is available to get the conversion data of ADC master or ADC slave: see helper macro __LL_ADC_MULTI_CONV_DATA_MASTER_SLAVE().
- On this STM32 series, setting of this feature is conditioned to ADC state: All ADC instances of the ADC common group must be disabled or enabled without conversion on going on group regular.

Reference Manual to LL API cross reference:

- CCR DAMDF LL_ADC_SetMultiDataFormat

LL_ADC_GetMultiDataFormat

Function name

__STATIC_INLINE uint32_t LL_ADC_GetMultiDataFormat (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get ADC multimode conversion data format: conversion data in data register of each ADC instance or ADC common instance.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_MULTI_REG_DATA_EACH_ADC
  - LL_ADC_MULTI_REG_DATA_COMMON_32B
  - LL_ADC_MULTI_REG_DATA_COMMON_16B

Notes

- If ADC data transfer by DMA is used: data register as DMA source and number of DMA requests is impacted, refer to description of parameters of this function.
- How to retrieve multimode conversion data: For multimode data transfer setting 16 bit resolution or less, using functions LL_ADC_REG_ReadMultiConvPacking() or LL_ADC_REG_ReadMultiConvNoPacking(). Conversion data is a raw data with ADC master and slave concatenated. A macro is available to get the conversion data of ADC master or ADC slave: see helper macro __LL_ADC_MULTI_CONV_DATA_MASTER_SLAVE().

- CCR DAMDF LL_ADC_GetMultiDataFormat

LL_ADC_SetMultiTwoSamplingDelay

Function name

__STATIC_INLINE void LL_ADC_SetMultiTwoSamplingDelay (ADC_Common_TypeDef * ADCxy_COMMON, uint32_t MultiTwoSamplingDelay)

Function description

Set ADC multimode delay between 2 sampling phases.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())
- **MultiTwoSamplingDelay:** This parameter can be one of the following values:
  - LL_ADC_MULTI_TWOSMP_DELAY_1CYCLE
  - LL_ADC_MULTI_TWOSMP_DELAY_2CYCLES
  - LL_ADC_MULTI_TWOSMP_DELAY_3CYCLES
  - LL_ADC_MULTI_TWOSMP_DELAY_4CYCLES
  - LL_ADC_MULTI_TWOSMP_DELAY_5CYCLES
  - LL_ADC_MULTI_TWOSMP_DELAY_6CYCLES
  - LL_ADC_MULTI_TWOSMP_DELAY_7CYCLES
  - LL_ADC_MULTI_TWOSMP_DELAY_8CYCLES
  - LL_ADC_MULTI_TWOSMP_DELAY_9CYCLES
  - LL_ADC_MULTI_TWOSMP_DELAY_10CYCLES
  - LL_ADC_MULTI_TWOSMP_DELAY_11CYCLES
  - LL_ADC_MULTI_TWOSMP_DELAY_12CYCLES
  - LL_ADC_MULTI_TWOSMP_DELAY_13CYCLES

Return values

- **None:**

Notes

- The sampling delay range depends on ADC resolution: ADC resolution 12 bits can have maximum delay of 12 cycles.ADC resolution 10 bits can have maximum delay of 10 cycles.ADC resolution 8 bits can have maximum delay of 8 cycles.ADC resolution 6 bits can have maximum delay of 6 cycles.
- On this STM32 series, setting of this feature is conditioned to ADC state: All ADC instances of the ADC common group must be disabled. This check can be done with function LL_ADC_IsEnabled() for each ADC instance or by using helper macro helper macro __LL_ADC_IS_ENABLED_ALL_COMMON_INSTANCE().

Reference Manual to LL API cross reference:

- CCR DELAY LL_ADC_SetMultiTwoSamplingDelay

LL_ADC_GetMultiTwoSamplingDelay

Function name

__STATIC_INLINE uint32_t LL_ADC_GetMultiTwoSamplingDelay (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get ADC multimode delay between 2 sampling phases.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_MULTI_TWOSMP_DELAY_1CYCLE
  - LL_ADC_MULTI_TWOSMP_DELAY_2CYCLES
  - LL_ADC_MULTI_TWOSMP_DELAY_3CYCLES
  - LL_ADC_MULTI_TWOSMP_DELAY_4CYCLES
  - LL_ADC_MULTI_TWOSMP_DELAY_5CYCLES
  - LL_ADC_MULTI_TWOSMP_DELAY_6CYCLES
  - LL_ADC_MULTI_TWOSMP_DELAY_7CYCLES

LL_ADC_EnableDeepPowerDown

Function name

__STATIC_INLINE void LL_ADC_EnableDeepPowerDown (ADC_TypeDef * ADCx)

Function description

Put ADC instance in deep power down state.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Notes

- In case of ADC calibration necessary: When ADC is in deep-power-down state, the internal analog calibration is lost. After exiting from deep power down, calibration must be relaunched or calibration factor (preliminarily saved) must be set back into calibration register.
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be ADC disabled.

Reference Manual to LL API cross reference:

- CR DEEPPWD LL_ADC_EnableDeepPowerDown

LL_ADC_DisableDeepPowerDown

Function name

__STATIC_INLINE void LL_ADC_DisableDeepPowerDown (ADC_TypeDef * ADCx)

Function description

Disable ADC deep power down mode.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Notes

- In case of ADC calibration necessary: When ADC is in deep-power-down state, the internal analog calibration is lost. After exiting from deep power down, calibration must be relaunched or calibration factor (preliminarily saved) must be set back into calibration register.
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be ADC disabled.

Reference Manual to LL API cross reference:

- CR DEEPPWD LL_ADC_DisableDeepPowerDown

LL_ADC_IsDeepPowerDownEnabled

Function name

__STATIC_INLINE uint32_t LL_ADC_IsDeepPowerDownEnabled (const ADC_TypeDef * ADCx)

Function description

Get the selected ADC instance deep power down state.

Parameters

- **ADCx:** ADC instance

Return values

- **0:** deep power down is disabled, 1: deep power down is enabled.

Reference Manual to LL API cross reference:

- CR DEEPPWD LL_ADC_IsDeepPowerDownEnabled

LL_ADC_EnableInternalRegulator

Function name

__STATIC_INLINE void LL_ADC_EnableInternalRegulator (ADC_TypeDef * ADCx)

Function description

Enable ADC instance internal voltage regulator.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Notes

- On this STM32 series, after ADC internal voltage regulator enable, a delay for ADC internal voltage regulator stabilization is required before performing a ADC calibration or ADC enable. Refer to device datasheet, parameter "tADCVREG_STUP". Refer to literal LL_ADC_DELAY_INTERNAL_REGUL_STAB_US.
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be ADC disabled.

Reference Manual to LL API cross reference:

- CR ADVREGEN LL_ADC_EnableInternalRegulator

LL_ADC_DisableInternalRegulator

Function name

__STATIC_INLINE void LL_ADC_DisableInternalRegulator (ADC_TypeDef * ADCx)

Function description

Disable ADC internal voltage regulator.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Notes

- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be ADC disabled.

Reference Manual to LL API cross reference:

- CR ADVREGEN LL_ADC_DisableInternalRegulator

LL_ADC_IsInternalRegulatorEnabled

Function name

__STATIC_INLINE uint32_t LL_ADC_IsInternalRegulatorEnabled (const ADC_TypeDef * ADCx)

Function description

Get the selected ADC instance internal voltage regulator state.

Parameters

- **ADCx:** ADC instance

Return values

- **0:** internal regulator is disabled, 1: internal regulator is enabled.

Reference Manual to LL API cross reference:

- CR ADVREGEN LL_ADC_IsInternalRegulatorEnabled

LL_ADC_Enable

Function name

__STATIC_INLINE void LL_ADC_Enable (ADC_TypeDef * ADCx)

Function description

Enable the selected ADC instance.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Notes

- On this STM32 series, after ADC enable, a delay for ADC internal analog stabilization is required before performing a ADC conversion start. Refer to device datasheet, parameter tSTAB.
- On this STM32 series, flag LL_ADC_FLAG_ADRDY is raised when the ADC is enabled and when conversion clock is active. (not only core clock: this ADC has a dual clock domain)
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be ADC disabled and ADC internal voltage regulator enabled.

Reference Manual to LL API cross reference:

- CR ADEN LL_ADC_Enable

LL_ADC_Disable

Function name

__STATIC_INLINE void LL_ADC_Disable (ADC_TypeDef * ADCx)

Function description

Disable the selected ADC instance.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Notes

- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be not disabled. Must be enabled without conversion on going on either groups regular or injected.

Reference Manual to LL API cross reference:

- CR ADDIS LL_ADC_Disable

LL_ADC_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_ADC_IsEnabled (const ADC_TypeDef * ADCx)

Function description

Get the selected ADC instance enable state.

Parameters

- **ADCx:** ADC instance

Return values

- **0:** ADC is disabled, 1: ADC is enabled.

Notes

- On this STM32 series, flag LL_ADC_FLAG_ADRDY is raised when the ADC is enabled and when conversion clock is active. (not only core clock: this ADC has a dual clock domain)

Reference Manual to LL API cross reference:

- CR ADEN LL_ADC_IsEnabled

LL_ADC_IsDisableOngoing

Function name

__STATIC_INLINE uint32_t LL_ADC_IsDisableOngoing (const ADC_TypeDef * ADCx)

Function description

Get the selected ADC instance disable state.

Parameters

- **ADCx:** ADC instance

Return values

- **0:** no ADC disable command on going.

Reference Manual to LL API cross reference:

- CR ADDIS LL_ADC_IsDisableOngoing

LL_ADC_StartCalibration

Function name

__STATIC_INLINE void LL_ADC_StartCalibration (ADC_TypeDef * ADCx)

Function description

Start ADC calibration in the mode single-ended or differential (for devices with differential mode available).

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Notes

- On this STM32 series, a minimum number of ADC clock cycles are required between ADC end of calibration and ADC enable. Refer to literal LL_ADC_DELAY_CALIB_ENABLE_ADC_CYCLES.
- For devices with differential mode available: Calibration of offset is specific to each of single-ended and differential modes (calibration run must be performed for each of these differential modes, if used afterwards and if the application requires their calibration).
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be ADC disabled.

Reference Manual to LL API cross reference:

- CR ADCAL LL_ADC_StartCalibration
- CR ADCALDIF LL_ADC_StartCalibration

LL_ADC_IsCalibrationOnGoing

Function name

__STATIC_INLINE uint32_t LL_ADC_IsCalibrationOnGoing (const ADC_TypeDef * ADCx)

Function description

Get ADC calibration state.

Parameters

- **ADCx:** ADC instance

Return values

- **0:** calibration complete, 1: calibration in progress.

Reference Manual to LL API cross reference:

- CR ADCAL LL_ADC_IsCalibrationOnGoing

LL_ADC_REG_StartConversion

Function name

__STATIC_INLINE void LL_ADC_REG_StartConversion (ADC_TypeDef * ADCx)

Function description

Start ADC group regular conversion.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Notes

- On this STM32 series, this function is relevant for both internal trigger (SW start) and external trigger: If ADC trigger has been set to software start, ADC conversion starts immediately.If ADC trigger has been set to external trigger, ADC conversion will start at next trigger event (on the selected trigger edge) following the ADC start conversion command.
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be enabled without conversion on going on group regular, without conversion stop command on going on group regular, without ADC disable command on going.

Reference Manual to LL API cross reference:

- CR ADSTART LL_ADC_REG_StartConversion

LL_ADC_REG_StopConversion

Function name

__STATIC_INLINE void LL_ADC_REG_StopConversion (ADC_TypeDef * ADCx)

Function description

Stop ADC group regular conversion.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Notes

- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be enabled with conversion on going on group regular, without ADC disable command on going.

Reference Manual to LL API cross reference:

- CR ADSTP LL_ADC_REG_StopConversion

LL_ADC_REG_IsConversionOngoing

Function name

__STATIC_INLINE uint32_t LL_ADC_REG_IsConversionOngoing (const ADC_TypeDef * ADCx)

Function description

Get ADC group regular conversion state.

Parameters

- **ADCx:** ADC instance

Return values

- **0:** no conversion is on going on ADC group regular.

Reference Manual to LL API cross reference:

- CR ADSTART LL_ADC_REG_IsConversionOngoing

LL_ADC_REG_IsStopConversionOngoing

Function name

__STATIC_INLINE uint32_t LL_ADC_REG_IsStopConversionOngoing (const ADC_TypeDef * ADCx)

Function description

Get ADC group regular command of conversion stop state.

Parameters

- **ADCx:** ADC instance

Return values

- **0:** no command of conversion stop is on going on ADC group regular.

Reference Manual to LL API cross reference:

- CR ADSTP LL_ADC_REG_IsStopConversionOngoing

LL_ADC_REG_ReadConversionData32

Function name

__STATIC_INLINE uint32_t LL_ADC_REG_ReadConversionData32 (const ADC_TypeDef * ADCx)

Function description

Get ADC group regular conversion data, range fit for all ADC configurations: all ADC resolutions and all oversampling increased data width (for devices with feature oversampling).

Parameters

- **ADCx:** ADC instance

Return values

- **Value:** between Min_Data=0x00000000 and Max_Data=0xFFFFFFFF

Reference Manual to LL API cross reference:

- DR RDATA LL_ADC_REG_ReadConversionData32

LL_ADC_REG_ReadConversionData12

Function name

__STATIC_INLINE uint16_t LL_ADC_REG_ReadConversionData12 (const ADC_TypeDef * ADCx)

Function description

Get ADC group regular conversion data, range fit for ADC resolution 12 bits.

Parameters

- **ADCx:** ADC instance

Return values

- **Value:** between Min_Data=0x000 and Max_Data=0xFFF

Notes

- For devices with feature oversampling: Oversampling can increase data width, function for extended range may be needed: LL_ADC_REG_ReadConversionData32.

Reference Manual to LL API cross reference:

- DR RDATA LL_ADC_REG_ReadConversionData12

LL_ADC_REG_ReadConversionData10

Function name

__STATIC_INLINE uint16_t LL_ADC_REG_ReadConversionData10 (const ADC_TypeDef * ADCx)

Function description

Get ADC group regular conversion data, range fit for ADC resolution 10 bits.

Parameters

- **ADCx:** ADC instance

Return values

- **Value:** between Min_Data=0x000 and Max_Data=0x3FF

Notes

- For devices with feature oversampling: Oversampling can increase data width, function for extended range may be needed: LL_ADC_REG_ReadConversionData32.

Reference Manual to LL API cross reference:

- DR RDATA LL_ADC_REG_ReadConversionData10

LL_ADC_REG_ReadConversionData8

Function name

__STATIC_INLINE uint8_t LL_ADC_REG_ReadConversionData8 (const ADC_TypeDef * ADCx)

Function description

Get ADC group regular conversion data, range fit for ADC resolution 8 bits.

Parameters

- **ADCx:** ADC instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0xFF

Notes

- For devices with feature oversampling: Oversampling can increase data width, function for extended range may be needed: LL_ADC_REG_ReadConversionData32.

Reference Manual to LL API cross reference:

- DR RDATA LL_ADC_REG_ReadConversionData8

LL_ADC_REG_ReadConversionData6

Function name

__STATIC_INLINE uint8_t LL_ADC_REG_ReadConversionData6 (const ADC_TypeDef * ADCx)

Function description

Get ADC group regular conversion data, range fit for ADC resolution 6 bits.

Parameters

- **ADCx:** ADC instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x3F

Notes

- For devices with feature oversampling: Oversampling can increase data width, function for extended range may be needed: LL_ADC_REG_ReadConversionData32.

Reference Manual to LL API cross reference:

- DR RDATA LL_ADC_REG_ReadConversionData6

LL_ADC_REG_ReadMultiConvPacking

Function name

__STATIC_INLINE uint32_t LL_ADC_REG_ReadMultiConvPacking (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get ADC multimode conversion data of ADC master and ADC slave concatenated.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **Value:** between Min_Data=0x00000000 and Max_Data=0xFFFFFFFF

Notes

- Multimode data concatenation is usable under conditions of ADC multimode data format selected and data width, refer to description of literals in Multimode - Data format.
- From raw data with ADC master and slave concatenated, a macro is available to get the conversion data of ADC master or ADC slave: see helper macro __LL_ADC_MULTI_CONV_DATA_MASTER_SLAVE().

Reference Manual to LL API cross reference:

- CDR RDATA_MST LL_ADC_REG_ReadMultiConvPacking
- CDR RDATA_SLV LL_ADC_REG_ReadMultiConvPacking

LL_ADC_REG_ReadMultiConvNoPacking

Function name

__STATIC_INLINE uint32_t LL_ADC_REG_ReadMultiConvNoPacking (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get ADC multimode conversion data of ADC master or ADC slave (data set alternatively in specific data register).

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **Value:** between Min_Data=0x00000000 and Max_Data=0xFFFFFFFF

Notes

- Multimode data without concatenation is compliant with all ADC multimode data format and data width, refer to description of literals in Multimode - Data format.
- Multimode data without packing is using a unique data register (CDR2) for data of ADC master and slave alternatively. Therefore, data can be overwritten very quickly, recommended method to retrieve data without risk to miss some occurrences is to use DMA transfer.

Reference Manual to LL API cross reference:

- CDR2 RDATA_ALT LL_ADC_REG_ReadMultiConvNoPacking

LL_ADC_INJ_StartConversion

Function name

__STATIC_INLINE void LL_ADC_INJ_StartConversion (ADC_TypeDef * ADCx)

Function description

Start ADC group injected conversion.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Notes

- On this STM32 series, this function is relevant for both internal trigger (SW start) and external trigger: If ADC trigger has been set to software start, ADC conversion starts immediately.If ADC trigger has been set to external trigger, ADC conversion will start at next trigger event (on the selected trigger edge) following the ADC start conversion command.
- On this STM32 series, setting of this feature is conditioned to ADC state: ADC must be enabled without conversion on going on group injected, without conversion stop command on going on group injected, without ADC disable command on going.

LL_ADC_IsActiveFlag_EOC

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_EOC (const ADC_TypeDef * ADCx)

Function description

Get flag ADC group regular end of unitary conversion.

Parameters

- **ADCx:** ADC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR EOC LL_ADC_IsActiveFlag_EOC

LL_ADC_IsActiveFlag_EOS

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_EOS (const ADC_TypeDef * ADCx)

Function description

Get flag ADC group regular end of sequence conversions.

Parameters

- **ADCx:** ADC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR EOS LL_ADC_IsActiveFlag_EOS

LL_ADC_IsActiveFlag_OVR

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_OVR (const ADC_TypeDef * ADCx)

Function description

Get flag ADC group regular overrun.

Parameters

- **ADCx:** ADC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR OVR LL_ADC_IsActiveFlag_OVR

LL_ADC_IsActiveFlag_EOSMP

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_EOSMP (const ADC_TypeDef * ADCx)

Function description

Get flag ADC group regular end of sampling phase.

Parameters

- **ADCx:** ADC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR EOSMP LL_ADC_IsActiveFlag_EOSMP

LL_ADC_IsActiveFlag_JEOC

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_JEOC (const ADC_TypeDef * ADCx)

Function description

Get flag ADC group injected end of unitary conversion.

Parameters

- **ADCx:** ADC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR JEOC LL_ADC_IsActiveFlag_JEOC

LL_ADC_IsActiveFlag_JEOS

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_JEOS (const ADC_TypeDef * ADCx)

Function description

Get flag ADC group injected end of sequence conversions.

Parameters

- **ADCx:** ADC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR JEOS LL_ADC_IsActiveFlag_JEOS

LL_ADC_IsActiveFlag_JQOVF

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_JQOVF (const ADC_TypeDef * ADCx)

Function description

Get flag ADC group injected contexts queue overflow.

Parameters

- **ADCx:** ADC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR JQOVF LL_ADC_IsActiveFlag_JQOVF

LL_ADC_IsActiveFlag_AWD1

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_AWD1 (const ADC_TypeDef * ADCx)

Function description

Get flag ADC analog watchdog 1 flag.

Parameters

- **ADCx:** ADC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR AWD1 LL_ADC_IsActiveFlag_AWD1

LL_ADC_IsActiveFlag_AWD2

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_AWD2 (const ADC_TypeDef * ADCx)

Function description

Get flag ADC analog watchdog 2.

Parameters

- **ADCx:** ADC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR AWD2 LL_ADC_IsActiveFlag_AWD2

LL_ADC_IsActiveFlag_AWD3

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_AWD3 (const ADC_TypeDef * ADCx)

Function description

Get flag ADC analog watchdog 3.

Parameters

- **ADCx:** ADC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR AWD3 LL_ADC_IsActiveFlag_AWD3

LL_ADC_ClearFlag_ADRDY

Function name

__STATIC_INLINE void LL_ADC_ClearFlag_ADRDY (ADC_TypeDef * ADCx)

Function description

Clear flag ADC ready.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Notes

- On this STM32 series, flag LL_ADC_FLAG_ADRDY is raised when the ADC is enabled and when conversion clock is active. (not only core clock: this ADC has a dual clock domain)

Reference Manual to LL API cross reference:

- ISR ADRDY LL_ADC_ClearFlag_ADRDY

LL_ADC_ClearFlag_LDORDY

Function name

__STATIC_INLINE void LL_ADC_ClearFlag_LDORDY (ADC_TypeDef * ADCx)

Function description

Clear flag ADC internal voltage regulator ready.

Parameters

- **ADCx:** ADC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR LDORDY LL_ADC_ClearFlag_LDORDY

LL_ADC_ClearFlag_EOC

Function name

__STATIC_INLINE void LL_ADC_ClearFlag_EOC (ADC_TypeDef * ADCx)

Function description

Clear flag ADC group regular end of unitary conversion.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ISR EOC LL_ADC_ClearFlag_EOC

LL_ADC_ClearFlag_EOS

Function name

__STATIC_INLINE void LL_ADC_ClearFlag_EOS (ADC_TypeDef * ADCx)

Function description

Clear flag ADC group regular end of sequence conversions.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ISR EOS LL_ADC_ClearFlag_EOS

LL_ADC_ClearFlag_OVR

Function name

__STATIC_INLINE void LL_ADC_ClearFlag_OVR (ADC_TypeDef * ADCx)

Function description

Clear flag ADC group regular overrun.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ISR OVR LL_ADC_ClearFlag_OVR

LL_ADC_ClearFlag_EOSMP

Function name

__STATIC_INLINE void LL_ADC_ClearFlag_EOSMP (ADC_TypeDef * ADCx)

Function description

Clear flag ADC group regular end of sampling phase.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ISR EOSMP LL_ADC_ClearFlag_EOSMP

LL_ADC_ClearFlag_JEOC

Function name

__STATIC_INLINE void LL_ADC_ClearFlag_JEOC (ADC_TypeDef * ADCx)

Function description

Clear flag ADC group injected end of unitary conversion.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ISR JEOC LL_ADC_ClearFlag_JEOC

LL_ADC_ClearFlag_JEOS

Function name

__STATIC_INLINE void LL_ADC_ClearFlag_JEOS (ADC_TypeDef * ADCx)

Function description

Clear flag ADC group injected end of sequence conversions.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ISR JEOS LL_ADC_ClearFlag_JEOS

LL_ADC_ClearFlag_JQOVF

Function name

__STATIC_INLINE void LL_ADC_ClearFlag_JQOVF (ADC_TypeDef * ADCx)

Function description

Clear flag ADC group injected contexts queue overflow.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ISR JQOVF LL_ADC_ClearFlag_JQOVF

LL_ADC_ClearFlag_AWD1

Function name

__STATIC_INLINE void LL_ADC_ClearFlag_AWD1 (ADC_TypeDef * ADCx)

Function description

Clear flag ADC analog watchdog 1.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ISR AWD1 LL_ADC_ClearFlag_AWD1

LL_ADC_ClearFlag_AWD2

Function name

__STATIC_INLINE void LL_ADC_ClearFlag_AWD2 (ADC_TypeDef * ADCx)

Function description

Clear flag ADC analog watchdog 2.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ISR AWD2 LL_ADC_ClearFlag_AWD2

LL_ADC_ClearFlag_AWD3

Function name

__STATIC_INLINE void LL_ADC_ClearFlag_AWD3 (ADC_TypeDef * ADCx)

Function description

Clear flag ADC analog watchdog 3.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ISR AWD3 LL_ADC_ClearFlag_AWD3

LL_ADC_IsActiveFlag_MST_ADRDY

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_MST_ADRDY (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get flag multimode ADC ready of the ADC master.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR ADRDY_MST LL_ADC_IsActiveFlag_MST_ADRDY

LL_ADC_IsActiveFlag_SLV_ADRDY

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_SLV_ADRDY (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get flag multimode ADC ready of the ADC slave.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR ADRDY_SLV LL_ADC_IsActiveFlag_SLV_ADRDY

LL_ADC_IsActiveFlag_MST_LDORDY

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_MST_LDORDY (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get flag multimode ADC ready of the ADC master.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR LDORDY_MST LL_ADC_IsActiveFlag_MST_LDORDY

LL_ADC_IsActiveFlag_SLV_LDORDY

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_SLV_LDORDY (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get flag multimode ADC ready of the ADC slave.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR LDORDY_SLV LL_ADC_IsActiveFlag_SLV_LDORDY

LL_ADC_IsActiveFlag_MST_EOC

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_MST_EOC (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get flag multimode ADC group regular end of unitary conversion of the ADC master.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR EOC_MST LL_ADC_IsActiveFlag_MST_EOC

LL_ADC_IsActiveFlag_SLV_EOC

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_SLV_EOC (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get flag multimode ADC group regular end of unitary conversion of the ADC slave.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR EOC_SLV LL_ADC_IsActiveFlag_SLV_EOC

LL_ADC_IsActiveFlag_MST_EOS

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_MST_EOS (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get flag multimode ADC group regular end of sequence conversions of the ADC master.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR EOS_MST LL_ADC_IsActiveFlag_MST_EOS

LL_ADC_IsActiveFlag_SLV_EOS

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_SLV_EOS (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get flag multimode ADC group regular end of sequence conversions of the ADC slave.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR EOS_SLV LL_ADC_IsActiveFlag_SLV_EOS

LL_ADC_IsActiveFlag_MST_OVR

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_MST_OVR (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get flag multimode ADC group regular overrun of the ADC master.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR OVR_MST LL_ADC_IsActiveFlag_MST_OVR

LL_ADC_IsActiveFlag_SLV_OVR

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_SLV_OVR (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get flag multimode ADC group regular overrun of the ADC slave.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR OVR_SLV LL_ADC_IsActiveFlag_SLV_OVR

LL_ADC_IsActiveFlag_MST_EOSMP

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_MST_EOSMP (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get flag multimode ADC group regular end of sampling of the ADC master.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR EOSMP_MST LL_ADC_IsActiveFlag_MST_EOSMP

LL_ADC_IsActiveFlag_SLV_EOSMP

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_SLV_EOSMP (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get flag multimode ADC group regular end of sampling of the ADC slave.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR EOSMP_SLV LL_ADC_IsActiveFlag_SLV_EOSMP

LL_ADC_IsActiveFlag_MST_JEOC

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_MST_JEOC (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get flag multimode ADC group injected end of unitary conversion of the ADC master.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR JEOC_MST LL_ADC_IsActiveFlag_MST_JEOC

LL_ADC_IsActiveFlag_SLV_JEOC

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_SLV_JEOC (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get flag multimode ADC group injected end of unitary conversion of the ADC slave.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR JEOC_SLV LL_ADC_IsActiveFlag_SLV_JEOC

LL_ADC_IsActiveFlag_MST_JEOS

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_MST_JEOS (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get flag multimode ADC group injected end of sequence conversions of the ADC master.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR JEOS_MST LL_ADC_IsActiveFlag_MST_JEOS

LL_ADC_IsActiveFlag_SLV_JEOS

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_SLV_JEOS (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get flag multimode ADC group injected end of sequence conversions of the ADC slave.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR JEOS_SLV LL_ADC_IsActiveFlag_SLV_JEOS

LL_ADC_IsActiveFlag_MST_JQOVF

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_MST_JQOVF (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get flag multimode ADC group injected context queue overflow of the ADC master.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR JQOVF_MST LL_ADC_IsActiveFlag_MST_JQOVF

LL_ADC_IsActiveFlag_SLV_JQOVF

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_SLV_JQOVF (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get flag multimode ADC group injected context queue overflow of the ADC slave.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR JQOVF_SLV LL_ADC_IsActiveFlag_SLV_JQOVF

LL_ADC_IsActiveFlag_MST_AWD1

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_MST_AWD1 (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get flag multimode ADC analog watchdog 1 of the ADC master.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR AWD1_MST LL_ADC_IsActiveFlag_MST_AWD1

LL_ADC_IsActiveFlag_SLV_AWD1

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_SLV_AWD1 (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get flag multimode analog watchdog 1 of the ADC slave.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR AWD1_SLV LL_ADC_IsActiveFlag_SLV_AWD1

LL_ADC_IsActiveFlag_MST_AWD2

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_MST_AWD2 (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get flag multimode ADC analog watchdog 2 of the ADC master.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR AWD2_MST LL_ADC_IsActiveFlag_MST_AWD2

LL_ADC_IsActiveFlag_SLV_AWD2

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_SLV_AWD2 (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get flag multimode ADC analog watchdog 2 of the ADC slave.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR AWD2_SLV LL_ADC_IsActiveFlag_SLV_AWD2

LL_ADC_IsActiveFlag_MST_AWD3

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_MST_AWD3 (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get flag multimode ADC analog watchdog 3 of the ADC master.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR AWD3_MST LL_ADC_IsActiveFlag_MST_AWD3

LL_ADC_IsActiveFlag_SLV_AWD3

Function name

__STATIC_INLINE uint32_t LL_ADC_IsActiveFlag_SLV_AWD3 (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get flag multimode ADC analog watchdog 3 of the ADC slave.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR AWD3_SLV LL_ADC_IsActiveFlag_SLV_AWD3

LL_ADC_EnableIT_ADRDY

Function name

__STATIC_INLINE void LL_ADC_EnableIT_ADRDY (ADC_TypeDef * ADCx)

Function description

Enable ADC ready.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER ADRDYIE LL_ADC_EnableIT_ADRDY

LL_ADC_EnableIT_LDORDY

Function name

__STATIC_INLINE void LL_ADC_EnableIT_LDORDY (ADC_TypeDef * ADCx)

Function description

Enable interruption ADC internal voltage regulator ready.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER LDORDYIE LL_ADC_EnableIT_LDORDY

LL_ADC_EnableIT_EOC

Function name

__STATIC_INLINE void LL_ADC_EnableIT_EOC (ADC_TypeDef * ADCx)

Function description

Enable interruption ADC group regular end of unitary conversion.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER EOCIE LL_ADC_EnableIT_EOC

LL_ADC_EnableIT_EOS

Function name

__STATIC_INLINE void LL_ADC_EnableIT_EOS (ADC_TypeDef * ADCx)

Function description

Enable interruption ADC group regular end of sequence conversions.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER EOSIE LL_ADC_EnableIT_EOS

LL_ADC_EnableIT_OVR

Function name

__STATIC_INLINE void LL_ADC_EnableIT_OVR (ADC_TypeDef * ADCx)

Function description

Enable ADC group regular interruption overrun.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER OVRIE LL_ADC_EnableIT_OVR

LL_ADC_EnableIT_EOSMP

Function name

__STATIC_INLINE void LL_ADC_EnableIT_EOSMP (ADC_TypeDef * ADCx)

Function description

Enable interruption ADC group regular end of sampling.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER EOSMPIE LL_ADC_EnableIT_EOSMP

LL_ADC_EnableIT_JEOC

Function name

__STATIC_INLINE void LL_ADC_EnableIT_JEOC (ADC_TypeDef * ADCx)

Function description

Enable interruption ADC group injected end of unitary conversion.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER JEOCIE LL_ADC_EnableIT_JEOC

LL_ADC_EnableIT_JEOS

Function name

__STATIC_INLINE void LL_ADC_EnableIT_JEOS (ADC_TypeDef * ADCx)

Function description

Enable interruption ADC group injected end of sequence conversions.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER JEOSIE LL_ADC_EnableIT_JEOS

LL_ADC_EnableIT_JQOVF

Function name

__STATIC_INLINE void LL_ADC_EnableIT_JQOVF (ADC_TypeDef * ADCx)

Function description

Enable interruption ADC group injected context queue overflow.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER JQOVFIE LL_ADC_EnableIT_JQOVF

LL_ADC_EnableIT_AWD1

Function name

__STATIC_INLINE void LL_ADC_EnableIT_AWD1 (ADC_TypeDef * ADCx)

Function description

Enable interruption ADC analog watchdog 1.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER AWD1IE LL_ADC_EnableIT_AWD1

LL_ADC_EnableIT_AWD2

Function name

__STATIC_INLINE void LL_ADC_EnableIT_AWD2 (ADC_TypeDef * ADCx)

Function description

Enable interruption ADC analog watchdog 2.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER AWD2IE LL_ADC_EnableIT_AWD2

LL_ADC_EnableIT_AWD3

Function name

__STATIC_INLINE void LL_ADC_EnableIT_AWD3 (ADC_TypeDef * ADCx)

Function description

Enable interruption ADC analog watchdog 3.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER AWD3IE LL_ADC_EnableIT_AWD3

LL_ADC_DisableIT_ADRDY

Function name

__STATIC_INLINE void LL_ADC_DisableIT_ADRDY (ADC_TypeDef * ADCx)

Function description

Disable interruption ADC ready.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER ADRDYIE LL_ADC_DisableIT_ADRDY

LL_ADC_DisableIT_LDORDY

Function name

__STATIC_INLINE void LL_ADC_DisableIT_LDORDY (ADC_TypeDef * ADCx)

Function description

Disable interruption ADC internal voltage regulator ready.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER LDORDYIE LL_ADC_DisableIT_ADRDY

LL_ADC_DisableIT_EOC

Function name

__STATIC_INLINE void LL_ADC_DisableIT_EOC (ADC_TypeDef * ADCx)

Function description

Disable interruption ADC group regular end of unitary conversion.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER EOCIE LL_ADC_DisableIT_EOC

LL_ADC_DisableIT_EOS

Function name

__STATIC_INLINE void LL_ADC_DisableIT_EOS (ADC_TypeDef * ADCx)

Function description

Disable interruption ADC group regular end of sequence conversions.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER EOSIE LL_ADC_DisableIT_EOS

LL_ADC_DisableIT_OVR

Function name

__STATIC_INLINE void LL_ADC_DisableIT_OVR (ADC_TypeDef * ADCx)

Function description

Disable interruption ADC group regular overrun.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER OVRIE LL_ADC_DisableIT_OVR

LL_ADC_DisableIT_EOSMP

Function name

__STATIC_INLINE void LL_ADC_DisableIT_EOSMP (ADC_TypeDef * ADCx)

Function description

Disable interruption ADC group regular end of sampling.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER EOSMPIE LL_ADC_DisableIT_EOSMP

LL_ADC_DisableIT_JEOC

Function name

__STATIC_INLINE void LL_ADC_DisableIT_JEOC (ADC_TypeDef * ADCx)

Function description

Disable interruption ADC group regular end of unitary conversion.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER JEOCIE LL_ADC_DisableIT_JEOC

LL_ADC_DisableIT_JEOS

Function name

__STATIC_INLINE void LL_ADC_DisableIT_JEOS (ADC_TypeDef * ADCx)

Function description

Disable interruption ADC group injected end of sequence conversions.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER JEOSIE LL_ADC_DisableIT_JEOS

LL_ADC_DisableIT_JQOVF

Function name

__STATIC_INLINE void LL_ADC_DisableIT_JQOVF (ADC_TypeDef * ADCx)

Function description

Disable interruption ADC group injected context queue overflow.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER JQOVFIE LL_ADC_DisableIT_JQOVF

LL_ADC_DisableIT_AWD1

Function name

__STATIC_INLINE void LL_ADC_DisableIT_AWD1 (ADC_TypeDef * ADCx)

Function description

Disable interruption ADC analog watchdog 1.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER AWD1IE LL_ADC_DisableIT_AWD1

LL_ADC_DisableIT_AWD2

Function name

__STATIC_INLINE void LL_ADC_DisableIT_AWD2 (ADC_TypeDef * ADCx)

Function description

Disable interruption ADC analog watchdog 2.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER AWD2IE LL_ADC_DisableIT_AWD2

LL_ADC_DisableIT_AWD3

Function name

__STATIC_INLINE void LL_ADC_DisableIT_AWD3 (ADC_TypeDef * ADCx)

Function description

Disable interruption ADC analog watchdog 3.

Parameters

- **ADCx:** ADC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER AWD3IE LL_ADC_DisableIT_AWD3

LL_ADC_IsEnabledIT_ADRDY

Function name

__STATIC_INLINE uint32_t LL_ADC_IsEnabledIT_ADRDY (const ADC_TypeDef * ADCx)

Function description

Get state of interruption ADC ready (0: interrupt disabled, 1: interrupt enabled).

Parameters

- **ADCx:** ADC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER ADRDYIE LL_ADC_IsEnabledIT_ADRDY

LL_ADC_IsEnabledIT_LDORDY

Function name

__STATIC_INLINE uint32_t LL_ADC_IsEnabledIT_LDORDY (const ADC_TypeDef * ADCx)

Function description

Get state of interruption ADC interruption ADC internal voltage regulator ready.

Parameters

- **ADCx:** ADC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER LDORDYIE LL_ADC_IsEnabledIT_LDORDY

LL_ADC_IsEnabledIT_EOC

Function name

__STATIC_INLINE uint32_t LL_ADC_IsEnabledIT_EOC (const ADC_TypeDef * ADCx)

Function description

Get state of interruption ADC group regular end of unitary conversion (0: interrupt disabled, 1: interrupt enabled).

Parameters

- **ADCx:** ADC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER EOCIE LL_ADC_IsEnabledIT_EOC

LL_ADC_IsEnabledIT_EOS

Function name

__STATIC_INLINE uint32_t LL_ADC_IsEnabledIT_EOS (const ADC_TypeDef * ADCx)

Function description

Get state of interruption ADC group regular end of sequence conversions (0: interrupt disabled, 1: interrupt enabled).

Parameters

- **ADCx:** ADC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER EOSIE LL_ADC_IsEnabledIT_EOS

LL_ADC_IsEnabledIT_OVR

Function name

__STATIC_INLINE uint32_t LL_ADC_IsEnabledIT_OVR (const ADC_TypeDef * ADCx)

Function description

Get state of interruption ADC group regular overrun (0: interrupt disabled, 1: interrupt enabled).

Parameters

- **ADCx:** ADC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER OVRIE LL_ADC_IsEnabledIT_OVR

LL_ADC_IsEnabledIT_EOSMP

Function name

__STATIC_INLINE uint32_t LL_ADC_IsEnabledIT_EOSMP (const ADC_TypeDef * ADCx)

Function description

Get state of interruption ADC group regular end of sampling (0: interrupt disabled, 1: interrupt enabled).

Parameters

- **ADCx:** ADC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER EOSMPIE LL_ADC_IsEnabledIT_EOSMP

LL_ADC_IsEnabledIT_JEOC

Function name

__STATIC_INLINE uint32_t LL_ADC_IsEnabledIT_JEOC (const ADC_TypeDef * ADCx)

Function description

Get state of interruption ADC group injected end of unitary conversion (0: interrupt disabled, 1: interrupt enabled).

Parameters

- **ADCx:** ADC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER JEOCIE LL_ADC_IsEnabledIT_JEOC

LL_ADC_IsEnabledIT_JEOS

Function name

__STATIC_INLINE uint32_t LL_ADC_IsEnabledIT_JEOS (const ADC_TypeDef * ADCx)

Function description

Get state of interruption ADC group injected end of sequence conversions (0: interrupt disabled, 1: interrupt enabled).

Parameters

- **ADCx:** ADC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER JEOSIE LL_ADC_IsEnabledIT_JEOS

LL_ADC_IsEnabledIT_JQOVF

Function name

__STATIC_INLINE uint32_t LL_ADC_IsEnabledIT_JQOVF (const ADC_TypeDef * ADCx)

Function description

Get state of interruption ADC group injected context queue overflow interrupt state (0: interrupt disabled, 1: interrupt enabled).

Parameters

- **ADCx:** ADC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER JQOVFIE LL_ADC_IsEnabledIT_JQOVF

LL_ADC_IsEnabledIT_AWD1

Function name

__STATIC_INLINE uint32_t LL_ADC_IsEnabledIT_AWD1 (const ADC_TypeDef * ADCx)

Function description

Get state of interruption ADC analog watchdog 1 (0: interrupt disabled, 1: interrupt enabled).

Parameters

- **ADCx:** ADC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER AWD1IE LL_ADC_IsEnabledIT_AWD1

LL_ADC_IsEnabledIT_AWD2

Function name

__STATIC_INLINE uint32_t LL_ADC_IsEnabledIT_AWD2 (const ADC_TypeDef * ADCx)

Function description

Get state of interruption Get ADC analog watchdog 2 (0: interrupt disabled, 1: interrupt enabled).

Parameters

- **ADCx:** ADC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER AWD2IE LL_ADC_IsEnabledIT_AWD2

LL_ADC_IsEnabledIT_AWD3

Function name

__STATIC_INLINE uint32_t LL_ADC_IsEnabledIT_AWD3 (const ADC_TypeDef * ADCx)

Function description

Get state of interruption Get ADC analog watchdog 3 (0: interrupt disabled, 1: interrupt enabled).

Parameters

- **ADCx:** ADC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER AWD3IE LL_ADC_IsEnabledIT_AWD3

LL_ADC_CommonDeInit

Function name

ErrorStatus LL_ADC_CommonDeInit (const ADC_Common_TypeDef * ADCxy_COMMON)

Function description

De-initialize registers of all ADC instances belonging to the same ADC common instance to their default reset values.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: ADC common registers are de-initialized
  - ERROR: not applicable

Notes

- This function is performing a hard reset, using high level clock source RCC ADC reset. Caution: On this STM32 series, if several ADC instances are available on the selected device, RCC ADC reset will reset all ADC instances belonging to the common ADC instance. To de-initialize only 1 ADC instance, use function LL_ADC_DeInit().

LL_ADC_CommonInit

Function name

ErrorStatus LL_ADC_CommonInit (ADC_Common_TypeDef * ADCxy_COMMON, const LL_ADC_CommonInitTypeDef * pADC_CommonInitStruct)

Function description

Initialize some features of ADC common parameters (all ADC instances belonging to the same ADC common instance) and multimode (for devices with several ADC instances available).

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())
- **pADC_CommonInitStruct:** Pointer to a LL_ADC_CommonInitTypeDef structure

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: ADC common registers are initialized
  - ERROR: ADC common registers are not initialized

Notes

- The setting of ADC common parameters is conditioned to ADC instances state: All ADC instances belonging to the same ADC common instance must be disabled.

LL_ADC_CommonStructInit

Function name

void LL_ADC_CommonStructInit (LL_ADC_CommonInitTypeDef * pADC_CommonInitStruct)

Function description

Set each LL_ADC_CommonInitTypeDef field to default value.

Parameters

- **pADC_CommonInitStruct:** Pointer to a LL_ADC_CommonInitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

LL_ADC_DeInit

Function name

ErrorStatus LL_ADC_DeInit (ADC_TypeDef * ADCx)

Function description

De-initialize registers of the selected ADC instance to their default reset values.

Parameters

- **ADCx:** ADC instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: ADC registers are de-initialized
  - ERROR: ADC registers are not de-initialized

Notes

- To reset all ADC instances quickly (perform a hard reset), use function LL_ADC_CommonDeInit().
- If this functions returns error status, it means that ADC instance is in an unknown state. In this case, perform a hard reset using high level clock source RCC ADC reset. Caution: On this STM32 series, if several ADC instances are available on the selected device, RCC ADC reset will reset all ADC instances belonging to the common ADC instance. Refer to function LL_ADC_CommonDeInit().

LL_ADC_Init

Function name

ErrorStatus LL_ADC_Init (ADC_TypeDef * ADCx, const LL_ADC_InitTypeDef * pADC_InitStruct)

Function description

Initialize some features of ADC instance.

Parameters

- **ADCx:** ADC instance
- **pADC_InitStruct:** Pointer to a LL_ADC_REG_InitTypeDef structure

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: ADC registers are initialized
  - ERROR: ADC registers are not initialized

Notes

- These parameters have an impact on ADC scope: ADC instance. Affects both group regular and group injected (availability of ADC group injected depends on STM32 families). Refer to corresponding unitary functions into Configuration of ADC hierarchical scope: ADC instance .
- The setting of these parameters by function LL_ADC_Init() is conditioned to ADC state: ADC instance must be disabled. This condition is applied to all ADC features, for efficiency and compatibility over all STM32 families. However, the different features can be set under different ADC state conditions (setting possible with ADC enabled without conversion on going, ADC enabled with conversion on going, ...) Each feature can be updated afterwards with a unitary function and potentially with ADC in a different state than disabled, refer to description of each function for setting conditioned to ADC state.
- After using this function, some other features must be configured using LL unitary functions. The minimum configuration remaining to be done is: Set ADC group regular or group injected sequencer: map channel on the selected sequencer rank. Refer to function LL_ADC_REG_SetSequencerRanks().Set ADC channel sampling time Refer to function LL_ADC_SetChannelSamplingTime();

LL_ADC_StructInit

Function name

void LL_ADC_StructInit (LL_ADC_InitTypeDef * pADC_InitStruct)

Function description

Set each LL_ADC_InitTypeDef field to default value.

Parameters

- **pADC_InitStruct:** Pointer to a LL_ADC_InitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

LL_ADC_REG_Init

Function name

ErrorStatus LL_ADC_REG_Init (ADC_TypeDef * ADCx, const LL_ADC_REG_InitTypeDef * pADC_RegInitStruct)

Function description

Initialize some features of ADC group regular.

Parameters

- **ADCx:** ADC instance
- **pADC_RegInitStruct:** Pointer to a LL_ADC_REG_InitTypeDef structure

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: ADC registers are initialized
  - ERROR: ADC registers are not initialized

Notes

- These parameters have an impact on ADC scope: ADC group regular. Refer to corresponding unitary functions into Configuration of ADC hierarchical scope: group regular (functions with prefix "REG").
- The setting of these parameters by function LL_ADC_Init() is conditioned to ADC state: ADC instance must be disabled. This condition is applied to all ADC features, for efficiency and compatibility over all STM32 families. However, the different features can be set under different ADC state conditions (setting possible with ADC enabled without conversion on going, ADC enabled with conversion on going, ...) Each feature can be updated afterwards with a unitary function and potentially with ADC in a different state than disabled, refer to description of each function for setting conditioned to ADC state.
- After using this function, other features must be configured using LL unitary functions. The minimum configuration remaining to be done is: Set ADC group regular or group injected sequencer: map channel on the selected sequencer rank. Refer to function LL_ADC_REG_SetSequencerRanks().Set ADC channel sampling time Refer to function LL_ADC_SetChannelSamplingTime();

LL_ADC_REG_StructInit

Function name

void LL_ADC_REG_StructInit (LL_ADC_REG_InitTypeDef * pADC_RegInitStruct)

Function description

Set each LL_ADC_REG_InitTypeDef field to default value.

Parameters

- **pADC_RegInitStruct:** Pointer to a LL_ADC_REG_InitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

LL_ADC_INJ_Init

Function name

ErrorStatus LL_ADC_INJ_Init (ADC_TypeDef * ADCx, const LL_ADC_INJ_InitTypeDef * pADC_InjInitStruct)

Function description

Initialize some features of ADC group injected.

Parameters

- **ADCx:** ADC instance
- **pADC_InjInitStruct:** Pointer to a LL_ADC_INJ_InitTypeDef structure

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: ADC registers are initialized
  - ERROR: ADC registers are not initialized

Notes

- These parameters have an impact on ADC scope: ADC group injected. Refer to corresponding unitary functions into Configuration of ADC hierarchical scope: group regular (functions with prefix "INJ").
- The setting of these parameters by function LL_ADC_Init() is conditioned to ADC state: ADC instance must be disabled. This condition is applied to all ADC features, for efficiency and compatibility over all STM32 families. However, the different features can be set under different ADC state conditions (setting possible with ADC enabled without conversion on going, ADC enabled with conversion on going, ...) Each feature can be updated afterwards with a unitary function and potentially with ADC in a different state than disabled, refer to description of each function for setting conditioned to ADC state.
- After using this function, other features must be configured using LL unitary functions. The minimum configuration remaining to be done is: Set ADC group injected sequencer: map channel on the selected sequencer rank. Refer to function LL_ADC_INJ_SetSequencerRanks().Set ADC channel sampling time Refer to function LL_ADC_SetChannelSamplingTime();
- Caution if feature ADC group injected contexts queue is enabled (refer to with function LL_ADC_INJ_SetQueueMode()): using successively several times this function will appear as having no effect. To set several features of ADC group injected, use function LL_ADC_INJ_ConfigQueueContext().

LL_ADC_INJ_StructInit

Function name

void LL_ADC_INJ_StructInit (LL_ADC_INJ_InitTypeDef * pADC_InjInitStruct)

Function description

Set each LL_ADC_INJ_InitTypeDef field to default value.

Parameters

- **pADC_InjInitStruct:** Pointer to a LL_ADC_INJ_InitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

74.3 ADC Firmware driver defines

The following section lists the various define and macros of the module.

74.3.1 ADC

ADC

Analog watchdog - Monitored channels

LL_ADC_AWD_DISABLE

ADC analog watchdog monitoring disabled

LL_ADC_AWD_ALL_CHANNELS_REG

ADC analog watchdog monitoring of all channels, converted by group regular only

LL_ADC_AWD_ALL_CHANNELS_INJ

ADC analog watchdog monitoring of all channels, converted by group injected only

LL_ADC_AWD_ALL_CHANNELS_REG_INJ

ADC analog watchdog monitoring of all channels, converted by either group regular or injected

LL_ADC_AWD_CHANNEL_0_REG

ADC analog watchdog monitoring of ADC channel ADCx_IN0, converted by group regular only

LL_ADC_AWD_CHANNEL_0_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN0, converted by group injected only

LL_ADC_AWD_CHANNEL_0_REG_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN0, converted by either group regular or injected

LL_ADC_AWD_CHANNEL_1_REG

ADC analog watchdog monitoring of ADC channel ADCx_IN1, converted by group regular only

LL_ADC_AWD_CHANNEL_1_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN1, converted by group injected only

LL_ADC_AWD_CHANNEL_1_REG_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN1, converted by either group regular or injected

LL_ADC_AWD_CHANNEL_2_REG

ADC analog watchdog monitoring of ADC channel ADCx_IN2, converted by group regular only

LL_ADC_AWD_CHANNEL_2_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN2, converted by group injected only

LL_ADC_AWD_CHANNEL_2_REG_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN2, converted by either group regular or injected

LL_ADC_AWD_CHANNEL_3_REG

ADC analog watchdog monitoring of ADC channel ADCx_IN3, converted by group regular only

LL_ADC_AWD_CHANNEL_3_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN3, converted by group injected only

LL_ADC_AWD_CHANNEL_3_REG_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN3, converted by either group regular or injected

LL_ADC_AWD_CHANNEL_4_REG

ADC analog watchdog monitoring of ADC channel ADCx_IN4, converted by group regular only

LL_ADC_AWD_CHANNEL_4_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN4, converted by group injected only

LL_ADC_AWD_CHANNEL_4_REG_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN4, converted by either group regular or injected

LL_ADC_AWD_CHANNEL_5_REG

ADC analog watchdog monitoring of ADC channel ADCx_IN5, converted by group regular only

LL_ADC_AWD_CHANNEL_5_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN5, converted by group injected only

LL_ADC_AWD_CHANNEL_5_REG_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN5, converted by either group regular or injected

LL_ADC_AWD_CHANNEL_6_REG

ADC analog watchdog monitoring of ADC channel ADCx_IN6, converted by group regular only

LL_ADC_AWD_CHANNEL_6_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN6, converted by group injected only

LL_ADC_AWD_CHANNEL_6_REG_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN6, converted by either group regular or injected

LL_ADC_AWD_CHANNEL_7_REG

ADC analog watchdog monitoring of ADC channel ADCx_IN7, converted by group regular only

LL_ADC_AWD_CHANNEL_7_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN7, converted by group injected only

LL_ADC_AWD_CHANNEL_7_REG_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN7, converted by either group regular or injected

LL_ADC_AWD_CHANNEL_8_REG

ADC analog watchdog monitoring of ADC channel ADCx_IN8, converted by group regular only

LL_ADC_AWD_CHANNEL_8_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN8, converted by group injected only

LL_ADC_AWD_CHANNEL_8_REG_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN8, converted by either group regular or injected

LL_ADC_AWD_CHANNEL_9_REG

ADC analog watchdog monitoring of ADC channel ADCx_IN9, converted by group regular only

LL_ADC_AWD_CHANNEL_9_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN9, converted by group injected only

LL_ADC_AWD_CHANNEL_9_REG_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN9, converted by either group regular or injected

LL_ADC_AWD_CHANNEL_10_REG

ADC analog watchdog monitoring of ADC channel ADCx_IN10, converted by group regular only

LL_ADC_AWD_CHANNEL_10_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN10, converted by group injected only

LL_ADC_AWD_CHANNEL_10_REG_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN10, converted by either group regular or injected

LL_ADC_AWD_CHANNEL_11_REG

ADC analog watchdog monitoring of ADC channel ADCx_IN11, converted by group regular only

LL_ADC_AWD_CHANNEL_11_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN11, converted by group injected only

LL_ADC_AWD_CHANNEL_11_REG_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN11, converted by either group regular or injected

LL_ADC_AWD_CHANNEL_12_REG

ADC analog watchdog monitoring of ADC channel ADCx_IN12, converted by group regular only

LL_ADC_AWD_CHANNEL_12_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN12, converted by group injected only

LL_ADC_AWD_CHANNEL_12_REG_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN12, converted by either group regular or injected

LL_ADC_AWD_CHANNEL_13_REG

ADC analog watchdog monitoring of ADC channel ADCx_IN13, converted by group regular only

LL_ADC_AWD_CHANNEL_13_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN13, converted by group injected only

LL_ADC_AWD_CHANNEL_13_REG_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN13, converted by either group regular or injected

LL_ADC_AWD_CHANNEL_14_REG

ADC analog watchdog monitoring of ADC channel ADCx_IN14, converted by group regular only

LL_ADC_AWD_CHANNEL_14_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN14, converted by group only

LL_ADC_AWD_CHANNEL_14_REG_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN14, converted by either group regular or injected

LL_ADC_AWD_CHANNEL_15_REG

ADC analog watchdog monitoring monitoring of ADC channel ADCx_IN15, converted by group regular only

LL_ADC_AWD_CHANNEL_15_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN15, converted by group injected only

LL_ADC_AWD_CHANNEL_15_REG_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN15, converted by either group regular or injected

LL_ADC_AWD_CHANNEL_16_REG

ADC analog watchdog monitoring of ADC channel ADCx_IN16, converted by group regular only

LL_ADC_AWD_CHANNEL_16_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN16, converted by group injected only

LL_ADC_AWD_CHANNEL_16_REG_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN16, converted by either group regular or injected

LL_ADC_AWD_CHANNEL_17_REG

ADC analog watchdog monitoring of ADC channel ADCx_IN17, converted by group regular only

LL_ADC_AWD_CHANNEL_17_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN17, converted by group injected only

LL_ADC_AWD_CHANNEL_17_REG_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN17, converted by either group regular or injected

LL_ADC_AWD_CHANNEL_18_REG

ADC analog watchdog monitoring of ADC channel ADCx_IN18, converted by group regular only

LL_ADC_AWD_CHANNEL_18_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN18, converted by group injected only

LL_ADC_AWD_CHANNEL_18_REG_INJ

ADC analog watchdog monitoring of ADC channel ADCx_IN18, converted by either group regular or injected

LL_ADC_AWD_CH_VREFINT_REG

ADC analog watchdog monitoring of ADC internal channel connected to VrefInt: Internal voltage reference, converted by group regular only

LL_ADC_AWD_CH_VREFINT_INJ

ADC analog watchdog monitoring of ADC internal channel connected to VrefInt: Internal voltage reference, converted by group injected only

LL_ADC_AWD_CH_VREFINT_REG_INJ

ADC analog watchdog monitoring of ADC internal channel connected to VrefInt: Internal voltage reference, converted by either group regular or injected

LL_ADC_AWD_CH_VBAT_REG

ADC analog watchdog monitoring of ADC internal channel connected to Vbat/4: Vbat voltage through a divider ladder of factor 1/4 to have Vbat always below Vdda, converted by group regular only

LL_ADC_AWD_CH_VBAT_INJ

ADC analog watchdog monitoring of ADC internal channel connected to Vbat/4: Vbat voltage through a divider ladder of factor 1/4 to have Vbat always below Vdda, converted by group injected only

LL_ADC_AWD_CH_VBAT_REG_INJ

ADC analog watchdog monitoring of ADC internal channel connected to Vbat/4: Vbat voltage through a divider ladder of factor 1/4 to have Vbat always below Vdda

LL_ADC_AWD_CH_VDDCORE_REG

ADC analog watchdog monitoring of ADC internal channel connected to VddCore, converted by group regular only

LL_ADC_AWD_CH_VDDCORE_INJ

ADC analog watchdog monitoring of ADC internal channel connected to VddCore, converted by group injected only

LL_ADC_AWD_CH_VDDCORE_REG_INJ

ADC analog watchdog monitoring of ADC internal channel connected to VddCore, converted by either group regular or injected

LL_ADC_AWD_CH_TEMPSENSOR_REG

ADC analog watchdog monitoring of ADC internal channel connected to Temperature sensor, converted by group regular only

LL_ADC_AWD_CH_TEMPSENSOR_INJ

ADC analog watchdog monitoring of ADC internal channel connected to Temperature sensor, converted by group injected only

LL_ADC_AWD_CH_TEMPSENSOR_REG_INJ

ADC analog watchdog monitoring of ADC internal channel connected to Temperature sensor, converted by either group regular or injected

LL_ADC_AWD_CH_DAC1CH1_ADC2_REG

ADC analog watchdog monitoring of ADC internal channel connected to DAC1 Channel 1, converted by group regular only

LL_ADC_AWD_CH_DAC1CH1_ADC2_INJ

ADC analog watchdog monitoring of ADC internal channel connected to DAC1 Channel 1, converted by group injected only

LL_ADC_AWD_CH_DAC1CH1_ADC2_REG_INJ

ADC analog watchdog monitoring of ADC internal channel connected to DAC1 Channel 1, converted by either group regular or injected

LL_ADC_AWD_CH_DAC1CH2_ADC2_REG

ADC analog watchdog monitoring of ADC internal channel connected to DAC1 Channel 2, converted by group regular only

LL_ADC_AWD_CH_DAC1CH2_ADC2_INJ

ADC analog watchdog monitoring of ADC internal channel connected to DAC1 Channel 2, converted by group injected only

LL_ADC_AWD_CH_DAC1CH2_ADC2_REG_INJ

ADC analog watchdog monitoring of ADC internal channel connected to DAC1 Channel 2, converted by either group regular or injected

Analog watchdog - filtering config

LL_ADC_AWD_FILTERING_NONE

ADC analog watchdog filtering disabled: one out-of-window sample is needed to raise flag or interrupt

LL_ADC_AWD_FILTERING_2SAMPLES

ADC analog watchdog filtering enabled: 2 out-of-window samples are needed to raise flag or interrupt

LL_ADC_AWD_FILTERING_3SAMPLES

ADC analog watchdog filtering enabled: 3 out-of-window samples are needed to raise flag or interrupt

LL_ADC_AWD_FILTERING_4SAMPLES

ADC analog watchdog filtering enabled: 4 out-of-window samples are needed to raise flag or interrupt

LL_ADC_AWD_FILTERING_5SAMPLES

ADC analog watchdog filtering enabled: 5 out-of-window samples are needed to raise flag or interrupt

LL_ADC_AWD_FILTERING_6SAMPLES

ADC analog watchdog filtering enabled: 6 out-of-window samples are needed to raise flag or interrupt

LL_ADC_AWD_FILTERING_7SAMPLES

ADC analog watchdog filtering enabled: 7 out-of-window samples are needed to raise flag or interrupt

LL_ADC_AWD_FILTERING_8SAMPLES

ADC analog watchdog filtering enabled: 8 out-of-window samples are needed to raise flag or interrupt

Analog watchdog - Analog watchdog number

LL_ADC_AWD1

ADC analog watchdog number 1

LL_ADC_AWD2

ADC analog watchdog number 2

LL_ADC_AWD3

ADC analog watchdog number 3

Analog watchdog - Thresholds

LL_ADC_AWD_THRESHOLD_HIGH

ADC analog watchdog threshold high

LL_ADC_AWD_THRESHOLD_LOW

ADC analog watchdog threshold low

ADC instance - Channel number

LL_ADC_CHANNEL_0

Channel ADCx_IN0

LL_ADC_CHANNEL_1

Channel ADCx_IN1

LL_ADC_CHANNEL_2

Channel ADCx_IN2

LL_ADC_CHANNEL_3

Channel ADCx_IN3

LL_ADC_CHANNEL_4

Channel ADCx_IN4

LL_ADC_CHANNEL_5

Channel ADCx_IN5

LL_ADC_CHANNEL_6

LL_ADC_CHANNEL_18

Channel ADCx_IN18

LL_ADC_CHANNEL_VREFINT

ADC internal channel connected to VrefInt: Internal voltage reference.

LL_ADC_CHANNEL_DAC1CH1_ADC2

ADC internal channel DAC1 channel 1, channel specific to ADC2

LL_ADC_CHANNEL_DAC1CH2_ADC2

ADC internal channel DAC1 channel 2, channel specific to ADC2

LL_ADC_CHANNEL_VBAT

ADC internal channel connected to Vbat/4: Vbat voltage through a divider ladder of factor 1/4 to have Vbat always below Vdda.

LL_ADC_CHANNEL_TEMPSENSOR

ADC internal channel Temperature sensor

LL_ADC_CHANNEL_VDDCORE

ADC internal channel Vddcore

Channel - Sampling time

LL_ADC_SAMPLINGTIME_1CYCLE_5

Sampling time 1.5 ADC clock cycle

LL_ADC_SAMPLINGTIME_2CYCLES_5

Sampling time 2.5 ADC clock cycles

LL_ADC_SAMPLINGTIME_6CYCLES_5

Sampling time 6.5 ADC clock cycles

LL_ADC_SAMPLINGTIME_11CYCLES_5

Sampling time 11.5 ADC clock cycles

LL_ADC_SAMPLINGTIME_23CYCLES_5

Sampling time 23.5 ADC clock cycles

LL_ADC_SAMPLINGTIME_46CYCLES_5

Sampling time 46.5 ADC clock cycles

LL_ADC_SAMPLINGTIME_246CYCLES_5

Sampling time 246.5 ADC clock cycles

LL_ADC_SAMPLINGTIME_1499CYCLES_5

Sampling time 1499.5 ADC clock cycles

Channel - Single or differential ending

LL_ADC_SINGLE_ENDED

ADC channel ending set to single ended (literal also used to set calibration mode)

ADC common - Measurement path to internal channels

LL_ADC_PATH_INTERNAL_NONE

ADC measurement paths all disabled

LL_ADC_PATH_INTERNAL_VREFINT

ADC measurement path to internal channel VrefInt

LL_ADC_PATH_INTERNAL_VBAT

ADC measurement path to internal channel Vbat

LL_ADC_PATH_INTERNAL_TEMPSENSOR

ADC measurement path to internal channel Vsense

ADC flags

LL_ADC_FLAG_ADRDY

ADC flag ADC instance ready

LL_ADC_FLAG_EOC

ADC flag ADC group regular end of unitary conversion

LL_ADC_FLAG_EOS

ADC flag ADC group regular end of sequence conversions

LL_ADC_FLAG_OVR

ADC flag ADC group regular overrun

LL_ADC_FLAG_EOSMP

ADC flag ADC group regular end of sampling phase

LL_ADC_FLAG_JEOC

ADC flag ADC group injected end of unitary conversion

LL_ADC_FLAG_JEOS

ADC flag ADC group injected end of sequence conversions

LL_ADC_FLAG_JQOVF

ADC flag ADC group injected contexts queue overflow

LL_ADC_FLAG_AWD1

ADC flag ADC analog watchdog 1

LL_ADC_FLAG_AWD2

ADC flag ADC analog watchdog 2

LL_ADC_FLAG_AWD3

ADC flag ADC analog watchdog 3

LL_ADC_FLAG_LDORDY

ADC internal voltage regulator Ready

LL_ADC_FLAG_ADRDY_MST

ADC flag ADC multimode master instance ready

LL_ADC_FLAG_ADRDY_SLV

ADC flag ADC multimode slave instance ready

LL_ADC_FLAG_EOC_MST

ADC flag ADC multimode master group regular end of unitary conversion

LL_ADC_FLAG_EOC_SLV

ADC flag ADC multimode slave group regular end of unitary conversion

LL_ADC_FLAG_EOS_MST

ADC flag ADC multimode master group regular end of sequence conversions

LL_ADC_FLAG_EOS_SLV

ADC flag ADC multimode slave group regular end of sequence conversions

LL_ADC_FLAG_OVR_MST

ADC flag ADC multimode master group regular overrun

LL_ADC_FLAG_OVR_SLV

ADC flag ADC multimode slave group regular overrun

LL_ADC_FLAG_EOSMP_MST

ADC flag ADC multimode master group regular end of sampling phase

LL_ADC_FLAG_EOSMP_SLV

ADC flag ADC multimode slave group regular end of sampling phase

LL_ADC_FLAG_JEOC_MST

ADC flag ADC multimode master group injected end of unitary conversion

LL_ADC_FLAG_JEOC_SLV

ADC flag ADC multimode slave group injected end of unitary conversion

LL_ADC_FLAG_JEOS_MST

ADC flag ADC multimode master group injected end of sequence conversions

LL_ADC_FLAG_JEOS_SLV

ADC flag ADC multimode slave group injected end of sequence conversions

LL_ADC_FLAG_JQOVF_MST

ADC flag ADC multimode master group injected contexts queue overflow

LL_ADC_FLAG_JQOVF_SLV

ADC flag ADC multimode slave group injected contexts queue overflow

LL_ADC_FLAG_AWD1_MST

ADC flag ADC multimode master analog watchdog 1 of the ADC master

LL_ADC_FLAG_AWD1_SLV

ADC flag ADC multimode slave analog watchdog 1 of the ADC slave

LL_ADC_FLAG_AWD2_MST

ADC flag ADC multimode master analog watchdog 2 of the ADC master

LL_ADC_FLAG_AWD2_SLV

ADC flag ADC multimode slave analog watchdog 2 of the ADC slave

LL_ADC_FLAG_AWD3_MST

ADC flag ADC multimode master analog watchdog 3 of the ADC master

LL_ADC_FLAG_AWD3_SLV

ADC flag ADC multimode slave analog watchdog 3 of the ADC slave

LL_ADC_FLAG_LDORDY_MST

ADC interruption ADC internal voltage regulator of the ADC master

LL_ADC_FLAG_LDORDY_SLV

ADC interruption ADC internal voltage regulator of the ADC slave

ADC instance - Groups

LL_ADC_GROUP_REGULAR

ADC group regular (available on all STM32 devices)

LL_ADC_GROUP_INJECTED

ADC group injected (not available on all STM32 devices)

LL_ADC_GROUP_REGULAR_INJECTED

ADC both groups regular and injected

Definitions of constants used by helper macro

LL_ADC_TEMPERATURE_CALC_ERROR

Definitions of ADC hardware constraints delays

LL_ADC_DELAY_INTERNAL_REGUL_STAB_US

Delay for ADC stabilization time (ADC voltage regulator start-up time)

LL_ADC_DELAY_VREFINT_STAB_US

Delay for internal voltage reference stabilization time

LL_ADC_DELAY_TEMPSENSOR_STAB_US

Delay for temperature sensor stabilization time

LL_ADC_DELAY_TEMPSENSOR_BUFFER_STAB_US

Delay for temperature sensor buffer stabilization time (starting from ADC enable, refer to

LL_ADC_DELAY_CALIB_ENABLE_ADC_CYCLES

Delay required between ADC end of calibration and ADC enable

ADC group injected - Context queue mode

LL_ADC_INJ_QUEUE_2CONTEXTS_LAST_ACTIVE

LL_ADC_INJ_QUEUE_2CONTEXTS_END_EMPTY

LL_ADC_INJ_QUEUE_DISABLE

ADC group injected - Sequencer discontinuous mode

LL_ADC_INJ_SEQ_DISCONT_DISABLE

ADC group injected sequencer discontinuous mode disable

LL_ADC_INJ_SEQ_DISCONT_1RANK

ADC group injected sequencer discontinuous mode enable with sequence interruption every rank

ADC group injected - Sequencer ranks

LL_ADC_INJ_RANK_1

ADC group injected sequencer rank 1

LL_ADC_INJ_RANK_2

ADC group injected sequencer rank 2

LL_ADC_INJ_RANK_3

ADC group injected sequencer rank 3

LL_ADC_INJ_RANK_4

ADC group injected sequencer rank 4

ADC group injected - Sequencer scan length

LL_ADC_INJ_SEQ_SCAN_DISABLE

ADC group injected sequencer disable (equivalent to sequencer of 1 rank: ADC conversion on only 1 channel)

LL_ADC_INJ_SEQ_SCAN_ENABLE_2RANKS

ADC group injected sequencer enable with 2 ranks in the sequence

LL_ADC_INJ_SEQ_SCAN_ENABLE_3RANKS

ADC group injected sequencer enable with 3 ranks in the sequence

LL_ADC_INJ_SEQ_SCAN_ENABLE_4RANKS

ADC group injected sequencer enable with 4 ranks in the sequence

ADC group injected - Trigger edge

LL_ADC_INJ_TRIG_EXT_RISING

ADC group injected conversion trigger polarity set to rising edge

LL_ADC_INJ_TRIG_EXT_FALLING

ADC group injected conversion trigger polarity set to falling edge

LL_ADC_INJ_TRIG_EXT_RISINGFALLING

ADC group injected conversion trigger polarity set to both rising and falling edges

ADC group injected - Trigger source

LL_ADC_INJ_TRIG_SOFTWARE

ADC group inject. conversion trigger internal: SW start.

LL_ADC_INJ_TRIG_EXT_TIM1_TRGO

ADC group inject. conversion trigger from external peripheral: TIM1 TRGO event. Trigger edge set to rising edge (default setting).

LL_ADC_INJ_TRIG_EXT_TIM1_CH4

ADC group inject. conversion trigger from external peripheral: TIM1 channel 4 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

LL_ADC_INJ_TRIG_EXT_TIM2_TRGO

ADC group inject. conversion trigger from external peripheral: TIM2 TRGO event. Trigger edge set to rising edge (default setting).

LL_ADC_INJ_TRIG_EXT_TIM2_CH1

ADC group inject. conversion trigger from external peripheral: TIM2 channel 1 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

LL_ADC_INJ_TRIG_EXT_TIM3_CH4

ADC group inject. conversion trigger from external peripheral: TIM3 channel 4 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

LL_ADC_INJ_TRIG_EXT_TIM4_TRGO

ADC group inject. conversion trigger from external peripheral: TIM4 TRGO event. Trigger edge set to rising edge (default setting).

LL_ADC_INJ_TRIG_EXT_EXTI_LINE15

ADC group inject. conversion trigger from external peripheral: external interrupt line 15. Trigger edge set to rising edge (default setting).

LL_ADC_INJ_TRIG_EXT_TIM1_TRGO2

ADC group inject. conversion trigger from external peripheral: TIM1 TRGO2 event. Trigger edge set to rising edge (default setting).

LL_ADC_INJ_TRIG_EXT_TIM3_CH3

ADC group inject. conversion trigger from external peripheral: TIM3 channel 3 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

LL_ADC_INJ_TRIG_EXT_TIM3_TRGO

ADC group inject. conversion trigger from external peripheral: TIM3 TRGO event. Trigger edge set to rising edge (default setting).

LL_ADC_INJ_TRIG_EXT_TIM3_CH1

ADC group inject. conversion trigger from external peripheral: TIM3 channel 1 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

LL_ADC_INJ_TRIG_EXT_TIM6_TRGO

ADC group inject. conversion trigger from external peripheral: TIM6 TRGO event. Trigger edge set to rising edge (default setting).

LL_ADC_INJ_TRIG_EXT_TIM15_TRGO

ADC group inject. conversion trigger from external peripheral: TIM12 TRGO event. Trigger edge set to rising edge (default setting).

LL_ADC_INJ_TRIG_EXT_LPTIM1_CH2

ADC group inject. conversion trigger from external peripheral: LPTIM1 channel 2 event. Trigger edge set to rising edge (default setting).

LL_ADC_INJ_TRIG_EXT_LPTIM2_CH2

ADC group inject. conversion trigger from external peripheral: LPTIM2 channel 2 event. Trigger edge set to rising edge (default setting).

LL_ADC_INJ_TRIG_EXT_LPTIM3_CH1

ADC group inject. conversion trigger from external peripheral: LPTIM3 channel 1 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

LL_ADC_INJ_TRIG_EXT_LPTIM4_OUT

ADC group inject. conversion trigger from external peripheral: LPTIM4 OUT event. Trigger edge set to rising edge (default setting).

ADC group injected - Automatic trigger mode

LL_ADC_INJ_TRIG_INDEPENDENT

ADC group injected conversion trigger independent. Setting mandatory if ADC group injected injected trigger source is set to an external trigger.

LL_ADC_INJ_TRIG_FROM_GRP_REGULAR

ADC group injected conversion trigger from ADC group regular. Setting compliant only with group injected trigger source set to SW start, without any further action on ADC group injected conversion start or stop: in this case, ADC group injected is controlled only from ADC group regular.

ADC interruptions for configuration (interruption enable or disable)

LL_ADC_IT_ADRDY

ADC interruption ADC instance ready

LL_ADC_IT_EOC

ADC interruption ADC group regular end of unitary conversion

LL_ADC_IT_EOS

ADC interruption ADC group regular end of sequence conversions

LL_ADC_IT_OVR

ADC interruption ADC group regular overrun

LL_ADC_IT_EOSMP

ADC interruption ADC group regular end of sampling phase

LL_ADC_IT_JEOC

ADC interruption ADC group injected end of unitary conversion

LL_ADC_IT_JEOS

ADC interruption ADC group injected end of sequence conversions

LL_ADC_IT_JQOVF

ADC interruption ADC group injected contexts queue overflow

LL_ADC_IT_AWD1

ADC interruption ADC analog watchdog 1

LL_ADC_IT_AWD2

ADC interruption ADC analog watchdog 2

LL_ADC_IT_AWD3

ADC interruption ADC analog watchdog 3

LL_ADC_IT_LDORDY

ADC interruption ADC internal voltage regulator

ADC left Shift

LL_ADC_LEFT_BIT_SHIFT_NONE

ADC no bit shift left applied on the final ADC conversion data

LL_ADC_LEFT_BIT_SHIFT_1

ADC 1 bit shift left applied on the final ADC conversion data

LL_ADC_LEFT_BIT_SHIFT_2

ADC 2 bits shift left applied on the final ADC conversion data

LL_ADC_LEFT_BIT_SHIFT_3

ADC 3 bits shift left applied on the final ADC conversion data

LL_ADC_LEFT_BIT_SHIFT_4

ADC 4 bits shift left applied on the final ADC conversion data

LL_ADC_LEFT_BIT_SHIFT_5

ADC 5 bits shift left applied on the final ADC conversion data

LL_ADC_LEFT_BIT_SHIFT_6

ADC 6 bits shift left applied on the final ADC conversion data

LL_ADC_LEFT_BIT_SHIFT_7

ADC 7 bits shift left applied on the final ADC conversion data

LL_ADC_LEFT_BIT_SHIFT_8

ADC 8 bits shift left applied on the final ADC conversion data

LL_ADC_LEFT_BIT_SHIFT_9

ADC 9 bits shift left applied on the final ADC conversion data

LL_ADC_LEFT_BIT_SHIFT_10

ADC 10 bits shift left applied on the final ADC conversion data

LL_ADC_LEFT_BIT_SHIFT_11

ADC 11 bits shift left applied on the final ADC conversion data

LL_ADC_LEFT_BIT_SHIFT_12

ADC 12 bits shift left applied on the final ADC conversion data

LL_ADC_LEFT_BIT_SHIFT_13

ADC 13 bits shift left applied on the final ADC conversion data

LL_ADC_LEFT_BIT_SHIFT_14

ADC 14 bits shift left applied on the final ADC conversion data

LL_ADC_LEFT_BIT_SHIFT_15

ADC 15 bits shift left applied on the final ADC conversion data

ADC instance - Low power mode

LL_ADC_LP_AUTOWAIT_DISABLE

ADC low power mode auto delay disabled.

LL_ADC_LP_AUTOWAIT_ENABLE

ADC low power mode auto delay enabled: dynamic low power mode, ADC conversions are performed only when necessary (when previous ADC conversion data is read). See description with function

Multimode - Data format

LL_ADC_MULTI_REG_DATA_EACH_ADC

ADC multimode group regular data format: conversion data in data register of each ADC instance. If ADC data transfer by DMA is used: each ADC uses its own DMA channel, with its individual DMA transfer settings.

LL_ADC_MULTI_REG_DATA_COMMON_32B

ADC multimode group regular data format: conversion data in two ADC common instance data registers (CDR, CDR2) with packing option on 32 bit. In register CDR, data packing on 32 bit: ADC master and slave data are concatenated (data master in [15; 0], data slave in [31; 16]), therefore data width must be lower than 16 bit (even with ADC resolution 12 bit, higher width reachable by post processing: oversampling, offset, ...). In register CDR2, data of master and slave are alternatively set in full register width 32 bit, therefore no constraint on data width. In case of usage with DMA, CDR generate ones transfer request and CDR2 two transfer requests per conversion.

LL_ADC_MULTI_REG_DATA_COMMON_16B

ADC multimode group regular data format: conversion data in two ADC common instance data registers (CDR, CDR2) with packing option on 16 bit. In register CDR, data packing on 16 bit: ADC master and slave data are concatenated (data master in [7; 0], data slave in [15; 8]), therefore data width must be lower than 8 bit (even with ADC resolution 8 bit, higher width reachable by post processing: oversampling, offset, ...). In register CDR2, data of master and slave are alternatively set in full register width 32 bit, therefore no constraint on data width. In case of usage with DMA, CDR generate ones transfer request and CDR2 two transfer requests per conversion.

Multimode - ADC master or slave

LL_ADC_MULTI_MASTER

In multimode, selection among several ADC instances: ADC master

LL_ADC_MULTI_SLAVE

In multimode, selection among several ADC instances: ADC slave

LL_ADC_MULTI_MASTER_SLAVE

In multimode, selection among several ADC instances: both ADC master and ADC slave

Multimode - Mode

LL_ADC_MULTI_INDEPENDENT

ADC dual mode disabled (ADC independent mode)

LL_ADC_MULTI_DUAL_REG_SIMULT

ADC dual mode enabled: group regular simultaneous

LL_ADC_MULTI_DUAL_REG_INTERL

ADC dual mode enabled: Combined group regular interleaved

LL_ADC_MULTI_DUAL_INJ_SIMULT

ADC dual mode enabled: group injected simultaneous

LL_ADC_MULTI_DUAL_INJ_ALTERN

ADC dual mode enabled: group injected alternate trigger. Works only with external triggers (not SW start)

LL_ADC_MULTI_DUAL_REG_SIM_INJ_SIM

ADC dual mode enabled: Combined group regular simultaneous + group injected simultaneous

LL_ADC_MULTI_DUAL_REG_SIM_INJ_ALT

ADC dual mode enabled: Combined group regular simultaneous + group injected alternate trigger

LL_ADC_MULTI_DUAL_REG_INT_INJ_SIM

ADC dual mode enabled: Combined group regular interleaved + group injected simultaneous

Multimode - Delay between two sampling phases

LL_ADC_MULTI_TWOSMP_DELAY_1CYCLE

ADC multimode interleaved delay between two sampling phases: 1 ADC clock cycle

LL_ADC_MULTI_TWOSMP_DELAY_2CYCLES

ADC multimode interleaved delay between two sampling phases: 2 ADC clock cycles

LL_ADC_MULTI_TWOSMP_DELAY_3CYCLES

ADC multimode interleaved delay between two sampling phases: 3 ADC clock cycles

LL_ADC_MULTI_TWOSMP_DELAY_4CYCLES

ADC multimode interleaved delay between two sampling phases: 4 ADC clock cycles

LL_ADC_MULTI_TWOSMP_DELAY_5CYCLES

ADC multimode interleaved delay between two sampling phases: 5 ADC clock cycles

LL_ADC_MULTI_TWOSMP_DELAY_6CYCLES

ADC multimode interleaved delay between two sampling phases: 6 ADC clock cycles

LL_ADC_MULTI_TWOSMP_DELAY_7CYCLES

ADC multimode interleaved delay between two sampling phases: 7 ADC clock cycles

LL_ADC_MULTI_TWOSMP_DELAY_8CYCLES

ADC multimode interleaved delay between two sampling phases: 8 ADC clock cycles

LL_ADC_MULTI_TWOSMP_DELAY_9CYCLES

ADC multimode interleaved delay between two sampling phases: 9 ADC clock cycles

LL_ADC_MULTI_TWOSMP_DELAY_10CYCLES

ADC multimode interleaved delay between two sampling phases: 10 ADC clock cycles

LL_ADC_MULTI_TWOSMP_DELAY_11CYCLES

ADC multimode interleaved delay between two sampling phases: 11 ADC clock cycles

LL_ADC_MULTI_TWOSMP_DELAY_12CYCLES

ADC multimode interleaved delay between two sampling phases: 12 ADC clock cycles

LL_ADC_MULTI_TWOSMP_DELAY_13CYCLES

ADC multimode interleaved delay between two sampling phases: 13 ADC clock cycles

ADC instance - Offset instance

LL_ADC_OFFSET_1

ADC offset instance 1: ADC channel and offset level to which the offset programmed will be applied (independently of channel mapped on ADC group regular or injected)

LL_ADC_OFFSET_2

ADC offset instance 2: ADC channel and offset level to which the offset programmed will be applied (independently of channel mapped on ADC group regular or injected)

LL_ADC_OFFSET_3

ADC offset instance 3: ADC channel and offset level to which the offset programmed will be applied (independently of channel mapped on ADC group regular or injected)

LL_ADC_OFFSET_4

ADC offset instance 4: ADC channel and offset level to which the offset programmed will be applied (independently of channel mapped on ADC group regular or injected)

ADC instance - Offset sign

LL_ADC_OFFSET_SIGN_NEGATIVE

ADC offset is negative

LL_ADC_OFFSET_SIGN_POSITIVE

ADC offset is positive

ADC instance - Offset signed saturation mode

LL_ADC_OFFSET_SIGNED_SAT_DISABLE

ADC offset signed saturation is disabled

LL_ADC_OFFSET_SIGNED_SAT_ENABLE

ADC offset signed saturation is enabled

ADC instance - Offset unsigned saturation mode

LL_ADC_OFFSET_UNSIGNED_SAT_DISABLE

ADC offset unsigned saturation is disabled

LL_ADC_OFFSET_UNSIGNED_SAT_ENABLE

ADC offset unsigned saturation is enabled

Oversampling - Discontinuous mode

LL_ADC_OVS_REG_CONT

ADC oversampling discontinuous mode: continuous mode (all conversions of oversampling ratio are done from 1 trigger)

LL_ADC_OVS_REG_DISCONT

ADC oversampling discontinuous mode: discontinuous mode (each conversion of oversampling ratio needs a trigger)

Oversampling - Oversampling scope

LL_ADC_OVS_DISABLE

ADC oversampling disabled.

LL_ADC_OVS_GRP_REGULAR_CONTINUED

ADC oversampling on conversions of ADC group regular. If group injected interrupts group regular: when ADC group injected is triggered, the oversampling on ADC group regular is temporary stopped and continued afterwards.

LL_ADC_OVS_GRP_REGULAR_RESUMED

ADC oversampling on conversions of ADC group regular. If group injected interrupts group regular: when ADC group injected is triggered, the oversampling on ADC group regular is resumed from start (oversampler buffer reset).

LL_ADC_OVS_GRP_INJECTED

ADC oversampling on conversions of ADC group injected.

LL_ADC_OVS_GRP_INJ_REG_RESUMED

ADC oversampling on conversions of both ADC groups regular and injected. If group injected interrupting group regular: when ADC group injected is triggered, the oversampling on ADC group regular is resumed from start (oversampler buffer reset).

Oversampling - Data right shift

LL_ADC_OVS_SHIFT_NONE

ADC oversampling no shift (sum of the ADC conversions data is not divided to result as oversampling conversion data)

LL_ADC_OVS_SHIFT_RIGHT_1

ADC oversampling right shift of 1 (sum of the ADC conversions data (after OVS ratio) is divided by 2 to result as oversampling conversion data)

LL_ADC_OVS_SHIFT_RIGHT_2

ADC oversampling right shift of 2 (sum of the ADC conversions data (after OVS ratio) is divided by 4 to result as oversampling conversion data)

LL_ADC_OVS_SHIFT_RIGHT_3

ADC oversampling right shift of 3 (sum of the ADC conversions data (after OVS ratio) is divided by 8 to result as oversampling conversion data)

LL_ADC_OVS_SHIFT_RIGHT_4

ADC oversampling right shift of 4 (sum of the ADC conversions data (after OVS ratio) is divided by 16 to result as oversampling conversion data)

LL_ADC_OVS_SHIFT_RIGHT_5

ADC oversampling right shift of 5 (sum of the ADC conversions data (after OVS ratio) is divided by 32 to result as oversampling conversion data)

LL_ADC_OVS_SHIFT_RIGHT_6

ADC oversampling right shift of 6 (sum of the ADC conversions data (after OVS ratio) is divided by 64 to result as oversampling conversion data)

LL_ADC_OVS_SHIFT_RIGHT_7

ADC oversampling right shift of 7 (sum of the ADC conversions data (after OVS ratio) is divided by 128 to result as oversampling conversion data)

LL_ADC_OVS_SHIFT_RIGHT_8

ADC oversampling right shift of 8 (sum of the ADC conversions data (after OVS ratio) is divided by 256 to result as oversampling conversion data)

LL_ADC_OVS_SHIFT_RIGHT_9

ADC oversampling right shift of 8 (sum of the ADC conversions data (after OVS ratio) is divided by 512 to result as oversampling conversion data)

LL_ADC_OVS_SHIFT_RIGHT_10

ADC oversampling right shift of 8 (sum of the ADC conversions data (after OVS ratio) is divided by 1024 to result as oversampling conversion data)

ADC instance - Measurement path to internal channels

LL_ADC_PATH_INTERNAL_VDDCORE

ADC measurement path to internal channel VddCore

ADC registers compliant with specific purpose

LL_ADC_DMA_REG_REGULAR_DATA

ADC group regular conversion data register (corresponding to register DR) to be used with ADC configured in independent mode. Without DMA transfer, register accessed by LL function

LL_ADC_DMA_REG_REGULAR_MULTI_NO_PACKING

ADC group regular conversion data register to be used with ADC configured in multimode (available on STM32 devices with several ADC instances), without data packing. Register used is CDR2, compliant with all ADC multimode data format and data width, refer to description of literals in

LL_ADC_DMA_REG_REGULAR_MULTI_PACKING

ADC group regular conversion data register to be used with ADC configured in multimode (available on STM32 devices with several ADC instances), with data packing. Register used is CDR, usable under conditions of ADC multimode data format selected and data width, refer to description of literals in

ADC group regular - Continuous mode

LL_ADC_REG_CONV_SINGLE

ADC conversions performed in single mode: one conversion per trigger

LL_ADC_REG_CONV_CONTINUOUS

ADC conversions performed in continuous mode: after the first trigger, following conversions launched successively automatically

ADC group regular - Data transfer mode of ADC conversion data

LL_ADC_REG_DR_TRANSFER

ADC conversions data are available in ADC data register only

LL_ADC_REG_DMA_TRANSFER_LIMITED

ADC conversion data are transferred by DMA, in limited mode (one shot mode): DMA transfer requests are stopped when number of DMA data transfers (number of ADC conversions) is reached. This ADC mode is intended to be used with DMA mode non-circular.

LL_ADC_REG_DMA_TRANSFER_UNLIMITED

ADC conversion data are transferred by DMA, in unlimited mode: DMA transfer requests are unlimited, whatever number of DMA data transferred (number of ADC conversions). This ADC mode is intended to be used with DMA mode circular.

LL_ADC_REG_MDF_TRANSFER

ADC conversion data are transferred to MDF

ADC group regular - Overrun behavior on conversion data

LL_ADC_REG_OVR_DATA_PRESERVED

ADC group regular behavior in case of overrun: data preserved

LL_ADC_REG_OVR_DATA_OVERWRITTEN

ADC group regular behavior in case of overrun: data overwritten

ADC group regular - Sampling mode

LL_ADC_REG_SAMPLING_MODE_NORMAL

ADC conversions sampling phase duration is defined using

LL_ADC_REG_SAMPLING_MODE_BULB

ADC conversions sampling phase starts immediately after end of conversion, and stops upon trigger event. Note: First conversion is using minimal sampling time (see

LL_ADC_REG_SAMPLING_MODE_TRIGGER_CONTROLED

ADC conversions sampling phase is controlled by trigger events: Trigger rising edge = start sampling, Trigger falling edge = stop sampling and start conversion.

ADC group regular - Sequencer discontinuous mode

LL_ADC_REG_SEQ_DISCONT_DISABLE

ADC group regular sequencer discontinuous mode disable

LL_ADC_REG_SEQ_DISCONT_1RANK

ADC group regular sequencer discontinuous mode enable with sequence interruption every rank

LL_ADC_REG_SEQ_DISCONT_2RANKS

ADC group regular sequencer discontinuous mode enabled with sequence interruption every 2 ranks

LL_ADC_REG_SEQ_DISCONT_3RANKS

ADC group regular sequencer discontinuous mode enable with sequence interruption every 3 ranks

LL_ADC_REG_SEQ_DISCONT_4RANKS

ADC group regular sequencer discontinuous mode enable with sequence interruption every 4 ranks

LL_ADC_REG_SEQ_DISCONT_5RANKS

ADC group regular sequencer discontinuous mode enable with sequence interruption every 5 ranks

LL_ADC_REG_SEQ_DISCONT_6RANKS

ADC group regular sequencer discontinuous mode enable with sequence interruption every 6 ranks

LL_ADC_REG_SEQ_DISCONT_7RANKS

ADC group regular sequencer discontinuous mode enable with sequence interruption every 7 ranks

LL_ADC_REG_SEQ_DISCONT_8RANKS

ADC group regular sequencer discontinuous mode enable with sequence interruption every 8 ranks

ADC group regular - Sequencer ranks

LL_ADC_REG_RANK_1

ADC group regular sequencer rank 1

LL_ADC_REG_RANK_2

ADC group regular sequencer rank 2

LL_ADC_REG_RANK_3

ADC group regular sequencer rank 3

LL_ADC_REG_RANK_4

ADC group regular sequencer rank 4

LL_ADC_REG_RANK_5

ADC group regular sequencer rank 5

LL_ADC_REG_RANK_6

ADC group regular sequencer rank 6

LL_ADC_REG_RANK_7

ADC group regular sequencer rank 7

LL_ADC_REG_RANK_8

ADC group regular sequencer rank 8

LL_ADC_REG_RANK_9

ADC group regular sequencer rank 9

LL_ADC_REG_RANK_10

ADC group regular sequencer rank 10

LL_ADC_REG_RANK_11

ADC group regular sequencer rank 11

LL_ADC_REG_RANK_12

ADC group regular sequencer rank 12

LL_ADC_REG_RANK_13

ADC group regular sequencer rank 13

LL_ADC_REG_RANK_14

ADC group regular sequencer rank 14

LL_ADC_REG_RANK_15

ADC group regular sequencer rank 15

LL_ADC_REG_RANK_16

ADC group regular sequencer rank 16

ADC group regular - Sequencer scan length

LL_ADC_REG_SEQ_SCAN_DISABLE

ADC group regular sequencer disable (equivalent to sequencer of 1 rank: ADC conversion on only 1 channel)

LL_ADC_REG_SEQ_SCAN_ENABLE_2RANKS

ADC group regular sequencer enable with 2 ranks in the sequence

LL_ADC_REG_SEQ_SCAN_ENABLE_3RANKS

ADC group regular sequencer enable with 3 ranks in the sequence

LL_ADC_REG_SEQ_SCAN_ENABLE_4RANKS

ADC group regular sequencer enable with 4 ranks in the sequence

LL_ADC_REG_SEQ_SCAN_ENABLE_5RANKS

ADC group regular sequencer enable with 5 ranks in the sequence

LL_ADC_REG_SEQ_SCAN_ENABLE_6RANKS

ADC group regular sequencer enable with 6 ranks in the sequence

LL_ADC_REG_SEQ_SCAN_ENABLE_7RANKS

ADC group regular sequencer enable with 7 ranks in the sequence

LL_ADC_REG_SEQ_SCAN_ENABLE_8RANKS

ADC group regular sequencer enable with 8 ranks in the sequence

LL_ADC_REG_SEQ_SCAN_ENABLE_9RANKS

ADC group regular sequencer enable with 9 ranks in the sequence

LL_ADC_REG_SEQ_SCAN_ENABLE_10RANKS

ADC group regular sequencer enable with 10 ranks in the sequence

LL_ADC_REG_SEQ_SCAN_ENABLE_11RANKS

ADC group regular sequencer enable with 11 ranks in the sequence

LL_ADC_REG_SEQ_SCAN_ENABLE_12RANKS

ADC group regular sequencer enable with 12 ranks in the sequence

LL_ADC_REG_SEQ_SCAN_ENABLE_13RANKS

ADC group regular sequencer enable with 13 ranks in the sequence

LL_ADC_REG_SEQ_SCAN_ENABLE_14RANKS

ADC group regular sequencer enable with 14 ranks in the sequence

LL_ADC_REG_SEQ_SCAN_ENABLE_15RANKS

ADC group regular sequencerenable with 15 ranks in the sequence

LL_ADC_REG_SEQ_SCAN_ENABLE_16RANKS

ADC group regular sequencer enable with 16 ranks in the sequence

ADC group regular - Trigger edge

LL_ADC_REG_TRIG_EXT_RISING

ADC group regular conversion trigger polarity set to rising edge

LL_ADC_REG_TRIG_EXT_FALLING

ADC group regular conversion trigger polarity set to falling edge

LL_ADC_REG_TRIG_EXT_RISINGFALLING

ADC group regular conversion trigger polarity set to both rising and falling edges

ADC group regular - Trigger source

LL_ADC_REG_TRIG_SOFTWARE

ADC group regular conversion trigger internal: SW start.

LL_ADC_REG_TRIG_EXT_TIM1_CH1

ADC group regular conversion trigger from external peripheral: TIM1 channel 1 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

LL_ADC_REG_TRIG_EXT_TIM1_CH2

ADC group regular conversion trigger from external peripheral: TIM1 channel 2 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

LL_ADC_REG_TRIG_EXT_TIM1_CH3

ADC group regular conversion trigger from external peripheral: TIM1 channel 3 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

LL_ADC_REG_TRIG_EXT_TIM2_CH2

ADC group regular conversion trigger from external peripheral: TIM2 channel 2 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

LL_ADC_REG_TRIG_EXT_TIM3_TRGO

ADC group regular conversion trigger from external peripheral: TIM3 TRGO event. Trigger edge set to rising edge (default setting).

LL_ADC_REG_TRIG_EXT_TIM4_CH4

ADC group regular conversion trigger from external peripheral: TIM4 channel 4 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

LL_ADC_REG_TRIG_EXT_EXTI_LINE11

ADC group regular conversion trigger from external periph.: external interrupt line 11 event. Trigger edge set to rising edge (default setting).

LL_ADC_REG_TRIG_EXT_TIM1_TRGO

ADC group regular conversion trigger from external peripheral: TIM1 TRGO event. Trigger edge set to rising edge (default setting).

LL_ADC_REG_TRIG_EXT_TIM1_TRGO2

ADC group regular conversion trigger from external peripheral: TIM1 TRGO2 event. Trigger edge set to rising edge (default setting).

LL_ADC_REG_TRIG_EXT_TIM2_TRGO

ADC group regular conversion trigger from external peripheral: TIM2 TRGO event. Trigger edge set to rising edge (default setting).

LL_ADC_REG_TRIG_EXT_TIM4_TRGO

ADC group regular conversion trigger from external peripheral: TIM4 TRGO event. Trigger edge set to rising edge (default setting).

LL_ADC_REG_TRIG_EXT_TIM6_TRGO

ADC group regular conversion trigger from external peripheral: TIM6 TRGO event. Trigger edge set to rising edge (default setting).

LL_ADC_REG_TRIG_EXT_TIM15_TRGO

ADC group regular conversion trigger from external peripheral: TIM15 TRGO event. Trigger edge set to rising edge (default setting).

LL_ADC_REG_TRIG_EXT_TIM3_CH4

ADC group regular conversion trigger from external peripheral: TIM3 channel 4 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

LL_ADC_REG_TRIG_EXT_EXTI_LINE15

ADC group regular conversion trigger from external periph.: external interrupt line 15 event. Trigger edge set to rising edge (default setting).

LL_ADC_REG_TRIG_EXT_LPTIM1_CH1

ADC group regular conversion trigger from external peripheral: LPTIM1 channel 1 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

LL_ADC_REG_TRIG_EXT_LPTIM2_CH1

ADC group regular conversion trigger from external peripheral: LPTIM2 channel 1 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

LL_ADC_REG_TRIG_EXT_LPTIM3_CH1

ADC group regular conversion trigger from external peripheral: LPTIM3 channel 1 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

LL_ADC_REG_TRIG_EXT_LPTIM4_OUT

ADC group regular conversion trigger from external peripheral: LPTIM4 OUT event. Trigger edge set to rising edge (default setting).

ADC instance - Resolution

LL_ADC_RESOLUTION_12B

ADC resolution 12 bits

LL_ADC_RESOLUTION_10B

ADC resolution 10 bits

LL_ADC_RESOLUTION_8B

ADC resolution 8 bits

LL_ADC_RESOLUTION_6B

ADC resolution 6 bits

ADC helper macro

__LL_ADC_CHANNEL_TO_DECIMAL_NB

Description:

- Helper macro to get ADC channel number in decimal format from literals LL_ADC_CHANNEL_x.

Parameters:

- __CHANNEL__: This parameter can be one of the following values:
  - LL_ADC_CHANNEL_0
  - LL_ADC_CHANNEL_1
  - LL_ADC_CHANNEL_2
  - LL_ADC_CHANNEL_3
  - LL_ADC_CHANNEL_4
  - LL_ADC_CHANNEL_5
  - LL_ADC_CHANNEL_6
  - LL_ADC_CHANNEL_7
  - LL_ADC_CHANNEL_8
  - LL_ADC_CHANNEL_9
  - LL_ADC_CHANNEL_10
  - LL_ADC_CHANNEL_11
  - LL_ADC_CHANNEL_12
  - LL_ADC_CHANNEL_13
  - LL_ADC_CHANNEL_14
  - LL_ADC_CHANNEL_15
  - LL_ADC_CHANNEL_16
  - LL_ADC_CHANNEL_17
  - LL_ADC_CHANNEL_18
  - LL_ADC_CHANNEL_VDDCORE
  - LL_ADC_CHANNEL_VREFINT (1)
  - LL_ADC_CHANNEL_TEMPSENSOR (1)
  - LL_ADC_CHANNEL_VBAT (1)
  - LL_ADC_CHANNEL_DAC1CH1_ADC2 (1)
  - LL_ADC_CHANNEL_DAC1CH2_ADC2 (1)

Return value:

- Value: between Min_Data=0 and Max_Data=18

Notes:

- Example: __LL_ADC_CHANNEL_TO_DECIMAL_NB(LL_ADC_CHANNEL_4) will return decimal number "4". The input can be a value from functions where a channel number is returned, either defined with number or with bitfield (only one bit must be set).

__LL_ADC_DECIMAL_NB_TO_CHANNEL

Description:

- Helper macro to get ADC channel in literal format LL_ADC_CHANNEL_x from number in decimal format.

Parameters:

- __DECIMAL_NB__: Value between Min_Data=0 and Max_Data=18

Return value:

- Returned: value can be one of the following values:
  - LL_ADC_CHANNEL_0
  - LL_ADC_CHANNEL_1
  - LL_ADC_CHANNEL_2
  - LL_ADC_CHANNEL_3
  - LL_ADC_CHANNEL_4
  - LL_ADC_CHANNEL_5
  - LL_ADC_CHANNEL_6
  - LL_ADC_CHANNEL_7
  - LL_ADC_CHANNEL_8
  - LL_ADC_CHANNEL_9
  - LL_ADC_CHANNEL_10
  - LL_ADC_CHANNEL_11
  - LL_ADC_CHANNEL_12
  - LL_ADC_CHANNEL_13
  - LL_ADC_CHANNEL_14
  - LL_ADC_CHANNEL_15
  - LL_ADC_CHANNEL_16
  - LL_ADC_CHANNEL_17
  - LL_ADC_CHANNEL_18
  - LL_ADC_CHANNEL_VREFINT (1)(3)
  - LL_ADC_CHANNEL_VBAT (1)(3)
  - LL_ADC_CHANNEL_TEMPSENSOR (1)(3)
  - LL_ADC_CHANNEL_VDDCORE (1)(3)
  - LL_ADC_CHANNEL_DAC1CH1_ADC2 (2)(3)
  - LL_ADC_CHANNEL_DAC1CH2_ADC2 (2)(3)

Notes:

- Example: __LL_ADC_DECIMAL_NB_TO_CHANNEL(4) will return a data equivalent to "LL_ADC_CHANNEL_4".

__LL_ADC_IS_CHANNEL_INTERNAL

Description:

- Helper macro to determine whether the selected channel corresponds to literal definitions of driver.

Parameters:

- __CHANNEL__: This parameter can be one of the following values:
  - LL_ADC_CHANNEL_0
  - LL_ADC_CHANNEL_1
  - LL_ADC_CHANNEL_2
  - LL_ADC_CHANNEL_3
  - LL_ADC_CHANNEL_4
  - LL_ADC_CHANNEL_5
  - LL_ADC_CHANNEL_6
  - LL_ADC_CHANNEL_7
  - LL_ADC_CHANNEL_8
  - LL_ADC_CHANNEL_9
  - LL_ADC_CHANNEL_10
  - LL_ADC_CHANNEL_11
  - LL_ADC_CHANNEL_12
  - LL_ADC_CHANNEL_13
  - LL_ADC_CHANNEL_14
  - LL_ADC_CHANNEL_15
  - LL_ADC_CHANNEL_16
  - LL_ADC_CHANNEL_17
  - LL_ADC_CHANNEL_18
  - LL_ADC_CHANNEL_VDDCORE
  - LL_ADC_CHANNEL_VREFINT (1)
  - LL_ADC_CHANNEL_TEMPSENSOR (1)
  - LL_ADC_CHANNEL_VBAT (1)
  - LL_ADC_CHANNEL_DAC1CH1_ADC2 (1)
  - LL_ADC_CHANNEL_DAC1CH2_ADC2 (1)

Return value:

- Value: "0" if the channel corresponds to a parameter definition of a ADC external channel (channel connected to a GPIO pin). Value "1" if the channel corresponds to a parameter definition of a ADC internal channel.

Notes:

- The different literal definitions of ADC channels are: ADC internal channel: LL_ADC_CHANNEL_VREFINT, ...ADC external channel (channel connected to a GPIO pin): LL_ADC_CHANNEL_1, LL_ADC_CHANNEL_2, ... The channel parameter must be a value defined from literal definition of a ADC internal channel (LL_ADC_CHANNEL_VREFINT, ...), ADC external channel (LL_ADC_CHANNEL_1, LL_ADC_CHANNEL_2, ...), must not be a value from functions where a channel number is returned from ADC registers, because internal and external channels share the same channel number in ADC registers. The differentiation is made only with parameters definitions of driver.

__LL_ADC_CHANNEL_INTERNAL_TO_EXTERNAL

Description:

- Helper macro to convert a channel defined from parameter definition of a ADC internal channel (LL_ADC_CHANNEL_VREFINT, ...), to its equivalent parameter definition of a ADC external channel (LL_ADC_CHANNEL_1, LL_ADC_CHANNEL_2, ...).

Parameters:

- __CHANNEL__: This parameter can be one of the following values:
  - LL_ADC_CHANNEL_0
  - LL_ADC_CHANNEL_1
  - LL_ADC_CHANNEL_2
  - LL_ADC_CHANNEL_3
  - LL_ADC_CHANNEL_4
  - LL_ADC_CHANNEL_5
  - LL_ADC_CHANNEL_6
  - LL_ADC_CHANNEL_7
  - LL_ADC_CHANNEL_8
  - LL_ADC_CHANNEL_9
  - LL_ADC_CHANNEL_10
  - LL_ADC_CHANNEL_11
  - LL_ADC_CHANNEL_12
  - LL_ADC_CHANNEL_13
  - LL_ADC_CHANNEL_14
  - LL_ADC_CHANNEL_15
  - LL_ADC_CHANNEL_16
  - LL_ADC_CHANNEL_17
  - LL_ADC_CHANNEL_18
  - LL_ADC_CHANNEL_VDDCORE
  - LL_ADC_CHANNEL_VREFINT (1)
  - LL_ADC_CHANNEL_TEMPSENSOR (1)
  - LL_ADC_CHANNEL_VBAT (1)
  - LL_ADC_CHANNEL_DAC1CH1_ADC2 (1)
  - LL_ADC_CHANNEL_DAC1CH2_ADC2 (1)

Return value:

- Returned: value can be one of the following values:
  - LL_ADC_CHANNEL_0
  - LL_ADC_CHANNEL_1
  - LL_ADC_CHANNEL_2
  - LL_ADC_CHANNEL_3
  - LL_ADC_CHANNEL_4
  - LL_ADC_CHANNEL_5
  - LL_ADC_CHANNEL_6
  - LL_ADC_CHANNEL_7
  - LL_ADC_CHANNEL_8
  - LL_ADC_CHANNEL_9
  - LL_ADC_CHANNEL_10
  - LL_ADC_CHANNEL_11
  - LL_ADC_CHANNEL_12
  - LL_ADC_CHANNEL_13
  - LL_ADC_CHANNEL_14
  - LL_ADC_CHANNEL_15
  - LL_ADC_CHANNEL_16
  - LL_ADC_CHANNEL_17
  - LL_ADC_CHANNEL_18

Notes:

- The channel parameter can be, additionally to a value defined from parameter definition of a ADC internal channel (LL_ADC_CHANNEL_VREFINT, ...), a value defined from parameter definition of ADC external channel (LL_ADC_CHANNEL_1, LL_ADC_CHANNEL_2, ...) or a value from functions where a channel number is returned from ADC registers.

__LL_ADC_IS_CHANNEL_INTERNAL_AVAILABLE

Description:

- Helper macro to determine whether the internal channel selected is available on the ADC instance selected.

Parameters:

- __ADC_INSTANCE__: ADC instance
- __CHANNEL__: This parameter can be one of the following values:
  - LL_ADC_CHANNEL_VREFINT
  - LL_ADC_CHANNEL_VDDCORE
  - LL_ADC_CHANNEL_TEMPSENSOR
  - LL_ADC_CHANNEL_VBAT
  - LL_ADC_CHANNEL_DAC1CH1_ADC2 (1)
  - LL_ADC_CHANNEL_DAC1CH2_ADC2 (1)

Return value:

- Value: "0" if the internal channel selected is not available on the ADC instance selected. Value "1" if the internal channel selected is available on the ADC instance selected.

Notes:

- The channel parameter must be a value defined from parameter definition of a ADC internal channel (LL_ADC_CHANNEL_VREFINT, ...), must not be a value defined from parameter definition of ADC external channel (LL_ADC_CHANNEL_1, LL_ADC_CHANNEL_2, ...) or a value from functions where a channel number is returned from ADC registers, because internal and external channels share the same channel number in ADC registers. The differentiation is made only with parameters definitions of driver.

__LL_ADC_ANALOGWD_CHANNEL_GROUP

Description:

- Helper macro to define ADC analog watchdog parameter: define a single channel to monitor with analog watchdog from sequencer channel and groups definition.

Parameters:

- __CHANNEL__: This parameter can be one of the following values:
  - LL_ADC_CHANNEL_0
  - LL_ADC_CHANNEL_1
  - LL_ADC_CHANNEL_2
  - LL_ADC_CHANNEL_3
  - LL_ADC_CHANNEL_4
  - LL_ADC_CHANNEL_5
  - LL_ADC_CHANNEL_6
  - LL_ADC_CHANNEL_7
  - LL_ADC_CHANNEL_8
  - LL_ADC_CHANNEL_9
  - LL_ADC_CHANNEL_10
  - LL_ADC_CHANNEL_11
  - LL_ADC_CHANNEL_12
  - LL_ADC_CHANNEL_13
  - LL_ADC_CHANNEL_14
  - LL_ADC_CHANNEL_15
  - LL_ADC_CHANNEL_16
  - LL_ADC_CHANNEL_17
  - LL_ADC_CHANNEL_18
  - LL_ADC_CHANNEL_VREFINT (1)(3)
  - LL_ADC_CHANNEL_VBAT (1)(3)
  - LL_ADC_CHANNEL_TEMPSENSOR (1)(3)
  - LL_ADC_CHANNEL_VDDCORE (1)(3)
  - LL_ADC_CHANNEL_DAC1CH1_ADC2 (2)(3)
  - LL_ADC_CHANNEL_DAC1CH2_ADC2 (2)(3)
- __GROUP__: This parameter can be one of the following values:
  - LL_ADC_GROUP_REGULAR
  - LL_ADC_GROUP_INJECTED
  - LL_ADC_GROUP_REGULAR_INJECTED

Return value:

- Returned: value can be one of the following values:
  - LL_ADC_AWD_DISABLE
  - LL_ADC_AWD_ALL_CHANNELS_REG (0)
  - LL_ADC_AWD_ALL_CHANNELS_INJ (0)
  - LL_ADC_AWD_ALL_CHANNELS_REG_INJ
  - LL_ADC_AWD_CHANNEL_0_REG (0)
  - LL_ADC_AWD_CHANNEL_0_INJ (0)
  - LL_ADC_AWD_CHANNEL_0_REG_INJ
  - LL_ADC_AWD_CHANNEL_1_REG (0)
  - LL_ADC_AWD_CHANNEL_1_INJ (0)
  - LL_ADC_AWD_CHANNEL_1_REG_INJ
  - LL_ADC_AWD_CHANNEL_2_REG (0)
  - LL_ADC_AWD_CHANNEL_2_INJ (0)
  - LL_ADC_AWD_CHANNEL_2_REG_INJ
  - LL_ADC_AWD_CHANNEL_3_REG (0)
  - LL_ADC_AWD_CHANNEL_3_INJ (0)
  - LL_ADC_AWD_CHANNEL_3_REG_INJ
  - LL_ADC_AWD_CHANNEL_4_REG (0)
  - LL_ADC_AWD_CHANNEL_4_INJ (0)
  - LL_ADC_AWD_CHANNEL_4_REG_INJ
  - LL_ADC_AWD_CHANNEL_5_REG (0)
  - LL_ADC_AWD_CHANNEL_5_INJ (0)
  - LL_ADC_AWD_CHANNEL_5_REG_INJ
  - LL_ADC_AWD_CHANNEL_6_REG (0)
  - LL_ADC_AWD_CHANNEL_6_INJ (0)
  - LL_ADC_AWD_CHANNEL_6_REG_INJ
  - LL_ADC_AWD_CHANNEL_7_REG (0)
  - LL_ADC_AWD_CHANNEL_7_INJ (0)
  - LL_ADC_AWD_CHANNEL_7_REG_INJ
  - LL_ADC_AWD_CHANNEL_8_REG (0)
  - LL_ADC_AWD_CHANNEL_8_INJ (0)
  - LL_ADC_AWD_CHANNEL_8_REG_INJ
  - LL_ADC_AWD_CHANNEL_9_REG (0)
  - LL_ADC_AWD_CHANNEL_9_INJ (0)
  - LL_ADC_AWD_CHANNEL_9_REG_INJ
  - LL_ADC_AWD_CHANNEL_10_REG (0)
  - LL_ADC_AWD_CHANNEL_10_INJ (0)
  - LL_ADC_AWD_CHANNEL_10_REG_INJ
  - LL_ADC_AWD_CHANNEL_11_REG (0)
  - LL_ADC_AWD_CHANNEL_11_INJ (0)
  - LL_ADC_AWD_CHANNEL_11_REG_INJ
  - LL_ADC_AWD_CHANNEL_12_REG (0)
  - LL_ADC_AWD_CHANNEL_12_INJ (0)
  - LL_ADC_AWD_CHANNEL_12_REG_INJ
  - LL_ADC_AWD_CHANNEL_13_REG (0)
  - LL_ADC_AWD_CHANNEL_13_INJ (0)
  - LL_ADC_AWD_CHANNEL_13_REG_INJ
  - LL_ADC_AWD_CHANNEL_14_REG (0)
  - LL_ADC_AWD_CHANNEL_14_INJ (0)

- LL_ADC_AWD_CHANNEL_14_REG_INJ
- LL_ADC_AWD_CHANNEL_15_REG (0)
- LL_ADC_AWD_CHANNEL_15_INJ (0)
- LL_ADC_AWD_CHANNEL_15_REG_INJ
- LL_ADC_AWD_CHANNEL_16_REG (0)
- LL_ADC_AWD_CHANNEL_16_INJ (0)
- LL_ADC_AWD_CHANNEL_16_REG_INJ
- LL_ADC_AWD_CHANNEL_17_REG (0)
- LL_ADC_AWD_CHANNEL_17_INJ (0)
- LL_ADC_AWD_CHANNEL_17_REG_INJ
- LL_ADC_AWD_CHANNEL_18_REG (0)
- LL_ADC_AWD_CHANNEL_18_INJ (0)
- LL_ADC_AWD_CHANNEL_18_REG_INJ
- LL_ADC_AWD_CH_VREFINT_REG (0)
- LL_ADC_AWD_CH_VREFINT_INJ (0)
- LL_ADC_AWD_CH_VREFINT_REG_INJ
- LL_ADC_AWD_CH_VBAT_REG (0)
- LL_ADC_AWD_CH_VBAT_INJ (0)
- LL_ADC_AWD_CH_VBAT_REG_INJ
- LL_ADC_AWD_CH_VDDCORE_REG (0)
- LL_ADC_AWD_CH_VDDCORE_INJ (0)
- LL_ADC_AWD_CH_VDDCORE_REG_INJ
- LL_ADC_AWD_CH_TEMPSENSOR_REG (0)
- LL_ADC_AWD_CH_TEMPSENSOR_INJ (0)
- LL_ADC_AWD_CH_TEMPSENSOR_REG_INJ
- LL_ADC_AWD_CH_DAC1CH1_ADC2_REG (0)(1)
- LL_ADC_AWD_CH_DAC1CH1_ADC2_INJ (0)(1)
- LL_ADC_AWD_CH_DAC1CH1_ADC2_REG_INJ (1)
- LL_ADC_AWD_CH_DAC1CH2_ADC2_REG (0)(1)
- LL_ADC_AWD_CH_DAC1CH2_ADC2_INJ (0)(1)
- LL_ADC_AWD_CH_DAC1CH2_ADC2_REG_INJ (1)

Notes:

- To be used with function LL_ADC_SetAnalogWDMonitChannels(). Example:
  LL_ADC_SetAnalogWDMonitChannels(ADC1, LL_ADC_AWD1,
  __LL_ADC_ANALOGWD_CHANNEL_GROUP(LL_ADC_CHANNEL4, LL_ADC_GROUP_REGULAR))

__LL_ADC_ANALOGWD_SET_THRESHOLD_RESOLUTION

Description:

- Helper macro to set the value of ADC analog watchdog threshold high or low in function of ADC resolution when ADC resolution is different of 12 bit.

Parameters:

- __ADC_RESOLUTION__: This parameter can be one of the following values:
  - LL_ADC_RESOLUTION_12B
  - LL_ADC_RESOLUTION_10B
  - LL_ADC_RESOLUTION_8B
  - LL_ADC_RESOLUTION_6B
- __AWD_THRESHOLD_DATA__: Value between Min_Data=0x000 and Max_Data=0xFFF (or tigher range for data corresponding to lower ADC resolution)

Return value:

- Value: between Min_Data=0x000 and Max_Data=0xFFF

Notes:

- In case of ADC resolution different of 12 bits, this macro performs the required data formatting: analog watchdog thresholds data aligned to left side (bit 11).bits out of resolution range (LSB) set to value "0". To be used with function LL_ADC_SetAnalogWDThresholds(). Example, with a ADC resolution of 8 bits, to set the value of analog watchdog threshold high (on 8 bits): LL_ADC_SetAnalogWDThresholds (< ADCx param >, __LL_ADC_ANALOGWD_SET_THRESHOLD_RESOLUTION(LL_ADC_RESOLUTION_8B, <threshold_data_8_bits>));

__LL_ADC_ANALOGWD_GET_THRESHOLD_RESOLUTION

Description:

- Helper macro to get the value of ADC analog watchdog threshold high or low in function of ADC resolution, when ADC resolution is different of 12 bits.

Parameters:

- __ADC_RESOLUTION__: This parameter can be one of the following values:
  - LL_ADC_RESOLUTION_12B
  - LL_ADC_RESOLUTION_10B
  - LL_ADC_RESOLUTION_8B
  - LL_ADC_RESOLUTION_6B
- __AWD_THRESHOLD_12_BITS__: Value between Min_Data=0x000 and Max_Data=0xFFF

Return value:

- Value: between Min_Data=0x000 and Max_Data=0xFFF

Notes:

- To be used with function LL_ADC_GetAnalogWDThresholds(). Example, with a ADC resolution of 8 bits, to get the value of analog watchdog threshold high (on 8 bits): < threshold_value_6_bits > = __LL_ADC_ANALOGWD_GET_THRESHOLD_RESOLUTION (LL_ADC_RESOLUTION_8B, LL_ADC_GetAnalogWDThresholds(<ADCx param>, LL_ADC_AWD_THRESHOLD_HIGH));

__LL_ADC_CALIB_FACTOR_SINGLE_DIFF

Description:

- Helper macro to set the ADC calibration value with both single ended and differential modes calibration factors concatenated.

Parameters:

- __CALIB_FACTOR_SINGLE_ENDED__: Value between Min_Data=0x00 and Max_Data=0x1FF
- __CALIB_FACTOR_DIFFERENTIAL__: Value between Min_Data=0x00 and Max_Data=0x1FF

Return value:

- Value: between Min_Data=0x00000000 and Max_Data=0xFFFFFFFF

Notes:

- To be used with function LL_ADC_SetCalibrationFactor(). Example, to set calibration factors single ended to 0x55 and differential ended to 0x2A: LL_ADC_SetCalibrationFactor(ADC1, __LL_ADC_CALIB_FACTOR_SINGLE_DIFF(0x55, 0x2A))

__LL_ADC_MULTI_CONV_DATA_MASTER_SLAVE

Description:

- Helper macro to get the ADC multimode conversion data of ADC master or ADC slave from raw value with both ADC conversion data concatenated.

Parameters:

- __ADC_MULTI_MASTER_SLAVE__: This parameter can be one of the following values:
  - LL_ADC_MULTI_MASTER
  - LL_ADC_MULTI_SLAVE
- __ADC_MULTI_CONV_DATA__: Value between Min_Data=0x000 and Max_Data=0xFFF

Return value:

- Value: between Min_Data=0x000 and Max_Data=0xFFF

Notes:

- This macro is intended to be used when multimode transfer by DMA is enabled: refer to function LL_ADC_SetMultiDataFormat(). In this case the transferred data need to processed with this macro to separate the conversion data of ADC master and ADC slave.

__LL_ADC_MULTI_INSTANCE_MASTER

Description:

- Helper macro to select, from a ADC instance, to which ADC instance it has a dependence in multimode (ADC master of the corresponding ADC common instance).

Parameters:

- __ADCx__: ADC instance

Return value:

- __ADCx__: ADC instance master of the corresponding ADC common instance

Notes:

- In case of device with multimode available and a mix of ADC instances compliant and not compliant with multimode feature, ADC instances not compliant with multimode feature are considered as master instances (do not depend to any other ADC instance).

__LL_ADC_COMMON_INSTANCE

Description:

- Helper macro to select the ADC common instance to which is belonging the selected ADC instance.

Parameters:

- __ADCx__: ADC instance

Return value:

- ADC: common register instance

Notes:

- ADC common register instance can be used for: Set parameters common to several ADC instancesMultimode (for devices with several ADC instances) Refer to functions having argument "ADCxy_COMMON" as parameter.

__LL_ADC_IS_ENABLED_ALL_COMMON_INSTANCE

Description:

- Helper macro to check if all ADC instances sharing the same ADC common instance are disabled.

Parameters:

- __ADCXY_COMMON__: ADC common instance (can be set directly from CMSIS definition or by using helper macro

Return value:

- Value: "0" if all ADC instances sharing the same ADC common instance are disabled. Value "1" if at least one ADC instance sharing the same ADC common instance is enabled.

Notes:

- This check is required by functions with setting conditioned to ADC state: All ADC instances of the ADC common group must be disabled. Refer to functions having argument "ADCxy_COMMON" as parameter. On devices with only 1 ADC common instance, parameter of this macro is useless and can be ignored (parameter kept for compatibility with devices featuring several ADC common instances).

__LL_ADC_DIGITAL_SCALE

Description:

- Helper macro to define the ADC conversion data full-scale digital value corresponding to the selected ADC resolution.

Parameters:

- __ADC_RESOLUTION__: This parameter can be one of the following values:
  - LL_ADC_RESOLUTION_12B
  - LL_ADC_RESOLUTION_10B
  - LL_ADC_RESOLUTION_8B
  - LL_ADC_RESOLUTION_6B

Return value:

- ADC: conversion data full-scale digital value (unit: digital value of ADC conversion data)

Notes:

- ADC conversion data full-scale corresponds to voltage range determined by analog voltage references Vref+ and Vref- (refer to reference manual).

__LL_ADC_CONVERT_DATA_RESOLUTION

Description:

- Helper macro to convert the ADC conversion data from a resolution to another resolution.

Parameters:

- __DATA__: ADC conversion data to be converted
- __ADC_RESOLUTION_CURRENT__: Resolution of the data to be converted This parameter can be one of the following values:
  - LL_ADC_RESOLUTION_12B
  - LL_ADC_RESOLUTION_10B
  - LL_ADC_RESOLUTION_8B
  - LL_ADC_RESOLUTION_6B
- __ADC_RESOLUTION_TARGET__: Resolution of the data after conversion This parameter can be one of the following values:
  - LL_ADC_RESOLUTION_12B
  - LL_ADC_RESOLUTION_10B
  - LL_ADC_RESOLUTION_8B
  - LL_ADC_RESOLUTION_6B

Return value:

- ADC: conversion data to the requested resolution

__LL_ADC_CALC_DATA_TO_VOLTAGE

Description:

- Helper macro to calculate the voltage (unit: mVolt) corresponding to a ADC conversion data (unit: digital value).

Parameters:

- __VREFANALOG_VOLTAGE__: Analog reference voltage (unit: mV)
- __ADC_DATA__: ADC conversion data (resolution 12 bits) (unit: digital value).
- __ADC_RESOLUTION__: This parameter can be one of the following values:
  - LL_ADC_RESOLUTION_12B
  - LL_ADC_RESOLUTION_10B
  - LL_ADC_RESOLUTION_8B
  - LL_ADC_RESOLUTION_6B

Return value:

- ADC: conversion data equivalent voltage value (unit: mVolt)

Notes:

- Analog reference voltage (Vref+) must be either known from user board environment or can be calculated using ADC measurement and ADC helper macro __LL_ADC_CALC_VREFANALOG_VOLTAGE().

__LL_ADC_CALC_VREFANALOG_VOLTAGE

Description:

- Helper macro to calculate analog reference voltage (Vref+) (unit: mVolt) from ADC conversion data of internal voltage reference VrefInt.

Parameters:

- __VREFINT_ADC_DATA__: ADC conversion data (resolution 12 bits) of internal voltage reference VrefInt (unit: digital value).
- __ADC_RESOLUTION__: This parameter can be one of the following values:
  - LL_ADC_RESOLUTION_12B
  - LL_ADC_RESOLUTION_10B
  - LL_ADC_RESOLUTION_8B
  - LL_ADC_RESOLUTION_6B

Return value:

- Analog: reference voltage (unit: mV)

Notes:

- Computation is using VrefInt calibration value stored in system memory for each device during production. This voltage depends on user board environment: voltage level connected to pin Vref+. On devices with small package, the pin Vref+ is not present and internally bonded to pin Vdda. On this STM32 series, calibration data of internal voltage reference VrefInt corresponds to a resolution of 12 bits, this is the recommended ADC resolution to convert voltage of internal voltage reference VrefInt. Otherwise, this macro performs the processing to scale ADC conversion data to 12 bits.

__LL_ADC_CALC_TEMPERATURE

Description:

- Helper macro to calculate the temperature (unit: degree Celsius) from ADC conversion data of internal temperature sensor.

Parameters:

- __VREFANALOG_VOLTAGE__: Analog reference voltage (unit: mV)
- __TEMPSENSOR_ADC_DATA__: ADC conversion data of internal temperature sensor (unit: digital value).
- __ADC_RESOLUTION__: ADC resolution at which internal temperature sensor voltage has been measured. This parameter can be one of the following values:
  - LL_ADC_RESOLUTION_12B
  - LL_ADC_RESOLUTION_10B
  - LL_ADC_RESOLUTION_8B
  - LL_ADC_RESOLUTION_6B

Return value:

- Temperature: (unit: degree Celsius) In case or error, value LL_ADC_TEMPERATURE_CALC_ERROR is returned (inconsistent temperature value)

Notes:

- Computation is using temperature sensor calibration values stored in system memory for each device during production. Calculation formula: Temperature = ((TS_ADC_DATA - TS_CAL1) * (TS_CAL2_TEMP - TS_CAL1_TEMP)) / (TS_CAL2 - TS_CAL1) + TS_CAL1_TEMP with TS_ADC_DATA = temperature sensor raw data measured by ADC Avg_Slope = (TS_CAL2 - TS_CAL1) / (TS_CAL2_TEMP - TS_CAL1_TEMP) TS_CAL1 = equivalent TS_ADC_DATA at temperature TEMP_DEGC_CAL1 (calibrated in factory) TS_CAL2 = equivalent TS_ADC_DATA at temperature TEMP_DEGC_CAL2 (calibrated in factory) Caution: Calculation relevancy under reserve that calibration parameters are correct (address and data). To calculate temperature using temperature sensor datasheet typical values (generic values less, therefore less accurate than calibrated values), use helper macro __LL_ADC_CALC_TEMPERATURE_TYP_PARAMS(). As calculation input, the analog reference voltage (Vref+) must be defined as it impacts the ADC LSB equivalent voltage. Analog reference voltage (Vref+) must be either known from user board environment or can be calculated using ADC measurement and ADC helper macro __LL_ADC_CALC_VREFANALOG_VOLTAGE(). On this STM32 series, calibration data of temperature sensor corresponds to a resolution of 12 bits, this is the recommended ADC resolution to convert voltage of temperature sensor. Otherwise, this macro performs the processing to scale ADC conversion data to 12 bits.

__LL_ADC_CALC_TEMPERATURE_TYP_PARAMS

Description:

- Helper macro to calculate the temperature (unit: degree Celsius) from ADC conversion data of internal temperature sensor.

Parameters:

- __TEMPSENSOR_TYP_AVGSLOPE__: Device datasheet data: Temperature sensor slope typical value (unit: uV/DegCelsius). On this STM32 series, refer to device datasheet parameter "Avg_Slope".
- __TEMPSENSOR_TYP_CALX_V__: Device datasheet data: Temperature sensor voltage typical value (at temperature and Vref+ defined in parameters below) (unit: mV). On this STM32 series, refer to device datasheet parameter "V30" (corresponding to TS_CAL1).
- __TEMPSENSOR_CALX_TEMP__: Device datasheet data: Temperature at which temperature sensor voltage (see parameter above) is corresponding (unit: mV)
- __VREFANALOG_VOLTAGE__: Analog voltage reference (Vref+) voltage (unit: mV)
- __TEMPSENSOR_ADC_DATA__: ADC conversion data of internal temperature sensor (unit: digital value).
- __ADC_RESOLUTION__: ADC resolution at which internal temperature sensor voltage has been measured. This parameter can be one of the following values:
  - LL_ADC_RESOLUTION_12B
  - LL_ADC_RESOLUTION_10B
  - LL_ADC_RESOLUTION_8B
  - LL_ADC_RESOLUTION_6B

Return value:

- Temperature: (unit: degree Celsius)

Notes:

- Computation is using temperature sensor typical values (refer to device datasheet). Calculation formula: Temperature = (TS_TYP_CALx_VOLT(uV) - TS_ADC_DATA * Conversion_uV) / Avg_Slope + CALx_TEMP with TS_ADC_DATA = temperature sensor raw data measured by ADC (unit: digital value) Avg_Slope = temperature sensor slope (unit: uV/Degree Celsius) TS_TYP_CALx_VOLT = temperature sensor digital value at temperature CALx_TEMP (unit: mV) Caution: Calculation relevancy under reserve the temperature sensor of the current device has characteristics in line with datasheet typical values. If temperature sensor calibration values are available on on this device (presence of macro __LL_ADC_CALC_TEMPERATURE()), temperature calculation will be more accurate using helper macro __LL_ADC_CALC_TEMPERATURE(). As calculation input, the analog reference voltage (Vref+) must be defined as it impacts the ADC LSB equivalent voltage. Analog reference voltage (Vref+) must be either known from user board environment or can be calculated using ADC measurement and ADC helper macro __LL_ADC_CALC_VREFANALOG_VOLTAGE(). ADC measurement data must correspond to a resolution of 12 bits (full scale digital value 4095). If not the case, the data must be preliminarily rescaled to an equivalent resolution of 12 bits.

Common write and read registers Macros

LL_ADC_WriteReg

Description:

- Write a value in ADC register.

Parameters:

- __INSTANCE__: ADC Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_ADC_ReadReg

Description:

- Read a value in ADC register.

Parameters:

- __INSTANCE__: ADC Instance
- __REG__: Register to be read

Return value:

- Register: value

ADC Exported Constants

LL_ADC_LP_MODE_NONE

LL_ADC_LP_AUTOWAIT

75 LL BUS Generic Driver

75.1 BUS Firmware driver API description

The following section lists the various functions of the BUS library.

75.1.1 Detailed description of functions

LL_AHB1_GRP1_EnableClock

Function name

__STATIC_INLINE void LL_AHB1_GRP1_EnableClock (uint32_t Periphs)

Function description

Enable AHB1 peripherals clock.

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_AHB1_GRP1_PERIPH_ALL
  - LL_AHB1_GRP1_PERIPH_GPDMA1
  - LL_AHB1_GRP1_PERIPH_ADF1
  - LL_AHB1_GRP1_PERIPH_HSP1 (*)
  - LL_AHB1_GRP1_PERIPH_FLASH
  - LL_AHB1_GRP1_PERIPH_CRC
  - LL_AHB1_GRP1_PERIPH_TSC
  - LL_AHB1_GRP1_PERIPH_RAMCFG
  - LL_AHB1_GRP1_PERIPH_GTZC1 (*)
  - LL_AHB1_GRP1_PERIPH_SRAM4 (*)
  - LL_AHB1_GRP1_PERIPH_SRAM1

  (*) value not defined in all devices.

Return values

- **None:**

Reference Manual to LL API cross reference:

LL_AHB1_GRP1_IsEnabledClock

Function name

__STATIC_INLINE uint32_t LL_AHB1_GRP1_IsEnabledClock (uint32_t Periphs)

Function description

Check if AHB1 peripheral clock is enabled or not.

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_AHB1_GRP1_PERIPH_ALL
  - LL_AHB1_GRP1_PERIPH_GPDMA1
  - LL_AHB1_GRP1_PERIPH_ADF1
  - LL_AHB1_GRP1_PERIPH_HSP1 (*)
  - LL_AHB1_GRP1_PERIPH_FLASH
  - LL_AHB1_GRP1_PERIPH_CRC
  - LL_AHB1_GRP1_PERIPH_TSC
  - LL_AHB1_GRP1_PERIPH_RAMCFG
  - LL_AHB1_GRP1_PERIPH_GTZC1 (*)
  - LL_AHB1_GRP1_PERIPH_SRAM4 (*)
  - LL_AHB1_GRP1_PERIPH_SRAM1

  (*) value not defined in all devices.

Return values

- **State:** of Periphs (1 or 0).

LL_AHB1_GRP1_DisableClock

Function name

__STATIC_INLINE void LL_AHB1_GRP1_DisableClock (uint32_t Periphs)

Function description

Disable AHB1 peripherals clock.

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_AHB1_GRP1_PERIPH_ALL
  - LL_AHB1_GRP1_PERIPH_GPDMA1
  - LL_AHB1_GRP1_PERIPH_ADF1
  - LL_AHB1_GRP1_PERIPH_HSP1 (*)
  - LL_AHB1_GRP1_PERIPH_FLASH
  - LL_AHB1_GRP1_PERIPH_CRC
  - LL_AHB1_GRP1_PERIPH_TSC
  - LL_AHB1_GRP1_PERIPH_RAMCFG
  - LL_AHB1_GRP1_PERIPH_GTZC1 (*)
  - LL_AHB1_GRP1_PERIPH_SRAM4 (*)
  - LL_AHB1_GRP1_PERIPH_SRAM1

  (*) value not defined in all devices.

Return values

- **None:**

LL_AHB2_GRP1_EnableClock

Function name

__STATIC_INLINE void LL_AHB2_GRP1_EnableClock (uint32_t Periphs)

Function description

Enable AHB2 peripherals clock.

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_AHB2_GRP1_PERIPH_ALL
  - LL_AHB2_GRP1_PERIPH_GPIOA
  - LL_AHB2_GRP1_PERIPH_GPIOB
  - LL_AHB2_GRP1_PERIPH_GPIOC
  - LL_AHB2_GRP1_PERIPH_GPIOD
  - LL_AHB2_GRP1_PERIPH_GPIOE
  - LL_AHB2_GRP1_PERIPH_GPIOF (*)
  - LL_AHB2_GRP1_PERIPH_GPIOG
  - LL_AHB2_GRP1_PERIPH_GPIOH
  - LL_AHB2_GRP1_PERIPH_ADC12
  - LL_AHB2_GRP1_PERIPH_DAC1
  - LL_AHB2_GRP1_PERIPH_AES (*)
  - LL_AHB2_GRP1_PERIPH_HASH (*)
  - LL_AHB2_GRP1_PERIPH_RNG (*)
  - LL_AHB2_GRP1_PERIPH_PKA (*)
  - LL_AHB2_GRP1_PERIPH_SAES (*)
  - LL_AHB2_GRP1_PERIPH_CCB (*)
  - LL_AHB2_GRP1_PERIPH_SDMMC1
  - LL_AHB2_GRP1_PERIPH_SRAM2
  - LL_AHB2_GRP1_PERIPH_SRAM3 (*)

  (*) value not defined in all devices.

Return values

- **None:**

76 LL COMP Generic Driver

76.1 COMP Firmware driver registers structures

76.1.1 LL_COMP_InitTypeDef

LL_COMP_InitTypeDef is defined in the stm32u3xx_ll_comp.h

Data Fields

- ***uint32_t PowerMode***
- ***uint32_t InputPlus***
- ***uint32_t InputMinus***
- ***uint32_t InputHysteresis***
- ***uint32_t OutputPolarity***
- ***uint32_t OutputBlankingSource***

Field Documentation

- ***uint32_t LL_COMP_InitTypeDef::PowerMode***
  Set comparator operating mode to adjust power and speed. This parameter can be a value of ***COMP_LL_EC_POWERMODE*** This feature can be modified afterwards using unitary function **LL_COMP_SetPowerMode()**.
- ***uint32_t LL_COMP_InitTypeDef::InputPlus***
  Set comparator input plus (non-inverting input). This parameter can be a value of ***COMP_LL_EC_INPUT_PLUS*** This feature can be modified afterwards using unitary function **LL_COMP_SetInputPlus()**.
- ***uint32_t LL_COMP_InitTypeDef::InputMinus***
  Set comparator input minus (inverting input). This parameter can be a value of ***COMP_LL_EC_INPUT_MINUS*** This feature can be modified afterwards using unitary function **LL_COMP_SetInputMinus()**.
- ***uint32_t LL_COMP_InitTypeDef::InputHysteresis***
  Set comparator hysteresis mode of the input minus. This parameter can be a value of ***COMP_LL_EC_INPUT_HYSTERESIS*** This feature can be modified afterwards using unitary function **LL_COMP_SetInputHysteresis()**.
- ***uint32_t LL_COMP_InitTypeDef::OutputPolarity***
  Set comparator output polarity. This parameter can be a value of ***COMP_LL_EC_OUTPUT_POLARITY*** This feature can be modified afterwards using unitary function **LL_COMP_SetOutputPolarity()**.
- ***uint32_t LL_COMP_InitTypeDef::OutputBlankingSource***
  Set comparator blanking source. This parameter can be a value of ***COMP_LL_EC_OUTPUT_BLANKING_SOURCE*** This feature can be modified afterwards using unitary function **LL_COMP_SetOutputBlankingSource()**.

76.2 COMP Firmware driver API description

The following section lists the various functions of the COMP library.

76.2.1 Detailed description of functions

LL_COMP_SetCommonWindowMode

Function name

__STATIC_INLINE void LL_COMP_SetCommonWindowMode (COMP_Common_TypeDef * COMPxy_COMMON, uint32_t WindowMode)

Function description

Set window mode of a pair of comparators instances (2 consecutive COMP instances COMP<x> and COMP<x+1>).

Parameters

- **COMPxy_COMMON:** Comparator common instance (can be set directly from CMSIS definition or by using helper macro __LL_COMP_COMMON_INSTANCE())
- **WindowMode:** This parameter can be one of the following values:
  - LL_COMP_WINDOWMODE_DISABLE
  - LL_COMP_WINDOWMODE_COMP1_INPUT_PLUS_COMMON
  - LL_COMP_WINDOWMODE_COMP2_INPUT_PLUS_COMMON

Return values

- **None:**

Reference Manual to LL API cross reference:

- CSR WINMODE LL_COMP_SetCommonWindowMode

LL_COMP_GetCommonWindowMode

Function name

__STATIC_INLINE uint32_t LL_COMP_GetCommonWindowMode (const COMP_Common_TypeDef * COMPxy_COMMON)

Function description

Get window mode of a pair of comparators instances (2 consecutive COMP instances COMP<x> and COMP<x+1>).

Parameters

- **COMPxy_COMMON:** Comparator common instance (can be set directly from CMSIS definition or by using helper macro __LL_COMP_COMMON_INSTANCE())

Return values

- **Returned:** value can be one of the following values:
  - LL_COMP_WINDOWMODE_DISABLE
  - LL_COMP_WINDOWMODE_COMP1_INPUT_PLUS_COMMON
  - LL_COMP_WINDOWMODE_COMP2_INPUT_PLUS_COMMON

Reference Manual to LL API cross reference:

- CSR WINMODE LL_COMP_GetCommonWindowMode

LL_COMP_SetCommonWindowOutput

Function name

__STATIC_INLINE void LL_COMP_SetCommonWindowOutput (COMP_Common_TypeDef * COMPxy_COMMON, uint32_t WindowOutput)

Function description

Set window output of a pair of comparators instances (2 consecutive COMP instances COMP<x> and COMP<x+1>).

Parameters

- **COMPxy_COMMON:** Comparator common instance (can be set directly from CMSIS definition or by using helper macro __LL_COMP_COMMON_INSTANCE())
- **WindowOutput:** This parameter can be one of the following values:
  - LL_COMP_WINDOWOUTPUT_EACH_COMP
  - LL_COMP_WINDOWOUTPUT_COMP1 (1)
  - LL_COMP_WINDOWOUTPUT_COMP2 (1)
  - LL_COMP_WINDOWOUTPUT_BOTH

  (1) Parameter available on all STM32U3 devices, must be used with comparator common instance COMP12_COMMON

Return values

- **None:**

Reference Manual to LL API cross reference:

- CSR WINOUT LL_COMP_SetCommonWindowOutput

LL_COMP_GetCommonWindowOutput

Function name

__STATIC_INLINE uint32_t LL_COMP_GetCommonWindowOutput (const COMP_Common_TypeDef * COMPxy_COMMON)

Function description

Get window output of a pair of comparators instances (2 consecutive COMP instances COMP<x> and COMP<x+1>).

Parameters

- **COMPxy_COMMON:** Comparator common instance (can be set directly from CMSIS definition or by using helper macro __LL_COMP_COMMON_INSTANCE())

Return values

- **Returned:** value can be one of the following values:
  - LL_COMP_WINDOWOUTPUT_EACH_COMP
  - LL_COMP_WINDOWOUTPUT_COMP1 (1)
  - LL_COMP_WINDOWOUTPUT_COMP2 (1)
  - LL_COMP_WINDOWOUTPUT_BOTH

  (1) Parameter available on all STM32U3 devices, must be used with comparator common instance COMP12_COMMON

Reference Manual to LL API cross reference:

- CSR WINMODE LL_COMP_GetCommonWindowOutput

LL_COMP_SetPowerMode

Function name

__STATIC_INLINE void LL_COMP_SetPowerMode (COMP_TypeDef * COMPx, uint32_t PowerMode)

Function description

Set comparator instance operating mode to adjust power and speed.

Parameters

- **COMPx:** Comparator instance
- **PowerMode:** This parameter can be one of the following values:
  - LL_COMP_POWERMODE_HIGHSPEED
  - LL_COMP_POWERMODE_MEDIUMSPEED
  - LL_COMP_POWERMODE_ULTRALOWPOWER

Return values

- **None:**

Reference Manual to LL API cross reference:

- CSR PWRMODE LL_COMP_SetPowerMode

LL_COMP_GetPowerMode

Function name

__STATIC_INLINE uint32_t LL_COMP_GetPowerMode (const COMP_TypeDef * COMPx)

Function description

Get comparator instance operating mode to adjust power and speed.

Parameters

- **COMPx:** Comparator instance

Return values

- **Returned:** value can be one of the following values:
  - LL_COMP_POWERMODE_HIGHSPEED
  - LL_COMP_POWERMODE_MEDIUMSPEED
  - LL_COMP_POWERMODE_ULTRALOWPOWER

Reference Manual to LL API cross reference:

- CSR PWRMODE LL_COMP_GetPowerMode

LL_COMP_ConfigInputs

Function name

__STATIC_INLINE void LL_COMP_ConfigInputs (COMP_TypeDef * COMPx, uint32_t InputMinus, uint32_t InputPlus)

Function description

Set comparator inputs minus (inverting) and plus (non-inverting).

Parameters

- **COMPx:** Comparator instance
- **InputMinus:** This parameter can be one of the following values:
  - LL_COMP_INPUT_MINUS_1_4VREFINT
  - LL_COMP_INPUT_MINUS_1_2VREFINT
  - LL_COMP_INPUT_MINUS_3_4VREFINT
  - LL_COMP_INPUT_MINUS_VREFINT
  - LL_COMP_INPUT_MINUS_DAC1_CH1
  - LL_COMP_INPUT_MINUS_DAC1_CH2
  - LL_COMP_INPUT_MINUS_IO1
  - LL_COMP_INPUT_MINUS_IO2
- **InputPlus:** This parameter can be one of the following values:
  - LL_COMP_INPUT_PLUS_IO1
  - LL_COMP_INPUT_PLUS_IO2
  - LL_COMP_INPUT_PLUS_IO3 (1)
  - LL_COMP_INPUT_PLUS_IO4 (1)

  (1) Available only on COMP instance: COMP1.

Return values

- **None:**

Notes

- In case of comparator input selected to be connected to IO: GPIO pins are specific to each comparator instance. Refer to description of parameters or to reference manual.
- On this STM32 series, a voltage scaler is used when COMP input is based on VrefInt (VrefInt or subdivision of VrefInt): Voltage scaler requires a delay for voltage stabilization. Refer to device datasheet, parameter "tSTART_SCALER".

Reference Manual to LL API cross reference:

- CSR INMSEL LL_COMP_ConfigInputs
- CSR INPSEL LL_COMP_ConfigInputs
-

LL_COMP_SetInputPlus

Function name

__STATIC_INLINE void LL_COMP_SetInputPlus (COMP_TypeDef * COMPx, uint32_t InputPlus)

Function description

Set comparator input plus (non-inverting).

Parameters

- **COMPx:** Comparator instance
- **InputPlus:** This parameter can be one of the following values:
  - LL_COMP_INPUT_PLUS_IO1
  - LL_COMP_INPUT_PLUS_IO2
  - LL_COMP_INPUT_PLUS_IO3 (1)
  - LL_COMP_INPUT_PLUS_IO4 (1)

  (1) Available only on COMP instance: COMP1.

Return values

- **None:**

Notes

- In case of comparator input selected to be connected to IO: GPIO pins are specific to each comparator instance. Refer to description of parameters or to reference manual.

Reference Manual to LL API cross reference:

- CSR INPSEL LL_COMP_SetInputPlus

LL_COMP_GetInputPlus

Function name

__STATIC_INLINE uint32_t LL_COMP_GetInputPlus (const COMP_TypeDef * COMPx)

Function description

Get comparator input plus (non-inverting).

Parameters

- **COMPx:** Comparator instance

Return values

- **Returned:** value can be one of the following values:
  - LL_COMP_INPUT_PLUS_IO1
  - LL_COMP_INPUT_PLUS_IO2
  - LL_COMP_INPUT_PLUS_IO3 (1)
  - LL_COMP_INPUT_PLUS_IO4 (1)

  (1) Available only on COMP instance: COMP1.

Notes

- In case of comparator input selected to be connected to IO: GPIO pins are specific to each comparator instance. Refer to description of parameters or to reference manual.

Reference Manual to LL API cross reference:

- CSR INPSEL LL_COMP_GetInputPlus

LL_COMP_SetInputMinus

Function name

__STATIC_INLINE void LL_COMP_SetInputMinus (COMP_TypeDef * COMPx, uint32_t InputMinus)

Function description

Set comparator input minus (inverting).

Parameters

- **COMPx:** Comparator instance
- **InputMinus:** This parameter can be one of the following values:
  - LL_COMP_INPUT_MINUS_1_4VREFINT
  - LL_COMP_INPUT_MINUS_1_2VREFINT
  - LL_COMP_INPUT_MINUS_3_4VREFINT
  - LL_COMP_INPUT_MINUS_VREFINT
  - LL_COMP_INPUT_MINUS_DAC1_CH1
  - LL_COMP_INPUT_MINUS_DAC1_CH2
  - LL_COMP_INPUT_MINUS_IO1
  - LL_COMP_INPUT_MINUS_IO2

Return values

- **None:**

Notes

- In case of comparator input selected to be connected to IO: GPIO pins are specific to each comparator instance. Refer to description of parameters or to reference manual.
- On this STM32 series, a voltage scaler is used when COMP input is based on VrefInt (VrefInt or subdivision of VrefInt): Voltage scaler requires a delay for voltage stabilization. Refer to device datasheet, parameter "tSTART_SCALER".

Reference Manual to LL API cross reference:

- CSR INMSEL LL_COMP_SetInputMinus

LL_COMP_GetInputMinus

Function name

__STATIC_INLINE uint32_t LL_COMP_GetInputMinus (const COMP_TypeDef * COMPx)

Function description

Get comparator input minus (inverting).

Parameters

- **COMPx:** Comparator instance

Return values

- **Returned:** value can be one of the following values:
  - LL_COMP_INPUT_MINUS_1_4VREFINT
  - LL_COMP_INPUT_MINUS_1_2VREFINT
  - LL_COMP_INPUT_MINUS_3_4VREFINT
  - LL_COMP_INPUT_MINUS_VREFINT
  - LL_COMP_INPUT_MINUS_DAC1_CH1
  - LL_COMP_INPUT_MINUS_DAC1_CH2
  - LL_COMP_INPUT_MINUS_IO1
  - LL_COMP_INPUT_MINUS_IO2

Notes

- In case of comparator input selected to be connected to IO: GPIO pins are specific to each comparator instance. Refer to description of parameters or to reference manual.

Reference Manual to LL API cross reference:

- CSR INMSEL LL_COMP_GetInputMinus

LL_COMP_SetInputHysteresis

Function name

__STATIC_INLINE void LL_COMP_SetInputHysteresis (COMP_TypeDef * COMPx, uint32_t InputHysteresis)

Function description

Set comparator instance hysteresis mode of the input minus (inverting input).

Parameters

- **COMPx:** Comparator instance
- **InputHysteresis:** This parameter can be one of the following values:
  - LL_COMP_HYSTERESIS_NONE
  - LL_COMP_HYSTERESIS_LOW
  - LL_COMP_HYSTERESIS_MEDIUM
  - LL_COMP_HYSTERESIS_HIGH

Return values

- **None:**

Reference Manual to LL API cross reference:

- CSR HYST LL_COMP_SetInputHysteresis

LL_COMP_GetInputHysteresis

Function name

__STATIC_INLINE uint32_t LL_COMP_GetInputHysteresis (const COMP_TypeDef * COMPx)

Function description

Get comparator instance hysteresis mode of the minus (inverting) input.

Parameters

- **COMPx:** Comparator instance

Return values

- **Returned:** value can be one of the following values:
  - LL_COMP_HYSTERESIS_NONE
  - LL_COMP_HYSTERESIS_LOW
  - LL_COMP_HYSTERESIS_MEDIUM
  - LL_COMP_HYSTERESIS_HIGH

Reference Manual to LL API cross reference:

- CSR HYST LL_COMP_GetInputHysteresis

LL_COMP_SetOutputPolarity

Function name

__STATIC_INLINE void LL_COMP_SetOutputPolarity (COMP_TypeDef * COMPx, uint32_t OutputPolarity)

Function description

Set comparator instance output polarity.

Parameters

- **COMPx:** Comparator instance
- **OutputPolarity:** This parameter can be one of the following values:
  - LL_COMP_OUTPUTPOL_NONINVERTED
  - LL_COMP_OUTPUTPOL_INVERTED

Return values

- **None:**

Reference Manual to LL API cross reference:

- CSR POLARITY LL_COMP_SetOutputPolarity

LL_COMP_GetOutputPolarity

Function name

__STATIC_INLINE uint32_t LL_COMP_GetOutputPolarity (const COMP_TypeDef * COMPx)

Function description

Get comparator instance output polarity.

Parameters

- **COMPx:** Comparator instance

Return values

- **Returned:** value can be one of the following values:
  - LL_COMP_OUTPUTPOL_NONINVERTED
  - LL_COMP_OUTPUTPOL_INVERTED

Reference Manual to LL API cross reference:

- CSR POLARITY LL_COMP_GetOutputPolarity

LL_COMP_SetOutputBlankingSource

Function name

__STATIC_INLINE void LL_COMP_SetOutputBlankingSource (COMP_TypeDef * COMPx, uint32_t BlankingSource)

Function description

Set comparator instance blanking source.

Parameters

- **COMPx:** Comparator instance
- **BlankingSource:** This parameter can be one of the following values:
  - LL_COMP_BLANKINGSRC_NONE
  - LL_COMP_BLANKINGSRC_TIM1_OC5 (1)
  - LL_COMP_BLANKINGSRC_TIM2_OC3 (1)
  - LL_COMP_BLANKINGSRC_TIM3_OC3 (1)
  - LL_COMP_BLANKINGSRC_TIM3_OC4 (2)

  (1) Available only on COMP instance: COMP1. (2) Available only on COMP instance: COMP2.

Return values

- **None:**

Notes

- Blanking source may be specific to each comparator instance. Refer to description of parameters or to reference manual.
- Availability of parameters of blanking source from timer depends on timers availability on the selected device.

Reference Manual to LL API cross reference:

- CSR BLANKSEL LL_COMP_SetOutputBlankingSource

LL_COMP_GetOutputBlankingSource

Function name

__STATIC_INLINE uint32_t LL_COMP_GetOutputBlankingSource (const COMP_TypeDef * COMPx)

Function description

Get comparator instance blanking source.

Parameters

- **COMPx:** Comparator instance

Return values

- **Returned:** value can be one of the following values:
  - LL_COMP_BLANKINGSRC_NONE
  - LL_COMP_BLANKINGSRC_TIM1_OC5 (1)
  - LL_COMP_BLANKINGSRC_TIM2_OC3 (1)
  - LL_COMP_BLANKINGSRC_TIM3_OC3 (1)
  - LL_COMP_BLANKINGSRC_TIM3_OC4 (2)

  (1) Available only on COMP instance: COMP1. (2) Available only on COMP instance: COMP2.

Notes

- Availability of parameters of blanking source from timer depends on timers availability on the selected device.
- Blanking source may be specific to each comparator instance. Refer to description of parameters or to reference manual.

Reference Manual to LL API cross reference:

- CSR BLANKSEL LL_COMP_GetOutputBlankingSource

LL_COMP_Enable

Function name

__STATIC_INLINE void LL_COMP_Enable (COMP_TypeDef * COMPx)

Function description

Enable comparator instance.

Parameters

- **COMPx:** Comparator instance

Return values

- **None:**

Notes

- After enable from off state, comparator requires a delay to reach reach propagation delay specification. Refer to device datasheet, parameter "tSTART".

Reference Manual to LL API cross reference:

- CSR EN LL_COMP_Enable

LL_COMP_Disable

Function name

__STATIC_INLINE void LL_COMP_Disable (COMP_TypeDef * COMPx)

Function description

Disable comparator instance.

Parameters

- **COMPx:** Comparator instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CSR EN LL_COMP_Disable

LL_COMP_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_COMP_IsEnabled (const COMP_TypeDef * COMPx)

Function description

Get comparator enable state (0: COMP is disabled, 1: COMP is enabled)

Parameters

- **COMPx:** Comparator instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR EN LL_COMP_IsEnabled

LL_COMP_Lock

Function name

__STATIC_INLINE void LL_COMP_Lock (COMP_TypeDef * COMPx)

Function description

Lock comparator instance.

Parameters

- **COMPx:** Comparator instance

Return values

- **None:**

Notes

- Once locked, comparator configuration can be accessed in read-only.
- The only way to unlock the comparator is a device hardware reset.

Reference Manual to LL API cross reference:

- CSR LOCK LL_COMP_Lock

LL_COMP_IsLocked

Function name

__STATIC_INLINE uint32_t LL_COMP_IsLocked (const COMP_TypeDef * COMPx)

Function description

Get comparator lock state (0: COMP is unlocked, 1: COMP is locked).

Parameters

- **COMPx:** Comparator instance

Return values

- **State:** of bit (1 or 0).

Notes

- Once locked, comparator configuration can be accessed in read-only.
- The only way to unlock the comparator is a device hardware reset.

Reference Manual to LL API cross reference:

- CSR LOCK LL_COMP_IsLocked

LL_COMP_ReadOutputLevel

Function name

__STATIC_INLINE uint32_t LL_COMP_ReadOutputLevel (const COMP_TypeDef * COMPx)

Function description

Read comparator instance output level.

Parameters

- **COMPx:** Comparator instance

Return values

- **Returned:** value can be one of the following values:
  - LL_COMP_OUTPUT_LEVEL_LOW
  - LL_COMP_OUTPUT_LEVEL_HIGH

Notes

- The comparator output level depends on the selected polarity (Refer to function LL_COMP_SetOutputPolarity()). If the comparator polarity is not inverted: Comparator output is low when the input plus is at a lower voltage than the input minusComparator output is high when the input plus is at a higher voltage than the input minus If the comparator polarity is inverted:Comparator output is high when the input plus is at a lower voltage than the input minusComparator output is low when the input plus is at a higher voltage than the input minus

Reference Manual to LL API cross reference:

- CSR VALUE LL_COMP_ReadOutputLevel

LL_COMP_DeInit

Function name

ErrorStatus LL_COMP_DeInit (COMP_TypeDef * COMPx)

Function description

De-initialize registers of the selected COMP instance to their default reset values.

Parameters

- **COMPx:** COMP instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: COMP registers are de-initialized
  - ERROR: COMP registers are not de-initialized

Notes

- If comparator is locked, de-initialization by software is not possible. The only way to unlock the comparator is a device hardware reset.

LL_COMP_Init

Function name

ErrorStatus LL_COMP_Init (COMP_TypeDef * COMPx, const LL_COMP_InitTypeDef * COMP_InitStruct)

Function description

Initialize some features of COMP instance.

Parameters

- **COMPx:** COMP instance
- **COMP_InitStruct:** Pointer to a LL_COMP_InitTypeDef structure

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: COMP registers are initialized
  - ERROR: COMP registers are not initialized

Notes

- This function configures features of the selected COMP instance. Some features are also available at scope COMP common instance (common to several COMP instances). Refer to functions having argument "COMPxy_COMMON" as parameter.

LL_COMP_StructInit

Function name

void LL_COMP_StructInit (LL_COMP_InitTypeDef * COMP_InitStruct)

Function description

Set each LL_COMP_InitTypeDef field to default value.

Parameters

- **COMP_InitStruct:** Pointer to a LL_COMP_InitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

76.3 COMP Firmware driver defines

The following section lists the various define and macros of the module.

76.3.1 COMP

COMP

Comparator common modes - Window mode

LL_COMP_WINDOWMODE_DISABLE

Window mode disable: Comparators 1 and 2 are independent

LL_COMP_WINDOWMODE_COMP1_INPUT_PLUS_COMMON

Window mode enable: Comparators instances pair COMP1 and COMP2 have their input plus connected together. The common input is COMP1 input plus (COMP2 input plus is no more accessible).

LL_COMP_WINDOWMODE_COMP2_INPUT_PLUS_COMMON

Window mode enable: if used from COMP1 or COMP2 instance, comparators instances pair COMP1 and COMP2 have their input plus connected together, the common input is COMP2 input plus (COMP1 input plus is no more accessible).

Comparator common modes - Window output

LL_COMP_WINDOWOUTPUT_EACH_COMP

Window output default mode: Comparators output are indicating each their own state. To know window mode state: each comparator output must be read, if "((COMPx exclusive or COMPy) == 1)" then monitored signal is within comparators window. The same way, if both comparators output are high, then monitored signal is below window.

LL_COMP_WINDOWOUTPUT_COMP1

Window output synthesized on COMP1 output: COMP1 output is no more indicating its own state, but global window mode state (logical high means monitored signal is within comparators window). Note: impacts only comparator output signal level (COMPx_OUT propagated to GPIO, EXTI lines, timers, ...), does not impact output digital state of comparator (COMPx_VALUE) always reflecting each comparator output state.

LL_COMP_WINDOWOUTPUT_COMP2

Window output synthesized on COMP2 output: COMP2 output is no more indicating its own state, but global window mode state (logical high means monitored signal is within comparators window). Note: impacts only comparator output signal level (COMPx_OUT propagated to GPIO, EXTI lines, timers, ...), does not impact output digital state of comparator (COMPx_VALUE) always reflecting each comparator output state.

LL_COMP_WINDOWOUTPUT_BOTH

Window output synthesized on both comparators output of pair of comparator selected (COMP1 and COMP2): both comparators outputs are no more indicating their own state, but global window mode state (logical high means monitored signal is within comparators window). This is a specific configuration (technically possible but not relevant from application point of view: 2 comparators output used for the same signal level), standard configuration for window mode is one of the settings above.

Definitions of COMP hardware constraints delays

LL_COMP_DELAY_STARTUP_US

Delay for COMP startup time

LL_COMP_DELAY_VOLTAGE_SCALER_STAB_US

Delay for COMP voltage scaler stabilization time

Comparator input - Hysteresis

LL_COMP_HYSTERESIS_NONE

No hysteresis

LL_COMP_HYSTERESIS_LOW

Hysteresis level low

LL_COMP_HYSTERESIS_MEDIUM

Hysteresis level medium

LL_COMP_HYSTERESIS_HIGH

Hysteresis level high

Comparator inputs - Input minus (input inverting) selection

LL_COMP_INPUT_MINUS_1_4VREFINT

Comparator input minus connected to 1/4 VrefInt

LL_COMP_INPUT_MINUS_1_2VREFINT

Comparator input minus connected to 1/2 VrefInt

LL_COMP_INPUT_MINUS_3_4VREFINT

Comparator input minus connected to 3/4 VrefInt

LL_COMP_INPUT_MINUS_VREFINT

Comparator input minus connected to VrefInt

LL_COMP_INPUT_MINUS_DAC1_CH1

Comparator input minus connected to DAC1 channel 1 (DAC_OUT1)

LL_COMP_INPUT_MINUS_DAC1_CH2

Comparator input minus connected to DAC1 channel 2 (DAC_OUT2)

LL_COMP_INPUT_MINUS_IO1

Comparator input minus connected to IO1 (pin PB1 for COMP1, pin PB7 for COMP2)

LL_COMP_INPUT_MINUS_IO2

Comparator input minus connected to IO2 (pin PC4 for COMP1, pin PB3 for COMP2)

Comparator inputs - Input plus (input non-inverting) selection

LL_COMP_INPUT_PLUS_IO1

Comparator input plus connected to IO1 (pin PC5 for COMP1, pin PB4 for COMP2)

LL_COMP_INPUT_PLUS_IO2

Comparator input plus connected to IO2 (pin PB2 for COMP1, pin PB6 for COMP2)

LL_COMP_INPUT_PLUS_IO3

Comparator input plus connected to IO3 (pin PA2 for COMP1)

LL_COMP_INPUT_PLUS_IO4

Comparator input plus connected to IO4 (pin PA3 for COMP1)

Comparator output - Blanking source

LL_COMP_BLANKINGSRC_NONE

Comparator output without blanking

LL_COMP_BLANKINGSRC_TIM1_OC5

Comparator output blanking source TIM1 OC5 for COMP1 Instance

LL_COMP_BLANKINGSRC_TIM2_OC3

Comparator output blanking source TIM2 OC3 for COMP1 Instance

LL_COMP_BLANKINGSRC_TIM3_OC3

Comparator output blanking source TIM3 OC3 for COMP1 Instance

LL_COMP_BLANKINGSRC_TIM3_OC4

Comparator output blanking source TIM3 OC4 for COMP2 Instance

Comparator output - Output level

LL_COMP_OUTPUT_LEVEL_LOW

Comparator output level low (if the polarity is not inverted, otherwise to be complemented)

LL_COMP_OUTPUT_LEVEL_HIGH

Comparator output level high (if the polarity is not inverted, otherwise to be complemented)

Comparator output - Output polarity

LL_COMP_OUTPUTPOL_NONINVERTED

COMP output polarity is not inverted: comparator output is high when the plus (non-inverting) input is at a higher voltage than the minus (inverting) input

LL_COMP_OUTPUTPOL_INVERTED

COMP output polarity is inverted: comparator output is low when the plus (non-inverting) input is at a lower voltage than the minus (inverting) input

Comparator modes - Power mode

LL_COMP_POWERMODE_HIGHSPEED

COMP power mode to high speed

LL_COMP_POWERMODE_MEDIUMSPEED

COMP power mode to medium speed

LL_COMP_POWERMODE_ULTRALOWPOWER

COMP power mode to ultra-low power

COMP helper macro

__LL_COMP_COMMON_INSTANCE

Description:

- Helper macro to select the COMP common instance to which is belonging the selected COMP instance.

Parameters:

- __COMPx__: COMP instance

Return value:

- COMP: common instance or value "0" if there is no COMP common instance.

Notes:

- COMP common register instance can be used to set parameters common to several COMP instances. Refer to functions having argument "COMPxy_COMMON" as parameter.

Common write and read registers macro

LL_COMP_WriteReg

Description:

- Write a value in COMP register.

Parameters:

- __INSTANCE__: comparator instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_COMP_ReadReg

Description:

- Read a value in COMP register.

Parameters:

- __INSTANCE__: comparator instance
- __REG__: Register to be read

Return value:

- Register: value

77 LL CORTEX Generic Driver

77.1 CORTEX Firmware driver API description

The following section lists the various functions of the CORTEX library.

77.1.1 Detailed description of functions

LL_SYSTICK_IsActiveCounterFlag

Function name

__STATIC_INLINE uint32_t LL_SYSTICK_IsActiveCounterFlag (void)

Function description

This function checks if the Systick counter flag is active or not.

Return values

- **State:** of bit (1 or 0).

Notes

- It can be used in timeout function on application side.

Reference Manual to LL API cross reference:

- STK_CTRL COUNTFLAG LL_SYSTICK_IsActiveCounterFlag

LL_SYSTICK_SetClkSource

Function name

__STATIC_INLINE void LL_SYSTICK_SetClkSource (uint32_t Source)

Function description

Configures the SysTick clock source.

Parameters

- **Source:** This parameter can be one of the following values:
  - LL_SYSTICK_CLKSOURCE_EXTERNAL
  - LL_SYSTICK_CLKSOURCE_HCLK

Return values

- **None:**

Reference Manual to LL API cross reference:

- STK_CTRL CLKSOURCE LL_SYSTICK_SetClkSource

LL_SYSTICK_GetClkSource

Function name

__STATIC_INLINE uint32_t LL_SYSTICK_GetClkSource (void)

Function description

Get the SysTick clock source.

Return values

- **Returned:** value can be one of the following values:
  - LL_SYSTICK_CLKSOURCE_EXTERNAL
  - LL_SYSTICK_CLKSOURCE_HCLK

Reference Manual to LL API cross reference:

- STK_CTRL CLKSOURCE LL_SYSTICK_GetClkSource

LL_SYSTICK_EnableIT

Function name

__STATIC_INLINE void LL_SYSTICK_EnableIT (void)

Function description

Enable SysTick exception request.

Return values

- **None:**

Reference Manual to LL API cross reference:

- STK_CTRL TICKINT LL_SYSTICK_EnableIT

LL_SYSTICK_DisableIT

Function name

__STATIC_INLINE void LL_SYSTICK_DisableIT (void)

Function description

Disable SysTick exception request.

Return values

- **None:**

Reference Manual to LL API cross reference:

- STK_CTRL TICKINT LL_SYSTICK_DisableIT

LL_SYSTICK_IsEnabledIT

Function name

__STATIC_INLINE uint32_t LL_SYSTICK_IsEnabledIT (void)

Function description

Checks if the SYSTICK interrupt is enabled or disabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- STK_CTRL TICKINT LL_SYSTICK_IsEnabledIT

LL_LPM_EnableSleep

Function name

__STATIC_INLINE void LL_LPM_EnableSleep (void)

Function description

Processor uses sleep as its low power mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SCB_SCR SLEEPDEEP LL_LPM_EnableSleep

LL_LPM_EnableDeepSleep

Function name

__STATIC_INLINE void LL_LPM_EnableDeepSleep (void)

Function description

Processor uses deep sleep as its low power mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SCB_SCR SLEEPDEEP LL_LPM_EnableDeepSleep

LL_LPM_EnableSleepOnExit

Function name

__STATIC_INLINE void LL_LPM_EnableSleepOnExit (void)

Function description

Configures sleep-on-exit when returning from Handler mode to Thread mode.

Return values

- **None:**

Notes

- Setting this bit to 1 enables an interrupt-driven application to avoid returning to an empty main application.

Reference Manual to LL API cross reference:

- SCB_SCR SLEEPONEXIT LL_LPM_EnableSleepOnExit

LL_LPM_DisableSleepOnExit

Function name

__STATIC_INLINE void LL_LPM_DisableSleepOnExit (void)

Function description

Do not sleep when returning to Thread mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SCB_SCR SLEEPONEXIT LL_LPM_DisableSleepOnExit

LL_LPM_EnableEventOnPend

Function name

__STATIC_INLINE void LL_LPM_EnableEventOnPend (void)

Function description

Enabled events and all interrupts, including disabled interrupts, can wakeup the processor.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SCB_SCR SEVEONPEND LL_LPM_EnableEventOnPend

LL_LPM_DisableEventOnPend

Function name

__STATIC_INLINE void LL_LPM_DisableEventOnPend (void)

Function description

Only enabled interrupts or events can wakeup the processor, disabled interrupts are excluded.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SCB_SCR SEVEONPEND LL_LPM_DisableEventOnPend

LL_LPM_ClearEvent

Function name

__STATIC_INLINE void LL_LPM_ClearEvent (void)

Function description

Clear pending events.

Return values

- **None:**

LL_HANDLER_EnableFault

Function name

__STATIC_INLINE void LL_HANDLER_EnableFault (uint32_t Fault)

Function description

Enable a fault in System handler control register (SHCSR)

Parameters

- **Fault:** This parameter can be a combination of the following values:
  - LL_HANDLER_FAULT_USG
  - LL_HANDLER_FAULT_BUS
  - LL_HANDLER_FAULT_MEM
  - LL_HANDLER_FAULT_SECURE (*)

  (*) value applicable in secure when the system implements the security.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SCB_SHCSR USGFAULTENA LL_HANDLER_EnableFault
- SCB_SHCSR BUSFAULTENA LL_HANDLER_EnableFault
- SCB_SHCSR MEMFAULTENA LL_HANDLER_EnableFault
- SCB_SHCSR SECUREFAULTENA LL_HANDLER_EnableFault

LL_HANDLER_DisableFault

Function name

__STATIC_INLINE void LL_HANDLER_DisableFault (uint32_t Fault)

Function description

Disable a fault in System handler control register (SHCSR)

Parameters

- **Fault:** This parameter can be a combination of the following values:
  - LL_HANDLER_FAULT_USG
  - LL_HANDLER_FAULT_BUS
  - LL_HANDLER_FAULT_MEM
  - LL_HANDLER_FAULT_SECURE (*)

  (*) value applicable in secure when the system implements the security.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SCB_SHCSR USGFAULTENA LL_HANDLER_DisableFault
- SCB_SHCSR BUSFAULTENA LL_HANDLER_DisableFault
- SCB_SHCSR MEMFAULTENA LL_HANDLER_DisableFault
- SCB_SHCSR SECUREFAULTENA LL_HANDLER_DisableFault

LL_CPUID_GetImplementer

Function name

__STATIC_INLINE uint32_t LL_CPUID_GetImplementer (void)

Function description

Get Implementer code.

Return values

- **Value:** should be equal to 0x41 for ARM

Reference Manual to LL API cross reference:

- SCB_CPUID IMPLEMENTER LL_CPUID_GetImplementer

LL_CPUID_GetVariant

Function name

__STATIC_INLINE uint32_t LL_CPUID_GetVariant (void)

Function description

Get Variant number (The r value in the rnpn product revision identifier)

Return values

- **Value:** between 0 and 255 (0x0: revision 0)

Reference Manual to LL API cross reference:

- SCB_CPUID VARIANT LL_CPUID_GetVariant

LL_CPUID_GetArchitecture

Function name

__STATIC_INLINE uint32_t LL_CPUID_GetArchitecture (void)

Function description

Get Architecture version.

Return values

- **Value:** should be equal to 0xF for Cortex-M33 ("ARMv8-M with Main Extension")

Reference Manual to LL API cross reference:

- SCB_CPUID ARCHITECTURE LL_CPUID_GetArchitecture

LL_CPUID_GetParNo

Function name

__STATIC_INLINE uint32_t LL_CPUID_GetParNo (void)

Function description

Get Part number.

Return values

- **Value:** should be equal to 0xD21 for Cortex-M33

Reference Manual to LL API cross reference:

- SCB_CPUID PARTNO LL_CPUID_GetParNo

LL_CPUID_GetRevision

Function name

__STATIC_INLINE uint32_t LL_CPUID_GetRevision (void)

Function description

Get Revision number (The p value in the rnpn product revision identifier, indicates patch release)

Return values

- **Value:** between 0 and 255 (0x1: patch 1)

Reference Manual to LL API cross reference:

- SCB_CPUID REVISION LL_CPUID_GetRevision

LL_MPU_Enable

Function name

__STATIC_INLINE void LL_MPU_Enable (uint32_t MPU_Control)

Function description

Enable MPU with input options.

Parameters

- **MPU_Control:** This parameter can be one of the following values:
  - LL_MPU_CTRL_HFNMI_PRIVDEF_NONE
  - LL_MPU_CTRL_HARDFAULT_NMI
  - LL_MPU_CTRL_PRIVILEGED_DEFAULT
  - LL_MPU_CTRL_HFNMI_PRIVDEF

Return values

- **None:**

Reference Manual to LL API cross reference:

- MPU_CTRL ENABLE LL_MPU_Enable

LL_MPU_Enable_NS

Function name

__STATIC_INLINE void LL_MPU_Enable_NS (uint32_t MPU_Control)

Function description

Enable non-secure MPU with input options.

Parameters

- **MPU_Control:** This parameter can be one of the following values:
  - LL_MPU_CTRL_HFNMI_PRIVDEF_NONE
  - LL_MPU_CTRL_HARDFAULT_NMI
  - LL_MPU_CTRL_PRIVILEGED_DEFAULT
  - LL_MPU_CTRL_HFNMI_PRIVDEF

Return values

- **None:**

Reference Manual to LL API cross reference:

- MPU_CTRL ENABLE LL_MPU_Enable

LL_MPU_Disable

Function name

__STATIC_INLINE void LL_MPU_Disable (void)

Function description

Disable MPU.

Return values

- **None:**

Reference Manual to LL API cross reference:

- MPU_CTRL ENABLE LL_MPU_Disable

LL_MPU_Disable_NS

Function name

__STATIC_INLINE void LL_MPU_Disable_NS (void)

Function description

Disable the non-secure MPU.

Return values

- **None:**

Reference Manual to LL API cross reference:

- MPU_CTRL ENABLE LL_MPU_Disable_NS

LL_MPU_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_MPU_IsEnabled (void)

Function description

Check if MPU is enabled or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- MPU_CTRL ENABLE LL_MPU_IsEnabled

LL_MPU_IsEnabled_NS

Function name

__STATIC_INLINE uint32_t LL_MPU_IsEnabled_NS (void)

Function description

Check if non-secure MPU is enabled or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- MPU_CTRL ENABLE LL_MPU_IsEnabled_NS

LL_MPU_EnableRegion

Function name

__STATIC_INLINE void LL_MPU_EnableRegion (uint32_t Region)

Function description

Enable a MPU region.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_MPU_REGION_NUMBER0
  - LL_MPU_REGION_NUMBER1
  - LL_MPU_REGION_NUMBER2
  - LL_MPU_REGION_NUMBER3
  - LL_MPU_REGION_NUMBER4
  - LL_MPU_REGION_NUMBER5
  - LL_MPU_REGION_NUMBER6
  - LL_MPU_REGION_NUMBER7
  - LL_MPU_REGION_NUMBER8 Available only on secure mode.
  - LL_MPU_REGION_NUMBER9 Available only on secure mode.
  - LL_MPU_REGION_NUMBER10 Available only on secure mode.
  - LL_MPU_REGION_NUMBER11 Available only on secure mode.

Return values

- **None:**

Notes

- STM32U3xx supports 12 secure and 8 non secure regions.

Reference Manual to LL API cross reference:

- MPU_RLAR EN LL_MPU_EnableRegion

LL_MPU_IsEnabledRegion

Function name

__STATIC_INLINE uint32_t LL_MPU_IsEnabledRegion (uint32_t Region)

Function description

Check if MPU region is enabled or not.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_MPU_REGION_NUMBER0
  - LL_MPU_REGION_NUMBER1
  - LL_MPU_REGION_NUMBER2
  - LL_MPU_REGION_NUMBER3
  - LL_MPU_REGION_NUMBER4
  - LL_MPU_REGION_NUMBER5
  - LL_MPU_REGION_NUMBER6
  - LL_MPU_REGION_NUMBER7
  - LL_MPU_REGION_NUMBER8 Available only on secure mode.
  - LL_MPU_REGION_NUMBER9 Available only on secure mode.
  - LL_MPU_REGION_NUMBER10 Available only on secure mode.
  - LL_MPU_REGION_NUMBER11 Available only on secure mode.

Return values

- **State:** of bit (1 or 0).

Notes

- STM32U3xx supports 12 secure and 8 non secure regions.

Reference Manual to LL API cross reference:

- MPU_RLAR EN LL_MPU_IsEnabledRegion

LL_MPU_EnableRegion_NS

Function name

__STATIC_INLINE void LL_MPU_EnableRegion_NS (uint32_t Region)

Function description

Enable a non-secure MPU region.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_MPU_REGION_NUMBER0
  - LL_MPU_REGION_NUMBER1
  - LL_MPU_REGION_NUMBER2
  - LL_MPU_REGION_NUMBER3
  - LL_MPU_REGION_NUMBER4
  - LL_MPU_REGION_NUMBER5
  - LL_MPU_REGION_NUMBER6
  - LL_MPU_REGION_NUMBER7

Return values

- **None:**

Notes

- STM32U3xx supports 12 secure and 8 non secure regions.

Reference Manual to LL API cross reference:

- MPU_RLAR EN LL_MPU_EnableRegion_NS

LL_MPU_IsEnabledRegion_NS

Function name

__STATIC_INLINE uint32_t LL_MPU_IsEnabledRegion_NS (uint32_t Region)

Function description

Check if non-secure MPU region is enabled or not.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_MPU_REGION_NUMBER0
  - LL_MPU_REGION_NUMBER1
  - LL_MPU_REGION_NUMBER2
  - LL_MPU_REGION_NUMBER3
  - LL_MPU_REGION_NUMBER4
  - LL_MPU_REGION_NUMBER5
  - LL_MPU_REGION_NUMBER6
  - LL_MPU_REGION_NUMBER7

Return values

- **State:** of bit (1 or 0).

Notes

- STM32U3xx supports 12 secure and 8 non secure regions.

Reference Manual to LL API cross reference:

- MPU_RLAR EN LL_MPU_IsEnabledRegion_NS

LL_MPU_DisableRegion

Function name

__STATIC_INLINE void LL_MPU_DisableRegion (uint32_t Region)

Function description

Disable a MPU region.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_MPU_REGION_NUMBER0
  - LL_MPU_REGION_NUMBER1
  - LL_MPU_REGION_NUMBER2
  - LL_MPU_REGION_NUMBER3
  - LL_MPU_REGION_NUMBER4
  - LL_MPU_REGION_NUMBER5
  - LL_MPU_REGION_NUMBER6
  - LL_MPU_REGION_NUMBER7
  - LL_MPU_REGION_NUMBER8 Available only on secure mode.
  - LL_MPU_REGION_NUMBER9 Available only on secure mode.
  - LL_MPU_REGION_NUMBER10 Available only on secure mode.
  - LL_MPU_REGION_NUMBER11 Available only on secure mode.

Return values

- **None:**

Notes

- STM32U3xx supports 12 secure and 8 non secure regions.

Reference Manual to LL API cross reference:

- MPU_RNR REGION LL_MPU_DisableRegion
- MPU_RLAR EN LL_MPU_DisableRegion

LL_MPU_DisableRegion_NS

Function name

__STATIC_INLINE void LL_MPU_DisableRegion_NS (uint32_t Region)

Function description

Disable a non-secure MPU region.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_MPU_REGION_NUMBER0
  - LL_MPU_REGION_NUMBER1
  - LL_MPU_REGION_NUMBER2
  - LL_MPU_REGION_NUMBER3
  - LL_MPU_REGION_NUMBER4
  - LL_MPU_REGION_NUMBER5
  - LL_MPU_REGION_NUMBER6
  - LL_MPU_REGION_NUMBER7

Return values

- **None:**

Notes

- STM32U3xx supports 12 secure and 8 non secure regions.

Reference Manual to LL API cross reference:

- MPU_RNR REGION LL_MPU_DisableRegion_NS
- MPU_RLAR EN LL_MPU_DisableRegion_NS

LL_MPU_ConfigRegion

Function name

__STATIC_INLINE void LL_MPU_ConfigRegion (uint32_t Region, uint32_t Attributes, uint32_t AttrIndx, uint32_t BaseAddress, uint32_t LimitAddress)

Function description

Configure and enable a MPU region.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_MPU_REGION_NUMBER0
  - LL_MPU_REGION_NUMBER1
  - LL_MPU_REGION_NUMBER2
  - LL_MPU_REGION_NUMBER3
  - LL_MPU_REGION_NUMBER4
  - LL_MPU_REGION_NUMBER5
  - LL_MPU_REGION_NUMBER6
  - LL_MPU_REGION_NUMBER7
  - LL_MPU_REGION_NUMBER8 Available only on secure mode.
  - LL_MPU_REGION_NUMBER9 Available only on secure mode.
  - LL_MPU_REGION_NUMBER10 Available only on secure mode.
  - LL_MPU_REGION_NUMBER11 Available only on secure mode.
- **Attributes:** This parameter can be a combination of the following values:
  - LL_MPU_INSTRUCTION_ACCESS_ENABLE or LL_MPU_INSTRUCTION_ACCESS_DISABLE
  - LL_MPU_ACCESS_NOT_SHAREABLE or LL_MPU_ACCESS_OUTER_SHAREABLE or LL_MPU_ACCESS_INNER_SHAREABLE
  - LL_MPU_REGION_PRIV_RW or LL_MPU_REGION_ALL_RW or LL_MPU_REGION_PRIV_RO or LL_MPU_REGION_ALL_RO
- **AttrIndx:** This parameter can be one of the following values:
  - LL_MPU_ATTRIBUTES_NUMBER0
  - LL_MPU_ATTRIBUTES_NUMBER1
  - LL_MPU_ATTRIBUTES_NUMBER2
  - LL_MPU_ATTRIBUTES_NUMBER3
  - LL_MPU_ATTRIBUTES_NUMBER4
  - LL_MPU_ATTRIBUTES_NUMBER5
  - LL_MPU_ATTRIBUTES_NUMBER6
  - LL_MPU_ATTRIBUTES_NUMBER7
- **BaseAddress:** Value of region base address
- **LimitAddress:** Value of region limit address

Return values

- **None:**

Notes

- STM32U3xx supports 12 secure and 8 non secure regions.

Reference Manual to LL API cross reference:

- MPU_RNR REGION LL_MPU_ConfigRegion
- MPU_RBAR BASE LL_MPU_ConfigRegion
- MPU_RLAR LIMIT LL_MPU_ConfigRegion
- MPU_RBAR XN LL_MPU_ConfigRegion
- MPU_RBAR AP LL_MPU_ConfigRegion
- MPU_RBAR SH LL_MPU_ConfigRegion
- MPU_RLAR EN LL_MPU_ConfigRegion
- MPU_RLAR AttrX LL_MPU_ConfigRegion

LL_MPU_ConfigRegion_NS

Function name

__STATIC_INLINE void LL_MPU_ConfigRegion_NS (uint32_t Region, uint32_t Attributes, uint32_t AttrIndx, uint32_t BaseAddress, uint32_t LimitAddress)

Function description

Configure and enable a non-secure MPU region.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_MPU_REGION_NUMBER0
  - LL_MPU_REGION_NUMBER1
  - LL_MPU_REGION_NUMBER2
  - LL_MPU_REGION_NUMBER3
  - LL_MPU_REGION_NUMBER4
  - LL_MPU_REGION_NUMBER5
  - LL_MPU_REGION_NUMBER6
  - LL_MPU_REGION_NUMBER7
- **Attributes:** This parameter can be a combination of the following values:
  - LL_MPU_INSTRUCTION_ACCESS_ENABLE or LL_MPU_INSTRUCTION_ACCESS_DISABLE
  - LL_MPU_ACCESS_NOT_SHAREABLE or LL_MPU_ACCESS_OUTER_SHAREABLE or LL_MPU_ACCESS_INNER_SHAREABLE
  - LL_MPU_REGION_PRIV_RW or LL_MPU_REGION_ALL_RW or LL_MPU_REGION_PRIV_RO or LL_MPU_REGION_ALL_RO
- **AttrIndx:** This parameter can be one of the following values:
  - LL_MPU_ATTRIBUTES_NUMBER0
  - LL_MPU_ATTRIBUTES_NUMBER1
  - LL_MPU_ATTRIBUTES_NUMBER2
  - LL_MPU_ATTRIBUTES_NUMBER3
  - LL_MPU_ATTRIBUTES_NUMBER4
  - LL_MPU_ATTRIBUTES_NUMBER5
  - LL_MPU_ATTRIBUTES_NUMBER6
  - LL_MPU_ATTRIBUTES_NUMBER7
- **BaseAddress:** Value of region base address
- **LimitAddress:** Value of region limit address

Return values

- **None:**

Notes

- STM32U3xx supports 12 secure and 8 non secure regions.

Reference Manual to LL API cross reference:

- MPU_RNR REGION LL_MPU_ConfigRegion_NS
- MPU_RBAR BASE LL_MPU_ConfigRegion_NS
- MPU_RLAR LIMIT LL_MPU_ConfigRegion_NS
- MPU_RBAR XN LL_MPU_ConfigRegion_NS
- MPU_RBAR AP LL_MPU_ConfigRegion_NS
- MPU_RBAR SH LL_MPU_ConfigRegion_NS
- MPU_RLAR EN LL_MPU_ConfigRegion_NS
- MPU_RLAR AttrX LL_MPU_ConfigRegion_NS

LL_MPU_ConfigRegionAddress

Function name

__STATIC_INLINE void LL_MPU_ConfigRegionAddress (uint32_t Region, uint32_t BaseAddress, uint32_t LimitAddress)

Function description

Configure a MPU region address range.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_MPU_REGION_NUMBER0
  - LL_MPU_REGION_NUMBER1
  - LL_MPU_REGION_NUMBER2
  - LL_MPU_REGION_NUMBER3
  - LL_MPU_REGION_NUMBER4
  - LL_MPU_REGION_NUMBER5
  - LL_MPU_REGION_NUMBER6
  - LL_MPU_REGION_NUMBER7
  - LL_MPU_REGION_NUMBER8 Available only on secure mode.
  - LL_MPU_REGION_NUMBER9 Available only on secure mode.
  - LL_MPU_REGION_NUMBER10 Available only on secure mode.
  - LL_MPU_REGION_NUMBER11 Available only on secure mode.
- **BaseAddress:** Value of region base address
- **LimitAddress:** Value of region limit address

Return values

- **None:**

Notes

- STM32U3xx supports 12 secure and 8 non secure regions.

Reference Manual to LL API cross reference:

- MPU_RNR REGION LL_MPU_ConfigRegionAddress
- MPU_RBAR BASE LL_MPU_ConfigRegionAddress
- MPU_RLAR LIMIT LL_MPU_ConfigRegionAddress

LL_MPU_ConfigRegionAddress_NS

Function name

__STATIC_INLINE void LL_MPU_ConfigRegionAddress_NS (uint32_t Region, uint32_t BaseAddress, uint32_t LimitAddress)

Function description

Configure a non-secure MPU region address range.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_MPU_REGION_NUMBER0
  - LL_MPU_REGION_NUMBER1
  - LL_MPU_REGION_NUMBER2
  - LL_MPU_REGION_NUMBER3
  - LL_MPU_REGION_NUMBER4
  - LL_MPU_REGION_NUMBER5
  - LL_MPU_REGION_NUMBER6
  - LL_MPU_REGION_NUMBER7
- **BaseAddress:** Value of region base address
- **LimitAddress:** Value of region limit address

Return values

- **None:**

Notes

- STM32U3xx supports 12 secure and 8 non secure regions.

Reference Manual to LL API cross reference:

- MPU_RNR REGION LL_MPU_ConfigRegionAddress_NS
- MPU_RBAR BASE LL_MPU_ConfigRegionAddress_NS
- MPU_RLAR LIMIT LL_MPU_ConfigRegionAddress_NS

LL_MPU_ConfigAttributes

Function name

__STATIC_INLINE void LL_MPU_ConfigAttributes (uint32_t AttIndex, uint32_t Attributes)

Function description

Configure a MPU attributes index.

Parameters

- **AttIndex:** This parameter can be one of the following values:
  - LL_MPU_ATTRIBUTES_NUMBER0
  - LL_MPU_ATTRIBUTES_NUMBER1
  - LL_MPU_ATTRIBUTES_NUMBER2
  - LL_MPU_ATTRIBUTES_NUMBER3
  - LL_MPU_ATTRIBUTES_NUMBER4
  - LL_MPU_ATTRIBUTES_NUMBER5
  - LL_MPU_ATTRIBUTES_NUMBER6
  - LL_MPU_ATTRIBUTES_NUMBER7
- **Attributes:** This parameter can be a combination of CORTEX LL MPU Attributes

Return values

- **None:**

Reference Manual to LL API cross reference:

- MPU_MAIR0 AttrX LL_MPU_ConfigAttributes
- MPU_MAIR1 AttrX LL_MPU_ConfigAttributes

LL_MPU_ConfigAttributes_NS

Function name

__STATIC_INLINE void LL_MPU_ConfigAttributes_NS (uint32_t AttIndex, uint32_t Attributes)

Function description

Configure a non-secure MPU attributes index.

Parameters

- **AttIndex:** This parameter can be one of the following values:
  - LL_MPU_ATTRIBUTES_NUMBER0
  - LL_MPU_ATTRIBUTES_NUMBER1
  - LL_MPU_ATTRIBUTES_NUMBER2
  - LL_MPU_ATTRIBUTES_NUMBER3
  - LL_MPU_ATTRIBUTES_NUMBER4
  - LL_MPU_ATTRIBUTES_NUMBER5
  - LL_MPU_ATTRIBUTES_NUMBER6
  - LL_MPU_ATTRIBUTES_NUMBER7
- **Attributes:** This parameter can be a combination of CORTEX LL MPU Attributes

Return values

- **None:**

Reference Manual to LL API cross reference:

- MPU_MAIR0 AttrX LL_MPU_ConfigAttributes_NS
- MPU_MAIR1 AttrX LL_MPU_ConfigAttributes_NS

LL_MPU_SetRegionLimitAddress

Function name

__STATIC_INLINE void LL_MPU_SetRegionLimitAddress (uint32_t Region, uint32_t LimitAddress)

Function description

Configure a MPU region limit address.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_MPU_REGION_NUMBER0
  - LL_MPU_REGION_NUMBER1
  - LL_MPU_REGION_NUMBER2
  - LL_MPU_REGION_NUMBER3
  - LL_MPU_REGION_NUMBER4
  - LL_MPU_REGION_NUMBER5
  - LL_MPU_REGION_NUMBER6
  - LL_MPU_REGION_NUMBER7
  - LL_MPU_REGION_NUMBER8 Available only on secure mode.
  - LL_MPU_REGION_NUMBER9 Available only on secure mode.
  - LL_MPU_REGION_NUMBER10 Available only on secure mode.
  - LL_MPU_REGION_NUMBER11 Available only on secure mode.
- **LimitAddress:** Value of region limit address

Return values

- **None:**

Notes

- STM32U3xx supports 12 secure and 8 non secure regions.

Reference Manual to LL API cross reference:

- MPU_RNR REGION LL_MPU_SetRegionLimitAddress
- MPU_RLAR LIMIT LL_MPU_SetRegionLimitAddress

LL_MPU_GetRegionLimitAddress

Function name

__STATIC_INLINE uint32_t LL_MPU_GetRegionLimitAddress (uint32_t Region)

Function description

Get a MPU region limit address.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_MPU_REGION_NUMBER0
  - LL_MPU_REGION_NUMBER1
  - LL_MPU_REGION_NUMBER2
  - LL_MPU_REGION_NUMBER3
  - LL_MPU_REGION_NUMBER4
  - LL_MPU_REGION_NUMBER5
  - LL_MPU_REGION_NUMBER6
  - LL_MPU_REGION_NUMBER7
  - LL_MPU_REGION_NUMBER8 Available only on secure mode.
  - LL_MPU_REGION_NUMBER9 Available only on secure mode.
  - LL_MPU_REGION_NUMBER10 Available only on secure mode.
  - LL_MPU_REGION_NUMBER11 Available only on secure mode.

Return values

- **MPU:** region limit address

Reference Manual to LL API cross reference:

- MPU_RNR REGION LL_MPU_GetRegionLimitAddress
- MPU_RLAR LIMIT LL_MPU_GetRegionLimitAddress

LL_MPU_SetRegionBaseAddress

Function name

__STATIC_INLINE void LL_MPU_SetRegionBaseAddress (uint32_t Region, uint32_t BaseAddress)

Function description

Configure a MPU region base address.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_MPU_REGION_NUMBER0
  - LL_MPU_REGION_NUMBER1
  - LL_MPU_REGION_NUMBER2
  - LL_MPU_REGION_NUMBER3
  - LL_MPU_REGION_NUMBER4

Return values

- **Non-secure:** MPU region limit address

Reference Manual to LL API cross reference:

- MPU_RNR REGION LL_MPU_GetRegionLimitAddress_NS
- MPU_RLAR LIMIT LL_MPU_GetRegionLimitAddress_NS

LL_MPU_SetRegionBaseAddress_NS

Function name

__STATIC_INLINE void LL_MPU_SetRegionBaseAddress_NS (uint32_t Region, uint32_t BaseAddress)

Function description

Configure a non-secure MPU region base address.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_MPU_REGION_NUMBER0
  - LL_MPU_REGION_NUMBER1
  - LL_MPU_REGION_NUMBER2
  - LL_MPU_REGION_NUMBER3
  - LL_MPU_REGION_NUMBER4
  - LL_MPU_REGION_NUMBER5
  - LL_MPU_REGION_NUMBER6
  - LL_MPU_REGION_NUMBER7
- **BaseAddress:** Value of region base address

Return values

- **None:**

Notes

- STM32U3xx supports 12 secure and 8 non secure regions.

Reference Manual to LL API cross reference:

- MPU_RNR REGION LL_MPU_SetRegionBaseAddress_NS
- MPU_RBAR BASE LL_MPU_SetRegionBaseAddress_NS

LL_MPU_GetRegionBaseAddress_NS

Function name

__STATIC_INLINE uint32_t LL_MPU_GetRegionBaseAddress_NS (uint32_t Region)

Function description

Get a non-secure MPU region base address.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_MPU_REGION_NUMBER0
  - LL_MPU_REGION_NUMBER1
  - LL_MPU_REGION_NUMBER2
  - LL_MPU_REGION_NUMBER3
  - LL_MPU_REGION_NUMBER4
  - LL_MPU_REGION_NUMBER5
  - LL_MPU_REGION_NUMBER6
  - LL_MPU_REGION_NUMBER7

Return values

- **Non-secure:** MPU region base address

Reference Manual to LL API cross reference:

- MPU_RNR REGION LL_MPU_GetRegionBaseAddress_NS
- MPU_RBAR BASE LL_MPU_GetRegionBaseAddress_NS

LL_MPU_SetRegionAccess_NS

Function name

__STATIC_INLINE void LL_MPU_SetRegionAccess_NS (uint32_t Region, uint32_t Attributes)

Function description

Configure a non-secure MPU region access attributes and enable a region.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_MPU_REGION_NUMBER0
  - LL_MPU_REGION_NUMBER1
  - LL_MPU_REGION_NUMBER2
  - LL_MPU_REGION_NUMBER3
  - LL_MPU_REGION_NUMBER4
  - LL_MPU_REGION_NUMBER5
  - LL_MPU_REGION_NUMBER6
  - LL_MPU_REGION_NUMBER7
- **Attributes:** This parameter can be a combination of the following values:
  - LL_MPU_INSTRUCTION_ACCESS_ENABLE or LL_MPU_INSTRUCTION_ACCESS_DISABLE
  - LL_MPU_ACCESS_NOT_SHAREABLE or LL_MPU_ACCESS_OUTER_SHAREABLE or LL_MPU_ACCESS_INNER_SHAREABLE
  - LL_MPU_REGION_PRIV_RW or LL_MPU_REGION_ALL_RW or LL_MPU_REGION_PRIV_RO or LL_MPU_REGION_ALL_RO

Return values

- **None:**

Notes

- STM32U3xx supports 12 secure and 8 non secure regions.

78 LL CRC Generic Driver

78.1 CRC Firmware driver API description

The following section lists the various functions of the CRC library.

78.1.1 Detailed description of functions

LL_CRC_ResetCRCCalculationUnit

Function name

__STATIC_INLINE void LL_CRC_ResetCRCCalculationUnit (CRC_TypeDef * CRCx)

Function description

Reset the CRC calculation unit.

Parameters

- **CRCx:** CRC Instance

Return values

- **None:**

Notes

- If Programmable Initial CRC value feature is available, also set the Data Register to the value stored in the CRC_INIT register, otherwise, reset Data Register to its default value.

Reference Manual to LL API cross reference:

- CR RESET LL_CRC_ResetCRCCalculationUnit

LL_CRC_SetPolynomialSize

Function name

__STATIC_INLINE void LL_CRC_SetPolynomialSize (CRC_TypeDef * CRCx, uint32_t PolySize)

Function description

Configure size of the polynomial.

Parameters

- **CRCx:** CRC Instance
- **PolySize:** This parameter can be one of the following values:
  - LL_CRC_POLYLENGTH_32B
  - LL_CRC_POLYLENGTH_16B
  - LL_CRC_POLYLENGTH_8B
  - LL_CRC_POLYLENGTH_7B

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR POLYSIZE LL_CRC_SetPolynomialSize

LL_CRC_GetPolynomialSize

Function name

__STATIC_INLINE uint32_t LL_CRC_GetPolynomialSize (const CRC_TypeDef * CRCx)

Function description

Return size of the polynomial.

Parameters

- **CRCx:** CRC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_CRC_POLYLENGTH_32B
  - LL_CRC_POLYLENGTH_16B
  - LL_CRC_POLYLENGTH_8B
  - LL_CRC_POLYLENGTH_7B

Reference Manual to LL API cross reference:

- CR POLYSIZE LL_CRC_GetPolynomialSize

LL_CRC_SetInputDataReverseType

Function name

__STATIC_INLINE void LL_CRC_SetInputDataReverseType (CRC_TypeDef * CRCx, uint32_t ReverseType)

Function description

Configure the reversal type of the input data.

Parameters

- **CRCx:** CRC Instance
- **ReverseType:** This parameter can be one of the following values:
  - LL_CRC_INDATA_REVERSETYPE_BIT
  - LL_CRC_INDATA_REVERSETYPE_BYTE_HALFWORD

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RTYPE_IN LL_CRC_SetInputDataReverseType

LL_CRC_GetInputDataReverseType

Function name

__STATIC_INLINE uint32_t LL_CRC_GetInputDataReverseType (CRC_TypeDef * CRCx)

Function description

Return input data type of reversal.

Parameters

- **CRCx:** CRC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_CRC_INDATA_REVERSETYPE_BIT
  - LL_CRC_INDATA_REVERSETYPE_BYTE_HALFWORD

Reference Manual to LL API cross reference:

- CR RTYPE_IN LL_CRC_GetInputDataReverseType

LL_CRC_SetOutputDataReverseType

Function name

__STATIC_INLINE void LL_CRC_SetOutputDataReverseType (CRC_TypeDef * CRCx, uint32_t ReverseType)

Function description

Configure the reversal type of the output data.

Parameters

- **CRCx:** CRC Instance
- **ReverseType:** This parameter can be one of the following values:
  - LL_CRC_OUTDATA_REVERSETYPE_BIT
  - LL_CRC_OUTDATA_REVERSETYPE_BYTE_HALFWORD

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RTYPE_OUT LL_CRC_SetOutputDataReverseType

LL_CRC_GetOutputDataReverseType

Function name

__STATIC_INLINE uint32_t LL_CRC_GetOutputDataReverseType (CRC_TypeDef * CRCx)

Function description

Return output data type of reversal.

Parameters

- **CRCx:** CRC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_CRC_OUTDATA_REVERSETYPE_BIT
  - LL_CRC_OUTDATA_REVERSETYPE_BYTE_HALFWORD

Reference Manual to LL API cross reference:

- CR RTYPE_OUT LL_CRC_GetOutputDataReverseType

LL_CRC_SetInputDataReverseMode

Function name

__STATIC_INLINE void LL_CRC_SetInputDataReverseMode (CRC_TypeDef * CRCx, uint32_t ReverseMode)

Function description

Configure the reversal of the bit order of the input data.

Parameters

- **CRCx:** CRC Instance
- **ReverseMode:** This parameter can be one of the following values:
  - LL_CRC_INDATA_REVERSE_NONE
  - LL_CRC_INDATA_REVERSE_BIT_BYBYTE
  - LL_CRC_INDATA_REVERSE_HALFWORD_BYWORD
  - LL_CRC_INDATA_REVERSE_BIT_BYHALFWORD
  - LL_CRC_INDATA_REVERSE_BYTE_BYWORD
  - LL_CRC_INDATA_REVERSE_BIT_BYWORD

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR REV_IN LL_CRC_SetInputDataReverseMode

LL_CRC_GetInputDataReverseMode

Function name

__STATIC_INLINE uint32_t LL_CRC_GetInputDataReverseMode (const CRC_TypeDef * CRCx)

Function description

Return mode of reversal for input data bit order.

Parameters

- **CRCx:** CRC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_CRC_INDATA_REVERSE_NONE
  - LL_CRC_INDATA_REVERSE_BIT_BYBYTE
  - LL_CRC_INDATA_REVERSE_HALFWORD_BYWORD
  - LL_CRC_INDATA_REVERSE_BIT_BYHALFWORD
  - LL_CRC_INDATA_REVERSE_BYTE_BYWORD
  - LL_CRC_INDATA_REVERSE_BIT_BYWORD

Reference Manual to LL API cross reference:

- CR REV_IN LL_CRC_GetInputDataReverseMode

LL_CRC_SetOutputDataReverseMode

Function name

__STATIC_INLINE void LL_CRC_SetOutputDataReverseMode (CRC_TypeDef * CRCx, uint32_t ReverseMode)

Function description

Configure the reversal of the bit order of the Output data.

Parameters

- **CRCx:** CRC Instance
- **ReverseMode:** This parameter can be one of the following values:
  - LL_CRC_OUTDATA_REVERSE_NONE
  - LL_CRC_OUTDATA_REVERSE_BIT
  - LL_CRC_OUTDATA_REVERSE_HALFWORD
  - LL_CRC_OUTDATA_REVERSE_BYTE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR REV_OUT LL_CRC_SetOutputDataReverseMode

LL_CRC_GetOutputDataReverseMode

Function name

__STATIC_INLINE uint32_t LL_CRC_GetOutputDataReverseMode (const CRC_TypeDef * CRCx)

Function description

Return mode of reversal of the bit order of the Output data.

Parameters

- **CRCx:** CRC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_CRC_OUTDATA_REVERSE_NONE
  - LL_CRC_OUTDATA_REVERSE_BIT
  - LL_CRC_OUTDATA_REVERSE_HALFWORD
  - LL_CRC_OUTDATA_REVERSE_BYTE

Reference Manual to LL API cross reference:

- CR REV_OUT LL_CRC_GetOutputDataReverseMode

LL_CRC_SetInitialData

Function name

__STATIC_INLINE void LL_CRC_SetInitialData (CRC_TypeDef * CRCx, uint32_t InitCrc)

Function description

Initialize the Programmable initial CRC value.

Parameters

- **CRCx:** CRC Instance
- **InitCrc:** Value to be programmed in Programmable initial CRC value register

Return values

- **None:**

Notes

- If the CRC size is less than 32 bits, the least significant bits are used to write the correct value
- LL_CRC_DEFAULT_CRC_INITVALUE could be used as value for InitCrc parameter.

Reference Manual to LL API cross reference:

- INIT INIT LL_CRC_SetInitialData

LL_CRC_GetInitialData

Function name

__STATIC_INLINE uint32_t LL_CRC_GetInitialData (const CRC_TypeDef * CRCx)

Function description

Return current Initial CRC value.

Parameters

- **CRCx:** CRC Instance

Return values

- **Value:** programmed in Programmable initial CRC value register

Notes

- If the CRC size is less than 32 bits, the least significant bits are used to read the correct value

Reference Manual to LL API cross reference:

- INIT INIT LL_CRC_GetInitialData

LL_CRC_SetPolynomialCoef

Function name

__STATIC_INLINE void LL_CRC_SetPolynomialCoef (CRC_TypeDef * CRCx, uint32_t PolynomCoef)

Function description

Initialize the Programmable polynomial value (coefficients of the polynomial to be used for CRC calculation).

Parameters

- **CRCx:** CRC Instance
- **PolynomCoef:** Value to be programmed in Programmable Polynomial value register

Return values

- **None:**

Notes

- LL_CRC_DEFAULT_CRC32_POLY could be used as value for PolynomCoef parameter.
- Please check Reference Manual and existing Errata Sheets, regarding possible limitations for Polynomial values usage. For example, for a polynomial of degree 7, X^7 + X^6 + X^5 + X^2 + 1 is written 0x65

Reference Manual to LL API cross reference:

- POL POL LL_CRC_SetPolynomialCoef

LL_CRC_GetPolynomialCoef

Function name

__STATIC_INLINE uint32_t LL_CRC_GetPolynomialCoef (const CRC_TypeDef * CRCx)

Function description

Return current Programmable polynomial value.

Parameters

- **CRCx:** CRC Instance

Return values

- **Value:** programmed in Programmable Polynomial value register

Notes

- Please check Reference Manual and existing Errata Sheets, regarding possible limitations for Polynomial values usage. For example, for a polynomial of degree 7, X^7 + X^6 + X^5 + X^2 + 1 is written 0x65

Reference Manual to LL API cross reference:

- POL POL LL_CRC_GetPolynomialCoef

LL_CRC_FeedData32

Function name

__STATIC_INLINE void LL_CRC_FeedData32 (CRC_TypeDef * CRCx, uint32_t InData)

Function description

Write given 32-bit data to the CRC calculator.

Parameters

- **CRCx:** CRC Instance
- **InData:** value to be provided to CRC calculator between between Min_Data=0 and Max_Data=0xFFFFFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- DR DR LL_CRC_FeedData32

LL_CRC_FeedData16

Function name

__STATIC_INLINE void LL_CRC_FeedData16 (CRC_TypeDef * CRCx, uint16_t InData)

Function description

Write given 16-bit data to the CRC calculator.

Parameters

- **CRCx:** CRC Instance
- **InData:** 16 bit value to be provided to CRC calculator between between Min_Data=0 and Max_Data=0xFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- DR DR LL_CRC_FeedData16

LL_CRC_FeedData8

Function name

__STATIC_INLINE void LL_CRC_FeedData8 (CRC_TypeDef * CRCx, uint8_t InData)

Function description

Write given 8-bit data to the CRC calculator.

Parameters

- **CRCx:** CRC Instance
- **InData:** 8 bit value to be provided to CRC calculator between between Min_Data=0 and Max_Data=0xFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- DR DR LL_CRC_FeedData8

LL_CRC_ReadData32

Function name

__STATIC_INLINE uint32_t LL_CRC_ReadData32 (const CRC_TypeDef * CRCx)

Function description

Return current CRC calculation result.

Parameters

- **CRCx:** CRC Instance

Return values

- **Current:** CRC calculation result as stored in CRC_DR register (32 bits).

Reference Manual to LL API cross reference:

- DR DR LL_CRC_ReadData32

LL_CRC_ReadData16

Function name

__STATIC_INLINE uint16_t LL_CRC_ReadData16 (const CRC_TypeDef * CRCx)

Function description

Return current CRC calculation result.

Parameters

- **CRCx:** CRC Instance

Return values

- **Current:** CRC calculation result as stored in CRC_DR register (16 bits).

Notes

- This function is expected to be used in a 16 bits CRC polynomial size context.

Reference Manual to LL API cross reference:

- DR DR LL_CRC_ReadData16

LL_CRC_ReadData8

Function name

__STATIC_INLINE uint8_t LL_CRC_ReadData8 (const CRC_TypeDef * CRCx)

Function description

Return current CRC calculation result.

Parameters

- **CRCx:** CRC Instance

Return values

- **Current:** CRC calculation result as stored in CRC_DR register (8 bits).

Notes

- This function is expected to be used in a 8 bits CRC polynomial size context.

Reference Manual to LL API cross reference:

- DR DR LL_CRC_ReadData8

LL_CRC_ReadData7

Function name

__STATIC_INLINE uint8_t LL_CRC_ReadData7 (const CRC_TypeDef * CRCx)

Function description

Return current CRC calculation result.

Parameters

- **CRCx:** CRC Instance

Return values

- **Current:** CRC calculation result as stored in CRC_DR register (7 bits).

Notes

- This function is expected to be used in a 7 bits CRC polynomial size context.

Reference Manual to LL API cross reference:

- DR DR LL_CRC_ReadData7

LL_CRC_Read_IDR

Function name

__STATIC_INLINE uint32_t LL_CRC_Read_IDR (const CRC_TypeDef * CRCx)

Function description

Return data stored in the Independent Data(IDR) register.

Parameters

- **CRCx:** CRC Instance

Return values

- **Value:** stored in CRC_IDR register (General-purpose 32-bit data register).

Notes

- This register can be used as a temporary storage location for one 32-bit long data.

Reference Manual to LL API cross reference:

- IDR IDR LL_CRC_Read_IDR

LL_CRC_Write_IDR

Function name

__STATIC_INLINE void LL_CRC_Write_IDR (CRC_TypeDef * CRCx, uint32_t InData)

Function description

Store data in the Independent Data(IDR) register.

Parameters

- **CRCx:** CRC Instance
- **InData:** value to be stored in CRC_IDR register (32-bit) between Min_Data=0 and Max_Data=0xFFFFFFFF

Return values

- **None:**

Notes

- This register can be used as a temporary storage location for one 32-bit long data.

Reference Manual to LL API cross reference:

- IDR IDR LL_CRC_Write_IDR

LL_CRC_DeInit

Function name

ErrorStatus LL_CRC_DeInit (const CRC_TypeDef * CRCx)

Function description

De-initialize CRC registers (Registers restored to their default values).

Parameters

- **CRCx:** CRC Instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: CRC registers are de-initialized
  - ERROR: CRC registers are not de-initialized

78.2 CRC Firmware driver defines

The following section lists the various define and macros of the module.

78.2.1 CRC

CRC

Default CRC computation initialization value

LL_CRC_DEFAULT_CRC_INITVALUE

Default CRC computation initialization value

Default CRC generating polynomial value

LL_CRC_DEFAULT_CRC32_POLY

Default CRC generating polynomial value

Input Data Reverse

LL_CRC_INDATA_REVERSE_NONE

Input Data bit order not affected

LL_CRC_INDATA_REVERSE_BIT_BYBYTE

Input Data bit reversal done by byte

LL_CRC_INDATA_REVERSE_BYTE

Definition for compatibility with legacy code

LL_CRC_INDATA_REVERSE_HALFWORD_BYWORD

Input Data half-word reversal done by word

LL_CRC_INDATA_REVERSE_BIT_BYHALFWORD

Input Data bit reversal done by half-word

LL_CRC_INDATA_REVERSE_HALFWORD

Definition for compatibility with legacy code

LL_CRC_INDATA_REVERSE_BYTE_BYWORD

Input Data byte reversal done by word

LL_CRC_INDATA_REVERSE_BIT_BYWORD

Input Data bit reversal done by word

LL_CRC_INDATA_REVERSE_WORD

Definition for compatibility with legacy code

Input Reverse Type

LL_CRC_INDATA_REVERSETYPE_BIT

Input Data reverse type at bit level granularity

LL_CRC_INDATA_REVERSETYPE_BYTE_HALFWORD

Input Data reverse type at byte or half-word level granularity

Output Data Reverse

LL_CRC_OUTDATA_REVERSE_NONE

Output Data bit order not affected

LL_CRC_OUTDATA_REVERSE_BIT

Output Data bit reversal done by bit

LL_CRC_OUTDATA_REVERSE_HALFWORD

Output Data half-word reversal done by word

LL_CRC_OUTDATA_REVERSE_BYTE

Output Data byte reversal done by word

Output Reverse Type

LL_CRC_OUTDATA_REVERSETYPE_BIT

Output Data reverse type at bit level granularity

LL_CRC_OUTDATA_REVERSETYPE_BYTE_HALFWORD

Output Data reverse type at byte or half-word level granularity

Polynomial length

LL_CRC_POLYLENGTH_32B

32 bits Polynomial size

LL_CRC_POLYLENGTH_16B

16 bits Polynomial size

LL_CRC_POLYLENGTH_8B

8 bits Polynomial size

LL_CRC_POLYLENGTH_7B

7 bits Polynomial size

Common Write and read registers Macros

LL_CRC_WriteReg

Description:

- Write a value in CRC register.

Parameters:

- __INSTANCE__: CRC Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_CRC_ReadReg

Description:

- Read a value in CRC register.

Parameters:

- __INSTANCE__: CRC Instance
- __REG__: Register to be read

Return value:

- Register: value

79 LL CRS Generic Driver

79.1 CRS Firmware driver API description

The following section lists the various functions of the CRS library.

79.1.1 Detailed description of functions

LL_CRS_EnableFreqErrorCounter

Function name

__STATIC_INLINE void LL_CRS_EnableFreqErrorCounter (void)

Function description

Enable Frequency error counter.

Return values

- **None:**

Notes

- When this bit is set, the CRS_CFGR register is write-protected and cannot be modified

Reference Manual to LL API cross reference:

- CR CEN LL_CRS_EnableFreqErrorCounter

LL_CRS_DisableFreqErrorCounter

Function name

__STATIC_INLINE void LL_CRS_DisableFreqErrorCounter (void)

Function description

Disable Frequency error counter.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CEN LL_CRS_DisableFreqErrorCounter

LL_CRS_IsEnabledFreqErrorCounter

Function name

__STATIC_INLINE uint32_t LL_CRS_IsEnabledFreqErrorCounter (void)

Function description

Check if Frequency error counter is enabled or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR CEN LL_CRS_IsEnabledFreqErrorCounter

LL_CRS_EnableAutoTrimming

Function name

__STATIC_INLINE void LL_CRS_EnableAutoTrimming (void)

Function description

Enable Automatic trimming counter.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR AUTOTRIMEN LL_CRS_EnableAutoTrimming

LL_CRS_DisableAutoTrimming

Function name

__STATIC_INLINE void LL_CRS_DisableAutoTrimming (void)

Function description

Disable Automatic trimming counter.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR AUTOTRIMEN LL_CRS_DisableAutoTrimming

LL_CRS_IsEnabledAutoTrimming

Function name

__STATIC_INLINE uint32_t LL_CRS_IsEnabledAutoTrimming (void)

Function description

Check if Automatic trimming is enabled or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR AUTOTRIMEN LL_CRS_IsEnabledAutoTrimming

LL_CRS_SetHSI48SmoothTrimming

Function name

__STATIC_INLINE void LL_CRS_SetHSI48SmoothTrimming (uint32_t Value)

Function description

Set HSI48 oscillator smooth trimming.

Parameters

- **Value:** a number between Min_Data = 0 and Max_Data = 127

Return values

- **None:**

Notes

- When the AUTOTRIMEN bit is set, this field is controlled by hardware and is read-only
- Default value can be set thanks to LL_CRS_HSI48CALIBRATION_DEFAULT

Reference Manual to LL API cross reference:

- CR TRIM LL_CRS_SetHSI48SmoothTrimming

LL_CRS_GetHSI48SmoothTrimming

Function name

__STATIC_INLINE uint32_t LL_CRS_GetHSI48SmoothTrimming (void)

Function description

Get HSI48 oscillator smooth trimming.

Return values

- **a:** number between Min_Data = 0 and Max_Data = 127

Reference Manual to LL API cross reference:

- CR TRIM LL_CRS_GetHSI48SmoothTrimming

LL_CRS_SetReloadCounter

Function name

__STATIC_INLINE void LL_CRS_SetReloadCounter (uint32_t Value)

Function description

Set counter reload value.

Parameters

- **Value:** a number between Min_Data = 0 and Max_Data = 65535 (0xFFFF)

Return values

- **None:**

Notes

- Default value can be set thanks to LL_CRS_RELOADVALUE_DEFAULT Otherwise it can be calculated in using macro __LL_CRS_CALC_CALCULATE_RELOADVALUE (_FTARGET_, _FSYNC_)

Reference Manual to LL API cross reference:

- CFGR RELOAD LL_CRS_SetReloadCounter

LL_CRS_GetReloadCounter

Function name

__STATIC_INLINE uint32_t LL_CRS_GetReloadCounter (void)

Function description

Get counter reload value.

Return values

- **a:** number between Min_Data = 0 and Max_Data = 65535 (0xFFFF)

Reference Manual to LL API cross reference:

- CFGR RELOAD LL_CRS_GetReloadCounter

LL_CRS_SetFreqErrorLimit

Function name

__STATIC_INLINE void LL_CRS_SetFreqErrorLimit (uint32_t Value)

Function description

Set frequency error limit.

Parameters

- **Value:** a number between Min_Data = 0 and Max_Data = 255

Return values

- **None:**

Notes

- Default value can be set thanks to LL_CRS_ERRORLIMIT_DEFAULT

Reference Manual to LL API cross reference:

- CFGR FELIM LL_CRS_SetFreqErrorLimit

LL_CRS_GetFreqErrorLimit

Function name

__STATIC_INLINE uint32_t LL_CRS_GetFreqErrorLimit (void)

Function description

Get frequency error limit.

Return values

- **A:** number between Min_Data = 0 and Max_Data = 255

Reference Manual to LL API cross reference:

- CFGR FELIM LL_CRS_GetFreqErrorLimit

LL_CRS_SetSyncDivider

Function name

__STATIC_INLINE void LL_CRS_SetSyncDivider (uint32_t Divider)

Function description

Set division factor for SYNC signal.

Parameters

- **Divider:** This parameter can be one of the following values:
  - LL_CRS_SYNC_DIV_1
  - LL_CRS_SYNC_DIV_2
  - LL_CRS_SYNC_DIV_4
  - LL_CRS_SYNC_DIV_8
  - LL_CRS_SYNC_DIV_16
  - LL_CRS_SYNC_DIV_32
  - LL_CRS_SYNC_DIV_64
  - LL_CRS_SYNC_DIV_128

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR SYNCDIV LL_CRS_SetSyncDivider

LL_CRS_GetSyncDivider

Function name

__STATIC_INLINE uint32_t LL_CRS_GetSyncDivider (void)

Function description

Get division factor for SYNC signal.

Return values

- **Returned:** value can be one of the following values:
  - LL_CRS_SYNC_DIV_1
  - LL_CRS_SYNC_DIV_2
  - LL_CRS_SYNC_DIV_4
  - LL_CRS_SYNC_DIV_8
  - LL_CRS_SYNC_DIV_16
  - LL_CRS_SYNC_DIV_32
  - LL_CRS_SYNC_DIV_64
  - LL_CRS_SYNC_DIV_128

Reference Manual to LL API cross reference:

- CFGR SYNCDIV LL_CRS_GetSyncDivider

LL_CRS_SetSyncSignalSource

Function name

__STATIC_INLINE void LL_CRS_SetSyncSignalSource (uint32_t Source)

Function description

Set SYNC signal source.

Parameters

- **Source:** This parameter can be one of the following values:
  - LL_CRS_SYNC_SOURCE_GPIO
  - LL_CRS_SYNC_SOURCE_LSE
  - LL_CRS_SYNC_SOURCE_USB

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR SYNCSRC LL_CRS_SetSyncSignalSource

LL_CRS_GetSyncSignalSource

Function name

__STATIC_INLINE uint32_t LL_CRS_GetSyncSignalSource (void)

Function description

Get SYNC signal source.

Return values

- **Returned:** value can be one of the following values:
  - LL_CRS_SYNC_SOURCE_GPIO
  - LL_CRS_SYNC_SOURCE_LSE
  - LL_CRS_SYNC_SOURCE_USB

Reference Manual to LL API cross reference:

- CFGR SYNCSRC LL_CRS_GetSyncSignalSource

LL_CRS_SetSyncPolarity

Function name

__STATIC_INLINE void LL_CRS_SetSyncPolarity (uint32_t Polarity)

Function description

Set input polarity for the SYNC signal source.

Parameters

- **Polarity:** This parameter can be one of the following values:
  - LL_CRS_SYNC_POLARITY_RISING
  - LL_CRS_SYNC_POLARITY_FALLING

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR SYNCPOL LL_CRS_SetSyncPolarity

LL_CRS_GetSyncPolarity

Function name

__STATIC_INLINE uint32_t LL_CRS_GetSyncPolarity (void)

Function description

Get input polarity for the SYNC signal source.

Return values

- **Returned:** value can be one of the following values:
  - LL_CRS_SYNC_POLARITY_RISING
  - LL_CRS_SYNC_POLARITY_FALLING

Reference Manual to LL API cross reference:

- CFGR SYNCPOL LL_CRS_GetSyncPolarity

LL_CRS_ConfigSynchronization

Function name

__STATIC_INLINE void LL_CRS_ConfigSynchronization (uint32_t HSI48CalibrationValue, uint32_t ErrorLimitValue, uint32_t ReloadValue, uint32_t Settings)

Function description

Configure CRS for the synchronization.

Parameters

- **HSI48CalibrationValue:** a number between Min_Data = 0 and Max_Data = 63
- **ErrorLimitValue:** a number between Min_Data = 0 and Max_Data = 255
- **ReloadValue:** a number between Min_Data = 0 and Max_Data = 65535 (0xFFFF)
- **Settings:** This parameter can be a combination of the following values:
  - LL_CRS_SYNC_DIV_1 or LL_CRS_SYNC_DIV_2 or LL_CRS_SYNC_DIV_4 or LL_CRS_SYNC_DIV_8 or LL_CRS_SYNC_DIV_16 or LL_CRS_SYNC_DIV_32 or LL_CRS_SYNC_DIV_64 or LL_CRS_SYNC_DIV_128
  - LL_CRS_SYNC_SOURCE_GPIO or LL_CRS_SYNC_SOURCE_LSE or LL_CRS_SYNC_SOURCE_USB
  - LL_CRS_SYNC_POLARITY_RISING or LL_CRS_SYNC_POLARITY_FALLING

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR TRIM LL_CRS_ConfigSynchronization
- CFGR RELOAD LL_CRS_ConfigSynchronization
- CFGR FELIM LL_CRS_ConfigSynchronization
- CFGR SYNCDIV LL_CRS_ConfigSynchronization
- CFGR SYNCSRC LL_CRS_ConfigSynchronization
- CFGR SYNCPOL LL_CRS_ConfigSynchronization

LL_CRS_GenerateEvent_SWSYNC

Function name

__STATIC_INLINE void LL_CRS_GenerateEvent_SWSYNC (void)

Function description

Generate software SYNC event.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR SWSYNC LL_CRS_GenerateEvent_SWSYNC

LL_CRS_GetFreqErrorDirection

Function name

__STATIC_INLINE uint32_t LL_CRS_GetFreqErrorDirection (void)

Function description

Get the frequency error direction latched in the time of the last SYNC event.

Return values

- **Returned:** value can be one of the following values:
  - LL_CRS_FREQ_ERROR_DIR_UP
  - LL_CRS_FREQ_ERROR_DIR_DOWN

Reference Manual to LL API cross reference:

- ISR FEDIR LL_CRS_GetFreqErrorDirection

LL_CRS_GetFreqErrorCapture

Function name

__STATIC_INLINE uint32_t LL_CRS_GetFreqErrorCapture (void)

Function description

Get the frequency error counter value latched in the time of the last SYNC event.

Return values

- **A:** number between Min_Data = 0x0000 and Max_Data = 0xFFFF

Reference Manual to LL API cross reference:

- ISR FECAP LL_CRS_GetFreqErrorCapture

LL_CRS_IsActiveFlag_SYNCOK

Function name

__STATIC_INLINE uint32_t LL_CRS_IsActiveFlag_SYNCOK (void)

Function description

Check if SYNC event OK signal occurred or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR SYNCOKF LL_CRS_IsActiveFlag_SYNCOK

LL_CRS_IsActiveFlag_SYNCWARN

Function name

__STATIC_INLINE uint32_t LL_CRS_IsActiveFlag_SYNCWARN (void)

Function description

Check if SYNC warning signal occurred or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR SYNCWARNF LL_CRS_IsActiveFlag_SYNCWARN

LL_CRS_IsActiveFlag_ERR

Function name

__STATIC_INLINE uint32_t LL_CRS_IsActiveFlag_ERR (void)

Function description

Check if Synchronization or trimming error signal occurred or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR ERRF LL_CRS_IsActiveFlag_ERR

LL_CRS_IsActiveFlag_ESYNC

Function name

__STATIC_INLINE uint32_t LL_CRS_IsActiveFlag_ESYNC (void)

Function description

Check if Expected SYNC signal occurred or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR ESYNCF LL_CRS_IsActiveFlag_ESYNC

LL_CRS_IsActiveFlag_SYNCERR

Function name

__STATIC_INLINE uint32_t LL_CRS_IsActiveFlag_SYNCERR (void)

Function description

Check if SYNC error signal occurred or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR SYNCERR LL_CRS_IsActiveFlag_SYNCERR

LL_CRS_IsActiveFlag_SYNCMISS

Function name

__STATIC_INLINE uint32_t LL_CRS_IsActiveFlag_SYNCMISS (void)

Function description

Check if SYNC missed error signal occurred or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR SYNCMISS LL_CRS_IsActiveFlag_SYNCMISS

LL_CRS_IsActiveFlag_TRIMOVF

Function name

__STATIC_INLINE uint32_t LL_CRS_IsActiveFlag_TRIMOVF (void)

Function description

Check if Trimming overflow or underflow occurred or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TRIMOVF LL_CRS_IsActiveFlag_TRIMOVF

LL_CRS_ClearFlag_SYNCOK

Function name

__STATIC_INLINE void LL_CRS_ClearFlag_SYNCOK (void)

Function description

Clear the SYNC event OK flag.

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR SYNCOKC LL_CRS_ClearFlag_SYNCOK

LL_CRS_ClearFlag_SYNCWARN

Function name

__STATIC_INLINE void LL_CRS_ClearFlag_SYNCWARN (void)

Function description

Clear the SYNC warning flag.

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR SYNCWARNC LL_CRS_ClearFlag_SYNCWARN

LL_CRS_ClearFlag_ERR

Function name

__STATIC_INLINE void LL_CRS_ClearFlag_ERR (void)

Function description

Clear TRIMOVF, SYNCMISS and SYNCERR bits and consequently also the ERR flag.

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR ERRC LL_CRS_ClearFlag_ERR

LL_CRS_ClearFlag_ESYNC

Function name

__STATIC_INLINE void LL_CRS_ClearFlag_ESYNC (void)

Function description

Clear Expected SYNC flag.

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR ESYNCC LL_CRS_ClearFlag_ESYNC

LL_CRS_EnableIT_SYNCOK

Function name

__STATIC_INLINE void LL_CRS_EnableIT_SYNCOK (void)

Function description

Enable SYNC event OK interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR SYNCOKIE LL_CRS_EnableIT_SYNCOK

LL_CRS_DisableIT_SYNCOK

Function name

__STATIC_INLINE void LL_CRS_DisableIT_SYNCOK (void)

Function description

Disable SYNC event OK interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR SYNCOKIE LL_CRS_DisableIT_SYNCOK

LL_CRS_IsEnabledIT_SYNCOK

Function name

__STATIC_INLINE uint32_t LL_CRS_IsEnabledIT_SYNCOK (void)

Function description

Check if SYNC event OK interrupt is enabled or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR SYNCOKIE LL_CRS_IsEnabledIT_SYNCOK

LL_CRS_EnableIT_SYNCWARN

Function name

__STATIC_INLINE void LL_CRS_EnableIT_SYNCWARN (void)

Function description

Enable SYNC warning interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR SYNCWARNIE LL_CRS_EnableIT_SYNCWARN

LL_CRS_DisableIT_SYNCWARN

Function name

__STATIC_INLINE void LL_CRS_DisableIT_SYNCWARN (void)

Function description

Disable SYNC warning interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR SYNCWARNIE LL_CRS_DisableIT_SYNCWARN

LL_CRS_IsEnabledIT_SYNCWARN

Function name

__STATIC_INLINE uint32_t LL_CRS_IsEnabledIT_SYNCWARN (void)

Function description

Check if SYNC warning interrupt is enabled or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR SYNCWARNIE LL_CRS_IsEnabledIT_SYNCWARN

LL_CRS_EnableIT_ERR

Function name

__STATIC_INLINE void LL_CRS_EnableIT_ERR (void)

Function description

Enable Synchronization or trimming error interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR ERRIE LL_CRS_EnableIT_ERR

LL_CRS_DisableIT_ERR

Function name

__STATIC_INLINE void LL_CRS_DisableIT_ERR (void)

Function description

Disable Synchronization or trimming error interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR ERRIE LL_CRS_DisableIT_ERR

LL_CRS_IsEnabledIT_ERR

Function name

__STATIC_INLINE uint32_t LL_CRS_IsEnabledIT_ERR (void)

Function description

Check if Synchronization or trimming error interrupt is enabled or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR ERRIE LL_CRS_IsEnabledIT_ERR

LL_CRS_EnableIT_ESYNC

Function name

__STATIC_INLINE void LL_CRS_EnableIT_ESYNC (void)

Function description

Enable Expected SYNC interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR ESYNCIE LL_CRS_EnableIT_ESYNC

LL_CRS_DisableIT_ESYNC

Function name

__STATIC_INLINE void LL_CRS_DisableIT_ESYNC (void)

Function description

Disable Expected SYNC interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR ESYNCIE LL_CRS_DisableIT_ESYNC

LL_CRS_IsEnabledIT_ESYNC

Function name

__STATIC_INLINE uint32_t LL_CRS_IsEnabledIT_ESYNC (void)

Function description

Check if Expected SYNC interrupt is enabled or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR ESYNCIE LL_CRS_IsEnabledIT_ESYNC

LL_CRS_DeInit

Function name

ErrorStatus LL_CRS_DeInit (void)

Function description

De-Initializes CRS peripheral registers to their default reset values.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: CRS registers are de-initialized
  - ERROR: not applicable

79.2 CRS Firmware driver defines

The following section lists the various define and macros of the module.

79.2.1 CRS

CRS

Default Values

LL_CRS_RELOADVALUE_DEFAULT

Notes:

- The reset value of the RELOAD field corresponds to a target frequency of 48 MHz and a synchronization signal frequency of 1 kHz (SOF signal from USB)

LL_CRS_ERRORLIMIT_DEFAULT

LL_CRS_HSI48CALIBRATION_DEFAULT

Notes:

- The default value is 64, which corresponds to the middle of the trimming interval. The trimming step is specified in the product datasheet. A higher TRIM value corresponds to a higher output frequency.

Frequency Error Direction

LL_CRS_FREQ_ERROR_DIR_UP

Upcounting direction, the actual frequency is above the target

LL_CRS_FREQ_ERROR_DIR_DOWN

Downcounting direction, the actual frequency is below the target

Get Flags Defines

Synchronization Signal Divider

LL_CRS_SYNC_DIV_1

Synchro Signal not divided (default)

LL_CRS_SYNC_DIV_2

Synchro Signal divided by 2

LL_CRS_SYNC_DIV_4

Synchro Signal divided by 4

LL_CRS_SYNC_DIV_8

Synchro Signal divided by 8

LL_CRS_SYNC_DIV_16

Synchro Signal divided by 16

LL_CRS_SYNC_DIV_32

Synchro Signal divided by 32

LL_CRS_SYNC_DIV_64

Synchro Signal divided by 64

LL_CRS_SYNC_DIV_128

Synchro Signal divided by 128

Synchronization Signal Polarity

LL_CRS_SYNC_POLARITY_RISING

Synchro Active on rising edge (default)

LL_CRS_SYNC_POLARITY_FALLING

Synchro Active on falling edge

Synchronization Signal Source

LL_CRS_SYNC_SOURCE_GPIO

Synchro Signal source GPIO

LL_CRS_SYNC_SOURCE_LSE

Synchro Signal source LSE

LL_CRS_SYNC_SOURCE_USB

Synchro Signal source USB SOF (default)

Exported_Macros_Calculate_Reload

__LL_CRS_CALC_CALCULATE_RELOADVALUE

Description:

- Macro to calculate reload value to be set in CRS register according to target and sync frequencies.

Parameters:

- __FTARGET__: Target frequency (value in Hz)
- __FSYNC__: Synchronization signal frequency (value in Hz)

Return value:

- Reload: value (in Hz)

Notes:

- The RELOAD value should be selected according to the ratio between the target frequency and the frequency of the synchronization source after prescaling. It is then decreased by one in order to reach the expected synchronization on the zero value. The formula is the following: RELOAD = (fTARGET / fSYNC) -1

Common Write and read registers Macros

LL_CRS_WriteReg

Description:

- Write a value in CRS register.

Parameters:

- __INSTANCE__: CRS Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_CRS_ReadReg

Description:

- Read a value in CRS register.

Parameters:

- __INSTANCE__: CRS Instance
- __REG__: Register to be read

Return value:

- Register: value

80 LL DAC Generic Driver

80.1 DAC Firmware driver registers structures

80.1.1 LL_DAC_InitTypeDef

LL_DAC_InitTypeDef is defined in the stm32u3xx_ll_dac.h

Data Fields

- ***uint32_t TriggerSource***
- ***uint32_t WaveAutoGeneration***
- ***uint32_t WaveAutoGenerationConfig***
- ***uint32_t OutputBuffer***
- ***uint32_t OutputConnection***
- ***uint32_t OutputMode***

Field Documentation

- ***uint32_t LL_DAC_InitTypeDef::TriggerSource***
  Set the conversion trigger source for the selected DAC channel: internal (SW start) or from external peripheral (timer event, external interrupt line). This parameter can be a value of ***DAC_LL_EC_TRIGGER_SOURCE***This feature can be modified afterwards using unitary function **LL_DAC_SetTriggerSource()**.
- ***uint32_t LL_DAC_InitTypeDef::WaveAutoGeneration***
  Set the waveform automatic generation mode for the selected DAC channel. This parameter can be a value of ***DAC_LL_EC_WAVE_AUTO_GENERATION_MODE***This feature can be modified afterwards using unitary function **LL_DAC_SetWaveAutoGeneration()**.
- ***uint32_t LL_DAC_InitTypeDef::WaveAutoGenerationConfig***
  Set the waveform automatic generation mode for the selected DAC channel. If waveform automatic generation mode is set to noise, this parameter can be a value of ***DAC_LL_EC_WAVE_NOISE_LFSR_UNMASK_BITS*** If waveform automatic generation mode is set to triangle, this parameter can be a value of ***DAC_LL_EC_WAVE_TRIANGLE_AMPLITUDE***
  Note:
  – If waveform automatic generation mode is disabled, this parameter is discarded.

  This feature can be modified afterwards using unitary function **LL_DAC_SetWaveNoiseLFSR()**, **LL_DAC_SetWaveTriangleAmplitude()** depending on the wave automatic generation selected.
- ***uint32_t LL_DAC_InitTypeDef::OutputBuffer***
  Set the output buffer for the selected DAC channel. This parameter can be a value of ***DAC_LL_EC_OUTPUT_BUFFER***This feature can be modified afterwards using unitary function **LL_DAC_SetOutputBuffer()**.
- ***uint32_t LL_DAC_InitTypeDef::OutputConnection***
  Set the output connection for the selected DAC channel. This parameter can be a value of ***DAC_LL_EC_OUTPUT_CONNECTION***This feature can be modified afterwards using unitary function **LL_DAC_SetOutputConnection()**.
- ***uint32_t LL_DAC_InitTypeDef::OutputMode***
  Set the output mode normal or sample-and-hold for the selected DAC channel. This parameter can be a value of ***DAC_LL_EC_OUTPUT_MODE***This feature can be modified afterwards using unitary function **LL_DAC_SetOutputMode()**.

80.2 DAC Firmware driver API description

The following section lists the various functions of the DAC library.

80.2.1 Detailed description of functions

LL_DAC_SetHighFrequencyMode

Function name

__STATIC_INLINE void LL_DAC_SetHighFrequencyMode (DAC_TypeDef * DACx, uint32_t HighFreqMode)

Function description

Set the high frequency interface mode for the selected DAC instance.

Parameters

- **DACx:** DAC instance
- **HighFreqMode:** This parameter can be one of the following values:
  - LL_DAC_HIGH_FREQ_MODE_DISABLE
  - LL_DAC_HIGH_FREQ_MODE_ABOVE_48MHZ

Return values

- **None:**

Reference Manual to LL API cross reference:

- MCR HFSEL LL_DAC_SetHighFrequencyMode

LL_DAC_GetHighFrequencyMode

Function name

__STATIC_INLINE uint32_t LL_DAC_GetHighFrequencyMode (const DAC_TypeDef * DACx)

Function description

Get the high frequency interface mode for the selected DAC instance.

Parameters

- **DACx:** DAC instance

Return values

- **Returned:** value can be one of the following values:
  - LL_DAC_HIGH_FREQ_MODE_DISABLE
  - LL_DAC_HIGH_FREQ_MODE_ABOVE_48MHZ

Reference Manual to LL API cross reference:

- MCR HFSEL LL_DAC_GetHighFrequencyMode

LL_DAC_SetMode

Function name

__STATIC_INLINE void LL_DAC_SetMode (DAC_TypeDef * DACx, uint32_t DAC_Channel, uint32_t ChannelMode)

Function description

Set the operating mode for the selected DAC channel: calibration or normal operating mode.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2
- **ChannelMode:** This parameter can be one of the following values:
  - LL_DAC_MODE_NORMAL_OPERATION
  - LL_DAC_MODE_CALIBRATION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CEN1 LL_DAC_SetMode
- CR CEN2 LL_DAC_SetMode

LL_DAC_GetMode

Function name

__STATIC_INLINE uint32_t LL_DAC_GetMode (const DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Get the operating mode for the selected DAC channel: calibration or normal operating mode.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **Returned:** value can be one of the following values:
  - LL_DAC_MODE_NORMAL_OPERATION
  - LL_DAC_MODE_CALIBRATION

Reference Manual to LL API cross reference:

- CR CEN1 LL_DAC_GetMode
- CR CEN2 LL_DAC_GetMode

LL_DAC_SetTrimmingValue

Function name

__STATIC_INLINE void LL_DAC_SetTrimmingValue (DAC_TypeDef * DACx, uint32_t DAC_Channel, uint32_t TrimmingValue)

Function description

Set the offset trimming value for the selected DAC channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2
- **TrimmingValue:** Value between Min_Data=0x00 and Max_Data=0x1F

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCR OTRIM1 LL_DAC_SetTrimmingValue
- CCR OTRIM2 LL_DAC_SetTrimmingValue

LL_DAC_GetTrimmingValue

Function name

__STATIC_INLINE uint32_t LL_DAC_GetTrimmingValue (const DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Get the offset trimming value for the selected DAC channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **TrimmingValue:** Value between Min_Data=0x00 and Max_Data=0x1F

Reference Manual to LL API cross reference:

- CCR OTRIM1 LL_DAC_GetTrimmingValue
- CCR OTRIM2 LL_DAC_GetTrimmingValue

LL_DAC_SetTriggerSource

Function name

__STATIC_INLINE void LL_DAC_SetTriggerSource (DAC_TypeDef * DACx, uint32_t DAC_Channel, uint32_t TriggerSource)

Function description

Set the conversion trigger source for the selected DAC channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2
- **TriggerSource:** This parameter can be one of the following values:
  - LL_DAC_TRIG_SOFTWARE
  - LL_DAC_TRIG_EXT_TIM1_TRGO
  - LL_DAC_TRIG_EXT_TIM2_TRGO
  - LL_DAC_TRIG_EXT_TIM4_TRGO
  - LL_DAC_TRIG_EXT_TIM5_TRGO
  - LL_DAC_TRIG_EXT_TIM6_TRGO
  - LL_DAC_TRIG_EXT_TIM7_TRGO
  - LL_DAC_TRIG_EXT_TIM8_TRGO
  - LL_DAC_TRIG_EXT_TIM15_TRGO
  - LL_DAC_TRIG_EXT_LPTIM1_CH1
  - LL_DAC_TRIG_EXT_LPTIM3_CH1
  - LL_DAC_TRIG_EXT_EXTI_LINE9

Return values

- **None:**

Notes

- For conversion trigger source to be effective, DAC trigger must be enabled using function LL_DAC_EnableTrigger().
- To set conversion trigger source, DAC channel must be disabled. Otherwise, the setting is discarded.
- Availability of parameters of trigger sources from timer depends on timers availability on the selected device.

Reference Manual to LL API cross reference:

- CR TSEL1 LL_DAC_SetTriggerSource
- CR TSEL2 LL_DAC_SetTriggerSource

LL_DAC_GetTriggerSource

Function name

__STATIC_INLINE uint32_t LL_DAC_GetTriggerSource (const DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Get the conversion trigger source for the selected DAC channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **Returned:** value can be one of the following values:
  - LL_DAC_TRIG_SOFTWARE
  - LL_DAC_TRIG_EXT_TIM1_TRGO
  - LL_DAC_TRIG_EXT_TIM2_TRGO
  - LL_DAC_TRIG_EXT_TIM4_TRGO
  - LL_DAC_TRIG_EXT_TIM5_TRGO
  - LL_DAC_TRIG_EXT_TIM6_TRGO
  - LL_DAC_TRIG_EXT_TIM7_TRGO
  - LL_DAC_TRIG_EXT_TIM8_TRGO
  - LL_DAC_TRIG_EXT_TIM15_TRGO
  - LL_DAC_TRIG_EXT_LPTIM1_CH1
  - LL_DAC_TRIG_EXT_LPTIM3_CH1
  - LL_DAC_TRIG_EXT_EXTI_LINE9

Notes

- For conversion trigger source to be effective, DAC trigger must be enabled using function LL_DAC_EnableTrigger().
- Availability of parameters of trigger sources from timer depends on timers availability on the selected device.

Reference Manual to LL API cross reference:

- CR TSEL1 LL_DAC_GetTriggerSource
- CR TSEL2 LL_DAC_GetTriggerSource

LL_DAC_SetWaveAutoGeneration

Function name

__STATIC_INLINE void LL_DAC_SetWaveAutoGeneration (DAC_TypeDef * DACx, uint32_t DAC_Channel, uint32_t WaveAutoGeneration)

Function description

Set the waveform automatic generation mode for the selected DAC channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2
- **WaveAutoGeneration:** This parameter can be one of the following values:
  - LL_DAC_WAVE_AUTO_GENERATION_NONE
  - LL_DAC_WAVE_AUTO_GENERATION_NOISE
  - LL_DAC_WAVE_AUTO_GENERATION_TRIANGLE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR WAVE1 LL_DAC_SetWaveAutoGeneration
- CR WAVE2 LL_DAC_SetWaveAutoGeneration

LL_DAC_GetWaveAutoGeneration

Function name

__STATIC_INLINE uint32_t LL_DAC_GetWaveAutoGeneration (const DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Get the waveform automatic generation mode for the selected DAC channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **Returned:** value can be one of the following values:
  - LL_DAC_WAVE_AUTO_GENERATION_NONE
  - LL_DAC_WAVE_AUTO_GENERATION_NOISE
  - LL_DAC_WAVE_AUTO_GENERATION_TRIANGLE

Reference Manual to LL API cross reference:

- CR WAVE1 LL_DAC_GetWaveAutoGeneration
- CR WAVE2 LL_DAC_GetWaveAutoGeneration

LL_DAC_SetWaveNoiseLFSR

Function name

__STATIC_INLINE void LL_DAC_SetWaveNoiseLFSR (DAC_TypeDef * DACx, uint32_t DAC_Channel, uint32_t NoiseLFSRMask)

Function description

Set the noise waveform generation for the selected DAC channel: Noise mode and parameters LFSR (linear feedback shift register).

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2
- **NoiseLFSRMask:** This parameter can be one of the following values:
  - LL_DAC_NOISE_LFSR_UNMASK_BIT0
  - LL_DAC_NOISE_LFSR_UNMASK_BITS1_0
  - LL_DAC_NOISE_LFSR_UNMASK_BITS2_0
  - LL_DAC_NOISE_LFSR_UNMASK_BITS3_0
  - LL_DAC_NOISE_LFSR_UNMASK_BITS4_0
  - LL_DAC_NOISE_LFSR_UNMASK_BITS5_0
  - LL_DAC_NOISE_LFSR_UNMASK_BITS6_0
  - LL_DAC_NOISE_LFSR_UNMASK_BITS7_0
  - LL_DAC_NOISE_LFSR_UNMASK_BITS8_0
  - LL_DAC_NOISE_LFSR_UNMASK_BITS9_0
  - LL_DAC_NOISE_LFSR_UNMASK_BITS10_0
  - LL_DAC_NOISE_LFSR_UNMASK_BITS11_0

Return values

- **None:**

Notes

- For wave generation to be effective, DAC channel wave generation mode must be enabled using function LL_DAC_SetWaveAutoGeneration().
- This setting can be set when the selected DAC channel is disabled (otherwise, the setting operation is ignored).

Reference Manual to LL API cross reference:

- CR MAMP1 LL_DAC_SetWaveNoiseLFSR
- CR MAMP2 LL_DAC_SetWaveNoiseLFSR

LL_DAC_GetWaveNoiseLFSR

Function name

__STATIC_INLINE uint32_t LL_DAC_GetWaveNoiseLFSR (const DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Get the noise waveform generation for the selected DAC channel: Noise mode and parameters LFSR (linear feedback shift register).

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **Returned:** value can be one of the following values:
  - LL_DAC_NOISE_LFSR_UNMASK_BIT0
  - LL_DAC_NOISE_LFSR_UNMASK_BITS1_0
  - LL_DAC_NOISE_LFSR_UNMASK_BITS2_0
  - LL_DAC_NOISE_LFSR_UNMASK_BITS3_0
  - LL_DAC_NOISE_LFSR_UNMASK_BITS4_0
  - LL_DAC_NOISE_LFSR_UNMASK_BITS5_0
  - LL_DAC_NOISE_LFSR_UNMASK_BITS6_0
  - LL_DAC_NOISE_LFSR_UNMASK_BITS7_0
  - LL_DAC_NOISE_LFSR_UNMASK_BITS8_0
  - LL_DAC_NOISE_LFSR_UNMASK_BITS9_0
  - LL_DAC_NOISE_LFSR_UNMASK_BITS10_0
  - LL_DAC_NOISE_LFSR_UNMASK_BITS11_0

Reference Manual to LL API cross reference:

- CR MAMP1 LL_DAC_GetWaveNoiseLFSR
- CR MAMP2 LL_DAC_GetWaveNoiseLFSR

LL_DAC_SetWaveTriangleAmplitude

Function name

__STATIC_INLINE void LL_DAC_SetWaveTriangleAmplitude (DAC_TypeDef * DACx, uint32_t DAC_Channel, uint32_t TriangleAmplitude)

Function description

Set the triangle waveform generation for the selected DAC channel: triangle mode and amplitude.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2
- **TriangleAmplitude:** This parameter can be one of the following values:
  - LL_DAC_TRIANGLE_AMPLITUDE_1
  - LL_DAC_TRIANGLE_AMPLITUDE_3
  - LL_DAC_TRIANGLE_AMPLITUDE_7
  - LL_DAC_TRIANGLE_AMPLITUDE_15
  - LL_DAC_TRIANGLE_AMPLITUDE_31
  - LL_DAC_TRIANGLE_AMPLITUDE_63
  - LL_DAC_TRIANGLE_AMPLITUDE_127
  - LL_DAC_TRIANGLE_AMPLITUDE_255
  - LL_DAC_TRIANGLE_AMPLITUDE_511
  - LL_DAC_TRIANGLE_AMPLITUDE_1023
  - LL_DAC_TRIANGLE_AMPLITUDE_2047
  - LL_DAC_TRIANGLE_AMPLITUDE_4095

Return values

- **None:**

Notes

- For wave generation to be effective, DAC channel wave generation mode must be enabled using function LL_DAC_SetWaveAutoGeneration().
- This setting can be set when the selected DAC channel is disabled (otherwise, the setting operation is ignored).

Reference Manual to LL API cross reference:

- CR MAMP1 LL_DAC_SetWaveTriangleAmplitude
- CR MAMP2 LL_DAC_SetWaveTriangleAmplitude

LL_DAC_GetWaveTriangleAmplitude

Function name

__STATIC_INLINE uint32_t LL_DAC_GetWaveTriangleAmplitude (const DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Get the triangle waveform generation for the selected DAC channel: triangle mode and amplitude.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **Returned:** value can be one of the following values:
  - LL_DAC_TRIANGLE_AMPLITUDE_1
  - LL_DAC_TRIANGLE_AMPLITUDE_3
  - LL_DAC_TRIANGLE_AMPLITUDE_7
  - LL_DAC_TRIANGLE_AMPLITUDE_15
  - LL_DAC_TRIANGLE_AMPLITUDE_31
  - LL_DAC_TRIANGLE_AMPLITUDE_63
  - LL_DAC_TRIANGLE_AMPLITUDE_127
  - LL_DAC_TRIANGLE_AMPLITUDE_255
  - LL_DAC_TRIANGLE_AMPLITUDE_511
  - LL_DAC_TRIANGLE_AMPLITUDE_1023
  - LL_DAC_TRIANGLE_AMPLITUDE_2047
  - LL_DAC_TRIANGLE_AMPLITUDE_4095

Reference Manual to LL API cross reference:

- CR MAMP1 LL_DAC_GetWaveTriangleAmplitude
- CR MAMP2 LL_DAC_GetWaveTriangleAmplitude

LL_DAC_ConfigOutput

Function name

__STATIC_INLINE void LL_DAC_ConfigOutput (DAC_TypeDef * DACx, uint32_t DAC_Channel, uint32_t OutputMode, uint32_t OutputBuffer, uint32_t OutputConnection)

Function description

Set the output for the selected DAC channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2
- **OutputMode:** This parameter can be one of the following values:
  - LL_DAC_OUTPUT_MODE_NORMAL
  - LL_DAC_OUTPUT_MODE_SAMPLE_AND_HOLD
- **OutputBuffer:** This parameter can be one of the following values:
  - LL_DAC_OUTPUT_BUFFER_ENABLE
  - LL_DAC_OUTPUT_BUFFER_DISABLE
- **OutputConnection:** This parameter can be one of the following values:
  - LL_DAC_OUTPUT_CONNECT_GPIO
  - LL_DAC_OUTPUT_CONNECT_INTERNAL

Return values

- **None:**

Notes

- This function set several features: mode normal or sample-and-holdbufferconnection to GPIO or internal path. These features can also be set individually using dedicated functions:LL_DAC_SetOutputBuffer()LL_DAC_SetOutputMode()LL_DAC_SetOutputConnection()
- On this STM32 series, output connection depends on output mode (normal or sample and hold) and output buffer state. if output connection is set to internal path and output buffer is enabled (whatever output mode): output connection is also connected to GPIO pin (both connections to GPIO pin and internal path).if output connection is set to GPIO pin, output buffer is disabled, output mode set to sample and hold: output connection is also connected to internal path (both connections to GPIO pin and internal path).
- Mode sample-and-hold requires an external capacitor to be connected between DAC channel output and ground. Capacitor value depends on load on DAC channel output and sample-and-hold timings configured. As indication, capacitor typical value is 100nF (refer to device datasheet, parameter "CSH").

Reference Manual to LL API cross reference:

- CR MODE1 LL_DAC_ConfigOutput
- CR MODE2 LL_DAC_ConfigOutput

LL_DAC_SetOutputMode

Function name

__STATIC_INLINE void LL_DAC_SetOutputMode (DAC_TypeDef * DACx, uint32_t DAC_Channel, uint32_t OutputMode)

Function description

Set the output mode normal or sample-and-hold for the selected DAC channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2
- **OutputMode:** This parameter can be one of the following values:
  - LL_DAC_OUTPUT_MODE_NORMAL
  - LL_DAC_OUTPUT_MODE_SAMPLE_AND_HOLD

Return values

- **None:**

Notes

- Mode sample-and-hold requires an external capacitor to be connected between DAC channel output and ground. Capacitor value depends on load on DAC channel output and sample-and-hold timings configured. As indication, capacitor typical value is 100nF (refer to device datasheet, parameter "CSH").

Reference Manual to LL API cross reference:

- CR MODE1 LL_DAC_SetOutputMode
- CR MODE2 LL_DAC_SetOutputMode

LL_DAC_GetOutputMode

Function name

__STATIC_INLINE uint32_t LL_DAC_GetOutputMode (const DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Get the output mode normal or sample-and-hold for the selected DAC channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **Returned:** value can be one of the following values:
  - LL_DAC_OUTPUT_MODE_NORMAL
  - LL_DAC_OUTPUT_MODE_SAMPLE_AND_HOLD

Reference Manual to LL API cross reference:

- CR MODE1 LL_DAC_GetOutputMode
- CR MODE2 LL_DAC_GetOutputMode

LL_DAC_SetOutputBuffer

Function name

__STATIC_INLINE void LL_DAC_SetOutputBuffer (DAC_TypeDef * DACx, uint32_t DAC_Channel, uint32_t OutputBuffer)

Function description

Set the output buffer for the selected DAC channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2
- **OutputBuffer:** This parameter can be one of the following values:
  - LL_DAC_OUTPUT_BUFFER_ENABLE
  - LL_DAC_OUTPUT_BUFFER_DISABLE

Return values

- **None:**

Notes

- On this STM32 series, when buffer is enabled, its offset can be trimmed: factory calibration default values can be replaced by user trimming values, using function LL_DAC_SetTrimmingValue().

Reference Manual to LL API cross reference:

- CR MODE1 LL_DAC_SetOutputBuffer
- CR MODE2 LL_DAC_SetOutputBuffer

LL_DAC_GetOutputBuffer

Function name

__STATIC_INLINE uint32_t LL_DAC_GetOutputBuffer (const DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Get the output buffer state for the selected DAC channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **Returned:** value can be one of the following values:
  - LL_DAC_OUTPUT_BUFFER_ENABLE
  - LL_DAC_OUTPUT_BUFFER_DISABLE

Reference Manual to LL API cross reference:

- CR MODE1 LL_DAC_GetOutputBuffer
- CR MODE2 LL_DAC_GetOutputBuffer

LL_DAC_SetOutputConnection

Function name

__STATIC_INLINE void LL_DAC_SetOutputConnection (DAC_TypeDef * DACx, uint32_t DAC_Channel, uint32_t OutputConnection)

Function description

Set the output connection for the selected DAC channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2
- **OutputConnection:** This parameter can be one of the following values:
  - LL_DAC_OUTPUT_CONNECT_GPIO
  - LL_DAC_OUTPUT_CONNECT_INTERNAL

Return values

- **None:**

Notes

- On this STM32 series, output connection depends on output mode (normal or sample and hold) and output buffer state. if output connection is set to internal path and output buffer is enabled (whatever output mode): output connection is also connected to GPIO pin (both connections to GPIO pin and internal path).if output connection is set to GPIO pin, output buffer is disabled, output mode set to sample and hold: output connection is also connected to internal path (both connections to GPIO pin and internal path).

Reference Manual to LL API cross reference:

- CR MODE1 LL_DAC_SetOutputConnection
- CR MODE2 LL_DAC_SetOutputConnection

LL_DAC_GetOutputConnection

Function name

__STATIC_INLINE uint32_t LL_DAC_GetOutputConnection (const DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Get the output connection for the selected DAC channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **Returned:** value can be one of the following values:
  - LL_DAC_OUTPUT_CONNECT_GPIO
  - LL_DAC_OUTPUT_CONNECT_INTERNAL

Notes

- On this STM32 series, output connection depends on output mode (normal or sample and hold) and output buffer state. if output connection is set to internal path and output buffer is enabled (whatever output mode): output connection is also connected to GPIO pin (both connections to GPIO pin and internal path).if output connection is set to GPIO pin, output buffer is disabled, output mode set to sample and hold: output connection is also connected to internal path (both connections to GPIO pin and internal path).

Reference Manual to LL API cross reference:

- CR MODE1 LL_DAC_GetOutputConnection
- CR MODE2 LL_DAC_GetOutputConnection

LL_DAC_SetSampleAndHoldSampleTime

Function name

__STATIC_INLINE void LL_DAC_SetSampleAndHoldSampleTime (DAC_TypeDef * DACx, uint32_t DAC_Channel, uint32_t SampleTime)

Function description

Set the sample-and-hold timing for the selected DAC channel: sample time.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2
- **SampleTime:** Value between Min_Data=0x000 and Max_Data=0x3FF

Return values

- **None:**

Notes

- Sample time must be set when DAC channel is disabled or during DAC operation when DAC channel flag BWSTx is reset, otherwise the setting is ignored. Check BWSTx flag state using function "LL_DAC_IsActiveFlag_BWSTx()".

Reference Manual to LL API cross reference:

- SHSR1 TSAMPLE1 LL_DAC_SetSampleAndHoldSampleTime
- SHSR2 TSAMPLE2 LL_DAC_SetSampleAndHoldSampleTime

LL_DAC_GetSampleAndHoldSampleTime

Function name

__STATIC_INLINE uint32_t LL_DAC_GetSampleAndHoldSampleTime (const DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Get the sample-and-hold timing for the selected DAC channel: sample time.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **Value:** between Min_Data=0x000 and Max_Data=0x3FF

Reference Manual to LL API cross reference:

- SHSR1 TSAMPLE1 LL_DAC_GetSampleAndHoldSampleTime
- SHSR2 TSAMPLE2 LL_DAC_GetSampleAndHoldSampleTime

LL_DAC_SetSampleAndHoldHoldTime

Function name

__STATIC_INLINE void LL_DAC_SetSampleAndHoldHoldTime (DAC_TypeDef * DACx, uint32_t DAC_Channel, uint32_t HoldTime)

Function description

Set the sample-and-hold timing for the selected DAC channel: hold time.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2
- **HoldTime:** Value between Min_Data=0x000 and Max_Data=0x3FF

Return values

- **None:**

Reference Manual to LL API cross reference:

- SHHR THOLD1 LL_DAC_SetSampleAndHoldHoldTime
- SHHR THOLD2 LL_DAC_SetSampleAndHoldHoldTime

LL_DAC_GetSampleAndHoldHoldTime

Function name

__STATIC_INLINE uint32_t LL_DAC_GetSampleAndHoldHoldTime (const DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Get the sample-and-hold timing for the selected DAC channel: hold time.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **Value:** between Min_Data=0x000 and Max_Data=0x3FF

Reference Manual to LL API cross reference:

- SHHR THOLD1 LL_DAC_GetSampleAndHoldHoldTime
- SHHR THOLD2 LL_DAC_GetSampleAndHoldHoldTime

LL_DAC_SetSampleAndHoldRefreshTime

Function name

__STATIC_INLINE void LL_DAC_SetSampleAndHoldRefreshTime (DAC_TypeDef * DACx, uint32_t DAC_Channel, uint32_t RefreshTime)

Function description

Set the sample-and-hold timing for the selected DAC channel: refresh time.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2
- **RefreshTime:** Value between Min_Data=0x00 and Max_Data=0xFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- SHRR TREFRESH1 LL_DAC_SetSampleAndHoldRefreshTime
- SHRR TREFRESH2 LL_DAC_SetSampleAndHoldRefreshTime

LL_DAC_GetSampleAndHoldRefreshTime

Function name

__STATIC_INLINE uint32_t LL_DAC_GetSampleAndHoldRefreshTime (const DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Get the sample-and-hold timing for the selected DAC channel: refresh time.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0xFF

Reference Manual to LL API cross reference:

- SHRR TREFRESH1 LL_DAC_GetSampleAndHoldRefreshTime
- SHRR TREFRESH2 LL_DAC_GetSampleAndHoldRefreshTime

LL_DAC_SetSignedFormat

Function name

__STATIC_INLINE void LL_DAC_SetSignedFormat (DAC_TypeDef * DACx, uint32_t DAC_Channel, uint32_t SignedFormat)

Function description

Set the signed format for the selected DAC channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2
- **SignedFormat:** This parameter can be one of the following values:
  - LL_DAC_SIGNED_FORMAT_ENABLE
  - LL_DAC_SIGNED_FORMAT_DISABLE

Return values

- **None:**

Notes

- On this STM32 series, signed format can be used to inject Q1.15, Q1.11, Q1.7 signed format data to DAC. Ex when using 12bits data format (Q1.11 is used): 0x800 will output 0v level 0xFFF will output mid-scale level 0x000 will output mid-scale level 0x7FF will output full-scale level

Reference Manual to LL API cross reference:

- MCR SINFORMAT1 LL_DAC_SetSignedFormat
- MCR SINFORMAT2 LL_DAC_SetSignedFormat

LL_DAC_GetSignedFormat

Function name

__STATIC_INLINE uint32_t LL_DAC_GetSignedFormat (const DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Get the signed format state for the selected DAC channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **Returned:** value can be one of the following values:
  - LL_DAC_SIGNED_FORMAT_ENABLE
  - LL_DAC_SIGNED_FORMAT_DISABLE

Reference Manual to LL API cross reference:

- MCR SINFORMAT1 LL_DAC_GetSignedFormat
- MCR SINFORMAT2 LL_DAC_GetSignedFormat

LL_DAC_EnableDMAReq

Function name

__STATIC_INLINE void LL_DAC_EnableDMAReq (DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Enable DAC DMA transfer request of the selected channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **None:**

Notes

- To configure DMA source address (peripheral address), use function LL_DAC_DMA_GetRegAddr().

Reference Manual to LL API cross reference:

- CR DMAEN1 LL_DAC_EnableDMAReq
- CR DMAEN2 LL_DAC_EnableDMAReq

LL_DAC_DisableDMAReq

Function name

__STATIC_INLINE void LL_DAC_DisableDMAReq (DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Disable DAC DMA transfer request of the selected channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **None:**

Notes

- To configure DMA source address (peripheral address), use function LL_DAC_DMA_GetRegAddr().

Reference Manual to LL API cross reference:

- CR DMAEN1 LL_DAC_DisableDMAReq
- CR DMAEN2 LL_DAC_DisableDMAReq

LL_DAC_IsDMAReqEnabled

Function name

__STATIC_INLINE uint32_t LL_DAC_IsDMAReqEnabled (const DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Get DAC DMA transfer request state of the selected channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR DMAEN1 LL_DAC_IsDMAReqEnabled
- CR DMAEN2 LL_DAC_IsDMAReqEnabled

LL_DAC_EnableDMADoubleDataMode

Function name

__STATIC_INLINE void LL_DAC_EnableDMADoubleDataMode (DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Enable DAC DMA Double data mode of the selected channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **None:**

Reference Manual to LL API cross reference:

- MCR DMADOUBLE1 LL_DAC_EnableDMADoubleDataMode
- MCR DMADOUBLE2 LL_DAC_EnableDMADoubleDataMode

LL_DAC_DisableDMADoubleDataMode

Function name

__STATIC_INLINE void LL_DAC_DisableDMADoubleDataMode (DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Disable DAC DMA Double data mode of the selected channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **None:**

Reference Manual to LL API cross reference:

- MCR DMADOUBLE1 LL_DAC_DisableDMADoubleDataMode
- MCR DMADOUBLE2 LL_DAC_DisableDMADoubleDataMode

LL_DAC_IsDMADoubleDataModeEnabled

Function name

__STATIC_INLINE uint32_t LL_DAC_IsDMADoubleDataModeEnabled (const DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Get DAC DMA double data mode state of the selected channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- MCR DMADOUBLE1 LL_DAC_IsDMADoubleDataModeEnabled
- MCR DMADOUBLE2 LL_DAC_IsDMADoubleDataModeEnabled

LL_DAC_DMA_GetRegAddr

Function name

__STATIC_INLINE uint32_t LL_DAC_DMA_GetRegAddr (const DAC_TypeDef * DACx, uint32_t DAC_Channel, uint32_t Register)

Function description

Function to help to configure DMA transfer to DAC: retrieve the DAC register address from DAC instance and a list of DAC registers intended to be used (most commonly) with DMA transfer.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2
- **Register:** This parameter can be one of the following values:
  - LL_DAC_DMA_REG_DATA_12BITS_RIGHT_ALIGNED
  - LL_DAC_DMA_REG_DATA_12BITS_LEFT_ALIGNED
  - LL_DAC_DMA_REG_DATA_8BITS_RIGHT_ALIGNED

Return values

- **DAC:** register address

Notes

- These DAC registers are data holding registers: when DAC conversion is requested, DAC generates a DMA transfer request to have data available in DAC data holding registers.
- This macro is intended to be used with LL DMA driver, refer to function "LL_DMA_ConfigAddresses()". Example: LL_DMA_ConfigAddresses(DMA1, LL_DMA_CHANNEL_1, (uint32_t)&< array or variable >, LL_DAC_DMA_GetRegAddr(DAC1, LL_DAC_CHANNEL_1, LL_DAC_DMA_REG_DATA_12BITS_RIGHT_ALIGNED), LL_DMA_DIRECTION_MEMORY_TO_PERIPH);

Reference Manual to LL API cross reference:

- DHR12R1 DACC1DHR LL_DAC_DMA_GetRegAddr
- DHR12L1 DACC1DHR LL_DAC_DMA_GetRegAddr
- DHR8R1 DACC1DHR LL_DAC_DMA_GetRegAddr
- DHR12R2 DACC2DHR LL_DAC_DMA_GetRegAddr
- DHR12L2 DACC2DHR LL_DAC_DMA_GetRegAddr
- DHR8R2 DACC2DHR LL_DAC_DMA_GetRegAddr

LL_DAC_Enable

Function name

__STATIC_INLINE void LL_DAC_Enable (DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Enable DAC selected channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **None:**

Notes

- After enable from off state, DAC channel requires a delay for output voltage to reach accuracy +/- 1 LSB. Refer to device datasheet, parameter "tWAKEUP".

Reference Manual to LL API cross reference:

- CR EN1 LL_DAC_Enable
- CR EN2 LL_DAC_Enable

LL_DAC_Disable

Function name

__STATIC_INLINE void LL_DAC_Disable (DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Disable DAC selected channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR EN1 LL_DAC_Disable
- CR EN2 LL_DAC_Disable

LL_DAC_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_DAC_IsEnabled (const DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Get DAC enable state of the selected channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR EN1 LL_DAC_IsEnabled
- CR EN2 LL_DAC_IsEnabled

LL_DAC_IsReady

Function name

__STATIC_INLINE uint32_t LL_DAC_IsReady (const DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Get DAC ready for conversion state of the selected channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR DAC1RDY LL_DAC_IsReady
- SR DAC2RDY LL_DAC_IsReady

LL_DAC_EnableTrigger

Function name

__STATIC_INLINE void LL_DAC_EnableTrigger (DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Enable DAC trigger of the selected channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **None:**

Notes

- - If DAC trigger is disabled, DAC conversion is performed automatically once the data holding register is updated, using functions "LL_DAC_ConvertData{8; 12}{Right; Left} Aligned()": LL_DAC_ConvertData12RightAligned(), ... If DAC trigger is enabled, DAC conversion is performed only when a hardware of software trigger event is occurring. Select trigger source using function LL_DAC_SetTriggerSource().

Reference Manual to LL API cross reference:

- CR TEN1 LL_DAC_EnableTrigger
- CR TEN2 LL_DAC_EnableTrigger

LL_DAC_DisableTrigger

Function name

__STATIC_INLINE void LL_DAC_DisableTrigger (DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Disable DAC trigger of the selected channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR TEN1 LL_DAC_DisableTrigger
- CR TEN2 LL_DAC_DisableTrigger

LL_DAC_IsTriggerEnabled

Function name

__STATIC_INLINE uint32_t LL_DAC_IsTriggerEnabled (const DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Get DAC trigger state of the selected channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR TEN1 LL_DAC_IsTriggerEnabled
- CR TEN2 LL_DAC_IsTriggerEnabled

LL_DAC_TrigSWConversion

Function name

__STATIC_INLINE void LL_DAC_TrigSWConversion (DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Trig DAC conversion by software for the selected DAC channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can a combination of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **None:**

Notes

- Preliminarily, DAC trigger must be set to software trigger using function LL_DAC_Init() LL_DAC_SetTriggerSource() with parameter "LL_DAC_TRIGGER_SOFTWARE". and DAC trigger must be enabled using function LL_DAC_EnableTrigger().
- For devices featuring DAC with 2 channels: this function can perform a SW start of both DAC channels simultaneously. Two channels can be selected as parameter. Example: (LL_DAC_CHANNEL_1 | LL_DAC_CHANNEL_2)

Reference Manual to LL API cross reference:

- SWTRIGR SWTRIG1 LL_DAC_TrigSWConversion
- SWTRIGR SWTRIG2 LL_DAC_TrigSWConversion

LL_DAC_ConvertData12RightAligned

Function name

__STATIC_INLINE void LL_DAC_ConvertData12RightAligned (DAC_TypeDef * DACx, uint32_t DAC_Channel, uint32_t Data)

Function description

Set the data to be loaded in the data holding register in format 12 bits left alignment (LSB aligned on bit 0), for the selected DAC channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2
- **Data:** Value between Min_Data=0x000 and Max_Data=0xFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- DHR12R1 DACC1DHR LL_DAC_ConvertData12RightAligned
- DHR12R2 DACC2DHR LL_DAC_ConvertData12RightAligned

LL_DAC_ConvertData12LeftAligned

Function name

__STATIC_INLINE void LL_DAC_ConvertData12LeftAligned (DAC_TypeDef * DACx, uint32_t DAC_Channel, uint32_t Data)

Function description

Set the data to be loaded in the data holding register in format 12 bits left alignment (MSB aligned on bit 15), for the selected DAC channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2
- **Data:** Value between Min_Data=0x000 and Max_Data=0xFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- DHR12L1 DACC1DHR LL_DAC_ConvertData12LeftAligned
- DHR12L2 DACC2DHR LL_DAC_ConvertData12LeftAligned

LL_DAC_ConvertData8RightAligned

Function name

__STATIC_INLINE void LL_DAC_ConvertData8RightAligned (DAC_TypeDef * DACx, uint32_t DAC_Channel, uint32_t Data)

Function description

Set the data to be loaded in the data holding register in format 8 bits left alignment (LSB aligned on bit 0), for the selected DAC channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2
- **Data:** Value between Min_Data=0x00 and Max_Data=0xFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- DHR8R1 DACC1DHR LL_DAC_ConvertData8RightAligned
- DHR8R2 DACC2DHR LL_DAC_ConvertData8RightAligned

LL_DAC_ConvertDualData12RightAligned

Function name

__STATIC_INLINE void LL_DAC_ConvertDualData12RightAligned (DAC_TypeDef * DACx, uint32_t DataChannel1, uint32_t DataChannel2)

Function description

Set the data to be loaded in the data holding register in format 12 bits left alignment (LSB aligned on bit 0), for both DAC channels.

Parameters

- **DACx:** DAC instance
- **DataChannel1:** Value between Min_Data=0x000 and Max_Data=0xFFF
- **DataChannel2:** Value between Min_Data=0x000 and Max_Data=0xFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- DHR12RD DACC1DHR LL_DAC_ConvertDualData12RightAligned
- DHR12RD DACC2DHR LL_DAC_ConvertDualData12RightAligned

LL_DAC_ConvertDualData12LeftAligned

Function name

__STATIC_INLINE void LL_DAC_ConvertDualData12LeftAligned (DAC_TypeDef * DACx, uint32_t DataChannel1, uint32_t DataChannel2)

Function description

Set the data to be loaded in the data holding register in format 12 bits left alignment (MSB aligned on bit 15), for both DAC channels.

Parameters

- **DACx:** DAC instance
- **DataChannel1:** Value between Min_Data=0x000 and Max_Data=0xFFF
- **DataChannel2:** Value between Min_Data=0x000 and Max_Data=0xFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- DHR12LD DACC1DHR LL_DAC_ConvertDualData12LeftAligned
- DHR12LD DACC2DHR LL_DAC_ConvertDualData12LeftAligned

LL_DAC_ConvertDualData8RightAligned

Function name

__STATIC_INLINE void LL_DAC_ConvertDualData8RightAligned (DAC_TypeDef * DACx, uint32_t DataChannel1, uint32_t DataChannel2)

Function description

Set the data to be loaded in the data holding register in format 8 bits left alignment (LSB aligned on bit 0), for both DAC channels.

Parameters

- **DACx:** DAC instance
- **DataChannel1:** Value between Min_Data=0x00 and Max_Data=0xFF
- **DataChannel2:** Value between Min_Data=0x00 and Max_Data=0xFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- DHR8RD DACC1DHR LL_DAC_ConvertDualData8RightAligned
- DHR8RD DACC2DHR LL_DAC_ConvertDualData8RightAligned

LL_DAC_RetrieveOutputData

Function name

__STATIC_INLINE uint32_t LL_DAC_RetrieveOutputData (const DAC_TypeDef * DACx, uint32_t DAC_Channel)

Function description

Retrieve output data currently generated for the selected DAC channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return values

- **Value:** between Min_Data=0x000 and Max_Data=0xFFF

Notes

- Whatever alignment and resolution settings (using functions "LL_DAC_ConvertData{8; 12}{Right; Left} Aligned()": LL_DAC_ConvertData12RightAligned(), ...), output data format is 12 bits right aligned (LSB aligned on bit 0).

Reference Manual to LL API cross reference:

- DOR1 DACC1DOR LL_DAC_RetrieveOutputData
- DOR2 DACC2DOR LL_DAC_RetrieveOutputData

LL_DAC_IsActiveFlag_CAL1

Function name

__STATIC_INLINE uint32_t LL_DAC_IsActiveFlag_CAL1 (const DAC_TypeDef * DACx)

Function description

Get DAC calibration offset flag for DAC channel 1.

Parameters

- **DACx:** DAC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CAL_FLAG1 LL_DAC_IsActiveFlag_CAL1

LL_DAC_IsActiveFlag_CAL2

Function name

__STATIC_INLINE uint32_t LL_DAC_IsActiveFlag_CAL2 (const DAC_TypeDef * DACx)

Function description

Get DAC calibration offset flag for DAC channel 2.

Parameters

- **DACx:** DAC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CAL_FLAG2 LL_DAC_IsActiveFlag_CAL2

LL_DAC_IsActiveFlag_BWST1

Function name

__STATIC_INLINE uint32_t LL_DAC_IsActiveFlag_BWST1 (const DAC_TypeDef * DACx)

Function description

Get DAC busy writing sample time flag for DAC channel 1.

Parameters

- **DACx:** DAC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR BWST1 LL_DAC_IsActiveFlag_BWST1

LL_DAC_IsActiveFlag_BWST2

Function name

__STATIC_INLINE uint32_t LL_DAC_IsActiveFlag_BWST2 (const DAC_TypeDef * DACx)

Function description

Get DAC busy writing sample time flag for DAC channel 2.

Parameters

- **DACx:** DAC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR BWST2 LL_DAC_IsActiveFlag_BWST2

LL_DAC_IsActiveFlag_DAC1RDY

Function name

__STATIC_INLINE uint32_t LL_DAC_IsActiveFlag_DAC1RDY (const DAC_TypeDef * DACx)

Function description

Get DAC ready status flag for DAC channel 1.

Parameters

- **DACx:** DAC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR DAC1RDY LL_DAC_IsActiveFlag_DAC1RDY

LL_DAC_IsActiveFlag_DAC2RDY

Function name

__STATIC_INLINE uint32_t LL_DAC_IsActiveFlag_DAC2RDY (const DAC_TypeDef * DACx)

Function description

Get DAC ready status flag for DAC channel 2.

Parameters

- **DACx:** DAC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR DAC2RDY LL_DAC_IsActiveFlag_DAC2RDY

LL_DAC_IsActiveFlag_DORSTAT1

Function name

__STATIC_INLINE uint32_t LL_DAC_IsActiveFlag_DORSTAT1 (const DAC_TypeDef * DACx)

Function description

Get DAC output register status flag for DAC channel 1.

Parameters

- **DACx:** DAC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR DORSTAT1 LL_DAC_IsActiveFlag_DORSTAT1

LL_DAC_IsActiveFlag_DORSTAT2

Function name

__STATIC_INLINE uint32_t LL_DAC_IsActiveFlag_DORSTAT2 (const DAC_TypeDef * DACx)

Function description

Get DAC output register status flag for DAC channel 2.

Parameters

- **DACx:** DAC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR DORSTAT2 LL_DAC_IsActiveFlag_DORSTAT2

LL_DAC_IsActiveFlag_DMAUDR1

Function name

__STATIC_INLINE uint32_t LL_DAC_IsActiveFlag_DMAUDR1 (const DAC_TypeDef * DACx)

Function description

Get DAC underrun flag for DAC channel 1.

Parameters

- **DACx:** DAC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR DMAUDR1 LL_DAC_IsActiveFlag_DMAUDR1

LL_DAC_IsActiveFlag_DMAUDR2

Function name

__STATIC_INLINE uint32_t LL_DAC_IsActiveFlag_DMAUDR2 (const DAC_TypeDef * DACx)

Function description

Get DAC underrun flag for DAC channel 2.

Parameters

- **DACx:** DAC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR DMAUDR2 LL_DAC_IsActiveFlag_DMAUDR2

LL_DAC_ClearFlag_DMAUDR1

Function name

__STATIC_INLINE void LL_DAC_ClearFlag_DMAUDR1 (DAC_TypeDef * DACx)

Function description

Clear DAC underrun flag for DAC channel 1.

Parameters

- **DACx:** DAC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR DMAUDR1 LL_DAC_ClearFlag_DMAUDR1

LL_DAC_ClearFlag_DMAUDR2

Function name

__STATIC_INLINE void LL_DAC_ClearFlag_DMAUDR2 (DAC_TypeDef * DACx)

Function description

Clear DAC underrun flag for DAC channel 2.

Parameters

- **DACx:** DAC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR DMAUDR2 LL_DAC_ClearFlag_DMAUDR2

LL_DAC_EnableIT_DMAUDR1

Function name

__STATIC_INLINE void LL_DAC_EnableIT_DMAUDR1 (DAC_TypeDef * DACx)

Function description

Enable DMA underrun interrupt for DAC channel 1.

Parameters

- **DACx:** DAC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR DMAUDRIE1 LL_DAC_EnableIT_DMAUDR1

LL_DAC_EnableIT_DMAUDR2

Function name

__STATIC_INLINE void LL_DAC_EnableIT_DMAUDR2 (DAC_TypeDef * DACx)

Function description

Enable DMA underrun interrupt for DAC channel 2.

Parameters

- **DACx:** DAC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR DMAUDRIE2 LL_DAC_EnableIT_DMAUDR2

LL_DAC_DisableIT_DMAUDR1

Function name

__STATIC_INLINE void LL_DAC_DisableIT_DMAUDR1 (DAC_TypeDef * DACx)

Function description

Disable DMA underrun interrupt for DAC channel 1.

Parameters

- **DACx:** DAC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR DMAUDRIE1 LL_DAC_DisableIT_DMAUDR1

LL_DAC_DisableIT_DMAUDR2

Function name

__STATIC_INLINE void LL_DAC_DisableIT_DMAUDR2 (DAC_TypeDef * DACx)

Function description

Disable DMA underrun interrupt for DAC channel 2.

Parameters

- **DACx:** DAC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR DMAUDRIE2 LL_DAC_DisableIT_DMAUDR2

LL_DAC_IsEnabledIT_DMAUDR1

Function name

__STATIC_INLINE uint32_t LL_DAC_IsEnabledIT_DMAUDR1 (const DAC_TypeDef * DACx)

Function description

Get DMA underrun interrupt for DAC channel 1.

Parameters

- **DACx:** DAC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR DMAUDRIE1 LL_DAC_IsEnabledIT_DMAUDR1

LL_DAC_IsEnabledIT_DMAUDR2

Function name

__STATIC_INLINE uint32_t LL_DAC_IsEnabledIT_DMAUDR2 (const DAC_TypeDef * DACx)

Function description

Get DMA underrun interrupt for DAC channel 2.

Parameters

- **DACx:** DAC instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR DMAUDRIE2 LL_DAC_IsEnabledIT_DMAUDR2

LL_DAC_EnableAutonomousMode

Function name

__STATIC_INLINE void LL_DAC_EnableAutonomousMode (DAC_TypeDef * DACx)

Function description

Enable DAC autonomous mode.

Parameters

- **DACx:** DAC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR AUTOMODE LL_DAC_EnableAutonomousMode

LL_DAC_DisableAutonomousMode

Function name

__STATIC_INLINE void LL_DAC_DisableAutonomousMode (DAC_TypeDef * DACx)

Function description

Disable DAC autonomous mode.

Parameters

- **DACx:** DAC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR AUTOMODE LL_DAC_DisableAutonomousMode

LL_DAC_IsAutonomousModeEnabled

Function name

__STATIC_INLINE uint32_t LL_DAC_IsAutonomousModeEnabled (const DAC_TypeDef * DACx)

Function description

Get DAC autonomous mode state.

Parameters

- **DACx:** DAC instance

Return values

- **State:** of bit (1 or 0).

LL_DAC_DeInit

Function name

ErrorStatus LL_DAC_DeInit (const DAC_TypeDef * DACx)

Function description

De-initialize registers of the selected DAC instance to their default reset values.

Parameters

- **DACx:** DAC instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: DAC registers are de-initialized
  - ERROR: not applicable

LL_DAC_Init

Function name

ErrorStatus LL_DAC_Init (DAC_TypeDef * DACx, uint32_t DAC_Channel, const LL_DAC_InitTypeDef * DAC_InitStruct)

Function description

Initialize some features of DAC channel.

Parameters

- **DACx:** DAC instance
- **DAC_Channel:** This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2
- **DAC_InitStruct:** Pointer to a LL_DAC_InitTypeDef structure

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: DAC registers are initialized
  - ERROR: DAC registers are not initialized

Notes

- LL_DAC_Init() aims to ease basic configuration of a DAC channel. Leaving it ready to be enabled and output: a level by calling one of LL_DAC_ConvertData12RightAligned LL_DAC_ConvertData12LeftAligned LL_DAC_ConvertData8RightAligned or one of the supported autogenerated wave.
- This function allows configuration of: Output modeTriggerWave generation
- The setting of these parameters by function LL_DAC_Init() is conditioned to DAC state: DAC channel must be disabled.

LL_DAC_StructInit

Function name

void LL_DAC_StructInit (LL_DAC_InitTypeDef * DAC_InitStruct)

Function description

Set each LL_DAC_InitTypeDef field to default value.

Parameters

- **DAC_InitStruct:** pointer to a LL_DAC_InitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

80.3 DAC Firmware driver defines

The following section lists the various define and macros of the module.

80.3.1 DAC

DAC

DAC channels

LL_DAC_CHANNEL_1

DAC channel 1

LL_DAC_CHANNEL_2

DAC channel 2

DAC flags

LL_DAC_FLAG_DMAUDR1

DAC channel 1 flag DMA underrun

LL_DAC_FLAG_CAL1

DAC channel 1 flag offset calibration status

LL_DAC_FLAG_BWST1

DAC channel 1 flag busy writing sample time

LL_DAC_FLAG_DAC1RDY

DAC channel 1 flag ready

LL_DAC_FLAG_DORSTAT1

DAC channel 1 flag output register

LL_DAC_FLAG_DMAUDR2

DAC channel 2 flag DMA underrun

LL_DAC_FLAG_CAL2

DAC channel 2 flag offset calibration status

LL_DAC_FLAG_BWST2

DAC channel 2 flag busy writing sample time

LL_DAC_FLAG_DAC2RDY

DAC channel 2 flag ready

LL_DAC_FLAG_DORSTAT2

DAC channel 2 flag output register

DAC high frequency interface mode

LL_DAC_HIGH_FREQ_MODE_DISABLE

High frequency interface mode disabled

LL_DAC_HIGH_FREQ_MODE_ABOVE_48MHZ

High frequency interface mode compatible to AHB>48MHz enabled

Definitions of DAC hardware constraints delays

LL_DAC_DELAY_STARTUP_VOLTAGE_SETTLING_US

Delay for DAC channel voltage settling time from DAC channel startup (transition from disable to enable)

LL_DAC_DELAY_VOLTAGE_SETTLING_US

Delay for DAC channel voltage settling time

DAC interruptions

LL_DAC_IT_DMAUDRIE1

DAC channel 1 interruption DMA underrun

LL_DAC_IT_DMAUDRIE2

DAC channel 2 interruption DMA underrun

DAC operating mode

LL_DAC_MODE_NORMAL_OPERATION

DAC channel in mode normal operation

LL_DAC_MODE_CALIBRATION

DAC channel in mode calibration

DAC channel output buffer

LL_DAC_OUTPUT_BUFFER_ENABLE

The selected DAC channel output is buffered: higher drive current capability, but also higher current consumption

LL_DAC_OUTPUT_BUFFER_DISABLE

The selected DAC channel output is not buffered: lower drive current capability, but also lower current consumption

DAC channel output connection

LL_DAC_OUTPUT_CONNECT_GPIO

The selected DAC channel output is connected to external pin

LL_DAC_OUTPUT_CONNECT_INTERNAL

The selected DAC channel output is connected to on-chip peripherals via internal paths. On this STM32 series, output connection depends on output mode (normal or sample and hold) and output buffer state. Refer to comments of function

DAC channel output mode

LL_DAC_OUTPUT_MODE_NORMAL

The selected DAC channel output is on mode normal.

LL_DAC_OUTPUT_MODE_SAMPLE_AND_HOLD

The selected DAC channel output is on mode sample-and-hold. Mode sample-and-hold requires an external capacitor, refer to description of function

DAC registers compliant with specific purpose

LL_DAC_DMA_REG_DATA_12BITS_RIGHT_ALIGNED

DAC channel data holding register 12 bits right aligned

LL_DAC_DMA_REG_DATA_12BITS_LEFT_ALIGNED

DAC channel data holding register 12 bits left aligned

LL_DAC_DMA_REG_DATA_8BITS_RIGHT_ALIGNED

DAC channel data holding register 8 bits right aligned

DAC channel output resolution

LL_DAC_RESOLUTION_12B

DAC channel resolution 12 bits

LL_DAC_RESOLUTION_8B

DAC channel resolution 8 bits

DAC channel signed format

LL_DAC_SIGNED_FORMAT_DISABLE

The selected DAC channel data format is not signed

LL_DAC_SIGNED_FORMAT_ENABLE

The selected DAC channel data format is signed

DAC trigger source

LL_DAC_TRIG_SOFTWARE

DAC channel conversion trigger internal (SW start)

LL_DAC_TRIG_EXT_TIM1_TRGO

DAC channel conversion trigger from external peripheral: TIM1 TRGO.

LL_DAC_TRIG_EXT_TIM2_TRGO

DAC channel conversion trigger from external peripheral: TIM2 TRGO.

LL_DAC_TRIG_EXT_TIM4_TRGO

DAC channel conversion trigger from external peripheral: TIM4 TRGO.

LL_DAC_TRIG_EXT_TIM5_TRGO

DAC channel conversion trigger from external peripheral: TIM5 TRGO.

LL_DAC_TRIG_EXT_TIM6_TRGO

DAC channel conversion trigger from external peripheral: TIM6 TRGO.

LL_DAC_TRIG_EXT_TIM7_TRGO

DAC channel conversion trigger from external peripheral: TIM7 TRGO.

LL_DAC_TRIG_EXT_TIM8_TRGO

DAC channel conversion trigger from external peripheral: TIM8 TRGO.

LL_DAC_TRIG_EXT_TIM15_TRGO

DAC channel conversion trigger from external peripheral: TIM15 TRGO.

LL_DAC_TRIG_EXT_LPTIM1_CH1

DAC channel conversion trigger from external peripheral: LPTIM1 CH1.

LL_DAC_TRIG_EXT_LPTIM3_CH1

DAC channel conversion trigger from external peripheral: LPTIM3 CH1.

LL_DAC_TRIG_EXT_EXTI_LINE9

DAC channel conversion trigger from external peripheral: external interrupt line 9.

LL_DAC_TRIG_EXT_LPTIM1_OUT

Keep old definition for compatibility

LL_DAC_TRIG_EXT_LPTIM3_OUT

Keep old definition for compatibility

DAC waveform automatic generation mode

LL_DAC_WAVE_AUTO_GENERATION_NONE

DAC channel wave auto generation mode disabled.

LL_DAC_WAVE_AUTO_GENERATION_NOISE

DAC channel wave auto generation mode enabled, set generated noise waveform.

LL_DAC_WAVE_AUTO_GENERATION_TRIANGLE

DAC channel wave auto generation mode enabled, set generated triangle waveform.

DAC wave generation - Noise LFSR unmask bits

LL_DAC_NOISE_LFSR_UNMASK_BIT0

Noise wave generation, unmask LFSR bit0, for the selected DAC channel

LL_DAC_NOISE_LFSR_UNMASK_BITS1_0

Noise wave generation, unmask LFSR bits[1:0], for the selected DAC channel

LL_DAC_NOISE_LFSR_UNMASK_BITS2_0

Noise wave generation, unmask LFSR bits[2:0], for the selected DAC channel

LL_DAC_NOISE_LFSR_UNMASK_BITS3_0

Noise wave generation, unmask LFSR bits[3:0], for the selected DAC channel

LL_DAC_NOISE_LFSR_UNMASK_BITS4_0

Noise wave generation, unmask LFSR bits[4:0], for the selected DAC channel

LL_DAC_NOISE_LFSR_UNMASK_BITS5_0

Noise wave generation, unmask LFSR bits[5:0], for the selected DAC channel

LL_DAC_NOISE_LFSR_UNMASK_BITS6_0

Noise wave generation, unmask LFSR bits[6:0], for the selected DAC channel

LL_DAC_NOISE_LFSR_UNMASK_BITS7_0

Noise wave generation, unmask LFSR bits[7:0], for the selected DAC channel

LL_DAC_NOISE_LFSR_UNMASK_BITS8_0

Noise wave generation, unmask LFSR bits[8:0], for the selected DAC channel

LL_DAC_NOISE_LFSR_UNMASK_BITS9_0

Noise wave generation, unmask LFSR bits[9:0], for the selected DAC channel

LL_DAC_NOISE_LFSR_UNMASK_BITS10_0

Noise wave generation, unmask LFSR bits[10:0], for the selected DAC channel

LL_DAC_NOISE_LFSR_UNMASK_BITS11_0

Noise wave generation, unmask LFSR bits[11:0], for the selected DAC channel

DAC wave generation - Triangle amplitude

LL_DAC_TRIANGLE_AMPLITUDE_1

Triangle wave generation, amplitude of 1 LSB of DAC output range, for the selected DAC channel

LL_DAC_TRIANGLE_AMPLITUDE_3

Triangle wave generation, amplitude of 3 LSB of DAC output range, for the selected DAC channel

LL_DAC_TRIANGLE_AMPLITUDE_7

Triangle wave generation, amplitude of 7 LSB of DAC output range, for the selected DAC channel

LL_DAC_TRIANGLE_AMPLITUDE_15

Triangle wave generation, amplitude of 15 LSB of DAC output range, for the selected DAC channel

LL_DAC_TRIANGLE_AMPLITUDE_31

Triangle wave generation, amplitude of 31 LSB of DAC output range, for the selected DAC channel

LL_DAC_TRIANGLE_AMPLITUDE_63

Triangle wave generation, amplitude of 63 LSB of DAC output range, for the selected DAC channel

LL_DAC_TRIANGLE_AMPLITUDE_127

Triangle wave generation, amplitude of 127 LSB of DAC output range, for the selected DAC channel

LL_DAC_TRIANGLE_AMPLITUDE_255

Triangle wave generation, amplitude of 255 LSB of DAC output range, for the selected DAC channel

LL_DAC_TRIANGLE_AMPLITUDE_511

Triangle wave generation, amplitude of 512 LSB of DAC output range, for the selected DAC channel

LL_DAC_TRIANGLE_AMPLITUDE_1023

Triangle wave generation, amplitude of 1023 LSB of DAC output range, for the selected DAC channel

LL_DAC_TRIANGLE_AMPLITUDE_2047

Triangle wave generation, amplitude of 2047 LSB of DAC output range, for the selected DAC channel

LL_DAC_TRIANGLE_AMPLITUDE_4095

Triangle wave generation, amplitude of 4095 LSB of DAC output range, for the selected DAC channel

DAC helper macro

__LL_DAC_CHANNEL_TO_DECIMAL_NB

Description:

- Helper macro to get DAC channel number in decimal format from literals LL_DAC_CHANNEL_x.

Parameters:

- __CHANNEL__: This parameter can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Return value:

- 1...2

Notes:

- The input can be a value from functions where a channel number is returned.

__LL_DAC_DECIMAL_NB_TO_CHANNEL

Description:

- Helper macro to get DAC channel in literal format LL_DAC_CHANNEL_x from number in decimal format.

Parameters:

- __DECIMAL_NB__: 1...2

Return value:

- Returned: value can be one of the following values:
  - LL_DAC_CHANNEL_1
  - LL_DAC_CHANNEL_2

Notes:

- If the input parameter does not correspond to a DAC channel, this macro returns value '0'.

__LL_DAC_DIGITAL_SCALE

Description:

- Helper macro to define the DAC conversion data full-scale digital value corresponding to the selected DAC resolution.

Parameters:

- __DAC_RESOLUTION__: This parameter can be one of the following values:
  - LL_DAC_RESOLUTION_12B
  - LL_DAC_RESOLUTION_8B

Return value:

- ADC: conversion data equivalent voltage value (unit: mVolt)

Notes:

- DAC conversion data full-scale corresponds to voltage range determined by analog voltage references Vref+ and Vref- (refer to reference manual).

__LL_DAC_CALC_VOLTAGE_TO_DATA

Description:

- Helper macro to calculate the DAC conversion data (unit: digital value) corresponding to a voltage (unit: mVolt).

Parameters:

- __VREFANALOG_VOLTAGE__: Analog reference voltage (unit: mV)
- __DAC_VOLTAGE__: Voltage to be generated by DAC channel (unit: mVolt).
- __DAC_RESOLUTION__: This parameter can be one of the following values:
  - LL_DAC_RESOLUTION_12B
  - LL_DAC_RESOLUTION_8B

Return value:

- DAC: conversion data (unit: digital value)

Notes:

- This helper macro is intended to provide input data in voltage rather than digital value, to be used with LL DAC functions such as LL_DAC_ConvertData12RightAligned(). Analog reference voltage (Vref+) must be either known from user board environment or can be calculated using ADC measurement and ADC helper macro __LL_ADC_CALC_VREFANALOG_VOLTAGE().

Common write and read registers macros

LL_DAC_WriteReg

Description:

- Write a value in DAC register.

Parameters:

- __INSTANCE__: DAC Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_DAC_ReadReg

Description:

- Read a value in DAC register.

Parameters:

- __INSTANCE__: DAC Instance
- __REG__: Register to be read

Return value:

- Register: value

81 LL DLYB Generic Driver

81.1 DLYB Firmware driver registers structures

81.1.1 LL_DLYB_CfgTypeDef

LL_DLYB_CfgTypeDef is defined in the stm32u3xx_ll_dlyb.h

Data Fields

- ***uint32_t Units***
- ***uint32_t PhaseSel***

Field Documentation

- ***uint32_t LL_DLYB_CfgTypeDef::Units***
  Specifies the Delay of a unit delay cell. This parameter can be a value between 0 and DLYB_MAX_UNIT
- ***uint32_t LL_DLYB_CfgTypeDef::PhaseSel***
  Specifies the Phase for the output clock. This parameter can be a value between 0 and DLYB_MAX_SELECT

81.2 DLYB Firmware driver API description

The following section lists the various functions of the DLYB library.

81.2.1 DelayBlock peripheral features

The DelayBlock is used to generate an Output clock which is de-phased from the Input clock. The phase of the Output clock is programmed by FW. The Output clock is then used to clock the receive data in i.e. a SDMMC, OSPI or QSPI interface. The delay is Voltage and Temperature dependent, which may require FW to do re-tuning and recenter the Output clock phase to the receive data.

The DelayBlock features include the following:

- Input clock frequency.
- Up to 12 oversampling phases.

81.2.2 How to use this driver

This driver is a considered as a driver of service for external devices drivers that interfaces with the DELAY peripheral. The LL_DLYB_SetDelay() function, configure the Delay value configured on SEL and UNIT. The LL_DLYB_GetDelay() function, return the Delay value configured on SEL and UNIT. The LL_DLYB_GetClockPeriod()function, get the clock period.

81.2.3 Detailed description of functions

LL_DLYB_Enable

Function name

__STATIC_INLINE void LL_DLYB_Enable (DLYB_TypeDef * DLYBx)

Function description

DLYB Enable.

Parameters

- **DLYBx:** DLYB Instance

Return values

- **None:**

LL_DLYB_Disable

Function name

__STATIC_INLINE void LL_DLYB_Disable (DLYB_TypeDef * DLYBx)

Function description

Disable the DLYB.

Parameters

- **DLYBx:** DLYB Instance.

Return values

- **None:**

LL_DLYB_SetDelay

Function name

void LL_DLYB_SetDelay (DLYB_TypeDef * DLYBx, LL_DLYB_CfgTypeDef * pdlyb_cfg)

Function description

Set the Delay value configured on SEL and UNIT.

Parameters

- **DLYBx:** Pointer to DLYB instance.
- **pdlyb_cfg:** Pointer to DLYB configuration structure.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: the Delay value is set.
  - ERROR: the Delay value is not set.

LL_DLYB_GetDelay

Function name

void LL_DLYB_GetDelay (DLYB_TypeDef * DLYBx, LL_DLYB_CfgTypeDef * pdlyb_cfg)

Function description

Get the Delay value configured on SEL and UNIT.

Parameters

- **DLYBx:** Pointer to DLYB instance.
- **pdlyb_cfg:** Pointer to DLYB configuration structure.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: the Delay value is received.
  - ERROR: the Delay value is not received.

LL_DLYB_GetClockPeriod

Function name

uint32_t LL_DLYB_GetClockPeriod (DLYB_TypeDef * DLYBx, LL_DLYB_CfgTypeDef * pdlyb_cfg)

Function description

Get the clock period.

Parameters

- **DLYBx:** Pointer to DLYB instance.
- **pdlyb_cfg:** Pointer to DLYB configuration structure.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: there is a valid period detected and stored in pdlyb_cfg.
  - ERROR: there is no valid period detected.

81.3 DLYB Firmware driver defines

The following section lists the various define and macros of the module.

81.3.1 DLYB

DLYB

DLYB Flags

DLYB_FLAG_LNGF

82 LL DMA Generic Driver

82.1 DMA Firmware driver registers structures

82.1.1 LL_DMA_InitTypeDef

LL_DMA_InitTypeDef is defined in the stm32u3xx_ll_dma.h

Data Fields

- ***uint32_t SrcAddress***
- ***uint32_t DestAddress***
- ***uint32_t Direction***

- ***uint32_t Mode***

Field Documentation

- ***uint32_t LL_DMA_InitTypeDef::SrcAddress***
  This field specify the data transfer source address. Programming this field is mandatory for all available DMA channels. This parameter must be a value between Min_Data = 0 and Max_Data = 0xFFFFFFFF. This feature can be modified afterwards using unitary function **LL_DMA_SetSrcAddress()**.

- ***uint32_t LL_DMA_InitTypeDef::DestAddress***
  This field specify the data transfer destination address. Programming this field is mandatory for all available DMA channels. This parameter must be a value between Min_Data = 0 and Max_Data = 0xFFFFFFFF. This feature can be modified afterwards using unitary function **LL_DMA_SetDestAddress()**.
- ***uint32_t LL_DMA_InitTypeDef::Direction***
  This field specify the data transfer direction. Programming this field is mandatory for all available DMA channels. This parameter can be a value of ***DMA_LL_EC_TRANSFER_DIRECTION***. This feature can be modified afterwards using unitary function **LL_DMA_SetDataTransferDirection()**.
- ***uint32_t LL_DMA_InitTypeDef::BlkHWRequest***
  This field specify the hardware request unity. Programming this field is mandatory for all available DMA channels. This parameter can be a value of ***DMA_LL_EC_BLKHW_REQUEST***. This feature can be modified afterwards using unitary function **LL_DMA_SetBlkHWRequest()**.
- ***uint32_t LL_DMA_InitTypeDef::DataAlignment***
  This field specify the transfer data alignment. Programming this field is mandatory for all available DMA channels. This parameter can be a value of ***DMA_LL_EC_DATA_ALIGNMENT***. This feature can be modified afterwards using unitary function **LL_DMA_SetDataAlignment()**.
- ***uint32_t LL_DMA_InitTypeDef::SrcBurstLength***
  This field specify the source burst length of transfer in bytes. Programming this field is mandatory for all available DMA channels. This parameter must be a value between Min_Data = 1 and Max_Data = 64. This feature can be modified afterwards using unitary function **LL_DMA_SetSrcBurstLength()**.
- ***uint32_t LL_DMA_InitTypeDef::DestBurstLength***
  This field specify the destination burst length of transfer in bytes. Programming this field is mandatory for all available DMA channels. This parameter must be a value between Min_Data = 1 and Max_Data = 64. This feature can be modified afterwards using unitary function **LL_DMA_SetDestBurstLength()**.
- ***uint32_t LL_DMA_InitTypeDef::SrcDataWidth***
  This field specify the source data width. Programming this field is mandatory for all available DMA channels. This parameter can be a value of ***DMA_LL_EC_SOURCE_DATA_WIDTH***. This feature can be modified afterwards using unitary function **LL_DMA_SetSrcDataWidth()**.
- ***uint32_t LL_DMA_InitTypeDef::DestDataWidth***
  This field specify the destination data width. Programming this field is mandatory for all available DMA channels. This parameter can be a value of ***DMA_LL_EC_DESTINATION_DATA_WIDTH***. This feature can be modified afterwards using unitary function **LL_DMA_SetDestDataWidth()**.
- ***uint32_t LL_DMA_InitTypeDef::SrcIncMode***
  This field specify the source burst increment mode. Programming this field is mandatory for all available DMA channels. This parameter can be a value of ***DMA_LL_EC_SOURCE_INCREMENT_MODE***. This feature can be modified afterwards using unitary function **LL_DMA_SetSrcIncMode()**.
- ***uint32_t LL_DMA_InitTypeDef::DestIncMode***
  This field specify the destination burst increment mode. Programming this field is mandatory for all available DMA channels. This parameter can be a value of ***DMA_LL_EC_DESTINATION_INCREMENT_MODE***. This feature can be modified afterwards using unitary function **LL_DMA_SetDestIncMode()**.
- ***uint32_t LL_DMA_InitTypeDef::Priority***
  This field specify the channel priority level. Programming this field is mandatory for all available DMA channels. This parameter can be a value of ***DMA_LL_EC_PRIORITY_LEVEL***. This feature can be modified afterwards using unitary function **LL_DMA_SetChannelPriorityLevel()**.
- ***uint32_t LL_DMA_InitTypeDef::BlkDataLength***
  This field specify the length of a block transfer in bytes. Programming this field is mandatory for all available DMA channels. This parameter must be a value between Min_Data = 0 and Max_Data = 0x0000FFFF. This feature can be modified afterwards using unitary function **LL_DMA_SetBlkDataLength()**.
- ***uint32_t LL_DMA_InitTypeDef::BlkRptCount***
  This field specify the number of repetitions of the current block. Programming this field is mandatory only for 2D addressing channels. This parameter can be a value between 1 and 2048 Min_Data = 0 and Max_Data = 0x000007FF. This feature can be modified afterwards using unitary function **LL_DMA_SetBlkRptCount()**.
- ***uint32_t LL_DMA_InitTypeDef::TriggerMode***
  This field specify the trigger mode. Programming this field is mandatory for all available DMA channels. This parameter can be a value of ***DMA_LL_EC_TRIGGER_MODE***. This feature can be modified afterwards using unitary function **LL_DMA_SetTriggerMode()**.

- ***uint32_t LL_DMA_InitTypeDef::TriggerPolarity***
  This field specify the trigger event polarity. Programming this field is mandatory for all available DMA channels. This parameter can be a value of ***DMA_LL_EC_TRIGGER_POLARITY***. This feature can be modified afterwards using unitary function **LL_DMA_SetTriggerPolarity()**.
- ***uint32_t LL_DMA_InitTypeDef::TriggerSelection***
  This field specify the trigger event selection. Programming this field is mandatory for all available DMA channels. This parameter can be a value of ***DMA_LL_EC_TRIGGER_SELECTION***. This feature can be modified afterwards using unitary function **LL_DMA_SetHWTrigger()**.
- ***uint32_t LL_DMA_InitTypeDef::Request***
  This field specify the peripheral request selection. Programming this field is mandatory for all available DMA channels. This parameter can be a value of ***DMA_LL_EC_REQUEST_SELECTION***. This feature can be modified afterwards using unitary function **LL_DMA_SetPeriphRequest()**.
- ***uint32_t LL_DMA_InitTypeDef::TransferEventMode***
  This field specify the transfer event mode. Programming this field is mandatory for all available DMA channels. This parameter can be a value of ***DMA_LL_EC_TRANSFER_EVENT_MODE***. This feature can be modified afterwards using unitary function **LL_DMA_SetTransferEventMode()**.
- ***uint32_t LL_DMA_InitTypeDef::DestHWordExchange***
  This field specify the destination half word exchange. Programming this field is mandatory for all available DMA channels. This parameter can be a value of ***DMA_LL_EC_DEST_HALFWORD_EXCHANGE***. This feature can be modified afterwards using unitary function **LL_DMA_SetDestHWordExchange()**.
- ***uint32_t LL_DMA_InitTypeDef::DestByteExchange***
  This field specify the destination byte exchange. Programming this field is mandatory for all available DMA channels. This parameter can be a value of ***DMA_LL_EC_DEST_BYTE_EXCHANGE***. This feature can be modified afterwards using unitary function **LL_DMA_SetDestByteExchange()**.
- ***uint32_t LL_DMA_InitTypeDef::SrcByteExchange***
  This field specify the source byte exchange. Programming this field is mandatory for all available DMA channels. This parameter can be a value of ***DMA_LL_EC_SRC_BYTE_EXCHANGE***. This feature can be modified afterwards using unitary function **LL_DMA_SetSrcByteExchange()**.
- ***uint32_t LL_DMA_InitTypeDef::SrcAllocatedPort***
  This field specify the source allocated port. Programming this field is mandatory for all available DMA channels. This parameter can be a value of ***DMA_LL_EC_SOURCE_ALLOCATED_PORT***. This feature can be modified afterwards using unitary function **LL_DMA_SetSrcAllocatedPort()**.
- ***uint32_t LL_DMA_InitTypeDef::DestAllocatedPort***
  This field specify the destination allocated port. Programming this field is mandatory for all available DMA channels. This parameter can be a value of ***DMA_LL_EC_DESTINATION_ALLOCATED_PORT***. This feature can be modified afterwards using unitary function **LL_DMA_SetDestAllocatedPort()**.
- ***uint32_t LL_DMA_InitTypeDef::LinkAllocatedPort***
  This field specify the linked-list allocated port. Programming this field is mandatory for all available DMA channels. This parameter can be a value of ***DMA_LL_EC_LINKED_LIST_ALLOCATED_PORT***. This feature can be modified afterwards using unitary function **LL_DMA_SetLinkAllocatedPort()**.
- ***uint32_t LL_DMA_InitTypeDef::LinkStepMode***
  This field specify the link step mode. Programming this field is mandatory for all available DMA channels. This parameter can be a value of ***DMA_LL_EC_LINK_STEP_MODE***. This feature can be modified afterwards using unitary function **LL_DMA_SetLinkStepMode()**.
- ***uint32_t LL_DMA_InitTypeDef::SrcAddrUpdateMode***
  This field specify the source address update mode. Programming this field is mandatory only for 2D addressing channels. This parameter can be a value of ***DMA_LL_EC_SRC_ADDR_UPDATE_MODE***. This feature can be modified afterwards using unitary function **LL_DMA_SetSrcAddrUpdate()**.
- ***uint32_t LL_DMA_InitTypeDef::DestAddrUpdateMode***
  This field specify the destination address update mode. Programming this field is mandatory only for 2D addressing channels. This parameter can be a value of ***DMA_LL_EC_DEST_ADDR_UPDATE_MODE***. This feature can be modified afterwards using unitary function **LL_DMA_SetDestAddrUpdate()**.
- ***uint32_t LL_DMA_InitTypeDef::SrcAddrOffset***
  This field specifies the source address offset. Programming this field is mandatory only for 2D addressing channels. This parameter can be a value Between 0 to 0x00001FFF. This feature can be modified afterwards using unitary function **LL_DMA_SetSrcAddrUpdateValue()**.

- ***uint32_t LL_DMA_InitTypeDef::DestAddrOffset***
  This field specifies the destination address offset. Programming this field is mandatory only for 2D addressing channels. This parameter can be a value Between 0 to 0x00001FFF. This feature can be modified afterwards using unitary function **LL_DMA_SetDestAddrUpdateValue()**.
- ***uint32_t LL_DMA_InitTypeDef::BlkRptSrcAddrUpdateMode***
  This field specifies the block repeat source address update mode. Programming this field is mandatory only for 2D addressing channels. This parameter can be a value of *DMA_LL_EC_BLK_RPT_SRC_ADDR_UPDATE_MODE*. This feature can be modified afterwards using unitary function **LL_DMA_SetBlkRptSrcAddrUpdate()**.
- ***uint32_t LL_DMA_InitTypeDef::BlkRptDestAddrUpdateMode***
  This field specifies the block repeat destination address update mode. Programming this field is mandatory only for 2D addressing channels. This parameter can be a value of *DMA_LL_EC_BLK_RPT_DEST_ADDR_UPDATE_MODE*. This feature can be modified afterwards using unitary function **LL_DMA_SetBlkRptDestAddrUpdate()**.
- ***uint32_t LL_DMA_InitTypeDef::BlkRptSrcAddrOffset***
  This field specifies the block repeat source address offset. Programming this field is mandatory only for 2D addressing channels. This parameter can be a value Between 0 to 0x0000FFFF. This feature can be modified afterwards using unitary function **LL_DMA_SetBlkRptSrcAddrUpdateValue()**.
- ***uint32_t LL_DMA_InitTypeDef::BlkRptDestAddrOffset***
  This field specifies the block repeat destination address offset. Programming this field is mandatory only for 2D addressing channels. This parameter can be a value Between 0 to 0x0000FFFF. This feature can be modified afterwards using unitary function **LL_DMA_SetBlkRptDestAddrUpdateValue()**.
- ***uint32_t LL_DMA_InitTypeDef::LinkedListBaseAddr***
  This field specify the linked list base address. Programming this field is mandatory for all available DMA channels. This parameter can be a value Between 0 to 0xFFFF0000 (where the 4 first bytes are always forced to 0). This feature can be modified afterwards using unitary function **LL_DMA_SetLinkedListBaseAddr()**.
- ***uint32_t LL_DMA_InitTypeDef::LinkedListAddrOffset***
  Specifies the linked list address offset. Programming this field is mandatory for all available DMA channels. This parameter can be a value Between 0 to 0x0000FFFC. This feature can be modified afterwards using unitary function **LL_DMA_SetLinkedListAddrOffset()**.
- ***uint32_t LL_DMA_InitTypeDef::Mode***
  Specifies the transfer mode for the DMA channel. This parameter can be a value of *DMA_LL_TRANSFER_MODE*

82.1.2 LL_DMA_InitLinkedListTypeDef

LL_DMA_InitLinkedListTypeDef is defined in the stm32u3xx_ll_dma.h

Data Fields

- ***uint32_t Priority***
- ***uint32_t LinkStepMode***
- ***uint32_t LinkAllocatedPort***
- ***uint32_t TransferEventMode***

Field Documentation

- ***uint32_t LL_DMA_InitLinkedListTypeDef::Priority***
  This field specify the channel priority level. Programming this field is mandatory for all available DMA channels. This parameter can be a value of *DMA_LL_EC_PRIORITY_LEVEL*. This feature can be modified afterwards using unitary function **LL_DMA_SetChannelPriorityLevel()**.
- ***uint32_t LL_DMA_InitLinkedListTypeDef::LinkStepMode***
  This field specify the link step mode. Programming this field is mandatory for all available DMA channels. This parameter can be a value of *DMA_LL_EC_LINK_STEP_MODE*. This feature can be modified afterwards using unitary function **LL_DMA_SetLinkStepMode()**.
- ***uint32_t LL_DMA_InitLinkedListTypeDef::LinkAllocatedPort***
  This field specify the linked-list allocated port. Programming this field is mandatory for all available DMA channels. This parameter can be a value of *DMA_LL_EC_LINKED_LIST_ALLOCATED_PORT*. This feature can be modified afterwards using unitary function **LL_DMA_SetLinkAllocatedPort()**.

- ***uint32_t LL_DMA_InitLinkedListTypeDef::TransferEventMode***
  This field specify the transfer event mode. Programming this field is mandatory for all available DMA channels. This parameter can be a value of ***DMA_LL_EC_TRANSFER_EVENT_MODE***. This feature can be modified afterwards using unitary function **LL_DMA_SetTransferEventMode()**.

82.1.3 LL_DMA_InitNodeTypeDef

LL_DMA_InitNodeTypeDef is defined in the stm32u3xx_ll_dma.h

Data Fields

- ***uint32_t DestSecure***

- ***uint32_t UpdateRegisters***
- ***uint32_t NodeType***

Field Documentation

- ***uint32_t LL_DMA_InitNodeTypeDef::DestSecure***
  This field specify the destination secure. This parameter can be a value of ***DMA_LL_EC_DESTINATION_SECURITY_ATTRIBUTE***.
- ***uint32_t LL_DMA_InitNodeTypeDef::DestAllocatedPort***
  This field specify the destination allocated port. This parameter can be a value of ***DMA_LL_EC_DESTINATION_ALLOCATED_PORT***.

- ***uint32_t LL_DMA_InitNodeTypeDef::DestHWordExchange***
  This field specify the destination half word exchange. This parameter can be a value of ***DMA_LL_EC_DEST_HALFWORD_EXCHANGE***.
- ***uint32_t LL_DMA_InitNodeTypeDef::DestByteExchange***
  This field specify the destination byte exchange. This parameter can be a value of ***DMA_LL_EC_DEST_BYTE_EXCHANGE***.
- ***uint32_t LL_DMA_InitNodeTypeDef::DestBurstLength***
  This field specify the destination burst length of transfer in bytes. This parameter must be a value between Min_Data = 1 and Max_Data = 64.
- ***uint32_t LL_DMA_InitNodeTypeDef::DestIncMode***
  This field specify the destination increment mode. This parameter can be a value of ***DMA_LL_EC_DESTINATION_INCREMENT_MODE***.
- ***uint32_t LL_DMA_InitNodeTypeDef::DestDataWidth***
  This field specify the destination data width. This parameter can be a value of ***DMA_LL_EC_DESTINATION_DATA_WIDTH***.
- ***uint32_t LL_DMA_InitNodeTypeDef::SrcSecure***
  This field specify the source secure. This parameter can be a value of ***DMA_LL_EC_SOURCE_SECURITY_ATTRIBUTE***.
- ***uint32_t LL_DMA_InitNodeTypeDef::SrcAllocatedPort***
  This field specify the source allocated port. This parameter can be a value of ***DMA_LL_EC_SOURCE_ALLOCATED_PORT***.
- ***uint32_t LL_DMA_InitNodeTypeDef::SrcByteExchange***
  This field specify the source byte exchange. This parameter can be a value of ***DMA_LL_EC_SRC_BYTE_EXCHANGE***.
- ***uint32_t LL_DMA_InitNodeTypeDef::DataAlignment***
  This field specify the transfer data alignment. This parameter can be a value of ***DMA_LL_EC_DATA_ALIGNMENT***.
- ***uint32_t LL_DMA_InitNodeTypeDef::SrcBurstLength***
  This field specify the source burst length of transfer in bytes. This parameter must be a value between Min_Data = 1 and Max_Data = 64.
- ***uint32_t LL_DMA_InitNodeTypeDef::SrcIncMode***
  This field specify the source increment mode. This parameter can be a value of ***DMA_LL_EC_SOURCE_INCREMENT_MODE***.
- ***uint32_t LL_DMA_InitNodeTypeDef::SrcDataWidth***
  This field specify the source data width. This parameter can be a value of ***DMA_LL_EC_SOURCE_DATA_WIDTH***.
- ***uint32_t LL_DMA_InitNodeTypeDef::TransferEventMode***
  This field specify the transfer event mode. This parameter can be a value of ***DMA_LL_EC_TRANSFER_EVENT_MODE***.
- ***uint32_t LL_DMA_InitNodeTypeDef::TriggerPolarity***
  This field specify the trigger event polarity. This parameter can be a value of ***DMA_LL_EC_TRIGGER_POLARITY***.
- ***uint32_t LL_DMA_InitNodeTypeDef::TriggerSelection***
  This field specify the trigger event selection. This parameter can be a value of ***DMA_LL_EC_TRIGGER_SELECTION***.
- ***uint32_t LL_DMA_InitNodeTypeDef::TriggerMode***
  This field specify the trigger mode. This parameter can be a value of ***DMA_LL_EC_TRIGGER_MODE***.
- ***uint32_t LL_DMA_InitNodeTypeDef::BlkHWRequest***
  This field specify the hardware request unity. This parameter can be a value of ***DMA_LL_EC_BLKHW_REQUEST***.
- ***uint32_t LL_DMA_InitNodeTypeDef::Direction***
  This field specify the transfer direction. This parameter can be a value of ***DMA_LL_EC_TRANSFER_DIRECTION***.
- ***uint32_t LL_DMA_InitNodeTypeDef::Request***
  This field specify the peripheral request selection. This parameter can be a value of ***DMA_LL_EC_REQUEST_SELECTION***.
- ***uint32_t LL_DMA_InitNodeTypeDef::Mode***
  This field DMA Transfer Mode. This parameter can be a value of ***DMA_LL_TRANSFER_MODE***.

- ***uint32_t LL_DMA_InitNodeTypeDef::BlkRptDestAddrUpdateMode***
  This field specifies the block repeat destination address update mode. This parameter can be a value of ***DMA_LL_EC_BLK_RPT_DEST_ADDR_UPDATE_MODE***.
- ***uint32_t LL_DMA_InitNodeTypeDef::BlkRptSrcAddrUpdateMode***
  This field specifies the block repeat source address update mode. This parameter can be a value of ***DMA_LL_EC_BLK_RPT_SRC_ADDR_UPDATE_MODE***.
- ***uint32_t LL_DMA_InitNodeTypeDef::DestAddrUpdateMode***
  This field specify the Destination address update mode. This parameter can be a value of ***DMA_LL_EC_DEST_ADDR_UPDATE_MODE***.
- ***uint32_t LL_DMA_InitNodeTypeDef::SrcAddrUpdateMode***
  This field specify the Source address update mode. This parameter can be a value of ***DMA_LL_EC_SRC_ADDR_UPDATE_MODE***.
- ***uint32_t LL_DMA_InitNodeTypeDef::BlkRptCount***
  This field specify the number of repetitions of the current block. This parameter can be a value between 1 and 2048 Min_Data = 0 and Max_Data = 0x000007FF.
- ***uint32_t LL_DMA_InitNodeTypeDef::BlkDataLength***
  This field specify the length of a block transfer in bytes. This parameter must be a value between Min_Data = 0 and Max_Data = 0x0000FFFF.
- ***uint32_t LL_DMA_InitNodeTypeDef::SrcAddress***
  This field specify the transfer source address. This parameter must be a value between Min_Data = 0 and Max_Data = 0xFFFFFFFF.
- ***uint32_t LL_DMA_InitNodeTypeDef::DestAddress***
  This field specify the transfer destination address. This parameter must be a value between Min_Data = 0 and Max_Data = 0xFFFFFFFF.
- ***uint32_t LL_DMA_InitNodeTypeDef::DestAddrOffset***
  This field specifies the destination address offset. This parameter can be a value Between 0 to 0x00001FFF.
- ***uint32_t LL_DMA_InitNodeTypeDef::SrcAddrOffset***
  This field specifies the source address offset. This parameter can be a value Between 0 to 0x00001FFF.
- ***uint32_t LL_DMA_InitNodeTypeDef::BlkRptDestAddrOffset***
  This field specifies the block repeat destination address offset. This parameter can be a value Between 0 to 0x0000FFFF.
- ***uint32_t LL_DMA_InitNodeTypeDef::BlkRptSrcAddrOffset***
  This field specifies the block repeat source address offset. This parameter can be a value Between 0 to 0x0000FFFF.
- ***uint32_t LL_DMA_InitNodeTypeDef::UpdateRegisters***
  Specifies the linked list register update. This parameter can be a value of ***DMA_LL_EC_LINKEDLIST_REGISTER_UPDATE***.
- ***uint32_t LL_DMA_InitNodeTypeDef::NodeType***
  Specifies the node type to be created. This parameter can be a value of ***DMA_LL_EC_LINKEDLIST_NODE_TYPE***.

82.1.4 LL_DMA_LinkNodeTypeDef

LL_DMA_LinkNodeTypeDef is defined in the stm32u3xx_ll_dma.h

Data Fields

- ***__IO uint32_t LinkRegisters***

Field Documentation

- ***__IO uint32_t LL_DMA_LinkNodeTypeDef::LinkRegisters[8U]***

82.2 DMA Firmware driver API description

The following section lists the various functions of the DMA library.

82.2.1 LL DMA driver acronyms

Acronyms table :

- RC Source

- DEST Destination
- ADDR Address
- ADDRS Addresses
- INC Increment / Incremented
- DEC Decrement / Decremented
- BLK Block
- RPT Repeat / Repeated
- TRIG Trigger

82.2.2 Detailed description of functions

LL_DMA_EnableChannel

Function name

__STATIC_INLINE void LL_DMA_EnableChannel (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Enable channel.

Parameters

- **DMAx:** DMAx Instance.
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CCR EN LL_DMA_EnableChannel

LL_DMA_DisableChannel

Function name

__STATIC_INLINE void LL_DMA_DisableChannel (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Disable channel.

Parameters

- **DMAx:** DMAx Instance.
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CCR EN LL_DMA_DisableChannel

LL_DMA_IsEnabledChannel

Function name

__STATIC_INLINE uint32_t LL_DMA_IsEnabledChannel (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Check if channel is enabled or disabled.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **State:** of bit (1 or 0).

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CCR EN LL_DMA_IsEnabledChannel

LL_DMA_ResetChannel

Function name

__STATIC_INLINE void LL_DMA_ResetChannel (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Reset channel.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CCR RESET LL_DMA_ResetChannel

LL_DMA_SuspendChannel

Function name

__STATIC_INLINE void LL_DMA_SuspendChannel (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Suspend channel.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CCR SUSP LL_DMA_SuspendChannel

LL_DMA_ResumeChannel

Function name

__STATIC_INLINE void LL_DMA_ResumeChannel (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Resume channel.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CCR SUSP LL_DMA_ResumeChannel

LL_DMA_IsSuspendedChannel

Function name

__STATIC_INLINE uint32_t LL_DMA_IsSuspendedChannel (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Check if channel is suspended.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **State:** of bit (1 or 0).

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CCR SUSP LL_DMA_IsSuspendedChannel

LL_DMA_SetLinkedListBaseAddr

Function name

__STATIC_INLINE void LL_DMA_SetLinkedListBaseAddr (const DMA_TypeDef * DMAx, uint32_t Channel, uint32_t LinkedListBaseAddr)

Function description

Set linked-list base address.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11
- **LinkedListBaseAddr:** Between 0 to 0xFFFF0000 (where the 4 LSB bytes are always 0)

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CLBAR LBA LL_DMA_SetLinkedListBaseAddr

LL_DMA_GetLinkedListBaseAddr

Function name

__STATIC_INLINE uint32_t LL_DMA_GetLinkedListBaseAddr (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Get linked-list base address.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **Value:** between 0 to 0xFFFF0000 (where the 4 LSB bytes are always 0)

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CLBAR LBA LL_DMA_GetLinkedListBaseAddr

LL_DMA_ConfigControl

Function name

__STATIC_INLINE void LL_DMA_ConfigControl (const DMA_TypeDef * DMAx, uint32_t Channel, uint32_t Configuration)

Function description

Configure all parameters linked to channel control.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11
- **Configuration:** This parameter must be a combination of all the following values:
  - LL_DMA_LOW_PRIORITY_LOW_WEIGHT or LL_DMA_LOW_PRIORITY_MID_WEIGHT or LL_DMA_LOW_PRIORITY_HIGH_WEIGHT or LL_DMA_HIGH_PRIORITY
  - LL_DMA_LINK_ALLOCATED_PORT0 or LL_DMA_LINK_ALLOCATED_PORT1
  - LL_DMA_LSM_FULL_EXECUTION or LL_DMA_LSM_1LINK_EXECUTION

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CCR PRIO LL_DMA_ConfigControl
- CCR LAP LL_DMA_ConfigControl
- CCR LSM LL_DMA_ConfigControl

LL_DMA_SetChannelPriorityLevel

Function name

__STATIC_INLINE void LL_DMA_SetChannelPriorityLevel (const DMA_TypeDef * DMAx, uint32_t Channel, uint32_t Priority)

Function description

Set priority level.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11
- **Priority:** This parameter can be one of the following values:
  - LL_DMA_LOW_PRIORITY_LOW_WEIGHT
  - LL_DMA_LOW_PRIORITY_MID_WEIGHT
  - LL_DMA_LOW_PRIORITY_HIGH_WEIGHT
  - LL_DMA_HIGH_PRIORITY

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CCR PRIO LL_DMA_SetChannelPriorityLevel

LL_DMA_GetChannelPriorityLevel

Function name

__STATIC_INLINE uint32_t LL_DMA_GetChannelPriorityLevel (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Get Channel priority level.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **Returned:** value can be one of the following values:
  - LL_DMA_LOW_PRIORITY_LOW_WEIGHT
  - LL_DMA_LOW_PRIORITY_MID_WEIGHT
  - LL_DMA_LOW_PRIORITY_HIGH_WEIGHT
  - LL_DMA_HIGH_PRIORITY

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CCR PRIO LL_DMA_GetChannelPriorityLevel

LL_DMA_SetLinkAllocatedPort

Function name

__STATIC_INLINE void LL_DMA_SetLinkAllocatedPort (const DMA_TypeDef * DMAx, uint32_t Channel, uint32_t LinkAllocatedPort)

Function description

Set linked-list allocated port.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11
- **LinkAllocatedPort:** This parameter can be one of the following values:
  - LL_DMA_LINK_ALLOCATED_PORT0
  - LL_DMA_LINK_ALLOCATED_PORT1

Return values

- **None.:**

Reference Manual to LL API cross reference:

- CCR LAP LL_DMA_SetLinkAllocatedPort

LL_DMA_GetLinkAllocatedPort

Function name

__STATIC_INLINE uint32_t LL_DMA_GetLinkAllocatedPort (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Get linked-list allocated port.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **Returned:** value can be one of the following values:
  - LL_DMA_LINK_ALLOCATED_PORT0
  - LL_DMA_LINK_ALLOCATED_PORT1

Reference Manual to LL API cross reference:

- CCR LAP LL_DMA_GetLinkAllocatedPort

LL_DMA_SetLinkStepMode

Function name

__STATIC_INLINE void LL_DMA_SetLinkStepMode (const DMA_TypeDef * DMAx, uint32_t Channel, uint32_t LinkStepMode)

Function description

Set link step mode.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11
- **LinkStepMode:** This parameter can be one of the following values:
  - LL_DMA_LSM_FULL_EXECUTION
  - LL_DMA_LSM_1LINK_EXECUTION

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CCR LSM LL_DMA_SetLinkStepMode

LL_DMA_GetLinkStepMode

Function name

__STATIC_INLINE uint32_t LL_DMA_GetLinkStepMode (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Get Link step mode.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **Returned:** value can be one of the following values:
  - LL_DMA_LSM_FULL_EXECUTION
  - LL_DMA_LSM_1LINK_EXECUTION

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CCR LSM LL_DMA_GetLinkStepMode

LL_DMA_ConfigTransfer

Function name

__STATIC_INLINE void LL_DMA_ConfigTransfer (const DMA_TypeDef * DMAx, uint32_t Channel, uint32_t Configuration)

Function description

Configure data transfer.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11
- **Configuration:** This parameter must be a combination of all the following values:
  - LL_DMA_DEST_ALLOCATED_PORT0 or LL_DMA_DEST_ALLOCATED_PORT1
  - LL_DMA_DEST_HALFWORD_PRESERVE or LL_DMA_DEST_HALFWORD_EXCHANGE
  - LL_DMA_DEST_BYTE_PRESERVE or LL_DMA_DEST_BYTE_EXCHANGE
  - LL_DMA_SRC_BYTE_PRESERVE or LL_DMA_SRC_BYTE_EXCHANGE
  - LL_DMA_DEST_FIXED or LL_DMA_DEST_INCREMENT
  - LL_DMA_DEST_DATAWIDTH_BYTE or LL_DMA_DEST_DATAWIDTH_HALFWORD or LL_DMA_DEST_DATAWIDTH_WORD
  - LL_DMA_SRC_ALLOCATED_PORT0 or LL_DMA_SRC_ALLOCATED_PORT1
  - LL_DMA_DATA_ALIGN_ZEROPADD or LL_DMA_DATA_ALIGN_SIGNEXTPADD or LL_DMA_DATA_PACK_UNPACK
  - LL_DMA_SRC_FIXED or LL_DMA_SRC_INCREMENT
  - LL_DMA_SRC_DATAWIDTH_BYTE or LL_DMA_SRC_DATAWIDTH_HALFWORD or LL_DMA_SRC_DATAWIDTH_WORD

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

LL_DMA_ConfigBurstLength

Function name

__STATIC_INLINE void LL_DMA_ConfigBurstLength (const DMA_TypeDef * DMAx, uint32_t Channel, uint32_t SrcBurstLength, uint32_t DestBurstLength)

Function description

Configure source and destination burst length.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11
- **SrcBurstLength:** Between 1 to 64
- **DestBurstLength:** Between 1 to 64

Return values

- **None.:**

Reference Manual to LL API cross reference:

- CTR1 DBL_1 LL_DMA_SetDestBurstLength
-
- CTR1 SBL_1 LL_DMA_SetDestBurstLength

LL_DMA_ConfigChannelSecure

Function name

__STATIC_INLINE void LL_DMA_ConfigChannelSecure (DMA_TypeDef * DMAx, uint32_t Channel, uint32_t Configuration)

Function description

Configure all secure parameters linked to DMA channel.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11
- **Configuration:** This parameter must be a combination of all the following values:
  - LL_DMA_CHANNEL_NSEC or LL_DMA_CHANNEL_SEC
  - LL_DMA_CHANNEL_SRC_NSEC or LL_DMA_CHANNEL_SRC_SEC
  - LL_DMA_CHANNEL_DEST_NSEC or LL_DMA_CHANNEL_DEST_SEC

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

LL_DMA_EnableChannelDestSecure

Function name

__STATIC_INLINE void LL_DMA_EnableChannelDestSecure (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Enable security attribute of the DMA transfer to the destination.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CTR1 DSEC LL_DMA_EnableChannelDestSecure

LL_DMA_DisableChannelDestSecure

Function name

__STATIC_INLINE void LL_DMA_DisableChannelDestSecure (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Disable security attribute of the DMA transfer to the destination.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

LL_DMA_IsEnabledChannelDestSecure

Function name

__STATIC_INLINE uint32_t LL_DMA_IsEnabledChannelDestSecure (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Check security attribute of the DMA transfer to the destination.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **State:** of bit (1 or 0).

Notes

- This API is used for all available DMA channels.

LL_DMA_GetDestAllocatedPort

Function name

__STATIC_INLINE uint32_t LL_DMA_GetDestAllocatedPort (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Get destination allocated port.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **Returned:** value can be one of the following values:
  - LL_DMA_DEST_ALLOCATED_PORT0
  - LL_DMA_DEST_ALLOCATED_PORT1

Reference Manual to LL API cross reference:

- CTR1 DAP LL_DMA_GetDestAllocatedPort

LL_DMA_SetDestHWordExchange

Function name

__STATIC_INLINE void LL_DMA_SetDestHWordExchange (const DMA_TypeDef * DMAx, uint32_t Channel, uint32_t DestHWordExchange)

Function description

Set destination half-word exchange.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5

Function name

__STATIC_INLINE void LL_DMA_SetSrcBurstLength (const DMA_TypeDef * DMAx, uint32_t Channel, uint32_t SrcBurstLength)

Function description

Set source burst length.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11
- **SrcBurstLength:** Between 1 to 64

Return values

- **None.:**

Reference Manual to LL API cross reference:

- CTR1 SBL_1 LL_DMA_SetSrcBurstLength

LL_DMA_GetSrcBurstLength

Function name

__STATIC_INLINE uint32_t LL_DMA_GetSrcBurstLength (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Get source burst length.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **Between:** 1 to 64
- **None.:**

Reference Manual to LL API cross reference:

- CTR1 SBL_1 LL_DMA_GetSrcBurstLength

LL_DMA_SetSrcIncMode

Function name

__STATIC_INLINE void LL_DMA_SetSrcIncMode (const DMA_TypeDef * DMAx, uint32_t Channel, uint32_t SrcInc)

Function description

Set source increment mode.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11
- **SrcInc:** This parameter can be one of the following values:
  - LL_DMA_SRC_FIXED
  - LL_DMA_SRC_INCREMENT

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CTR1 SINC LL_DMA_SetSrcIncMode

LL_DMA_GetSrcIncMode

Function name

__STATIC_INLINE uint32_t LL_DMA_GetSrcIncMode (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Get source increment mode.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **Returned:** value can be one of the following values:
  - LL_DMA_SRC_FIXED
  - LL_DMA_SRC_INCREMENT

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CTR1 SINC LL_DMA_GetSrcIncMode

LL_DMA_SetSrcDataWidth

Function name

__STATIC_INLINE void LL_DMA_SetSrcDataWidth (const DMA_TypeDef * DMAx, uint32_t Channel, uint32_t SrcDataWidth)

Function description

Set source data width.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11
- **SrcDataWidth:** This parameter can be one of the following values:
  - LL_DMA_SRC_DATAWIDTH_BYTE
  - LL_DMA_SRC_DATAWIDTH_HALFWORD
  - LL_DMA_SRC_DATAWIDTH_WORD

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

Function name

__STATIC_INLINE uint32_t LL_DMA_GetSrcDataWidth (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Get Source Data width.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **Returned:** value can be one of the following values:
  - LL_DMA_SRC_DATAWIDTH_BYTE
  - LL_DMA_SRC_DATAWIDTH_HALFWORD
  - LL_DMA_SRC_DATAWIDTH_WORD

Notes

- This API is used for all available DMA channels.

LL_DMA_ConfigChannelTransfer

Function name

__STATIC_INLINE void LL_DMA_ConfigChannelTransfer (const DMA_TypeDef * DMAx, uint32_t Channel, uint32_t Configuration)

Function description

Configure channel transfer.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11
- **Configuration:** This parameter must be a combination of all the following values:
  - LL_DMA_TCEM_BLK_TRANSFER or LL_DMA_TCEM_RPT_BLK_TRANSFER or LL_DMA_TCEM_EACH_LLITEM_TRANSFER or LL_DMA_TCEM_LAST_LLITEM_TRANSFER
  - LL_DMA_HWREQUEST_SINGLEBURST or LL_DMA_HWREQUEST_BLK
  - LL_DMA_TRIG_POLARITY_MASKED or LL_DMA_TRIG_POLARITY_RISING or LL_DMA_TRIG_POLARITY_FALLING
  - LL_DMA_TRIGM_BLK_TRANSFER or LL_DMA_TRIGM_RPT_BLK_TRANSFER or LL_DMA_TRIGM_LLI_LINK_TRANSFER or LL_DMA_TRIGM_SINGLBURST_TRANSFER
  - LL_DMA_DIRECTION_PERIPH_TO_MEMORY or LL_DMA_DIRECTION_MEMORY_TO_PERIPH or LL_DMA_DIRECTION_MEMORY_TO_MEMORY
  - LL_DMA_NORMAL or LL_DMA_PFCTRL

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

LL_DMA_SetTransferEventMode

Function name

__STATIC_INLINE void LL_DMA_SetTransferEventMode (const DMA_TypeDef * DMAx, uint32_t Channel, uint32_t TransferEventMode)

Function description

Set transfer event mode.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11
- **TransferEventMode:** This parameter can be one of the following values:
  - LL_DMA_TCEM_BLK_TRANSFER
  - LL_DMA_TCEM_RPT_BLK_TRANSFER
  - LL_DMA_TCEM_EACH_LLITEM_TRANSFER
  - LL_DMA_TCEM_LAST_LLITEM_TRANSFER

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

Function name

__STATIC_INLINE uint32_t LL_DMA_GetTransferEventMode (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Get transfer event mode.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **Returned:** value can be one of the following values:
  - LL_DMA_TCEM_BLK_TRANSFER
  - LL_DMA_TCEM_RPT_BLK_TRANSFER
  - LL_DMA_TCEM_EACH_LLITEM_TRANSFER
  - LL_DMA_TCEM_LAST_LLITEM_TRANSFER

Notes

- This API is used for all available DMA channels.

LL_DMA_SetTriggerPolarity

Function name

__STATIC_INLINE void LL_DMA_SetTriggerPolarity (const DMA_TypeDef * DMAx, uint32_t Channel, uint32_t TriggerPolarity)

Function description

Set trigger polarity.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11
- **TriggerPolarity:** This parameter can be one of the following values:
  - LL_DMA_TRIG_POLARITY_MASKED
  - LL_DMA_TRIG_POLARITY_RISING
  - LL_DMA_TRIG_POLARITY_FALLING

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

- CTR2 TRIGPOL LL_DMA_SetTriggerPolarity

LL_DMA_GetTriggerPolarity

Function name

__STATIC_INLINE uint32_t LL_DMA_GetTriggerPolarity (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Get trigger polarity.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **Returned:** value can be one of the following values:
  - LL_DMA_TRIG_POLARITY_MASKED
  - LL_DMA_TRIG_POLARITY_RISING
  - LL_DMA_TRIG_POLARITY_FALLING

Notes

- This API is used for all available DMA channels.

LL_DMA_SetTriggerMode

Function name

__STATIC_INLINE void LL_DMA_SetTriggerMode (const DMA_TypeDef * DMAx, uint32_t Channel, uint32_t TriggerMode)

Function description

Set trigger Mode.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11
- **TriggerMode:** This parameter can be one of the following values:
  - LL_DMA_TRIGM_BLK_TRANSFER
  - LL_DMA_TRIGM_RPT_BLK_TRANSFER (This value is allowed only for 2D addressing channels)
  - LL_DMA_TRIGM_LLI_LINK_TRANSFER
  - LL_DMA_TRIGM_SINGLBURST_TRANSFER

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

LL_DMA_SetTransferMode

Function name

__STATIC_INLINE void LL_DMA_SetTransferMode (const DMA_TypeDef * DMAx, uint32_t Channel, uint32_t Mode)

Function description

Set DMA transfer mode.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0 (HW request peripheral flow control mode supported)
  - LL_DMA_CHANNEL_1 (HW request peripheral flow control mode supported)
- **Mode:** This parameter can be one of the following values:
  - LL_DMA_NORMAL
  - LL_DMA_PFCTRL

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

LL_DMA_ConfigBlkRptAddrUpdate

Function name

__STATIC_INLINE void LL_DMA_ConfigBlkRptAddrUpdate (const DMA_TypeDef * DMAx, uint32_t Channel, uint32_t Configuration)

Function description

Configure addresses update.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11
- **Configuration:** This parameter must be a combination of all the following values:
  - LL_DMA_BLKRPT_DEST_ADDR_INCREMENT or LL_DMA_BLKRPT_DEST_ADDR_DECREMENT
  - LL_DMA_BLKRPT_SRC_ADDR_INCREMENT or LL_DMA_BLKRPT_SRC_ADDR_DECREMENT
  - LL_DMA_BURST_DEST_ADDR_INCREMENT or LL_DMA_BURST_DEST_ADDR_DECREMENT
  - LL_DMA_BURST_SRC_ADDR_INCREMENT or LL_DMA_BURST_SRC_ADDR_DECREMENT

Return values

- **None.:**

Notes

- This API is used only for 2D addressing channels.

LL_DMA_ConfigBlkCounters

Function name

__STATIC_INLINE void LL_DMA_ConfigBlkCounters (const DMA_TypeDef * DMAx, uint32_t Channel, uint32_t BlkDataLength, uint32_t BlkRptCount)

Function description

Configure DMA Block number of data and repeat Count.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11
- **BlkDataLength:** Block transfer length Value between 0 to 0x0000FFFF
- **BlkRptCount:** Block repeat counter Value between 0 to 0x000007FF

Return values

- **None.:**

Notes

- This API is used only for 2D addressing channels.

LL_DMA_SetBlkRptDestAddrUpdate

Function name

__STATIC_INLINE void LL_DMA_SetBlkRptDestAddrUpdate (const DMA_TypeDef * DMAx, uint32_t Channel, uint32_t BlkRptDestAddrUpdate)

Function description

Set block repeat destination address update.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11
- **BlkRptDestAddrUpdate:** This parameter can be one of the following values:
  - LL_DMA_BLKRPT_DEST_ADDR_INCREMENT
  - LL_DMA_BLKRPT_DEST_ADDR_DECREMENT

Return values

- **None.:**

Notes

LL_DMA_ConfigAddresses

Function name

__STATIC_INLINE void LL_DMA_ConfigAddresses (const DMA_TypeDef * DMAx, uint32_t Channel, uint32_t SrcAddress, uint32_t DestAddress)

Function description

Configure the source and destination addresses.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11
- **SrcAddress:** Between 0 to 0xFFFFFFFF
- **DestAddress:** Between 0 to 0xFFFFFFFF

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.
- This API must not be called when the DMA Channel is enabled.

Reference Manual to LL API cross reference:

- CSAR SA LL_DMA_ConfigAddresses
- CDAR DA LL_DMA_ConfigAddresses

LL_DMA_SetSrcAddress

Function name

__STATIC_INLINE void LL_DMA_SetSrcAddress (const DMA_TypeDef * DMAx, uint32_t Channel, uint32_t SrcAddress)

Function description

Set source address.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11
- **SrcAddress:** Between 0 to 0xFFFFFFFF

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CSAR SA LL_DMA_SetSrcAddress

LL_DMA_GetSrcAddress

Function name

__STATIC_INLINE uint32_t LL_DMA_GetSrcAddress (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Get source address.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **Between:** 0 to 0xFFFFFFFF

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CSAR SA LL_DMA_GetSrcAddress

LL_DMA_SetDestAddress

Function name

__STATIC_INLINE void LL_DMA_SetDestAddress (const DMA_TypeDef * DMAx, uint32_t Channel, uint32_t DestAddress)

Function description

Set destination address.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11
- **DestAddress:** Between 0 to 0xFFFFFFFF

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CDAR DA LL_DMA_SetDestAddress

LL_DMA_GetDestAddress

Function name

__STATIC_INLINE uint32_t LL_DMA_GetDestAddress (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Get destination address.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **Between:** 0 to 0xFFFFFFFF

Notes

- This API is used for all available DMA channels.

LL_DMA_ConfigAddrUpdateValue

Function name

__STATIC_INLINE void LL_DMA_ConfigAddrUpdateValue (const DMA_TypeDef * DMAx, uint32_t Channel, uint32_t SrcAddrOffset, uint32_t DestAddrOffset)

Function description

Configure source and destination addresses offset.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11
- **DestAddrOffset:** Between 0 to 0x00001FFF
- **SrcAddrOffset:** Between 0 to 0x00001FFF

Return values

- **None.:**

Notes

- This API is used only for 2D addressing channels.
- This API must not be called when the DMA Channel is enabled.

LL_DMA_ConfigBlkRptAddrUpdateValue

Function name

__STATIC_INLINE void LL_DMA_ConfigBlkRptAddrUpdateValue (const DMA_TypeDef * DMAx, uint32_t Channel, uint32_t BlkRptSrcAddrOffset, uint32_t BlkRptDestAddrOffset)

Function description

Configure the block repeated source and destination addresses offset.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11
- **BlkRptDestAddrOffset:** Between 0 to 0x0000FFFF
- **BlkRptSrcAddrOffset:** Between 0 to 0x0000FFFF

Return values

- **None.:**

Notes

- This API is used only for 2D addressing channels.
- This API must not be called when the DMA Channel is enabled.

LL_DMA_ConfigLinkUpdate

Function name

__STATIC_INLINE void LL_DMA_ConfigLinkUpdate (const DMA_TypeDef * DMAx, uint32_t Channel, uint32_t RegistersUpdate, uint32_t LinkedListAddrOffset)

Function description

Configure registers update and node address offset during the link transfer.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11
- **RegistersUpdate:** This parameter must be a combination of all the following values:
  - LL_DMA_UPDATE_CTR1
  - LL_DMA_UPDATE_CTR2
  - LL_DMA_UPDATE_CBR1
  - LL_DMA_UPDATE_CSAR
  - LL_DMA_UPDATE_CDAR
  - LL_DMA_UPDATE_CTR3 (This value is allowed only for 2D addressing channels)
  - LL_DMA_UPDATE_CBR2 (This value is allowed only for 2D addressing channels)
  - LL_DMA_UPDATE_CLLR
- **LinkedListAddrOffset:** Between 0 to 0x0000FFFC by increment of 4 Bytes.

Return values

- **None.:**

Notes

- This API is used for all available DMA channels. For linear addressing channels, UT3 and UB2 fields are discarded.

LL_DMA_EnableCTR1Update

Function name

__STATIC_INLINE void LL_DMA_EnableCTR1Update (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Enable CTR1 update during the link transfer.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **State:** of bit (1 or 0).

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CLLR UDA LL_DMA_IsEnabledCDARUpdate

LL_DMA_EnableCTR3Update

Function name

__STATIC_INLINE void LL_DMA_EnableCTR3Update (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Enable CTR3 update during the link transfer.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **None.:**

Notes

- This API is used only for 2D addressing channels.

Reference Manual to LL API cross reference:

- CLLR UT3 LL_DMA_EnableCTR3Update

LL_DMA_DisableCTR3Update

Function name

__STATIC_INLINE void LL_DMA_DisableCTR3Update (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Disable CTR3 update during the link transfer.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **None.:**

Notes

- This API is used only for 2D addressing channels.

Reference Manual to LL API cross reference:

- CLLR UT3 LL_DMA_DisableCTR3Update

LL_DMA_IsEnabledCTR3Update

Function name

__STATIC_INLINE uint32_t LL_DMA_IsEnabledCTR3Update (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Check if CTR3 update during the link transfer is enabled.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **State:** of bit (1 or 0).

Notes

- This API is used only for 2D addressing channels.

Reference Manual to LL API cross reference:

- CLLR UT3 LL_DMA_IsEnabledCTR3Update

LL_DMA_EnableCBR2Update

Function name

__STATIC_INLINE void LL_DMA_EnableCBR2Update (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Enable CBR2 update during the link transfer.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **None.:**

Notes

- This API is used only for 2D addressing channels.

Reference Manual to LL API cross reference:

- CLLR UB2 LL_DMA_EnableCBR2Update

LL_DMA_DisableCBR2Update

Function name

__STATIC_INLINE void LL_DMA_DisableCBR2Update (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Disable CBR2 update during the link transfer.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **None.:**

Notes

- This API is used only for 2D addressing channels.

LL_DMA_IsActiveFlag_DTE

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_DTE (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Get data transfer error flag.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **State:** of bit (1 or 0).

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CSR DTEF LL_DMA_IsActiveFlag_DTE

LL_DMA_IsActiveFlag_HT

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_HT (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Get half transfer flag.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **State:** of bit (1 or 0).

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CSR HTF LL_DMA_IsActiveFlag_HT

LL_DMA_IsActiveFlag_TC

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_TC (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Get transfer complete flag.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **State:** of bit (1 or 0).

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CSR TCF LL_DMA_IsActiveFlag_TC

LL_DMA_IsActiveFlag_IDLE

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_IDLE (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Get idle flag.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **State:** of bit (1 or 0).

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CSR IDLEF LL_DMA_IsActiveFlag_IDLE

LL_DMA_IsActiveFlag_MIS

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_MIS (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Check if nsecure masked interrupt is active.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **State:** of bit (1 or 0).

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- MISR MISx LL_DMA_IsActiveFlag_MIS

LL_DMA_IsActiveFlag_SMIS

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_SMIS (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Check if secure masked interrupt is active.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **State:** of bit (1 or 0).

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- SMISR MISx LL_DMA_IsActiveFlag_SMIS

LL_DMA_EnableIT_TO

Function name

__STATIC_INLINE void LL_DMA_EnableIT_TO (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Enable trigger overrun interrupt.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CCR TOIE LL_DMA_EnableIT_TO

LL_DMA_EnableIT_SUSP

Function name

__STATIC_INLINE void LL_DMA_EnableIT_SUSP (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Enable suspension interrupt.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CCR SUSPIE LL_DMA_EnableIT_SUSP

LL_DMA_EnableIT_USE

Function name

__STATIC_INLINE void LL_DMA_EnableIT_USE (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Enable user setting error interrupt.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CCR USEIE LL_DMA_EnableIT_USE

LL_DMA_EnableIT_ULE

Function name

__STATIC_INLINE void LL_DMA_EnableIT_ULE (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Enable update link transfer error interrupt.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CCR ULEIE LL_DMA_EnableIT_ULE

LL_DMA_EnableIT_DTE

Function name

__STATIC_INLINE void LL_DMA_EnableIT_DTE (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Enable data transfer error interrupt.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CCR DTEIE LL_DMA_EnableIT_DTE

LL_DMA_EnableIT_HT

Function name

__STATIC_INLINE void LL_DMA_EnableIT_HT (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Enable half transfer complete interrupt.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CCR HTIE LL_DMA_EnableIT_HT

LL_DMA_EnableIT_TC

Function name

__STATIC_INLINE void LL_DMA_EnableIT_TC (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Enable transfer complete interrupt.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CCR TCIE LL_DMA_EnableIT_TC

LL_DMA_DisableIT_TO

Function name

__STATIC_INLINE void LL_DMA_DisableIT_TO (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Disable trigger overrun interrupt.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CCR TOIE LL_DMA_DisableIT_TO

LL_DMA_DisableIT_SUSP

Function name

__STATIC_INLINE void LL_DMA_DisableIT_SUSP (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Disable suspension interrupt.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **None.:**

Notes

- This API is used for all available DMA channels.

LL_DMA_IsEnabledIT_TC

Function name

__STATIC_INLINE uint32_t LL_DMA_IsEnabledIT_TC (const DMA_TypeDef * DMAx, uint32_t Channel)

Function description

Check if transfer complete interrupt is enabled.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **State:** of bit (1 or 0).

Notes

- This API is used for all available DMA channels.

Reference Manual to LL API cross reference:

- CCR TCIE LL_DMA_IsEnabledIT_TC

LL_DMA_Init

Function name

uint32_t LL_DMA_Init (DMA_TypeDef * DMAx, uint32_t Channel, LL_DMA_InitTypeDef * DMA_InitStruct)

Function description

Initialize the DMA registers according to the specified parameters in DMA_InitStruct.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11
- **DMA_InitStruct:** pointer to a LL_DMA_InitTypeDef structure.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS : DMA registers are initialized.
  - ERROR : Not applicable.

Notes

- This API is used for all available DMA channels.
- A software request transfer can be done once programming the direction field in memory to memory value.
- To convert DMAx_Channely Instance to DMAx Instance and Channely, use helper macros : LL_DMA_GET_INSTANCE LL_DMA_GET_CHANNEL

LL_DMA_DeInit

Function name

uint32_t LL_DMA_DeInit (DMA_TypeDef * DMAx, uint32_t Channel)

Function description

De-initialize the DMA registers to their default reset values.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS : DMA registers are de-initialized.
  - ERROR : DMA registers are not de-initialized.

Notes

- This API is used for all available DMA channels.
- To convert DMAx_Channely Instance to DMAx Instance and Channely, use helper macros : LL_DMA_GET_INSTANCE LL_DMA_GET_CHANNEL

LL_DMA_StructInit

Function name

void LL_DMA_StructInit (LL_DMA_InitTypeDef * DMA_InitStruct)

Function description

Set each LL_DMA_InitTypeDef field to default value.

Parameters

- **DMA_InitStruct:** Pointer to a LL_DMA_InitTypeDef structure.

Return values

- **None.:**

LL_DMA_ListStructInit

Function name

void LL_DMA_ListStructInit (LL_DMA_InitLinkedListTypeDef * DMA_InitLinkedListStruct)

Function description

Set each LL_DMA_InitLinkedListTypeDef field to default value.

Parameters

- **DMA_InitLinkedListStruct:** Pointer to a LL_DMA_InitLinkedListTypeDef structure.

Return values

- **None.:**

LL_DMA_NodeStructInit

Function name

void LL_DMA_NodeStructInit (LL_DMA_InitNodeTypeDef * DMA_InitNodeStruct)

Function description

Set each LL_DMA_InitNodeTypeDef field to default value.

Parameters

- **DMA_InitNodeStruct:** Pointer to a LL_DMA_InitNodeTypeDef structure.

Return values

- **None.:**

LL_DMA_List_Init

Function name

uint32_t LL_DMA_List_Init (DMA_TypeDef * DMAx, uint32_t Channel, LL_DMA_InitLinkedListTypeDef * DMA_InitLinkedListStruct)

Function description

Initialize the DMA linked list according to the specified parameters in LL_DMA_InitLinkedListTypeDef.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11
- **DMA_InitLinkedListStruct:** pointer to a LL_DMA_InitLinkedListTypeDef structure.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS : DMA registers are initialized.
  - ERROR : Not applicable.

Notes

- This API is used for all available DMA channels.
- To convert DMAx_Channely Instance to DMAx Instance and Channely, use helper macros : LL_DMA_GET_INSTANCE LL_DMA_GET_CHANNEL

LL_DMA_List_DeInit

Function name

uint32_t LL_DMA_List_DeInit (DMA_TypeDef * DMAx, uint32_t Channel)

Function description

De-initialize the DMA linked list.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_DMA_CHANNEL_0
  - LL_DMA_CHANNEL_1
  - LL_DMA_CHANNEL_2
  - LL_DMA_CHANNEL_3
  - LL_DMA_CHANNEL_4
  - LL_DMA_CHANNEL_5
  - LL_DMA_CHANNEL_6
  - LL_DMA_CHANNEL_7
  - LL_DMA_CHANNEL_8
  - LL_DMA_CHANNEL_9
  - LL_DMA_CHANNEL_10
  - LL_DMA_CHANNEL_11

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS : DMA registers are de-initialized.
  - ERROR : DMA registers are not de-initialized.

Notes

- This API is used for all available DMA channels.
- To convert DMAx_Channely Instance to DMAx Instance and Channely, use helper macros : LL_DMA_GET_INSTANCE LL_DMA_GET_CHANNEL

LL_DMA_CreateLinkNode

Function name

uint32_t LL_DMA_CreateLinkNode (const LL_DMA_InitNodeTypeDef * DMA_InitNodeStruct, LL_DMA_LinkNodeTypeDef * pNode)

Function description

Initializes DMA linked list node according to the specified parameters in the DMA_InitNodeStruct.

Parameters

- **DMA_InitNodeStruct:** Pointer to a LL_DMA_InitNodeTypeDef structure that contains linked list node registers configurations.
- **pNode:** Pointer to linked list node to fill according to LL_DMA_LinkNodeTypeDef parameters.

Return values

- **None:**

LL_DMA_ConnectLinkNode

Function name

void LL_DMA_ConnectLinkNode (LL_DMA_LinkNodeTypeDef * pPrevLinkNode, uint32_t PrevNodeCLLRIdx, LL_DMA_LinkNodeTypeDef * pNewLinkNode, uint32_t NewNodeCLLRIdx)

Function description

Connect Linked list Nodes.

Parameters

- **pPrevLinkNode:** Pointer to previous linked list node to be connected to new Linked list node.
- **PrevNodeCLLRIdx:** Offset of Previous Node CLLR register. This parameter can be a value of CLLR offset.
- **pNewLinkNode:** Pointer to new Linked list.
- **NewNodeCLLRIdx:** Offset of New Node CLLR register. This parameter can be a value of CLLR offset.

Return values

- **None:**

LL_DMA_DisconnectNextLinkNode

Function name

void LL_DMA_DisconnectNextLinkNode (LL_DMA_LinkNodeTypeDef * pLinkNode, uint32_t LinkNodeCLLRIdx)

Function description

Disconnect the next linked list node.

Parameters

- **pLinkNode:** Pointer to linked list node to be disconnected from the next one.
- **LinkNodeCLLRIdx:** Offset of Link Node CLLR register.

Return values

- **None.:**

82.3 DMA Firmware driver defines

The following section lists the various define and macros of the module.

82.3.1 DMA

DMA

Block Hardware Request

LL_DMA_HWREQUEST_SINGLEBURST

Hardware request is driven by a peripheral with a hardware request/acknowledge protocol at a burst level

LL_DMA_HWREQUEST_BLK

Hardware request is driven by a peripheral with a hardware request/acknowledge protocol at a block level

Block Repeat Destination Address Update Mode

LL_DMA_BLKRPT_DEST_ADDR_INCREMENT

Destination address is incremented after each block transfer by destination update value

LL_DMA_BLKRPT_DEST_ADDR_DECREMENT

Destination address is decremented after each block transfer by destination update value

Block Repeat Source Address Update Mode

LL_DMA_BLKRPT_SRC_ADDR_INCREMENT

Source address pointer is incremented after each block transfer by source update value

LL_DMA_BLKRPT_SRC_ADDR_DECREMENT

Source address pointer is decremented after each block transfer by source update value

Channel

LL_DMA_CHANNEL_0

LL_DMA_CHANNEL_1

LL_DMA_CHANNEL_2

LL_DMA_CHANNEL_3

LL_DMA_CHANNEL_4

LL_DMA_CHANNEL_5

LL_DMA_CHANNEL_6

LL_DMA_CHANNEL_7

LL_DMA_CHANNEL_8

LL_DMA_CHANNEL_9

LL_DMA_CHANNEL_10

LL_DMA_CHANNEL_11

LL_DMA_CHANNEL_12

LL_DMA_CHANNEL_13

LL_DMA_CHANNEL_14

LL_DMA_CHANNEL_15

LL_DMA_CHANNEL_ALL

CLLR offset

LL_DMA_CLLR_OFFSET0

LL_DMA_CLLR_OFFSET1

LL_DMA_CLLR_OFFSET2

LL_DMA_CLLR_OFFSET3

LL_DMA_CLLR_OFFSET4

LL_DMA_CLLR_OFFSET5

LL_DMA_CLLR_OFFSET6

LL_DMA_CLLR_OFFSET7

Data Alignment

LL_DMA_DATA_ALIGN_ZEROPADD

If src data width < dest data width : => Right Aligned padded with 0 up to destination data width. If src data width > dest data width : => Right Aligned Left Truncated down to destination data width.

LL_DMA_DATA_ALIGN_SIGNEXTPADD

If src data width < dest data width : => Right Aligned padded with sign extended up to destination data width. If src data width > dest data width : => Left Aligned Right Truncated down to the destination data width

LL_DMA_DATA_PACK_UNPACK

If src data width < dest data width : => Packed at the destination data width If src data width > dest data width : => Unpacked at the destination data width

Destination Allocated Port

LL_DMA_DEST_ALLOCATED_PORT0

Destination Allocated Port 0

LL_DMA_DEST_ALLOCATED_PORT1

Destination Allocated Port 1

Destination Data Width

LL_DMA_DEST_DATAWIDTH_BYTE

Destination Data Width : Byte

LL_DMA_DEST_DATAWIDTH_HALFWORD

Destination Data Width : HalfWord

LL_DMA_DEST_DATAWIDTH_WORD

Destination Data Width : Word

Destination Increment Mode

LL_DMA_DEST_FIXED

Destination fixed single/burst

LL_DMA_DEST_INCREMENT

Destination incremented single/burst

Destination Security Attribute

LL_DMA_CHANNEL_DEST_NSEC

NSecure transfer from the destination

LL_DMA_CHANNEL_DEST_SEC

Secure transfer from the destination

Burst Destination Address Update Mode

LL_DMA_BURST_DEST_ADDR_INCREMENT

Destination address pointer is incremented after each burst transfer by destination update value

LL_DMA_BURST_DEST_ADDR_DECREMENT

Destination address pointer is decremented after each burst transfer by destination update value

Destination Byte Exchange

LL_DMA_DEST_BYTE_PRESERVE

No destination Byte exchange when destination data width > Byte

LL_DMA_DEST_BYTE_EXCHANGE

Destination Byte exchange when destination data width > Byte

Destination Half-Word Exchange

LL_DMA_DEST_HALFWORD_PRESERVE

No destination Half-Word exchange when destination data width is word

LL_DMA_DEST_HALFWORD_EXCHANGE

Destination Half-Word exchange when destination data width is word

Linked list node type

LL_DMA_GPDMA_LINEAR_NODE

GPDMA node : linear addressing node

LL_DMA_GPDMA_2D_NODE

GPDMA node : 2 dimension addressing node

Linked list register update

LL_DMA_UPDATE_CTR1

Update CTR1 register from memory : available for all DMA channels

LL_DMA_UPDATE_CTR2

Update CTR2 register from memory : available for all DMA channels

LL_DMA_UPDATE_CBR1

Update CBR1 register from memory : available for all DMA channels

LL_DMA_UPDATE_CSAR

Update CSAR register from memory : available for all DMA channels

LL_DMA_UPDATE_CDAR

Update CDAR register from memory : available for all DMA channels

LL_DMA_UPDATE_CTR3

Update CTR3 register from memory : available only for 2D addressing DMA channels

LL_DMA_UPDATE_CBR2

Update CBR2 register from memory : available only for 2D addressing DMA channels

LL_DMA_UPDATE_CLLR

Update CLLR register from memory : available for all DMA channels

Linked List Allocated Port

LL_DMA_LINK_ALLOCATED_PORT0

Linked List Allocated Port 0

LL_DMA_LINK_ALLOCATED_PORT1

Linked List Allocated Port 1

Link Step Mode

LL_DMA_LSM_FULL_EXECUTION

Channel execute the full linked list

LL_DMA_LSM_1LINK_EXECUTION

Channel execute one node of the linked list

Priority Level

LL_DMA_LOW_PRIORITY_LOW_WEIGHT

Priority level : Low Priority, Low Weight

LL_DMA_LOW_PRIORITY_MID_WEIGHT

Priority level : Low Priority, Mid Weight

LL_DMA_LOW_PRIORITY_HIGH_WEIGHT

Priority level : Low Priority, High Weight

LL_DMA_HIGH_PRIORITY

Priority level : High Priority

Request Selection

LL_GPDMA1_REQUEST_ADC1

GPDMA1 HW request is ADC1

LL_GPDMA1_REQUEST_ADC2

GPDMA1 HW request is ADC2

LL_GPDMA1_REQUEST_DAC1_CH1

GPDMA1 HW request is DAC1_CH1

LL_GPDMA1_REQUEST_DAC1_CH2

GPDMA1 HW request is DAC1_CH2

LL_GPDMA1_REQUEST_TIM6_UP

GPDMA1 HW request is TIM6_UP

LL_GPDMA1_REQUEST_TIM7_UP

GPDMA1 HW request is TIM7_UP

LL_GPDMA1_REQUEST_SPI1_RX

GPDMA1 HW request is SPI1_RX

LL_GPDMA1_REQUEST_SPI1_TX

GPDMA1 HW request is SPI1_TX

LL_GPDMA1_REQUEST_SPI2_RX

GPDMA1 HW request is SPI2_RX

LL_GPDMA1_REQUEST_SPI2_TX

GPDMA1 HW request is SPI2_TX

LL_GPDMA1_REQUEST_SPI3_RX

GPDMA1 HW request is SPI3_RX

LL_GPDMA1_REQUEST_SPI3_TX

GPDMA1 HW request is SPI3_TX

LL_GPDMA1_REQUEST_I2C1_RX

GPDMA1 HW request is I2C1_RX

LL_GPDMA1_REQUEST_I2C1_TX

GPDMA1 HW request is I2C1_TX

LL_GPDMA1_REQUEST_I2C1_EVC

GPDMA1 HW request is I2C1_EVC

LL_GPDMA1_REQUEST_I2C2_RX

GPDMA1 HW request is I2C2_RX

LL_GPDMA1_REQUEST_I2C2_TX

GPDMA1 HW request is I2C2_TX

LL_GPDMA1_REQUEST_I2C2_EVC

GPDMA1 HW request is I2C2_EVC

LL_GPDMA1_REQUEST_I2C3_RX

GPDMA1 HW request is I2C3_RX

LL_GPDMA1_REQUEST_I2C3_TX

GPDMA1 HW request is I2C3_TX

LL_GPDMA1_REQUEST_I2C3_EVC

GPDMA1 HW request is I2C3_EVC

LL_GPDMA1_REQUEST_USART1_RX

GPDMA1 HW request is USART1_RX

LL_GPDMA1_REQUEST_USART1_TX

GPDMA1 HW request is USART1_TX

LL_GPDMA1_REQUEST_USART3_RX

GPDMA1 HW request is USART3_RX

LL_GPDMA1_REQUEST_USART3_TX

GPDMA1 HW request is USART3_TX

LL_GPDMA1_REQUEST_UART4_RX

GPDMA1 HW request is UART4_RX

LL_GPDMA1_REQUEST_UART4_TX

GPDMA1 HW request is UART4_TX

LL_GPDMA1_REQUEST_UART5_RX

GPDMA1 HW request is UART5_RX

LL_GPDMA1_REQUEST_UART5_TX

GPDMA1 HW request is UART5_TX

LL_GPDMA1_REQUEST_LPUART1_RX

GPDMA1 HW request is LPUART1_RX

LL_GPDMA1_REQUEST_LPUART1_TX

GPDMA1 HW request is LPUART1_TX

LL_GPDMA1_REQUEST_SAI1_A

GPDMA1 HW request is SAI1_A

LL_GPDMA1_REQUEST_SAI1_B

GPDMA1 HW request is SAI1_B

LL_GPDMA1_REQUEST_OCTOSPI1

GPDMA1 HW request is OCTOSPI1

LL_GPDMA1_REQUEST_TIM1_CH1

GPDMA1 HW request is TIM1_CH1

LL_GPDMA1_REQUEST_TIM1_CH2

GPDMA1 HW request is TIM1_CH2

LL_GPDMA1_REQUEST_TIM1_CH3

GPDMA1 HW request is TIM1_CH3

LL_GPDMA1_REQUEST_TIM1_CH4

GPDMA1 HW request is TIM1_CH4

LL_GPDMA1_REQUEST_TIM1_UP

GPDMA1 HW request is TIM1_UP

LL_GPDMA1_REQUEST_TIM1_TRIG

GPDMA1 HW request is TIM1_TRIG

LL_GPDMA1_REQUEST_TIM1_COM

GPDMA1 HW request is TIM1_COM

LL_GPDMA1_REQUEST_I3C1_RX

GPDMA1 HW request is I3C1_RX

LL_GPDMA1_REQUEST_I3C1_TX

GPDMA1 HW request is I3C1_TX

LL_GPDMA1_REQUEST_I3C1_TC

GPDMA1 HW request is I3C1_TC

LL_GPDMA1_REQUEST_I3C1_RS

GPDMA1 HW request is I3C1_RS

LL_GPDMA1_REQUEST_TIM2_CH1

GPDMA1 HW request is TIM2_CH1

LL_GPDMA1_REQUEST_TIM2_CH2

GPDMA1 HW request is TIM2_CH2

LL_GPDMA1_REQUEST_TIM2_CH3

GPDMA1 HW request is TIM2_CH3

LL_GPDMA1_REQUEST_TIM2_CH4

GPDMA1 HW request is TIM2_CH4

LL_GPDMA1_REQUEST_TIM2_UP

GPDMA1 HW request is TIM2_UP

LL_GPDMA1_REQUEST_TIM3_CH1

GPDMA1 HW request is TIM3_CH1

LL_GPDMA1_REQUEST_TIM3_CH2

GPDMA1 HW request is TIM3_CH2

LL_GPDMA1_REQUEST_TIM3_CH3

GPDMA1 HW request is TIM3_CH3

LL_GPDMA1_REQUEST_TIM3_CH4

GPDMA1 HW request is TIM3_CH4

LL_GPDMA1_REQUEST_TIM3_UP

GPDMA1 HW request is TIM3_UP

LL_GPDMA1_REQUEST_TIM3_TRIG

GPDMA1 HW request is TIM3_TRIG

LL_GPDMA1_REQUEST_TIM4_CH1

GPDMA1 HW request is TIM4_CH1

LL_GPDMA1_REQUEST_TIM4_CH2

GPDMA1 HW request is TIM4_CH2

LL_GPDMA1_REQUEST_TIM4_CH3

GPDMA1 HW request is TIM4_CH3

LL_GPDMA1_REQUEST_TIM4_CH4

GPDMA1 HW request is TIM4_CH4

LL_GPDMA1_REQUEST_TIM4_UP

GPDMA1 HW request is TIM4_UP

LL_GPDMA1_REQUEST_I3C2_RX

GPDMA1 HW request is I3C2_RX

LL_GPDMA1_REQUEST_I3C2_TX

GPDMA1 HW request is I3C2_TX

LL_GPDMA1_REQUEST_I3C2_TC

GPDMA1 HW request is I3C2_TC

LL_GPDMA1_REQUEST_I3C2_RS

GPDMA1 HW request is I3C2_RS

LL_GPDMA1_REQUEST_TIM15_CH1

GPDMA1 HW request is TIM15_CH1

LL_GPDMA1_REQUEST_TIM15_UP

GPDMA1 HW request is TIM15_UP

LL_GPDMA1_REQUEST_TIM15_TRIG

GPDMA1 HW request is TIM15_TRIG

LL_GPDMA1_REQUEST_TIM15_COM

GPDMA1 HW request is TIM15_COM

LL_GPDMA1_REQUEST_TIM16_CH1

GPDMA1 HW request is TIM16_CH1

LL_GPDMA1_REQUEST_TIM16_UP

GPDMA1 HW request is TIM16_UP

LL_GPDMA1_REQUEST_TIM17_CH1

GPDMA1 HW request is TIM17_CH1

LL_GPDMA1_REQUEST_TIM17_UP

GPDMA1 HW request is TIM17_UP

LL_GPDMA1_REQUEST_AES_IN

GPDMA1 HW request is AES_IN

LL_GPDMA1_REQUEST_AES_OUT

GPDMA1 HW request is AES_OUT

LL_GPDMA1_REQUEST_HASH_IN

GPDMA1 HW request is HASH_IN

LL_GPDMA1_REQUEST_ADF1_FLT0

GPDMA1 HW request is ADF1_FLT0

LL_GPDMA1_REQUEST_SAES_IN

GPDMA1 HW request is SAES_IN

LL_GPDMA1_REQUEST_SAES_OUT

GPDMA1 HW request is SAES_OUT

LL_GPDMA1_REQUEST_LPTIM1_IC1

GPDMA1 HW request is LPTIM1_IC1

LL_GPDMA1_REQUEST_LPTIM1_IC2

GPDMA1 HW request is LPTIM1_IC2

LL_GPDMA1_REQUEST_LPTIM1_UE

GPDMA1 HW request is LPTIM1_UE

LL_GPDMA1_REQUEST_LPTIM2_IC1

GPDMA1 HW request is LPTIM2_IC1

LL_GPDMA1_REQUEST_LPTIM2_IC2

GPDMA1 HW request is LPTIM2_IC2

LL_GPDMA1_REQUEST_LPTIM2_UE

GPDMA1 HW request is LPTIM2_UE

LL_GPDMA1_REQUEST_LPTIM3_IC1

GPDMA1 HW request is LPTIM3_IC1

LL_GPDMA1_REQUEST_LPTIM3_IC2

GPDMA1 HW request is LPTIM3_IC2

LL_GPDMA1_REQUEST_LPTIM3_UE

GPDMA1 HW request is LPTIM3_UE

Source Allocated Port

LL_DMA_SRC_ALLOCATED_PORT0

Source Allocated Port 0

LL_DMA_SRC_ALLOCATED_PORT1

Source Allocated Port 1

Source Data Width

LL_DMA_SRC_DATAWIDTH_BYTE

Source Data Width : Byte

LL_DMA_SRC_DATAWIDTH_HALFWORD

Source Data Width : HalfWord

LL_DMA_SRC_DATAWIDTH_WORD

Source Data Width : Word

Source Increment Mode

LL_DMA_SRC_FIXED

Source fixed single/burst

LL_DMA_SRC_INCREMENT

Source incremented single/burst

Source Security Attribute

LL_DMA_CHANNEL_NSEC

NSecure channel

LL_DMA_CHANNEL_SEC

Secure channel

LL_DMA_CHANNEL_SRC_NSEC

NSecure transfer from the source

LL_DMA_CHANNEL_SRC_SEC

Secure transfer from the source

Burst Source Address Update Mode

LL_DMA_BURST_SRC_ADDR_INCREMENT

Source address pointer is incremented after each burst transfer by source update value

LL_DMA_BURST_SRC_ADDR_DECREMENT

Source address pointer is decremented after each burst transfer by source update value

Source Byte Exchange

LL_DMA_SRC_BYTE_PRESERVE

No source Byte exchange when source data width is word

LL_DMA_SRC_BYTE_EXCHANGE

Source Byte exchange when source data width is word

Transfer Direction

LL_DMA_DIRECTION_MEMORY_TO_MEMORY

Memory to memory direction

LL_DMA_DIRECTION_PERIPH_TO_MEMORY

Peripheral to memory direction

LL_DMA_DIRECTION_MEMORY_TO_PERIPH

Memory to peripheral direction

Transfer Event Mode

LL_DMA_TCEM_BLK_TRANSFER

The TC (and the HT) event is generated at the (respectively half) end of each block

LL_DMA_TCEM_RPT_BLK_TRANSFER

The TC (and the HT) event is generated at the (respectively half) end of the repeated block

LL_DMA_TCEM_EACH_LLITEM_TRANSFER

The TC (and the HT) event is generated at the (respectively half) end of each linked-list item

LL_DMA_TCEM_LAST_LLITEM_TRANSFER

The TC (and the HT) event is generated at the (respectively half) end of the last linked-list item

Transfer Trigger Mode

LL_DMA_TRIGM_BLK_TRANSFER

A block transfer is conditioned by (at least) one hit trigger

LL_DMA_TRIGM_RPT_BLK_TRANSFER

A repeated block transfer is conditioned by (at least) one hit trigger

LL_DMA_TRIGM_LLI_LINK_TRANSFER

A LLI link transfer is conditioned by (at least) one hit trigger

LL_DMA_TRIGM_SINGLBURST_TRANSFER

A Single/Burst transfer is conditioned by (at least) one hit trigger

Trigger Polarity

LL_DMA_TRIG_POLARITY_MASKED

No trigger of the selected DMA request. Masked trigger event

LL_DMA_TRIG_POLARITY_RISING

Trigger of the selected DMA request on the rising edge of the selected trigger event input

LL_DMA_TRIG_POLARITY_FALLING

Trigger of the selected DMA request on the falling edge of the selected trigger event input

Trigger Selection

LL_GPDMA1_TRIGGER_EXTI_LINE0

GPDMA1 HW Trigger signal is EXTI_LINE0

LL_GPDMA1_TRIGGER_EXTI_LINE1

GPDMA1 HW Trigger signal is EXTI_LINE1

LL_GPDMA1_TRIGGER_EXTI_LINE2

GPDMA1 HW Trigger signal is EXTI_LINE2

LL_GPDMA1_TRIGGER_EXTI_LINE3

GPDMA1 HW Trigger signal is EXTI_LINE3

LL_GPDMA1_TRIGGER_EXTI_LINE4

GPDMA1 HW Trigger signal is EXTI_LINE4

LL_GPDMA1_TRIGGER_EXTI_LINE5

GPDMA1 HW Trigger signal is EXTI_LINE5

LL_GPDMA1_TRIGGER_EXTI_LINE6

GPDMA1 HW Trigger signal is EXTI_LINE6

LL_GPDMA1_TRIGGER_EXTI_LINE7

GPDMA1 HW Trigger signal is EXTI_LINE7

LL_GPDMA1_TRIGGER_TAMP_TRG1

GPDMA1 HW Trigger signal is TAMP_TRG1

LL_GPDMA1_TRIGGER_TAMP_TRG2

GPDMA1 HW Trigger signal is TAMP_TRG2

LL_GPDMA1_TRIGGER_TAMP_TRG3

GPDMA1 HW Trigger signal is TAMP_TRG3

LL_GPDMA1_TRIGGER_LPTIM1_CH1

GPDMA1 HW Trigger signal is LPTIM1_CH1

LL_GPDMA1_TRIGGER_LPTIM1_CH2

GPDMA1 HW Trigger signal is LPTIM1_CH2

LL_GPDMA1_TRIGGER_LPTIM2_CH1

GPDMA1 HW Trigger signal is LPTIM2_CH1

LL_GPDMA1_TRIGGER_LPTIM2_CH2

GPDMA1 HW Trigger signal is LPTIM2_CH2

LL_GPDMA1_TRIGGER_LPTIM4_OUT

GPDMA1 HW Trigger signal is LPTIM4_OUT

LL_GPDMA1_TRIGGER_COMP1_OUT

GPDMA1 HW Trigger signal is COMP1_OUT

LL_GPDMA1_TRIGGER_COMP2_OUT

GPDMA1 HW Trigger signal is COMP2_OUT

LL_GPDMA1_TRIGGER_RTC_ALRA_TRG

GPDMA1 HW Trigger signal is RTC_ALRA_TRG

LL_GPDMA1_TRIGGER_RTC_ALRB_TRG

GPDMA1 HW Trigger signal is RTC_ALRB_TRG

LL_GPDMA1_TRIGGER_RTC_WUT_TRG

GPDMA1 HW Trigger signal is RTC_WUT_TRG

LL_GPDMA1_TRIGGER_GPDMA1_CH0_TCF

GPDMA1 HW Trigger signal is GPDMA1_CH0_TCF

LL_GPDMA1_TRIGGER_GPDMA1_CH1_TCF

GPDMA1 HW Trigger signal is GPDMA1_CH1_TCF

LL_GPDMA1_TRIGGER_GPDMA1_CH2_TCF

GPDMA1 HW Trigger signal is GPDMA1_CH2_TCF

LL_GPDMA1_TRIGGER_GPDMA1_CH3_TCF

GPDMA1 HW Trigger signal is GPDMA1_CH3_TCF

LL_GPDMA1_TRIGGER_GPDMA1_CH4_TCF

GPDMA1 HW Trigger signal is GPDMA1_CH4_TCF

LL_GPDMA1_TRIGGER_GPDMA1_CH5_TCF

GPDMA1 HW Trigger signal is GPDMA1_CH5_TCF

LL_GPDMA1_TRIGGER_GPDMA1_CH6_TCF

GPDMA1 HW Trigger signal is GPDMA1_CH6_TCF

LL_GPDMA1_TRIGGER_GPDMA1_CH7_TCF

GPDMA1 HW Trigger signal is GPDMA1_CH7_TCF

LL_GPDMA1_TRIGGER_GPDMA1_CH8_TCF

GPDMA1 HW Trigger signal is GPDMA1_CH8_TCF

LL_GPDMA1_TRIGGER_GPDMA1_CH9_TCF

GPDMA1 HW Trigger signal is GPDMA1_CH9_TCF

LL_GPDMA1_TRIGGER_GPDMA1_CH10_TCF

GPDMA1 HW Trigger signal is GPDMA1_CH10_TCF

LL_GPDMA1_TRIGGER_GPDMA1_CH11_TCF

GPDMA1 HW Trigger signal is GPDMA1_CH11_TCF

LL_GPDMA1_TRIGGER_TIM2_TRGO

GPDMA1 HW Trigger signal is TIM2_TRGO

LL_GPDMA1_TRIGGER_TIM15_TRGO

GPDMA1 HW Trigger signal is TIM15_TRGO

LL_GPDMA1_TRIGGER_ADC2_AWD1

GPDMA1 HW Trigger signal is ADC2_AWD1

LL_GPDMA1_TRIGGER_ADC1_AWD1

GPDMA1 HW Trigger signal is ADC1_AWD1

Common Write and Read Registers macros

LL_DMA_WriteReg

Description:

- Write a value in DMA register.

Parameters:

- __INSTANCE__: DMA Instance.
- __REG__: Register to be written.
- __VALUE__: Value to be written in the register.

Return value:

- None.

LL_DMA_ReadReg

Description:

- Read a value in DMA register.

Parameters:

- __INSTANCE__: DMA Instance.
- __REG__: Register to be read.

Return value:

- Register: value.

Convert DMAxChannely

LL_DMA_GET_INSTANCE

Description:

- Convert DMAx_Channely into DMAx.

Parameters:

- __CHANNEL_INSTANCE__: DMAx_Channely.

Return value:

- DMAx.

LL_DMA_GET_CHANNEL

Description:

- Convert DMAx_Channely into LL_DMA_CHANNEL_y.

Parameters:

- __CHANNEL_INSTANCE__: DMAx_Channely.

Return value:

- LL_DMA_CHANNEL_y.

LL_DMA_GET_CHANNEL_INSTANCE

Description:

- Convert DMA Instance DMAx and LL_DMA_CHANNEL_y into DMAx_Channely.

Parameters:

- __DMA_INSTANCE__: DMAx.
- __CHANNEL__: LL_DMA_CHANNEL_y.

Return value:

- DMAx_Channely.

Transfer Mode

LL_DMA_NORMAL

Normal DMA transfer

LL_DMA_PFCTRL

HW request peripheral flow control mode

83 LL EXTI Generic Driver

83.1 EXTI Firmware driver registers structures

83.1.1 LL_EXTI_InitTypeDef

LL_EXTI_InitTypeDef is defined in the stm32u3xx_ll_exti.h

Data Fields

- ***uint32_t Line_0_31***
- ***FunctionalState LineCommand***
- ***uint8_t Mode***
- ***uint8_t Trigger***

Field Documentation

- ***uint32_t LL_EXTI_InitTypeDef::Line_0_31***
  Specifies the EXTI lines to be enabled or disabled for Lines in range 0 to 31 This parameter can be any combination of ***EXTI_LL_EC_LINE***
- ***FunctionalState LL_EXTI_InitTypeDef::LineCommand***
  Specifies the new state of the selected EXTI lines. This parameter can be set either to ENABLE or DISABLE
- ***uint8_t LL_EXTI_InitTypeDef::Mode***
  Specifies the mode for the EXTI lines. This parameter can be a value of ***EXTI_LL_EC_MODE***.
- ***uint8_t LL_EXTI_InitTypeDef::Trigger***
  Specifies the trigger signal active edge for the EXTI lines. This parameter can be a value of ***EXTI_LL_EC_TRIGGER***.

83.2 EXTI Firmware driver API description

The following section lists the various functions of the EXTI library.

83.2.1 Detailed description of functions

LL_EXTI_EnableIT_0_31

Function name

__STATIC_INLINE void LL_EXTI_EnableIT_0_31 (uint32_t ExtiLine)

Function description

Enable ExtiLine Interrupt request for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be one of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7
  - LL_EXTI_LINE_8
  - LL_EXTI_LINE_9
  - LL_EXTI_LINE_10
  - LL_EXTI_LINE_11
  - LL_EXTI_LINE_12
  - LL_EXTI_LINE_13
  - LL_EXTI_LINE_14
  - LL_EXTI_LINE_15
  - LL_EXTI_LINE_16
  - LL_EXTI_LINE_17
  - LL_EXTI_LINE_18
  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21
  - LL_EXTI_LINE_22
  - LL_EXTI_LINE_ALL_0_31

Return values

- **None:**

Notes

- The reset value for the direct or internal lines (see RM) is set to 1 in order to enable the interrupt by default. Bits are set automatically at Power on.
- Please check each device line mapping for EXTI Line availability

Reference Manual to LL API cross reference:

- IMR1 IMx LL_EXTI_EnableIT_0_31

LL_EXTI_DisableIT_0_31

Function name

__STATIC_INLINE void LL_EXTI_DisableIT_0_31 (uint32_t ExtiLine)

Function description

Disable ExtiLine Interrupt request for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be one of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7
  - LL_EXTI_LINE_8
  - LL_EXTI_LINE_9
  - LL_EXTI_LINE_10
  - LL_EXTI_LINE_11
  - LL_EXTI_LINE_12
  - LL_EXTI_LINE_13
  - LL_EXTI_LINE_14
  - LL_EXTI_LINE_15
  - LL_EXTI_LINE_16
  - LL_EXTI_LINE_17
  - LL_EXTI_LINE_18
  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21
  - LL_EXTI_LINE_22
  - LL_EXTI_LINE_ALL_0_31

Return values

- **None:**

Notes

- The reset value for the direct or internal lines (see RM) is set to 1 in order to enable the interrupt by default. Bits are set automatically at Power on.
- Please check each device line mapping for EXTI Line availability

Reference Manual to LL API cross reference:

- IMR1 IMx LL_EXTI_DisableIT_0_31

LL_EXTI_IsEnabledIT_0_31

Function name

__STATIC_INLINE uint32_t LL_EXTI_IsEnabledIT_0_31 (uint32_t ExtiLine)

Function description

Indicate if ExtiLine Interrupt request is enabled for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be one of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7
  - LL_EXTI_LINE_8
  - LL_EXTI_LINE_9
  - LL_EXTI_LINE_10
  - LL_EXTI_LINE_11
  - LL_EXTI_LINE_12
  - LL_EXTI_LINE_13
  - LL_EXTI_LINE_14
  - LL_EXTI_LINE_15
  - LL_EXTI_LINE_16
  - LL_EXTI_LINE_17
  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21
  - LL_EXTI_LINE_22
  - LL_EXTI_LINE_ALL_0_31

Return values

- **State:** of bit (1 or 0).

Notes

- The reset value for the direct or internal lines (see RM) is set to 1 in order to enable the interrupt by default. Bits are set automatically at Power on.
- Please check each device line mapping for EXTI Line availability

Reference Manual to LL API cross reference:

- IMR1 IMx LL_EXTI_IsEnabledIT_0_31

LL_EXTI_EnableEvent_0_31

Function name

__STATIC_INLINE void LL_EXTI_EnableEvent_0_31 (uint32_t ExtiLine)

Function description

Enable ExtiLine Event request for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be one of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7
  - LL_EXTI_LINE_8
  - LL_EXTI_LINE_9
  - LL_EXTI_LINE_10
  - LL_EXTI_LINE_11
  - LL_EXTI_LINE_12
  - LL_EXTI_LINE_13
  - LL_EXTI_LINE_14
  - LL_EXTI_LINE_15
  - LL_EXTI_LINE_16
  - LL_EXTI_LINE_17
  - LL_EXTI_LINE_18
  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21
  - LL_EXTI_LINE_22
  - LL_EXTI_LINE_ALL_0_31

Return values

- **None:**

Notes

- Please check each device line mapping for EXTI Line availability

Reference Manual to LL API cross reference:

- EMR1 EMx LL_EXTI_EnableEvent_0_31

LL_EXTI_DisableEvent_0_31

Function name

__STATIC_INLINE void LL_EXTI_DisableEvent_0_31 (uint32_t ExtiLine)

Function description

Disable ExtiLine Event request for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be one of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7
  - LL_EXTI_LINE_8
  - LL_EXTI_LINE_9
  - LL_EXTI_LINE_10
  - LL_EXTI_LINE_11
  - LL_EXTI_LINE_12
  - LL_EXTI_LINE_13
  - LL_EXTI_LINE_14
  - LL_EXTI_LINE_15
  - LL_EXTI_LINE_16
  - LL_EXTI_LINE_17
  - LL_EXTI_LINE_18
  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21
  - LL_EXTI_LINE_22
  - LL_EXTI_LINE_ALL_0_31

Return values

- **None:**

Notes

- Please check each device line mapping for EXTI Line availability

Reference Manual to LL API cross reference:

- EMR1 EMx LL_EXTI_DisableEvent_0_31

LL_EXTI_IsEnabledEvent_0_31

Function name

__STATIC_INLINE uint32_t LL_EXTI_IsEnabledEvent_0_31 (uint32_t ExtiLine)

Function description

Indicate if ExtiLine Event request is enabled for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be one of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7
  - LL_EXTI_LINE_8
  - LL_EXTI_LINE_9
  - LL_EXTI_LINE_10
  - LL_EXTI_LINE_11
  - LL_EXTI_LINE_12
  - LL_EXTI_LINE_13
  - LL_EXTI_LINE_14
  - LL_EXTI_LINE_15
  - LL_EXTI_LINE_16
  - LL_EXTI_LINE_17
  - LL_EXTI_LINE_18
  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21
  - LL_EXTI_LINE_22
  - LL_EXTI_LINE_ALL_0_31

Return values

- **State:** of bit (1 or 0).

Notes

- Please check each device line mapping for EXTI Line availability

Reference Manual to LL API cross reference:

- EMR1 EMx LL_EXTI_IsEnabledEvent_0_31

LL_EXTI_EnableRisingTrig_0_31

Function name

__STATIC_INLINE void LL_EXTI_EnableRisingTrig_0_31 (uint32_t ExtiLine)

Function description

Enable ExtiLine Rising Edge Trigger for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be a combination of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7
  - LL_EXTI_LINE_8
  - LL_EXTI_LINE_9
  - LL_EXTI_LINE_10
  - LL_EXTI_LINE_11
  - LL_EXTI_LINE_12
  - LL_EXTI_LINE_13
  - LL_EXTI_LINE_14
  - LL_EXTI_LINE_15
  - LL_EXTI_LINE_16
  - LL_EXTI_LINE_17
  - LL_EXTI_LINE_18
  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21
  - LL_EXTI_LINE_22

Return values

- **None:**

Notes

- The configurable wakeup lines are edge-triggered. No glitch must be generated on these lines. If a rising edge on a configurable interrupt line occurs during a write operation in the EXTI_RTSR register, the pending bit is not set. Rising and falling edge triggers can be set for the same interrupt line. In this case, both generate a trigger condition.
- Please check each device line mapping for EXTI Line availability

Reference Manual to LL API cross reference:

- RTSR1 RTx LL_EXTI_EnableRisingTrig_0_31

LL_EXTI_DisableRisingTrig_0_31

Function name

__STATIC_INLINE void LL_EXTI_DisableRisingTrig_0_31 (uint32_t ExtiLine)

Function description

Disable ExtiLine Rising Edge Trigger for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be a combination of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7
  - LL_EXTI_LINE_8
  - LL_EXTI_LINE_9
  - LL_EXTI_LINE_10
  - LL_EXTI_LINE_11
  - LL_EXTI_LINE_12
  - LL_EXTI_LINE_13
  - LL_EXTI_LINE_14
  - LL_EXTI_LINE_15
  - LL_EXTI_LINE_16
  - LL_EXTI_LINE_17
  - LL_EXTI_LINE_18
  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21
  - LL_EXTI_LINE_22

Return values

- **None:**

Notes

- The configurable wakeup lines are edge-triggered. No glitch must be generated on these lines. If a rising edge on a configurable interrupt line occurs during a write operation in the EXTI_RTSR register, the pending bit is not set. Rising and falling edge triggers can be set for the same interrupt line. In this case, both generate a trigger condition.
- Please check each device line mapping for EXTI Line availability

Reference Manual to LL API cross reference:

- RTSR1 RTx LL_EXTI_DisableRisingTrig_0_31

LL_EXTI_IsEnabledRisingTrig_0_31

Function name

__STATIC_INLINE uint32_t LL_EXTI_IsEnabledRisingTrig_0_31 (uint32_t ExtiLine)

Function description

Check if rising edge trigger is enabled for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be a combination of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7
  - LL_EXTI_LINE_8
  - LL_EXTI_LINE_9
  - LL_EXTI_LINE_10
  - LL_EXTI_LINE_11
  - LL_EXTI_LINE_12
  - LL_EXTI_LINE_13
  - LL_EXTI_LINE_14
  - LL_EXTI_LINE_15
  - LL_EXTI_LINE_16
  - LL_EXTI_LINE_17
  - LL_EXTI_LINE_18
  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21
  - LL_EXTI_LINE_22

Return values

- **State:** of bit (1 or 0).

Notes

- Please check each device line mapping for EXTI Line availability

Reference Manual to LL API cross reference:

- RTSR1 RTx LL_EXTI_IsEnabledRisingTrig_0_31

LL_EXTI_EnableFallingTrig_0_31

Function name

__STATIC_INLINE void LL_EXTI_EnableFallingTrig_0_31 (uint32_t ExtiLine)

Function description

Enable ExtiLine Falling Edge Trigger for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be a combination of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7
  - LL_EXTI_LINE_8
  - LL_EXTI_LINE_9
  - LL_EXTI_LINE_10
  - LL_EXTI_LINE_11
  - LL_EXTI_LINE_12
  - LL_EXTI_LINE_13
  - LL_EXTI_LINE_14
  - LL_EXTI_LINE_15
  - LL_EXTI_LINE_16
  - LL_EXTI_LINE_17
  - LL_EXTI_LINE_18
  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21
  - LL_EXTI_LINE_22

Return values

- **None:**

Notes

- The configurable wakeup lines are edge-triggered. No glitch must be generated on these lines. If a falling edge on a configurable interrupt line occurs during a write operation in the EXTI_FTSR register, the pending bit is not set. Rising and falling edge triggers can be set for the same interrupt line. In this case, both generate a trigger condition.
- Please check each device line mapping for EXTI Line availability

Reference Manual to LL API cross reference:

- FTSR1 FTx LL_EXTI_EnableFallingTrig_0_31

LL_EXTI_DisableFallingTrig_0_31

Function name

__STATIC_INLINE void LL_EXTI_DisableFallingTrig_0_31 (uint32_t ExtiLine)

Function description

Disable ExtiLine Falling Edge Trigger for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be a combination of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7
  - LL_EXTI_LINE_8
  - LL_EXTI_LINE_9
  - LL_EXTI_LINE_10
  - LL_EXTI_LINE_11
  - LL_EXTI_LINE_12
  - LL_EXTI_LINE_13
  - LL_EXTI_LINE_14
  - LL_EXTI_LINE_15
  - LL_EXTI_LINE_16
  - LL_EXTI_LINE_17
  - LL_EXTI_LINE_18
  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21
  - LL_EXTI_LINE_22

Return values

- **None:**

Notes

- The configurable wakeup lines are edge-triggered. No glitch must be generated on these lines. If a Falling edge on a configurable interrupt line occurs during a write operation in the EXTI_FTSR register, the pending bit is not set. Rising and falling edge triggers can be set for the same interrupt line. In this case, both generate a trigger condition.
- Please check each device line mapping for EXTI Line availability

Reference Manual to LL API cross reference:

- FTSR1 FTx LL_EXTI_DisableFallingTrig_0_31

LL_EXTI_IsEnabledFallingTrig_0_31

Function name

__STATIC_INLINE uint32_t LL_EXTI_IsEnabledFallingTrig_0_31 (uint32_t ExtiLine)

Function description

Check if falling edge trigger is enabled for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be a combination of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7
  - LL_EXTI_LINE_8
  - LL_EXTI_LINE_9
  - LL_EXTI_LINE_10
  - LL_EXTI_LINE_11
  - LL_EXTI_LINE_12
  - LL_EXTI_LINE_13
  - LL_EXTI_LINE_14
  - LL_EXTI_LINE_15
  - LL_EXTI_LINE_16
  - LL_EXTI_LINE_17
  - LL_EXTI_LINE_18
  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21
  - LL_EXTI_LINE_22

Return values

- **State:** of bit (1 or 0).

Notes

- Please check each device line mapping for EXTI Line availability

Reference Manual to LL API cross reference:

- FTSR1 FTx LL_EXTI_IsEnabledFallingTrig_0_31

LL_EXTI_GenerateSWI_0_31

Function name

__STATIC_INLINE void LL_EXTI_GenerateSWI_0_31 (uint32_t ExtiLine)

Function description

Generate a software Interrupt Event for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be a combination of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7
  - LL_EXTI_LINE_8
  - LL_EXTI_LINE_9
  - LL_EXTI_LINE_10
  - LL_EXTI_LINE_11
  - LL_EXTI_LINE_12
  - LL_EXTI_LINE_13
  - LL_EXTI_LINE_14
  - LL_EXTI_LINE_15
  - LL_EXTI_LINE_16
  - LL_EXTI_LINE_17
  - LL_EXTI_LINE_18
  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21
  - LL_EXTI_LINE_22

Return values

- **None:**

Notes

- If the interrupt is enabled on this line in the EXTI_IMR, writing a 1 to this bit when it is at '0' sets the corresponding pending bit in EXTI_PR resulting in an interrupt request generation. This bit is cleared by clearing the corresponding bit in the EXTI_PR register (by writing a 1 into the bit)
- Please check each device line mapping for EXTI Line availability

Reference Manual to LL API cross reference:

- SWIER1 SWIx LL_EXTI_GenerateSWI_0_31

LL_EXTI_IsActiveFallingFlag_0_31

Function name

__STATIC_INLINE uint32_t LL_EXTI_IsActiveFallingFlag_0_31 (uint32_t ExtiLine)

Function description

Check if the ExtLine Falling Flag is set or not for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be a combination of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4

  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21
  - LL_EXTI_LINE_22

Return values

- **State:** of bit (1 or 0).

Notes

- This bit is set when the falling edge event arrives on the interrupt line. This bit is cleared by writing a 1 to the bit.
- Please check each device line mapping for EXTI Line availability

Reference Manual to LL API cross reference:

- FPR1 FPIFx LL_EXTI_IsActiveFallingFlag_0_31

LL_EXTI_ReadFallingFlag_0_31

Function name

__STATIC_INLINE uint32_t LL_EXTI_ReadFallingFlag_0_31 (uint32_t ExtiLine)

Function description

Read ExtLine Combination Falling Flag for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be a combination of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7
  - LL_EXTI_LINE_8
  - LL_EXTI_LINE_9
  - LL_EXTI_LINE_10
  - LL_EXTI_LINE_11
  - LL_EXTI_LINE_12
  - LL_EXTI_LINE_13
  - LL_EXTI_LINE_14
  - LL_EXTI_LINE_15
  - LL_EXTI_LINE_16

  - LL_EXTI_LINE_18
  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21
  - LL_EXTI_LINE_22

Return values

- **@note:** This bit is set when the selected edge event arrives on the interrupt

Notes

- This bit is set when the falling edge event arrives on the interrupt line. This bit is cleared by writing a 1 to the bit.
- Please check each device line mapping for EXTI Line availability

Reference Manual to LL API cross reference:

- FPR1 FPIFx LL_EXTI_ReadFallingFlag_0_31

LL_EXTI_ClearFallingFlag_0_31

Function name

__STATIC_INLINE void LL_EXTI_ClearFallingFlag_0_31 (uint32_t ExtiLine)

Function description

Clear ExtLine Falling Flags for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be a combination of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7
  - LL_EXTI_LINE_8
  - LL_EXTI_LINE_9
  - LL_EXTI_LINE_10
  - LL_EXTI_LINE_11
  - LL_EXTI_LINE_12
  - LL_EXTI_LINE_13
  - LL_EXTI_LINE_14
  - LL_EXTI_LINE_15
  - LL_EXTI_LINE_16
  - LL_EXTI_LINE_17
  - LL_EXTI_LINE_18
  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21
  - LL_EXTI_LINE_22

Return values

- **None:**

Notes

- This bit is set when the falling edge event arrives on the interrupt line. This bit is cleared by writing a 1 to the bit.
- Please check each device line mapping for EXTI Line availability

Reference Manual to LL API cross reference:

- FPR1 FPIFx LL_EXTI_ClearFallingFlag_0_31

LL_EXTI_IsActiveRisingFlag_0_31

Function name

__STATIC_INLINE uint32_t LL_EXTI_IsActiveRisingFlag_0_31 (uint32_t ExtiLine)

Function description

Check if the ExtLine Rising Flag is set or not for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be a combination of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7
  - LL_EXTI_LINE_8
  - LL_EXTI_LINE_9
  - LL_EXTI_LINE_10
  - LL_EXTI_LINE_11
  - LL_EXTI_LINE_12
  - LL_EXTI_LINE_13
  - LL_EXTI_LINE_14
  - LL_EXTI_LINE_15
  - LL_EXTI_LINE_16
  - LL_EXTI_LINE_17
  - LL_EXTI_LINE_18
  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21
  - LL_EXTI_LINE_22

Return values

- **State:** of bit (1 or 0).

Notes

- This bit is set when the Rising edge event arrives on the interrupt line. This bit is cleared by writing a 1 to the bit.
- Please check each device line mapping for EXTI Line availability

Reference Manual to LL API cross reference:

- RPR1 RPIFx LL_EXTI_IsActiveRisingFlag_0_31

LL_EXTI_ReadRisingFlag_0_31

Function name

__STATIC_INLINE uint32_t LL_EXTI_ReadRisingFlag_0_31 (uint32_t ExtiLine)

Function description

Read ExtLine Combination Rising Flag for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be a combination of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7
  - LL_EXTI_LINE_8
  - LL_EXTI_LINE_9
  - LL_EXTI_LINE_10
  - LL_EXTI_LINE_11
  - LL_EXTI_LINE_12
  - LL_EXTI_LINE_13
  - LL_EXTI_LINE_14
  - LL_EXTI_LINE_15
  - LL_EXTI_LINE_16
  - LL_EXTI_LINE_17
  - LL_EXTI_LINE_18
  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21
  - LL_EXTI_LINE_22

Return values

- **@note:** This bit is set when the selected edge event arrives on the interrupt

Notes

- This bit is set when the Rising edge event arrives on the interrupt line. This bit is cleared by writing a 1 to the bit.
- Please check each device line mapping for EXTI Line availability

Reference Manual to LL API cross reference:

- RPR1 RPIFx LL_EXTI_ReadRisingFlag_0_31

LL_EXTI_ClearRisingFlag_0_31

Function name

__STATIC_INLINE void LL_EXTI_ClearRisingFlag_0_31 (uint32_t ExtiLine)

Function description

Clear ExtLine Rising Flags for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be a combination of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7
  - LL_EXTI_LINE_8
  - LL_EXTI_LINE_9
  - LL_EXTI_LINE_10
  - LL_EXTI_LINE_11
  - LL_EXTI_LINE_12
  - LL_EXTI_LINE_13
  - LL_EXTI_LINE_14
  - LL_EXTI_LINE_15
  - LL_EXTI_LINE_16
  - LL_EXTI_LINE_17
  - LL_EXTI_LINE_18
  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21
  - LL_EXTI_LINE_22

Return values

- **None:**

Notes

- This bit is set when the Rising edge event arrives on the interrupt line. This bit is cleared by writing a 1 to the bit.
- Please check each device line mapping for EXTI Line availability

Reference Manual to LL API cross reference:

LL_EXTI_SetEXTISource

Function name

__STATIC_INLINE void LL_EXTI_SetEXTISource (uint32_t Port, uint32_t Line)

Function description

Configure source input for the EXTI external interrupt.

Parameters

- **Port:** This parameter can be one of the following values:
  - LL_EXTI_CONFIG_PORTA
  - LL_EXTI_CONFIG_PORTB
  - LL_EXTI_CONFIG_PORTC
  - LL_EXTI_CONFIG_PORTH

  (*) value not defined in all devices
- **Line:** This parameter can be one of the following values:
  - LL_EXTI_CONFIG_LINE0
  - LL_EXTI_CONFIG_LINE1
  - LL_EXTI_CONFIG_LINE2
  - LL_EXTI_CONFIG_LINE3
  - LL_EXTI_CONFIG_LINE4
  - LL_EXTI_CONFIG_LINE5
  - LL_EXTI_CONFIG_LINE6
  - LL_EXTI_CONFIG_LINE7
  - LL_EXTI_CONFIG_LINE8
  - LL_EXTI_CONFIG_LINE9
  - LL_EXTI_CONFIG_LINE10
  - LL_EXTI_CONFIG_LINE11
  - LL_EXTI_CONFIG_LINE12
  - LL_EXTI_CONFIG_LINE13
  - LL_EXTI_CONFIG_LINE14
  - LL_EXTI_CONFIG_LINE15

Return values

- **None:**

LL_EXTI_GetEXTISource

Function name

__STATIC_INLINE uint32_t LL_EXTI_GetEXTISource (uint32_t Line)

Function description

Get the configured defined for specific EXTI Line.

Parameters

- **Line:** This parameter can be one of the following values:
  - LL_EXTI_CONFIG_LINE0
  - LL_EXTI_CONFIG_LINE1
  - LL_EXTI_CONFIG_LINE2
  - LL_EXTI_CONFIG_LINE3
  - LL_EXTI_CONFIG_LINE4
  - LL_EXTI_CONFIG_LINE5
  - LL_EXTI_CONFIG_LINE6
  - LL_EXTI_CONFIG_LINE7
  - LL_EXTI_CONFIG_LINE8

LL_EXTI_EnableSecure_0_31

Function name

__STATIC_INLINE void LL_EXTI_EnableSecure_0_31 (uint32_t ExtiLine)

Function description

Enable ExtiLine Secure attribute for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be one of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7
  - LL_EXTI_LINE_8

Reference Manual to LL API cross reference:

- PRIVCFGR1 PRIVx LL_EXTI_IsEnabledPrivilege_0_31

LL_EXTI_LockAttributes

Function name

__STATIC_INLINE void LL_EXTI_LockAttributes (void)

Function description

Lock the secure and privilege configuration registers.

Return values

- **None:**

Reference Manual to LL API cross reference:

- LOCKR LOCK LL_EXTI_LockAttributes

LL_EXTI_GetLockAttributes

Function name

__STATIC_INLINE uint32_t LL_EXTI_GetLockAttributes (void)

Function description

Return the secure and privilege configuration registers LOCK status.

Return values

- **1:** if the secure and privilege configuration registers have been locked else 0.

Reference Manual to LL API cross reference:

- LOCKR LOCK LL_EXTI_GetLockAttributes

LL_EXTI_Init

Function name

ErrorStatus LL_EXTI_Init (LL_EXTI_InitTypeDef * EXTI_InitStruct)

Function description

Initialize the EXTI registers according to the specified parameters in EXTI_InitStruct.

Parameters

- **EXTI_InitStruct:** pointer to a LL_EXTI_InitTypeDef structure.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: EXTI registers are initialized
  - ERROR: not applicable

LL_EXTI_DeInit

Function name

ErrorStatus LL_EXTI_DeInit (void)

Function description

De-initialize the EXTI registers to their default reset values.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: EXTI registers are de-initialized
  - ERROR: not applicable

LL_EXTI_StructInit

Function name

void LL_EXTI_StructInit (LL_EXTI_InitTypeDef * EXTI_InitStruct)

Function description

Set each LL_EXTI_InitTypeDef field to default value.

Parameters

- **EXTI_InitStruct:** Pointer to a LL_EXTI_InitTypeDef structure.

Return values

- **None:**

Description:

- Write a value in EXTI register.

Parameters:

- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_EXTI_ReadReg

Description:

- Read a value in EXTI register.

Parameters:

- __REG__: Register to be read

Return value:

- Register: value

84 LL GPIO Generic Driver

84.1 GPIO Firmware driver registers structures

84.1.1 LL_GPIO_InitTypeDef

LL_GPIO_InitTypeDef is defined in the stm32u3xx_ll_gpio.h

Data Fields

- ***uint32_t Pin***
- ***uint32_t Mode***
- ***uint32_t Speed***
- ***uint32_t OutputType***
- ***uint32_t Pull***
- ***uint32_t Alternate***

Field Documentation

- ***uint32_t LL_GPIO_InitTypeDef::Pin***
  Specifies the GPIO pins to be configured. This parameter can be any value of ***GPIO_LL_EC_PIN***
- ***uint32_t LL_GPIO_InitTypeDef::Mode***
  Specifies the operating mode for the selected pins. This parameter can be a value of ***GPIO_LL_EC_MODE***.GPIO HW configuration can be modified afterwards using unitary function **LL_GPIO_SetPinMode()**.
- ***uint32_t LL_GPIO_InitTypeDef::Speed***
  Specifies the speed for the selected pins. This parameter can be a value of ***GPIO_LL_EC_SPEED***.GPIO HW configuration can be modified afterwards using unitary function **LL_GPIO_SetPinSpeed()**.
- ***uint32_t LL_GPIO_InitTypeDef::OutputType***
  Specifies the operating output type for the selected pins. This parameter can be a value of ***GPIO_LL_EC_OUTPUT***.GPIO HW configuration can be modified afterwards using unitary function **LL_GPIO_SetPinOutputType()**.
- ***uint32_t LL_GPIO_InitTypeDef::Pull***
  Specifies the operating Pull-up/Pull down for the selected pins. This parameter can be a value of ***GPIO_LL_EC_PULL***.GPIO HW configuration can be modified afterwards using unitary function **LL_GPIO_SetPinPull()**.
- ***uint32_t LL_GPIO_InitTypeDef::Alternate***
  Specifies the Peripheral to be connected to the selected pins. This parameter can be a value of ***GPIO_LL_EC_AF***.GPIO HW configuration can be modified afterwards using unitary function **LL_GPIO_SetAFPin_0_7()** and **LL_GPIO_SetAFPin_8_15()**.

84.2 GPIO Firmware driver API description

The following section lists the various functions of the GPIO library.

84.2.1 Detailed description of functions

LL_GPIO_SetPinMode

Function name

__STATIC_INLINE void LL_GPIO_SetPinMode (GPIO_TypeDef * GPIOx, uint32_t Pin, uint32_t Mode)

Function description

Configure gpio mode for a dedicated pin on dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **Pin:** This parameter can be one of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
- **Mode:** This parameter can be one of the following values:
  - LL_GPIO_MODE_INPUT
  - LL_GPIO_MODE_OUTPUT
  - LL_GPIO_MODE_ALTERNATE
  - LL_GPIO_MODE_ANALOG

Return values

- **None:**

Notes

- I/O mode can be Input mode, General purpose output, Alternate function mode or Analog.
- Warning: only one pin can be passed as parameter.

Reference Manual to LL API cross reference:

- MODER MODEy LL_GPIO_SetPinMode

LL_GPIO_GetPinMode

Function name

__STATIC_INLINE uint32_t LL_GPIO_GetPinMode (const GPIO_TypeDef * GPIOx, uint32_t Pin)

Function description

Return gpio mode for a dedicated pin on dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **Pin:** This parameter can be one of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15

Return values

- **Returned:** value can be one of the following values:
  - LL_GPIO_MODE_INPUT
  - LL_GPIO_MODE_OUTPUT
  - LL_GPIO_MODE_ALTERNATE
  - LL_GPIO_MODE_ANALOG

Notes

- I/O mode can be Input mode, General purpose output, Alternate function mode or Analog.
- Warning: only one pin can be passed as parameter.

Reference Manual to LL API cross reference:

- MODER MODEy LL_GPIO_GetPinMode

LL_GPIO_SetPinOutputType

Function name

__STATIC_INLINE void LL_GPIO_SetPinOutputType (GPIO_TypeDef * GPIOx, uint32_t PinMask, uint32_t OutputType)

Function description

Configure gpio output type for several pins on dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
  - LL_GPIO_PIN_ALL
- **OutputType:** This parameter can be one of the following values:
  - LL_GPIO_OUTPUT_PUSHPULL
  - LL_GPIO_OUTPUT_OPENDRAIN

Return values

- **None:**

Notes

- Output type as to be set when gpio pin is in output or alternate modes. Possible type are Push-pull or Open-drain.

Reference Manual to LL API cross reference:

- OTYPER OTy LL_GPIO_SetPinOutputType

LL_GPIO_GetPinOutputType

Function name

__STATIC_INLINE uint32_t LL_GPIO_GetPinOutputType (const GPIO_TypeDef * GPIOx, uint32_t Pin)

Function description

Return gpio output type for several pins on dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **Pin:** This parameter can be one of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
  - LL_GPIO_PIN_ALL

Return values

- **Returned:** value can be one of the following values:
  - LL_GPIO_OUTPUT_PUSHPULL
  - LL_GPIO_OUTPUT_OPENDRAIN

Notes

- Output type as to be set when gpio pin is in output or alternate modes. Possible type are Push-pull or Open-drain.
- Warning: only one pin can be passed as parameter.

Reference Manual to LL API cross reference:

- OTYPER OTy LL_GPIO_GetPinOutputType

LL_GPIO_SetPinSpeed

Function name

__STATIC_INLINE void LL_GPIO_SetPinSpeed (GPIO_TypeDef * GPIOx, uint32_t Pin, uint32_t Speed)

Function description

Configure gpio speed for a dedicated pin on dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **Pin:** This parameter can be one of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
- **Speed:** This parameter can be one of the following values:
  - LL_GPIO_SPEED_FREQ_LOW
  - LL_GPIO_SPEED_FREQ_MEDIUM
  - LL_GPIO_SPEED_FREQ_HIGH
  - LL_GPIO_SPEED_FREQ_VERY_HIGH

Return values

- **None:**

Notes

- I/O speed can be Low, Medium, Fast or High speed.
- Warning: only one pin can be passed as parameter.
- Refer to datasheet for frequency specifications and the power supply and load conditions for each speed.

Reference Manual to LL API cross reference:

- OSPEEDR OSPEEDy LL_GPIO_SetPinSpeed

LL_GPIO_GetPinSpeed

Function name

__STATIC_INLINE uint32_t LL_GPIO_GetPinSpeed (const GPIO_TypeDef * GPIOx, uint32_t Pin)

Function description

Return gpio speed for a dedicated pin on dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **Pin:** This parameter can be one of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15

Return values

- **Returned:** value can be one of the following values:
  - LL_GPIO_SPEED_FREQ_LOW
  - LL_GPIO_SPEED_FREQ_MEDIUM
  - LL_GPIO_SPEED_FREQ_HIGH
  - LL_GPIO_SPEED_FREQ_VERY_HIGH

Notes

- I/O speed can be Low, Medium, Fast or High speed.
- Warning: only one pin can be passed as parameter.
- Refer to datasheet for frequency specifications and the power supply and load conditions for each speed.

Reference Manual to LL API cross reference:

- OSPEEDR OSPEEDy LL_GPIO_GetPinSpeed

LL_GPIO_SetPinPull

Function name

__STATIC_INLINE void LL_GPIO_SetPinPull (GPIO_TypeDef * GPIOx, uint32_t Pin, uint32_t Pull)

Function description

Configure gpio pull-up or pull-down for a dedicated pin on a dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **Pin:** This parameter can be one of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
- **Pull:** This parameter can be one of the following values:
  - LL_GPIO_PULL_NO
  - LL_GPIO_PULL_UP
  - LL_GPIO_PULL_DOWN

Return values

- **None:**

Notes

- Warning: only one pin can be passed as parameter.

Reference Manual to LL API cross reference:

- PUPDR PUPDy LL_GPIO_SetPinPull

LL_GPIO_GetPinPull

Function name

__STATIC_INLINE uint32_t LL_GPIO_GetPinPull (const GPIO_TypeDef * GPIOx, uint32_t Pin)

Function description

Return gpio pull-up or pull-down for a dedicated pin on a dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **Pin:** This parameter can be one of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15

Return values

- **Returned:** value can be one of the following values:
  - LL_GPIO_PULL_NO
  - LL_GPIO_PULL_UP
  - LL_GPIO_PULL_DOWN

Notes

- Warning: only one pin can be passed as parameter.

Reference Manual to LL API cross reference:

- PUPDR PUPDy LL_GPIO_GetPinPull

LL_GPIO_SetAFPin_0_7

Function name

__STATIC_INLINE void LL_GPIO_SetAFPin_0_7 (GPIO_TypeDef * GPIOx, uint32_t Pin, uint32_t Alternate)

Function description

Configure gpio alternate function of a dedicated pin from 0 to 7 for a dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **Pin:** This parameter can be one of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
- **Alternate:** This parameter can be one of the following values:
  - LL_GPIO_AF_0
  - LL_GPIO_AF_1
  - LL_GPIO_AF_2
  - LL_GPIO_AF_3
  - LL_GPIO_AF_4
  - LL_GPIO_AF_5
  - LL_GPIO_AF_6
  - LL_GPIO_AF_7
  - LL_GPIO_AF_8
  - LL_GPIO_AF_9
  - LL_GPIO_AF_10
  - LL_GPIO_AF_11
  - LL_GPIO_AF_12
  - LL_GPIO_AF_13
  - LL_GPIO_AF_14
  - LL_GPIO_AF_15

Return values

- **None:**

Notes

- Possible values are from AF0 to AF15 depending on target.
- Warning: only one pin can be passed as parameter.

Reference Manual to LL API cross reference:

- AFRL AFSELy LL_GPIO_SetAFPin_0_7

LL_GPIO_GetAFPin_0_7

Function name

__STATIC_INLINE uint32_t LL_GPIO_GetAFPin_0_7 (const GPIO_TypeDef * GPIOx, uint32_t Pin)

Function description

Return gpio alternate function of a dedicated pin from 0 to 7 for a dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **Pin:** This parameter can be one of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7

Return values

- **Returned:** value can be one of the following values:
  - LL_GPIO_AF_0
  - LL_GPIO_AF_1
  - LL_GPIO_AF_2
  - LL_GPIO_AF_3
  - LL_GPIO_AF_4
  - LL_GPIO_AF_5
  - LL_GPIO_AF_6
  - LL_GPIO_AF_7
  - LL_GPIO_AF_8
  - LL_GPIO_AF_9
  - LL_GPIO_AF_10
  - LL_GPIO_AF_11
  - LL_GPIO_AF_12
  - LL_GPIO_AF_13
  - LL_GPIO_AF_14

LL_GPIO_SetAFPin_8_15

Function name

__STATIC_INLINE void LL_GPIO_SetAFPin_8_15 (GPIO_TypeDef * GPIOx, uint32_t Pin, uint32_t Alternate)

Function description

Configure gpio alternate function of a dedicated pin from 8 to 15 for a dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **Pin:** This parameter can be one of the following values:
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
- **Alternate:** This parameter can be one of the following values:
  - LL_GPIO_AF_0
  - LL_GPIO_AF_1
  - LL_GPIO_AF_2
  - LL_GPIO_AF_3
  - LL_GPIO_AF_4
  - LL_GPIO_AF_5
  - LL_GPIO_AF_6
  - LL_GPIO_AF_7
  - LL_GPIO_AF_8
  - LL_GPIO_AF_9
  - LL_GPIO_AF_10
  - LL_GPIO_AF_11
  - LL_GPIO_AF_12
  - LL_GPIO_AF_13
  - LL_GPIO_AF_14
  - LL_GPIO_AF_15

Return values

- **None:**

Notes

- Possible values are from AF0 to AF15 depending on target.
- Warning: only one pin can be passed as parameter.

Reference Manual to LL API cross reference:

- AFRH AFSELy LL_GPIO_SetAFPin_8_15

LL_GPIO_GetAFPin_8_15

Function name

__STATIC_INLINE uint32_t LL_GPIO_GetAFPin_8_15 (const GPIO_TypeDef * GPIOx, uint32_t Pin)

Function description

Return gpio alternate function of a dedicated pin from 8 to 15 for a dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **Pin:** This parameter can be one of the following values:
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15

Return values

- **Returned:** value can be one of the following values:
  - LL_GPIO_AF_0
  - LL_GPIO_AF_1
  - LL_GPIO_AF_2
  - LL_GPIO_AF_3
  - LL_GPIO_AF_4
  - LL_GPIO_AF_5
  - LL_GPIO_AF_6
  - LL_GPIO_AF_7
  - LL_GPIO_AF_8
  - LL_GPIO_AF_9
  - LL_GPIO_AF_10
  - LL_GPIO_AF_11
  - LL_GPIO_AF_12
  - LL_GPIO_AF_13
  - LL_GPIO_AF_14
  - LL_GPIO_AF_15

Notes

- Possible values are from AF0 to AF15 depending on target.

Reference Manual to LL API cross reference:

- AFRH AFSELy LL_GPIO_GetAFPin_8_15

LL_GPIO_LockPin

Function name

__STATIC_INLINE void LL_GPIO_LockPin (GPIO_TypeDef * GPIOx, uint32_t PinMask)

Function description

Lock configuration of several pins for a dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
  - LL_GPIO_PIN_ALL

Return values

- **None:**

Notes

- When the lock sequence has been applied on a port bit, the value of this port bit can no longer be modified until the next reset.
- Each lock bit freezes a specific configuration register (control and alternate function registers).

Reference Manual to LL API cross reference:

- LCKR LCKK LL_GPIO_LockPin

LL_GPIO_IsPinLocked

Function name

__STATIC_INLINE uint32_t LL_GPIO_IsPinLocked (const GPIO_TypeDef * GPIOx, uint32_t PinMask)

Function description

Return 1 if all pins passed as parameter, of a dedicated port, are locked.

Parameters

- **GPIOx:** GPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
  - LL_GPIO_PIN_ALL

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- LCKR LCKy LL_GPIO_IsPinLocked

LL_GPIO_IsAnyPinLocked

Function name

__STATIC_INLINE uint32_t LL_GPIO_IsAnyPinLocked (const GPIO_TypeDef * GPIOx)

Function description

Return 1 if one of the pin of a dedicated port is locked.

Parameters

- **GPIOx:** GPIO Port

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- LCKR LCKK LL_GPIO_IsAnyPinLocked

LL_GPIO_ReadInputPort

Function name

__STATIC_INLINE uint32_t LL_GPIO_ReadInputPort (const GPIO_TypeDef * GPIOx)

Function description

Return full input data register value for a dedicated port.

Parameters

- **GPIOx:** GPIO Port

Return values

- **Input:** data register value of port

Reference Manual to LL API cross reference:

- IDR IDy LL_GPIO_ReadInputPort

LL_GPIO_IsInputPinSet

Function name

__STATIC_INLINE uint32_t LL_GPIO_IsInputPinSet (const GPIO_TypeDef * GPIOx, uint32_t PinMask)

Function description

Return if input data level for several pins of dedicated port is high or low.

Parameters

- **GPIOx:** GPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
  - LL_GPIO_PIN_ALL

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IDR IDy LL_GPIO_IsInputPinSet

LL_GPIO_WriteOutputPort

Function name

__STATIC_INLINE void LL_GPIO_WriteOutputPort (GPIO_TypeDef * GPIOx, uint32_t PortValue)

Function description

Write output data register for the port.

Parameters

- **GPIOx:** GPIO Port
- **PortValue:** Level value for each pin of the port

Return values

- **None:**

Reference Manual to LL API cross reference:

- ODR ODy LL_GPIO_WriteOutputPort

LL_GPIO_ReadOutputPort

Function name

__STATIC_INLINE uint32_t LL_GPIO_ReadOutputPort (const GPIO_TypeDef * GPIOx)

Function description

Return full output data register value for a dedicated port.

Parameters

- **GPIOx:** GPIO Port

Return values

- **Output:** data register value of port

Reference Manual to LL API cross reference:

- ODR ODy LL_GPIO_ReadOutputPort

LL_GPIO_IsOutputPinSet

Function name

__STATIC_INLINE uint32_t LL_GPIO_IsOutputPinSet (const GPIO_TypeDef * GPIOx, uint32_t PinMask)

Function description

Return if input data level for several pins of dedicated port is high or low.

Parameters

- **GPIOx:** GPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
  - LL_GPIO_PIN_ALL

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ODR ODy LL_GPIO_IsOutputPinSet

LL_GPIO_SetOutputPin

Function name

__STATIC_INLINE void LL_GPIO_SetOutputPin (GPIO_TypeDef * GPIOx, uint32_t PinMask)

Function description

Set several pins to high level on dedicated gpio port.

Parameters

- **GPIOx:** GPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
  - LL_GPIO_PIN_ALL

Return values

- **None:**

Reference Manual to LL API cross reference:

- BSRR BSy LL_GPIO_SetOutputPin

LL_GPIO_ResetOutputPin

Function name

__STATIC_INLINE void LL_GPIO_ResetOutputPin (GPIO_TypeDef * GPIOx, uint32_t PinMask)

Function description

Set several pins to low level on dedicated gpio port.

Parameters

- **GPIOx:** GPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
  - LL_GPIO_PIN_ALL

Return values

- **None:**

Reference Manual to LL API cross reference:

- BRR BRy LL_GPIO_ResetOutputPin

LL_GPIO_TogglePin

Function name

__STATIC_INLINE void LL_GPIO_TogglePin (GPIO_TypeDef * GPIOx, uint32_t PinMask)

Function description

Toggle data value for several pin of dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
  - LL_GPIO_PIN_ALL

Return values

- **None:**

Reference Manual to LL API cross reference:

- ODR ODy LL_GPIO_TogglePin

LL_GPIO_EnableHighSPeedLowVoltage

Function name

__STATIC_INLINE void LL_GPIO_EnableHighSPeedLowVoltage (GPIO_TypeDef * GPIOx, uint32_t PinMask)

Function description

Enable speed optimization for several pin of dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15

Return values

- **None:**

Notes

- Not all I/Os support the HSLV mode. Refer to the I/O structure in the corresponding datasheet for the list of I/Os supporting this feature. Other I/Os HSLV configuration must be kept at reset value.
- It must be used only if the I/O supply voltage is below 2.7 V.

Reference Manual to LL API cross reference:

- HSLVR HSLVy LL_GPIO_EnableHighSPeedLowVoltage

LL_GPIO_DisableHighSPeedLowVoltage

Function name

__STATIC_INLINE void LL_GPIO_DisableHighSPeedLowVoltage (GPIO_TypeDef * GPIOx, uint32_t PinMask)

Function description

Disable speed optimization for several pin of dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15

Return values

- **None:**

Notes

- Not all I/Os support the HSLV mode. Refer to the I/O structure in the corresponding datasheet for the list of I/Os supporting this feature. Other I/Os HSLV configuration must be kept at reset value.
- It must be used only if the I/O supply voltage is below 2.7 V.

LL_GPIO_IsEnabledHighSPeedLowVoltage

Function name

__STATIC_INLINE uint32_t LL_GPIO_IsEnabledHighSPeedLowVoltage (const GPIO_TypeDef * GPIOx, uint32_t PinMask)

Function description

Return if speed optimization for several pin of dedicated port is enabled or not.

Parameters

- **GPIOx:** GPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15

Return values

- **State:** of bit (1 or 0).

Notes

- Not all I/Os support the HSLV mode. Refer to the I/O structure in the corresponding datasheet for the list of I/Os supporting this feature. Other I/Os HSLV configuration must be kept at reset value.
- It must be used only if the I/O supply voltage is below 2.7 V.

- HSLVR HSLVy LL_GPIO_IsEnabledHighSPeedLowVoltage

LL_GPIO_EnablePinSecure

Function name

__STATIC_INLINE void LL_GPIO_EnablePinSecure (GPIO_TypeDef * GPIOx, uint32_t PinMask)

Function description

Enable secure write only access for several pin of dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
  - LL_GPIO_PIN_ALL

Return values

- **None:**

Reference Manual to LL API cross reference:

- SECCFGR SECy LL_GPIO_EnablePinSecure

LL_GPIO_DisablePinSecure

Function name

__STATIC_INLINE void LL_GPIO_DisablePinSecure (GPIO_TypeDef * GPIOx, uint32_t PinMask)

Function description

Disable secure write only access for several pin of dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
  - LL_GPIO_PIN_ALL

Return values

- **None:**

Reference Manual to LL API cross reference:

- SECCFGR SECy LL_GPIO_DisablePinSecure

LL_GPIO_IsEnabledPinSecure

Function name

__STATIC_INLINE uint32_t LL_GPIO_IsEnabledPinSecure (const GPIO_TypeDef * GPIOx, uint32_t PinMask)

Function description

Return if secure write only access for several pin of dedicated port is enabled or not.

Parameters

- **GPIOx:** GPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
  - LL_GPIO_PIN_ALL

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SECCFGR SECy LL_GPIO_IsEnabledPinSecure

LL_GPIO_DeInit

Function name

ErrorStatus LL_GPIO_DeInit (const GPIO_TypeDef * GPIOx)

Function description

De-initialize GPIO registers (Registers restored to their default values).

Parameters

- **GPIOx:** GPIO Port

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: GPIO registers are de-initialized
  - ERROR: Wrong GPIO Port

LL_GPIO_Init

Function name

ErrorStatus LL_GPIO_Init (GPIO_TypeDef * GPIOx, const LL_GPIO_InitTypeDef * GPIO_InitStruct)

Function description

Initialize GPIO registers according to the specified parameters in GPIO_InitStruct.

Parameters

- **GPIOx:** GPIO Port
- **GPIO_InitStruct:** pointer to a LL_GPIO_InitTypeDef structure that contains the configuration information for the specified GPIO peripheral.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: GPIO registers are initialized according to GPIO_InitStruct content
  - ERROR: Not applicable

LL_GPIO_StructInit

Function name

void LL_GPIO_StructInit (LL_GPIO_InitTypeDef * GPIO_InitStruct)

Function description

Set each LL_GPIO_InitTypeDef field to default value.

Parameters

- **GPIO_InitStruct:** pointer to a LL_GPIO_InitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

Common Write and read registers Macros

LL_GPIO_WriteReg

Description:

- Write a value in GPIO register.

Parameters:

- __INSTANCE__: GPIO Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_GPIO_ReadReg

Description:

- Read a value in GPIO register.

Parameters:

- __INSTANCE__: GPIO Instance
- __REG__: Register to be read

Return value:

- Register: value

GPIO Exported Constants

85 LL I2C Generic Driver

85.1 I2C Firmware driver registers structures

85.1.1 LL_I2C_InitTypeDef

LL_I2C_InitTypeDef is defined in the stm32u3xx_ll_i2c.h

Data Fields

- ***uint32_t PeripheralMode***
- ***uint32_t Timing***
- ***uint32_t AnalogFilter***
- ***uint32_t DigitalFilter***
- ***uint32_t OwnAddress1***
- ***uint32_t TypeAcknowledge***
- ***uint32_t OwnAddrSize***

Field Documentation

- ***uint32_t LL_I2C_InitTypeDef::PeripheralMode***
  Specifies the peripheral mode. This parameter can be a value of ***I2C_LL_EC_PERIPHERAL_MODE***.This feature can be modified afterwards using unitary function **LL_I2C_SetMode()**.
- ***uint32_t LL_I2C_InitTypeDef::Timing***
  Specifies the SDA setup, hold time and the SCL high, low period values. This parameter must be set by referring to the STM32CubeMX Tool and the helper macro **__LL_I2C_CONVERT_TIMINGS()**.This feature can be modified afterwards using unitary function **LL_I2C_SetTiming()**.
- ***uint32_t LL_I2C_InitTypeDef::AnalogFilter***
  Enables or disables analog noise filter. This parameter can be a value of ***I2C_LL_EC_ANALOGFILTER_SELECTION***.This feature can be modified afterwards using unitary functions **LL_I2C_EnableAnalogFilter()** or **LL_I2C_DisableAnalogFilter()**.
- ***uint32_t LL_I2C_InitTypeDef::DigitalFilter***
  Configures the digital noise filter. This parameter can be a number between Min_Data = 0x00 and Max_Data = 0x0F.This feature can be modified afterwards using unitary function **LL_I2C_SetDigitalFilter()**.
- ***uint32_t LL_I2C_InitTypeDef::OwnAddress1***
  Specifies the device own address 1. This parameter must be a value between Min_Data = 0x00 and Max_Data = 0x3FF.This feature can be modified afterwards using unitary function **LL_I2C_SetOwnAddress1()**.
- ***uint32_t LL_I2C_InitTypeDef::TypeAcknowledge***
  Specifies the ACKnowledge or Non ACKnowledge condition after the address receive match code or next received byte. This parameter can be a value of ***I2C_LL_EC_I2C_ACKNOWLEDGE***.This feature can be modified afterwards using unitary function **LL_I2C_AcknowledgeNextData()**.
- ***uint32_t LL_I2C_InitTypeDef::OwnAddrSize***
  Specifies the device own address 1 size (7-bit or 10-bit). This parameter can be a value of ***I2C_LL_EC_OWNADDRESS1***.This feature can be modified afterwards using unitary function **LL_I2C_SetOwnAddress1()**.

85.2 I2C Firmware driver API description

The following section lists the various functions of the I2C library.

85.2.1 Detailed description of functions

LL_I2C_Enable

Function name

__STATIC_INLINE void LL_I2C_Enable (I2C_TypeDef * I2Cx)

Function description

Enable I2C peripheral (PE = 1).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 PE LL_I2C_Enable

LL_I2C_Disable

Function name

__STATIC_INLINE void LL_I2C_Disable (I2C_TypeDef * I2Cx)

Function description

Disable I2C peripheral (PE = 0).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- When PE = 0, the I2C SCL and SDA lines are released. Internal state machines and status bits are put back to their reset value. When cleared, PE must be kept low for at least 3 APB clock cycles.

Reference Manual to LL API cross reference:

- CR1 PE LL_I2C_Disable

LL_I2C_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabled (const I2C_TypeDef * I2Cx)

Function description

Check if the I2C peripheral is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 PE LL_I2C_IsEnabled

LL_I2C_ConfigFilters

Function name

__STATIC_INLINE void LL_I2C_ConfigFilters (I2C_TypeDef * I2Cx, uint32_t AnalogFilter, uint32_t DigitalFilter)

Function description

Configure Noise Filters (Analog and Digital).

Parameters

- **I2Cx:** I2C Instance.
- **AnalogFilter:** This parameter can be one of the following values:
  - LL_I2C_ANALOGFILTER_ENABLE
  - LL_I2C_ANALOGFILTER_DISABLE
- **DigitalFilter:** This parameter must be a value between Min_Data=0x00 (Digital filter disabled) and Max_Data=0x0F (Digital filter enabled and filtering capability up to 15*ti2cclk). This parameter is used to configure the digital noise filter on SDA and SCL input. The digital filter will filter spikes with a length of up to DNF[3:0]*ti2cclk.

Return values

- **None:**

Notes

- If the analog filter is also enabled, the digital filter is added to analog filter. The filters can only be programmed when the I2C is disabled (PE = 0).

Reference Manual to LL API cross reference:

- CR1 ANFOFF LL_I2C_ConfigFilters
- CR1 DNF LL_I2C_ConfigFilters

LL_I2C_SetDigitalFilter

Function name

__STATIC_INLINE void LL_I2C_SetDigitalFilter (I2C_TypeDef * I2Cx, uint32_t DigitalFilter)

Function description

Configure Digital Noise Filter.

Parameters

- **I2Cx:** I2C Instance.
- **DigitalFilter:** This parameter must be a value between Min_Data=0x00 (Digital filter disabled) and Max_Data=0x0F (Digital filter enabled and filtering capability up to 15*ti2cclk). This parameter is used to configure the digital noise filter on SDA and SCL input. The digital filter will filter spikes with a length of up to DNF[3:0]*ti2cclk.

Return values

- **None:**

Notes

- If the analog filter is also enabled, the digital filter is added to analog filter. This filter can only be programmed when the I2C is disabled (PE = 0).

Reference Manual to LL API cross reference:

- CR1 DNF LL_I2C_SetDigitalFilter

LL_I2C_GetDigitalFilter

Function name

__STATIC_INLINE uint32_t LL_I2C_GetDigitalFilter (const I2C_TypeDef * I2Cx)

Function description

Get the current Digital Noise Filter configuration.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0x0 and Max_Data=0xF

Reference Manual to LL API cross reference:

- CR1 DNF LL_I2C_GetDigitalFilter

LL_I2C_EnableAnalogFilter

Function name

__STATIC_INLINE void LL_I2C_EnableAnalogFilter (I2C_TypeDef * I2Cx)

Function description

Enable Analog Noise Filter.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- This filter can only be programmed when the I2C is disabled (PE = 0).

Reference Manual to LL API cross reference:

- CR1 ANFOFF LL_I2C_EnableAnalogFilter

LL_I2C_DisableAnalogFilter

Function name

__STATIC_INLINE void LL_I2C_DisableAnalogFilter (I2C_TypeDef * I2Cx)

Function description

Disable Analog Noise Filter.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- This filter can only be programmed when the I2C is disabled (PE = 0).

Reference Manual to LL API cross reference:

- CR1 ANFOFF LL_I2C_DisableAnalogFilter

LL_I2C_IsEnabledAnalogFilter

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledAnalogFilter (const I2C_TypeDef * I2Cx)

Function description

Check if Analog Noise Filter is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 ANFOFF LL_I2C_IsEnabledAnalogFilter

LL_I2C_EnableDMAReq_TX

Function name

__STATIC_INLINE void LL_I2C_EnableDMAReq_TX (I2C_TypeDef * I2Cx)

Function description

Enable DMA transmission requests.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TXDMAEN LL_I2C_EnableDMAReq_TX

LL_I2C_DisableDMAReq_TX

Function name

__STATIC_INLINE void LL_I2C_DisableDMAReq_TX (I2C_TypeDef * I2Cx)

Function description

Disable DMA transmission requests.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TXDMAEN LL_I2C_DisableDMAReq_TX

LL_I2C_IsEnabledDMAReq_TX

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledDMAReq_TX (const I2C_TypeDef * I2Cx)

Function description

Check if DMA transmission requests are enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 TXDMAEN LL_I2C_IsEnabledDMAReq_TX

LL_I2C_EnableDMAReq_RX

Function name

__STATIC_INLINE void LL_I2C_EnableDMAReq_RX (I2C_TypeDef * I2Cx)

Function description

Enable DMA reception requests.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RXDMAEN LL_I2C_EnableDMAReq_RX

LL_I2C_DisableDMAReq_RX

Function name

__STATIC_INLINE void LL_I2C_DisableDMAReq_RX (I2C_TypeDef * I2Cx)

Function description

Disable DMA reception requests.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RXDMAEN LL_I2C_DisableDMAReq_RX

LL_I2C_IsEnabledDMAReq_RX

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledDMAReq_RX (const I2C_TypeDef * I2Cx)

Function description

Check if DMA reception requests are enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 RXDMAEN LL_I2C_IsEnabledDMAReq_RX

LL_I2C_DMA_GetRegAddr

Function name

__STATIC_INLINE uint32_t LL_I2C_DMA_GetRegAddr (const I2C_TypeDef * I2Cx, uint32_t Direction)

Function description

Get the data register address used for DMA transfer.

Parameters

- **I2Cx:** I2C Instance
- **Direction:** This parameter can be one of the following values:
  - LL_I2C_DMA_REG_DATA_TRANSMIT
  - LL_I2C_DMA_REG_DATA_RECEIVE

Return values

- **Address:** of data register

Reference Manual to LL API cross reference:

- TXDR TXDATA LL_I2C_DMA_GetRegAddr
- RXDR RXDATA LL_I2C_DMA_GetRegAddr

LL_I2C_EnableClockStretching

Function name

__STATIC_INLINE void LL_I2C_EnableClockStretching (I2C_TypeDef * I2Cx)

Function description

Enable Clock stretching.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- This bit can only be programmed when the I2C is disabled (PE = 0).

Reference Manual to LL API cross reference:

- CR1 NOSTRETCH LL_I2C_EnableClockStretching

LL_I2C_DisableClockStretching

Function name

__STATIC_INLINE void LL_I2C_DisableClockStretching (I2C_TypeDef * I2Cx)

Function description

Disable Clock stretching.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- This bit can only be programmed when the I2C is disabled (PE = 0).

Reference Manual to LL API cross reference:

- CR1 NOSTRETCH LL_I2C_DisableClockStretching

LL_I2C_IsEnabledClockStretching

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledClockStretching (const I2C_TypeDef * I2Cx)

Function description

Check if Clock stretching is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 NOSTRETCH LL_I2C_IsEnabledClockStretching

LL_I2C_EnableSlaveByteControl

Function name

__STATIC_INLINE void LL_I2C_EnableSlaveByteControl (I2C_TypeDef * I2Cx)

Function description

Enable hardware byte control in slave mode.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 SBC LL_I2C_EnableSlaveByteControl

LL_I2C_DisableSlaveByteControl

Function name

__STATIC_INLINE void LL_I2C_DisableSlaveByteControl (I2C_TypeDef * I2Cx)

Function description

Disable hardware byte control in slave mode.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 SBC LL_I2C_DisableSlaveByteControl

LL_I2C_IsEnabledSlaveByteControl

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledSlaveByteControl (const I2C_TypeDef * I2Cx)

Function description

Check if hardware byte control in slave mode is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 SBC LL_I2C_IsEnabledSlaveByteControl

LL_I2C_EnableWakeUpFromStop

Function name

__STATIC_INLINE void LL_I2C_EnableWakeUpFromStop (I2C_TypeDef * I2Cx)

Function description

Enable Wakeup from STOP.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_I2C_WAKEUP_FROMSTOP_INSTANCE(I2Cx) can be used to check whether or not WakeUpFromStop feature is supported by the I2Cx Instance.
- This bit can only be programmed when Digital Filter is disabled.

Reference Manual to LL API cross reference:

- CR1 WUPEN LL_I2C_EnableWakeUpFromStop

LL_I2C_DisableWakeUpFromStop

Function name

__STATIC_INLINE void LL_I2C_DisableWakeUpFromStop (I2C_TypeDef * I2Cx)

Function description

Disable Wakeup from STOP.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_I2C_WAKEUP_FROMSTOP_INSTANCE(I2Cx) can be used to check whether or not WakeUpFromStop feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- CR1 WUPEN LL_I2C_DisableWakeUpFromStop

LL_I2C_IsEnabledWakeUpFromStop

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledWakeUpFromStop (const I2C_TypeDef * I2Cx)

Function description

Check if Wakeup from STOP is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- The macro IS_I2C_WAKEUP_FROMSTOP_INSTANCE(I2Cx) can be used to check whether or not WakeUpFromStop feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- CR1 WUPEN LL_I2C_IsEnabledWakeUpFromStop

LL_I2C_EnableGeneralCall

Function name

__STATIC_INLINE void LL_I2C_EnableGeneralCall (I2C_TypeDef * I2Cx)

Function description

Enable General Call.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- When enabled the Address 0x00 is ACKed.

Reference Manual to LL API cross reference:

- CR1 GCEN LL_I2C_EnableGeneralCall

LL_I2C_DisableGeneralCall

Function name

__STATIC_INLINE void LL_I2C_DisableGeneralCall (I2C_TypeDef * I2Cx)

Function description

Disable General Call.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- When disabled the Address 0x00 is NACKed.

Reference Manual to LL API cross reference:

- CR1 GCEN LL_I2C_DisableGeneralCall

LL_I2C_IsEnabledGeneralCall

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledGeneralCall (const I2C_TypeDef * I2Cx)

Function description

Check if General Call is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 GCEN LL_I2C_IsEnabledGeneralCall

LL_I2C_EnableFastModePlus

Function name

__STATIC_INLINE void LL_I2C_EnableFastModePlus (I2C_TypeDef * I2Cx)

Function description

Enable I2C Fast Mode Plus (FMP = 1).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- 20mA I/O drive enable

Reference Manual to LL API cross reference:

- CR1 FMP LL_I2C_EnableFastModePlus

LL_I2C_DisableFastModePlus

Function name

__STATIC_INLINE void LL_I2C_DisableFastModePlus (I2C_TypeDef * I2Cx)

Function description

Disable I2C Fast Mode Plus (FMP = 0).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- 20mA I/O drive disable

Reference Manual to LL API cross reference:

- CR1 FMP LL_I2C_DisableFastModePlus

LL_I2C_IsEnabledFastModePlus

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledFastModePlus (const I2C_TypeDef * I2Cx)

Function description

Check if the I2C Fast Mode Plus is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 FMP LL_I2C_IsEnabledFastModePlus

LL_I2C_EnableAutoClearFlag_ADDR

Function name

__STATIC_INLINE void LL_I2C_EnableAutoClearFlag_ADDR (I2C_TypeDef * I2Cx)

Function description

Enable automatic clear of ADDR flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 ADDRACLR LL_I2C_EnableAutoClearFlag_ADDR

LL_I2C_DisableAutoClearFlag_ADDR

Function name

__STATIC_INLINE void LL_I2C_DisableAutoClearFlag_ADDR (I2C_TypeDef * I2Cx)

Function description

Disable automatic clear of ADDR flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 ADDRACLR LL_I2C_DisableAutoClearFlag_ADDR

LL_I2C_IsEnabledAutoClearFlag_ADDR

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledAutoClearFlag_ADDR (const I2C_TypeDef * I2Cx)

Function description

Check if the automatic clear of ADDR flag is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 ADDRACLR LL_I2C_IsEnabledAutoClearFlag_ADDR

LL_I2C_EnableAutoClearFlag_STOP

Function name

__STATIC_INLINE void LL_I2C_EnableAutoClearFlag_STOP (I2C_TypeDef * I2Cx)

Function description

Enable automatic clear of STOP flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 STOPFACLR LL_I2C_EnableAutoClearFlag_STOP

LL_I2C_DisableAutoClearFlag_STOP

Function name

__STATIC_INLINE void LL_I2C_DisableAutoClearFlag_STOP (I2C_TypeDef * I2Cx)

Function description

Disable automatic clear of STOP flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 STOPFACLR LL_I2C_DisableAutoClearFlag_STOP

LL_I2C_IsEnabledAutoClearFlag_STOP

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledAutoClearFlag_STOP (const I2C_TypeDef * I2Cx)

Function description

Check if the automatic clear of STOP flag is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 STOPFACLR LL_I2C_IsEnabledAutoClearFlag_STOP

LL_I2C_SetMasterAddressingMode

Function name

__STATIC_INLINE void LL_I2C_SetMasterAddressingMode (I2C_TypeDef * I2Cx, uint32_t AddressingMode)

Function description

Configure the Master to operate in 7-bit or 10-bit addressing mode.

Parameters

- **I2Cx:** I2C Instance.
- **AddressingMode:** This parameter can be one of the following values:
  - LL_I2C_ADDRESSING_MODE_7BIT
  - LL_I2C_ADDRESSING_MODE_10BIT

Return values

- **None:**

Notes

- Changing this bit is not allowed, when the START bit is set.

Reference Manual to LL API cross reference:

- CR2 ADD10 LL_I2C_SetMasterAddressingMode

LL_I2C_GetMasterAddressingMode

Function name

__STATIC_INLINE uint32_t LL_I2C_GetMasterAddressingMode (const I2C_TypeDef * I2Cx)

Function description

Get the Master addressing mode.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I2C_ADDRESSING_MODE_7BIT
  - LL_I2C_ADDRESSING_MODE_10BIT

Reference Manual to LL API cross reference:

- CR2 ADD10 LL_I2C_GetMasterAddressingMode

LL_I2C_SetOwnAddress1

Function name

__STATIC_INLINE void LL_I2C_SetOwnAddress1 (I2C_TypeDef * I2Cx, uint32_t OwnAddress1, uint32_t OwnAddrSize)

Function description

Set the Own Address1.

Parameters

- **I2Cx:** I2C Instance.
- **OwnAddress1:** This parameter must be a value between Min_Data=0 and Max_Data=0x3FF.
- **OwnAddrSize:** This parameter can be one of the following values:
  - LL_I2C_OWNADDRESS1_7BIT
  - LL_I2C_OWNADDRESS1_10BIT

Return values

- **None:**

Reference Manual to LL API cross reference:

- OAR1 OA1 LL_I2C_SetOwnAddress1
- OAR1 OA1MODE LL_I2C_SetOwnAddress1

LL_I2C_EnableOwnAddress1

Function name

__STATIC_INLINE void LL_I2C_EnableOwnAddress1 (I2C_TypeDef * I2Cx)

Function description

Enable acknowledge on Own Address1 match address.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- OAR1 OA1EN LL_I2C_EnableOwnAddress1

LL_I2C_DisableOwnAddress1

Function name

__STATIC_INLINE void LL_I2C_DisableOwnAddress1 (I2C_TypeDef * I2Cx)

Function description

Disable acknowledge on Own Address1 match address.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- OAR1 OA1EN LL_I2C_DisableOwnAddress1

LL_I2C_IsEnabledOwnAddress1

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledOwnAddress1 (const I2C_TypeDef * I2Cx)

Function description

Check if Own Address1 acknowledge is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- OAR1 OA1EN LL_I2C_IsEnabledOwnAddress1

LL_I2C_SetOwnAddress2

Function name

__STATIC_INLINE void LL_I2C_SetOwnAddress2 (I2C_TypeDef * I2Cx, uint32_t OwnAddress2, uint32_t OwnAddrMask)

Function description

Set the 7bits Own Address2.

Parameters

- **I2Cx:** I2C Instance.
- **OwnAddress2:** Value between Min_Data=0 and Max_Data=0x7F.
- **OwnAddrMask:** This parameter can be one of the following values:
  - LL_I2C_OWNADDRESS2_NOMASK
  - LL_I2C_OWNADDRESS2_MASK01
  - LL_I2C_OWNADDRESS2_MASK02
  - LL_I2C_OWNADDRESS2_MASK03
  - LL_I2C_OWNADDRESS2_MASK04
  - LL_I2C_OWNADDRESS2_MASK05
  - LL_I2C_OWNADDRESS2_MASK06
  - LL_I2C_OWNADDRESS2_MASK07

Return values

- **None:**

Notes

- This action has no effect if own address2 is enabled.

Reference Manual to LL API cross reference:

- OAR2 OA2 LL_I2C_SetOwnAddress2
- OAR2 OA2MSK LL_I2C_SetOwnAddress2

LL_I2C_EnableOwnAddress2

Function name

__STATIC_INLINE void LL_I2C_EnableOwnAddress2 (I2C_TypeDef * I2Cx)

Function description

Enable acknowledge on Own Address2 match address.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- OAR2 OA2EN LL_I2C_EnableOwnAddress2

LL_I2C_DisableOwnAddress2

Function name

__STATIC_INLINE void LL_I2C_DisableOwnAddress2 (I2C_TypeDef * I2Cx)

Function description

Disable acknowledge on Own Address2 match address.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- OAR2 OA2EN LL_I2C_DisableOwnAddress2

LL_I2C_IsEnabledOwnAddress2

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledOwnAddress2 (const I2C_TypeDef * I2Cx)

Function description

Check if Own Address1 acknowledge is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- OAR2 OA2EN LL_I2C_IsEnabledOwnAddress2

LL_I2C_SetTiming

Function name

__STATIC_INLINE void LL_I2C_SetTiming (I2C_TypeDef * I2Cx, uint32_t Timing)

Function description

Configure the SDA setup, hold time and the SCL high, low period.

Parameters

- **I2Cx:** I2C Instance.
- **Timing:** This parameter must be a value between Min_Data=0 and Max_Data=0xFFFFFFFF.

Return values

- **None:**

Notes

- This bit can only be programmed when the I2C is disabled (PE = 0).
- This parameter is computed with the STM32CubeMX Tool.

Reference Manual to LL API cross reference:

- TIMINGR TIMINGR LL_I2C_SetTiming

LL_I2C_GetTimingPrescaler

Function name

__STATIC_INLINE uint32_t LL_I2C_GetTimingPrescaler (const I2C_TypeDef * I2Cx)

Function description

Get the Timing Prescaler setting.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0x0 and Max_Data=0xF

Reference Manual to LL API cross reference:

- TIMINGR PRESC LL_I2C_GetTimingPrescaler

LL_I2C_GetClockLowPeriod

Function name

__STATIC_INLINE uint32_t LL_I2C_GetClockLowPeriod (const I2C_TypeDef * I2Cx)

Function description

Get the SCL low period setting.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0xFF

Reference Manual to LL API cross reference:

- TIMINGR SCLL LL_I2C_GetClockLowPeriod

LL_I2C_GetClockHighPeriod

Function name

__STATIC_INLINE uint32_t LL_I2C_GetClockHighPeriod (const I2C_TypeDef * I2Cx)

Function description

Get the SCL high period setting.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0xFF

Reference Manual to LL API cross reference:

- TIMINGR SCLH LL_I2C_GetClockHighPeriod

LL_I2C_GetDataHoldTime

Function name

__STATIC_INLINE uint32_t LL_I2C_GetDataHoldTime (const I2C_TypeDef * I2Cx)

Function description

Get the SDA hold time.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0x0 and Max_Data=0xF

Reference Manual to LL API cross reference:

- TIMINGR SDADEL LL_I2C_GetDataHoldTime

LL_I2C_GetDataSetupTime

Function name

__STATIC_INLINE uint32_t LL_I2C_GetDataSetupTime (const I2C_TypeDef * I2Cx)

Function description

Get the SDA setup time.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0x0 and Max_Data=0xF

Reference Manual to LL API cross reference:

- TIMINGR SCLDEL LL_I2C_GetDataSetupTime

LL_I2C_SetMode

Function name

__STATIC_INLINE void LL_I2C_SetMode (I2C_TypeDef * I2Cx, uint32_t PeripheralMode)

Function description

Configure peripheral mode.

Parameters

- **I2Cx:** I2C Instance.
- **PeripheralMode:** This parameter can be one of the following values:
  - LL_I2C_MODE_I2C
  - LL_I2C_MODE_SMBUS_HOST
  - LL_I2C_MODE_SMBUS_DEVICE
  - LL_I2C_MODE_SMBUS_DEVICE_ARP

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- CR1 SMBHEN LL_I2C_SetMode
- CR1 SMBDEN LL_I2C_SetMode

LL_I2C_GetMode

Function name

__STATIC_INLINE uint32_t LL_I2C_GetMode (const I2C_TypeDef * I2Cx)

Function description

Get peripheral mode.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I2C_MODE_I2C
  - LL_I2C_MODE_SMBUS_HOST
  - LL_I2C_MODE_SMBUS_DEVICE
  - LL_I2C_MODE_SMBUS_DEVICE_ARP

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- CR1 SMBHEN LL_I2C_GetMode
- CR1 SMBDEN LL_I2C_GetMode

LL_I2C_EnableSMBusAlert

Function name

__STATIC_INLINE void LL_I2C_EnableSMBusAlert (I2C_TypeDef * I2Cx)

Function description

Enable SMBus alert (Host or Device mode)

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- SMBus Device mode: SMBus Alert pin is drived low and Alert Response Address Header acknowledge is enabled. SMBus Host mode:SMBus Alert pin management is supported.

Reference Manual to LL API cross reference:

- CR1 ALERTEN LL_I2C_EnableSMBusAlert

LL_I2C_DisableSMBusAlert

Function name

__STATIC_INLINE void LL_I2C_DisableSMBusAlert (I2C_TypeDef * I2Cx)

Function description

Disable SMBus alert (Host or Device mode)

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- SMBus Device mode: SMBus Alert pin is not drived (can be used as a standard GPIO) and Alert Response Address Header acknowledge is disabled. SMBus Host mode:SMBus Alert pin management is not supported.

Reference Manual to LL API cross reference:

- CR1 ALERTEN LL_I2C_DisableSMBusAlert

LL_I2C_IsEnabledSMBusAlert

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledSMBusAlert (const I2C_TypeDef * I2Cx)

Function description

Check if SMBus alert (Host or Device mode) is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- CR1 ALERTEN LL_I2C_IsEnabledSMBusAlert

LL_I2C_EnableSMBusPEC

Function name

__STATIC_INLINE void LL_I2C_EnableSMBusPEC (I2C_TypeDef * I2Cx)

Function description

Enable SMBus Packet Error Calculation (PEC).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- CR1 PECEN LL_I2C_EnableSMBusPEC

LL_I2C_DisableSMBusPEC

Function name

__STATIC_INLINE void LL_I2C_DisableSMBusPEC (I2C_TypeDef * I2Cx)

Function description

Disable SMBus Packet Error Calculation (PEC).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- CR1 PECEN LL_I2C_DisableSMBusPEC

LL_I2C_IsEnabledSMBusPEC

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledSMBusPEC (const I2C_TypeDef * I2Cx)

Function description

Check if SMBus Packet Error Calculation (PEC) is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- CR1 PECEN LL_I2C_IsEnabledSMBusPEC

LL_I2C_ConfigSMBusTimeout

Function name

__STATIC_INLINE void LL_I2C_ConfigSMBusTimeout (I2C_TypeDef * I2Cx, uint32_t TimeoutA, uint32_t TimeoutAMode, uint32_t TimeoutB)

Function description

Configure the SMBus Clock Timeout.

Parameters

- **I2Cx:** I2C Instance.
- **TimeoutA:** This parameter must be a value between Min_Data=0 and Max_Data=0xFFF.
- **TimeoutAMode:** This parameter can be one of the following values:
  - LL_I2C_SMBUS_TIMEOUTA_MODE_SCL_LOW
  - LL_I2C_SMBUS_TIMEOUTA_MODE_SDA_SCL_HIGH
- **TimeoutB:**

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- This configuration can only be programmed when associated Timeout is disabled (TimeoutA and/ orTimeoutB).

Reference Manual to LL API cross reference:

- TIMEOUTR TIMEOUTA LL_I2C_ConfigSMBusTimeout
- TIMEOUTR TIDLE LL_I2C_ConfigSMBusTimeout
- TIMEOUTR TIMEOUTB LL_I2C_ConfigSMBusTimeout

LL_I2C_SetSMBusTimeoutA

Function name

__STATIC_INLINE void LL_I2C_SetSMBusTimeoutA (I2C_TypeDef * I2Cx, uint32_t TimeoutA)

Function description

Configure the SMBus Clock TimeoutA (SCL low timeout or SCL and SDA high timeout depends on TimeoutA mode).

Parameters

- **I2Cx:** I2C Instance.
- **TimeoutA:** This parameter must be a value between Min_Data=0 and Max_Data=0xFFF.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- These bits can only be programmed when TimeoutA is disabled.

Reference Manual to LL API cross reference:

- TIMEOUTR TIMEOUTA LL_I2C_SetSMBusTimeoutA

LL_I2C_GetSMBusTimeoutA

Function name

__STATIC_INLINE uint32_t LL_I2C_GetSMBusTimeoutA (const I2C_TypeDef * I2Cx)

Function description

Get the SMBus Clock TimeoutA setting.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0 and Max_Data=0xFFF

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- TIMEOUTR TIMEOUTA LL_I2C_GetSMBusTimeoutA

LL_I2C_SetSMBusTimeoutAMode

Function name

__STATIC_INLINE void LL_I2C_SetSMBusTimeoutAMode (I2C_TypeDef * I2Cx, uint32_t TimeoutAMode)

Function description

Set the SMBus Clock TimeoutA mode.

Parameters

- **I2Cx:** I2C Instance.
- **TimeoutAMode:** This parameter can be one of the following values:
  - LL_I2C_SMBUS_TIMEOUTA_MODE_SCL_LOW
  - LL_I2C_SMBUS_TIMEOUTA_MODE_SDA_SCL_HIGH

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- This bit can only be programmed when TimeoutA is disabled.

Reference Manual to LL API cross reference:

- TIMEOUTR TIDLE LL_I2C_SetSMBusTimeoutAMode

LL_I2C_GetSMBusTimeoutAMode

Function name

__STATIC_INLINE uint32_t LL_I2C_GetSMBusTimeoutAMode (const I2C_TypeDef * I2Cx)

Function description

Get the SMBus Clock TimeoutA mode.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I2C_SMBUS_TIMEOUTA_MODE_SCL_LOW
  - LL_I2C_SMBUS_TIMEOUTA_MODE_SDA_SCL_HIGH

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- TIMEOUTR TIDLE LL_I2C_GetSMBusTimeoutAMode

LL_I2C_SetSMBusTimeoutB

Function name

__STATIC_INLINE void LL_I2C_SetSMBusTimeoutB (I2C_TypeDef * I2Cx, uint32_t TimeoutB)

Function description

Configure the SMBus Extended Cumulative Clock TimeoutB (Master or Slave mode).

Parameters

- **I2Cx:** I2C Instance.
- **TimeoutB:** This parameter must be a value between Min_Data=0 and Max_Data=0xFFF.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- These bits can only be programmed when TimeoutB is disabled.

Reference Manual to LL API cross reference:

Function description

Disable STOP detection interrupt.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 STOPIE LL_I2C_DisableIT_STOP

LL_I2C_IsEnabledIT_STOP

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledIT_STOP (const I2C_TypeDef * I2Cx)

Function description

Check if STOP detection interrupt is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 STOPIE LL_I2C_IsEnabledIT_STOP

LL_I2C_EnableIT_TC

Function name

__STATIC_INLINE void LL_I2C_EnableIT_TC (I2C_TypeDef * I2Cx)

Function description

Enable Transfer Complete interrupt.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- Any of these events will generate interrupt : Transfer Complete (TC) Transfer Complete Reload (TCR)

Reference Manual to LL API cross reference:

- CR1 TCIE LL_I2C_EnableIT_TC

LL_I2C_DisableIT_TC

Function name

__STATIC_INLINE void LL_I2C_DisableIT_TC (I2C_TypeDef * I2Cx)

Function description

Disable Transfer Complete interrupt.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- Any of these events will generate interrupt : Transfer Complete (TC) Transfer Complete Reload (TCR)

Reference Manual to LL API cross reference:

- CR1 TCIE LL_I2C_DisableIT_TC

LL_I2C_IsEnabledIT_TC

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledIT_TC (const I2C_TypeDef * I2Cx)

Function description

Check if Transfer Complete interrupt is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 TCIE LL_I2C_IsEnabledIT_TC

LL_I2C_EnableIT_ERR

Function name

__STATIC_INLINE void LL_I2C_EnableIT_ERR (I2C_TypeDef * I2Cx)

Function description

Enable Error interrupts.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- Any of these errors will generate interrupt : Arbitration Loss (ARLO) Bus Error detection (BERR) Overrun/ Underrun (OVR) SMBus Timeout detection (TIMEOUT) SMBus PEC error detection (PECERR) SMBus Alert pin event detection (ALERT)

Reference Manual to LL API cross reference:

- CR1 ERRIE LL_I2C_EnableIT_ERR

LL_I2C_DisableIT_ERR

Function name

__STATIC_INLINE void LL_I2C_DisableIT_ERR (I2C_TypeDef * I2Cx)

Function description

Disable Error interrupts.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- Any of these errors will generate interrupt : Arbitration Loss (ARLO) Bus Error detection (BERR) Overrun/ Underrun (OVR) SMBus Timeout detection (TIMEOUT) SMBus PEC error detection (PECERR) SMBus Alert pin event detection (ALERT)

Reference Manual to LL API cross reference:

- CR1 ERRIE LL_I2C_DisableIT_ERR

LL_I2C_IsEnabledIT_ERR

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledIT_ERR (const I2C_TypeDef * I2Cx)

Function description

Check if Error interrupts are enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 ERRIE LL_I2C_IsEnabledIT_ERR

LL_I2C_IsActiveFlag_TXE

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_TXE (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of Transmit data register empty flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: When next data is written in Transmit data register. SET: When Transmit data register is empty.

Reference Manual to LL API cross reference:

- ISR TXE LL_I2C_IsActiveFlag_TXE

LL_I2C_IsActiveFlag_TXIS

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_TXIS (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of Transmit interrupt flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: When next data is written in Transmit data register. SET: When Transmit data register is empty.

Reference Manual to LL API cross reference:

- ISR TXIS LL_I2C_IsActiveFlag_TXIS

LL_I2C_IsActiveFlag_RXNE

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_RXNE (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of Receive data register not empty flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: When Receive data register is read. SET: When the received data is copied in Receive data register.

Reference Manual to LL API cross reference:

- ISR RXNE LL_I2C_IsActiveFlag_RXNE

LL_I2C_IsActiveFlag_ADDR

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_ADDR (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of Address matched flag (slave mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: Clear default value. SET: When the received slave address matched with one of the enabled slave address.

Reference Manual to LL API cross reference:

- ISR ADDR LL_I2C_IsActiveFlag_ADDR

LL_I2C_IsActiveFlag_NACK

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_NACK (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of Not Acknowledge received flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: Clear default value. SET: When a NACK is received after a byte transmission.

Reference Manual to LL API cross reference:

- ISR NACKF LL_I2C_IsActiveFlag_NACK

LL_I2C_IsActiveFlag_STOP

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_STOP (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of Stop detection flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: Clear default value. SET: When a Stop condition is detected.

Reference Manual to LL API cross reference:

- ISR STOPF LL_I2C_IsActiveFlag_STOP

LL_I2C_IsActiveFlag_TC

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_TC (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of Transfer complete flag (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: Clear default value. SET: When RELOAD=0, AUTOEND=0 and NBYTES date have been transferred.

Reference Manual to LL API cross reference:

- ISR TC LL_I2C_IsActiveFlag_TC

LL_I2C_IsActiveFlag_TCR

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_TCR (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of Transfer complete flag (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: Clear default value. SET: When RELOAD=1 and NBYTES date have been transferred.

Reference Manual to LL API cross reference:

- ISR TCR LL_I2C_IsActiveFlag_TCR

LL_I2C_IsActiveFlag_BERR

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_BERR (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of Bus error flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: Clear default value. SET: When a misplaced Start or Stop condition is detected.

Reference Manual to LL API cross reference:

- ISR BERR LL_I2C_IsActiveFlag_BERR

LL_I2C_IsActiveFlag_ARLO

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_ARLO (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of Arbitration lost flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: Clear default value. SET: When arbitration lost.

Reference Manual to LL API cross reference:

- ISR ARLO LL_I2C_IsActiveFlag_ARLO

LL_I2C_IsActiveFlag_OVR

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_OVR (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of Overrun/Underrun flag (slave mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: Clear default value. SET: When an overrun/underrun error occurs (Clock Stretching Disabled).

Reference Manual to LL API cross reference:

- ISR OVR LL_I2C_IsActiveFlag_OVR

LL_I2C_IsActiveSMBusFlag_PECERR

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveSMBusFlag_PECERR (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of SMBus PEC error flag in reception.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- RESET: Clear default value. SET: When the received PEC does not match with the PEC register content.

Reference Manual to LL API cross reference:

- ISR PECERR LL_I2C_IsActiveSMBusFlag_PECERR

LL_I2C_IsActiveSMBusFlag_TIMEOUT

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveSMBusFlag_TIMEOUT (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of SMBus Timeout detection flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- RESET: Clear default value. SET: When a timeout or extended clock timeout occurs.

Reference Manual to LL API cross reference:

- ISR TIMEOUT LL_I2C_IsActiveSMBusFlag_TIMEOUT

LL_I2C_IsActiveSMBusFlag_ALERT

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveSMBusFlag_ALERT (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of SMBus alert flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- RESET: Clear default value. SET: When SMBus host configuration, SMBus alert enabled and a falling edge event occurs on SMBA pin.

Reference Manual to LL API cross reference:

- ISR ALERT LL_I2C_IsActiveSMBusFlag_ALERT

LL_I2C_IsActiveFlag_BUSY

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_BUSY (const I2C_TypeDef * I2Cx)

Function description

Indicate the status of Bus Busy flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: Clear default value. SET: When a Start condition is detected.

Reference Manual to LL API cross reference:

- ISR BUSY LL_I2C_IsActiveFlag_BUSY

LL_I2C_ClearFlag_ADDR

Function name

__STATIC_INLINE void LL_I2C_ClearFlag_ADDR (I2C_TypeDef * I2Cx)

Function description

Clear Address Matched flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR ADDRCF LL_I2C_ClearFlag_ADDR

LL_I2C_ClearFlag_NACK

Function name

__STATIC_INLINE void LL_I2C_ClearFlag_NACK (I2C_TypeDef * I2Cx)

Function description

Clear Not Acknowledge flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR NACKCF LL_I2C_ClearFlag_NACK

LL_I2C_ClearFlag_STOP

Function name

__STATIC_INLINE void LL_I2C_ClearFlag_STOP (I2C_TypeDef * I2Cx)

Function description

Clear Stop detection flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR STOPCF LL_I2C_ClearFlag_STOP

LL_I2C_ClearFlag_TXE

Function name

__STATIC_INLINE void LL_I2C_ClearFlag_TXE (I2C_TypeDef * I2Cx)

Function description

Clear Transmit data register empty flag (TXE).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- This bit can be clear by software in order to flush the transmit data register (TXDR).

Reference Manual to LL API cross reference:

- ISR TXE LL_I2C_ClearFlag_TXE

LL_I2C_ClearFlag_BERR

Function name

__STATIC_INLINE void LL_I2C_ClearFlag_BERR (I2C_TypeDef * I2Cx)

Function description

Clear Bus error flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR BERRCF LL_I2C_ClearFlag_BERR

LL_I2C_ClearFlag_ARLO

Function name

__STATIC_INLINE void LL_I2C_ClearFlag_ARLO (I2C_TypeDef * I2Cx)

Function description

Clear Arbitration lost flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR ARLOCF LL_I2C_ClearFlag_ARLO

LL_I2C_ClearFlag_OVR

Function name

__STATIC_INLINE void LL_I2C_ClearFlag_OVR (I2C_TypeDef * I2Cx)

Function description

Clear Overrun/Underrun flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR OVRCF LL_I2C_ClearFlag_OVR

LL_I2C_ClearSMBusFlag_PECERR

Function name

__STATIC_INLINE void LL_I2C_ClearSMBusFlag_PECERR (I2C_TypeDef * I2Cx)

Function description

Clear SMBus PEC error flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- ICR PECCF LL_I2C_ClearSMBusFlag_PECERR

LL_I2C_ClearSMBusFlag_TIMEOUT

Function name

__STATIC_INLINE void LL_I2C_ClearSMBusFlag_TIMEOUT (I2C_TypeDef * I2Cx)

Function description

Clear SMBus Timeout detection flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- ICR TIMOUTCF LL_I2C_ClearSMBusFlag_TIMEOUT

LL_I2C_ClearSMBusFlag_ALERT

Function name

__STATIC_INLINE void LL_I2C_ClearSMBusFlag_ALERT (I2C_TypeDef * I2Cx)

Function description

Clear SMBus Alert flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- ICR ALERTCF LL_I2C_ClearSMBusFlag_ALERT

LL_I2C_EnableAutoEndMode

Function name

__STATIC_INLINE void LL_I2C_EnableAutoEndMode (I2C_TypeDef * I2Cx)

Function description

Enable automatic STOP condition generation (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- Automatic end mode : a STOP condition is automatically sent when NBYTES data are transferred. This bit has no effect in slave mode or when RELOAD bit is set.

Reference Manual to LL API cross reference:

- CR2 AUTOEND LL_I2C_EnableAutoEndMode

LL_I2C_DisableAutoEndMode

Function name

__STATIC_INLINE void LL_I2C_DisableAutoEndMode (I2C_TypeDef * I2Cx)

Function description

Disable automatic STOP condition generation (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- Software end mode : TC flag is set when NBYTES data are transferre, stretching SCL low.

Reference Manual to LL API cross reference:

- CR2 AUTOEND LL_I2C_DisableAutoEndMode

LL_I2C_IsEnabledAutoEndMode

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledAutoEndMode (const I2C_TypeDef * I2Cx)

Function description

Check if automatic STOP condition is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR2 AUTOEND LL_I2C_IsEnabledAutoEndMode

LL_I2C_EnableReloadMode

Function name

__STATIC_INLINE void LL_I2C_EnableReloadMode (I2C_TypeDef * I2Cx)

Function description

Enable reload mode (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The transfer is not completed after the NBYTES data transfer, NBYTES will be reloaded when TCR flag is set.

Reference Manual to LL API cross reference:

- CR2 RELOAD LL_I2C_EnableReloadMode

LL_I2C_DisableReloadMode

Function name

__STATIC_INLINE void LL_I2C_DisableReloadMode (I2C_TypeDef * I2Cx)

Function description

Disable reload mode (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The transfer is completed after the NBYTES data transfer(STOP or RESTART will follow).

Reference Manual to LL API cross reference:

- CR2 RELOAD LL_I2C_DisableReloadMode

LL_I2C_IsEnabledReloadMode

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledReloadMode (const I2C_TypeDef * I2Cx)

Function description

Check if reload mode is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR2 RELOAD LL_I2C_IsEnabledReloadMode

LL_I2C_SetTransferSize

Function name

__STATIC_INLINE void LL_I2C_SetTransferSize (I2C_TypeDef * I2Cx, uint32_t TransferSize)

Function description

Configure the number of bytes for transfer.

Parameters

- **I2Cx:** I2C Instance.
- **TransferSize:** This parameter must be a value between Min_Data=0x00 and Max_Data=0xFF.

Return values

- **None:**

Notes

- Changing these bits when START bit is set is not allowed.

Reference Manual to LL API cross reference:

- CR2 NBYTES LL_I2C_SetTransferSize

LL_I2C_GetTransferSize

Function name

__STATIC_INLINE uint32_t LL_I2C_GetTransferSize (const I2C_TypeDef * I2Cx)

Function description

Get the number of bytes configured for transfer.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0x0 and Max_Data=0xFF

Reference Manual to LL API cross reference:

- CR2 NBYTES LL_I2C_GetTransferSize

LL_I2C_AcknowledgeNextData

Function name

__STATIC_INLINE void LL_I2C_AcknowledgeNextData (I2C_TypeDef * I2Cx, uint32_t TypeAcknowledge)

Function description

Prepare the generation of a ACKnowledge or Non ACKnowledge condition after the address receive match code or next received byte.

Parameters

- **I2Cx:** I2C Instance.
- **TypeAcknowledge:** This parameter can be one of the following values:
  - LL_I2C_ACK
  - LL_I2C_NACK

Return values

- **None:**

Notes

- Usage in Slave mode only.

Reference Manual to LL API cross reference:

- CR2 NACK LL_I2C_AcknowledgeNextData

LL_I2C_GenerateStartCondition

Function name

__STATIC_INLINE void LL_I2C_GenerateStartCondition (I2C_TypeDef * I2Cx)

Function description

Generate a START or RESTART condition.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The START bit can be set even if bus is BUSY or I2C is in slave mode. This action has no effect when RELOAD is set.

Reference Manual to LL API cross reference:

- CR2 START LL_I2C_GenerateStartCondition

LL_I2C_GenerateStopCondition

Function name

__STATIC_INLINE void LL_I2C_GenerateStopCondition (I2C_TypeDef * I2Cx)

Function description

Generate a STOP condition after the current byte transfer (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 STOP LL_I2C_GenerateStopCondition

LL_I2C_EnableAuto10BitRead

Function name

__STATIC_INLINE void LL_I2C_EnableAuto10BitRead (I2C_TypeDef * I2Cx)

Function description

Enable automatic RESTART Read request condition for 10bit address header (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The master sends the complete 10bit slave address read sequence : Start + 2 bytes 10bit address in Write direction + Restart + first 7 bits of 10bit address in Read direction.

Reference Manual to LL API cross reference:

- CR2 HEAD10R LL_I2C_EnableAuto10BitRead

LL_I2C_DisableAuto10BitRead

Function name

__STATIC_INLINE void LL_I2C_DisableAuto10BitRead (I2C_TypeDef * I2Cx)

Function description

Disable automatic RESTART Read request condition for 10bit address header (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The master only sends the first 7 bits of 10bit address in Read direction.

Reference Manual to LL API cross reference:

- CR2 HEAD10R LL_I2C_DisableAuto10BitRead

LL_I2C_IsEnabledAuto10BitRead

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledAuto10BitRead (const I2C_TypeDef * I2Cx)

Function description

Check if automatic RESTART Read request condition for 10bit address header is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR2 HEAD10R LL_I2C_IsEnabledAuto10BitRead

LL_I2C_SetTransferRequest

Function name

__STATIC_INLINE void LL_I2C_SetTransferRequest (I2C_TypeDef * I2Cx, uint32_t TransferRequest)

Function description

Configure the transfer direction (master mode).

Parameters

- **I2Cx:** I2C Instance.
- **TransferRequest:** This parameter can be one of the following values:
  - LL_I2C_REQUEST_WRITE
  - LL_I2C_REQUEST_READ

Return values

- **None:**

Notes

- Changing these bits when START bit is set is not allowed.

Reference Manual to LL API cross reference:

- CR2 RD_WRN LL_I2C_SetTransferRequest

LL_I2C_GetTransferRequest

Function name

__STATIC_INLINE uint32_t LL_I2C_GetTransferRequest (const I2C_TypeDef * I2Cx)

Function description

Get the transfer direction requested (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I2C_REQUEST_WRITE
  - LL_I2C_REQUEST_READ

Reference Manual to LL API cross reference:

- CR2 RD_WRN LL_I2C_GetTransferRequest

LL_I2C_SetSlaveAddr

Function name

__STATIC_INLINE void LL_I2C_SetSlaveAddr (I2C_TypeDef * I2Cx, uint32_t SlaveAddr)

Function description

Configure the slave address for transfer (master mode).

Parameters

- **I2Cx:** I2C Instance.
- **SlaveAddr:** This parameter must be a value between Min_Data=0x00 and Max_Data=0x3F.

Return values

- **None:**

Notes

- Changing these bits when START bit is set is not allowed.

Reference Manual to LL API cross reference:

- CR2 SADD LL_I2C_SetSlaveAddr

LL_I2C_GetSlaveAddr

Function name

__STATIC_INLINE uint32_t LL_I2C_GetSlaveAddr (const I2C_TypeDef * I2Cx)

Function description

Get the slave address programmed for transfer.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0x0 and Max_Data=0x3F

Reference Manual to LL API cross reference:

- CR2 SADD LL_I2C_GetSlaveAddr

LL_I2C_HandleTransfer

Function name

__STATIC_INLINE void LL_I2C_HandleTransfer (I2C_TypeDef * I2Cx, uint32_t SlaveAddr, uint32_t SlaveAddrSize, uint32_t TransferSize, uint32_t EndMode, uint32_t Request)

Function description

Handles I2Cx communication when starting transfer or during transfer (TC or TCR flag are set).

Parameters

- **I2Cx:** I2C Instance.
- **SlaveAddr:** Specifies the slave address to be programmed.
- **SlaveAddrSize:** This parameter can be one of the following values:
  - LL_I2C_ADDRSLAVE_7BIT
  - LL_I2C_ADDRSLAVE_10BIT
- **TransferSize:** Specifies the number of bytes to be programmed. This parameter must be a value between Min_Data=0 and Max_Data=255.
- **EndMode:** This parameter can be one of the following values:
  - LL_I2C_MODE_RELOAD
  - LL_I2C_MODE_AUTOEND
  - LL_I2C_MODE_SOFTEND
  - LL_I2C_MODE_SMBUS_RELOAD
  - LL_I2C_MODE_SMBUS_AUTOEND_NO_PEC
  - LL_I2C_MODE_SMBUS_SOFTEND_NO_PEC
  - LL_I2C_MODE_SMBUS_AUTOEND_WITH_PEC
  - LL_I2C_MODE_SMBUS_SOFTEND_WITH_PEC
- **Request:** This parameter can be one of the following values:
  - LL_I2C_GENERATE_NOSTARTSTOP
  - LL_I2C_GENERATE_STOP
  - LL_I2C_GENERATE_START_READ
  - LL_I2C_GENERATE_START_WRITE
  - LL_I2C_GENERATE_RESTART_7BIT_READ
  - LL_I2C_GENERATE_RESTART_7BIT_WRITE
  - LL_I2C_GENERATE_RESTART_10BIT_READ
  - LL_I2C_GENERATE_RESTART_10BIT_WRITE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 SADD LL_I2C_HandleTransfer
- CR2 ADD10 LL_I2C_HandleTransfer
- CR2 RD_WRN LL_I2C_HandleTransfer
- CR2 START LL_I2C_HandleTransfer
- CR2 STOP LL_I2C_HandleTransfer
- CR2 RELOAD LL_I2C_HandleTransfer
- CR2 NBYTES LL_I2C_HandleTransfer
- CR2 AUTOEND LL_I2C_HandleTransfer
- CR2 HEAD10R LL_I2C_HandleTransfer

LL_I2C_GetTransferDirection

Function name

__STATIC_INLINE uint32_t LL_I2C_GetTransferDirection (const I2C_TypeDef * I2Cx)

Function description

Indicate the value of transfer direction (slave mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I2C_DIRECTION_WRITE
  - LL_I2C_DIRECTION_READ

Notes

- RESET: Write transfer, Slave enters in receiver mode. SET: Read transfer, Slave enters in transmitter mode.

Reference Manual to LL API cross reference:

- ISR DIR LL_I2C_GetTransferDirection

LL_I2C_GetAddressMatchCode

Function name

__STATIC_INLINE uint32_t LL_I2C_GetAddressMatchCode (const I2C_TypeDef * I2Cx)

Function description

Return the slave matched address.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x3F

Reference Manual to LL API cross reference:

- ISR ADDCODE LL_I2C_GetAddressMatchCode

LL_I2C_EnableSMBusPECCompare

Function name

__STATIC_INLINE void LL_I2C_EnableSMBusPECCompare (I2C_TypeDef * I2Cx)

Function description

Enable internal comparison of the SMBus Packet Error byte (transmission or reception mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- This feature is cleared by hardware when the PEC byte is transferred, or when a STOP condition or an Address Matched is received. This bit has no effect when RELOAD bit is set. This bit has no effect in device mode when SBC bit is not set.

Reference Manual to LL API cross reference:

- CR2 PECBYTE LL_I2C_EnableSMBusPECCompare

LL_I2C_IsEnabledSMBusPECCompare

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledSMBusPECCompare (const I2C_TypeDef * I2Cx)

Function description

Check if the SMBus Packet Error byte internal comparison is requested or not.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- CR2 PECBYTE LL_I2C_IsEnabledSMBusPECCompare

LL_I2C_GetSMBusPEC

Function name

__STATIC_INLINE uint32_t LL_I2C_GetSMBusPEC (const I2C_TypeDef * I2Cx)

Function description

Get the SMBus Packet Error byte calculated.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0xFF

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- PECR PEC LL_I2C_GetSMBusPEC

LL_I2C_ReceiveData8

Function name

__STATIC_INLINE uint8_t LL_I2C_ReceiveData8 (const I2C_TypeDef * I2Cx)

Function description

Read Receive Data register.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0xFF

Reference Manual to LL API cross reference:

- RXDR RXDATA LL_I2C_ReceiveData8

LL_I2C_TransmitData8

Function name

__STATIC_INLINE void LL_I2C_TransmitData8 (I2C_TypeDef * I2Cx, uint8_t Data)

Function description

Write in Transmit Data Register .

Parameters

- **I2Cx:** I2C Instance.
- **Data:** Value between Min_Data=0x00 and Max_Data=0xFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TXDR TXDATA LL_I2C_TransmitData8

LL_I2C_Enable_SelectedTrigger

Function name

__STATIC_INLINE void LL_I2C_Enable_SelectedTrigger (I2C_TypeDef * I2Cx)

Function description

Enable Selected Trigger.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGEN LL_I2C_Enable_SelectedTrigger

LL_I2C_Disable_SelectedTrigger

Function name

__STATIC_INLINE void LL_I2C_Disable_SelectedTrigger (I2C_TypeDef * I2Cx)

Function description

Disable Selected Trigger.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGEN LL_I2C_Disable_SelectedTrigger

LL_I2C_IsEnabled_SelectedTrigger

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabled_SelectedTrigger (const I2C_TypeDef * I2Cx)

Function description

Indicate if selected Trigger is disabled or enabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- AUTOCR TRIGEN LL_I2C_IsEnabled_SelectedTrigger

LL_I2C_SetTriggerPolarity

Function name

__STATIC_INLINE void LL_I2C_SetTriggerPolarity (I2C_TypeDef * I2Cx, uint32_t Polarity)

Function description

Set the trigger polarity.

Parameters

- **I2Cx:** I2C Instance.
- **Polarity:** This parameter can be one of the following values:
  - LL_I2C_TRIG_POLARITY_RISING
  - LL_I2C_TRIG_POLARITY_FALLING

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGPOL LL_I2C_SetTriggerPolarity

LL_I2C_GetTriggerPolarity

Function name

__STATIC_INLINE uint32_t LL_I2C_GetTriggerPolarity (const I2C_TypeDef * I2Cx)

Function description

Get the trigger polarity.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I2C_TRIG_POLARITY_RISING
  - LL_I2C_TRIG_POLARITY_FALLING

Reference Manual to LL API cross reference:

- AUTOCR TRIGPOL LL_I2C_GetTriggerPolarity

LL_I2C_SetSelectedTrigger

Function name

__STATIC_INLINE void LL_I2C_SetSelectedTrigger (I2C_TypeDef * I2Cx, uint32_t Trigger)

Function description

Set the selected trigger.

Parameters

- **I2Cx:** I2C Instance.
- **Trigger:** This parameter can be one of the following values:
  - LL_I2C_GRP1_GPDMA_CH0_TCF_TRG
  - LL_I2C_GRP1_GPDMA_CH1_TCF_TRG
  - LL_I2C_GRP1_GPDMA_CH2_TCF_TRG
  - LL_I2C_GRP1_GPDMA_CH3_TCF_TRG
  - LL_I2C_GRP1_EXTI5_TRG
  - LL_I2C_GRP1_EXTI9_TRG
  - LL_I2C_GRP1_LPTIM1_CH1_TRG
  - LL_I2C_GRP1_LPTIM2_CH1_TRG
  - LL_I2C_GRP1_COMP1_TRG
  - LL_I2C_GRP1_COMP2_TRG
  - LL_I2C_GRP1_RTC_ALRA_TRG
  - LL_I2C_GRP1_RTC_WUT_TRG
  - LL_I2C_GRP2_GPDMA_CH0_TCF_TRG
  - LL_I2C_GRP2_GPDMA_CH1_TCF_TRG
  - LL_I2C_GRP2_GPDMA_CH2_TCF_TRG
  - LL_I2C_GRP2_GPDMA_CH3_TCF_TRG
  - LL_I2C_GRP2_EXTI5_TRG
  - LL_I2C_GRP2_EXTI8_TRG
  - LL_I2C_GRP2_LPTIM1_CH1_TRG
  - LL_I2C_GRP2_LPTIM3_CH1_TRG
  - LL_I2C_GRP2_COMP1_TRG
  - LL_I2C_GRP2_COMP2_TRG
  - LL_I2C_GRP2_RTC_ALRA_TRG
  - LL_I2C_GRP2_RTC_WUT_TRG

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGSEL LL_I2C_SetSelectedTrigger

LL_I2C_GetSelectedTrigger

Function name

__STATIC_INLINE uint32_t LL_I2C_GetSelectedTrigger (const I2C_TypeDef * I2Cx)

Function description

Get the selected trigger.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I2C_GRP1_GPDMA_CH0_TCF_TRG
  - LL_I2C_GRP1_GPDMA_CH1_TCF_TRG
  - LL_I2C_GRP1_GPDMA_CH2_TCF_TRG
  - LL_I2C_GRP1_GPDMA_CH3_TCF_TRG
  - LL_I2C_GRP1_EXTI5_TRG
  - LL_I2C_GRP1_EXTI9_TRG
  - LL_I2C_GRP1_LPTIM1_CH1_TRG
  - LL_I2C_GRP1_LPTIM2_CH1_TRG
  - LL_I2C_GRP1_COMP1_TRG
  - LL_I2C_GRP1_COMP2_TRG
  - LL_I2C_GRP1_RTC_ALRA_TRG
  - LL_I2C_GRP1_RTC_WUT_TRG
  - LL_I2C_GRP2_GPDMA_CH0_TCF_TRG
  - LL_I2C_GRP2_GPDMA_CH1_TCF_TRG
  - LL_I2C_GRP2_GPDMA_CH2_TCF_TRG
  - LL_I2C_GRP2_GPDMA_CH3_TCF_TRG
  - LL_I2C_GRP2_EXTI5_TRG
  - LL_I2C_GRP2_EXTI8_TRG
  - LL_I2C_GRP2_LPTIM1_CH1_TRG
  - LL_I2C_GRP2_LPTIM3_CH1_TRG
  - LL_I2C_GRP2_COMP1_TRG
  - LL_I2C_GRP2_COMP2_TRG
  - LL_I2C_GRP2_RTC_ALRA_TRG
  - LL_I2C_GRP2_RTC_WUT_TRG

Reference Manual to LL API cross reference:

- AUTOCR TRIGSEL LL_I2C_GetSelectedTrigger

LL_I2C_Init

Function name

ErrorStatus LL_I2C_Init (I2C_TypeDef * I2Cx, const LL_I2C_InitTypeDef * I2C_InitStruct)

Function description

Initialize the I2C registers according to the specified parameters in I2C_InitStruct.

Parameters

- **I2Cx:** I2C Instance.
- **I2C_InitStruct:** pointer to a LL_I2C_InitTypeDef structure.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: I2C registers are initialized
  - ERROR: Not applicable

LL_I2C_DeInit

Function name

ErrorStatus LL_I2C_DeInit (const I2C_TypeDef * I2Cx)

Function description

De-initialize the I2C registers to their default reset values.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: I2C registers are de-initialized
  - ERROR: I2C registers are not de-initialized

LL_I2C_StructInit

Function name

void LL_I2C_StructInit (LL_I2C_InitTypeDef * I2C_InitStruct)

Function description

Set each LL_I2C_InitTypeDef field to default value.

Parameters

- **I2C_InitStruct:** Pointer to a LL_I2C_InitTypeDef structure.

Return values

- **None:**

85.3 I2C Firmware driver defines

The following section lists the various define and macros of the module.

85.3.1 I2C

I2C

Master Addressing Mode

LL_I2C_ADDRESSING_MODE_7BIT

Master operates in 7-bit addressing mode.

LL_I2C_ADDRESSING_MODE_10BIT

Master operates in 10-bit addressing mode.

Slave Address Length

LL_I2C_ADDRSLAVE_7BIT

Slave Address in 7-bit.

LL_I2C_ADDRSLAVE_10BIT

Slave Address in 10-bit.

Analog Filter Selection

LL_I2C_ANALOGFILTER_ENABLE

Analog filter is enabled.

LL_I2C_ANALOGFILTER_DISABLE

Analog filter is disabled.

Autonomous Trigger Polarity

LL_I2C_TRIG_POLARITY_RISING

I2C triggered on rising edge

LL_I2C_TRIG_POLARITY_FALLING

I2C triggered on falling edge

Autonomous Trigger selection

LL_I2C_TRIG_GRP1

Trigger Group for I2C1, I2C2

LL_I2C_TRIG_GRP2

Trigger Group for I2C3

LL_I2C_GRP1_GPDMA_CH0_TCF_TRG

HW Trigger signal is GPDMA_CH0_TRG

LL_I2C_GRP1_GPDMA_CH1_TCF_TRG

HW Trigger signal is GPDMA_CH1_TRG

LL_I2C_GRP1_GPDMA_CH2_TCF_TRG

HW Trigger signal is GPDMA_CH2_TRG

LL_I2C_GRP1_GPDMA_CH3_TCF_TRG

HW Trigger signal is GPDMA_CH3_TRG

LL_I2C_GRP1_EXTI5_TRG

HW Trigger signal is EXTI5_TRG

LL_I2C_GRP1_EXTI9_TRG

HW Trigger signal is EXTI9_TRG

LL_I2C_GRP1_LPTIM1_CH1_TRG

HW Trigger signal is LPTIM1_CH1_TRG

LL_I2C_GRP1_LPTIM2_CH1_TRG

HW Trigger signal is LPTIM2_CH1_TRG

LL_I2C_GRP1_COMP1_TRG

HW Trigger signal is COMP1_TRG

LL_I2C_GRP1_COMP2_TRG

HW Trigger signal is COMP2_TRG

LL_I2C_GRP1_RTC_ALRA_TRG

HW Trigger signal is RTC_ALRA_TRG

LL_I2C_GRP1_RTC_WUT_TRG

HW Trigger signal is RTC_WUT_TRG

LL_I2C_GRP2_GPDMA_CH0_TCF_TRG

HW Trigger signal is GPDMA_CH0_TRG

LL_I2C_GRP2_GPDMA_CH1_TCF_TRG

HW Trigger signal is GPDMA_CH1_TRG

LL_I2C_GRP2_GPDMA_CH2_TCF_TRG

HW Trigger signal is GPDMA_CH2_TRG

LL_I2C_GRP2_GPDMA_CH3_TCF_TRG

HW Trigger signal is GPDMA_CH3_TRG

LL_I2C_GRP2_EXTI5_TRG

HW Trigger signal is EXTI5_TRG

LL_I2C_GRP2_EXTI8_TRG

HW Trigger signal is EXTI8_TRG

LL_I2C_GRP2_LPTIM1_CH1_TRG

HW Trigger signal is LPTIM1_CH1_TRG

LL_I2C_GRP2_LPTIM3_CH1_TRG

HW Trigger signal is LPTIM3_CH1_TRG

LL_I2C_GRP2_COMP1_TRG

HW Trigger signal is COMP1_TRG

LL_I2C_GRP2_COMP2_TRG

HW Trigger signal is COMP2_TRG

LL_I2C_GRP2_RTC_ALRA_TRG

HW Trigger signal is RTC_ALRA_TRG

LL_I2C_GRP2_RTC_WUT_TRG

HW Trigger signal is RTC_WUT_TRG

Clear Flags Defines

LL_I2C_ICR_ADDRCF

Address Matched flag

LL_I2C_ICR_NACKCF

Not Acknowledge flag

LL_I2C_ICR_STOPCF

Stop detection flag

LL_I2C_ICR_BERRCF

Bus error flag

LL_I2C_ICR_ARLOCF

Arbitration Lost flag

LL_I2C_ICR_OVRCF

Overrun/Underrun flag

LL_I2C_ICR_PECCF

PEC error flag

LL_I2C_ICR_TIMOUTCF

Timeout detection flag

LL_I2C_ICR_ALERTCF

Alert flag

Read Write Direction

LL_I2C_DIRECTION_WRITE

Write transfer request by master, slave enters receiver mode.

LL_I2C_DIRECTION_READ

Read transfer request by master, slave enters transmitter mode.

DMA Register Data

LL_I2C_DMA_REG_DATA_TRANSMIT

Get address of data register used for transmission

LL_I2C_DMA_REG_DATA_RECEIVE

Get address of data register used for reception

Start And Stop Generation

LL_I2C_GENERATE_NOSTARTSTOP

Don't Generate Stop and Start condition.

LL_I2C_GENERATE_STOP

Generate Stop condition (Size should be set to 0).

LL_I2C_GENERATE_START_READ

Generate Start for read request.

LL_I2C_GENERATE_START_WRITE

Generate Start for write request.

LL_I2C_GENERATE_RESTART_7BIT_READ

Generate Restart for read request, slave 7Bit address.

LL_I2C_GENERATE_RESTART_7BIT_WRITE

Generate Restart for write request, slave 7Bit address.

LL_I2C_GENERATE_RESTART_10BIT_READ

Generate Restart for read request, slave 10Bit address.

LL_I2C_GENERATE_RESTART_10BIT_WRITE

Generate Restart for write request, slave 10Bit address.

Get Flags Defines

LL_I2C_ISR_TXE

Transmit data register empty

LL_I2C_ISR_TXIS

Transmit interrupt status

LL_I2C_ISR_RXNE

Receive data register not empty

LL_I2C_ISR_ADDR

Address matched (slave mode)

LL_I2C_ISR_NACKF

Not Acknowledge received flag

LL_I2C_ISR_STOPF

Stop detection flag

LL_I2C_ISR_TC

Transfer Complete (master mode)

LL_I2C_ISR_TCR

Transfer Complete Reload

LL_I2C_ISR_BERR

Bus error

LL_I2C_ISR_ARLO

Arbitration lost

LL_I2C_ISR_OVR

Overrun/Underrun (slave mode)

LL_I2C_ISR_PECERR

PEC Error in reception (SMBus mode)

LL_I2C_ISR_TIMEOUT

Timeout detection flag (SMBus mode)

LL_I2C_ISR_ALERT

SMBus alert (SMBus mode)

LL_I2C_ISR_BUSY

Bus busy

Acknowledge Generation

LL_I2C_ACK

ACK is sent after current received byte.

LL_I2C_NACK

NACK is sent after current received byte.

IT Defines

LL_I2C_CR1_TXIE

TX Interrupt enable

LL_I2C_CR1_RXIE

RX Interrupt enable

LL_I2C_CR1_ADDRIE

Address match Interrupt enable (slave only)

LL_I2C_CR1_NACKIE

Not acknowledge received Interrupt enable

LL_I2C_CR1_STOPIE

STOP detection Interrupt enable

LL_I2C_CR1_TCIE

Transfer Complete interrupt enable

LL_I2C_CR1_ERRIE

Error interrupts enable

Transfer End Mode

LL_I2C_MODE_RELOAD

Enable I2C Reload mode.

LL_I2C_MODE_AUTOEND

Enable I2C Automatic end mode with no HW PEC comparison.

LL_I2C_MODE_SOFTEND

Enable I2C Software end mode with no HW PEC comparison.

LL_I2C_MODE_SMBUS_RELOAD

Enable SMBUS Automatic end mode with HW PEC comparison.

LL_I2C_MODE_SMBUS_AUTOEND_NO_PEC

Enable SMBUS Automatic end mode with HW PEC comparison.

LL_I2C_MODE_SMBUS_SOFTEND_NO_PEC

Enable SMBUS Software end mode with HW PEC comparison.

LL_I2C_MODE_SMBUS_AUTOEND_WITH_PEC

Enable SMBUS Automatic end mode with HW PEC comparison.

LL_I2C_MODE_SMBUS_SOFTEND_WITH_PEC

Enable SMBUS Software end mode with HW PEC comparison.

Own Address 1 Length

LL_I2C_OWNADDRESS1_7BIT

Own address 1 is a 7-bit address.

LL_I2C_OWNADDRESS1_10BIT

Own address 1 is a 10-bit address.

Own Address 2 Masks

LL_I2C_OWNADDRESS2_NOMASK

Own Address2 No mask.

LL_I2C_OWNADDRESS2_MASK01

Only Address2 bits[7:2] are compared.

LL_I2C_OWNADDRESS2_MASK02

Only Address2 bits[7:3] are compared.

LL_I2C_OWNADDRESS2_MASK03

Only Address2 bits[7:4] are compared.

LL_I2C_OWNADDRESS2_MASK04

Only Address2 bits[7:5] are compared.

LL_I2C_OWNADDRESS2_MASK05

Only Address2 bits[7:6] are compared.

LL_I2C_OWNADDRESS2_MASK06

Only Address2 bits[7] are compared.

LL_I2C_OWNADDRESS2_MASK07

No comparison is done. All Address2 are acknowledged.

Peripheral Mode

LL_I2C_MODE_I2C

I2C Master or Slave mode

LL_I2C_MODE_SMBUS_HOST

SMBus Host address acknowledge

LL_I2C_MODE_SMBUS_DEVICE

SMBus Device default mode (Default address not acknowledge)

LL_I2C_MODE_SMBUS_DEVICE_ARP

SMBus Device Default address acknowledge

Transfer Request Direction

LL_I2C_REQUEST_WRITE

Master request a write transfer.

LL_I2C_REQUEST_READ

Master request a read transfer.

SMBus TimeoutA Mode SCL SDA Timeout

LL_I2C_SMBUS_TIMEOUTA_MODE_SCL_LOW

TimeoutA is used to detect SCL low level timeout.

LL_I2C_SMBUS_TIMEOUTA_MODE_SDA_SCL_HIGH

TimeoutA is used to detect both SCL and SDA high level timeout.

SMBus Timeout Selection

LL_I2C_SMBUS_TIMEOUTA

TimeoutA enable bit

LL_I2C_SMBUS_TIMEOUTB

TimeoutB (extended clock) enable bit

LL_I2C_SMBUS_ALL_TIMEOUT

TimeoutA and TimeoutB (extended clock) enable bits

Convert SDA SCL timings

__LL_I2C_CONVERT_TIMINGS

Description:

- Configure the SDA setup, hold time and the SCL high, low period.

Parameters:

- __PRESCALER__: This parameter must be a value between Min_Data=0 and Max_Data=0xF.
- __SETUP_TIME__: This parameter must be a value between Min_Data=0 and Max_Data=0xF. (tscldel = (SCLDEL+1)xtpresc)
- __HOLD_TIME__: This parameter must be a value between Min_Data=0 and Max_Data=0xF. (tsdadel = SDADELxtpresc)
- __SCLH_PERIOD__: This parameter must be a value between Min_Data=0 and Max_Data=0xFF. (tsclh = (SCLH+1)xtpresc)
- __SCLL_PERIOD__: This parameter must be a value between Min_Data=0 and Max_Data=0xFF. (tscll = (SCLL+1)xtpresc)

Return value:

- Value: between Min_Data=0 and Max_Data=0xFFFFFFFF

Common Write and read registers Macros

LL_I2C_WriteReg

Description:

- Write a value in I2C register.

Parameters:

- __INSTANCE__: I2C Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_I2C_ReadReg

Description:

- Read a value in I2C register.

Parameters:

- __INSTANCE__: I2C Instance
- __REG__: Register to be read

Return value:

- Register: value

86 LL I3C Generic Driver

86.1 I3C Firmware driver registers structures

86.1.1 LL_I3C_CtrlBusConfTypeDef

LL_I3C_CtrlBusConfTypeDef is defined in the stm32u3xx_ll_i3c.h

Data Fields

- ***uint32_t SDAHoldTime***
- ***uint32_t WaitTime***
- ***uint8_t SCLPPLowDuration***
- ***uint8_t SCLI3CHighDuration***
- ***uint8_t SCLODLowDuration***
- ***uint8_t SCLI2CHighDuration***
- ***uint8_t BusFreeDuration***
- ***uint8_t BusIdleDuration***

Field Documentation

- ***uint32_t LL_I3C_CtrlBusConfTypeDef::SDAHoldTime***
  Specifies the I3C SDA hold time. This parameter must be a value of ***I3C_LL_EC_SDA_HOLD_TIME***
- ***uint32_t LL_I3C_CtrlBusConfTypeDef::WaitTime***
  Specifies the time that the main and the new controllers should wait before issuing a start. This parameter must be a value of ***I3C_LL_EC_OWN_ACTIVITY_STATE***
- ***uint8_t LL_I3C_CtrlBusConfTypeDef::SCLPPLowDuration***
  Specifies the I3C SCL low duration in number of kernel clock cycles in I3C push-pull phases. This parameter must be a number between Min_Data=0 and Max_Data=0xFF.
- ***uint8_t LL_I3C_CtrlBusConfTypeDef::SCLI3CHighDuration***
  Specifies the I3C SCL high duration in number of kernel clock cycles, used for I3C messages for I3C open-drain and push pull phases. This parameter must be a number between Min_Data=0 and Max_Data=0xFF.
- ***uint8_t LL_I3C_CtrlBusConfTypeDef::SCLODLowDuration***
  Specifies the I3C SCL low duration in number of kernel clock cycles in open-drain phases, used for legacy I2C commands and for I3C open-drain phases. This parameter must be a number between Min_Data=0 and Max_Data=0xFF.
- ***uint8_t LL_I3C_CtrlBusConfTypeDef::SCLI2CHighDuration***
  Specifies the I3C SCL high duration in number of kernel clock cycles, used for legacy I2C commands. This parameter must be a number between Min_Data=0 and Max_Data=0xFF.
- ***uint8_t LL_I3C_CtrlBusConfTypeDef::BusFreeDuration***
  Specifies the I3C controller duration in number of kernel clock cycles, after a stop and before a start. This parameter must be a number between Min_Data=0 and Max_Data=0xFF.
- ***uint8_t LL_I3C_CtrlBusConfTypeDef::BusIdleDuration***
  Specifies the I3C controller duration in number of kernel clock cycles to be elapsed, after that both SDA and SCL are continuously high and stable before issuing a hot-join event. This parameter must be a number between Min_Data=0 and Max_Data=0xFF.

86.1.2 LL_I3C_TgtBusConfTypeDef

LL_I3C_TgtBusConfTypeDef is defined in the stm32u3xx_ll_i3c.h

Data Fields

- ***uint8_t BusAvailableDuration***

Field Documentation

- ***uint8_t LL_I3C_TgtBusConfTypeDef::BusAvailableDuration***
  Specifies the I3C target duration in number of kernel clock cycles, when the SDA and the SCL are high for at least taval. This parameter must be a number between Min_Data=0 and Max_Data=0xFF.

86.1.3 LL_I3C_InitTypeDef

LL_I3C_InitTypeDef is defined in the stm32u3xx_ll_i3c.h

Data Fields

- ***LL_I3C_CtrlBusConfTypeDef CtrlBusCharacteristic***
- ***LL_I3C_TgtBusConfTypeDef TgtBusCharacteristic***

Field Documentation

- ***LL_I3C_CtrlBusConfTypeDef LL_I3C_InitTypeDef::CtrlBusCharacteristic***
  Specifies the I3C controller bus characteristic configuration when Controller mode
- ***LL_I3C_TgtBusConfTypeDef LL_I3C_InitTypeDef::TgtBusCharacteristic***
  Specifies the I3C target bus characteristic configuration when Target mode

86.2 I3C Firmware driver API description

The following section lists the various functions of the I3C library.

86.2.1 Detailed description of functions

LL_I3C_Enable

Function name

__STATIC_INLINE void LL_I3C_Enable (I3C_TypeDef * I3Cx)

Function description

Enable I3C peripheral (EN = 1).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR EN LL_I3C_Enable

LL_I3C_Disable

Function name

__STATIC_INLINE void LL_I3C_Disable (I3C_TypeDef * I3Cx)

Function description

Disable I3C peripheral (EN = 0).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- Controller mode: before clearing EN, all possible target requests must be disabled using DISEC CCC.
  Target mode: software is not expected clearing EN unless a partial reset of the IP is needed

Reference Manual to LL API cross reference:

- CFGR EN LL_I3C_Disable

LL_I3C_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabled (const I3C_TypeDef * I3Cx)

Function description

Check if the I3C peripheral is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CFGR EN LL_I3C_IsEnabled

LL_I3C_IsEnabledReset

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledReset (const I3C_TypeDef * I3Cx)

Function description

Check if Reset action is required or not required.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- This bit indicates if Reset Action field has been updated by HW upon reception of RSTACT during current frame.

Reference Manual to LL API cross reference:

- DEVR0 RSTVAL LL_I3C_IsEnabledReset

LL_I3C_SetMode

Function name

__STATIC_INLINE void LL_I3C_SetMode (I3C_TypeDef * I3Cx, uint32_t PeripheralMode)

Function description

Configure peripheral mode.

Parameters

- **I3Cx:** I3C Instance.
- **PeripheralMode:** This parameter can be one of the following values:
  - LL_I3C_MODE_CONTROLLER
  - LL_I3C_MODE_TARGET

Return values

- **None:**

Notes

- This bit can only be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- CFGR CRINIT LL_I3C_SetMode

LL_I3C_GetMode

Function name

__STATIC_INLINE uint32_t LL_I3C_GetMode (const I3C_TypeDef * I3Cx)

Function description

Get peripheral mode.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I3C_MODE_CONTROLLER
  - LL_I3C_MODE_TARGET

Reference Manual to LL API cross reference:

- CFGR CRINIT LL_I3C_GetMode

LL_I3C_EnableArbitrationHeader

Function name

__STATIC_INLINE void LL_I3C_EnableArbitrationHeader (I3C_TypeDef * I3Cx)

Function description

An arbitration header (7'h7E) is sent after Start in case of legacy I2C or I3C private transfers.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be modified only when there is no frame ongoing

Reference Manual to LL API cross reference:

- CFGR NOARBH LL_I3C_EnableArbitrationHeader

LL_I3C_DisableArbitrationHeader

Function name

__STATIC_INLINE void LL_I3C_DisableArbitrationHeader (I3C_TypeDef * I3Cx)

Function description

Target address is sent directly after a Start in case of legacy I2C or I3C private transfers.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be modified only when there is no frame ongoing

Reference Manual to LL API cross reference:

- CFGR NOARBH LL_I3C_DisableArbitrationHeader

LL_I3C_IsEnabledArbitrationHeader

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledArbitrationHeader (const I3C_TypeDef * I3Cx)

Function description

Check if the arbitration header is enabled of disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CFGR NOARBH LL_I3C_IsEnabledArbitrationHeader

LL_I3C_EnableResetPattern

Function name

__STATIC_INLINE void LL_I3C_EnableResetPattern (I3C_TypeDef * I3Cx)

Function description

A Reset Pattern is inserted before the STOP at the end of a frame when the last CCC of the frame was RSTACT CCC.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be modified only when there is no frame ongoing

Reference Manual to LL API cross reference:

- CFGR RSTPTRN LL_I3C_EnableResetPattern

LL_I3C_DisableResetPattern

Function name

__STATIC_INLINE void LL_I3C_DisableResetPattern (I3C_TypeDef * I3Cx)

Function description

A single STOP is emitted at the end of a frame.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be modified only when there is no frame ongoing

Reference Manual to LL API cross reference:

- CFGR RSTPTRN LL_I3C_DisableResetPattern

LL_I3C_IsEnabledResetPattern

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledResetPattern (const I3C_TypeDef * I3Cx)

Function description

Check if Reset Pattern is enabled of disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CFGR RSTPTRN LL_I3C_IsEnabledResetPattern

LL_I3C_EnableExitPattern

Function name

__STATIC_INLINE void LL_I3C_EnableExitPattern (I3C_TypeDef * I3Cx)

Function description

An Exit Pattern is sent after header (MTYPE = header) to program an escalation fault.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be modified only when there is no frame ongoing

Reference Manual to LL API cross reference:

- CFGR EXITPTRN LL_I3C_EnableExitPattern

LL_I3C_DisableExitPattern

Function name

__STATIC_INLINE void LL_I3C_DisableExitPattern (I3C_TypeDef * I3Cx)

Function description

An Exit Pattern is not sent after header (MTYPE = header).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be modified only when there is no frame ongoing

Reference Manual to LL API cross reference:

- CFGR EXITPTRN LL_I3C_DisableExitPattern

LL_I3C_IsEnabledExitPattern

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledExitPattern (const I3C_TypeDef * I3Cx)

Function description

Check if Exit Pattern is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CFGR EXITPTRN LL_I3C_IsEnabledExitPattern

LL_I3C_EnableHighKeeperSDA

Function name

__STATIC_INLINE void LL_I3C_EnableHighKeeperSDA (I3C_TypeDef * I3Cx)

Function description

High Keeper is enabled and will be used in place of standard Open drain Pull Up device during handoff procedures.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can only be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- CFGR HKSDAEN LL_I3C_EnableHighKeeperSDA

LL_I3C_DisableHighKeeperSDA

Function name

__STATIC_INLINE void LL_I3C_DisableHighKeeperSDA (I3C_TypeDef * I3Cx)

Function description

High Keeper is disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can only be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- CFGR HKSDAEN LL_I3C_DisableHighKeeperSDA

LL_I3C_IsEnabledHighKeeperSDA

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledHighKeeperSDA (const I3C_TypeDef * I3Cx)

Function description

Check if High Keeper is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CFGR HKSDAEN LL_I3C_IsEnabledHighKeeperSDA

LL_I3C_EnableHJAck

Function name

__STATIC_INLINE void LL_I3C_EnableHJAck (I3C_TypeDef * I3Cx)

Function description

Hot Join Request is Acked.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be used when I3C is acting as a Controller.

Reference Manual to LL API cross reference:

- CFGR HJACK LL_I3C_EnableHJAck

LL_I3C_DisableHJAck

Function name

__STATIC_INLINE void LL_I3C_DisableHJAck (I3C_TypeDef * I3Cx)

Function description

Hot Join Request is Nacked.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be used when I3C is acting as a Controller.

Reference Manual to LL API cross reference:

- CFGR HJACK LL_I3C_DisableHJAck

LL_I3C_IsEnabledHJAck

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledHJAck (const I3C_TypeDef * I3Cx)

Function description

Check if Hot Join Request Acknowledgement is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CFGR HJACK LL_I3C_IsEnabledHJAck

LL_I3C_DMA_GetRegAddr

Function name

__STATIC_INLINE uint32_t LL_I3C_DMA_GetRegAddr (const I3C_TypeDef * I3Cx, uint32_t Direction)

Function description

Get the data register address used for DMA transfer.

Parameters

- **I3Cx:** I3C Instance
- **Direction:** This parameter can be one of the following values:
  - LL_I3C_DMA_REG_DATA_TRANSMIT_BYTE
  - LL_I3C_DMA_REG_DATA_RECEIVE_BYTE
  - LL_I3C_DMA_REG_DATA_TRANSMIT_WORD
  - LL_I3C_DMA_REG_DATA_RECEIVE_WORD
  - LL_I3C_DMA_REG_STATUS
  - LL_I3C_DMA_REG_CONTROL

Return values

- **Address:** of data register

Reference Manual to LL API cross reference:

- TDR TDB0 LL_I3C_DMA_GetRegAddr
- TDWR TDWR LL_I3C_DMA_GetRegAddr
- RDR RXRB0 LL_I3C_DMA_GetRegAddr
- RDWR RDWR LL_I3C_DMA_GetRegAddr
- SR SR LL_I3C_DMA_GetRegAddr
- CR CR LL_I3C_DMA_GetRegAddr

LL_I3C_EnableDMAReq_RX

Function name

__STATIC_INLINE void LL_I3C_EnableDMAReq_RX (I3C_TypeDef * I3Cx)

Function description

Enable DMA FIFO reception requests.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR RXDMAEN LL_I3C_EnableDMAReq_RX

LL_I3C_DisableDMAReq_RX

Function name

__STATIC_INLINE void LL_I3C_DisableDMAReq_RX (I3C_TypeDef * I3Cx)

Function description

Disable DMA FIFO reception requests.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR RXDMAEN LL_I3C_DisableDMAReq_RX

LL_I3C_IsEnabledDMAReq_RX

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledDMAReq_RX (const I3C_TypeDef * I3Cx)

Function description

Check if DMA FIFO reception requests are enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CFGR RXDMAEN LL_I3C_IsEnabledDMAReq_RX

LL_I3C_SetRxFIFOThreshold

Function name

__STATIC_INLINE void LL_I3C_SetRxFIFOThreshold (I3C_TypeDef * I3Cx, uint32_t RxFIFOThreshold)

Function description

Set the Receive FIFO Threshold level.

Parameters

- **I3Cx:** I3C Instance.
- **RxFIFOThreshold:** This parameter can be one of the following values:
  - LL_I3C_RXFIFO_THRESHOLD_1_4
  - LL_I3C_RXFIFO_THRESHOLD_4_4

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR RXTHRES LL_I3C_SetRxFIFOThreshold

LL_I3C_GetRxFIFOThreshold

Function name

__STATIC_INLINE uint32_t LL_I3C_GetRxFIFOThreshold (const I3C_TypeDef * I3Cx)

Function description

Get the Receive FIFO Threshold level.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I3C_RXFIFO_THRESHOLD_1_4
  - LL_I3C_RXFIFO_THRESHOLD_4_4

Reference Manual to LL API cross reference:

- CFGR RXTHRES LL_I3C_GetRxFIFOThreshold

LL_I3C_EnableDMAReq_TX

Function name

__STATIC_INLINE void LL_I3C_EnableDMAReq_TX (I3C_TypeDef * I3Cx)

Function description

Enable DMA FIFO transmission requests.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR TXDMAEN LL_I3C_EnableDMAReq_TX

LL_I3C_DisableDMAReq_TX

Function name

__STATIC_INLINE void LL_I3C_DisableDMAReq_TX (I3C_TypeDef * I3Cx)

Function description

Disable DMA FIFO transmission requests.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR TXDMAEN LL_I3C_DisableDMAReq_TX

LL_I3C_IsEnabledDMAReq_TX

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledDMAReq_TX (const I3C_TypeDef * I3Cx)

Function description

Check if DMA FIFO transmission requests are enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CFGR TXDMAEN LL_I3C_IsEnabledDMAReq_TX

LL_I3C_SetTxFIFOThreshold

Function name

__STATIC_INLINE void LL_I3C_SetTxFIFOThreshold (I3C_TypeDef * I3Cx, uint32_t TxFIFOThreshold)

Function description

Set the Transmit FIFO Threshold level.

Parameters

- **I3Cx:** I3C Instance.
- **TxFIFOThreshold:** This parameter can be one of the following values:
  - LL_I3C_TXFIFO_THRESHOLD_1_4
  - LL_I3C_TXFIFO_THRESHOLD_4_4

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR TXTHRES LL_I3C_SetTxFIFOThreshold

LL_I3C_GetTxFIFOThreshold

Function name

__STATIC_INLINE uint32_t LL_I3C_GetTxFIFOThreshold (const I3C_TypeDef * I3Cx)

Function description

Get the Transmit FIFO Threshold level.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I3C_TXFIFO_THRESHOLD_1_4
  - LL_I3C_TXFIFO_THRESHOLD_4_4
- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CFGR TXTHRES LL_I3C_GetTxFIFOThreshold

LL_I3C_EnableDMAReq_Status

Function name

__STATIC_INLINE void LL_I3C_EnableDMAReq_Status (I3C_TypeDef * I3Cx)

Function description

Enable DMA FIFO Status requests.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR SDMAEN LL_I3C_EnableDMAReq_Status

LL_I3C_DisableDMAReq_Status

Function name

__STATIC_INLINE void LL_I3C_DisableDMAReq_Status (I3C_TypeDef * I3Cx)

Function description

Disable DMA FIFO Status requests.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR SDMAEN LL_I3C_DisableDMAReq_Status

LL_I3C_IsEnabledDMAReq_Status

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledDMAReq_Status (const I3C_TypeDef * I3Cx)

Function description

Check if DMA FIFO Status requests are enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CFGR SDMAEN LL_I3C_IsEnabledDMAReq_Status

LL_I3C_EnableStatusFIFO

Function name

__STATIC_INLINE void LL_I3C_EnableStatusFIFO (I3C_TypeDef * I3Cx)

Function description

Enable the Status FIFO.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- Not applicable in target mode. Status FIFO always disabled in target mode.

Reference Manual to LL API cross reference:

- CFGR SMODE LL_I3C_EnableStatusFIFO

LL_I3C_DisableStatusFIFO

Function name

__STATIC_INLINE void LL_I3C_DisableStatusFIFO (I3C_TypeDef * I3Cx)

Function description

Disable the Status FIFO Threshold.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR SMODE LL_I3C_DisableStatusFIFO

LL_I3C_IsEnabledStatusFIFO

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledStatusFIFO (const I3C_TypeDef * I3Cx)

Function description

Check if the Status FIFO Threshold is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CFGR SMODE LL_I3C_IsEnabledStatusFIFO

LL_I3C_EnableControlFIFO

Function name

__STATIC_INLINE void LL_I3C_EnableControlFIFO (I3C_TypeDef * I3Cx)

Function description

Enable the Control and Transmit FIFO preloaded before starting a transfer on I3C bus.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- Not applicable in target mode. Control FIFO always disabled in target mode.

Reference Manual to LL API cross reference:

- CFGR TMODE LL_I3C_EnableControlFIFO

LL_I3C_DisableControlFIFO

Function name

__STATIC_INLINE void LL_I3C_DisableControlFIFO (I3C_TypeDef * I3Cx)

Function description

Disable the Control and Transmit FIFO preloaded before starting a transfer on I3C bus.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR TMODE LL_I3C_DisableControlFIFO

LL_I3C_IsEnabledControlFIFO

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledControlFIFO (const I3C_TypeDef * I3Cx)

Function description

Check if the Control and Transmit FIFO preloaded is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CFGR TMODE LL_I3C_IsEnabledControlFIFO

LL_I3C_EnableDMAReq_Control

Function name

__STATIC_INLINE void LL_I3C_EnableDMAReq_Control (I3C_TypeDef * I3Cx)

Function description

Enable DMA FIFO Control word transfer requests.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR CDMAEN LL_I3C_EnableDMAReq_Control

LL_I3C_DisableDMAReq_Control

Function name

__STATIC_INLINE void LL_I3C_DisableDMAReq_Control (I3C_TypeDef * I3Cx)

Function description

Disable DMA FIFO Control word transfer requests.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR CDMAEN LL_I3C_DisableDMAReq_Control

LL_I3C_IsEnabledDMAReq_Control

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledDMAReq_Control (const I3C_TypeDef * I3Cx)

Function description

Check if DMA FIFO Control word transfer requests are enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CFGR CDMAEN LL_I3C_IsEnabledDMAReq_Control

LL_I3C_SetTriggerSource

Function name

__STATIC_INLINE void LL_I3C_SetTriggerSource (I3C_TypeDef * I3Cx, uint32_t TriggerSource)

Function description

Set Hardware Trigger Selector.

Parameters

- **I3Cx:** I3C Instance.
- **TriggerSource:** This parameter can be one of the following values:
  - LL_I3C_GRP1_GPDMA_CH0_TCF_TRG
  - LL_I3C_GRP1_GPDMA_CH1_TCF_TRG
  - LL_I3C_GRP1_GPDMA_CH2_TCF_TRG
  - LL_I3C_GRP1_GPDMA_CH3_TCF_TRG
  - LL_I3C_GRP1_EXTI5_TRG
  - LL_I3C_GRP1_EXTI9_TRG
  - LL_I3C_GRP1_LPTIM1_CH1_TRG
  - LL_I3C_GRP1_LPTIM2_CH1_TRG
  - LL_I3C_GRP1_COMP1_TRG
  - LL_I3C_GRP1_COMP2_TRG
  - LL_I3C_GRP1_RTC_ALRA_TRG
  - LL_I3C_GRP1_RTC_WUT_TRG
  - LL_I3C_GRP1_TIM15_TGO_CKTIM_TRG
  - LL_I3C_GRP1_TIM16_OC1_TRG

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR TRIGSEL LL_I3C_SetTriggerSource

LL_I3C_GetTriggerSource

Function name

__STATIC_INLINE uint32_t LL_I3C_GetTriggerSource (const I3C_TypeDef * I3Cx)

Function description

Get Hardware Trigger Selector.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I3C_GRP1_GPDMA_CH0_TCF_TRG
  - LL_I3C_GRP1_GPDMA_CH1_TCF_TRG
  - LL_I3C_GRP1_GPDMA_CH2_TCF_TRG
  - LL_I3C_GRP1_GPDMA_CH3_TCF_TRG
  - LL_I3C_GRP1_EXTI5_TRG
  - LL_I3C_GRP1_EXTI9_TRG
  - LL_I3C_GRP1_LPTIM1_CH1_TRG
  - LL_I3C_GRP1_LPTIM2_CH1_TRG
  - LL_I3C_GRP1_COMP1_TRG
  - LL_I3C_GRP1_COMP2_TRG
  - LL_I3C_GRP1_RTC_ALRA_TRG
  - LL_I3C_GRP1_RTC_WUT_TRG
  - LL_I3C_GRP1_TIM15_TGO_CKTIM_TRG
  - LL_I3C_GRP1_TIM16_OC1_TRG

Reference Manual to LL API cross reference:

- CFGR TRIGSEL LL_I3C_GetTriggerSource

LL_I3C_SetTriggerPolarity

Function name

__STATIC_INLINE void LL_I3C_SetTriggerPolarity (I3C_TypeDef * I3Cx, uint32_t TriggerPolarity)

Function description

Set Hardware Trigger Polarity.

Parameters

- **I3Cx:** I3C Instance.
- **TriggerPolarity:** This parameter can be one of the following values:
  - LL_I3C_TRIG_LOW
  - LL_I3C_TRIG_HIGH

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR TRIGPOL LL_I3C_SetTriggerPolarity

LL_I3C_GetTriggerPolarity

Function name

__STATIC_INLINE uint32_t LL_I3C_GetTriggerPolarity (const I3C_TypeDef * I3Cx)

Function description

Get Hardware Trigger Polarity.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I3C_TRIG_LOW
  - LL_I3C_TRIG_HIGH

Reference Manual to LL API cross reference:

- CFGR TRIGPOL LL_I3C_GetTriggerPolarity

LL_I3C_EnableTrigger

Function name

__STATIC_INLINE void LL_I3C_EnableTrigger (I3C_TypeDef * I3Cx)

Function description

Enable HardwareTrigger.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR TRIGHWEN LL_I3C_EnableTrigger

LL_I3C_DisableTrigger

Function name

__STATIC_INLINE void LL_I3C_DisableTrigger (I3C_TypeDef * I3Cx)

Function description

Disable HardwareTrigger.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR TRIGHWEN LL_I3C_DisableTrigger

LL_I3C_IsEnabledTrigger

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledTrigger (const I3C_TypeDef * I3Cx)

Function description

Check if HardwareTrigger is is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CFGR TRIGHWEN LL_I3C_IsEnabledTrigger

LL_I3C_EnableOwnDynAddress

Function name

__STATIC_INLINE void LL_I3C_EnableOwnDynAddress (I3C_TypeDef * I3Cx)

Function description

Set Own Dynamic Address as Valid.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- DEVR0 DAVAL LL_I3C_EnableOwnDynAddress

LL_I3C_DisableOwnDynAddress

Function name

__STATIC_INLINE void LL_I3C_DisableOwnDynAddress (I3C_TypeDef * I3Cx)

Function description

Set Own Dynamic Address as Not-Valid.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- DEVR0 DAVAL LL_I3C_DisableOwnDynAddress

LL_I3C_IsEnabledOwnDynAddress

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledOwnDynAddress (const I3C_TypeDef * I3Cx)

Function description

Check if Own Dynamic address is Valid or Not-Valid.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DEVR0 DAVAL LL_I3C_IsEnabledOwnDynAddress

LL_I3C_SetOwnDynamicAddress

Function name

__STATIC_INLINE void LL_I3C_SetOwnDynamicAddress (I3C_TypeDef * I3Cx, uint32_t OwnDynamicAddress)

Function description

Configure Own Dynamic Address.

Parameters

- **I3Cx:** I3C Instance.
- **OwnDynamicAddress:** This parameter must be a value between Min_Data=0 and Max_Data=0x7F

Return values

- **None:**

Notes

- This bit can be programmed in controller mode or during Dynamic Address procedure from current controller.

Reference Manual to LL API cross reference:

- DEVR0 DA LL_I3C_SetOwnDynamicAddress

LL_I3C_GetOwnDynamicAddress

Function name

__STATIC_INLINE uint8_t LL_I3C_GetOwnDynamicAddress (const I3C_TypeDef * I3Cx)

Function description

Get Own Dynamic Address.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Value:** between Min_Data=0 and Max_Data=0x7F

Reference Manual to LL API cross reference:

- DEVR0 DA LL_I3C_GetOwnDynamicAddress

LL_I3C_EnableIBI

Function name

__STATIC_INLINE void LL_I3C_EnableIBI (I3C_TypeDef * I3Cx)

Function description

Set IBI procedure allowed (when the I3C is acting as target).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be programmed when the I3C is disabled (EN = 0) or updated by HW upon reception of DISEC CCC.

Reference Manual to LL API cross reference:

- DEVR0 IBIEN LL_I3C_EnableIBI

LL_I3C_DisableIBI

Function name

__STATIC_INLINE void LL_I3C_DisableIBI (I3C_TypeDef * I3Cx)

Function description

Set IBI procedure not-allowed (when the I3C is acting as target).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be programmed when the I3C is disabled (EN = 0) or updated by HW upon reception of DISEC CCC.

Reference Manual to LL API cross reference:

- DEVR0 IBIEN LL_I3C_DisableIBI

LL_I3C_IsEnabledIBI

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledIBI (const I3C_TypeDef * I3Cx)

Function description

Check if IBI procedure is allowed or not allowed.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DEVR0 IBIEN LL_I3C_IsEnabledIBI

LL_I3C_EnableControllerRoleReq

Function name

__STATIC_INLINE void LL_I3C_EnableControllerRoleReq (I3C_TypeDef * I3Cx)

Function description

Set Controller-role Request allowed (when the I3C is acting as target).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be programmed when the I3C is disabled (EN = 0) or updated by HW upon reception of DISEC CCC.

Reference Manual to LL API cross reference:

- DEVR0 CREN LL_I3C_EnableControllerRoleReq

LL_I3C_DisableControllerRoleReq

Function name

__STATIC_INLINE void LL_I3C_DisableControllerRoleReq (I3C_TypeDef * I3Cx)

Function description

Set Controller-role Request as not-allowed (when the I3C is acting as target).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be programmed when the I3C is disabled (EN = 0) or updated by HW upon reception of DISEC CCC.

Reference Manual to LL API cross reference:

- DEVR0 CREN LL_I3C_DisableControllerRoleReq

LL_I3C_IsEnabledControllerRoleReq

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledControllerRoleReq (const I3C_TypeDef * I3Cx)

Function description

Check if Controller-role Request is allowed or not-allowed.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DEVR0 CREN LL_I3C_IsEnabledControllerRoleReq

LL_I3C_EnableHotJoin

Function name

__STATIC_INLINE void LL_I3C_EnableHotJoin (I3C_TypeDef * I3Cx)

Function description

Set Hot Join allowed (when the I3C is acting as target).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be programmed when the I3C is disabled (EN = 0) or updated by HW upon reception of DISEC CCC.

Reference Manual to LL API cross reference:

- DEVR0 HJEN LL_I3C_EnableHotJoin

LL_I3C_DisableHotJoin

Function name

__STATIC_INLINE void LL_I3C_DisableHotJoin (I3C_TypeDef * I3Cx)

Function description

Set Hot Join as not-allowed (when the I3C is acting as target).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be programmed when the I3C is disabled (EN = 0) or updated by HW upon reception of DISEC CCC.

Reference Manual to LL API cross reference:

- DEVR0 HJEN LL_I3C_DisableHotJoin

LL_I3C_IsEnabledHotJoin

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledHotJoin (const I3C_TypeDef * I3Cx)

Function description

Check if Hot Join is allowed or not-allowed.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DEVR0 HJEN LL_I3C_IsEnabledHotJoin

LL_I3C_SetMaxReadLength

Function name

__STATIC_INLINE void LL_I3C_SetMaxReadLength (I3C_TypeDef * I3Cx, uint16_t MaxReadLength)

Function description

Configure Maximum Read Length (target mode).

Parameters

- **I3Cx:** I3C Instance.
- **MaxReadLength:** This parameter must be a value between Min_Data=0x0 and Max_Data=0xFFFF

Return values

- **None:**

Notes

- Those bits can be updated by HW upon reception of GETMRL CCC.

Reference Manual to LL API cross reference:

- MAXRLR MRL LL_I3C_SetMaxReadLength

LL_I3C_GetMaxReadLength

Function name

__STATIC_INLINE uint32_t LL_I3C_GetMaxReadLength (const I3C_TypeDef * I3Cx)

Function description

Return Maximum Read Length (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Value:** between Min_Data=0x0 and Max_Data=0xFFFFF

Reference Manual to LL API cross reference:

- MAXRLR MRL LL_I3C_GetMaxReadLength

LL_I3C_ConfigNbIBIAddData

Function name

__STATIC_INLINE void LL_I3C_ConfigNbIBIAddData (I3C_TypeDef * I3Cx, uint32_t NbIBIAddData)

Function description

Configure the number of additional Mandatory Data Byte (MDB) sent to the controller after an acknowledge of the IBI (target mode).

Parameters

- **I3Cx:** I3C Instance.
- **NbIBIAddData:** This parameter can be one of the following values:
  - LL_I3C_PAYLOAD_EMPTY
  - LL_I3C_PAYLOAD_1_BYTE
  - LL_I3C_PAYLOAD_2_BYTES
  - LL_I3C_PAYLOAD_3_BYTES
  - LL_I3C_PAYLOAD_4_BYTES

Return values

- **None:**

Reference Manual to LL API cross reference:

- MAXRLR IBIP LL_I3C_ConfigNbIBIAddData

LL_I3C_GetConfigNbIBIAddData

Function name

__STATIC_INLINE uint32_t LL_I3C_GetConfigNbIBIAddData (const I3C_TypeDef * I3Cx)

Function description

Return the number of additional Mandatory Data Byte (MDB) sent to the controller after an acknowledge of the IBI (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I3C_PAYLOAD_EMPTY
  - LL_I3C_PAYLOAD_1_BYTE
  - LL_I3C_PAYLOAD_2_BYTES
  - LL_I3C_PAYLOAD_3_BYTES
  - LL_I3C_PAYLOAD_4_BYTES

Reference Manual to LL API cross reference:

- MAXRLR IBIP LL_I3C_GetConfigNbIBIAddData

LL_I3C_SetMaxWriteLength

Function name

__STATIC_INLINE void LL_I3C_SetMaxWriteLength (I3C_TypeDef * I3Cx, uint16_t MaxWriteLength)

Function description

Configure Maximum Write Length (target mode).

Parameters

- **I3Cx:** I3C Instance.
- **MaxWriteLength:** This parameter must be a value between Min_Data=0x0 and Max_Data=0xFFFF

Return values

- **None:**

Notes

- Those bits can be updated by HW upon reception of GETMWL CCC.

Reference Manual to LL API cross reference:

- MAXWLR MWL LL_I3C_SetMaxWriteLength

LL_I3C_GetMaxWriteLength

Function name

__STATIC_INLINE uint32_t LL_I3C_GetMaxWriteLength (const I3C_TypeDef * I3Cx)

Function description

Return Maximum Write Length (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Value:** between Min_Data=0x0 and Max_Data=0xFFFFF

Reference Manual to LL API cross reference:

- MAXWLR MWL LL_I3C_GetMaxWriteLength

LL_I3C_ConfigClockWaveForm

Function name

__STATIC_INLINE void LL_I3C_ConfigClockWaveForm (I3C_TypeDef * I3Cx, uint32_t ClockWaveForm)

Function description

Configure the SCL clock signal waveform.

Parameters

- **I3Cx:** I3C Instance.
- **ClockWaveForm:** This parameter must be a value between Min_Data=0 and Max_Data=0xFFFFFFFF.

Return values

- **None:**

Notes

- This bit can only be programmed when the I3C is disabled (EN = 0).
- This parameter is computed with the STM32CubeMX Tool.

Reference Manual to LL API cross reference:

- TIMINGR0 TIMINGR0 LL_I3C_ConfigClockWaveForm

LL_I3C_GetClockWaveForm

Function name

__STATIC_INLINE uint32_t LL_I3C_GetClockWaveForm (const I3C_TypeDef * I3Cx)

Function description

Get the SCL clock signal waveform.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Value:** between Min_Data=0 and Max_Data=0xFFFFFFFF.

Reference Manual to LL API cross reference:

- TIMINGR0 TIMINGR0 LL_I3C_GetClockWaveForm

LL_I3C_SetPeriodClockLowPP

Function name

__STATIC_INLINE void LL_I3C_SetPeriodClockLowPP (I3C_TypeDef * I3Cx, uint32_t PeriodClockLowPP)

Function description

Configure the SCL clock low period during I3C push-pull phases.

Parameters

- **I3Cx:** I3C Instance.
- **PeriodClockLowPP:** This parameter must be a value between Min_Data=0 and Max_Data=0xFF.

Return values

- **None:**

Notes

- This bit can only be programmed when the I3C is disabled (EN = 0).
- This parameter is computed with the STM32CubeMX Tool.

Reference Manual to LL API cross reference:

- TIMINGR0 SCLL_PP LL_I3C_SetPeriodClockLowPP

LL_I3C_GetPeriodClockLowPP

Function name

__STATIC_INLINE uint32_t LL_I3C_GetPeriodClockLowPP (const I3C_TypeDef * I3Cx)

Function description

Get the SCL clock low period during I3C push-pull phases.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Value:** between Min_Data=0 and Max_Data=0xFF.

Reference Manual to LL API cross reference:

- TIMINGR0 SCLL_PP LL_I3C_GetPeriodClockLowPP

LL_I3C_SetPeriodClockHighI3C

Function name

__STATIC_INLINE void LL_I3C_SetPeriodClockHighI3C (I3C_TypeDef * I3Cx, uint32_t PeriodClockHighI3C)

Function description

Configure the SCL clock High period during I3C open drain and push-pull phases.

Parameters

- **I3Cx:** I3C Instance.
- **PeriodClockHighI3C:** This parameter must be a value between Min_Data=0 and Max_Data=0xFF.

Return values

- **None:**

Notes

- This bit can only be programmed when the I3C is disabled (EN = 0).
- This parameter is computed with the STM32CubeMX Tool.

Reference Manual to LL API cross reference:

- TIMINGR0 SCLH_I3C LL_I3C_SetPeriodClockHighI3C

LL_I3C_GetPeriodClockHighI3C

Function name

__STATIC_INLINE uint32_t LL_I3C_GetPeriodClockHighI3C (const I3C_TypeDef * I3Cx)

Function description

Get the SCL clock high period during I3C open drain and push-pull phases.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Value:** between Min_Data=0 and Max_Data=0xFF.

Reference Manual to LL API cross reference:

- TIMINGR0 SCLH_I3C LL_I3C_GetPeriodClockHighI3C

LL_I3C_SetPeriodClockLowOD

Function name

__STATIC_INLINE void LL_I3C_SetPeriodClockLowOD (I3C_TypeDef * I3Cx, uint32_t PeriodClockLowOD)

Function description

Configure the SCL clock low period during I3C open drain phases.

Parameters

- **I3Cx:** I3C Instance.
- **PeriodClockLowOD:** This parameter must be a value between Min_Data=0 and Max_Data=0xFF.

Return values

- **None:**

Notes

- This bit can only be programmed when the I3C is disabled (EN = 0).
- This parameter is computed with the STM32CubeMX Tool.

Reference Manual to LL API cross reference:

- TIMINGR0 SCLL_OD LL_I3C_SetPeriodClockLowOD

LL_I3C_GetPeriodClockLowOD

Function name

__STATIC_INLINE uint32_t LL_I3C_GetPeriodClockLowOD (const I3C_TypeDef * I3Cx)

Function description

Get the SCL clock low period during I3C open phases.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Value:** between Min_Data=0 and Max_Data=0xFF.

Reference Manual to LL API cross reference:

- TIMINGR0 SCLL_OD LL_I3C_GetPeriodClockLowOD

LL_I3C_SetPeriodClockHighI2C

Function name

__STATIC_INLINE void LL_I3C_SetPeriodClockHighI2C (I3C_TypeDef * I3Cx, uint32_t PeriodClockHighI2C)

Function description

Configure the SCL clock High period during I2C open drain phases.

Parameters

- **I3Cx:** I3C Instance.
- **PeriodClockHighI2C:** This parameter must be a value between Min_Data=0 and Max_Data=0xFF.

Return values

- **None:**

Notes

- This bit can only be programmed when the I3C is disabled (EN = 0).
- This parameter is computed with the STM32CubeMX Tool.

Reference Manual to LL API cross reference:

- TIMINGR0 SCLH_I2C LL_I3C_SetPeriodClockHighI2C

LL_I3C_GetPeriodClockHighI2C

Function name

__STATIC_INLINE uint32_t LL_I3C_GetPeriodClockHighI2C (const I3C_TypeDef * I3Cx)

Function description

Get the SCL clock high period during I2C open drain phases.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Value:** between Min_Data=0 and Max_Data=0xFF.

Reference Manual to LL API cross reference:

- TIMINGR0 SCLH_I2C LL_I3C_GetPeriodClockHighI2C

LL_I3C_SetDataHoldTime

Function name

__STATIC_INLINE void LL_I3C_SetDataHoldTime (I3C_TypeDef * I3Cx, uint32_t DataHoldTime)

Function description

Configure the Controller additional hold time on SDA line.

Parameters

- **I3Cx:** I3C Instance.
- **DataHoldTime:** This parameter can be one of the following values:
  - LL_I3C_SDA_HOLD_TIME_0_5
  - LL_I3C_SDA_HOLD_TIME_1_5
  - LL_I3C_SDA_HOLD_TIME_2_5
  - LL_I3C_SDA_HOLD_TIME_3_5

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMINGR1 SDA_HD LL_I3C_SetDataHoldTime

LL_I3C_GetDataHoldTime

Function name

__STATIC_INLINE uint32_t LL_I3C_GetDataHoldTime (const I3C_TypeDef * I3Cx)

Function description

Get the Controller additional hold time on SDA line.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I3C_SDA_HOLD_TIME_0_5
  - LL_I3C_SDA_HOLD_TIME_1_5
  - LL_I3C_SDA_HOLD_TIME_2_5
  - LL_I3C_SDA_HOLD_TIME_3_5

Reference Manual to LL API cross reference:

- TIMINGR1 SDA_HD LL_I3C_GetDataHoldTime

LL_I3C_SetAvalTiming

Function name

__STATIC_INLINE void LL_I3C_SetAvalTiming (I3C_TypeDef * I3Cx, uint32_t AvalTiming)

Function description

Configure the Idle, Available state.

Parameters

- **I3Cx:** I3C Instance.
- **AvalTiming:** This parameter must be a value between Min_Data=0 and Max_Data=0xFF.

Return values

- **None:**

Notes

- This bit can only be programmed when the I3C is disabled (EN = 0).
- This parameter is computed with the STM32CubeMX Tool.

Reference Manual to LL API cross reference:

- TIMINGR1 AVAL LL_I3C_SetAvalTiming

LL_I3C_GetAvalTiming

Function name

__STATIC_INLINE uint32_t LL_I3C_GetAvalTiming (const I3C_TypeDef * I3Cx)

Function description

Get the Idle, Available integer value state.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Value:** between Min_Data=0 and Max_Data=0xFF.

Reference Manual to LL API cross reference:

- TIMINGR1 AVAL LL_I3C_GetAvalTiming

LL_I3C_SetFreeTiming

Function name

__STATIC_INLINE void LL_I3C_SetFreeTiming (I3C_TypeDef * I3Cx, uint32_t FreeTiming)

Function description

Configure the Free state.

Parameters

- **I3Cx:** I3C Instance.
- **FreeTiming:** This parameter must be a value between Min_Data=0 and Max_Data=0x3F.

Return values

- **None:**

Notes

- This bit can only be programmed when the I3C is disabled (EN = 0).
- This parameter is computed with the STM32CubeMX Tool.

Reference Manual to LL API cross reference:

- TIMINGR1 FREE LL_I3C_SetFreeTiming

LL_I3C_GetFreeTiming

Function name

__STATIC_INLINE uint32_t LL_I3C_GetFreeTiming (const I3C_TypeDef * I3Cx)

Function description

Get the Free integeter value state.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Value:** between Min_Data=0 and Max_Data=0x3F.

Reference Manual to LL API cross reference:

- TIMINGR1 FREE LL_I3C_GetFreeTiming

LL_I3C_SetControllerActivityState

Function name

__STATIC_INLINE void LL_I3C_SetControllerActivityState (I3C_TypeDef * I3Cx, uint32_t ControllerActivityState)

Function description

Configure the activity state of the new controller.

Parameters

- **I3Cx:** I3C Instance.
- **ControllerActivityState:** This parameter can be one of the following values:
  - LL_I3C_OWN_ACTIVITY_STATE_0
  - LL_I3C_OWN_ACTIVITY_STATE_1
  - LL_I3C_OWN_ACTIVITY_STATE_2
  - LL_I3C_OWN_ACTIVITY_STATE_3

Return values

- **None:**

Notes

- Refer to MIPI I3C specification (https:__www.mipi.org_specifications) for more details related to Activity State.

Reference Manual to LL API cross reference:

- TIMINGR1 ASNCR LL_I3C_SetControllerActivityState

LL_I3C_GetControllerActivityState

Function name

__STATIC_INLINE uint32_t LL_I3C_GetControllerActivityState (const I3C_TypeDef * I3Cx)

Function description

Get the activity state of the new controller.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I3C_OWN_ACTIVITY_STATE_0
  - LL_I3C_OWN_ACTIVITY_STATE_1
  - LL_I3C_OWN_ACTIVITY_STATE_2
  - LL_I3C_OWN_ACTIVITY_STATE_3

Notes

- Refer to MIPI I3C specification (https:__www.mipi.org_specifications) for more details related to Activity State.

Reference Manual to LL API cross reference:

- TIMINGR1 ASNCR LL_I3C_GetControllerActivityState

LL_I3C_SetCtrlBusCharacteristic

Function name

__STATIC_INLINE void LL_I3C_SetCtrlBusCharacteristic (I3C_TypeDef * I3Cx, uint32_t CtrlBusCharacteristic)

Function description

Configure the Controller SDA Hold time, Bus Free, Activity state, Idle state.

Parameters

- **I3Cx:** I3C Instance.
- **CtrlBusCharacteristic:** This parameter must be a value between Min_Data=0 and Max_Data=0x107F03FF.

Return values

- **None:**

Notes

- This bit can only be programmed when the I3C is disabled (EN = 0).
- This parameter is computed with the STM32CubeMX Tool.

Reference Manual to LL API cross reference:

- TIMINGR1 SDA_HD LL_I3C_SetCtrlBusCharacteristic
- TIMINGR1 FREE LL_I3C_SetCtrlBusCharacteristic
- TIMINGR1 ASNCR LL_I3C_SetCtrlBusCharacteristic
- TIMINGR1 IDLE LL_I3C_SetCtrlBusCharacteristic

LL_I3C_GetCtrlBusCharacteristic

Function name

__STATIC_INLINE uint32_t LL_I3C_GetCtrlBusCharacteristic (const I3C_TypeDef * I3Cx)

Function description

Get the Controller SDA Hold time, Bus Free, Activity state, Idle state.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Value:** between Min_Data=0 and Max_Data=0x107F03FF.

Reference Manual to LL API cross reference:

- TIMINGR1 SDA_HD LL_I3C_GetCtrlBusCharacteristic
- TIMINGR1 FREE LL_I3C_GetCtrlBusCharacteristic
- TIMINGR1 ASNCR LL_I3C_GetCtrlBusCharacteristic
- TIMINGR1 IDLE LL_I3C_GetCtrlBusCharacteristic

LL_I3C_SetTgtBusCharacteristic

Function name

__STATIC_INLINE void LL_I3C_SetTgtBusCharacteristic (I3C_TypeDef * I3Cx, uint32_t TgtBusCharacteristic)

Function description

Configure the Target Available state.

Parameters

- **I3Cx:** I3C Instance.
- **TgtBusCharacteristic:** This parameter must be a value between Min_Data=0 and Max_Data=0xFF.

Return values

- **None:**

Notes

- This bit can only be programmed when the I3C is disabled (EN = 0).
- This parameter is computed with the STM32CubeMX Tool.

Reference Manual to LL API cross reference:

- TIMINGR1 IDLE LL_I3C_SetTgtBusCharacteristic

LL_I3C_GetTgtBusCharacteristic

Function name

__STATIC_INLINE uint32_t LL_I3C_GetTgtBusCharacteristic (const I3C_TypeDef * I3Cx)

Function description

Get the Target Available state.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Value:** between Min_Data=0 and Max_Data=0xFF.

Reference Manual to LL API cross reference:

- TIMINGR1 IDLE LL_I3C_GetTgtBusCharacteristic

LL_I3C_SetStallTime

Function name

__STATIC_INLINE void LL_I3C_SetStallTime (I3C_TypeDef * I3Cx, uint32_t ControllerStallTime)

Function description

Configure the SCL clock stalling time on I3C Bus (controller mode).

Parameters

- **I3Cx:** I3C Instance.
- **ControllerStallTime:** This parameter must be a value between Min_Data=0 and Max_Data=0xFF.

Return values

- **None:**

Notes

- This bit can only be programmed when the I3C is disabled (EN = 0).
- This parameter is computed with the STM32CubeMX Tool.

Reference Manual to LL API cross reference:

- TIMINGR2 STALL LL_I3C_SetStallTime

LL_I3C_GetStallTime

Function name

__STATIC_INLINE uint32_t LL_I3C_GetStallTime (const I3C_TypeDef * I3Cx)

Function description

Get the SCL clock stalling time on I3C Bus (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Value:** between Min_Data=0 and Max_Data=0xFF.

Reference Manual to LL API cross reference:

- TIMINGR2 STALL LL_I3C_GetStallTime

LL_I3C_EnableStallACKI2CAddr

Function name

__STATIC_INLINE void LL_I3C_EnableStallACKI2CAddr (I3C_TypeDef * I3Cx)

Function description

Set stall on data ACK/NACK bit of legacy I2C address (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- TIMINGR2 STALLL LL_I3C_EnableStallACKI2CAddr

LL_I3C_DisableStallACKI2CAddr

Function name

__STATIC_INLINE void LL_I3C_DisableStallACKI2CAddr (I3C_TypeDef * I3Cx)

Function description

Disable stall on data ACK/NACK bit of legacy I2C address (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- TIMINGR2 STALLA LL_I3C_DisableStallACKI2CAddr

LL_I3C_IsEnabledStallACKI2CAddr

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledStallACKI2CAddr (const I3C_TypeDef * I3Cx)

Function description

Check if stall on data ACK/NACK bit of legacy I2C address is enabled or disabled (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TIMINGR2 STALLA LL_I3C_IsEnabledStallACKI2CAddr

LL_I3C_EnableStallACKI2CWrite

Function name

__STATIC_INLINE void LL_I3C_EnableStallACKI2CWrite (I3C_TypeDef * I3Cx)

Function description

Set stall on data ACK/NACK bit of legacy I2C write message (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- TIMINGR2 STALLS LL_I3C_EnableStallACKI2CWrite

LL_I3C_DisableStallACKI2CWrite

Function name

__STATIC_INLINE void LL_I3C_DisableStallACKI2CWrite (I3C_TypeDef * I3Cx)

Function description

Disable stall on data ACK/NACK bit of legacy I2C write message (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- TIMINGR2 STALLS LL_I3C_DisableStallACKI2CWrite

Function description

Check if stall on data ACK/NACK bit of legacy I2C write message is enabled or disabled (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TIMINGR2 STALLS LL_I3C_IsEnabledStallACKI2CWrite

LL_I3C_EnableStallACKI2CRead

Function name

__STATIC_INLINE void LL_I3C_EnableStallACKI2CRead (I3C_TypeDef * I3Cx)

Function description

Set stall on data ACK/NACK bit of legacy I2C read message (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- TIMINGR2 STALLR LL_I3C_EnableStallACKI2CRead

LL_I3C_DisableStallACKI2CRead

Function name

__STATIC_INLINE void LL_I3C_DisableStallACKI2CRead (I3C_TypeDef * I3Cx)

Function description

Disable stall on data ACK/NACK bit of legacy I2C read message (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- TIMINGR2 STALLR LL_I3C_DisableStallACKI2CRead

Function description

Check if stall on data ACK/NACK bit of legacy I2C read message is enabled or disabled (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TIMINGR2 STALLR LL_I3C_IsEnabledStallACKI2CRead

LL_I3C_EnableStallACK

Function name

__STATIC_INLINE void LL_I3C_EnableStallACK (I3C_TypeDef * I3Cx)

Function description

Set stall on ACK bit (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- TIMINGR2 STALLA LL_I3C_EnableStallACK

LL_I3C_DisableStallACK

Function name

__STATIC_INLINE void LL_I3C_DisableStallACK (I3C_TypeDef * I3Cx)

Function description

Disable stall on ACK bit (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- TIMINGR2 STALLA LL_I3C_DisableStallACK

LL_I3C_IsEnabledStallACK

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledStallACK (const I3C_TypeDef * I3Cx)

Function description

Check if stall on ACK bit is enabled or disabled (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TIMINGR2 STALLA LL_I3C_IsEnabledStallACK

LL_I3C_EnableStallParityCCC

Function name

__STATIC_INLINE void LL_I3C_EnableStallParityCCC (I3C_TypeDef * I3Cx)

Function description

Set stall on Parity bit of Command Code byte (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- TIMINGR2 STALLC LL_I3C_EnableStallParityCCC

LL_I3C_DisableStallParityCCC

Function name

__STATIC_INLINE void LL_I3C_DisableStallParityCCC (I3C_TypeDef * I3Cx)

Function description

Disable stall on Parity bit of Command Code byte (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- TIMINGR2 STALLC LL_I3C_DisableStallParityCCC

LL_I3C_IsEnabledStallParityCCC

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledStallParityCCC (const I3C_TypeDef * I3Cx)

Function description

Check if stall on Parity bit of Command Code byte is enabled or disabled (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TIMINGR2 STALLC LL_I3C_IsEnabledStallParityCCC

LL_I3C_EnableStallParityData

Function name

__STATIC_INLINE void LL_I3C_EnableStallParityData (I3C_TypeDef * I3Cx)

Function description

Set stall on Parity bit of Data bytes (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- TIMINGR2 STALLD LL_I3C_EnableStallParityData

LL_I3C_DisableStallParityData

Function name

__STATIC_INLINE void LL_I3C_DisableStallParityData (I3C_TypeDef * I3Cx)

Function description

Disable stall on Parity bit of Data bytes (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- TIMINGR2 STALLD LL_I3C_DisableStallParityData

LL_I3C_IsEnabledStallParityData

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledStallParityData (const I3C_TypeDef * I3Cx)

Function description

Check if stall on Parity bit of Data bytes is enabled or disabled (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TIMINGR2 STALLD LL_I3C_IsEnabledStallParityData

LL_I3C_EnableStallTbit

Function name

__STATIC_INLINE void LL_I3C_EnableStallTbit (I3C_TypeDef * I3Cx)

Function description

Set stall on T bit (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- TIMINGR2 STALLT LL_I3C_EnableStallTbit

LL_I3C_DisableStallTbit

Function name

__STATIC_INLINE void LL_I3C_DisableStallTbit (I3C_TypeDef * I3Cx)

Function description

Disable stall on T bit (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- This bit can be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- TIMINGR2 STALLT LL_I3C_DisableStallTbit

LL_I3C_IsEnabledStallTbit

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledStallTbit (const I3C_TypeDef * I3Cx)

Function description

Check if stall on T bit is enabled or disabled (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TIMINGR2 STALLT LL_I3C_IsEnabledStallTbit

LL_I3C_SetDeviceCapabilityOnBus

Function name

__STATIC_INLINE void LL_I3C_SetDeviceCapabilityOnBus (I3C_TypeDef * I3Cx, uint32_t DeviceCapabilityOnBus)

Function description

Configure the Device Capability on Bus as Target or Controller (MIPI Bus Characteristics Register BCR6).

Parameters

- **I3Cx:** I3C Instance.
- **DeviceCapabilityOnBus:** This parameter can be one of the following values:
  - LL_I3C_DEVICE_ROLE_AS_TARGET
  - LL_I3C_DEVICE_ROLE_AS_CONTROLLER

Return values

- **None:**

Notes

- Those bits can be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- BCR BCR6 LL_I3C_SetDeviceCapabilityOnBus

LL_I3C_GetDeviceCapabilityOnBus

Function name

__STATIC_INLINE uint32_t LL_I3C_GetDeviceCapabilityOnBus (const I3C_TypeDef * I3Cx)

Function description

Get the Device Capability on Bus as Target or Controller (MIPI Bus Characteristics Register BCR6).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I3C_DEVICE_ROLE_AS_TARGET
  - LL_I3C_DEVICE_ROLE_AS_CONTROLLER

Reference Manual to LL API cross reference:

- BCR BCR6 LL_I3C_GetDeviceCapabilityOnBus

LL_I3C_SetDeviceIBIPayload

Function name

__STATIC_INLINE void LL_I3C_SetDeviceIBIPayload (I3C_TypeDef * I3Cx, uint32_t DeviceIBIPayload)

Function description

Configure the Device IBI Payload (MIPI Bus Characteristics Register BCR2).

Parameters

- **I3Cx:** I3C Instance.
- **DeviceIBIPayload:** This parameter can be one of the following values:
  - LL_I3C_IBI_NO_ADDITIONAL_DATA
  - LL_I3C_IBI_ADDITIONAL_DATA

Return values

- **None:**

Notes

- Those bits can be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- BCR BCR2 LL_I3C_SetDeviceIBIPayload

LL_I3C_GetDeviceIBIPayload

Function name

__STATIC_INLINE uint32_t LL_I3C_GetDeviceIBIPayload (const I3C_TypeDef * I3Cx)

Function description

Get the Device IBI Payload (MIPI Bus Characteristics Register BCR2).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I3C_IBI_NO_ADDITIONAL_DATA
  - LL_I3C_IBI_ADDITIONAL_DATA

Reference Manual to LL API cross reference:

- BCR BCR2 LL_I3C_GetDeviceIBIPayload

LL_I3C_SetDataSpeedLimitation

Function name

__STATIC_INLINE void LL_I3C_SetDataSpeedLimitation (I3C_TypeDef * I3Cx, uint32_t DataSpeedLimitation)

Function description

Configure the Data Speed Limitation (limitation, as described by I3C_GETMXDSR).

Parameters

- **I3Cx:** I3C Instance.
- **DataSpeedLimitation:** This parameter can be one of the following values:
  - LL_I3C_NO_DATA_SPEED_LIMITATION
  - LL_I3C_MAX_DATA_SPEED_LIMITATION

Return values

- **None:**

Notes

- Those bits can be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- BCR BCR0 LL_I3C_SetDataSpeedLimitation

LL_I3C_GetDataSpeedLimitation

Function name

__STATIC_INLINE uint32_t LL_I3C_GetDataSpeedLimitation (const I3C_TypeDef * I3Cx)

Function description

Get the Data Speed Limitation (limitation, as described by I3C_GETMXDSR).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I3C_NO_DATA_SPEED_LIMITATION
  - LL_I3C_MAX_DATA_SPEED_LIMITATION

Reference Manual to LL API cross reference:

- BCR BCR0 LL_I3C_GetDataSpeedLimitation

LL_I3C_SetDeviceCharacteristics

Function name

__STATIC_INLINE void LL_I3C_SetDeviceCharacteristics (I3C_TypeDef * I3Cx, uint32_t DeviceCharacteristics)

Function description

Configure the Device Characteristics Register (DCR).

Parameters

- **I3Cx:** I3C Instance.
- **DeviceCharacteristics:** This parameter must be a value between Min_Data=0 and Max_Data=0xFF.

Return values

- **None:**

Notes

- This bit can only be programmed when the I3C is disabled (EN = 0).
- Refer MIPI web site for the list of device code available.

Reference Manual to LL API cross reference:

- DCR DC LL_I3C_SetDeviceCharacteristics

LL_I3C_GetDeviceCharacteristics

Function name

__STATIC_INLINE uint32_t LL_I3C_GetDeviceCharacteristics (const I3C_TypeDef * I3Cx)

Function description

Get the Device Characteristics Register (DCR).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Value:** between Min_Data=0 and Max_Data=0xFF.

Notes

- Refer MIPI web site to associated value with the list of device code available.

Reference Manual to LL API cross reference:

- DCR DCR LL_I3C_GetDeviceCharacteristics

LL_I3C_SetPendingReadMDB

Function name

__STATIC_INLINE void LL_I3C_SetPendingReadMDB (I3C_TypeDef * I3Cx, uint32_t PendingReadMDB)

Function description

Configure IBI MDB support for pending read notification.

Parameters

- **I3Cx:** I3C Instance.
- **PendingReadMDB:** This parameter can be one of the following values:
  - LL_I3C_MDB_NO_PENDING_READ_NOTIFICATION
  - LL_I3C_MDB_PENDING_READ_NOTIFICATION

Return values

- **None:**

Notes

- Those bits can be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- GETCAPR CAPPEND LL_I3C_SetPendingReadMDB

LL_I3C_GetPendingReadMDB

Function name

__STATIC_INLINE uint32_t LL_I3C_GetPendingReadMDB (const I3C_TypeDef * I3Cx)

Function description

Get IBI MDB support for pending read notification value.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I3C_MDB_NO_PENDING_READ_NOTIFICATION
  - LL_I3C_MDB_PENDING_READ_NOTIFICATION

Reference Manual to LL API cross reference:

- GETCAPR CAPPEND LL_I3C_GetPendingReadMDB

LL_I3C_SetGrpAddrHandoffSupport

Function name

__STATIC_INLINE void LL_I3C_SetGrpAddrHandoffSupport (I3C_TypeDef * I3Cx, uint32_t GrpAddrHandoffSupport)

Function description

Configure the Group Management Support bit of MSTCAP1.

Parameters

- **I3Cx:** I3C Instance.
- **GrpAddrHandoffSupport:** This parameter can be one of the following values:
  - LL_I3C_HANDOFF_GRP_ADDR_NOT_SUPPORTED
  - LL_I3C_HANDOFF_GRP_ADDR_SUPPORTED

Return values

- **None:**

Notes

- Those bits can be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- CRCAPR CAPGRP LL_I3C_SetGrpAddrHandoffSupport

LL_I3C_GetGrpAddrHandoffSupport

Function name

__STATIC_INLINE uint32_t LL_I3C_GetGrpAddrHandoffSupport (const I3C_TypeDef * I3Cx)

Function description

Get the Group Management Support bit of MSTCAP1.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I3C_HANDOFF_GRP_ADDR_NOT_SUPPORTED
  - LL_I3C_HANDOFF_GRP_ADDR_SUPPORTED

Reference Manual to LL API cross reference:

- CRCAPR CAPGRP LL_I3C_GetGrpAddrHandoffSupport

LL_I3C_SetControllerHandoffDelayed

Function name

__STATIC_INLINE void LL_I3C_SetControllerHandoffDelayed (I3C_TypeDef * I3Cx, uint32_t ControllerHandoffDelayed)

Function description

Configure the Delayed Controller Handoff bit in MSTCAP2.

Parameters

- **I3Cx:** I3C Instance.
- **ControllerHandoffDelayed:** This parameter can be one of the following values:
  - LL_I3C_HANDOFF_NOT_DELAYED
  - LL_I3C_HANDOFF_DELAYED

Return values

- **None:**

Notes

- Those bits can be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- CRCAPR CAPDHOFF LL_I3C_SetControllerHandoffDelayed

LL_I3C_GetControllerHandoffDelayed

Function name

__STATIC_INLINE uint32_t LL_I3C_GetControllerHandoffDelayed (const I3C_TypeDef * I3Cx)

Function description

Get the Delayed Controller Handoff bit in MSTCAP2.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I3C_HANDOFF_NOT_DELAYED
  - LL_I3C_HANDOFF_DELAYED

Reference Manual to LL API cross reference:

- CRCAPR CAPDHOFF LL_I3C_GetControllerHandoffDelayed

LL_I3C_SetHandoffActivityState

Function name

__STATIC_INLINE void LL_I3C_SetHandoffActivityState (I3C_TypeDef * I3Cx, uint32_t HandoffActivityState)

Function description

Configure the Activity State after controllership handoff.

Parameters

- **I3Cx:** I3C Instance.
- **HandoffActivityState:** This parameter can be one of the following values:
  - LL_I3C_HANDOFF_ACTIVITY_STATE_0
  - LL_I3C_HANDOFF_ACTIVITY_STATE_1
  - LL_I3C_HANDOFF_ACTIVITY_STATE_2
  - LL_I3C_HANDOFF_ACTIVITY_STATE_3

Return values

- **None:**

Notes

- Those bits can be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- GETMXDSR HOFFAS LL_I3C_SetHandoffActivityState

LL_I3C_GetHandoffActivityState

Function name

__STATIC_INLINE uint32_t LL_I3C_GetHandoffActivityState (const I3C_TypeDef * I3Cx)

Function description

Get the Activity State after controllership handoff.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I3C_HANDOFF_ACTIVITY_STATE_0
  - LL_I3C_HANDOFF_ACTIVITY_STATE_1
  - LL_I3C_HANDOFF_ACTIVITY_STATE_2
  - LL_I3C_HANDOFF_ACTIVITY_STATE_3

Reference Manual to LL API cross reference:

- GETMXDSR HOFFAS LL_I3C_GetHandoffActivityState

LL_I3C_SetMaxDataSpeedFormat

Function name

__STATIC_INLINE void LL_I3C_SetMaxDataSpeedFormat (I3C_TypeDef * I3Cx, uint32_t MaxDataSpeedFormat)

Function description

Configure the Max Data Speed Format response for GETMXDS CCC.

Parameters

- **I3Cx:** I3C Instance.
- **MaxDataSpeedFormat:** This parameter can be one of the following values:
  - LL_I3C_GETMXDS_FORMAT_1
  - LL_I3C_GETMXDS_FORMAT_2_LSB
  - LL_I3C_GETMXDS_FORMAT_2_MID
  - LL_I3C_GETMXDS_FORMAT_2_MSB

Return values

- **None:**

Notes

- Those bits can be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- GETMXDSR FMT LL_I3C_SetMaxDataSpeedFormat

LL_I3C_GetMaxDataSpeedFormat

Function name

__STATIC_INLINE uint32_t LL_I3C_GetMaxDataSpeedFormat (const I3C_TypeDef * I3Cx)

Function description

Get the Max Data Speed Format response for GETMXDS CCC.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I3C_GETMXDS_FORMAT_1
  - LL_I3C_GETMXDS_FORMAT_2_LSB
  - LL_I3C_GETMXDS_FORMAT_2_MID
  - LL_I3C_GETMXDS_FORMAT_2_MSB

Reference Manual to LL API cross reference:

- GETMXDSR FMT LL_I3C_GetMaxDataSpeedFormat

LL_I3C_SetMiddleByteTurnAround

Function name

__STATIC_INLINE void LL_I3C_SetMiddleByteTurnAround (I3C_TypeDef * I3Cx, uint32_t MiddleByteTurnAround)

Function description

Configure the Middle byte of MaxRdTurn field of GETMXDS CCC Format 2 with turnaround.

Parameters

- **I3Cx:** I3C Instance.
- **MiddleByteTurnAround:** This parameter must be a value between Min_Data=0 and Max_Data=0xF.

Return values

- **None:**

Notes

- Those bits can be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- GETMXDSR RDTURN LL_I3C_SetMiddleByteTurnAround

LL_I3C_GetMiddleByteTurnAround

Function name

__STATIC_INLINE uint32_t LL_I3C_GetMiddleByteTurnAround (const I3C_TypeDef * I3Cx)

Function description

Get the value of Middle byte of MaxRdTurn field of GETMXDS CCC Format 2 with turnaround.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Value:** between Min_Data=0 and Max_Data=0xF.

Reference Manual to LL API cross reference:

- GETMXDSR RDTURN LL_I3C_GetMiddleByteTurnAround

LL_I3C_SetDataTurnAroundTime

Function name

__STATIC_INLINE void LL_I3C_SetDataTurnAroundTime (I3C_TypeDef * I3Cx, uint32_t DataTurnAroundTime)

Function description

Configure clock-to-data turnaround time.

Parameters

- **I3Cx:** I3C Instance.
- **DataTurnAroundTime:** This parameter can be one of the following values:
  - LL_I3C_TURNAROUND_TIME_TSCO_LESS_12NS
  - LL_I3C_TURNAROUND_TIME_TSCO_GREATER_12NS

Return values

- **None:**

Notes

- Those bits can be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- GETMXDSR TSCO LL_I3C_SetDataTurnAroundTime

LL_I3C_GetDataTurnAroundTime

Function name

__STATIC_INLINE uint32_t LL_I3C_GetDataTurnAroundTime (const I3C_TypeDef * I3Cx)

Function description

Get clock-to-data turnaround time.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I3C_TURNAROUND_TIME_TSCO_LESS_12NS
  - LL_I3C_TURNAROUND_TIME_TSCO_GREATER_12NS

Reference Manual to LL API cross reference:

- GETMXDSR TSCO LL_I3C_GetDataTurnAroundTime

LL_I3C_SetMIPIInstanceID

Function name

__STATIC_INLINE void LL_I3C_SetMIPIInstanceID (I3C_TypeDef * I3Cx, uint32_t MIPIInstanceID)

Function description

Configure the MIPI Instance ID.

Parameters

- **I3Cx:** I3C Instance.
- **MIPIInstanceID:** This parameter must be a value between Min_Data=0 and Max_Data=0xF.

Return values

- **None:**

Notes

- Those bits can be programmed when the I3C is disabled (EN = 0).

Reference Manual to LL API cross reference:

- EPIDR MIPIID LL_I3C_SetMIPIInstanceID

LL_I3C_GetMIPIInstanceID

Function name

__STATIC_INLINE uint32_t LL_I3C_GetMIPIInstanceID (const I3C_TypeDef * I3Cx)

Function description

Get the MIPI Instance ID.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Value:** between Min_Data=0 and Max_Data=0xF.

Reference Manual to LL API cross reference:

- EPIDR MIPIID LL_I3C_GetMIPIInstanceID

LL_I3C_GetIDTypeSelector

Function name

__STATIC_INLINE uint32_t LL_I3C_GetIDTypeSelector (const I3C_TypeDef * I3Cx)

Function description

Get the ID type selector.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Value:** between Min_Data=0x0 and Max_Data=0x1

Reference Manual to LL API cross reference:

- EPIDR IDTSEL LL_I3C_GetIDTypeSelector

LL_I3C_GetMIPIManufacturerID

Function name

__STATIC_INLINE uint32_t LL_I3C_GetMIPIManufacturerID (const I3C_TypeDef * I3Cx)

Function description

Get the MIPI Manufacturer ID.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Value:** between Min_Data=0 and Max_Data=0x7FFF.

Reference Manual to LL API cross reference:

- EPIDR MIPIMID LL_I3C_GetMIPIManufacturerID

LL_I3C_RequestRxFIFOFlush

Function name

__STATIC_INLINE void LL_I3C_RequestRxFIFOFlush (I3C_TypeDef * I3Cx)

Function description

Request a reception Data FIFO Flush.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR RXFLUSH LL_I3C_RequestRxFIFOFlush

LL_I3C_RequestTxFIFOFlush

Function name

__STATIC_INLINE void LL_I3C_RequestTxFIFOFlush (I3C_TypeDef * I3Cx)

Function description

Request a transmission Data FIFO Flush.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR TXFLUSH LL_I3C_RequestTxFIFOFlush

LL_I3C_RequestStatusFIFOFlush

Function name

__STATIC_INLINE void LL_I3C_RequestStatusFIFOFlush (I3C_TypeDef * I3Cx)

Function description

Request a Status Data FIFO Flush.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR SFLUSH LL_I3C_RequestStatusFIFOFlush

LL_I3C_SetEndOfFrameMode

Function name

__STATIC_INLINE void LL_I3C_SetEndOfFrameMode (I3C_TypeDef * I3Cx, uint32_t EOFrameConfig)

Function description

Set End of Frame mode.

Parameters

- **I3Cx:** I3C Instance.
- **EOFrameConfig:** This parameter can be one of the following values:
  - LL_I3C_END_OF_FRAME_CPLT_DISABLE
  - LL_I3C_END_OF_FRAME_CPLT_ENABLE

Return values

- **None:**

Notes

- This bit can be modified only when there is no frame ongoing

Reference Manual to LL API cross reference:

- CFGR FCFDIS LL_I3C_SetEndOfFrameMode

LL_I3C_GetEndOfFrameMode

Function name

__STATIC_INLINE uint32_t LL_I3C_GetEndOfFrameMode (const I3C_TypeDef * I3Cx)

Function description

Get End of Frame mode.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I3C_END_OF_FRAME_CPLT_DISABLE
  - LL_I3C_END_OF_FRAME_CPLT_ENABLE

Reference Manual to LL API cross reference:

- CFGR FCFDIS LL_I3C_GetEndOfFrameMode

LL_I3C_GetActivityState

Function name

__STATIC_INLINE uint32_t LL_I3C_GetActivityState (const I3C_TypeDef * I3Cx)

Function description

Get Activity state of Controller on the I3C Bus (Target only).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I3C_BUS_ACTIVITY_STATE_0
  - LL_I3C_BUS_ACTIVITY_STATE_1
  - LL_I3C_BUS_ACTIVITY_STATE_2
  - LL_I3C_BUS_ACTIVITY_STATE_3

Reference Manual to LL API cross reference:

- DEVR0 AS LL_I3C_GetActivityState

LL_I3C_GetResetAction

Function name

__STATIC_INLINE uint32_t LL_I3C_GetResetAction (const I3C_TypeDef * I3Cx)

Function description

Get Reset Action (Target only).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I3C_RESET_ACTION_NONE
  - LL_I3C_RESET_ACTION_PARTIAL
  - LL_I3C_RESET_ACTION_FULL

Reference Manual to LL API cross reference:

- DEVR0 RSTACT LL_I3C_GetResetAction

LL_I3C_RequestControlFIFOFlush

Function name

__STATIC_INLINE void LL_I3C_RequestControlFIFOFlush (I3C_TypeDef * I3Cx)

Function description

Request a Control word FIFO Flush.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR CFLUSH LL_I3C_RequestControlFIFOFlush

LL_I3C_RequestTransfer

Function name

__STATIC_INLINE void LL_I3C_RequestTransfer (I3C_TypeDef * I3Cx)

Function description

Request a Transfer start.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Notes

- After request, the current instruction in Control Register is executed on I3C Bus.

Reference Manual to LL API cross reference:

- CFGR TSFSET LL_I3C_RequestTransfer

LL_I3C_ControllerHandleMessage

Function name

__STATIC_INLINE void LL_I3C_ControllerHandleMessage (I3C_TypeDef * I3Cx, uint32_t TargetAddr, uint32_t TransferSize, uint32_t Direction, uint32_t MessageType, uint32_t EndMode)

Function description

Handles I3C Message content on the I3C Bus as Controller.

Parameters

- **I3Cx:** I3C Instance.
- **TargetAddr:** Specifies the target address to be programmed. This parameter must be a value between Min_Data=0 and Max_Data=0xFF.
- **TransferSize:** Specifies the number of bytes to be programmed. This parameter must be a value between Min_Data=0 and Max_Data=65535.
- **Direction:** This parameter can be one of the following values:
  - LL_I3C_DIRECTION_WRITE
  - LL_I3C_DIRECTION_READ
- **MessageType:** This parameter can be one of the following values:
  - LL_I3C_CONTROLLER_MTYPE_RELEASE
  - LL_I3C_CONTROLLER_MTYPE_HEADER
  - LL_I3C_CONTROLLER_MTYPE_PRIVATE
  - LL_I3C_CONTROLLER_MTYPE_DIRECT
  - LL_I3C_CONTROLLER_MTYPE_LEGACY_I2C
- **EndMode:** This parameter can be one of the following values:
  - LL_I3C_GENERATE_STOP
  - LL_I3C_GENERATE_RESTART

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR ADD LL_I3C_ControllerHandleMessage
- CR DCNT LL_I3C_ControllerHandleMessage
- CR RNW LL_I3C_ControllerHandleMessage
- CR MTYPE LL_I3C_ControllerHandleMessage
- CR MEND LL_I3C_ControllerHandleMessage

LL_I3C_ControllerHandleCCC

Function name

__STATIC_INLINE void LL_I3C_ControllerHandleCCC (I3C_TypeDef * I3Cx, uint32_t CCCValue, uint32_t AddByteSize, uint32_t EndMode)

Function description

Handles I3C Common Command Code content on the I3C Bus as Controller.

Parameters

- **I3Cx:** I3C Instance.
- **CCCValue:** Specifies the Command Code to be programmed. This parameter must be a value between Min_Data=0 and Max_Data=0x1FF.
- **AddByteSize:** Specifies the number of CCC additional bytes to be programmed. This parameter must be a value between Min_Data=0 and Max_Data=65535.
- **EndMode:** This parameter can be one of the following values:
  - LL_I3C_GENERATE_STOP
  - LL_I3C_GENERATE_RESTART

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CCC LL_I3C_ControllerHandleCCC
- CR DCNT LL_I3C_ControllerHandleCCC
- CR MTYPE LL_I3C_ControllerHandleCCC
- CR MEND LL_I3C_ControllerHandleCCC

LL_I3C_TargetHandleMessage

Function name

__STATIC_INLINE void LL_I3C_TargetHandleMessage (I3C_TypeDef * I3Cx, uint32_t MessageType, uint32_t IBISize)

Function description

Handles I3C Message content on the I3C Bus as Target.

Parameters

- **I3Cx:** I3C Instance.
- **MessageType:** This parameter can be one of the following values:
  - LL_I3C_TARGET_MTYPE_HOT_JOIN
  - LL_I3C_TARGET_MTYPE_CONTROLLER_ROLE_REQ
  - LL_I3C_TARGET_MTYPE_IBI
- **IBISize:** Specifies the number of IBI bytes. This parameter must be a value between Min_Data=0 and Max_Data=65535.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR MTYPE LL_I3C_TargetHandleMessage
- CR DCNT LL_I3C_TargetHandleMessage

LL_I3C_ReceiveData8

Function name

__STATIC_INLINE uint8_t LL_I3C_ReceiveData8 (const I3C_TypeDef * I3Cx)

Function description

Read Receive Data Byte register.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Value:** between Min_Data=0 to Max_Data=0xFF

Reference Manual to LL API cross reference:

- RDR RDB0 LL_I3C_ReceiveData8

LL_I3C_TransmitData8

Function name

__STATIC_INLINE void LL_I3C_TransmitData8 (I3C_TypeDef * I3Cx, uint8_t Data)

Function description

Write in Transmit Data Byte Register.

Parameters

- **I3Cx:** I3C Instance.
- **Data:** This parameter must be a value between Min_Data=0 and Max_Data=0xFF.

Return values

- **None:**

Reference Manual to LL API cross reference:

- TDR TDB0 LL_I3C_TransmitData8

LL_I3C_ReceiveData32

Function name

__STATIC_INLINE uint32_t LL_I3C_ReceiveData32 (const I3C_TypeDef * I3Cx)

Function description

Read Receive Data Word register.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Value:** between Min_Data=0 to Max_Data=0xFFFFFFFF

Notes

- Content of register is filled in Little Endian. Mean MSB correspond to last data byte received, LSB correspond to first data byte received.

Reference Manual to LL API cross reference:

- RDWR RDWR LL_I3C_ReceiveData32

LL_I3C_TransmitData32

Function name

__STATIC_INLINE void LL_I3C_TransmitData32 (I3C_TypeDef * I3Cx, uint32_t Data)

Function description

Write in Transmit Data Word Register.

Parameters

- **I3Cx:** I3C Instance.
- **Data:** This parameter must be a value between Min_Data=0 and Max_Data=0xFFFFFFFF.

Return values

- **None:**

Notes

- Content of register is filled in Little Endian. Mean MSB correspond to last data byte transmitted, LSB correspond to first data byte transmitted.

Reference Manual to LL API cross reference:

- TDWR TDWR LL_I3C_TransmitData32

LL_I3C_SetIBIPayload

Function name

__STATIC_INLINE void LL_I3C_SetIBIPayload (I3C_TypeDef * I3Cx, uint32_t OwnIBIPayload)

Function description

Configure the IBI data payload to be sent during IBI (target mode).

Parameters

- **I3Cx:** I3C Instance.
- **OwnIBIPayload:** This parameter must be a value between Min_Data=0 and Max_Data=0xFFFFFFFF

Return values

- **None:**

Notes

- Content of register is filled in Little Endian. Mean MSB correspond to last IBI data byte, LSB correspond to first IBI data byte.

Reference Manual to LL API cross reference:

- IBIDR IBIDR LL_I3C_SetIBIPayload

LL_I3C_GetIBIPayload

Function name

__STATIC_INLINE uint32_t LL_I3C_GetIBIPayload (const I3C_TypeDef * I3Cx)

Function description

Get the own IBI data payload (target mode), or get the Target IBI received (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Value:** between Min_Data=0 to Max_Data=0xFFFFFFFF

Notes

- Content of register is filled in Little Endian. Mean MSB correspond to last IBI data byte, LSB correspond to first IBI data byte.

Reference Manual to LL API cross reference:

- IBIDR IBIDR LL_I3C_GetIBIPayload

LL_I3C_GetNbIBIAddData

Function name

__STATIC_INLINE uint32_t LL_I3C_GetNbIBIAddData (const I3C_TypeDef * I3Cx)

Function description

Get the number of data bytes received when reading IBI data (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Value:** between Min_Data=0 to Max_Data=0x7

Reference Manual to LL API cross reference:

- RMR IBIRDCNT LL_I3C_GetNbIBIAddData

LL_I3C_GetIBITargetAddr

Function name

__STATIC_INLINE uint32_t LL_I3C_GetIBITargetAddr (const I3C_TypeDef * I3Cx)

Function description

Get the target address received during accepted IBI or Controller-role request.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Value:** between Min_Data=0 to Max_Data=0x3F

Reference Manual to LL API cross reference:

- RMR RADD LL_I3C_GetIBITargetAddr

LL_I3C_ConfigTxPreload

Function name

__STATIC_INLINE void LL_I3C_ConfigTxPreload (I3C_TypeDef * I3Cx, uint16_t TxDataCount)

Function description

Set TX FIFO Preload (target mode).

Parameters

- **I3Cx:** I3C Instance.
- **TxDataCount:** This parameter must be a value between Min_Data=0 and Max_Data=0xFFFF

Return values

- **None:**

Notes

- Set high by Software, cleared by hardware when all the bytes to transmit have been loaded to TX FIFO.

Reference Manual to LL API cross reference:

- TGTTDR PRELOAD LL_I3C_ConfigTxPreload
- TGTTDR TDCNT LL_I3C_ConfigTxPreload

LL_I3C_IsActiveTxPreload

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveTxPreload (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of TX FIFO preload (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- Set high by Software, cleared by hardware when all the bytes to transmit have been loaded to TX FIFO.

Reference Manual to LL API cross reference:

- TGTTDR PRELOAD LL_I3C_IsActiveTxPreload

LL_I3C_GetTxPreloadDataCount

Function name

__STATIC_INLINE uint16_t LL_I3C_GetTxPreloadDataCount (const I3C_TypeDef * I3Cx)

Function description

Get the number of bytes to transmit (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Value:** between Min_Data=0 to Max_Data=0xFFFF

Notes

- The return value correspond to the remaining number of bytes to load in TX FIFO.

Reference Manual to LL API cross reference:

- TGTTDR TDCNT LL_I3C_GetTxPreloadDataCount

LL_I3C_GetXferDataCount

Function name

__STATIC_INLINE uint32_t LL_I3C_GetXferDataCount (const I3C_TypeDef * I3Cx)

Function description

Get the number of data during a Transfer.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Value:** between Min_Data=0 to Max_Data=0xFFFF

Notes

- The return value correspond to number of transmitted bytes reported during Address Assignment process in Target mode. The return value correspond to number of target detected during Address Assignment process in Controller mode. The return value correspond to number of data bytes read from or sent to the I3C bus during the message link to MID current value.

Reference Manual to LL API cross reference:

- SR XDCNT LL_I3C_GetXferDataCount

LL_I3C_IsTargetAbortPrivateRead

Function name

__STATIC_INLINE uint32_t LL_I3C_IsTargetAbortPrivateRead (const I3C_TypeDef * I3Cx)

Function description

Indicates if a Target abort a private read command.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR ABT LL_I3C_IsTargetAbortPrivateRead

LL_I3C_GetMessageDirection

Function name

__STATIC_INLINE uint32_t LL_I3C_GetMessageDirection (const I3C_TypeDef * I3Cx)

Function description

Get Direction of the Message.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I3C_MESSAGE_DIRECTION_WRITE
  - LL_I3C_MESSAGE_DIRECTION_READ

Reference Manual to LL API cross reference:

- SR DIR LL_I3C_GetMessageDirection

LL_I3C_GetMessageIdentifier

Function name

__STATIC_INLINE uint32_t LL_I3C_GetMessageIdentifier (const I3C_TypeDef * I3Cx)

Function description

Get Message identifier.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Value:** between Min_Data=0 to Max_Data=0xFF, representing the internal hardware counter value.

Reference Manual to LL API cross reference:

- SR MID LL_I3C_GetMessageIdentifier

LL_I3C_GetMessageErrorCode

Function name

__STATIC_INLINE uint32_t LL_I3C_GetMessageErrorCode (const I3C_TypeDef * I3Cx)

Function description

Get Message error code.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I3C_CONTROLLER_ERROR_CE0
  - LL_I3C_CONTROLLER_ERROR_CE1
  - LL_I3C_CONTROLLER_ERROR_CE2
  - LL_I3C_CONTROLLER_ERROR_CE3
  - LL_I3C_TARGET_ERROR_TE0
  - LL_I3C_TARGET_ERROR_TE1
  - LL_I3C_TARGET_ERROR_TE2
  - LL_I3C_TARGET_ERROR_TE3
  - LL_I3C_TARGET_ERROR_TE4
  - LL_I3C_TARGET_ERROR_TE5
  - LL_I3C_TARGET_ERROR_TE6

Reference Manual to LL API cross reference:

- SER CODERR LL_I3C_GetMessageErrorCode

LL_I3C_GetReceiveCommandCode

Function name

__STATIC_INLINE uint32_t LL_I3C_GetReceiveCommandCode (const I3C_TypeDef * I3Cx)

Function description

Get CCC code of received command.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **Value:** between Min_Data=0 to Max_Data=0xFF.

Reference Manual to LL API cross reference:

- RMR RCODE LL_I3C_GetReceiveCommandCode

LL_I3C_SetTargetDynamicAddress

Function name

__STATIC_INLINE void LL_I3C_SetTargetDynamicAddress (I3C_TypeDef * I3Cx, uint32_t TargetId, uint32_t DynamicAddr)

Function description

Set Dynamic Address assigned to target x.

Parameters

- **I3Cx:** I3C Instance.
- **TargetId:** This parameter must be a value between Min_Data=1 and Max_Data=4
- **DynamicAddr:** Value between Min_Data=0 to Max_Data=0x7F

Return values

- **None:**

Reference Manual to LL API cross reference:

- DEVRX DA LL_I3C_SetTargetDynamicAddress

LL_I3C_GetTargetDynamicAddress

Function name

__STATIC_INLINE uint32_t LL_I3C_GetTargetDynamicAddress (const I3C_TypeDef * I3Cx, uint32_t TargetId)

Function description

Get Dynamic Address assigned to target x.

Parameters

- **I3Cx:** I3C Instance.
- **TargetId:** This parameter must be a value between Min_Data=1 and Max_Data=4

Return values

- **Value:** between Min_Data=0 to Max_Data=0x7F

Reference Manual to LL API cross reference:

- DEVRX DA LL_I3C_GetTargetDynamicAddress

LL_I3C_EnableTargetIBIAck

Function name

__STATIC_INLINE void LL_I3C_EnableTargetIBIAck (I3C_TypeDef * I3Cx, uint32_t TargetId)

Function description

Enable IBI Acknowledgement from target x(controller mode).

Parameters

- **I3Cx:** I3C Instance.
- **TargetId:** This parameter must be a value between Min_Data=1 and Max_Data=4

Return values

- **None:**

Notes

- The bit DIS is automatically set when CRACK or IBIACK are set. This mean DEVRX register access is not allowed. Reset CRACK and IBIACK will reset DIS bit.

Reference Manual to LL API cross reference:

- DEVRX IBIACK LL_I3C_EnableTargetIBIAck

LL_I3C_DisableTargetIBIAck

Function name

__STATIC_INLINE void LL_I3C_DisableTargetIBIAck (I3C_TypeDef * I3Cx, uint32_t TargetId)

Function description

Disable IBI Acknowledgement from target x (controller mode).

Parameters

- **I3Cx:** I3C Instance.
- **TargetId:** This parameter must be a value between Min_Data=1 and Max_Data=4

Return values

- **None:**

Reference Manual to LL API cross reference:

- DEVRX IBIACK LL_I3C_DisableTargetIBIAck

LL_I3C_IsEnabledTargetIBIAck

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledTargetIBIAck (const I3C_TypeDef * I3Cx, uint32_t TargetId)

Function description

Indicates if IBI from target x will be Acknowledged or Not Acknowledged (controller mode).

Parameters

- **I3Cx:** I3C Instance.
- **TargetId:** This parameter must be a value between Min_Data=1 and Max_Data=4

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DEVRX IBIACK LL_I3C_IsEnabledTargetIBIAck

LL_I3C_EnableTargetCRAck

Function name

__STATIC_INLINE void LL_I3C_EnableTargetCRAck (I3C_TypeDef * I3Cx, uint32_t TargetId)

Function description

Enable Controller-role Request Acknowledgement from target x(controller mode).

Parameters

- **I3Cx:** I3C Instance.
- **TargetId:** This parameter must be a value between Min_Data=1 and Max_Data=4

Return values

- **None:**

Notes

- The bit DIS is automatically set when CRACK or IBIACK are set. This mean DEVRX register access is not allowed. Reset CRACK and IBIACK will reset DIS bit.

Reference Manual to LL API cross reference:

- DEVRX CRACK LL_I3C_EnableTargetCRAck

LL_I3C_DisableTargetCRAck

Function name

__STATIC_INLINE void LL_I3C_DisableTargetCRAck (I3C_TypeDef * I3Cx, uint32_t TargetId)

Function description

Disable Controller-role Request Acknowledgement from target x (controller mode).

Parameters

- **I3Cx:** I3C Instance.
- **TargetId:** This parameter must be a value between Min_Data=1 and Max_Data=4

Return values

- **None:**

Reference Manual to LL API cross reference:

- DEVRX CRACK LL_I3C_DisableTargetCRAck

LL_I3C_IsEnabledTargetCRAck

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledTargetCRAck (const I3C_TypeDef * I3Cx, uint32_t TargetId)

Function description

Indicates if Controller-role Request from target x will be Acknowledged or Not Acknowledged (controller mode).

Parameters

- **I3Cx:** I3C Instance.
- **TargetId:** This parameter must be a value between Min_Data=1 and Max_Data=4

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DEVRX CRACK LL_I3C_IsEnabledTargetCRAck

LL_I3C_EnableIBIAddData

Function name

__STATIC_INLINE void LL_I3C_EnableIBIAddData (I3C_TypeDef * I3Cx, uint32_t TargetId)

Function description

Enable additional Mandatory Data Byte (MDB) follows the accepted IBI from target x.

Parameters

- **I3Cx:** I3C Instance.
- **TargetId:** This parameter must be a value between Min_Data=1 and Max_Data=4

Return values

- **None:**

Reference Manual to LL API cross reference:

- DEVRX IBIDEN LL_I3C_EnableIBIAddData

LL_I3C_DisableIBIAddData

Function name

__STATIC_INLINE void LL_I3C_DisableIBIAddData (I3C_TypeDef * I3Cx, uint32_t TargetId)

Function description

Disable additional Mandatory Data Byte (MDB) follows the accepted IBI from target x.

Parameters

- **I3Cx:** I3C Instance.
- **TargetId:** This parameter must be a value between Min_Data=1 and Max_Data=4

Return values

- **None:**

Reference Manual to LL API cross reference:

- DEVRX IBIDEN LL_I3C_DisableIBIAddData

LL_I3C_IsEnabledIBIAddData

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledIBIAddData (const I3C_TypeDef * I3Cx, uint32_t TargetId)

Function description

Indicates if additional Mandatory Data Byte (MDB) follows the accepted IBI from target x.

Parameters

- **I3Cx:** I3C Instance.
- **TargetId:** This parameter must be a value between Min_Data=1 and Max_Data=4

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DEVRX IBIDEN LL_I3C_IsEnabledIBIAddData

LL_I3C_EnableFrameSuspend

Function name

__STATIC_INLINE void LL_I3C_EnableFrameSuspend (I3C_TypeDef * I3Cx, uint32_t TargetId)

Function description

Enable Suspension of Current transfer during IBI treatment.

Parameters

- **I3Cx:** I3C Instance.
- **TargetId:** This parameter must be a value between Min_Data=1 and Max_Data=4

Return values

- **None:**

Notes

- When set, this feature will allow controller to send a Stop condition and CR FIFO is flushed after IBI treatment. Software has to rewrite instructions in Control Register to start a new transfer.

Reference Manual to LL API cross reference:

- DEVRX SUSP LL_I3C_EnableFrameSuspend

LL_I3C_DisableFrameSuspend

Function name

__STATIC_INLINE void LL_I3C_DisableFrameSuspend (I3C_TypeDef * I3Cx, uint32_t TargetId)

Function description

Disable Suspension of Current transfer during IBI treatment.

Parameters

- **I3Cx:** I3C Instance.
- **TargetId:** This parameter must be a value between Min_Data=1 and Max_Data=4

Return values

- **None:**

Notes

- When set, this feature will allow controller to continue CR FIFO treatment after IBI treatment.

Reference Manual to LL API cross reference:

- DEVRX SUSP LL_I3C_DisableFrameSuspend

LL_I3C_IsFrameMustBeSuspended

Function name

__STATIC_INLINE uint32_t LL_I3C_IsFrameMustBeSuspended (const I3C_TypeDef * I3Cx, uint32_t TargetId)

Function description

Indicates if I3C transfer must be Suspended or not Suspended during IBI treatment from target x.

Parameters

- **I3Cx:** I3C Instance.
- **TargetId:** This parameter must be a value between Min_Data=1 and Max_Data=4

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DEVRX SUSP LL_I3C_IsFrameMustBeSuspended

LL_I3C_IsAllowedPayloadUpdate

Function name

__STATIC_INLINE uint32_t LL_I3C_IsAllowedPayloadUpdate (const I3C_TypeDef * I3Cx, uint32_t TargetId)

Function description

Indicates if update of the Device Characteristics Register is Allowed or Not Allowed.

Parameters

- **I3Cx:** I3C Instance.
- **TargetId:** This parameter must be a value between Min_Data=1 and Max_Data=4

Return values

- **State:** of bit (1 or 0).

Notes

- Used to prevent software writing during reception of an IBI or Controller-role Request from target x.

Reference Manual to LL API cross reference:

- DEVRX DIS LL_I3C_IsAllowedPayloadUpdate

LL_I3C_ConfigDeviceCapabilities

Function name

__STATIC_INLINE void LL_I3C_ConfigDeviceCapabilities (I3C_TypeDef * I3Cx, uint32_t TargetId, uint32_t DynamicAddr, uint32_t IBIAck, uint32_t IBIAddData, uint32_t CRAck)

Function description

Set I3C bus devices configuration.

Parameters

- **I3Cx:** I3C Instance.
- **TargetId:** This parameter must be a value between Min_Data=1 and Max_Data=4
- **DynamicAddr:** Value between Min_Data=0 to Max_Data=0x7F
- **IBIAck:** Value This parameter can be one of the following values:
  - LL_I3C_IBI_CAPABILITY
  - LL_I3C_IBI_NO_CAPABILITY
- **IBIAddData:** This parameter can be one of the following values:
  - LL_I3C_IBI_DATA_ENABLE
  - LL_I3C_IBI_DATA_DISABLE
- **CRAck:** This parameter can be one of the following values:
  - LL_I3C_CR_CAPABILITY
  - LL_I3C_CR_NO_CAPABILITY

Return values

- **None:**

Notes

- This function is called only when the I3C instance is initialized as controller. This function can be called by the controller application to help the automatic treatment when target have capability of IBI and/or Control-Role.

Reference Manual to LL API cross reference:

- DEVRX DA LL_I3C_ConfigDeviceCapabilities
- DEVRX IBIACK LL_I3C_ConfigDeviceCapabilities
- DEVRX IBIDEN LL_I3C_ConfigDeviceCapabilities
- DEVRX CRACK LL_I3C_ConfigDeviceCapabilities

LL_I3C_IsActiveFlag_CFE

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_CFE (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Control FIFO Empty flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- EVR CFEF LL_I3C_IsActiveFlag_CFE

LL_I3C_IsActiveFlag_TXFE

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_TXFE (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Transmit FIFO Empty flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- EVR TXFEF LL_I3C_IsActiveFlag_TXFE

LL_I3C_IsActiveFlag_CFNF

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_CFNF (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Control FIFO Not Full flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- When a transfer is ongoing, the Control FIFO shall not be written unless this flag is set.

Reference Manual to LL API cross reference:

- EVR CFNFF LL_I3C_IsActiveFlag_CFNF

LL_I3C_IsActiveFlag_SFNE

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_SFNE (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Status FIFO Not Empty flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- This flag is updated only when the FIFO is used, mean SMODE = 1.

Reference Manual to LL API cross reference:

- EVR SFNEF LL_I3C_IsActiveFlag_SFNE

LL_I3C_IsActiveFlag_TXFNF

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_TXFNF (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Transmit FIFO Not Full flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- When a transfer is ongoing, the Transmit FIFO shall not be written unless this flag is set.

Reference Manual to LL API cross reference:

- EVR TXFNFF LL_I3C_IsActiveFlag_TXFNF

LL_I3C_IsActiveFlag_RXFNE

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_RXFNE (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Receive FIFO Not Full flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- EVR RXFNEF LL_I3C_IsActiveFlag_RXFNE

LL_I3C_IsActiveFlag_RXLAST

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_RXLAST (const I3C_TypeDef * I3Cx)

Function description

Indicates that the last Receive byte is available.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- EVR RXLASTF LL_I3C_IsActiveFlag_RXLAST

LL_I3C_IsActiveFlag_TXLAST

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_TXLAST (const I3C_TypeDef * I3Cx)

Function description

Indicates that the last Transmit byte is written in FIFO.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- EVR TXLASTF LL_I3C_IsActiveFlag_TXLAST

LL_I3C_IsActiveFlag_FC

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_FC (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Frame Complete flag (controller and target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- EVR FCF LL_I3C_IsActiveFlag_FC

LL_I3C_IsActiveFlag_RXTGTEND

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_RXTGTEND (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Reception Target End flag (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- This flag is set only when status FIFO is not used, mean SMODE = 0.

Reference Manual to LL API cross reference:

- EVR RXTGTENDF LL_I3C_IsActiveFlag_RXTGTEND

LL_I3C_IsActiveFlag_ERR

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_ERR (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Error flag (controller and target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- EVR ERRF LL_I3C_IsActiveFlag_ERR

LL_I3C_IsActiveFlag_IBI

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_IBI (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of IBI flag (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- EVR IBIF LL_I3C_IsActiveFlag_IBI

LL_I3C_IsActiveFlag_IBIEND

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_IBIEND (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of IBI End flag (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- EVR IBIENDF LL_I3C_IsActiveFlag_IBIEND

LL_I3C_IsActiveFlag_CR

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_CR (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Controller-role Request flag (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- EVR CRF LL_I3C_IsActiveFlag_CR

LL_I3C_IsActiveFlag_CRUPD

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_CRUPD (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Controller-role Request Update flag (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- EVR BCUPDF LL_I3C_IsActiveFlag_CRUPD

LL_I3C_IsActiveFlag_HJ

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_HJ (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Hot Join flag (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- EVR HJF LL_I3C_IsActiveFlag_HJ

LL_I3C_IsActiveFlag_WKP

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_WKP (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Wake Up flag (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- EVR WKPF LL_I3C_IsActiveFlag_WKP

LL_I3C_IsActiveFlag_GET

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_GET (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Get flag (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- EVR GETF LL_I3C_IsActiveFlag_GET

LL_I3C_IsActiveFlag_STA

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_STA (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Get Status flag (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- EVR STAF LL_I3C_IsActiveFlag_STA

LL_I3C_IsActiveFlag_DAUPD

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_DAUPD (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Dynamic Address Update flag (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- EVR DAUPDF LL_I3C_IsActiveFlag_DAUPD

LL_I3C_IsActiveFlag_MWLUPD

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_MWLUPD (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Max Write Length flag (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- EVR MWLUPDF LL_I3C_IsActiveFlag_MWLUPD

LL_I3C_IsActiveFlag_MRLUPD

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_MRLUPD (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Max Read Length flag (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- EVR MRLUPDF LL_I3C_IsActiveFlag_MRLUPD

LL_I3C_IsActiveFlag_RST

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_RST (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Reset flag (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- EVR RSTF LL_I3C_IsActiveFlag_RST

LL_I3C_IsActiveFlag_ASUPD

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_ASUPD (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Active State flag (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- EVR ASUPDF LL_I3C_IsActiveFlag_ASUPD

LL_I3C_IsActiveFlag_INTUPD

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_INTUPD (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Interrupt Update flag (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- EVR INTUPDF LL_I3C_IsActiveFlag_INTUPD

LL_I3C_IsActiveFlag_DEF

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_DEF (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Define List Targets flag (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- EVR DEFF LL_I3C_IsActiveFlag_DEF

LL_I3C_IsActiveFlag_GRP

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_GRP (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Define List Group Addresses flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- EVR GRPF LL_I3C_IsActiveFlag_GRP

LL_I3C_IsActiveFlag_PERR

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_PERR (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Protocol Error flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SER PERR LL_I3C_IsActiveFlag_PERR

LL_I3C_IsActiveFlag_STALL

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_STALL (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of SCL Stall Error flag (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SER STALL LL_I3C_IsActiveFlag_STALL

LL_I3C_IsActiveFlag_DOVR

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_DOVR (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of RX or TX FIFO Overrun flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SER DOVR LL_I3C_IsActiveFlag_DOVR

LL_I3C_IsActiveFlag_COVR

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_COVR (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Control or Status FIFO Overrun flag (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SER COVR LL_I3C_IsActiveFlag_COVR

LL_I3C_IsActiveFlag_ANACK

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_ANACK (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Address not acknowledged flag (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SER ANACK LL_I3C_IsActiveFlag_ANACK

LL_I3C_IsActiveFlag_DNACK

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_DNACK (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Data not acknowledged flag (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SER DNACK LL_I3C_IsActiveFlag_DNACK

LL_I3C_IsActiveFlag_DERR

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveFlag_DERR (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of Data error flag (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SER DERR LL_I3C_IsActiveFlag_DERR

LL_I3C_EnableIT_CFNF

Function name

__STATIC_INLINE void LL_I3C_EnableIT_CFNF (I3C_TypeDef * I3Cx)

Function description

Enable Control FIFO Not Full interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER CFNFIE LL_I3C_EnableIT_CFNF

LL_I3C_DisableIT_CFNF

Function name

__STATIC_INLINE void LL_I3C_DisableIT_CFNF (I3C_TypeDef * I3Cx)

Function description

Disable Control FIFO Not Full interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER CFNFIE LL_I3C_DisableIT_CFNF

LL_I3C_IsEnabledIT_CFNF

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledIT_CFNF (const I3C_TypeDef * I3Cx)

Function description

Check if Control FIFO Not Full interrupt is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER CFNFIE LL_I3C_IsEnabledIT_CFNF

LL_I3C_EnableIT_SFNE

Function name

__STATIC_INLINE void LL_I3C_EnableIT_SFNE (I3C_TypeDef * I3Cx)

Function description

Enable Status FIFO Not Empty interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER SFNEIE LL_I3C_EnableIT_SFNE

LL_I3C_DisableIT_SFNE

Function name

__STATIC_INLINE void LL_I3C_DisableIT_SFNE (I3C_TypeDef * I3Cx)

Function description

Disable Status FIFO Not Empty interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER SFNEIE LL_I3C_DisableIT_SFNE

LL_I3C_IsEnabledIT_SFNE

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledIT_SFNE (const I3C_TypeDef * I3Cx)

Function description

Check if Status FIFO Not Empty interrupt is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER SFNEIE LL_I3C_IsEnabledIT_SFNE

LL_I3C_EnableIT_TXFNF

Function name

__STATIC_INLINE void LL_I3C_EnableIT_TXFNF (I3C_TypeDef * I3Cx)

Function description

Enable Transmit FIFO Not Full interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TXFNFIE LL_I3C_EnableIT_TXFNF

LL_I3C_DisableIT_TXFNF

Function name

__STATIC_INLINE void LL_I3C_DisableIT_TXFNF (I3C_TypeDef * I3Cx)

Function description

Disable Transmit FIFO Not Full interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TXFNFIE LL_I3C_DisableIT_TXFNF

LL_I3C_IsEnabledIT_TXFNF

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledIT_TXFNF (const I3C_TypeDef * I3Cx)

Function description

Check if Transmit FIFO Not Full interrupt is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER TXFNFIE LL_I3C_IsEnabledIT_TXFNF

LL_I3C_EnableIT_RXFNE

Function name

__STATIC_INLINE void LL_I3C_EnableIT_RXFNE (I3C_TypeDef * I3Cx)

Function description

Enable Receive FIFO Not Empty interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER RXFNEIE LL_I3C_EnableIT_RXFNE

LL_I3C_DisableIT_RXFNE

Function name

__STATIC_INLINE void LL_I3C_DisableIT_RXFNE (I3C_TypeDef * I3Cx)

Function description

Disable Receive FIFO Not Empty interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER RXFNEIE LL_I3C_DisableIT_RXFNE

LL_I3C_IsEnabledIT_RXFNE

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledIT_RXFNE (const I3C_TypeDef * I3Cx)

Function description

Check if Receive FIFO Not Empty interrupt is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER RXFNEIE LL_I3C_IsEnabledIT_RXFNE

LL_I3C_EnableIT_FC

Function name

__STATIC_INLINE void LL_I3C_EnableIT_FC (I3C_TypeDef * I3Cx)

Function description

Enable Frame Complete interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER FCIE LL_I3C_EnableIT_FC

LL_I3C_DisableIT_FC

Function name

__STATIC_INLINE void LL_I3C_DisableIT_FC (I3C_TypeDef * I3Cx)

Function description

Disable Frame Complete interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER FCIE LL_I3C_DisableIT_FC

LL_I3C_IsEnabledIT_FC

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledIT_FC (const I3C_TypeDef * I3Cx)

Function description

Check if Frame Complete interrupt is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER FCIE LL_I3C_IsEnabledIT_FC

LL_I3C_EnableIT_RXTGTEND

Function name

__STATIC_INLINE void LL_I3C_EnableIT_RXTGTEND (I3C_TypeDef * I3Cx)

Function description

Enable Reception Target End interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER RXTGTENDIE LL_I3C_EnableIT_RXTGTEND

LL_I3C_DisableIT_RXTGTEND

Function name

__STATIC_INLINE void LL_I3C_DisableIT_RXTGTEND (I3C_TypeDef * I3Cx)

Function description

Disable Reception Target End interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER RXTGTENDIE LL_I3C_DisableIT_RXTGTEND

LL_I3C_IsEnabledIT_RXTGTEND

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledIT_RXTGTEND (const I3C_TypeDef * I3Cx)

Function description

Check if Reception Target End interrupt is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER RXTGTENDIE LL_I3C_IsEnabledIT_RXTGTEND

LL_I3C_EnableIT_ERR

Function name

__STATIC_INLINE void LL_I3C_EnableIT_ERR (I3C_TypeDef * I3Cx)

Function description

Enable Error interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER ERRIE LL_I3C_EnableIT_ERR

LL_I3C_DisableIT_ERR

Function name

__STATIC_INLINE void LL_I3C_DisableIT_ERR (I3C_TypeDef * I3Cx)

Function description

Disable Error interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER ERRIE LL_I3C_DisableIT_ERR

LL_I3C_IsEnabledIT_ERR

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledIT_ERR (const I3C_TypeDef * I3Cx)

Function description

Check if Error interrupt is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER ERRIE LL_I3C_IsEnabledIT_ERR

LL_I3C_EnableIT_IBI

Function name

__STATIC_INLINE void LL_I3C_EnableIT_IBI (I3C_TypeDef * I3Cx)

Function description

Enable IBI interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER IBIIE LL_I3C_EnableIT_IBI

LL_I3C_DisableIT_IBI

Function name

__STATIC_INLINE void LL_I3C_DisableIT_IBI (I3C_TypeDef * I3Cx)

Function description

Disable IBI interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER IBIIE LL_I3C_DisableIT_IBI

LL_I3C_IsEnabledIT_IBI

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledIT_IBI (const I3C_TypeDef * I3Cx)

Function description

Check if IBI interrupt is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER IBIIE LL_I3C_IsEnabledIT_IBI

LL_I3C_EnableIT_IBIEND

Function name

__STATIC_INLINE void LL_I3C_EnableIT_IBIEND (I3C_TypeDef * I3Cx)

Function description

Enable IBI End interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER IBIENDIE LL_I3C_EnableIT_IBIEND

LL_I3C_DisableIT_IBIEND

Function name

__STATIC_INLINE void LL_I3C_DisableIT_IBIEND (I3C_TypeDef * I3Cx)

Function description

Disable IBI End interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER IBIENDIE LL_I3C_DisableIT_IBIEND

LL_I3C_IsEnabledIT_IBIEND

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledIT_IBIEND (const I3C_TypeDef * I3Cx)

Function description

Check if IBI End interrupt is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER IBIENDIE LL_I3C_IsEnabledIT_IBIEND

LL_I3C_EnableIT_CR

Function name

__STATIC_INLINE void LL_I3C_EnableIT_CR (I3C_TypeDef * I3Cx)

Function description

Enable Controller-role interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER CRIE LL_I3C_EnableIT_CR

LL_I3C_DisableIT_CR

Function name

__STATIC_INLINE void LL_I3C_DisableIT_CR (I3C_TypeDef * I3Cx)

Function description

Disable Controller-role interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER CRIE LL_I3C_DisableIT_CR

LL_I3C_IsEnabledIT_CR

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledIT_CR (const I3C_TypeDef * I3Cx)

Function description

Check if Controller-role interrupt is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER CRIE LL_I3C_IsEnabledIT_CR

LL_I3C_EnableIT_CRUPD

Function name

__STATIC_INLINE void LL_I3C_EnableIT_CRUPD (I3C_TypeDef * I3Cx)

Function description

Enable Controller-role Update interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER CRUPDIE LL_I3C_EnableIT_CRUPD

LL_I3C_DisableIT_CRUPD

Function name

__STATIC_INLINE void LL_I3C_DisableIT_CRUPD (I3C_TypeDef * I3Cx)

Function description

Disable Controller-role Update interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER CRUPDIE LL_I3C_DisableIT_CRUPD

LL_I3C_IsEnabledIT_CRUPD

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledIT_CRUPD (const I3C_TypeDef * I3Cx)

Function description

Check if Controller-role Update interrupt is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER CRUPDIE LL_I3C_IsEnabledIT_CRUPD

LL_I3C_EnableIT_HJ

Function name

__STATIC_INLINE void LL_I3C_EnableIT_HJ (I3C_TypeDef * I3Cx)

Function description

Enable Hot Join interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER HJIE LL_I3C_EnableIT_HJ

LL_I3C_DisableIT_HJ

Function name

__STATIC_INLINE void LL_I3C_DisableIT_HJ (I3C_TypeDef * I3Cx)

Function description

Disable Hot Join interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER HJIE LL_I3C_DisableIT_HJ

LL_I3C_IsEnabledIT_HJ

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledIT_HJ (const I3C_TypeDef * I3Cx)

Function description

Check if Hot Join interrupt is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER HJIE LL_I3C_IsEnabledIT_HJ

LL_I3C_EnableIT_WKP

Function name

__STATIC_INLINE void LL_I3C_EnableIT_WKP (I3C_TypeDef * I3Cx)

Function description

Enable Wake Up interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER WKPIE LL_I3C_EnableIT_WKP

LL_I3C_DisableIT_WKP

Function name

__STATIC_INLINE void LL_I3C_DisableIT_WKP (I3C_TypeDef * I3Cx)

Function description

Disable Wake Up interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER WKPIE LL_I3C_DisableIT_WKP

LL_I3C_IsEnabledIT_WKP

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledIT_WKP (const I3C_TypeDef * I3Cx)

Function description

Check if Wake Up is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER WKPIE LL_I3C_IsEnabledIT_WKP

LL_I3C_EnableIT_GET

Function name

__STATIC_INLINE void LL_I3C_EnableIT_GET (I3C_TypeDef * I3Cx)

Function description

Enable Get Command interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER GETIE LL_I3C_EnableIT_GET

LL_I3C_DisableIT_GET

Function name

__STATIC_INLINE void LL_I3C_DisableIT_GET (I3C_TypeDef * I3Cx)

Function description

Disable Get Command interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER GETIE LL_I3C_DisableIT_GET

LL_I3C_IsEnabledIT_GET

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledIT_GET (const I3C_TypeDef * I3Cx)

Function description

Check if Get Command is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER GETIE LL_I3C_IsEnabledIT_GET

LL_I3C_EnableIT_STA

Function name

__STATIC_INLINE void LL_I3C_EnableIT_STA (I3C_TypeDef * I3Cx)

Function description

Enable Get Status interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER STAIE LL_I3C_EnableIT_STA

LL_I3C_DisableIT_STA

Function name

__STATIC_INLINE void LL_I3C_DisableIT_STA (I3C_TypeDef * I3Cx)

Function description

Disable Get Status interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER STAIE LL_I3C_DisableIT_STA

LL_I3C_IsEnabledIT_STA

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledIT_STA (const I3C_TypeDef * I3Cx)

Function description

Check if Get Status interrupt is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER STAIE LL_I3C_IsEnabledIT_STA

LL_I3C_EnableIT_DAUPD

Function name

__STATIC_INLINE void LL_I3C_EnableIT_DAUPD (I3C_TypeDef * I3Cx)

Function description

Enable Dynamic Address Update interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER DAUPDIE LL_I3C_EnableIT_DAUPD

LL_I3C_DisableIT_DAUPD

Function name

__STATIC_INLINE void LL_I3C_DisableIT_DAUPD (I3C_TypeDef * I3Cx)

Function description

Disable Dynamic Address Update interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER DAUPDIE LL_I3C_DisableIT_DAUPD

LL_I3C_IsEnabledIT_DAUPD

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledIT_DAUPD (const I3C_TypeDef * I3Cx)

Function description

Check if Dynamic Address Update interrupt is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER DAUPDIE LL_I3C_IsEnabledIT_DAUPD

LL_I3C_EnableIT_MWLUPD

Function name

__STATIC_INLINE void LL_I3C_EnableIT_MWLUPD (I3C_TypeDef * I3Cx)

Function description

Enable Max Write Length Update interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER MWLUPDIE LL_I3C_EnableIT_MWLUPD

LL_I3C_DisableIT_MWLUPD

Function name

__STATIC_INLINE void LL_I3C_DisableIT_MWLUPD (I3C_TypeDef * I3Cx)

Function description

Disable Max Write Length Update interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER MWLUPDIE LL_I3C_DisableIT_MWLUPD

LL_I3C_IsEnabledIT_MWLUPD

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledIT_MWLUPD (const I3C_TypeDef * I3Cx)

Function description

Check if Max Write Length Update interrupt is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER MWLUPDIE LL_I3C_IsEnabledIT_MWLUPD

LL_I3C_EnableIT_MRLUPD

Function name

__STATIC_INLINE void LL_I3C_EnableIT_MRLUPD (I3C_TypeDef * I3Cx)

Function description

Enable Max Read Length Update interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER MRLUPDIE LL_I3C_EnableIT_MRLUPD

LL_I3C_DisableIT_MRLUPD

Function name

__STATIC_INLINE void LL_I3C_DisableIT_MRLUPD (I3C_TypeDef * I3Cx)

Function description

Disable Max Read Length Update interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER MRLUPDIE LL_I3C_DisableIT_MRLUPD

LL_I3C_IsEnabledIT_MRLUPD

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledIT_MRLUPD (const I3C_TypeDef * I3Cx)

Function description

Check if Max Read Length Update interrupt is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER MRLUPDIE LL_I3C_IsEnabledIT_MRLUPD

LL_I3C_EnableIT_RST

Function name

__STATIC_INLINE void LL_I3C_EnableIT_RST (I3C_TypeDef * I3Cx)

Function description

Enable Reset interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER RSTIE LL_I3C_EnableIT_RST

LL_I3C_DisableIT_RST

Function name

__STATIC_INLINE void LL_I3C_DisableIT_RST (I3C_TypeDef * I3Cx)

Function description

Disable Reset interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER RSTIE LL_I3C_DisableIT_RST

LL_I3C_IsEnabledIT_RST

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledIT_RST (const I3C_TypeDef * I3Cx)

Function description

Check if Reset interrupt is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER RSTIE LL_I3C_IsEnabledIT_RST

LL_I3C_EnableIT_ASUPD

Function name

__STATIC_INLINE void LL_I3C_EnableIT_ASUPD (I3C_TypeDef * I3Cx)

Function description

Enable Activity State Update interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER ASUPDIE LL_I3C_EnableIT_ASUPD

LL_I3C_DisableIT_ASUPD

Function name

__STATIC_INLINE void LL_I3C_DisableIT_ASUPD (I3C_TypeDef * I3Cx)

Function description

Disable Activity State Update interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER ASUPDIE LL_I3C_DisableIT_ASUPD

LL_I3C_IsEnabledIT_ASUPD

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledIT_ASUPD (const I3C_TypeDef * I3Cx)

Function description

Check if Activity State Update interrupt is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER ASUPDIE LL_I3C_IsEnabledIT_ASUPD

LL_I3C_EnableIT_INTUPD

Function name

__STATIC_INLINE void LL_I3C_EnableIT_INTUPD (I3C_TypeDef * I3Cx)

Function description

Enable Interrupt Update interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER INTUPDIE LL_I3C_EnableIT_INTUPD

LL_I3C_DisableIT_INTUPD

Function name

__STATIC_INLINE void LL_I3C_DisableIT_INTUPD (I3C_TypeDef * I3Cx)

Function description

Disable Interrupt Update interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER INTUPDIE LL_I3C_DisableIT_INTUPD

LL_I3C_IsEnabledIT_INTUPD

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledIT_INTUPD (const I3C_TypeDef * I3Cx)

Function description

Check if Interrupt Update interrupt is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER INTUPDIE LL_I3C_IsEnabledIT_INTUPD

LL_I3C_EnableIT_DEF

Function name

__STATIC_INLINE void LL_I3C_EnableIT_DEF (I3C_TypeDef * I3Cx)

Function description

Enable Define List Target interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER DEFIE LL_I3C_EnableIT_DEF

LL_I3C_DisableIT_DEF

Function name

__STATIC_INLINE void LL_I3C_DisableIT_DEF (I3C_TypeDef * I3Cx)

Function description

Disable Define List Target interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER DEFIE LL_I3C_DisableIT_DEF

LL_I3C_IsEnabledIT_DEF

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledIT_DEF (const I3C_TypeDef * I3Cx)

Function description

Check if Define List Target interrupt is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER DEFIE LL_I3C_IsEnabledIT_DEF

LL_I3C_EnableIT_GRP

Function name

__STATIC_INLINE void LL_I3C_EnableIT_GRP (I3C_TypeDef * I3Cx)

Function description

Enable Define List Group Addresses interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER GRPIE LL_I3C_EnableIT_GRP

LL_I3C_DisableIT_GRP

Function name

__STATIC_INLINE void LL_I3C_DisableIT_GRP (I3C_TypeDef * I3Cx)

Function description

Disable Define List Group Addresses interrupt.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER GRPIE LL_I3C_DisableIT_GRP

LL_I3C_IsEnabledIT_GRP

Function name

__STATIC_INLINE uint32_t LL_I3C_IsEnabledIT_GRP (const I3C_TypeDef * I3Cx)

Function description

Check if Define List Group Addresses interrupt is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER GRPIE LL_I3C_IsEnabledIT_GRP

LL_I3C_ClearFlag_FC

Function name

__STATIC_INLINE void LL_I3C_ClearFlag_FC (I3C_TypeDef * I3Cx)

Function description

Clear Frame Complete flag (controller and target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CEVR CFCF LL_I3C_ClearFlag_FC

LL_I3C_ClearFlag_RXTGTEND

Function name

__STATIC_INLINE void LL_I3C_ClearFlag_RXTGTEND (I3C_TypeDef * I3Cx)

Function description

Clear Reception Target End flag (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CEVR CRXTGTENDF LL_I3C_ClearFlag_RXTGTEND

LL_I3C_ClearFlag_ERR

Function name

__STATIC_INLINE void LL_I3C_ClearFlag_ERR (I3C_TypeDef * I3Cx)

Function description

Clear Error flag (controller and target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CEVR CERRF LL_I3C_ClearFlag_ERR

LL_I3C_ClearFlag_IBI

Function name

__STATIC_INLINE void LL_I3C_ClearFlag_IBI (I3C_TypeDef * I3Cx)

Function description

Clear IBI flag (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CEVR CIBIF LL_I3C_ClearFlag_IBI

LL_I3C_ClearFlag_IBIEND

Function name

__STATIC_INLINE void LL_I3C_ClearFlag_IBIEND (I3C_TypeDef * I3Cx)

Function description

Clear IBI End flag (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CEVR CIBIENDF LL_I3C_ClearFlag_IBIEND

LL_I3C_ClearFlag_CR

Function name

__STATIC_INLINE void LL_I3C_ClearFlag_CR (I3C_TypeDef * I3Cx)

Function description

Clear Controller-role Request flag (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CEVR CCRF LL_I3C_ClearFlag_CR

LL_I3C_ClearFlag_CRUPD

Function name

__STATIC_INLINE void LL_I3C_ClearFlag_CRUPD (I3C_TypeDef * I3Cx)

Function description

Clear Controller-role Request Update flag (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CEVR CCRUPDF LL_I3C_ClearFlag_CRUPD

LL_I3C_ClearFlag_HJ

Function name

__STATIC_INLINE void LL_I3C_ClearFlag_HJ (I3C_TypeDef * I3Cx)

Function description

Clear Hot Join flag (controller mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CEVR CHJF LL_I3C_ClearFlag_HJ

LL_I3C_ClearFlag_WKP

Function name

__STATIC_INLINE void LL_I3C_ClearFlag_WKP (I3C_TypeDef * I3Cx)

Function description

Clear Wake Up flag (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CEVR CWKPF LL_I3C_ClearFlag_WKP

LL_I3C_ClearFlag_GET

Function name

__STATIC_INLINE void LL_I3C_ClearFlag_GET (I3C_TypeDef * I3Cx)

Function description

Clear Get flag (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CEVR CGETF LL_I3C_ClearFlag_GET

LL_I3C_ClearFlag_STA

Function name

__STATIC_INLINE void LL_I3C_ClearFlag_STA (I3C_TypeDef * I3Cx)

Function description

Clear Get Status flag (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CEVR CSTAF LL_I3C_ClearFlag_STA

LL_I3C_ClearFlag_DAUPD

Function name

__STATIC_INLINE void LL_I3C_ClearFlag_DAUPD (I3C_TypeDef * I3Cx)

Function description

Clear Dynamic Address Update flag (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CEVR CDAUPDF LL_I3C_ClearFlag_DAUPD

LL_I3C_ClearFlag_MWLUPD

Function name

__STATIC_INLINE void LL_I3C_ClearFlag_MWLUPD (I3C_TypeDef * I3Cx)

Function description

Clear Max Write Length flag (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CEVR CMWLUPDF LL_I3C_ClearFlag_MWLUPD

LL_I3C_ClearFlag_MRLUPD

Function name

__STATIC_INLINE void LL_I3C_ClearFlag_MRLUPD (I3C_TypeDef * I3Cx)

Function description

Clear Max Read Length flag (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CEVR CMRLUPDF LL_I3C_ClearFlag_MRLUPD

LL_I3C_ClearFlag_RST

Function name

__STATIC_INLINE void LL_I3C_ClearFlag_RST (I3C_TypeDef * I3Cx)

Function description

Clear Reset flag (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CEVR CRSTF LL_I3C_ClearFlag_RST

LL_I3C_ClearFlag_ASUPD

Function name

__STATIC_INLINE void LL_I3C_ClearFlag_ASUPD (I3C_TypeDef * I3Cx)

Function description

Clear Active State flag (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CEVR CASUPDF LL_I3C_ClearFlag_ASUPD

LL_I3C_ClearFlag_INTUPD

Function name

__STATIC_INLINE void LL_I3C_ClearFlag_INTUPD (I3C_TypeDef * I3Cx)

Function description

Clear Interrupt Update flag (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CEVR CINTUPDF LL_I3C_ClearFlag_INTUPD

LL_I3C_ClearFlag_DEF

Function name

__STATIC_INLINE void LL_I3C_ClearFlag_DEF (I3C_TypeDef * I3Cx)

Function description

Clear Define List Targets flag (target mode).

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CEVR CDEFF LL_I3C_ClearFlag_DEF

LL_I3C_ClearFlag_GRP

Function name

__STATIC_INLINE void LL_I3C_ClearFlag_GRP (I3C_TypeDef * I3Cx)

Function description

Clear Define List Group Addresses flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CEVR CGRPF LL_I3C_ClearFlag_GRP

LL_I3C_IsActiveMaskFlag_CFNF

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveMaskFlag_CFNF (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of masked interrupt Control FIFO Not Full flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- MISR CFNFMIS LL_I3C_IsActiveMaskFlag_CFNF

LL_I3C_IsActiveMaskFlag_SFNE

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveMaskFlag_SFNE (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of masked interrupt Status FIFO Not Empty flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- MISR SFNEMIS LL_I3C_IsActiveMaskFlag_SFNE

LL_I3C_IsActiveMaskFlag_TXFNF

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveMaskFlag_TXFNF (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of masked interrupt Transmit FIFO Not Full flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- MISR TXFNFMIS LL_I3C_IsActiveMaskFlag_TXFNF

LL_I3C_IsActiveMaskFlag_RXFNE

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveMaskFlag_RXFNE (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of masked interrupt Receive FIFO Not Empty flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- MISR RXFNEMIS LL_I3C_IsActiveMaskFlag_RXFNE

LL_I3C_IsActiveMaskFlag_FC

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveMaskFlag_FC (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of masked interrupt Frame Complete flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- MISR FCMIS LL_I3C_IsActiveMaskFlag_FC

LL_I3C_IsActiveMaskFlag_RXTGTEND

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveMaskFlag_RXTGTEND (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of masked interrupt Reception Target End flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- MISR RXTGTENDMIS LL_I3C_IsActiveMaskFlag_RXTGTEND

LL_I3C_IsActiveMaskFlag_ERR

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveMaskFlag_ERR (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of masked interrupt Error flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- MISR ERRMIS LL_I3C_IsActiveMaskFlag_ERR

LL_I3C_IsActiveMaskFlag_IBI

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveMaskFlag_IBI (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of masked interrupt IBI flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- MISR IBIMIS LL_I3C_IsActiveMaskFlag_IBI

LL_I3C_IsActiveMaskFlag_IBIEND

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveMaskFlag_IBIEND (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of masked interrupt IBI End flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- MISR IBIENDMIS LL_I3C_IsActiveMaskFlag_IBIEND

LL_I3C_IsActiveMaskFlag_CR

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveMaskFlag_CR (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of masked interrupt Controller-role flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- MISR CRMIS LL_I3C_IsActiveMaskFlag_CR

LL_I3C_IsActiveMaskFlag_CRUPD

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveMaskFlag_CRUPD (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of masked interrupt Controller-role Update flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- MISR CRUPDMIS LL_I3C_IsActiveMaskFlag_CRUPD

LL_I3C_IsActiveMaskFlag_HJ

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveMaskFlag_HJ (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of masked interrupt Hot Join flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- MISR HJMIS LL_I3C_IsActiveMaskFlag_HJ

LL_I3C_IsActiveMaskFlag_WKP

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveMaskFlag_WKP (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of masked interrupt Wake Up is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- MISR WKPMIS LL_I3C_IsActiveMaskFlag_WKP

LL_I3C_IsActiveMaskFlag_GET

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveMaskFlag_GET (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of masked interrupt Get Command is enabled or disabled.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- MISR GETMIS LL_I3C_IsActiveMaskFlag_GET

LL_I3C_IsActiveMaskFlag_STA

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveMaskFlag_STA (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of masked interrupt Get Status flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- MISR STAMIS LL_I3C_IsActiveMaskFlag_STA

LL_I3C_IsActiveMaskFlag_DAUPD

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveMaskFlag_DAUPD (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of masked interrupt Dynamic Address Update flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- MISR DAUPDMIS LL_I3C_IsActiveMaskFlag_DAUPD

LL_I3C_IsActiveMaskFlag_MWLUPD

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveMaskFlag_MWLUPD (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of masked interrupt Max Write Length Update flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- MISR MWLUPDMIS LL_I3C_IsActiveMaskFlag_MWLUPD

LL_I3C_IsActiveMaskFlag_MRLUPD

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveMaskFlag_MRLUPD (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of masked interrupt Max Read Length Update flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- MISR MRLUPDMIS LL_I3C_IsActiveMaskFlag_MRLUPD

LL_I3C_IsActiveMaskFlag_RST

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveMaskFlag_RST (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of masked interrupt Reset flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- MISR RSTMIS LL_I3C_IsActiveMaskFlag_RST

LL_I3C_IsActiveMaskFlag_ASUPD

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveMaskFlag_ASUPD (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of masked interrupt Activity State Update flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- MISR ASUPDMIS LL_I3C_IsActiveMaskFlag_ASUPD

LL_I3C_IsActiveMaskFlag_INTUPD

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveMaskFlag_INTUPD (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of masked Interrupt Update flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- MISR INTUPDMIS LL_I3C_IsActiveMaskFlag_INTUPD

LL_I3C_IsActiveMaskFlag_DEF

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveMaskFlag_DEF (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of masked interrupt Define List Target flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- MISR DEFMIS LL_I3C_IsActiveMaskFlag_DEF

LL_I3C_IsActiveMaskFlag_GRP

Function name

__STATIC_INLINE uint32_t LL_I3C_IsActiveMaskFlag_GRP (const I3C_TypeDef * I3Cx)

Function description

Indicates the status of masked interrupt Define List Group Addresses flag.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- MISR GRPMIS LL_I3C_IsActiveMaskFlag_GRP

LL_I3C_Init

Function name

ErrorStatus LL_I3C_Init (I3C_TypeDef * I3Cx, LL_I3C_InitTypeDef * I3C_InitStruct, uint32_t Mode)

Function description

Initialize the I3C registers according to the specified parameters in I3C_InitStruct.

Parameters

- **I3Cx:** I3C Instance.
- **I3C_InitStruct:** pointer to a LL_I3C_InitTypeDef structure.
- **Mode:** I3C peripheral mode. This parameter can be a value of MODE.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: I3C registers are initialized
  - ERROR: Not applicable

LL_I3C_DeInit

Function name

ErrorStatus LL_I3C_DeInit (const I3C_TypeDef * I3Cx)

Function description

De-initialize the I3C registers to their default reset values.

Parameters

- **I3Cx:** I3C Instance.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: I3C registers are de-initialized
  - ERROR: I3C registers are not de-initialized

LL_I3C_StructInit

Function name

void LL_I3C_StructInit (LL_I3C_InitTypeDef * I3C_InitStruct)

Function description

Set each LL_I3C_InitTypeDef field to default value.

Parameters

- **I3C_InitStruct:** Pointer to a LL_I3C_InitTypeDef structure.

Return values

- **None:**

86.3 I3C Firmware driver defines

The following section lists the various define and macros of the module.

86.3.1 I3C

I3C

BUS ACTIVITY STATE

LL_I3C_BUS_ACTIVITY_STATE_0

Controller on the Bus Activity State 0

LL_I3C_BUS_ACTIVITY_STATE_1

Controller on the Bus Activity State 1

LL_I3C_BUS_ACTIVITY_STATE_2

Controller on the Bus Activity State 2

LL_I3C_BUS_ACTIVITY_STATE_3

Controller on the Bus Activity State 3

CONTROLLER ERROR

LL_I3C_CONTROLLER_ERROR_CE0

Controller detected an illegally formatted CCC

LL_I3C_CONTROLLER_ERROR_CE1

Controller detected that transmitted data on the bus is different than expected

LL_I3C_CONTROLLER_ERROR_CE2

Controller detected that broadcast address 7'h7E has been nacked

LL_I3C_CONTROLLER_ERROR_CE3

Controller detected that new Controller did not drive the bus after Controller-role handoff

CONTROLLER MTYPE

LL_I3C_CONTROLLER_MTYPE_RELEASE

SCL output clock stops running until next instruction executed

LL_I3C_CONTROLLER_MTYPE_HEADER

Header Message

LL_I3C_CONTROLLER_MTYPE_PRIVATE

Private Message Type

LL_I3C_CONTROLLER_MTYPE_DIRECT

Direct Message Type

LL_I3C_CONTROLLER_MTYPE_LEGACY_I2C

Legacy I2C Message Type

LL_I3C_CONTROLLER_MTYPE_CCC

Common Command Code

CR CAPABILITY

LL_I3C_CR_CAPABILITY

Controller acknowledge Target Controller Role capable

LL_I3C_CR_NO_CAPABILITY

Controller no acknowledge Target Controller Role capable

DEVICE ROLE AS

LL_I3C_DEVICE_ROLE_AS_TARGET

I3C Target

LL_I3C_DEVICE_ROLE_AS_CONTROLLER

I3C Controller

DIRECTION

LL_I3C_DIRECTION_WRITE

Write transfer

LL_I3C_DIRECTION_READ

Read transfer

DMA Register Data

LL_I3C_DMA_REG_DATA_TRANSMIT_BYTE

Get address of data register used for transmission in Byte

LL_I3C_DMA_REG_DATA_RECEIVE_BYTE

Get address of data register used for reception in Byte

LL_I3C_DMA_REG_DATA_TRANSMIT_WORD

Get address of data register used for transmission in Word

LL_I3C_DMA_REG_DATA_RECEIVE_WORD

Get address of data register used for reception in Word

LL_I3C_DMA_REG_STATUS

Get address of status register used for transfer status in Word

LL_I3C_DMA_REG_CONTROL

Get address of control register used for transfer control in Word

End of Frame completion

LL_I3C_END_OF_FRAME_CPLT_DISABLE

Frame Completion Flag is autoclear by HW, no need SW action

LL_I3C_END_OF_FRAME_CPLT_ENABLE

Frame Completion Flag need to be clear by SW action (default configuration)

GENERATE

LL_I3C_GENERATE_STOP

Generate Stop condition after sending a message

LL_I3C_GENERATE_RESTART

Generate Restart condition after sending a message

GETMXDS FORMAT

LL_I3C_GETMXDS_FORMAT_1

GETMXDS CCC Format 1 is used, no MaxRdTurn field in response

LL_I3C_GETMXDS_FORMAT_2_LSB

GETMXDS CCC Format 2 is used, MaxRdTurn field in response, LSB = RDTURN[7:0]

LL_I3C_GETMXDS_FORMAT_2_MID

GETMXDS CCC Format 2 is used, MaxRdTurn field in response, Middle byte = RDTURN[7:0]

LL_I3C_GETMXDS_FORMAT_2_MSB

GETMXDS CCC Format 2 is used, MaxRdTurn field in response, MSB = RDTURN[7:0]

GETMXDS TSCO

LL_I3C_TURNAROUND_TIME_TSCO_LESS_12NS

clock-to-data turnaround time tSCO <= 12ns

LL_I3C_TURNAROUND_TIME_TSCO_GREATER_12NS

clock-to-data turnaround time tSCO > 12ns

Get Flags Defines

LL_I3C_EVR_CFEF

LL_I3C_EVR_TXFEF

LL_I3C_EVR_CFNFF

LL_I3C_EVR_SFNEF

LL_I3C_EVR_TXFNFF

LL_I3C_EVR_RXFNEF

LL_I3C_EVR_RXLASTF

LL_I3C_EVR_TXLASTF

LL_I3C_EVR_FCF

LL_I3C_EVR_RXTGTENDF

LL_I3C_EVR_ERRF

LL_I3C_EVR_IBIF

LL_I3C_EVR_IBIENDF

LL_I3C_EVR_STAF

LL_I3C_EVR_DAUPDF

LL_I3C_EVR_MWLUPDF

LL_I3C_EVR_MRLUPDF

LL_I3C_EVR_RSTF

LL_I3C_EVR_ASUPDF

LL_I3C_EVR_INTUPDF

LL_I3C_EVR_DEFF

LL_I3C_EVR_GRPF

LL_I3C_SER_PERR

LL_I3C_SER_STALL

LL_I3C_SER_DOVR

LL_I3C_SER_COVR

LL_I3C_SER_ANACK

LL_I3C_SER_DNACK

LL_I3C_SER_DERR

HANDOFF

LL_I3C_HANDOFF_NOT_DELAYED

Additional time to process controllership handoff is not needed

LL_I3C_HANDOFF_DELAYED

Additional time to process controllership handoff is needed

HANDOFF ACTIVITY STATE

LL_I3C_HANDOFF_ACTIVITY_STATE_0

Indicates that will act according to Activity State 0 after controllership handoff

LL_I3C_HANDOFF_ACTIVITY_STATE_1

Indicates that will act according to Activity State 1 after controllership handoff

LL_I3C_HANDOFF_ACTIVITY_STATE_2

Indicates that will act according to Activity State 2 after controllership handoff

LL_I3C_HANDOFF_ACTIVITY_STATE_3

Indicates that will act according to Activity State 3 after controllership handoff

HANDOFF GRP ADDR NOT

LL_I3C_HANDOFF_GRP_ADDR_NOT_SUPPORTED

Group Address Handoff is not supported

LL_I3C_HANDOFF_GRP_ADDR_SUPPORTED

Group Address Handoff is supported

IBI ADDITIONAL DATA

LL_I3C_IBI_DATA_ENABLE

A mandatory data byte follows the IBI acknowledgement

LL_I3C_IBI_DATA_DISABLE

No mandatory data byte follows the IBI acknowledgement

IBI CAPABILITY

LL_I3C_IBI_CAPABILITY

Controller acknowledge Target In Band Interrupt capable

LL_I3C_IBI_NO_CAPABILITY

Controller no acknowledge Target In Band Interrupt capable

IBI MDB READ NOTIFICATION

LL_I3C_MDB_NO_PENDING_READ_NOTIFICATION

No support of pending read notification via the IBI MDB[7:0] value

LL_I3C_MDB_PENDING_READ_NOTIFICATION

Support of pending read notification via the IBI MDB[7:0] value

IBI NO ADDITIONAL

LL_I3C_IBI_NO_ADDITIONAL_DATA

No data byte follows the accepted IBI

LL_I3C_IBI_ADDITIONAL_DATA

A Mandatory Data Byte (MDB) follows the accepted IBI

MAX DATA SPEED LIMITATION

LL_I3C_NO_DATA_SPEED_LIMITATION

No max data speed limitation

LL_I3C_MAX_DATA_SPEED_LIMITATION

Max data speed limitation

MESSAGE

LL_I3C_MESSAGE_ERROR

An error has been detected in the message

LL_I3C_MESSAGE_SUCCESS

The message ended with success

MESSAGE DIRECTION

LL_I3C_MESSAGE_DIRECTION_WRITE

Write data or command

LL_I3C_MESSAGE_DIRECTION_READ

Read data

MODE

LL_I3C_MODE_CONTROLLER

I3C Controller mode

LL_I3C_MODE_TARGET

I3C Target (Controller capable) mode

OWN ACTIVITY STATE

LL_I3C_OWN_ACTIVITY_STATE_0

Own Controller Activity state 0

LL_I3C_OWN_ACTIVITY_STATE_1

Own Controller Activity state 1

LL_I3C_OWN_ACTIVITY_STATE_2

Own Controller Activity state 2

LL_I3C_OWN_ACTIVITY_STATE_3

Own Controller Activity state 3

PAYLOAD

LL_I3C_PAYLOAD_EMPTY

Empty payload, no additional data after IBI acknowledge

LL_I3C_PAYLOAD_1_BYTE

One additional data byte after IBI acknowledge

LL_I3C_PAYLOAD_2_BYTES

Two additional data bytes after IBI acknowledge

LL_I3C_PAYLOAD_3_BYTES

Three additional data bytes after IBI acknowledge

LL_I3C_PAYLOAD_4_BYTES

Four additional data bytes after IBI acknowledge

RESET ACTION

LL_I3C_RESET_ACTION_NONE

No Reset Action Required

LL_I3C_RESET_ACTION_PARTIAL

Reset of some internal registers of the peripheral

LL_I3C_RESET_ACTION_FULL

Reset all internal registers of the peripheral

RX THRESHOLD

LL_I3C_RXFIFO_THRESHOLD_1_4

Rx Fifo Threshold is 1 byte in a Fifo depth of 4 bytes

LL_I3C_RXFIFO_THRESHOLD_4_4

Rx Fifo Threshold is 4 bytes in a Fifo depth of 4 bytes

SDA HOLD TIME 0

LL_I3C_SDA_HOLD_TIME_0_5

SDA hold time is 0.5 x ti3cclk

LL_I3C_SDA_HOLD_TIME_1_5

SDA hold time is 1.5 x ti3cclk

LL_I3C_SDA_HOLD_TIME_2_5

SDA hold time is 2.5 x ti3cclk

LL_I3C_SDA_HOLD_TIME_3_5

SDA hold time is 3.5 x ti3cclk

TARGET ERROR

LL_I3C_TARGET_ERROR_TE0

Target detected an invalid broadcast address

LL_I3C_TARGET_ERROR_TE1

Target detected an invalid CCC Code

LL_I3C_TARGET_ERROR_TE2

Target detected an invalid write data

LL_I3C_TARGET_ERROR_TE3

Target detected an invalid assigned address during Dynamic Address Assignment procedure

LL_I3C_TARGET_ERROR_TE4

Target detected 7'h7E missing after Restart during Dynamic Address Assignment procedure

LL_I3C_TARGET_ERROR_TE5

Target detected an illegally formatted CCC

LL_I3C_TARGET_ERROR_TE6

Target detected that transmitted data on the bus is different than expected

TARGET MTYPE HOT

LL_I3C_TARGET_MTYPE_HOT_JOIN

Hot Join

LL_I3C_TARGET_MTYPE_CONTROLLER_ROLE_REQ

Controller-role Request

LL_I3C_TARGET_MTYPE_IBI

In Band Interrupt (IBI)

TRIG

LL_I3C_TRIG_LOW

Trigger is active when signal is 0

LL_I3C_TRIG_HIGH

Trigger is active when signal is 1

Trigger source selection

LL_I3C_TRIG_GRP1

Trigger Group for I3C1, I3C2

LL_I3C_GRP1_GPDMA_CH0_TCF_TRG

HW Trigger signal is GPDMA_CH0_TRG

LL_I3C_GRP1_GPDMA_CH1_TCF_TRG

HW Trigger signal is GPDMA_CH1_TRG

LL_I3C_GRP1_GPDMA_CH2_TCF_TRG

HW Trigger signal is GPDMA_CH2_TRG

LL_I3C_GRP1_GPDMA_CH3_TCF_TRG

HW Trigger signal is GPDMA_CH3_TRG

LL_I3C_GRP1_EXTI5_TRG

HW Trigger signal is EXTI5_TRG

LL_I3C_GRP1_EXTI9_TRG

HW Trigger signal is EXTI9_TRG

LL_I3C_GRP1_LPTIM1_CH1_TRG

HW Trigger signal is LPTIM1_CH1_TRG

LL_I3C_GRP1_LPTIM2_CH1_TRG

HW Trigger signal is LPTIM2_CH1_TRG

LL_I3C_GRP1_COMP1_TRG

HW Trigger signal is COMP1_TRG

LL_I3C_GRP1_COMP2_TRG

HW Trigger signal is COMP2_TRG

LL_I3C_GRP1_RTC_ALRA_TRG

HW Trigger signal is RTC_ALRA_TRG

LL_I3C_GRP1_RTC_WUT_TRG

HW Trigger signal is RTC_WUT_TRG

LL_I3C_GRP1_TIM15_TGO_CKTIM_TRG

HW Trigger signal is TIM15_TGO_CKTIM_TRG

LL_I3C_GRP1_TIM16_OC1_TRG

HW Trigger signal is TIM16_OC1_TRG

TX THRESHOLD

LL_I3C_TXFIFO_THRESHOLD_1_4

Tx Fifo Threshold is 1 byte in a Fifo depth of 4 bytes

LL_I3C_TXFIFO_THRESHOLD_4_4

Tx Fifo Threshold is 4 bytes in a Fifo depth of 4 bytes

Common Write and read registers Macros

LL_I3C_GET_BCR

Description:

- Get Bus Characterics in payload (64bits) receive during ENTDAA procedure.

Parameters:

- __PAYLOAD__: specifies the Bus Characteristics capabilities retrieve during ENTDAA procedure. This parameter must be a number between Min_Data=0x00(uint64_t) and Max_Data=0xFFFFFFFFFFFFFFFFF.

Return value:

- The: value of BCR Return value between Min_Data=0x00 and Max_Data=0xFF.

LL_I3C_GET_IBI_CAPABLE

Description:

- Check IBI request capabilities.

Parameters:

- __BCR__: specifies the Bus Characteristics capabilities retrieve during ENTDAA procedure. This parameter must be a number between Min_Data=0x00 and Max_Data=0xFF.

Return value:

- Value: of

LL_I3C_GET_IBI_PAYLOAD

Description:

- Check IBI additional data byte capabilities.

Parameters:

- __BCR__: specifies the Bus Characteristics capabilities retrieve during ENTDAA procedure. This parameter must be a number between Min_Data=0x00 and Max_Data=0xFF.

Return value:

- Value: of

LL_I3C_GET_CR_CAPABLE

Description:

- Check Controller role request capabilities.

Parameters:

- __BCR__: specifies the Bus Characteristics capabilities retrieve during ENTDAA procedure. This parameter must be a number between Min_Data=0x00 and Max_Data=0xFF.

Return value:

- Value: of

LL_I3C_WriteReg

Description:

- Write a value in I3C register.

Parameters:

- __INSTANCE__: I3C Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_I3C_ReadReg

Description:

- Read a value in I3C register.

Parameters:

- __INSTANCE__: I3C Instance
- __REG__: Register to be read

Return value:

- Register: value

87 LL ICACHE Generic Driver

87.1 ICACHE Firmware driver registers structures

87.1.1 LL_ICACHE_RegionTypeDef

LL_ICACHE_RegionTypeDef is defined in the stm32u3xx_ll_icache.h

Data Fields

- ***uint32_t BaseAddress***
- ***uint32_t RemapAddress***
- ***uint32_t Size***
- ***uint32_t TrafficRoute***
- ***uint32_t OutputBurstType***

Field Documentation

- ***uint32_t LL_ICACHE_RegionTypeDef::BaseAddress***
  Configures the C-AHB base address to be remapped
- ***uint32_t LL_ICACHE_RegionTypeDef::RemapAddress***
  Configures the remap address to be remapped
- ***uint32_t LL_ICACHE_RegionTypeDef::Size***
  Configures the region size. This parameter can be a value of ***ICACHE_LL_EC_Region_Size***
- ***uint32_t LL_ICACHE_RegionTypeDef::TrafficRoute***
  Selects the traffic route. This parameter can be a value of ***ICACHE_LL_EC_Traffic_Route***
- ***uint32_t LL_ICACHE_RegionTypeDef::OutputBurstType***
  Selects the output burst type. This parameter can be a value of ***ICACHE_LL_EC_Output_Burst_Type***

87.2 ICACHE Firmware driver API description

The following section lists the various functions of the ICACHE library.

87.2.1 Detailed description of functions

LL_ICACHE_Enable

Function name

__STATIC_INLINE void LL_ICACHE_Enable (void)

Function description

Enable the ICACHE.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR EN LL_ICACHE_Enable

LL_ICACHE_Disable

Function name

__STATIC_INLINE void LL_ICACHE_Disable (void)

Function description

Disable the ICACHE.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR EN LL_ICACHE_Disable

LL_ICACHE_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_ICACHE_IsEnabled (void)

Function description

Return if ICACHE is enabled or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR EN LL_ICACHE_IsEnabled

LL_ICACHE_SetMode

Function name

__STATIC_INLINE void LL_ICACHE_SetMode (uint32_t Mode)

Function description

Select the ICACHE operating mode.

Parameters

- **Mode:** This parameter can be one of the following values:
  - LL_ICACHE_1WAY
  - LL_ICACHE_2WAYS

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR WAYSEL LL_ICACHE_SetMode

LL_ICACHE_GetMode

Function name

__STATIC_INLINE uint32_t LL_ICACHE_GetMode (void)

Function description

Get the selected ICACHE operating mode.

Return values

- **Returned:** value can be one of the following values:
  - LL_ICACHE_1WAY
  - LL_ICACHE_2WAYS

Reference Manual to LL API cross reference:

- CR WAYSEL LL_ICACHE_GetMode

LL_ICACHE_Invalidate

Function name

__STATIC_INLINE void LL_ICACHE_Invalidate (void)

Function description

Invalidate the ICACHE.

Return values

- **None:**

Notes

- Until the BSYEND flag is set, the cache is bypassed.

Reference Manual to LL API cross reference:

- CR CACHEINV LL_ICACHE_Invalidate

LL_ICACHE_EnableMonitors

Function name

__STATIC_INLINE void LL_ICACHE_EnableMonitors (uint32_t Monitors)

Function description

Enable the hit/miss monitor(s).

Parameters

- **Monitors:** This parameter can be one or a combination of the following values:
  - LL_ICACHE_MONITOR_HIT
  - LL_ICACHE_MONITOR_MISS
  - LL_ICACHE_MONITOR_ALL

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HITMEN LL_ICACHE_EnableMonitors
- CR MISSMEN LL_ICACHE_EnableMonitors

LL_ICACHE_DisableMonitors

Function name

__STATIC_INLINE void LL_ICACHE_DisableMonitors (uint32_t Monitors)

Function description

Disable the hit/miss monitor(s).

Parameters

- **Monitors:** This parameter can be one or a combination of the following values:
  - LL_ICACHE_MONITOR_HIT
  - LL_ICACHE_MONITOR_MISS
  - LL_ICACHE_MONITOR_ALL

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HITMEN LL_ICACHE_DisableMonitors
- CR MISSMEN LL_ICACHE_DisableMonitors

LL_ICACHE_IsEnabledMonitors

Function name

__STATIC_INLINE uint32_t LL_ICACHE_IsEnabledMonitors (uint32_t Monitors)

Function description

Check if the monitor(s) is(are) enabled or disabled.

Parameters

- **Monitors:** This parameter can be one or a combination of the following values:
  - LL_ICACHE_MONITOR_HIT
  - LL_ICACHE_MONITOR_MISS
  - LL_ICACHE_MONITOR_ALL

Return values

- **State:** of parameter value (1 or 0).

Reference Manual to LL API cross reference:

- CR HITMEN LL_ICACHE_IsEnabledMonitors
- CR MISSMEN LL_ICACHE_IsEnabledMonitors

LL_ICACHE_ResetMonitors

Function name

__STATIC_INLINE void LL_ICACHE_ResetMonitors (uint32_t Monitors)

Function description

Reset the hit/miss monitor(s).

Parameters

- **Monitors:** This parameter can be one or a combination of the following values:
  - LL_ICACHE_MONITOR_HIT
  - LL_ICACHE_MONITOR_MISS
  - LL_ICACHE_MONITOR_ALL

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HITMRST LL_ICACHE_ResetMonitors
- CR MISSMRST LL_ICACHE_ResetMonitors

LL_ICACHE_GetHitMonitor

Function name

__STATIC_INLINE uint32_t LL_ICACHE_GetHitMonitor (void)

Function description

Get the Hit monitor.

Return values

- **Value:** between Min_Data=0 and Max_Data=0xFFFFFFFF

Notes

- Upon reaching the 32-bit maximum value, hit monitor does not wrap.

Reference Manual to LL API cross reference:

- HMONR HITMON LL_ICACHE_GetHitMonitor

LL_ICACHE_GetMissMonitor

Function name

__STATIC_INLINE uint32_t LL_ICACHE_GetMissMonitor (void)

Function description

Get the Miss monitor.

Return values

- **Value:** between Min_Data=0 and Max_Data=0xFFFF

Notes

- Upon reaching the 16-bit maximum value, miss monitor does not wrap.

Reference Manual to LL API cross reference:

- MMONR MISSMON LL_ICACHE_GetMissMonitor

LL_ICACHE_EnableIT_BSYEND

Function name

__STATIC_INLINE void LL_ICACHE_EnableIT_BSYEND (void)

Function description

Enable BSYEND interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER BSYENDIE LL_ICACHE_EnableIT_BSYEND

LL_ICACHE_DisableIT_BSYEND

Function name

__STATIC_INLINE void LL_ICACHE_DisableIT_BSYEND (void)

Function description

Disable BSYEND interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER BSYENDIE LL_ICACHE_DisableIT_BSYEND

LL_ICACHE_IsEnabledIT_BSYEND

Function name

__STATIC_INLINE uint32_t LL_ICACHE_IsEnabledIT_BSYEND (void)

Function description

Check if the BSYEND Interrupt is enabled or disabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER BSYENDIE LL_ICACHE_IsEnabledIT_BSYEND

LL_ICACHE_EnableIT_ERR

Function name

__STATIC_INLINE void LL_ICACHE_EnableIT_ERR (void)

Function description

Enable ERR interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER ERRIE LL_ICACHE_EnableIT_ERR

LL_ICACHE_DisableIT_ERR

Function name

__STATIC_INLINE void LL_ICACHE_DisableIT_ERR (void)

Function description

Disable ERR interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER ERRIE LL_ICACHE_DisableIT_ERR

LL_ICACHE_IsEnabledIT_ERR

Function name

__STATIC_INLINE uint32_t LL_ICACHE_IsEnabledIT_ERR (void)

Function description

Check if the ERR Interrupt is enabled or disabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER ERRIE LL_ICACHE_IsEnabledIT_ERR

LL_ICACHE_IsActiveFlag_BUSY

Function name

__STATIC_INLINE uint32_t LL_ICACHE_IsActiveFlag_BUSY (void)

Function description

Indicate the status of an ongoing operation flag.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR BUSYF LL_ICACHE_IsActiveFlag_BUSY

LL_ICACHE_IsActiveFlag_BSYEND

Function name

__STATIC_INLINE uint32_t LL_ICACHE_IsActiveFlag_BSYEND (void)

Function description

Indicate the status of an operation end flag.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR BSYEND LL_ICACHE_IsActiveFlag_BSYEND

LL_ICACHE_IsActiveFlag_ERR

Function name

__STATIC_INLINE uint32_t LL_ICACHE_IsActiveFlag_ERR (void)

Function description

Indicate the status of an error flag.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR ERRF LL_ICACHE_IsActiveFlag_ERR

LL_ICACHE_ClearFlag_BSYEND

Function name

__STATIC_INLINE void LL_ICACHE_ClearFlag_BSYEND (void)

Function description

Clear busy end of operation flag.

Return values

- **None:**

Reference Manual to LL API cross reference:

- FCR CBSYENDF LL_ICACHE_ClearFlag_BSYEND

LL_ICACHE_ClearFlag_ERR

Function name

__STATIC_INLINE void LL_ICACHE_ClearFlag_ERR (void)

Function description

Clear error flag.

Return values

- **None:**

Reference Manual to LL API cross reference:

- FCR ERRF LL_ICACHE_ClearFlag_ERR

LL_ICACHE_EnableRegion

Function name

__STATIC_INLINE void LL_ICACHE_EnableRegion (uint32_t Region)

Function description

Enable the remapped memory region.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_ICACHE_REGION_0
  - LL_ICACHE_REGION_1
  - LL_ICACHE_REGION_2
  - LL_ICACHE_REGION_3

Return values

- **None:**

Notes

- The region must have been already configured.

Reference Manual to LL API cross reference:

- CRRx REN LL_ICACHE_EnableRegion

LL_ICACHE_DisableRegion

Function name

__STATIC_INLINE void LL_ICACHE_DisableRegion (uint32_t Region)

Function description

Disable the remapped memory region.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_ICACHE_REGION_0
  - LL_ICACHE_REGION_1
  - LL_ICACHE_REGION_2
  - LL_ICACHE_REGION_3

Return values

- **None:**

Reference Manual to LL API cross reference:

- CRRx REN LL_ICACHE_DisableRegion

LL_ICACHE_IsEnabledRegion

Function name

__STATIC_INLINE uint32_t LL_ICACHE_IsEnabledRegion (uint32_t Region)

Function description

Return if remapped memory region is enabled or not.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_ICACHE_REGION_0
  - LL_ICACHE_REGION_1
  - LL_ICACHE_REGION_2
  - LL_ICACHE_REGION_3

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CRRx REN LL_ICACHE_IsEnabledRegion

LL_ICACHE_SetRegionBaseAddress

Function name

__STATIC_INLINE void LL_ICACHE_SetRegionBaseAddress (uint32_t Region, uint32_t Address)

Function description

Select the memory remapped region base address.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_ICACHE_REGION_0
  - LL_ICACHE_REGION_1
  - LL_ICACHE_REGION_2
  - LL_ICACHE_REGION_3
- **Address:** Alias address in the Code region

Return values

- **None:**

Notes

- The useful bits depends on RSIZE as described in the Reference Manual.

Reference Manual to LL API cross reference:

- CRRx BASEADDR LL_ICACHE_SetRegionBaseAddress

LL_ICACHE_GetRegionBaseAddress

Function name

__STATIC_INLINE uint32_t LL_ICACHE_GetRegionBaseAddress (uint32_t Region)

Function description

Get the memory remapped region base address.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_ICACHE_REGION_0
  - LL_ICACHE_REGION_1
  - LL_ICACHE_REGION_2
  - LL_ICACHE_REGION_3

Return values

- **Address:** Alias address in the Code region

Notes

- The base address is the alias in the Code region.
- The useful bits depends on RSIZE as described in the Reference Manual.

Reference Manual to LL API cross reference:

- CRRx BASEADDR LL_ICACHE_GetRegionBaseAddress

LL_ICACHE_SetRegionRemapAddress

Function name

__STATIC_INLINE void LL_ICACHE_SetRegionRemapAddress (uint32_t Region, uint32_t Address)

Function description

Select the memory remapped region address.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_ICACHE_REGION_0
  - LL_ICACHE_REGION_1
  - LL_ICACHE_REGION_2
  - LL_ICACHE_REGION_3
- **Address:** Memory address to remap

Return values

- **None:**

Notes

- The useful bits depends on RSIZE as described in the Reference Manual.

Reference Manual to LL API cross reference:

- CRRx REMAPADDR LL_ICACHE_SetRegionRemapAddress

LL_ICACHE_GetRegionRemapAddress

Function name

__STATIC_INLINE uint32_t LL_ICACHE_GetRegionRemapAddress (uint32_t Region)

Function description

Get the memory remapped region address.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_ICACHE_REGION_0
  - LL_ICACHE_REGION_1
  - LL_ICACHE_REGION_2
  - LL_ICACHE_REGION_3

Return values

- **Address:** Remapped memory address

Notes

- The useful bits depends on RSIZE as described in the Reference Manual.

Reference Manual to LL API cross reference:

- CRRx REMAPADDR LL_ICACHE_GetRegionRemapAddress

LL_ICACHE_SetRegionSize

Function name

__STATIC_INLINE void LL_ICACHE_SetRegionSize (uint32_t Region, uint32_t Size)

Function description

Select the memory remapped region size.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_ICACHE_REGION_0
  - LL_ICACHE_REGION_1
  - LL_ICACHE_REGION_2
  - LL_ICACHE_REGION_3
- **Size:** This parameter can be one of the following values:
  - LL_ICACHE_REGIONSIZE_2MB
  - LL_ICACHE_REGIONSIZE_4MB
  - LL_ICACHE_REGIONSIZE_8MB
  - LL_ICACHE_REGIONSIZE_16MB
  - LL_ICACHE_REGIONSIZE_32MB
  - LL_ICACHE_REGIONSIZE_64MB
  - LL_ICACHE_REGIONSIZE_128MB

Return values

- **None:**

Reference Manual to LL API cross reference:

- CRRx RSIZE LL_ICACHE_SetRegionSize

LL_ICACHE_GetRegionSize

Function name

__STATIC_INLINE uint32_t LL_ICACHE_GetRegionSize (uint32_t Region)

Function description

Get the selected the memory remapped region size.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_ICACHE_REGION_0
  - LL_ICACHE_REGION_1
  - LL_ICACHE_REGION_2
  - LL_ICACHE_REGION_3

Return values

- **Returned:** value can be one of the following values:
  - LL_ICACHE_REGIONSIZE_2MB
  - LL_ICACHE_REGIONSIZE_4MB
  - LL_ICACHE_REGIONSIZE_8MB
  - LL_ICACHE_REGIONSIZE_16MB
  - LL_ICACHE_REGIONSIZE_32MB
  - LL_ICACHE_REGIONSIZE_64MB
  - LL_ICACHE_REGIONSIZE_128MB

Reference Manual to LL API cross reference:

- CRRx RSIZE LL_ICACHE_GetRegionSize

LL_ICACHE_SetRegionOutputBurstType

Function name

__STATIC_INLINE void LL_ICACHE_SetRegionOutputBurstType (uint32_t Region, uint32_t Type)

Function description

Select the memory remapped region output burst type.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_ICACHE_REGION_0
  - LL_ICACHE_REGION_1
  - LL_ICACHE_REGION_2
  - LL_ICACHE_REGION_3
- **Type:** This parameter can be one of the following values:
  - LL_ICACHE_OUTPUT_BURST_WRAP
  - LL_ICACHE_OUTPUT_BURST_INCR

Return values

- **None:**

Reference Manual to LL API cross reference:

- CRRx HBURST LL_ICACHE_SetRegionOutputBurstType

LL_ICACHE_GetRegionOutputBurstType

Function name

__STATIC_INLINE uint32_t LL_ICACHE_GetRegionOutputBurstType (uint32_t Region)

Function description

Get the selected the memory remapped region output burst type.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_ICACHE_REGION_0
  - LL_ICACHE_REGION_1
  - LL_ICACHE_REGION_2
  - LL_ICACHE_REGION_3

Return values

- **Returned:** value can be one of the following values:
  - LL_ICACHE_OUTPUT_BURST_WRAP
  - LL_ICACHE_OUTPUT_BURST_INCR

Reference Manual to LL API cross reference:

- CRRx HBURST LL_ICACHE_GetRegionOutputBurstType

LL_ICACHE_SetRegionMasterPort

Function name

__STATIC_INLINE void LL_ICACHE_SetRegionMasterPort (uint32_t Region, uint32_t Port)

Function description

Select the memory remapped region cache master port.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_ICACHE_REGION_0
  - LL_ICACHE_REGION_1
  - LL_ICACHE_REGION_2
  - LL_ICACHE_REGION_3
- **Port:** This parameter can be one of the following values:
  - LL_ICACHE_MASTER1_PORT
  - LL_ICACHE_MASTER2_PORT

Return values

- **None:**

Reference Manual to LL API cross reference:

- CRRx MSTSEL LL_ICACHE_SetRegionMasterPort

LL_ICACHE_GetRegionMasterPort

Function name

__STATIC_INLINE uint32_t LL_ICACHE_GetRegionMasterPort (uint32_t Region)

Function description

Get the selected the memory remapped region cache master port.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_ICACHE_REGION_0
  - LL_ICACHE_REGION_1
  - LL_ICACHE_REGION_2
  - LL_ICACHE_REGION_3

Return values

- **Returned:** value can be one of the following values:
  - LL_ICACHE_MASTER1_PORT
  - LL_ICACHE_MASTER2_PORT

Reference Manual to LL API cross reference:

- CRRx MSTSEL LL_ICACHE_GetRegionMasterPort

LL_ICACHE_ConfigRegion

Function name

void LL_ICACHE_ConfigRegion (uint32_t Region, const LL_ICACHE_RegionTypeDef *const pICACHE_RegionStruct)

Function description

Configure and enable the memory remapped region.

Parameters

- **Region:** This parameter can be one of the following values:
  - LL_ICACHE_REGION_0
  - LL_ICACHE_REGION_1
  - LL_ICACHE_REGION_2
  - LL_ICACHE_REGION_3
- **pICACHE_RegionStruct:** pointer to a LL_ICACHE_RegionTypeDef structure.

Return values

- **None:**

Notes

- The Instruction Cache and corresponding region must be disabled.

87.3 ICACHE Firmware driver defines

The following section lists the various define and macros of the module.

87.3.1 ICACHE

ICACHE

Clear Flags Defines

LL_ICACHE_FCR_CBSYENDF

Busy end flag

LL_ICACHE_FCR_CERRF

Cache error flag

Get Flags Defines

LL_ICACHE_SR_BUSYF

Busy flag

LL_ICACHE_SR_BSYENDF

Busy end flag

LL_ICACHE_SR_ERRF

Cache error flag

IT Defines

LL_ICACHE_IER_BSYENDIE

Busy end interrupt

LL_ICACHE_IER_ERRIE

Cache error interrupt

Monitor type

LL_ICACHE_MONITOR_HIT

Hit monitor counter

LL_ICACHE_MONITOR_MISS

Miss monitor counter

LL_ICACHE_MONITOR_ALL

All monitors counters

Remapped Output burst type

LL_ICACHE_OUTPUT_BURST_WRAP

WRAP

LL_ICACHE_OUTPUT_BURST_INCR

INCR

Remapped Region number

LL_ICACHE_REGION_0

Region 0

LL_ICACHE_REGION_1

Region 1

LL_ICACHE_REGION_2

Region 2

LL_ICACHE_REGION_3

Region 3

Remapped Region size

LL_ICACHE_REGIONSIZE_2MB

Region size 2MB

LL_ICACHE_REGIONSIZE_4MB

Region size 4MB

LL_ICACHE_REGIONSIZE_8MB

Region size 8MB

LL_ICACHE_REGIONSIZE_16MB

Region size 16MB

LL_ICACHE_REGIONSIZE_32MB

Region size 32MB

LL_ICACHE_REGIONSIZE_64MB

Region size 64MB

LL_ICACHE_REGIONSIZE_128MB

Region size 128MB

Remapped Traffic route

LL_ICACHE_MASTER1_PORT

Master1 port

LL_ICACHE_MASTER2_PORT

Master2 port

Ways selection

LL_ICACHE_1WAY

1-way cache (direct mapped cache)

LL_ICACHE_2WAYS

2-ways set associative cache (default)

Common write and read registers Macros

LL_ICACHE_WriteReg

Description:

- Write a value in ICACHE register.

Parameters:

- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_ICACHE_ReadReg

Description:

- Read a value in ICACHE register.

Parameters:

- __REG__: Register to be read

Return value:

- Register: value

88 LL IWDG Generic Driver

88.1 IWDG Firmware driver API description

The following section lists the various functions of the IWDG library.

88.1.1 Detailed description of functions

LL_IWDG_Enable

Function name

__STATIC_INLINE void LL_IWDG_Enable (IWDG_TypeDef * IWDGx)

Function description

Start the Independent Watchdog.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **None:**

Notes

- Except if the hardware watchdog option is selected

Reference Manual to LL API cross reference:

- KR KEY LL_IWDG_Enable

LL_IWDG_ReloadCounter

Function name

__STATIC_INLINE void LL_IWDG_ReloadCounter (IWDG_TypeDef * IWDGx)

Function description

Reloads IWDG counter with value defined in the reload register.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- KR KEY LL_IWDG_ReloadCounter

LL_IWDG_EnableWriteAccess

Function name

__STATIC_INLINE void LL_IWDG_EnableWriteAccess (IWDG_TypeDef * IWDGx)

Function description

Enable write access to IWDG_PR, IWDG_RLR and IWDG_WINR registers.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- KR KEY LL_IWDG_EnableWriteAccess

LL_IWDG_DisableWriteAccess

Function name

__STATIC_INLINE void LL_IWDG_DisableWriteAccess (IWDG_TypeDef * IWDGx)

Function description

Disable write access to IWDG_PR, IWDG_RLR and IWDG_WINR registers.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- KR KEY LL_IWDG_DisableWriteAccess

LL_IWDG_SetPrescaler

Function name

__STATIC_INLINE void LL_IWDG_SetPrescaler (IWDG_TypeDef * IWDGx, uint32_t Prescaler)

Function description

Select the prescaler of the IWDG.

Parameters

- **IWDGx:** IWDG Instance
- **Prescaler:** This parameter can be one of the following values:
  - LL_IWDG_PRESCALER_4
  - LL_IWDG_PRESCALER_8
  - LL_IWDG_PRESCALER_16
  - LL_IWDG_PRESCALER_32
  - LL_IWDG_PRESCALER_64
  - LL_IWDG_PRESCALER_128
  - LL_IWDG_PRESCALER_256
  - LL_IWDG_PRESCALER_512
  - LL_IWDG_PRESCALER_1024

Return values

- **None:**

Reference Manual to LL API cross reference:

- PR PR LL_IWDG_SetPrescaler

LL_IWDG_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_IWDG_GetPrescaler (const IWDG_TypeDef * IWDGx)

Function description

Get the selected prescaler of the IWDG.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_IWDG_PRESCALER_4
  - LL_IWDG_PRESCALER_8
  - LL_IWDG_PRESCALER_16
  - LL_IWDG_PRESCALER_32
  - LL_IWDG_PRESCALER_64
  - LL_IWDG_PRESCALER_128
  - LL_IWDG_PRESCALER_256
  - LL_IWDG_PRESCALER_512
  - LL_IWDG_PRESCALER_1024

Reference Manual to LL API cross reference:

- PR PR LL_IWDG_GetPrescaler

LL_IWDG_SetReloadCounter

Function name

__STATIC_INLINE void LL_IWDG_SetReloadCounter (IWDG_TypeDef * IWDGx, uint32_t Counter)

Function description

Specify the IWDG down-counter reload value.

Parameters

- **IWDGx:** IWDG Instance
- **Counter:** Value between Min_Data=0 and Max_Data=0x0FFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- RLR RL LL_IWDG_SetReloadCounter

LL_IWDG_GetReloadCounter

Function name

__STATIC_INLINE uint32_t LL_IWDG_GetReloadCounter (const IWDG_TypeDef * IWDGx)

Function description

Get the specified IWDG down-counter reload value.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **Value:** between Min_Data=0 and Max_Data=0x0FFF

Reference Manual to LL API cross reference:

- RLR RL LL_IWDG_GetReloadCounter

LL_IWDG_SetWindow

Function name

__STATIC_INLINE void LL_IWDG_SetWindow (IWDG_TypeDef * IWDGx, uint32_t Window)

Function description

Specify high limit of the window value to be compared to the down-counter.

Parameters

- **IWDGx:** IWDG Instance
- **Window:** Value between Min_Data=0 and Max_Data=0x0FFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- WINR WIN LL_IWDG_SetWindow

LL_IWDG_GetWindow

Function name

__STATIC_INLINE uint32_t LL_IWDG_GetWindow (const IWDG_TypeDef * IWDGx)

Function description

Get the high limit of the window value specified.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **Value:** between Min_Data=0 and Max_Data=0x0FFF

Reference Manual to LL API cross reference:

- WINR WIN LL_IWDG_GetWindow

LL_IWDG_SetEwiTime

Function name

__STATIC_INLINE void LL_IWDG_SetEwiTime (IWDG_TypeDef * IWDGx, uint32_t Time)

Function description

Specify comparator value that will be used to trig Early Wakeup interrupt.

Parameters

- **IWDGx:** IWDG Instance
- **Time:** Value between Min_Data=0 and Max_Data=0x0FFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- EWCR EWIT LL_IWDG_SetEwiTime

LL_IWDG_GetEwiTime

Function name

__STATIC_INLINE uint32_t LL_IWDG_GetEwiTime (const IWDG_TypeDef * IWDGx)

Function description

Get the Early Wakeup interrupt comparator value.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **Value:** between Min_Data=0 and Max_Data=0x0FFF

Reference Manual to LL API cross reference:

- EWCR EWIT LL_IWDG_GetEwiTime

LL_IWDG_EnableIT_EWI

Function name

__STATIC_INLINE void LL_IWDG_EnableIT_EWI (IWDG_TypeDef * IWDGx)

Function description

Enable Early wakeup interrupt.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EWCR EWIE LL_IWDG_EnableIT_EWI

LL_IWDG_DisableIT_EWI

Function name

__STATIC_INLINE void LL_IWDG_DisableIT_EWI (IWDG_TypeDef * IWDGx)

Function description

Disable Early wakeup interrupt.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EWCR EWIE LL_IWDG_DisableIT_EWI

LL_IWDG_IsEnabledIT_EWI

Function name

__STATIC_INLINE uint32_t LL_IWDG_IsEnabledIT_EWI (const IWDG_TypeDef * IWDGx)

Function description

Indicates whether Early wakeup interrupt is enable.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EWCR EWIE LL_IWDG_IsEnabledIT_EWI

LL_IWDG_IsActiveFlag_PVU

Function name

__STATIC_INLINE uint32_t LL_IWDG_IsActiveFlag_PVU (const IWDG_TypeDef * IWDGx)

Function description

Check if flag Prescaler Value Update is set or not.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR PVU LL_IWDG_IsActiveFlag_PVU

LL_IWDG_IsActiveFlag_RVU

Function name

__STATIC_INLINE uint32_t LL_IWDG_IsActiveFlag_RVU (const IWDG_TypeDef * IWDGx)

Function description

Check if flag Reload Value Update is set or not.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR RVU LL_IWDG_IsActiveFlag_RVU

LL_IWDG_IsActiveFlag_WVU

Function name

__STATIC_INLINE uint32_t LL_IWDG_IsActiveFlag_WVU (const IWDG_TypeDef * IWDGx)

Function description

Check if flag Window Value Update is set or not.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR WVU LL_IWDG_IsActiveFlag_WVU

LL_IWDG_IsActiveFlag_EWU

Function name

__STATIC_INLINE uint32_t LL_IWDG_IsActiveFlag_EWU (const IWDG_TypeDef * IWDGx)

Function description

Check if flag EWI Value Update is set or not.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR EVU LL_IWDG_IsActiveFlag_EWU

LL_IWDG_IsReady

Function name

__STATIC_INLINE uint32_t LL_IWDG_IsReady (const IWDG_TypeDef * IWDGx)

Function description

Check if all flags Prescaler, Reload, Window & Early Interrupt Value Update are reset or not.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **State:** of bits (1 or 0).

Reference Manual to LL API cross reference:

- SR PVU LL_IWDG_IsReady
- SR RVU LL_IWDG_IsReady
- SR WVU LL_IWDG_IsReady
- SR EWU LL_IWDG_IsReady

LL_IWDG_IsActiveFlag_ONF

Function name

__STATIC_INLINE uint32_t LL_IWDG_IsActiveFlag_ONF (const IWDG_TypeDef * IWDGx)

Function description

Check if IWDG has been started or not.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR ONF LL_IWDG_IsActiveFlag_ONF

LL_IWDG_IsActiveFlag_EWIF

Function name

__STATIC_INLINE uint32_t LL_IWDG_IsActiveFlag_EWIF (const IWDG_TypeDef * IWDGx)

Function description

Check if Early Wakeup interrupt flag is set or not.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR EWIF LL_IWDG_IsActiveFlag_EWIF

LL_IWDG_ClearFlag_EWIF

Function name

__STATIC_INLINE void LL_IWDG_ClearFlag_EWIF (IWDG_TypeDef * IWDGx)

Function description

Clear the Early Wakeup interrupt flag.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EWCR EWIC LL_IWDG_ClearFlag_EWIF

Common Write and read registers Macros

LL_IWDG_WriteReg

Description:

- Write a value in IWDG register.

Parameters:

- __INSTANCE__: IWDG Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_IWDG_ReadReg

Description:

- Read a value in IWDG register.

Parameters:

- __INSTANCE__: IWDG Instance
- __REG__: Register to be read

Return value:

- Register: value

89 LL LPTIM Generic Driver

89.1 LPTIM Firmware driver registers structures

89.1.1 LL_LPTIM_InitTypeDef

LL_LPTIM_InitTypeDef is defined in the stm32u3xx_ll_lptim.h

Data Fields

- ***uint32_t ClockSource***
- ***uint32_t Prescaler***
- ***uint32_t Waveform***

Field Documentation

- ***uint32_t LL_LPTIM_InitTypeDef::ClockSource***
  Specifies the source of the clock used by the LPTIM instance. This parameter can be a value of ***LPTIM_LL_EC_CLK_SOURCE***.This feature can be modified afterwards using unitary function **LL_LPTIM_SetClockSource()**.
- ***uint32_t LL_LPTIM_InitTypeDef::Prescaler***
  Specifies the prescaler division ratio. This parameter can be a value of ***LPTIM_LL_EC_PRESCALER***.This feature can be modified afterwards using using unitary function **LL_LPTIM_SetPrescaler()**.
- ***uint32_t LL_LPTIM_InitTypeDef::Waveform***
  Specifies the waveform shape. This parameter can be a value of ***LPTIM_LL_EC_OUTPUT_WAVEFORM***.This feature can be modified afterwards using unitary function **LL_LPTIM_SetWaveform()**.

89.2 LPTIM Firmware driver API description

The following section lists the various functions of the LPTIM library.

89.2.1 Detailed description of functions

LL_LPTIM_DeInit

Function name

ErrorStatus LL_LPTIM_DeInit (const LPTIM_TypeDef * LPTIMx)

Function description

Set LPTIMx registers to their reset values.

Parameters

- **LPTIMx:** LP Timer instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: LPTIMx registers are de-initialized
  - ERROR: invalid LPTIMx instance

LL_LPTIM_StructInit

Function name

void LL_LPTIM_StructInit (LL_LPTIM_InitTypeDef * LPTIM_InitStruct)

Function description

Set each fields of the LPTIM_InitStruct structure to its default value.

Parameters

- **LPTIM_InitStruct:** pointer to a LL_LPTIM_InitTypeDef structure

Return values

- **None:**

LL_LPTIM_Init

Function name

ErrorStatus LL_LPTIM_Init (LPTIM_TypeDef * LPTIMx, const LL_LPTIM_InitTypeDef * LPTIM_InitStruct)

Function description

Configure the LPTIMx peripheral according to the specified parameters.

Parameters

- **LPTIMx:** LP Timer Instance
- **LPTIM_InitStruct:** pointer to a LL_LPTIM_InitTypeDef structure

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: LPTIMx instance has been initialized
  - ERROR: LPTIMx instance hasn't been initialized

Notes

- LL_LPTIM_Init can only be called when the LPTIM instance is disabled.
- LPTIMx can be disabled using unitary function LL_LPTIM_Disable().

LL_LPTIM_Enable

Function name

__STATIC_INLINE void LL_LPTIM_Enable (LPTIM_TypeDef * LPTIMx)

Function description

Enable the LPTIM instance.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Notes

- After setting the ENABLE bit, a delay of two counter clock is needed before the LPTIM instance is actually enabled.

Reference Manual to LL API cross reference:

- CR ENABLE LL_LPTIM_Enable

LL_LPTIM_Disable

Function name

__STATIC_INLINE void LL_LPTIM_Disable (LPTIM_TypeDef * LPTIMx)

Function description

Disable the LPTIM instance.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR ENABLE LL_LPTIM_Disable

LL_LPTIM_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabled (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the LPTIM instance is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR ENABLE LL_LPTIM_IsEnabled

LL_LPTIM_StartCounter

Function name

__STATIC_INLINE void LL_LPTIM_StartCounter (LPTIM_TypeDef * LPTIMx, uint32_t OperatingMode)

Function description

Starts the LPTIM counter in the desired mode.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **OperatingMode:** This parameter can be one of the following values:
  - LL_LPTIM_OPERATING_MODE_CONTINUOUS
  - LL_LPTIM_OPERATING_MODE_ONESHOT

Return values

- **None:**

Notes

- LPTIM instance must be enabled before starting the counter.
- It is possible to change on the fly from One Shot mode to Continuous mode.

Reference Manual to LL API cross reference:

- CR CNTSTRT LL_LPTIM_StartCounter
- CR SNGSTRT LL_LPTIM_StartCounter

LL_LPTIM_EnableResetAfterRead

Function name

__STATIC_INLINE void LL_LPTIM_EnableResetAfterRead (LPTIM_TypeDef * LPTIMx)

Function description

Enable reset after read.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Notes

- After calling this function any read access to LPTIM_CNT register will asynchronously reset the LPTIM_CNT register content.

Reference Manual to LL API cross reference:

- CR RSTARE LL_LPTIM_EnableResetAfterRead

LL_LPTIM_DisableResetAfterRead

Function name

__STATIC_INLINE void LL_LPTIM_DisableResetAfterRead (LPTIM_TypeDef * LPTIMx)

Function description

Disable reset after read.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RSTARE LL_LPTIM_DisableResetAfterRead

LL_LPTIM_IsEnabledResetAfterRead

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledResetAfterRead (const LPTIM_TypeDef * LPTIMx)

Function description

Indicate whether the reset after read feature is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR RSTARE LL_LPTIM_IsEnabledResetAfterRead

LL_LPTIM_ResetCounter

Function name

__STATIC_INLINE void LL_LPTIM_ResetCounter (LPTIM_TypeDef * LPTIMx)

Function description

Reset of the LPTIM_CNT counter register (synchronous).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Notes

- Due to the synchronous nature of this reset, it only takes place after a synchronization delay of 3 LPTIM core clock cycles (LPTIM core clock may be different from APB clock).
- COUNTRST is automatically cleared by hardware

Reference Manual to LL API cross reference:

- CR COUNTRST LL_LPTIM_ResetCounter
-

LL_LPTIM_SetUpdateMode

Function name

__STATIC_INLINE void LL_LPTIM_SetUpdateMode (LPTIM_TypeDef * LPTIMx, uint32_t UpdateMode)

Function description

Set the LPTIM registers update mode (enable/disable register preload)

Parameters

- **LPTIMx:** Low-Power Timer instance
- **UpdateMode:** This parameter can be one of the following values:
  - LL_LPTIM_UPDATE_MODE_IMMEDIATE
  - LL_LPTIM_UPDATE_MODE_ENDOFPERIOD

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.

Reference Manual to LL API cross reference:

- CFGR PRELOAD LL_LPTIM_SetUpdateMode

LL_LPTIM_GetUpdateMode

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetUpdateMode (const LPTIM_TypeDef * LPTIMx)

Function description

Get the LPTIM registers update mode.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_UPDATE_MODE_IMMEDIATE
  - LL_LPTIM_UPDATE_MODE_ENDOFPERIOD

Reference Manual to LL API cross reference:

- CFGR PRELOAD LL_LPTIM_GetUpdateMode

LL_LPTIM_SetAutoReload

Function name

__STATIC_INLINE void LL_LPTIM_SetAutoReload (LPTIM_TypeDef * LPTIMx, uint32_t AutoReload)

Function description

Set the auto reload value.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **AutoReload:** Value between Min_Data=0x0001 and Max_Data=0xFFFF

Return values

- **None:**

Notes

- The LPTIMx_ARR register content must only be modified when the LPTIM is enabled
- After a write to the LPTIMx_ARR register a new write operation to the same register can only be performed when the previous write operation is completed. Any successive write before the ARROK flag is set, will lead to unpredictable results.
- autoreload value be strictly greater than the compare value.

Reference Manual to LL API cross reference:

- ARR ARR LL_LPTIM_SetAutoReload

LL_LPTIM_GetAutoReload

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetAutoReload (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual auto reload value.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **AutoReload:** Value between Min_Data=0x0001 and Max_Data=0xFFFF

Reference Manual to LL API cross reference:

- ARR ARR LL_LPTIM_GetAutoReload

LL_LPTIM_SetRepetition

Function name

__STATIC_INLINE void LL_LPTIM_SetRepetition (LPTIM_TypeDef * LPTIMx, uint32_t Repetition)

Function description

Set the repetition value.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **Repetition:** Value between Min_Data=0x00 and Max_Data=0xFF

Return values

- **None:**

Notes

- The LPTIMx_RCR register content must only be modified when the LPTIM is enabled

Reference Manual to LL API cross reference:

- RCR REP LL_LPTIM_SetRepetition

LL_LPTIM_GetRepetition

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetRepetition (const LPTIM_TypeDef * LPTIMx)

Function description

Get the repetition value.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Repetition:** Value between Min_Data=0x00 and Max_Data=0xFF

Reference Manual to LL API cross reference:

- RCR REP LL_LPTIM_GetRepetition

LL_LPTIM_CC_EnableChannel

Function name

__STATIC_INLINE void LL_LPTIM_CC_EnableChannel (LPTIM_TypeDef * LPTIMx, uint32_t Channel)

Function description

Enable capture/compare channel.

Parameters

- **LPTIMx:** LPTimer instance
- **Channel:** This parameter can be one of the following values:
  - LL_LPTIM_CHANNEL_CH1
  - LL_LPTIM_CHANNEL_CH2

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCMR1 CC1E LL_LPTIM_CC_EnableChannel
- CCMR1 CC2E LL_LPTIM_CC_EnableChannel

LL_LPTIM_CC_DisableChannel

Function name

__STATIC_INLINE void LL_LPTIM_CC_DisableChannel (LPTIM_TypeDef * LPTIMx, uint32_t Channel)

Function description

Disable capture/compare channel.

Parameters

- **LPTIMx:** LPTimer instance
- **Channel:** This parameter can be one of the following values:
  - LL_LPTIM_CHANNEL_CH1
  - LL_LPTIM_CHANNEL_CH2

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCMR1 CC1E LL_LPTIM_CC_DisableChannel
- CCMR1 CC2E LL_LPTIM_CC_DisableChannel

LL_LPTIM_CC_IsEnabledChannel

Function name

__STATIC_INLINE uint32_t LL_LPTIM_CC_IsEnabledChannel (const LPTIM_TypeDef * LPTIMx, uint32_t Channel)

Function description

Indicate whether channel is enabled.

Parameters

- **LPTIMx:** LPTimer instance
- **Channel:** This parameter can be one of the following values:
  - LL_LPTIM_CHANNEL_CH1
  - LL_LPTIM_CHANNEL_CH2

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CCMR1 CC1E LL_LPTIM_CC_IsEnabledChannel
- CCMR1 CC2E LL_LPTIM_CC_IsEnabledChannel

LL_LPTIM_OC_SetCompareCH1

Function name

__STATIC_INLINE void LL_LPTIM_OC_SetCompareCH1 (LPTIM_TypeDef * LPTIMx, uint32_t CompareValue)

Function description

Set the compare value.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **CompareValue:** Value between Min_Data=0x00 and Max_Data=0xFFFF

Return values

- **None:**

Notes

- After a write to the LPTIMx_CCR1 register a new write operation to the same register can only be performed when the previous write operation is completed. Any successive write before the CMP1OK flag is set, will lead to unpredictable results.

Reference Manual to LL API cross reference:

- CCR1 CCR1 LL_LPTIM_OC_SetCompareCH1

LL_LPTIM_OC_GetCompareCH1

Function name

__STATIC_INLINE uint32_t LL_LPTIM_OC_GetCompareCH1 (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual compare value.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **CompareValue:** Value between Min_Data=0x00 and Max_Data=0xFFFF

Reference Manual to LL API cross reference:

- CCR1 CCR1 LL_LPTIM_OC_GetCompareCH1

LL_LPTIM_OC_SetCompareCH2

Function name

__STATIC_INLINE void LL_LPTIM_OC_SetCompareCH2 (LPTIM_TypeDef * LPTIMx, uint32_t CompareValue)

Function description

Set the compare value.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **CompareValue:** Value between Min_Data=0x00 and Max_Data=0xFFFF

Return values

- **None:**

Notes

- After a write to the LPTIMx_CCR2 register a new write operation to the same register can only be performed when the previous write operation is completed. Any successive write before the CMP2OK flag is set, will lead to unpredictable results.

Reference Manual to LL API cross reference:

- CCR2 CCR2 LL_LPTIM_OC_SetCompareCH2

LL_LPTIM_OC_GetCompareCH2

Function name

__STATIC_INLINE uint32_t LL_LPTIM_OC_GetCompareCH2 (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual compare value.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **CompareValue:** Value between Min_Data=0x00 and Max_Data=0xFFFF

Reference Manual to LL API cross reference:

- CCR2 CCR2 LL_LPTIM_OC_GetCompareCH2

LL_LPTIM_GetCounter

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetCounter (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual counter value.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Counter:** value

Notes

- When the LPTIM instance is running with an asynchronous clock, reading the LPTIMx_CNT register may return unreliable values. So in this case it is necessary to perform two consecutive read accesses and verify that the two returned values are identical.

Reference Manual to LL API cross reference:

- CNT CNT LL_LPTIM_GetCounter

LL_LPTIM_SetCounterMode

Function name

__STATIC_INLINE void LL_LPTIM_SetCounterMode (LPTIM_TypeDef * LPTIMx, uint32_t CounterMode)

Function description

Set the counter mode (selection of the LPTIM counter clock source).

Parameters

- **LPTIMx:** Low-Power Timer instance
- **CounterMode:** This parameter can be one of the following values:
  - LL_LPTIM_COUNTER_MODE_INTERNAL
  - LL_LPTIM_COUNTER_MODE_EXTERNAL

Return values

- **None:**

Notes

- The counter mode can be set only when the LPTIM instance is disabled.

Reference Manual to LL API cross reference:

- CFGR COUNTMODE LL_LPTIM_SetCounterMode

LL_LPTIM_GetCounterMode

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetCounterMode (const LPTIM_TypeDef * LPTIMx)

Function description

Get the counter mode.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_COUNTER_MODE_INTERNAL
  - LL_LPTIM_COUNTER_MODE_EXTERNAL

Reference Manual to LL API cross reference:

- CFGR COUNTMODE LL_LPTIM_GetCounterMode

LL_LPTIM_SetWaveform

Function name

__STATIC_INLINE void LL_LPTIM_SetWaveform (LPTIM_TypeDef * LPTIMx, uint32_t Waveform)

Function description

Set waveform shape.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **Waveform:** This parameter can be one of the following values:
  - LL_LPTIM_OUTPUT_WAVEFORM_PWM
  - LL_LPTIM_OUTPUT_WAVEFORM_SETONCE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR WAVE LL_LPTIM_SetWaveform

LL_LPTIM_GetWaveform

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetWaveform (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual waveform shape.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_OUTPUT_WAVEFORM_PWM
  - LL_LPTIM_OUTPUT_WAVEFORM_SETONCE

Reference Manual to LL API cross reference:

- CFGR WAVE LL_LPTIM_GetWaveform

LL_LPTIM_OC_SetPolarity

Function name

__STATIC_INLINE void LL_LPTIM_OC_SetPolarity (LPTIM_TypeDef * LPTIMx, uint32_t Channel, uint32_t Polarity)

Function description

Set the polarity of an output channel.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_LPTIM_CHANNEL_CH1
  - LL_LPTIM_CHANNEL_CH2
- **Polarity:** This parameter can be one of the following values:
  - LL_LPTIM_OUTPUT_POLARITY_REGULAR
  - LL_LPTIM_OUTPUT_POLARITY_INVERSE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCMR1 CC1P LL_LPTIM_OC_SetPolarity
-
- CCMR1 CC2P LL_LPTIM_OC_SetPolarity
-

LL_LPTIM_OC_GetPolarity

Function name

__STATIC_INLINE uint32_t LL_LPTIM_OC_GetPolarity (const LPTIM_TypeDef * LPTIMx, uint32_t Channel)

Function description

Get the polarity of an output channel.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_LPTIM_CHANNEL_CH1
  - LL_LPTIM_CHANNEL_CH2

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_OUTPUT_POLARITY_REGULAR
  - LL_LPTIM_OUTPUT_POLARITY_INVERSE

Reference Manual to LL API cross reference:

- CCMR1 CC1P LL_LPTIM_OC_GetPolarity
-
- CCMR1 CC2P LL_LPTIM_OC_GetPolarity
-

LL_LPTIM_SetPrescaler

Function name

__STATIC_INLINE void LL_LPTIM_SetPrescaler (LPTIM_TypeDef * LPTIMx, uint32_t Prescaler)

Function description

Set actual prescaler division ratio.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **Prescaler:** This parameter can be one of the following values:
  - LL_LPTIM_PRESCALER_DIV1
  - LL_LPTIM_PRESCALER_DIV2
  - LL_LPTIM_PRESCALER_DIV4
  - LL_LPTIM_PRESCALER_DIV8
  - LL_LPTIM_PRESCALER_DIV16
  - LL_LPTIM_PRESCALER_DIV32
  - LL_LPTIM_PRESCALER_DIV64
  - LL_LPTIM_PRESCALER_DIV128

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.
- When the LPTIM is configured to be clocked by an internal clock source and the LPTIM counter is configured to be updated by active edges detected on the LPTIM external Input1, the internal clock provided to the LPTIM must be not be prescaled.

Reference Manual to LL API cross reference:

- CFGR PRESC LL_LPTIM_SetPrescaler

LL_LPTIM_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetPrescaler (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual prescaler division ratio.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_PRESCALER_DIV1
  - LL_LPTIM_PRESCALER_DIV2
  - LL_LPTIM_PRESCALER_DIV4
  - LL_LPTIM_PRESCALER_DIV8
  - LL_LPTIM_PRESCALER_DIV16
  - LL_LPTIM_PRESCALER_DIV32

LL_LPTIM_SetInput1Src

Function name

__STATIC_INLINE void LL_LPTIM_SetInput1Src (LPTIM_TypeDef * LPTIMx, uint32_t Src)

Function description

Set LPTIM input 1 source (default GPIO).

Parameters

- **LPTIMx:** Low-Power Timer instance
- **Src:** This parameter can be one of the following values:
  - LL_LPTIM_INPUT1_SRC_GPIO
  - LL_LPTIM_INPUT1_SRC_COMP1

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR2 IN1SEL LL_LPTIM_SetInput1Src

LL_LPTIM_SetInput2Src

Function name

LL_LPTIM_IC_SetPrescaler

Function name

__STATIC_INLINE void LL_LPTIM_IC_SetPrescaler (LPTIM_TypeDef * LPTIMx, uint32_t Channel, uint32_t Prescaler)

Function description

Set the prescaler of IC channels.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_LPTIM_CHANNEL_CH1
  - LL_LPTIM_CHANNEL_CH2
- **Prescaler:** This parameter can be one of the following values:
  - LL_LPTIM_ICPSC_DIV1
  - LL_LPTIM_ICPSC_DIV2
  - LL_LPTIM_ICPSC_DIV4
  - LL_LPTIM_ICPSC_DIV8

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCMR1 IC1PSC LL_LPTIM_IC_SetPrescaler
-
- CCMR1 IC2PSC LL_LPTIM_IC_SetPrescaler
-

LL_LPTIM_IC_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IC_GetPrescaler (const LPTIM_TypeDef * LPTIMx, uint32_t Channel)

Function description

Get the prescaler of IC channels.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_LPTIM_CHANNEL_CH1
  - LL_LPTIM_CHANNEL_CH2

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_ICPSC_DIV1
  - LL_LPTIM_ICPSC_DIV2
  - LL_LPTIM_ICPSC_DIV4
  - LL_LPTIM_ICPSC_DIV8

LL_LPTIM_CC_SetChannelMode

Function name

__STATIC_INLINE void LL_LPTIM_CC_SetChannelMode (LPTIM_TypeDef * LPTIMx, uint32_t Channel, uint32_t CCMode)

Function description

Set the Channel Mode.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_LPTIM_CHANNEL_CH1
  - LL_LPTIM_CHANNEL_CH2
- **CCMode:** This parameter can be one of the following values:
  - LL_LPTIM_CCMODE_OUTPUT_PWM
  - LL_LPTIM_CCMODE_INPUTCAPTURE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCMR1 CC1SEL LL_LPTIM_CC_SetChannelMode
- CCMR1 CC2SEL LL_LPTIM_CC_SetChannelMode

LL_LPTIM_CC_GetChannelMode

Function name

__STATIC_INLINE uint32_t LL_LPTIM_CC_GetChannelMode (const LPTIM_TypeDef * LPTIMx, uint32_t Channel)

Function description

Get the Channel Mode.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_LPTIM_CHANNEL_CH1
  - LL_LPTIM_CHANNEL_CH2

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_CCMODE_OUTPUT_PWM
  - LL_LPTIM_CCMODE_INPUTCAPTURE

Reference Manual to LL API cross reference:

- CCMR1 CC1SEL LL_LPTIM_CC_GetChannelMode
- CCMR1 CC2SEL LL_LPTIM_CC_GetChannelMode

LL_LPTIM_IC_GetCaptureCH1

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IC_GetCaptureCH1 (const LPTIM_TypeDef * LPTIMx)

Function description

Get captured value for input channel 1.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **CapturedValue:** (between Min_Data=0 and Max_Data=65535)

Notes

- The real capture value corresponding to the input capture trigger can be calculated using the formula hereafter : Real capture value = captured(LPTIM_CCRx) - offset where offset can be retrieved by calling LL_LPTIM_IC_GET_OFFSET

Reference Manual to LL API cross reference:

- CCR1 CCR1 LL_LPTIM_IC_GetCaptureCH1

LL_LPTIM_IC_GetCaptureCH2

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IC_GetCaptureCH2 (const LPTIM_TypeDef * LPTIMx)

Function description

Get captured value for input channel 2.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **CapturedValue:** (between Min_Data=0 and Max_Data=65535)

Notes

- The real capture value corresponding to the input capture trigger can be calculated using the formula hereafter : Real capture value = captured(LPTIM_CCRx) - offset where offset can be retrieved by calling LL_LPTIM_IC_GET_OFFSET

Reference Manual to LL API cross reference:

- CCR2 CCR2 LL_LPTIM_IC_GetCaptureCH2

LL_LPTIM_EnableTimeout

Function name

__STATIC_INLINE void LL_LPTIM_EnableTimeout (LPTIM_TypeDef * LPTIMx)

Function description

Enable the timeout function.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.
- The first trigger event will start the timer, any successive trigger event will reset the counter and the timer will restart.
- The timeout value corresponds to the compare value; if no trigger occurs within the expected time frame, the MCU is waked-up by the compare match event.

Reference Manual to LL API cross reference:

- CFGR TIMOUT LL_LPTIM_EnableTimeout

LL_LPTIM_DisableTimeout

Function name

__STATIC_INLINE void LL_LPTIM_DisableTimeout (LPTIM_TypeDef * LPTIMx)

Function description

Disable the timeout function.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.
- A trigger event arriving when the timer is already started will be ignored.

Reference Manual to LL API cross reference:

- CFGR TIMOUT LL_LPTIM_DisableTimeout

LL_LPTIM_IsEnabledTimeout

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledTimeout (const LPTIM_TypeDef * LPTIMx)

Function description

Indicate whether the timeout function is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CFGR TIMOUT LL_LPTIM_IsEnabledTimeout

LL_LPTIM_TrigSw

Function name

__STATIC_INLINE void LL_LPTIM_TrigSw (LPTIM_TypeDef * LPTIMx)

Function description

Start the LPTIM counter.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.

Reference Manual to LL API cross reference:

- CFGR TRIGEN LL_LPTIM_TrigSw

LL_LPTIM_ConfigTrigger

Function name

__STATIC_INLINE void LL_LPTIM_ConfigTrigger (LPTIM_TypeDef * LPTIMx, uint32_t Source, uint32_t Filter, uint32_t Polarity)

Function description

Configure the external trigger used as a trigger event for the LPTIM.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **Source:** This parameter can be one of the following values:
  - LL_LPTIM_TRIG_SOURCE_GPIO
  - LL_LPTIM_TRIG_SOURCE_RTCALARMA
  - LL_LPTIM_TRIG_SOURCE_RTCALARMB
  - LL_LPTIM_TRIG_SOURCE_RTCTAMP1
  - LL_LPTIM_TRIG_SOURCE_RTCTAMP2
  - LL_LPTIM_TRIG_SOURCE_RTCTAMP3
  - LL_LPTIM_TRIG_SOURCE_COMP1
  - LL_LPTIM_TRIG_SOURCE_COMP2
  - LL_LPTIM_TRIG_SOURCE_GPDMA_CH0_TCF
  - LL_LPTIM_TRIG_SOURCE_GPDMA_CH1_TCF
  - LL_LPTIM_TRIG_SOURCE_GPDMA_CH2_TCF
  - LL_LPTIM_TRIG_SOURCE_GPDMA_CH3_TCF
  - LL_LPTIM_TRIG_SOURCE_GPDMA_CH4_TCF
- **Filter:** This parameter can be one of the following values:
  - LL_LPTIM_TRIG_FILTER_NONE
  - LL_LPTIM_TRIG_FILTER_2
  - LL_LPTIM_TRIG_FILTER_4
  - LL_LPTIM_TRIG_FILTER_8
- **Polarity:** This parameter can be one of the following values:
  - LL_LPTIM_TRIG_POLARITY_RISING
  - LL_LPTIM_TRIG_POLARITY_FALLING
  - LL_LPTIM_TRIG_POLARITY_RISING_FALLING

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.
- An internal clock source must be present when a digital filter is required for the trigger.

Reference Manual to LL API cross reference:

- CFGR TRIGSEL LL_LPTIM_ConfigTrigger
- CFGR TRGFLT LL_LPTIM_ConfigTrigger
- CFGR TRIGEN LL_LPTIM_ConfigTrigger

LL_LPTIM_GetTriggerSource

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetTriggerSource (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual external trigger source.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_TRIG_SOURCE_GPIO
  - LL_LPTIM_TRIG_SOURCE_RTCALARMA
  - LL_LPTIM_TRIG_SOURCE_RTCALARMB
  - LL_LPTIM_TRIG_SOURCE_RTCTAMP1
  - LL_LPTIM_TRIG_SOURCE_RTCTAMP2
  - LL_LPTIM_TRIG_SOURCE_RTCTAMP3
  - LL_LPTIM_TRIG_SOURCE_COMP1
  - LL_LPTIM_TRIG_SOURCE_COMP2

Reference Manual to LL API cross reference:

- CFGR TRIGSEL LL_LPTIM_GetTriggerSource

LL_LPTIM_GetTriggerFilter

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetTriggerFilter (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual external trigger filter.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_TRIG_FILTER_NONE
  - LL_LPTIM_TRIG_FILTER_2
  - LL_LPTIM_TRIG_FILTER_4
  - LL_LPTIM_TRIG_FILTER_8

Reference Manual to LL API cross reference:

- CFGR TRGFLT LL_LPTIM_GetTriggerFilter

LL_LPTIM_GetTriggerPolarity

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetTriggerPolarity (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual external trigger polarity.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_TRIG_POLARITY_RISING
  - LL_LPTIM_TRIG_POLARITY_FALLING
  - LL_LPTIM_TRIG_POLARITY_RISING_FALLING

Reference Manual to LL API cross reference:

- CFGR TRIGEN LL_LPTIM_GetTriggerPolarity

LL_LPTIM_SetClockSource

Function name

__STATIC_INLINE void LL_LPTIM_SetClockSource (LPTIM_TypeDef * LPTIMx, uint32_t ClockSource)

Function description

Set the source of the clock used by the LPTIM instance.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **ClockSource:** This parameter can be one of the following values:
  - LL_LPTIM_CLK_SOURCE_INTERNAL
  - LL_LPTIM_CLK_SOURCE_EXTERNAL

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.

Reference Manual to LL API cross reference:

- CFGR CKSEL LL_LPTIM_SetClockSource

LL_LPTIM_GetClockSource

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetClockSource (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual LPTIM instance clock source.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_CLK_SOURCE_INTERNAL
  - LL_LPTIM_CLK_SOURCE_EXTERNAL

Reference Manual to LL API cross reference:

- CFGR CKSEL LL_LPTIM_GetClockSource

LL_LPTIM_ConfigClock

Function name

__STATIC_INLINE void LL_LPTIM_ConfigClock (LPTIM_TypeDef * LPTIMx, uint32_t ClockFilter, uint32_t ClockPolarity)

Function description

Configure the active edge or edges used by the counter when the LPTIM is clocked by an external clock source.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **ClockFilter:** This parameter can be one of the following values:
  - LL_LPTIM_CLK_FILTER_NONE
  - LL_LPTIM_CLK_FILTER_2
  - LL_LPTIM_CLK_FILTER_4
  - LL_LPTIM_CLK_FILTER_8
- **ClockPolarity:** This parameter can be one of the following values:
  - LL_LPTIM_CLK_POLARITY_RISING
  - LL_LPTIM_CLK_POLARITY_FALLING
  - LL_LPTIM_CLK_POLARITY_RISING_FALLING

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.
- When both external clock signal edges are considered active ones, the LPTIM must also be clocked by an internal clock source with a frequency equal to at least four times the external clock frequency.
- An internal clock source must be present when a digital filter is required for external clock.

Reference Manual to LL API cross reference:

- CFGR CKFLT LL_LPTIM_ConfigClock
- CFGR CKPOL LL_LPTIM_ConfigClock

LL_LPTIM_GetClockPolarity

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetClockPolarity (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual clock polarity.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_CLK_POLARITY_RISING
  - LL_LPTIM_CLK_POLARITY_FALLING
  - LL_LPTIM_CLK_POLARITY_RISING_FALLING

Reference Manual to LL API cross reference:

- CFGR CKPOL LL_LPTIM_GetClockPolarity

LL_LPTIM_GetClockFilter

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetClockFilter (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual clock digital filter.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_CLK_FILTER_NONE
  - LL_LPTIM_CLK_FILTER_2
  - LL_LPTIM_CLK_FILTER_4
  - LL_LPTIM_CLK_FILTER_8

Reference Manual to LL API cross reference:

- CFGR CKFLT LL_LPTIM_GetClockFilter

LL_LPTIM_SetEncoderMode

Function name

__STATIC_INLINE void LL_LPTIM_SetEncoderMode (LPTIM_TypeDef * LPTIMx, uint32_t EncoderMode)

Function description

Configure the encoder mode.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **EncoderMode:** This parameter can be one of the following values:
  - LL_LPTIM_ENCODER_MODE_RISING
  - LL_LPTIM_ENCODER_MODE_FALLING
  - LL_LPTIM_ENCODER_MODE_RISING_FALLING

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.

Reference Manual to LL API cross reference:

- CFGR CKPOL LL_LPTIM_SetEncoderMode

LL_LPTIM_GetEncoderMode

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetEncoderMode (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual encoder mode.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_ENCODER_MODE_RISING
  - LL_LPTIM_ENCODER_MODE_FALLING
  - LL_LPTIM_ENCODER_MODE_RISING_FALLING

Reference Manual to LL API cross reference:

- CFGR CKPOL LL_LPTIM_GetEncoderMode

LL_LPTIM_EnableEncoderMode

Function name

__STATIC_INLINE void LL_LPTIM_EnableEncoderMode (LPTIM_TypeDef * LPTIMx)

Function description

Enable the encoder mode.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.
- In this mode the LPTIM instance must be clocked by an internal clock source. Also, the prescaler division ratio must be equal to 1.
- LPTIM instance must be configured in continuous mode prior enabling the encoder mode.

Reference Manual to LL API cross reference:

- CFGR ENC LL_LPTIM_EnableEncoderMode

LL_LPTIM_DisableEncoderMode

Function name

__STATIC_INLINE void LL_LPTIM_DisableEncoderMode (LPTIM_TypeDef * LPTIMx)

Function description

Disable the encoder mode.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.

Reference Manual to LL API cross reference:

- CFGR ENC LL_LPTIM_DisableEncoderMode

LL_LPTIM_IsEnabledEncoderMode

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledEncoderMode (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the LPTIM operates in encoder mode.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CFGR ENC LL_LPTIM_IsEnabledEncoderMode

LL_LPTIM_ClearFlag_CC1

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_CC1 (LPTIM_TypeDef * LPTIMx)

Function description

Clear the compare match flag for channel 1 (CC1CF)

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CC1CF LL_LPTIM_ClearFlag_CC1

LL_LPTIM_IsActiveFlag_CC1

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_CC1 (const LPTIM_TypeDef * LPTIMx)

Function description

Inform application whether a capture/compare interrupt has occurred for channel 1.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR CC1IF LL_LPTIM_IsActiveFlag_CC1

LL_LPTIM_ClearFlag_CC2

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_CC2 (LPTIM_TypeDef * LPTIMx)

Function description

Clear the compare match flag for channel 2 (CC2CF)

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CC2CF LL_LPTIM_ClearFlag_CC2

LL_LPTIM_IsActiveFlag_CC2

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_CC2 (const LPTIM_TypeDef * LPTIMx)

Function description

Inform application whether a capture/compare interrupt has occurred for channel 2.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR CC2IF LL_LPTIM_IsActiveFlag_CC2

LL_LPTIM_ClearFlag_CC1O

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_CC1O (LPTIM_TypeDef * LPTIMx)

Function description

Clear the Capture/Compare 1 over-capture flag for channel 1 (CC1OCF)

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CC1OCF LL_LPTIM_ClearFlag_CC1O

LL_LPTIM_IsActiveFlag_CC1O

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_CC1O (const LPTIM_TypeDef * LPTIMx)

Function description

Inform application whether a Capture/Compare 1 over-capture has occurred for channel 1.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR CC1OF LL_LPTIM_IsActiveFlag_CC1O

LL_LPTIM_ClearFlag_CC2O

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_CC2O (LPTIM_TypeDef * LPTIMx)

Function description

Clear the Capture/Compare 2 over-capture flag for channel 2 (CC2OCF)

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CC2OCF LL_LPTIM_ClearFlag_CC2O

LL_LPTIM_IsActiveFlag_CC2O

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_CC2O (const LPTIM_TypeDef * LPTIMx)

Function description

Inform application whether a Capture/Compare 2 over-capture has occurred for channel 2.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR CC2OF LL_LPTIM_IsActiveFlag_CC2O

LL_LPTIM_ClearFlag_ARRM

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_ARRM (LPTIM_TypeDef * LPTIMx)

Function description

Clear the autoreload match flag (ARRMCF)

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR ARRMCF LL_LPTIM_ClearFlag_ARRM

LL_LPTIM_IsActiveFlag_ARRM

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_ARRM (const LPTIM_TypeDef * LPTIMx)

Function description

Inform application whether a autoreload match interrupt has occurred.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR ARRM LL_LPTIM_IsActiveFlag_ARRM

LL_LPTIM_ClearFlag_EXTTRIG

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_EXTTRIG (LPTIM_TypeDef * LPTIMx)

Function description

Clear the external trigger valid edge flag(EXTTRIGCF).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR EXTTRIGCF LL_LPTIM_ClearFlag_EXTTRIG

LL_LPTIM_IsActiveFlag_EXTTRIG

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_EXTTRIG (const LPTIM_TypeDef * LPTIMx)

Function description

Inform application whether a valid edge on the selected external trigger input has occurred.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR EXTTRIG LL_LPTIM_IsActiveFlag_EXTTRIG

LL_LPTIM_ClearFlag_CMP1OK

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_CMP1OK (LPTIM_TypeDef * LPTIMx)

Function description

Clear the compare register update interrupt flag (CMP1OKCF).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CMP1OKCF LL_LPTIM_ClearFlag_CMP1OK

LL_LPTIM_IsActiveFlag_CMP1OK

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_CMP1OK (const LPTIM_TypeDef * LPTIMx)

Function description

Informs application whether the APB bus write operation to the LPTIMx_CCR1 register has been successfully completed.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR CMP1OK LL_LPTIM_IsActiveFlag_CMP1OK

LL_LPTIM_ClearFlag_CMP2OK

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_CMP2OK (LPTIM_TypeDef * LPTIMx)

Function description

Clear the compare register update interrupt flag (CMP2OKCF).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CMP2OKCF LL_LPTIM_ClearFlag_CMP2OK

LL_LPTIM_IsActiveFlag_CMP2OK

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_CMP2OK (const LPTIM_TypeDef * LPTIMx)

Function description

Informs application whether the APB bus write operation to the LPTIMx_CCR2 register has been successfully completed.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR CMP2OK LL_LPTIM_IsActiveFlag_CMP2OK

LL_LPTIM_ClearFlag_DIEROK

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_DIEROK (LPTIM_TypeDef * LPTIMx)

Function description

Clear the interrupt register update interrupt flag (DIEROKCF).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR DIEROKCF LL_LPTIM_ClearFlag_DIEROK

LL_LPTIM_IsActiveFlag_DIEROK

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_DIEROK (const LPTIM_TypeDef * LPTIMx)

Function description

Informs application whether the APB bus write operation to the LPTIMx_DIER register has been successfully completed.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR DIEROK LL_LPTIM_IsActiveFlag_DIEROK

LL_LPTIM_ClearFlag_ARROK

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_ARROK (LPTIM_TypeDef * LPTIMx)

Function description

Clear the autoreload register update interrupt flag (ARROKCF).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR ARROKCF LL_LPTIM_ClearFlag_ARROK

LL_LPTIM_IsActiveFlag_ARROK

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_ARROK (const LPTIM_TypeDef * LPTIMx)

Function description

Informs application whether the APB bus write operation to the LPTIMx_ARR register has been successfully completed.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR ARROK LL_LPTIM_IsActiveFlag_ARROK

LL_LPTIM_ClearFlag_UP

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_UP (LPTIM_TypeDef * LPTIMx)

Function description

Clear the counter direction change to up interrupt flag (UPCF).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR UPCF LL_LPTIM_ClearFlag_UP

LL_LPTIM_IsActiveFlag_UP

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_UP (const LPTIM_TypeDef * LPTIMx)

Function description

Informs the application whether the counter direction has changed from down to up (when the LPTIM instance operates in encoder mode).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR UP LL_LPTIM_IsActiveFlag_UP

LL_LPTIM_ClearFlag_DOWN

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_DOWN (LPTIM_TypeDef * LPTIMx)

Function description

Clear the counter direction change to down interrupt flag (DOWNCF).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR DOWNCF LL_LPTIM_ClearFlag_DOWN

LL_LPTIM_IsActiveFlag_DOWN

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_DOWN (const LPTIM_TypeDef * LPTIMx)

Function description

Informs the application whether the counter direction has changed from up to down (when the LPTIM instance operates in encoder mode).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR DOWN LL_LPTIM_IsActiveFlag_DOWN

LL_LPTIM_ClearFlag_REPOK

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_REPOK (LPTIM_TypeDef * LPTIMx)

Function description

Clear the repetition register update interrupt flag (REPOKCF).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR REPOKCF LL_LPTIM_ClearFlag_REPOK

LL_LPTIM_IsActiveFlag_REPOK

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_REPOK (const LPTIM_TypeDef * LPTIMx)

Function description

Informs application whether the APB bus write operation to the LPTIMx_RCR register has been successfully completed; If so, a new one can be initiated.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR REPOK LL_LPTIM_IsActiveFlag_REPOK

LL_LPTIM_ClearFlag_UE

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_UE (LPTIM_TypeDef * LPTIMx)

Function description

Clear the update event flag (UECF).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR UECF LL_LPTIM_ClearFlag_UE

LL_LPTIM_IsActiveFlag_UE

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_UE (const LPTIM_TypeDef * LPTIMx)

Function description

Informs application whether the LPTIMx update event has occurred.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR UE LL_LPTIM_IsActiveFlag_UE

LL_LPTIM_EnableIT_CC1

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_CC1 (LPTIM_TypeDef * LPTIMx)

Function description

Enable capture/compare 1 interrupt (CC1IE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC1IE LL_LPTIM_EnableIT_CC1

LL_LPTIM_DisableIT_CC1

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_CC1 (LPTIM_TypeDef * LPTIMx)

Function description

Disable capture/compare 1 interrupt (CC1IE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC1IE LL_LPTIM_DisableIT_CC1

LL_LPTIM_IsEnabledIT_CC1

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_CC1 (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the capture/compare 1 interrupt (CC1IE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC1IE LL_LPTIM_IsEnabledIT_CC1

LL_LPTIM_EnableIT_CC2

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_CC2 (LPTIM_TypeDef * LPTIMx)

Function description

Enable capture/compare 1 interrupt (CC2IE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC2IE LL_LPTIM_EnableIT_CC2

LL_LPTIM_DisableIT_CC2

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_CC2 (LPTIM_TypeDef * LPTIMx)

Function description

Disable capture/compare 2 interrupt (CC2IE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC2IE LL_LPTIM_DisableIT_CC2

LL_LPTIM_IsEnabledIT_CC2

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_CC2 (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the capture/compare 2 interrupt (CC2IE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC2IE LL_LPTIM_IsEnabledIT_CC2

LL_LPTIM_EnableIT_CC1O

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_CC1O (LPTIM_TypeDef * LPTIMx)

Function description

Enable capture/compare 1 over-capture interrupt (CC1OIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC1OIE LL_LPTIM_EnableIT_CC1O

LL_LPTIM_DisableIT_CC1O

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_CC1O (LPTIM_TypeDef * LPTIMx)

Function description

Disable capture/compare 1 over-capture interrupt (CC1OIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC1OIE LL_LPTIM_DisableIT_CC1O

LL_LPTIM_IsEnabledIT_CC1O

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_CC1O (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the capture/compare 1 over-capture interrupt (CC1OIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC1OIE LL_LPTIM_IsEnabledIT_CC1O

LL_LPTIM_EnableIT_CC2O

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_CC2O (LPTIM_TypeDef * LPTIMx)

Function description

Enable capture/compare 1 over-capture interrupt (CC2OIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC2OIE LL_LPTIM_EnableIT_CC2O

LL_LPTIM_DisableIT_CC2O

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_CC2O (LPTIM_TypeDef * LPTIMx)

Function description

Disable capture/compare 1 over-capture interrupt (CC2OIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC2OIE LL_LPTIM_DisableIT_CC2O

LL_LPTIM_IsEnabledIT_CC2O

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_CC2O (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the capture/compare 2 over-capture interrupt (CC2OIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC2OIE LL_LPTIM_IsEnabledIT_CC2O

LL_LPTIM_EnableIT_ARRM

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_ARRM (LPTIM_TypeDef * LPTIMx)

Function description

Enable autoreload match interrupt (ARRMIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER ARRMIE LL_LPTIM_EnableIT_ARRM

LL_LPTIM_DisableIT_ARRM

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_ARRM (LPTIM_TypeDef * LPTIMx)

Function description

Disable autoreload match interrupt (ARRMIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER ARRMIE LL_LPTIM_DisableIT_ARRM

LL_LPTIM_IsEnabledIT_ARRM

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_ARRM (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the autoreload match interrupt (ARRMIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER ARRMIE LL_LPTIM_IsEnabledIT_ARRM

LL_LPTIM_EnableIT_EXTTRIG

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_EXTTRIG (LPTIM_TypeDef * LPTIMx)

Function description

Enable external trigger valid edge interrupt (EXTTRIGIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER EXTTRIGIE LL_LPTIM_EnableIT_EXTTRIG

LL_LPTIM_DisableIT_EXTTRIG

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_EXTTRIG (LPTIM_TypeDef * LPTIMx)

Function description

Disable external trigger valid edge interrupt (EXTTRIGIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER EXTTRIGIE LL_LPTIM_DisableIT_EXTTRIG

LL_LPTIM_IsEnabledIT_EXTTRIG

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_EXTTRIG (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates external trigger valid edge interrupt (EXTTRIGIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER EXTTRIGIE LL_LPTIM_IsEnabledIT_EXTTRIG

LL_LPTIM_EnableIT_CMP1OK

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_CMP1OK (LPTIM_TypeDef * LPTIMx)

Function description

Enable compare register write completed interrupt (CMP1OKIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER CMP1OKIE LL_LPTIM_EnableIT_CMP1OK

LL_LPTIM_DisableIT_CMP1OK

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_CMP1OK (LPTIM_TypeDef * LPTIMx)

Function description

Disable compare register write completed interrupt (CMP1OKIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER CMPO1KIE LL_LPTIM_DisableIT_CMP1OK

LL_LPTIM_IsEnabledIT_CMP1OK

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_CMP1OK (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the compare register write completed interrupt (CMP1OKIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER CMP1OKIE LL_LPTIM_IsEnabledIT_CMP1OK

LL_LPTIM_EnableIT_CMP2OK

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_CMP2OK (LPTIM_TypeDef * LPTIMx)

Function description

Enable compare register write completed interrupt (CMP2OKIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER CMP2OKIE LL_LPTIM_EnableIT_CMP2OK

LL_LPTIM_DisableIT_CMP2OK

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_CMP2OK (LPTIM_TypeDef * LPTIMx)

Function description

Disable compare register write completed interrupt (CMP2OKIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER CMP2OKIE LL_LPTIM_DisableIT_CMP2OK

LL_LPTIM_IsEnabledIT_CMP2OK

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_CMP2OK (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the compare register write completed interrupt (CMP2OKIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER CMP2OKIE LL_LPTIM_IsEnabledIT_CMP2OK

LL_LPTIM_EnableIT_ARROK

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_ARROK (LPTIM_TypeDef * LPTIMx)

Function description

Enable autoreload register write completed interrupt (ARROKIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER ARROKIE LL_LPTIM_EnableIT_ARROK

LL_LPTIM_DisableIT_ARROK

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_ARROK (LPTIM_TypeDef * LPTIMx)

Function description

Disable autoreload register write completed interrupt (ARROKIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER ARROKIE LL_LPTIM_DisableIT_ARROK

LL_LPTIM_IsEnabledIT_ARROK

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_ARROK (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the autoreload register write completed interrupt (ARROKIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit(1 or 0).

Reference Manual to LL API cross reference:

- DIER ARROKIE LL_LPTIM_IsEnabledIT_ARROK

LL_LPTIM_EnableIT_UP

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_UP (LPTIM_TypeDef * LPTIMx)

Function description

Enable direction change to up interrupt (UPIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER UPIE LL_LPTIM_EnableIT_UP

LL_LPTIM_DisableIT_UP

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_UP (LPTIM_TypeDef * LPTIMx)

Function description

Disable direction change to up interrupt (UPIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER UPIE LL_LPTIM_DisableIT_UP

LL_LPTIM_IsEnabledIT_UP

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_UP (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the direction change to up interrupt (UPIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit(1 or 0).

Reference Manual to LL API cross reference:

- DIER UPIE LL_LPTIM_IsEnabledIT_UP

LL_LPTIM_EnableIT_DOWN

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_DOWN (LPTIM_TypeDef * LPTIMx)

Function description

Enable direction change to down interrupt (DOWNIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER DOWNIE LL_LPTIM_EnableIT_DOWN

LL_LPTIM_DisableIT_DOWN

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_DOWN (LPTIM_TypeDef * LPTIMx)

Function description

Disable direction change to down interrupt (DOWNIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER DOWNIE LL_LPTIM_DisableIT_DOWN

LL_LPTIM_IsEnabledIT_DOWN

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_DOWN (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the direction change to down interrupt (DOWNIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit(1 or 0).

Reference Manual to LL API cross reference:

- DIER DOWNIE LL_LPTIM_IsEnabledIT_DOWN

LL_LPTIM_EnableIT_REPOK

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_REPOK (LPTIM_TypeDef * LPTIMx)

Function description

Enable repetition register update successfully completed interrupt (REPOKIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER REPOKIE LL_LPTIM_EnableIT_REPOK

LL_LPTIM_DisableIT_REPOK

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_REPOK (LPTIM_TypeDef * LPTIMx)

Function description

Disable repetition register update successfully completed interrupt (REPOKIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER REPOKIE LL_LPTIM_DisableIT_REPOK

LL_LPTIM_IsEnabledIT_REPOK

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_REPOK (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the repetition register update successfully completed interrupt (REPOKIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit(1 or 0).

Reference Manual to LL API cross reference:

- DIER REPOKIE LL_LPTIM_IsEnabledIT_REPOK

LL_LPTIM_EnableIT_UE

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_UE (LPTIM_TypeDef * LPTIMx)

Function description

Enable update event interrupt (UEIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER UEIE LL_LPTIM_EnableIT_UE

LL_LPTIM_DisableIT_UE

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_UE (LPTIM_TypeDef * LPTIMx)

Function description

Disable update event interrupt (UEIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER UEIE LL_LPTIM_DisableIT_UE

LL_LPTIM_IsEnabledIT_UE

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_UE (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the update event interrupt (UEIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance @ retval State of bit(1 or 0).

Reference Manual to LL API cross reference:

- DIER UEIE LL_LPTIM_IsEnabledIT_UE

LL_LPTIM_EnableDMAReq_UPDATE

Function name

__STATIC_INLINE void LL_LPTIM_EnableDMAReq_UPDATE (LPTIM_TypeDef * LPTIMx)

Function description

Enable update DMA request.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER UEDE LL_LPTIM_EnableDMAReq_UPDATE

LL_LPTIM_DisableDMAReq_UPDATE

Function name

__STATIC_INLINE void LL_LPTIM_DisableDMAReq_UPDATE (LPTIM_TypeDef * LPTIMx)

Function description

Disable update DMA request.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER UEDE LL_LPTIM_DisableDMAReq_UPDATE

LL_LPTIM_IsEnabledDMAReq_UPDATE

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledDMAReq_UPDATE (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the update DMA request is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER UEDE LL_LPTIM_IsEnabledDMAReq_UPDATE

LL_LPTIM_EnableDMAReq_CC1

Function name

__STATIC_INLINE void LL_LPTIM_EnableDMAReq_CC1 (LPTIM_TypeDef * LPTIMx)

Function description

Enable capture/compare 1 DMA request (CC1DE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC1DE LL_LPTIM_EnableDMAReq_CC1

LL_LPTIM_DisableDMAReq_CC1

Function name

__STATIC_INLINE void LL_LPTIM_DisableDMAReq_CC1 (LPTIM_TypeDef * LPTIMx)

Function description

Disable capture/compare 1 DMA request (CC1DE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC1DE LL_LPTIM_DisableDMAReq_CC1

LL_LPTIM_IsEnabledDMAReq_CC1

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledDMAReq_CC1 (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the capture/compare 1 DMA request (CC1DE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC1DE LL_LPTIM_IsEnabledDMAReq_CC1

LL_LPTIM_EnableDMAReq_CC2

Function name

__STATIC_INLINE void LL_LPTIM_EnableDMAReq_CC2 (LPTIM_TypeDef * LPTIMx)

Function description

Enable capture/compare 2 DMA request (CC2DE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC2DE LL_LPTIM_EnableDMAReq_CC2

LL_LPTIM_DisableDMAReq_CC2

Function name

__STATIC_INLINE void LL_LPTIM_DisableDMAReq_CC2 (LPTIM_TypeDef * LPTIMx)

Function description

Disable capture/compare 2 DMA request (CC2DE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC2DE LL_LPTIM_DisableDMAReq_CC2

LL_LPTIM_IsEnabledDMAReq_CC2

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledDMAReq_CC2 (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the capture/compare 2 DMA request (CC2DE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC2DE LL_LPTIM_IsEnabledDMAReq_CC2

89.3 LPTIM Firmware driver defines

The following section lists the various define and macros of the module.

89.3.1 LPTIM

LPTIM

Input1 Source

LL_LPTIM_INPUT1_SRC_GPIO

For LPTIM1, LPTIM2, LPTIM3 and LPTIM4

LL_LPTIM_INPUT1_SRC_COMP1

For LPTIM1, LPTIM2 and LPTIM3 and LPTIM4

Input2 Source

LL_LPTIM_INPUT2_SRC_GPIO

For LPTIM1, LPTIM2 and LPTIM3

LL_LPTIM_INPUT2_SRC_COMP2

For LPTIM1, LPTIM2 and LPTIM3

LPTIM1 Input Ch1 Remap

LL_LPTIM_LPTIM1_IC1_RMP_GPIO

IC1 connected to GPIO

LL_LPTIM_LPTIM1_IC1_RMP_COMP1

IC1 connected to COMP1

LL_LPTIM_LPTIM1_IC1_RMP_COMP2

IC1 connected to COMP2

LL_LPTIM_LPTIM1_IC1_RMP_I3C2_IBIACK

IC1 connected to I3C2 IBI ACK

LPTIM1 Input Ch2 Remap

LL_LPTIM_LPTIM1_IC2_RMP_GPIO

IC2 connected to GPIO

LL_LPTIM_LPTIM1_IC2_RMP_LSI

IC2 connected to LSI

LL_LPTIM_LPTIM1_IC2_RMP_LSE

IC2 connected to LSE

LPTIM2 Input Ch1 Remap

LL_LPTIM_LPTIM2_IC1_RMP_GPIO

IC1 connected to GPIO

LL_LPTIM_LPTIM2_IC1_RMP_COMP1

IC1 connected to COMP1

LL_LPTIM_LPTIM2_IC1_RMP_COMP2

IC1 connected to COMP2

LL_LPTIM_LPTIM2_IC1_RMP_I3C1_IBIACK

IC1 connected to I3C1 IBI ACK

LPTIM2 Input Ch2 Remap

LL_LPTIM_LPTIM2_IC2_RMP_GPIO

IC2 connected to GPIO

LL_LPTIM_LPTIM2_IC2_RMP_HSI_256

IC2 connected to HSI/256

LL_LPTIM_LPTIM2_IC2_RMP_MSI_1024

IC2 connected to MSIS/1024

LL_LPTIM_LPTIM2_IC2_RMP_MSI_4

IC2 connected to MSIS/4

LPTIM3 Input Ch1 Remap

LL_LPTIM_LPTIM3_IC1_RMP_GPIO

IC1 connected to GPIO

LL_LPTIM_LPTIM3_IC1_RMP_COMP1

IC1 connected to COMP1

LL_LPTIM_LPTIM3_IC1_RMP_COMP2

IC1 connected to COMP2

LL_LPTIM_LPTIM3_IC1_RMP_I3C1_IBIACK

IC1 connected to I3C1 IBI ACK

LPTIM3 Input Ch2 Remap

LL_LPTIM_LPTIM3_IC2_RMP_GPIO

IC2 connected to GPIO

LL_LPTIM_LPTIM3_IC2_RMP_I3C2_IBIACK

IC2 connected to I3C2 IBI ACK

Clock Filter

LL_LPTIM_CLK_FILTER_NONE

Any external clock signal level change is considered as a valid transition

LL_LPTIM_CLK_FILTER_2

External clock signal level change must be stable for at least 2 clock periods before it is considered as valid transition

LL_LPTIM_CLK_FILTER_4

External clock signal level change must be stable for at least 4 clock periods before it is considered as valid transition

LL_LPTIM_CLK_FILTER_8

External clock signal level change must be stable for at least 8 clock periods before it is considered as valid transition

Clock Polarity

LL_LPTIM_CLK_POLARITY_RISING

The rising edge is the active edge used for counting

LL_LPTIM_CLK_POLARITY_FALLING

The falling edge is the active edge used for counting

LL_LPTIM_CLK_POLARITY_RISING_FALLING

Both edges are active edges

Clock Source

LL_LPTIM_CLK_SOURCE_INTERNAL

LPTIM is clocked by internal clock source (APB clock or any of the embedded oscillators)

LL_LPTIM_CLK_SOURCE_EXTERNAL

LPTIM is clocked by an external clock source through the LPTIM external Input1

Counter Mode

LL_LPTIM_COUNTER_MODE_INTERNAL

The counter is incremented following each internal clock pulse

LL_LPTIM_COUNTER_MODE_EXTERNAL

The counter is incremented following each valid clock pulse on the LPTIM external Input1

Encoder Mode

LL_LPTIM_ENCODER_MODE_RISING

The rising edge is the active edge used for counting

LL_LPTIM_ENCODER_MODE_FALLING

The falling edge is the active edge used for counting

LL_LPTIM_ENCODER_MODE_RISING_FALLING

Both edges are active edges

Get Flags Defines

LL_LPTIM_ISR_CMP1OK

Compare register 1 update OK

LL_LPTIM_ISR_CMP2OK

Compare register 2 update OK

LL_LPTIM_ISR_CC1IF

Capture/Compare 1 interrupt flag

LL_LPTIM_ISR_CC2IF

Capture/Compare 2 interrupt flag

LL_LPTIM_ISR_CC1OF

Capture/Compare 1 over-capture flag

LL_LPTIM_ISR_CC2OF

Capture/Compare 2 over-capture flag

LL_LPTIM_ISR_DIEROK

Interrupt enable register update OK

LL_LPTIM_ISR_ARRM

Autoreload match

LL_LPTIM_ISR_EXTTRIG

External trigger edge event

LL_LPTIM_ISR_ARROK

Autoreload register update OK

LL_LPTIM_ISR_UP

Counter direction change down to up

LL_LPTIM_ISR_DOWN

Counter direction change up to down

LL_LPTIM_ISR_UE

Update event

LL_LPTIM_ISR_REPOK

Repetition register update OK

IT Defines

LL_LPTIM_DIER_CMP1OKIE

Compare register 1 update OK

LL_LPTIM_DIER_CMP2OKIE

Compare register 2 update OK

LL_LPTIM_DIER_CC1IFIE

Capture/Compare 1 interrupt flag

LL_LPTIM_DIER_CC2IFIE

Capture/Compare 2 interrupt flag

LL_LPTIM_DIER_CC1OFIE

Capture/Compare 1 over-capture flag

LL_LPTIM_DIER_CC2OFIE

Capture/Compare 2 over-capture flag

LL_LPTIM_DIER_ARRMIE

Autoreload match

LL_LPTIM_DIER_EXTTRIGIE

External trigger edge event

LL_LPTIM_DIER_ARROKIE

Autoreload register update OK

LL_LPTIM_DIER_UPIE

Counter direction change down to up

LL_LPTIM_DIER_DOWNIE

Counter direction change up to down

LL_LPTIM_DIER_UEIE

Update event

LL_LPTIM_DIER_REPOKIE

Repetition register update OK

Input Capture Filter

LL_LPTIM_ICFLT_CLOCK_DIV1

any external input capture signal level change is considered as a valid transition

LL_LPTIM_ICFLT_CLOCK_DIV2

external input capture signal level change must be stable for at least 2 clock periods before it is considered as valid transition

LL_LPTIM_ICFLT_CLOCK_DIV4

external input capture signal level change must be stable for at least 4 clock periods before it is considered as valid transition

LL_LPTIM_ICFLT_CLOCK_DIV8

external input capture signal level change must be stable for at least 8 clock periods before it is considered as valid transition

Input Capture Polarity

LL_LPTIM_ICPOLARITY_RISING

Capture/Compare input rising polarity

LL_LPTIM_ICPOLARITY_FALLING

Capture/Compare input falling polarity

LL_LPTIM_ICPOLARITY_RISING_FALLING

Capture/Compare input rising and falling polarities

Input Capture Prescaler

LL_LPTIM_ICPSC_DIV1

Capture performed each time an edge is detected on the capture input

LL_LPTIM_ICPSC_DIV2

Capture performed once every 2 events

LL_LPTIM_ICPSC_DIV4

Capture performed once every 4 events

LL_LPTIM_ICPSC_DIV8

Capture performed once every 8 events

Input Capture selection

LL_LPTIM_CCMODE_OUTPUT_PWM

Select PWM mode

LL_LPTIM_CCMODE_INPUTCAPTURE

Select Input Capture mode

Operating Mode

LL_LPTIM_OPERATING_MODE_CONTINUOUS

LP Timer starts in continuous mode

LL_LPTIM_OPERATING_MODE_ONESHOT

LP Tilmer starts in single mode

Output Polarity

LL_LPTIM_OUTPUT_POLARITY_REGULAR

The LPTIM output reflects the compare results between LPTIMx_ARR and LPTIMx_CCRx registers

LL_LPTIM_OUTPUT_POLARITY_INVERSE

The LPTIM output reflects the inverse of the compare results between LPTIMx_ARR and LPTIMx_CCx registers

Output Waveform Type

LL_LPTIM_OUTPUT_WAVEFORM_PWM

LPTIM generates either a PWM waveform or a One pulse waveform depending on chosen operating mode CONTINUOUS or SINGLE

LL_LPTIM_OUTPUT_WAVEFORM_SETONCE

LPTIM generates a Set Once waveform

Prescaler Value

LL_LPTIM_PRESCALER_DIV1

Prescaler division factor is set to 1

LL_LPTIM_PRESCALER_DIV2

Prescaler division factor is set to 2

LL_LPTIM_PRESCALER_DIV4

Prescaler division factor is set to 4

LL_LPTIM_PRESCALER_DIV8

Prescaler division factor is set to 8

LL_LPTIM_PRESCALER_DIV16

Prescaler division factor is set to 16

LL_LPTIM_PRESCALER_DIV32

Prescaler division factor is set to 32

LL_LPTIM_PRESCALER_DIV64

Prescaler division factor is set to 64

LL_LPTIM_PRESCALER_DIV128

Prescaler division factor is set to 128

Trigger Filter

LL_LPTIM_TRIG_FILTER_NONE

Any trigger active level change is considered as a valid trigger

LL_LPTIM_TRIG_FILTER_2

Trigger active level change must be stable for at least 2 clock periods before it is considered as valid trigger

LL_LPTIM_TRIG_FILTER_4

Trigger active level change must be stable for at least 4 clock periods before it is considered as valid trigger

LL_LPTIM_TRIG_FILTER_8

Trigger active level change must be stable for at least 8 clock periods before it is considered as valid trigger

Trigger Polarity

LL_LPTIM_TRIG_POLARITY_RISING

LPTIM counter starts when a rising edge is detected

LL_LPTIM_TRIG_POLARITY_FALLING

LPTIM counter starts when a falling edge is detected

LL_LPTIM_TRIG_POLARITY_RISING_FALLING

LPTIM counter starts when a rising or a falling edge is detected

Trigger Source

LL_LPTIM_TRIG_SOURCE_GPIO

External input trigger is connected to TIMx_ETR input

LL_LPTIM_TRIG_SOURCE_RTCALARMA

External input trigger is connected to RTC Alarm A

LL_LPTIM_TRIG_SOURCE_RTCALARMB

External input trigger is connected to RTC Alarm B

LL_LPTIM_TRIG_SOURCE_RTCTAMP1

External input trigger is connected to RTC Tamper 1

LL_LPTIM_TRIG_SOURCE_RTCTAMP2

External input trigger is connected to RTC Tamper 2

LL_LPTIM_TRIG_SOURCE_RTCTAMP3

External input trigger is connected to RTC Tamper 3

LL_LPTIM_TRIG_SOURCE_COMP1

External input trigger is connected to COMP1 output

LL_LPTIM_TRIG_SOURCE_COMP2

External input trigger is connected to COMP2 output

LL_LPTIM_TRIG_SOURCE_GPDMA_CH0_TCF

External input trigger is connected to GPDMA CH0 transfer complete

LL_LPTIM_TRIG_SOURCE_GPDMA_CH1_TCF

External input trigger is connected to GPDMA CH1 transfer complete

LL_LPTIM_TRIG_SOURCE_GPDMA_CH2_TCF

External input trigger is connected to GPDMA CH2 transfer complete

LL_LPTIM_TRIG_SOURCE_GPDMA_CH3_TCF

External input trigger is connected to GPDMA CH3 transfer complete

LL_LPTIM_TRIG_SOURCE_GPDMA_CH4_TCF

External input trigger is connected to GPDMA CH4 transfer complete

Update Mode

LL_LPTIM_UPDATE_MODE_IMMEDIATE

Preload is disabled: registers are updated after each APB bus write access

LL_LPTIM_UPDATE_MODE_ENDOFPERIOD

preload is enabled: registers are updated at the end of the current LPTIM period

Common Write and read registers Macros

LL_LPTIM_WriteReg

Description:

- Write a value in LPTIM register.

Parameters:

- __INSTANCE__: LPTIM Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_LPTIM_ReadReg

Description:

- Read a value in LPTIM register.

Parameters:

- __INSTANCE__: LPTIM Instance
- __REG__: Register to be read

Return value:

- Register: value

LL_LPTIM_IC_GET_OFFSET

Description:

- LPTimer Input Capture Get Offset(in counter step unit)

Parameters:

- __PSC__: This parameter can be one of the following values:
  - LL_LPTIM_PRESCALER_DIV1
  - LL_LPTIM_PRESCALER_DIV2
  - LL_LPTIM_PRESCALER_DIV4
  - LL_LPTIM_PRESCALER_DIV8
  - LL_LPTIM_PRESCALER_DIV16
  - LL_LPTIM_PRESCALER_DIV32
  - LL_LPTIM_PRESCALER_DIV64
  - LL_LPTIM_PRESCALER_DIV128
- __FLT__: This parameter can be one of the following values:
  - LL_LPTIM_ICFLT_CLOCK_DIV1
  - LL_LPTIM_ICFLT_CLOCK_DIV2
  - LL_LPTIM_ICFLT_CLOCK_DIV4
  - LL_LPTIM_ICFLT_CLOCK_DIV8

Return value:

- offset: value

Notes:

- The real capture value corresponding to the input capture trigger can be calculated using the formula hereafter : Real capture value = captured(LPTIM_CCRx) - offset The Offset value is depending on the glitch filter value for the channel and the value of the prescaler for the kernel clock. Please check Errata Sheet V1_8 for more details under "variable latency on input capture channel" section.

90 LL LPUART Generic Driver

90.1 LPUART Firmware driver registers structures

90.1.1 LL_LPUART_InitTypeDef

LL_LPUART_InitTypeDef is defined in the stm32u3xx_ll_lpuart.h

Data Fields

- ***uint32_t PrescalerValue***
- ***uint32_t BaudRate***
- ***uint32_t DataWidth***
- ***uint32_t StopBits***
- ***uint32_t Parity***
- ***uint32_t TransferDirection***
- ***uint32_t HardwareFlowControl***

Field Documentation

- ***uint32_t LL_LPUART_InitTypeDef::PrescalerValue***
  Specifies the Prescaler to compute the communication baud rate. This parameter can be a value of ***LPUART_LL_EC_PRESCALER***.This feature can be modified afterwards using unitary function **LL_LPUART_SetPrescaler()**.
- ***uint32_t LL_LPUART_InitTypeDef::BaudRate***
  This field defines expected LPUART communication baud rate.This feature can be modified afterwards using unitary function **LL_LPUART_SetBaudRate()**.
- ***uint32_t LL_LPUART_InitTypeDef::DataWidth***
  Specifies the number of data bits transmitted or received in a frame. This parameter can be a value of ***LPUART_LL_EC_DATAWIDTH***.This feature can be modified afterwards using unitary function **LL_LPUART_SetDataWidth()**.
- ***uint32_t LL_LPUART_InitTypeDef::StopBits***
  Specifies the number of stop bits transmitted. This parameter can be a value of ***LPUART_LL_EC_STOPBITS***.This feature can be modified afterwards using unitary function **LL_LPUART_SetStopBitsLength()**.
- ***uint32_t LL_LPUART_InitTypeDef::Parity***
  Specifies the parity mode. This parameter can be a value of ***LPUART_LL_EC_PARITY***.This feature can be modified afterwards using unitary function **LL_LPUART_SetParity()**.
- ***uint32_t LL_LPUART_InitTypeDef::TransferDirection***
  Specifies whether the Receive and/or Transmit mode is enabled or disabled. This parameter can be a value of ***LPUART_LL_EC_DIRECTION***.This feature can be modified afterwards using unitary function **LL_LPUART_SetTransferDirection()**.
- ***uint32_t LL_LPUART_InitTypeDef::HardwareFlowControl***
  Specifies whether the hardware flow control mode is enabled or disabled. This parameter can be a value of ***LPUART_LL_EC_HWCONTROL***.This feature can be modified afterwards using unitary function **LL_LPUART_SetHWFlowCtrl()**.

90.2 LPUART Firmware driver API description

The following section lists the various functions of the LPUART library.

90.2.1 Detailed description of functions

LL_LPUART_Enable

Function name

__STATIC_INLINE void LL_LPUART_Enable (USART_TypeDef * LPUARTx)

Function description

LPUART Enable.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 UE LL_LPUART_Enable

LL_LPUART_Disable

Function name

__STATIC_INLINE void LL_LPUART_Disable (USART_TypeDef * LPUARTx)

Function description

LPUART Disable.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Notes

- When LPUART is disabled, LPUART prescalers and outputs are stopped immediately, and current operations are discarded. The configuration of the LPUART is kept, but all the status flags, in the LPUARTx_ISR are set to their default values.
- In order to go into low-power mode without generating errors on the line, the TE bit must be reset before and the software must wait for the TC bit in the LPUART_ISR to be set before resetting the UE bit. The DMA requests are also reset when UE = 0 so the DMA channel must be disabled before resetting the UE bit.

Reference Manual to LL API cross reference:

- CR1 UE LL_LPUART_Disable

LL_LPUART_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabled (const USART_TypeDef * LPUARTx)

Function description

Indicate if LPUART is enabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 UE LL_LPUART_IsEnabled

LL_LPUART_EnableFIFO

Function name

__STATIC_INLINE void LL_LPUART_EnableFIFO (USART_TypeDef * LPUARTx)

Function description

FIFO Mode Enable.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 FIFOEN LL_LPUART_EnableFIFO

LL_LPUART_DisableFIFO

Function name

__STATIC_INLINE void LL_LPUART_DisableFIFO (USART_TypeDef * LPUARTx)

Function description

FIFO Mode Disable.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 FIFOEN LL_LPUART_DisableFIFO

LL_LPUART_IsEnabledFIFO

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledFIFO (const USART_TypeDef * LPUARTx)

Function description

Indicate if FIFO Mode is enabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 FIFOEN LL_LPUART_IsEnabledFIFO

LL_LPUART_SetTXFIFOThreshold

Function name

__STATIC_INLINE void LL_LPUART_SetTXFIFOThreshold (USART_TypeDef * LPUARTx, uint32_t Threshold)

Function description

Configure TX FIFO Threshold.

Parameters

- **LPUARTx:** LPUART Instance
- **Threshold:** This parameter can be one of the following values:
  - LL_LPUART_FIFOTHRESHOLD_1_8
  - LL_LPUART_FIFOTHRESHOLD_1_4
  - LL_LPUART_FIFOTHRESHOLD_1_2
  - LL_LPUART_FIFOTHRESHOLD_3_4
  - LL_LPUART_FIFOTHRESHOLD_7_8
  - LL_LPUART_FIFOTHRESHOLD_8_8

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 TXFTCFG LL_LPUART_SetTXFIFOThreshold

LL_LPUART_GetTXFIFOThreshold

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetTXFIFOThreshold (const USART_TypeDef * LPUARTx)

Function description

Return TX FIFO Threshold Configuration.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_FIFOTHRESHOLD_1_8
  - LL_LPUART_FIFOTHRESHOLD_1_4
  - LL_LPUART_FIFOTHRESHOLD_1_2
  - LL_LPUART_FIFOTHRESHOLD_3_4
  - LL_LPUART_FIFOTHRESHOLD_7_8
  - LL_LPUART_FIFOTHRESHOLD_8_8

Reference Manual to LL API cross reference:

- CR3 TXFTCFG LL_LPUART_GetTXFIFOThreshold

LL_LPUART_SetRXFIFOThreshold

Function name

__STATIC_INLINE void LL_LPUART_SetRXFIFOThreshold (USART_TypeDef * LPUARTx, uint32_t Threshold)

Function description

Configure RX FIFO Threshold.

Parameters

- **LPUARTx:** LPUART Instance
- **Threshold:** This parameter can be one of the following values:
  - LL_LPUART_FIFOTHRESHOLD_1_8
  - LL_LPUART_FIFOTHRESHOLD_1_4
  - LL_LPUART_FIFOTHRESHOLD_1_2
  - LL_LPUART_FIFOTHRESHOLD_3_4
  - LL_LPUART_FIFOTHRESHOLD_7_8
  - LL_LPUART_FIFOTHRESHOLD_8_8

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 RXFTCFG LL_LPUART_SetRXFIFOThreshold

LL_LPUART_GetRXFIFOThreshold

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetRXFIFOThreshold (const USART_TypeDef * LPUARTx)

Function description

Return RX FIFO Threshold Configuration.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_FIFOTHRESHOLD_1_8
  - LL_LPUART_FIFOTHRESHOLD_1_4
  - LL_LPUART_FIFOTHRESHOLD_1_2
  - LL_LPUART_FIFOTHRESHOLD_3_4
  - LL_LPUART_FIFOTHRESHOLD_7_8
  - LL_LPUART_FIFOTHRESHOLD_8_8

Reference Manual to LL API cross reference:

- CR3 RXFTCFG LL_LPUART_GetRXFIFOThreshold

LL_LPUART_ConfigFIFOsThreshold

Function name

__STATIC_INLINE void LL_LPUART_ConfigFIFOsThreshold (USART_TypeDef * LPUARTx, uint32_t TXThreshold, uint32_t RXThreshold)

Function description

Configure TX and RX FIFOs Threshold.

Parameters

- **LPUARTx:** LPUART Instance
- **TXThreshold:** This parameter can be one of the following values:
  - LL_LPUART_FIFOTHRESHOLD_1_8
  - LL_LPUART_FIFOTHRESHOLD_1_4
  - LL_LPUART_FIFOTHRESHOLD_1_2
  - LL_LPUART_FIFOTHRESHOLD_3_4
  - LL_LPUART_FIFOTHRESHOLD_7_8
  - LL_LPUART_FIFOTHRESHOLD_8_8
- **RXThreshold:** This parameter can be one of the following values:
  - LL_LPUART_FIFOTHRESHOLD_1_8
  - LL_LPUART_FIFOTHRESHOLD_1_4
  - LL_LPUART_FIFOTHRESHOLD_1_2
  - LL_LPUART_FIFOTHRESHOLD_3_4
  - LL_LPUART_FIFOTHRESHOLD_7_8
  - LL_LPUART_FIFOTHRESHOLD_8_8

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 TXFTCFG LL_LPUART_ConfigFIFOsThreshold
- CR3 RXFTCFG LL_LPUART_ConfigFIFOsThreshold

LL_LPUART_EnableInStopMode

Function name

__STATIC_INLINE void LL_LPUART_EnableInStopMode (USART_TypeDef * LPUARTx)

Function description

LPUART enabled in STOP Mode.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Notes

- When this function is enabled, LPUART is able to wake up the MCU from Stop mode, provided that LPUART clock selection is HSI or LSE in RCC.

Reference Manual to LL API cross reference:

- CR1 UESM LL_LPUART_EnableInStopMode

LL_LPUART_DisableInStopMode

Function name

__STATIC_INLINE void LL_LPUART_DisableInStopMode (USART_TypeDef * LPUARTx)

Function description

LPUART disabled in STOP Mode.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Notes

- When this function is disabled, LPUART is not able to wake up the MCU from Stop mode

Reference Manual to LL API cross reference:

- CR1 UESM LL_LPUART_DisableInStopMode

LL_LPUART_IsEnabledInStopMode

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledInStopMode (const USART_TypeDef * LPUARTx)

Function description

Indicate if LPUART is enabled in STOP Mode (able to wake up MCU from Stop mode or not)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 UESM LL_LPUART_IsEnabledInStopMode

LL_LPUART_EnableDirectionRx

Function name

__STATIC_INLINE void LL_LPUART_EnableDirectionRx (USART_TypeDef * LPUARTx)

Function description

Receiver Enable (Receiver is enabled and begins searching for a start bit)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RE LL_LPUART_EnableDirectionRx

LL_LPUART_DisableDirectionRx

Function name

__STATIC_INLINE void LL_LPUART_DisableDirectionRx (USART_TypeDef * LPUARTx)

Function description

Receiver Disable.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RE LL_LPUART_DisableDirectionRx

LL_LPUART_EnableDirectionTx

Function name

__STATIC_INLINE void LL_LPUART_EnableDirectionTx (USART_TypeDef * LPUARTx)

Function description

Transmitter Enable.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TE LL_LPUART_EnableDirectionTx

LL_LPUART_DisableDirectionTx

Function name

__STATIC_INLINE void LL_LPUART_DisableDirectionTx (USART_TypeDef * LPUARTx)

Function description

Transmitter Disable.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TE LL_LPUART_DisableDirectionTx

LL_LPUART_SetTransferDirection

Function name

__STATIC_INLINE void LL_LPUART_SetTransferDirection (USART_TypeDef * LPUARTx, uint32_t TransferDirection)

Function description

Configure simultaneously enabled/disabled states of Transmitter and Receiver.

Parameters

- **LPUARTx:** LPUART Instance
- **TransferDirection:** This parameter can be one of the following values:
  - LL_LPUART_DIRECTION_NONE
  - LL_LPUART_DIRECTION_RX
  - LL_LPUART_DIRECTION_TX
  - LL_LPUART_DIRECTION_TX_RX

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RE LL_LPUART_SetTransferDirection
- CR1 TE LL_LPUART_SetTransferDirection

LL_LPUART_GetTransferDirection

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetTransferDirection (const USART_TypeDef * LPUARTx)

Function description

Return enabled/disabled states of Transmitter and Receiver.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_DIRECTION_NONE
  - LL_LPUART_DIRECTION_RX
  - LL_LPUART_DIRECTION_TX
  - LL_LPUART_DIRECTION_TX_RX

Reference Manual to LL API cross reference:

- CR1 RE LL_LPUART_GetTransferDirection
- CR1 TE LL_LPUART_GetTransferDirection

LL_LPUART_SetParity

Function name

__STATIC_INLINE void LL_LPUART_SetParity (USART_TypeDef * LPUARTx, uint32_t Parity)

Function description

Configure Parity (enabled/disabled and parity mode if enabled)

Parameters

- **LPUARTx:** LPUART Instance
- **Parity:** This parameter can be one of the following values:
  - LL_LPUART_PARITY_NONE
  - LL_LPUART_PARITY_EVEN
  - LL_LPUART_PARITY_ODD

Return values

- **None:**

Notes

- This function selects if hardware parity control (generation and detection) is enabled or disabled. When the parity control is enabled (Odd or Even), computed parity bit is inserted at the MSB position (depending on data width) and parity is checked on the received data.

Reference Manual to LL API cross reference:

- CR1 PS LL_LPUART_SetParity
- CR1 PCE LL_LPUART_SetParity

LL_LPUART_GetParity

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetParity (const USART_TypeDef * LPUARTx)

Function description

Return Parity configuration (enabled/disabled and parity mode if enabled)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_PARITY_NONE
  - LL_LPUART_PARITY_EVEN
  - LL_LPUART_PARITY_ODD

Reference Manual to LL API cross reference:

- CR1 PS LL_LPUART_GetParity
- CR1 PCE LL_LPUART_GetParity

LL_LPUART_SetWakeUpMethod

Function name

__STATIC_INLINE void LL_LPUART_SetWakeUpMethod (USART_TypeDef * LPUARTx, uint32_t Method)

Function description

Set Receiver Wake Up method from Mute mode.

Parameters

- **LPUARTx:** LPUART Instance
- **Method:** This parameter can be one of the following values:
  - LL_LPUART_WAKEUP_IDLELINE
  - LL_LPUART_WAKEUP_ADDRESSMARK

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 WAKE LL_LPUART_SetWakeUpMethod

LL_LPUART_GetWakeUpMethod

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetWakeUpMethod (const USART_TypeDef * LPUARTx)

Function description

Return Receiver Wake Up method from Mute mode.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_WAKEUP_IDLELINE
  - LL_LPUART_WAKEUP_ADDRESSMARK

Reference Manual to LL API cross reference:

- CR1 WAKE LL_LPUART_GetWakeUpMethod

LL_LPUART_SetDataWidth

Function name

__STATIC_INLINE void LL_LPUART_SetDataWidth (USART_TypeDef * LPUARTx, uint32_t DataWidth)

Function description

Set Word length (nb of data bits, excluding start and stop bits)

Parameters

- **LPUARTx:** LPUART Instance
- **DataWidth:** This parameter can be one of the following values:
  - LL_LPUART_DATAWIDTH_7B
  - LL_LPUART_DATAWIDTH_8B
  - LL_LPUART_DATAWIDTH_9B

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 M LL_LPUART_SetDataWidth

LL_LPUART_GetDataWidth

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetDataWidth (const USART_TypeDef * LPUARTx)

Function description

Return Word length (i.e.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_DATAWIDTH_7B
  - LL_LPUART_DATAWIDTH_8B
  - LL_LPUART_DATAWIDTH_9B

Reference Manual to LL API cross reference:

- CR1 M LL_LPUART_GetDataWidth

LL_LPUART_EnableMuteMode

Function name

__STATIC_INLINE void LL_LPUART_EnableMuteMode (USART_TypeDef * LPUARTx)

Function description

Allow switch between Mute Mode and Active mode.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 MME LL_LPUART_EnableMuteMode

LL_LPUART_DisableMuteMode

Function name

__STATIC_INLINE void LL_LPUART_DisableMuteMode (USART_TypeDef * LPUARTx)

Function description

Prevent Mute Mode use.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 MME LL_LPUART_DisableMuteMode

LL_LPUART_IsEnabledMuteMode

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledMuteMode (const USART_TypeDef * LPUARTx)

Function description

Indicate if switch between Mute Mode and Active mode is allowed.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 MME LL_LPUART_IsEnabledMuteMode

LL_LPUART_SetPrescaler

Function name

__STATIC_INLINE void LL_LPUART_SetPrescaler (USART_TypeDef * LPUARTx, uint32_t PrescalerValue)

Function description

Configure Clock source prescaler for baudrate generator and oversampling.

Parameters

- **LPUARTx:** LPUART Instance
- **PrescalerValue:** This parameter can be one of the following values:
  - LL_LPUART_PRESCALER_DIV1
  - LL_LPUART_PRESCALER_DIV2
  - LL_LPUART_PRESCALER_DIV4
  - LL_LPUART_PRESCALER_DIV6
  - LL_LPUART_PRESCALER_DIV8
  - LL_LPUART_PRESCALER_DIV10
  - LL_LPUART_PRESCALER_DIV12
  - LL_LPUART_PRESCALER_DIV16
  - LL_LPUART_PRESCALER_DIV32
  - LL_LPUART_PRESCALER_DIV64
  - LL_LPUART_PRESCALER_DIV128
  - LL_LPUART_PRESCALER_DIV256

Return values

- **None:**

Reference Manual to LL API cross reference:

- PRESC PRESCALER LL_LPUART_SetPrescaler

LL_LPUART_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetPrescaler (const USART_TypeDef * LPUARTx)

Function description

Retrieve the Clock source prescaler for baudrate generator and oversampling.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_PRESCALER_DIV1
  - LL_LPUART_PRESCALER_DIV2
  - LL_LPUART_PRESCALER_DIV4
  - LL_LPUART_PRESCALER_DIV6
  - LL_LPUART_PRESCALER_DIV8
  - LL_LPUART_PRESCALER_DIV10
  - LL_LPUART_PRESCALER_DIV12
  - LL_LPUART_PRESCALER_DIV16
  - LL_LPUART_PRESCALER_DIV32
  - LL_LPUART_PRESCALER_DIV64
  - LL_LPUART_PRESCALER_DIV128
  - LL_LPUART_PRESCALER_DIV256

Reference Manual to LL API cross reference:

- PRESC PRESCALER LL_LPUART_GetPrescaler

LL_LPUART_SetStopBitsLength

Function name

__STATIC_INLINE void LL_LPUART_SetStopBitsLength (USART_TypeDef * LPUARTx, uint32_t StopBits)

Function description

Set the length of the stop bits.

Parameters

- **LPUARTx:** LPUART Instance
- **StopBits:** This parameter can be one of the following values:
  - LL_LPUART_STOPBITS_1
  - LL_LPUART_STOPBITS_2

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 STOP LL_LPUART_SetStopBitsLength

LL_LPUART_GetStopBitsLength

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetStopBitsLength (const USART_TypeDef * LPUARTx)

Function description

Retrieve the length of the stop bits.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_STOPBITS_1
  - LL_LPUART_STOPBITS_2

Reference Manual to LL API cross reference:

- CR2 STOP LL_LPUART_GetStopBitsLength

LL_LPUART_ConfigCharacter

Function name

__STATIC_INLINE void LL_LPUART_ConfigCharacter (USART_TypeDef * LPUARTx, uint32_t DataWidth, uint32_t Parity, uint32_t StopBits)

Function description

Configure Character frame format (Datawidth, Parity control, Stop Bits)

Parameters

- **LPUARTx:** LPUART Instance
- **DataWidth:** This parameter can be one of the following values:
  - LL_LPUART_DATAWIDTH_7B
  - LL_LPUART_DATAWIDTH_8B
  - LL_LPUART_DATAWIDTH_9B
- **Parity:** This parameter can be one of the following values:
  - LL_LPUART_PARITY_NONE
  - LL_LPUART_PARITY_EVEN
  - LL_LPUART_PARITY_ODD
- **StopBits:** This parameter can be one of the following values:
  - LL_LPUART_STOPBITS_1
  - LL_LPUART_STOPBITS_2

Return values

- **None:**

Notes

- Call of this function is equivalent to following function call sequence : Data Width configuration using LL_LPUART_SetDataWidth() functionParity Control and mode configuration using LL_LPUART_SetParity() functionStop bits configuration using LL_LPUART_SetStopBitsLength() function

Reference Manual to LL API cross reference:

- CR1 PS LL_LPUART_ConfigCharacter
- CR1 PCE LL_LPUART_ConfigCharacter
- CR1 M LL_LPUART_ConfigCharacter
- CR2 STOP LL_LPUART_ConfigCharacter

LL_LPUART_SetTXRXSwap

Function name

__STATIC_INLINE void LL_LPUART_SetTXRXSwap (USART_TypeDef * LPUARTx, uint32_t SwapConfig)

Function description

Configure TX/RX pins swapping setting.

Parameters

- **LPUARTx:** LPUART Instance
- **SwapConfig:** This parameter can be one of the following values:
  - LL_LPUART_TXRX_STANDARD
  - LL_LPUART_TXRX_SWAPPED

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 SWAP LL_LPUART_SetTXRXSwap

LL_LPUART_GetTXRXSwap

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetTXRXSwap (const USART_TypeDef * LPUARTx)

Function description

Retrieve TX/RX pins swapping configuration.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_TXRX_STANDARD
  - LL_LPUART_TXRX_SWAPPED

Reference Manual to LL API cross reference:

- CR2 SWAP LL_LPUART_GetTXRXSwap

LL_LPUART_SetRXPinLevel

Function name

__STATIC_INLINE void LL_LPUART_SetRXPinLevel (USART_TypeDef * LPUARTx, uint32_t PinInvMethod)

Function description

Configure RX pin active level logic.

Parameters

- **LPUARTx:** LPUART Instance
- **PinInvMethod:** This parameter can be one of the following values:
  - LL_LPUART_RXPIN_LEVEL_STANDARD
  - LL_LPUART_RXPIN_LEVEL_INVERTED

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 RXINV LL_LPUART_SetRXPinLevel

LL_LPUART_GetRXPinLevel

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetRXPinLevel (const USART_TypeDef * LPUARTx)

Function description

Retrieve RX pin active level logic configuration.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_RXPIN_LEVEL_STANDARD
  - LL_LPUART_RXPIN_LEVEL_INVERTED

Reference Manual to LL API cross reference:

- CR2 RXINV LL_LPUART_GetRXPinLevel

LL_LPUART_SetTXPinLevel

Function name

__STATIC_INLINE void LL_LPUART_SetTXPinLevel (USART_TypeDef * LPUARTx, uint32_t PinInvMethod)

Function description

Configure TX pin active level logic.

Parameters

- **LPUARTx:** LPUART Instance
- **PinInvMethod:** This parameter can be one of the following values:
  - LL_LPUART_TXPIN_LEVEL_STANDARD
  - LL_LPUART_TXPIN_LEVEL_INVERTED

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 TXINV LL_LPUART_SetTXPinLevel

LL_LPUART_GetTXPinLevel

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetTXPinLevel (const USART_TypeDef * LPUARTx)

Function description

Retrieve TX pin active level logic configuration.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_TXPIN_LEVEL_STANDARD
  - LL_LPUART_TXPIN_LEVEL_INVERTED

Reference Manual to LL API cross reference:

- CR2 TXINV LL_LPUART_GetTXPinLevel

LL_LPUART_SetBinaryDataLogic

Function name

__STATIC_INLINE void LL_LPUART_SetBinaryDataLogic (USART_TypeDef * LPUARTx, uint32_t DataLogic)

Function description

Configure Binary data logic.

Parameters

- **LPUARTx:** LPUART Instance
- **DataLogic:** This parameter can be one of the following values:
  - LL_LPUART_BINARY_LOGIC_POSITIVE
  - LL_LPUART_BINARY_LOGIC_NEGATIVE

Return values

- **None:**

Notes

- Allow to define how Logical data from the data register are send/received : either in positive/direct logic (1=H, 0=L) or in negative/inverse logic (1=L, 0=H)

Reference Manual to LL API cross reference:

- CR2 DATAINV LL_LPUART_SetBinaryDataLogic

LL_LPUART_GetBinaryDataLogic

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetBinaryDataLogic (const USART_TypeDef * LPUARTx)

Function description

Retrieve Binary data configuration.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_BINARY_LOGIC_POSITIVE
  - LL_LPUART_BINARY_LOGIC_NEGATIVE

Reference Manual to LL API cross reference:

- CR2 DATAINV LL_LPUART_GetBinaryDataLogic

LL_LPUART_SetTransferBitOrder

Function name

__STATIC_INLINE void LL_LPUART_SetTransferBitOrder (USART_TypeDef * LPUARTx, uint32_t BitOrder)

Function description

Configure transfer bit order (either Less or Most Significant Bit First)

Parameters

- **LPUARTx:** LPUART Instance
- **BitOrder:** This parameter can be one of the following values:
  - LL_LPUART_BITORDER_LSBFIRST
  - LL_LPUART_BITORDER_MSBFIRST

Return values

- **None:**

Notes

- MSB First means data is transmitted/received with the MSB first, following the start bit. LSB First means data is transmitted/received with data bit 0 first, following the start bit.

Reference Manual to LL API cross reference:

- CR2 MSBFIRST LL_LPUART_SetTransferBitOrder

LL_LPUART_GetTransferBitOrder

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetTransferBitOrder (const USART_TypeDef * LPUARTx)

Function description

Return transfer bit order (either Less or Most Significant Bit First)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_BITORDER_LSBFIRST
  - LL_LPUART_BITORDER_MSBFIRST

Notes

- MSB First means data is transmitted/received with the MSB first, following the start bit. LSB First means data is transmitted/received with data bit 0 first, following the start bit.

Reference Manual to LL API cross reference:

- CR2 MSBFIRST LL_LPUART_GetTransferBitOrder

LL_LPUART_ConfigNodeAddress

Function name

__STATIC_INLINE void LL_LPUART_ConfigNodeAddress (USART_TypeDef * LPUARTx, uint32_t AddressLen, uint32_t NodeAddress)

Function description

Set Address of the LPUART node.

Parameters

- **LPUARTx:** LPUART Instance
- **AddressLen:** This parameter can be one of the following values:
  - LL_LPUART_ADDRESS_DETECT_4B
  - LL_LPUART_ADDRESS_DETECT_7B
- **NodeAddress:** 4 or 7 bit Address of the LPUART node.

Return values

- **None:**

Notes

- This is used in multiprocessor communication during Mute mode or Stop mode, for wake up with address mark detection.
- 4bits address node is used when 4-bit Address Detection is selected in ADDM7. (b7-b4 should be set to 0) 8bits address node is used when 7-bit Address Detection is selected in ADDM7. (This is used in multiprocessor communication during Mute mode or Stop mode, for wake up with 7-bit address mark detection. The MSB of the character sent by the transmitter should be equal to 1. It may also be used for character detection during normal reception, Mute mode inactive (for example, end of block detection in ModBus protocol). In this case, the whole received character (8-bit) is compared to the ADD[7:0] value and CMF flag is set on match)

Reference Manual to LL API cross reference:

- CR2 ADD LL_LPUART_ConfigNodeAddress
- CR2 ADDM7 LL_LPUART_ConfigNodeAddress

LL_LPUART_GetNodeAddress

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetNodeAddress (const USART_TypeDef * LPUARTx)

Function description

Return 8 bit Address of the LPUART node as set in ADD field of CR2.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Address:** of the LPUART node (Value between Min_Data=0 and Max_Data=255)

Notes

- If 4-bit Address Detection is selected in ADDM7, only 4bits (b3-b0) of returned value are relevant (b31-b4 are not relevant) If 7-bit Address Detection is selected in ADDM7, only 8bits (b7-b0) of returned value are relevant (b31-b8 are not relevant)

Reference Manual to LL API cross reference:

- CR2 ADD LL_LPUART_GetNodeAddress

LL_LPUART_GetNodeAddressLen

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetNodeAddressLen (const USART_TypeDef * LPUARTx)

Function description

Return Length of Node Address used in Address Detection mode (7-bit or 4-bit)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_ADDRESS_DETECT_4B
  - LL_LPUART_ADDRESS_DETECT_7B

Reference Manual to LL API cross reference:

LL_LPUART_EnableRTSHWFlowCtrl

Function name

__STATIC_INLINE void LL_LPUART_EnableRTSHWFlowCtrl (USART_TypeDef * LPUARTx)

Function description

Enable RTS HW Flow Control.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 RTSE LL_LPUART_EnableRTSHWFlowCtrl

LL_LPUART_DisableRTSHWFlowCtrl

Function name

__STATIC_INLINE void LL_LPUART_DisableRTSHWFlowCtrl (USART_TypeDef * LPUARTx)

Function description

Disable RTS HW Flow Control.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 RTSE LL_LPUART_DisableRTSHWFlowCtrl

LL_LPUART_EnableCTSHWFlowCtrl

Function name

__STATIC_INLINE void LL_LPUART_EnableCTSHWFlowCtrl (USART_TypeDef * LPUARTx)

Function description

Enable CTS HW Flow Control.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 CTSE LL_LPUART_EnableCTSHWFlowCtrl

LL_LPUART_DisableCTSHWFlowCtrl

Function name

__STATIC_INLINE void LL_LPUART_DisableCTSHWFlowCtrl (USART_TypeDef * LPUARTx)

Function description

Disable CTS HW Flow Control.

Parameters

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 CTSE LL_LPUART_DisableCTSHWFlowCtrl

LL_LPUART_SetHWFlowCtrl

Function name

__STATIC_INLINE void LL_LPUART_SetHWFlowCtrl (USART_TypeDef * LPUARTx, uint32_t HardwareFlowControl)

Function description

Configure HW Flow Control mode (both CTS and RTS)

Parameters

- **LPUARTx:** LPUART Instance
- **HardwareFlowControl:** This parameter can be one of the following values:
  - LL_LPUART_HWCONTROL_NONE
  - LL_LPUART_HWCONTROL_RTS
  - LL_LPUART_HWCONTROL_CTS
  - LL_LPUART_HWCONTROL_RTS_CTS

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 RTSE LL_LPUART_SetHWFlowCtrl
- CR3 CTSE LL_LPUART_SetHWFlowCtrl

LL_LPUART_GetHWFlowCtrl

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetHWFlowCtrl (const USART_TypeDef * LPUARTx)

Function description

Return HW Flow Control configuration (both CTS and RTS)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_HWCONTROL_NONE
  - LL_LPUART_HWCONTROL_RTS
  - LL_LPUART_HWCONTROL_CTS
  - LL_LPUART_HWCONTROL_RTS_CTS

Reference Manual to LL API cross reference:

- CR3 CTSE LL_LPUART_GetHWFlowCtrl

LL_LPUART_EnableOverrunDetect

Function name

__STATIC_INLINE void LL_LPUART_EnableOverrunDetect (USART_TypeDef * LPUARTx)

Function description

Enable Overrun detection.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 OVRDIS LL_LPUART_EnableOverrunDetect

LL_LPUART_DisableOverrunDetect

Function name

__STATIC_INLINE void LL_LPUART_DisableOverrunDetect (USART_TypeDef * LPUARTx)

Function description

Disable Overrun detection.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 OVRDIS LL_LPUART_DisableOverrunDetect

LL_LPUART_IsEnabledOverrunDetect

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledOverrunDetect (const USART_TypeDef * LPUARTx)

Function description

Indicate if Overrun detection is enabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 OVRDIS LL_LPUART_IsEnabledOverrunDetect

LL_LPUART_SetBaudRate

Function name

__STATIC_INLINE void LL_LPUART_SetBaudRate (USART_TypeDef * LPUARTx, uint32_t PeriphClk, uint32_t PrescalerValue, uint32_t BaudRate)

Function description

Configure LPUART BRR register for achieving expected Baud Rate value.

Parameters

- **LPUARTx:** LPUART Instance
- **PeriphClk:** Peripheral Clock
- **PrescalerValue:** This parameter can be one of the following values:
  - LL_LPUART_PRESCALER_DIV1
  - LL_LPUART_PRESCALER_DIV2
  - LL_LPUART_PRESCALER_DIV4
  - LL_LPUART_PRESCALER_DIV6
  - LL_LPUART_PRESCALER_DIV8
  - LL_LPUART_PRESCALER_DIV10
  - LL_LPUART_PRESCALER_DIV12
  - LL_LPUART_PRESCALER_DIV16
  - LL_LPUART_PRESCALER_DIV32
  - LL_LPUART_PRESCALER_DIV64
  - LL_LPUART_PRESCALER_DIV128
  - LL_LPUART_PRESCALER_DIV256
- **BaudRate:** Baud Rate

Return values

- **None:**

Notes

- Compute and set LPUARTDIV value in BRR Register (full BRR content) according to used Peripheral Clock and expected Baud Rate values
- Peripheral clock and Baud Rate values provided as function parameters should be valid (Baud rate value != 0).
- Provided that LPUARTx_BRR must be > = 0x300 and LPUART_BRR is 20-bit, a care should be taken when generating high baud rates using high PeriphClk values. PeriphClk must be in the range [3 x BaudRate, 4096 x BaudRate].

Reference Manual to LL API cross reference:

- BRR BRR LL_LPUART_SetBaudRate

LL_LPUART_GetBaudRate

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetBaudRate (const USART_TypeDef * LPUARTx, uint32_t PeriphClk, uint32_t PrescalerValue)

Function description

Return current Baud Rate value, according to LPUARTDIV present in BRR register (full BRR content), and to used Peripheral Clock values.

Parameters

- **LPUARTx:** LPUART Instance
- **PeriphClk:** Peripheral Clock
- **PrescalerValue:** This parameter can be one of the following values:
  - LL_LPUART_PRESCALER_DIV1
  - LL_LPUART_PRESCALER_DIV2
  - LL_LPUART_PRESCALER_DIV4
  - LL_LPUART_PRESCALER_DIV6
  - LL_LPUART_PRESCALER_DIV8
  - LL_LPUART_PRESCALER_DIV10
  - LL_LPUART_PRESCALER_DIV12
  - LL_LPUART_PRESCALER_DIV16
  - LL_LPUART_PRESCALER_DIV32
  - LL_LPUART_PRESCALER_DIV64
  - LL_LPUART_PRESCALER_DIV128
  - LL_LPUART_PRESCALER_DIV256

Return values

- **Baud:** Rate

Notes

- In case of non-initialized or invalid value stored in BRR register, value 0 will be returned.

Reference Manual to LL API cross reference:

- BRR BRR LL_LPUART_GetBaudRate

LL_LPUART_EnableHalfDuplex

Function name

__STATIC_INLINE void LL_LPUART_EnableHalfDuplex (USART_TypeDef * LPUARTx)

Function description

Enable Single Wire Half-Duplex mode.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 HDSEL LL_LPUART_EnableHalfDuplex

LL_LPUART_DisableHalfDuplex

Function name

__STATIC_INLINE void LL_LPUART_DisableHalfDuplex (USART_TypeDef * LPUARTx)

Function description

Disable Single Wire Half-Duplex mode.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 HDSEL LL_LPUART_DisableHalfDuplex

LL_LPUART_IsEnabledHalfDuplex

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledHalfDuplex (const USART_TypeDef * LPUARTx)

Function description

Indicate if Single Wire Half-Duplex mode is enabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 HDSEL LL_LPUART_IsEnabledHalfDuplex

LL_LPUART_SetDEDeassertionTime

Function name

__STATIC_INLINE void LL_LPUART_SetDEDeassertionTime (USART_TypeDef * LPUARTx, uint32_t Time)

Function description

Set DEDT (Driver Enable De-Assertion Time), Time value expressed on 5 bits ([4:0] bits).

Parameters

- **LPUARTx:** LPUART Instance
- **Time:** Value between Min_Data=0 and Max_Data=31

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 DEDT LL_LPUART_SetDEDeassertionTime

LL_LPUART_GetDEDeassertionTime

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetDEDeassertionTime (const USART_TypeDef * LPUARTx)

Function description

Return DEDT (Driver Enable De-Assertion Time)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Time:** value expressed on 5 bits ([4:0] bits) : c

Reference Manual to LL API cross reference:

- CR1 DEDT LL_LPUART_GetDEDeassertionTime

LL_LPUART_SetDEAssertionTime

Function name

__STATIC_INLINE void LL_LPUART_SetDEAssertionTime (USART_TypeDef * LPUARTx, uint32_t Time)

Function description

Set DEAT (Driver Enable Assertion Time), Time value expressed on 5 bits ([4:0] bits).

Parameters

- **LPUARTx:** LPUART Instance
- **Time:** Value between Min_Data=0 and Max_Data=31

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 DEAT LL_LPUART_SetDEAssertionTime

LL_LPUART_GetDEAssertionTime

Function name

Function description

Return DEAT (Driver Enable Assertion Time)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Time:** value expressed on 5 bits ([4:0] bits) : Time Value between Min_Data=0 and Max_Data=31

Reference Manual to LL API cross reference:

- CR1 DEAT LL_LPUART_GetDEAssertionTime

LL_LPUART_EnableDEMode

Function name

__STATIC_INLINE void LL_LPUART_EnableDEMode (USART_TypeDef * LPUARTx)

Function description

Enable Driver Enable (DE) Mode.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DEM LL_LPUART_EnableDEMode

LL_LPUART_DisableDEMode

Function name

__STATIC_INLINE void LL_LPUART_DisableDEMode (USART_TypeDef * LPUARTx)

Function description

Disable Driver Enable (DE) Mode.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DEM LL_LPUART_DisableDEMode

LL_LPUART_IsEnabledDEMode

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledDEMode (const USART_TypeDef * LPUARTx)

Function description

Indicate if Driver Enable (DE) Mode is enabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 DEM LL_LPUART_IsEnabledDEMode

LL_LPUART_SetDESignalPolarity

Function name

__STATIC_INLINE void LL_LPUART_SetDESignalPolarity (USART_TypeDef * LPUARTx, uint32_t Polarity)

Function description

Select Driver Enable Polarity.

Parameters

- **LPUARTx:** LPUART Instance
- **Polarity:** This parameter can be one of the following values:
  - LL_LPUART_DE_POLARITY_HIGH
  - LL_LPUART_DE_POLARITY_LOW

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DEP LL_LPUART_SetDESignalPolarity

LL_LPUART_GetDESignalPolarity

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetDESignalPolarity (const USART_TypeDef * LPUARTx)

Function description

Return Driver Enable Polarity.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_DE_POLARITY_HIGH
  - LL_LPUART_DE_POLARITY_LOW

Reference Manual to LL API cross reference:

- CR3 DEP LL_LPUART_GetDESignalPolarity

LL_LPUART_IsActiveFlag_IDLE

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_IDLE (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART IDLE line detected Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR IDLE LL_LPUART_IsActiveFlag_IDLE

LL_LPUART_IsActiveFlag_RXNE_RXFNE

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_RXNE_RXFNE (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Read Data Register or LPUART RX FIFO Not Empty Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR RXNE_RXFNE LL_LPUART_IsActiveFlag_RXNE_RXFNE

LL_LPUART_IsActiveFlag_TC

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_TC (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Transmission Complete Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TC LL_LPUART_IsActiveFlag_TC

LL_LPUART_IsActiveFlag_TXE_TXFNF

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_TXE_TXFNF (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Transmit Data Register Empty or LPUART TX FIFO Not Full Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TXE_TXFNF LL_LPUART_IsActiveFlag_TXE_TXFNF

LL_LPUART_IsActiveFlag_nCTS

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_nCTS (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART CTS interrupt Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR CTSIF LL_LPUART_IsActiveFlag_nCTS

LL_LPUART_IsActiveFlag_CTS

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_CTS (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART CTS Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR CTS LL_LPUART_IsActiveFlag_CTS

LL_LPUART_IsActiveFlag_BUSY

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_BUSY (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Busy Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR BUSY LL_LPUART_IsActiveFlag_BUSY

LL_LPUART_IsActiveFlag_CM

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_CM (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Character Match Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR CMF LL_LPUART_IsActiveFlag_CM

LL_LPUART_IsActiveFlag_SBK

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_SBK (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Send Break Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR SBKF LL_LPUART_IsActiveFlag_SBK

LL_LPUART_IsActiveFlag_RWU

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_RWU (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Receive Wake Up from mute mode Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR RWU LL_LPUART_IsActiveFlag_RWU

LL_LPUART_IsActiveFlag_TEACK

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_TEACK (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Transmit Enable Acknowledge Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TEACK LL_LPUART_IsActiveFlag_TEACK

LL_LPUART_IsActiveFlag_REACK

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_REACK (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Receive Enable Acknowledge Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR REACK LL_LPUART_IsActiveFlag_REACK

LL_LPUART_IsActiveFlag_TXFE

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_TXFE (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART TX FIFO Empty Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TXFE LL_LPUART_IsActiveFlag_TXFE

LL_LPUART_IsActiveFlag_RXFF

Function name

LL_LPUART_IsActiveFlag_TXFT

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_TXFT (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART TX FIFO Threshold Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TXFT LL_LPUART_IsActiveFlag_TXFT

LL_LPUART_IsActiveFlag_RXFT

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_RXFT (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART RX FIFO Threshold Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR RXFT LL_LPUART_IsActiveFlag_RXFT

LL_LPUART_ClearFlag_PE

Function name

__STATIC_INLINE void LL_LPUART_ClearFlag_PE (USART_TypeDef * LPUARTx)

Function description

Clear Parity Error Flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR PECF LL_LPUART_ClearFlag_PE

LL_LPUART_ClearFlag_FE

Function name

__STATIC_INLINE void LL_LPUART_ClearFlag_FE (USART_TypeDef * LPUARTx)

Function description

Clear Framing Error Flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR FECF LL_LPUART_ClearFlag_FE

LL_LPUART_ClearFlag_NE

Function name

__STATIC_INLINE void LL_LPUART_ClearFlag_NE (USART_TypeDef * LPUARTx)

Function description

Clear Noise detected Flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR NECF LL_LPUART_ClearFlag_NE

LL_LPUART_ClearFlag_ORE

Function name

__STATIC_INLINE void LL_LPUART_ClearFlag_ORE (USART_TypeDef * LPUARTx)

Function description

Clear OverRun Error Flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR ORECF LL_LPUART_ClearFlag_ORE

LL_LPUART_ClearFlag_IDLE

Function name

__STATIC_INLINE void LL_LPUART_ClearFlag_IDLE (USART_TypeDef * LPUARTx)

Function description

Clear IDLE line detected Flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR IDLECF LL_LPUART_ClearFlag_IDLE

LL_LPUART_ClearFlag_TC

Function name

__STATIC_INLINE void LL_LPUART_ClearFlag_TC (USART_TypeDef * LPUARTx)

Function description

Clear Transmission Complete Flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR TCCF LL_LPUART_ClearFlag_TC

LL_LPUART_ClearFlag_nCTS

Function name

__STATIC_INLINE void LL_LPUART_ClearFlag_nCTS (USART_TypeDef * LPUARTx)

Function description

Clear CTS Interrupt Flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CTSCF LL_LPUART_ClearFlag_nCTS

LL_LPUART_ClearFlag_CM

Function name

__STATIC_INLINE void LL_LPUART_ClearFlag_CM (USART_TypeDef * LPUARTx)

Function description

Clear Character Match Flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CMCF LL_LPUART_ClearFlag_CM

LL_LPUART_EnableIT_IDLE

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_IDLE (USART_TypeDef * LPUARTx)

Function description

Enable IDLE Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 IDLEIE LL_LPUART_EnableIT_IDLE

LL_LPUART_EnableIT_RXNE_RXFNE

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_RXNE_RXFNE (USART_TypeDef * LPUARTx)

Function description

Enable RX Not Empty and RX FIFO Not Empty Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RXNEIE_RXFNEIE LL_LPUART_EnableIT_RXNE_RXFNE

LL_LPUART_EnableIT_TC

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_TC (USART_TypeDef * LPUARTx)

Function description

Enable Transmission Complete Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TCIE LL_LPUART_EnableIT_TC

LL_LPUART_EnableIT_TXE_TXFNF

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_TXE_TXFNF (USART_TypeDef * LPUARTx)

Function description

Enable TX Empty and TX FIFO Not Full Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TXEIE_TXFNFIE LL_LPUART_EnableIT_TXE_TXFNF

LL_LPUART_EnableIT_PE

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_PE (USART_TypeDef * LPUARTx)

Function description

Enable Parity Error Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 PEIE LL_LPUART_EnableIT_PE

LL_LPUART_EnableIT_CM

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_CM (USART_TypeDef * LPUARTx)

Function description

Enable Character Match Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CMIE LL_LPUART_EnableIT_CM

LL_LPUART_EnableIT_TXFE

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_TXFE (USART_TypeDef * LPUARTx)

Function description

Enable TX FIFO Empty Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TXFEIE LL_LPUART_EnableIT_TXFE

LL_LPUART_EnableIT_RXFF

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_RXFF (USART_TypeDef * LPUARTx)

Function description

Enable RX FIFO Full Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RXFFIE LL_LPUART_EnableIT_RXFF

LL_LPUART_EnableIT_ERROR

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_ERROR (USART_TypeDef * LPUARTx)

Function description

Enable Error Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Notes

- When set, Error Interrupt Enable Bit is enabling interrupt generation in case of a framing error, overrun error or noise flag (FE=1 or ORE=1 or NF=1 in the LPUARTx_ISR register). 0: Interrupt is inhibited1: An interrupt is generated when FE=1 or ORE=1 or NF=1 in the LPUARTx_ISR register.

Reference Manual to LL API cross reference:

- CR3 EIE LL_LPUART_EnableIT_ERROR

LL_LPUART_EnableIT_CTS

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_CTS (USART_TypeDef * LPUARTx)

Function description

Enable CTS Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 CTSIE LL_LPUART_EnableIT_CTS

LL_LPUART_EnableIT_TXFT

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_TXFT (USART_TypeDef * LPUARTx)

Function description

Enable TX FIFO Threshold Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 TXFTIE LL_LPUART_EnableIT_TXFT

LL_LPUART_EnableIT_RXFT

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_RXFT (USART_TypeDef * LPUARTx)

Function description

Enable RX FIFO Threshold Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 RXFTIE LL_LPUART_EnableIT_RXFT

LL_LPUART_DisableIT_IDLE

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_IDLE (USART_TypeDef * LPUARTx)

Function description

Disable IDLE Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 IDLEIE LL_LPUART_DisableIT_IDLE

LL_LPUART_DisableIT_RXNE_RXFNE

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_RXNE_RXFNE (USART_TypeDef * LPUARTx)

Function description

Disable RX Not Empty and RX FIFO Not Empty Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RXNEIE_RXFNEIE LL_LPUART_DisableIT_RXNE_RXFNE

LL_LPUART_DisableIT_TC

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_TC (USART_TypeDef * LPUARTx)

Function description

Disable Transmission Complete Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TCIE LL_LPUART_DisableIT_TC

LL_LPUART_DisableIT_TXE_TXFNF

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_TXE_TXFNF (USART_TypeDef * LPUARTx)

Function description

Disable TX Empty and TX FIFO Not Full Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TXEIE_TXFNFIE LL_LPUART_DisableIT_TXE_TXFNF

LL_LPUART_DisableIT_PE

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_PE (USART_TypeDef * LPUARTx)

Function description

Disable Parity Error Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 PEIE LL_LPUART_DisableIT_PE

LL_LPUART_DisableIT_CM

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_CM (USART_TypeDef * LPUARTx)

Function description

Disable Character Match Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CMIE LL_LPUART_DisableIT_CM

LL_LPUART_DisableIT_TXFE

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_TXFE (USART_TypeDef * LPUARTx)

Function description

Disable TX FIFO Empty Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TXFEIE LL_LPUART_DisableIT_TXFE

LL_LPUART_DisableIT_RXFF

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_RXFF (USART_TypeDef * LPUARTx)

Function description

Disable RX FIFO Full Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RXFFIE LL_LPUART_DisableIT_RXFF

LL_LPUART_DisableIT_ERROR

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_ERROR (USART_TypeDef * LPUARTx)

Function description

Disable Error Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Notes

- When set, Error Interrupt Enable Bit is enabling interrupt generation in case of a framing error, overrun error or noise flag (FE=1 or ORE=1 or NF=1 in the LPUARTx_ISR register). 0: Interrupt is inhibited1: An interrupt is generated when FE=1 or ORE=1 or NF=1 in the LPUARTx_ISR register.

Reference Manual to LL API cross reference:

LL_LPUART_DisableIT_CTS

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_CTS (USART_TypeDef * LPUARTx)

Function description

Disable CTS Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 CTSIE LL_LPUART_DisableIT_CTS

LL_LPUART_DisableIT_TXFT

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_TXFT (USART_TypeDef * LPUARTx)

Function description

Disable TX FIFO Threshold Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 TXFTIE LL_LPUART_DisableIT_TXFT

LL_LPUART_DisableIT_RXFT

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_RXFT (USART_TypeDef * LPUARTx)

Function description

Disable RX FIFO Threshold Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 RXFTIE LL_LPUART_DisableIT_RXFT

LL_LPUART_IsEnabledIT_IDLE

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledIT_IDLE (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART IDLE Interrupt source is enabled or disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 IDLEIE LL_LPUART_IsEnabledIT_IDLE

LL_LPUART_IsEnabledIT_RXNE_RXFNE

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledIT_RXNE_RXFNE (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART RX Not Empty and LPUART RX FIFO Not Empty Interrupt is enabled or disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 RXNEIE_RXFNEIE LL_LPUART_IsEnabledIT_RXNE_RXFNE

LL_LPUART_IsEnabledIT_TC

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledIT_TC (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Transmission Complete Interrupt is enabled or disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 TCIE LL_LPUART_IsEnabledIT_TC

LL_LPUART_IsEnabledIT_TXE_TXFNF

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledIT_TXE_TXFNF (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART TX Empty and LPUART TX FIFO Not Full Interrupt is enabled or disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 TXEIE_TXFNFIE LL_LPUART_IsEnabledIT_TXE_TXFNF

LL_LPUART_IsEnabledIT_PE

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledIT_PE (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Parity Error Interrupt is enabled or disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 PEIE LL_LPUART_IsEnabledIT_PE

LL_LPUART_IsEnabledIT_CM

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledIT_CM (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Character Match Interrupt is enabled or disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 CMIE LL_LPUART_IsEnabledIT_CM

LL_LPUART_IsEnabledIT_TXFE

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledIT_TXFE (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART TX FIFO Empty Interrupt is enabled or disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 TXFEIE LL_LPUART_IsEnabledIT_TXFE

LL_LPUART_IsEnabledIT_RXFF

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledIT_RXFF (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART RX FIFO Full Interrupt is enabled or disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 RXFFIE LL_LPUART_IsEnabledIT_RXFF

LL_LPUART_IsEnabledIT_ERROR

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledIT_ERROR (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Error Interrupt is enabled or disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 EIE LL_LPUART_IsEnabledIT_ERROR

LL_LPUART_IsEnabledIT_CTS

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledIT_CTS (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART CTS Interrupt is enabled or disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 CTSIE LL_LPUART_IsEnabledIT_CTS

LL_LPUART_IsEnabledIT_TXFT

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledIT_TXFT (const USART_TypeDef * LPUARTx)

Function description

Check if LPUART TX FIFO Threshold Interrupt is enabled or disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 TXFTIE LL_LPUART_IsEnabledIT_TXFT

LL_LPUART_IsEnabledIT_RXFT

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledIT_RXFT (const USART_TypeDef * LPUARTx)

Function description

Check if LPUART RX FIFO Threshold Interrupt is enabled or disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 RXFTIE LL_LPUART_IsEnabledIT_RXFT

LL_LPUART_EnableDMAReq_RX

Function name

__STATIC_INLINE void LL_LPUART_EnableDMAReq_RX (USART_TypeDef * LPUARTx)

Function description

Enable DMA Mode for reception.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DMAR LL_LPUART_EnableDMAReq_RX

LL_LPUART_DisableDMAReq_RX

Function name

__STATIC_INLINE void LL_LPUART_DisableDMAReq_RX (USART_TypeDef * LPUARTx)

Function description

Disable DMA Mode for reception.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DMAR LL_LPUART_DisableDMAReq_RX

LL_LPUART_IsEnabledDMAReq_RX

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledDMAReq_RX (const USART_TypeDef * LPUARTx)

Function description

Check if DMA Mode is enabled for reception.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 DMAR LL_LPUART_IsEnabledDMAReq_RX

LL_LPUART_EnableDMAReq_TX

Function name

__STATIC_INLINE void LL_LPUART_EnableDMAReq_TX (USART_TypeDef * LPUARTx)

Function description

Enable DMA Mode for transmission.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DMAT LL_LPUART_EnableDMAReq_TX

LL_LPUART_DisableDMAReq_TX

Function name

__STATIC_INLINE void LL_LPUART_DisableDMAReq_TX (USART_TypeDef * LPUARTx)

Function description

Disable DMA Mode for transmission.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DMAT LL_LPUART_DisableDMAReq_TX

LL_LPUART_IsEnabledDMAReq_TX

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledDMAReq_TX (const USART_TypeDef * LPUARTx)

Function description

Check if DMA Mode is enabled for transmission.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 DMAT LL_LPUART_IsEnabledDMAReq_TX

LL_LPUART_EnableDMADeactOnRxErr

Function name

__STATIC_INLINE void LL_LPUART_EnableDMADeactOnRxErr (USART_TypeDef * LPUARTx)

Function description

Enable DMA Disabling on Reception Error.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DDRE LL_LPUART_EnableDMADeactOnRxErr

LL_LPUART_DisableDMADeactOnRxErr

Function name

__STATIC_INLINE void LL_LPUART_DisableDMADeactOnRxErr (USART_TypeDef * LPUARTx)

Function description

Disable DMA Disabling on Reception Error.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DDRE LL_LPUART_DisableDMADeactOnRxErr

LL_LPUART_IsEnabledDMADeactOnRxErr

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledDMADeactOnRxErr (const USART_TypeDef * LPUARTx)

Function description

Indicate if DMA Disabling on Reception Error is disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 DDRE LL_LPUART_IsEnabledDMADeactOnRxErr

LL_LPUART_DMA_GetRegAddr

Function name

__STATIC_INLINE uint32_t LL_LPUART_DMA_GetRegAddr (const USART_TypeDef * LPUARTx, uint32_t Direction)

Function description

Get the LPUART data register address used for DMA transfer.

Parameters

- **LPUARTx:** LPUART Instance
- **Direction:** This parameter can be one of the following values:
  - LL_LPUART_DMA_REG_DATA_TRANSMIT
  - LL_LPUART_DMA_REG_DATA_RECEIVE

Return values

- **Address:** of data register

Reference Manual to LL API cross reference:

- RDR RDR LL_LPUART_DMA_GetRegAddr
-
- TDR TDR LL_LPUART_DMA_GetRegAddr

LL_LPUART_ReceiveData8

Function name

__STATIC_INLINE uint8_t LL_LPUART_ReceiveData8 (const USART_TypeDef * LPUARTx)

Function description

Read Receiver Data register (Receive Data value, 8 bits)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Time:** Value between Min_Data=0x00 and Max_Data=0xFF

Reference Manual to LL API cross reference:

- RDR RDR LL_LPUART_ReceiveData8

LL_LPUART_ReceiveData9

Function name

__STATIC_INLINE uint16_t LL_LPUART_ReceiveData9 (const USART_TypeDef * LPUARTx)

Function description

Read Receiver Data register (Receive Data value, 9 bits)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Time:** Value between Min_Data=0x00 and Max_Data=0x1FF

Reference Manual to LL API cross reference:

- RDR RDR LL_LPUART_ReceiveData9

LL_LPUART_TransmitData8

Function name

__STATIC_INLINE void LL_LPUART_TransmitData8 (USART_TypeDef * LPUARTx, uint8_t Value)

Function description

Write in Transmitter Data Register (Transmit Data value, 8 bits)

Parameters

- **LPUARTx:** LPUART Instance
- **Value:** between Min_Data=0x00 and Max_Data=0xFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TDR TDR LL_LPUART_TransmitData8

LL_LPUART_TransmitData9

Function name

__STATIC_INLINE void LL_LPUART_TransmitData9 (USART_TypeDef * LPUARTx, uint16_t Value)

Function description

Write in Transmitter Data Register (Transmit Data value, 9 bits)

Parameters

- **LPUARTx:** LPUART Instance
- **Value:** between Min_Data=0x00 and Max_Data=0x1FF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TDR TDR LL_LPUART_TransmitData9

LL_LPUART_RequestBreakSending

Function name

__STATIC_INLINE void LL_LPUART_RequestBreakSending (USART_TypeDef * LPUARTx)

Function description

Request Break sending.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RQR SBKRQ LL_LPUART_RequestBreakSending

LL_LPUART_RequestEnterMuteMode

Function name

__STATIC_INLINE void LL_LPUART_RequestEnterMuteMode (USART_TypeDef * LPUARTx)

Function description

Put LPUART in mute mode and set the RWU flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RQR MMRQ LL_LPUART_RequestEnterMuteMode

LL_LPUART_RequestRxDataFlush

Function name

__STATIC_INLINE void LL_LPUART_RequestRxDataFlush (USART_TypeDef * LPUARTx)

Function description

Request a Receive Data and FIFO flush.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Notes

- Allows to discard the received data without reading them, and avoid an overrun condition.

Reference Manual to LL API cross reference:

- RQR RXFRQ LL_LPUART_RequestRxDataFlush

LL_LPUART_RequestTxDataFlush

Function name

__STATIC_INLINE void LL_LPUART_RequestTxDataFlush (USART_TypeDef * LPUARTx)

Function description

Request a Transmit data FIFO flush.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Notes

- TXFRQ bit is set to flush the whole FIFO when FIFO mode is enabled. This also sets the flag TXFE (TXFIFO empty bit in the LPUART_ISR register).
- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- RQR TXFRQ LL_LPUART_RequestTxDataFlush

LL_LPUART_Enable_SelectedTrigger

Function name

__STATIC_INLINE void LL_LPUART_Enable_SelectedTrigger (USART_TypeDef * LPUARTx)

Function description

Enable Selected Trigger.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGEN LL_LPUART_Enable_SelectedTrigger

LL_LPUART_Disable_SelectedTrigger

Function name

__STATIC_INLINE void LL_LPUART_Disable_SelectedTrigger (USART_TypeDef * LPUARTx)

Function description

Disable Selected Trigger.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGEN LL_LPUART_Disable_SelectedTrigger

LL_LPUART_IsEnabled_SelectedTrigger

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabled_SelectedTrigger (const USART_TypeDef * LPUARTx)

Function description

Indicate if selected Trigger is disabled or enabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- AUTOCR TRIGEN LL_LPUART_IsEnabled_SelectedTrigger

LL_LPUART_Enable_AutonomousSendIdleFrame

Function name

__STATIC_INLINE void LL_LPUART_Enable_AutonomousSendIdleFrame (USART_TypeDef * LPUARTx)

Function description

Enable Autonomous Send Idle Frame feature.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR IDLEDIS LL_LPUART_Enable_AutonomousSendIdleFrame

LL_LPUART_Disable_AutonomousSendIdleFrame

Function name

__STATIC_INLINE void LL_LPUART_Disable_AutonomousSendIdleFrame (USART_TypeDef * LPUARTx)

Function description

Disable Autonomous Send Idle Frame feature.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR IDLEDIS LL_LPUART_Disable_AutonomousSendIdleFrame

LL_LPUART_IsEnabled_AutonomousSendIdleFrame

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabled_AutonomousSendIdleFrame (const USART_TypeDef * LPUARTx)

Function description

Indicate if Autonomous send Idle Frame feature is disabled or enabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- AUTOCR IDLEDIS LL_LPUART_IsEnabled_AutonomousSendIdleFrame

LL_LPUART_SetNbTxData

Function name

__STATIC_INLINE void LL_LPUART_SetNbTxData (USART_TypeDef * LPUARTx, uint32_t Nbdata)

Function description

Configure the Number of transferred data in bytes.

Parameters

- **LPUARTx:** LPUART Instance
- **Nbdata:** This parameter can be a value between 0 and 0xFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TDN LL_LPUART_SetNbTxData

LL_LPUART_GetNbTxData

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetNbTxData (const USART_TypeDef * LPUARTx)

Function description

Retrieve the Number of transferred data in bytes.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be a value between 0 and 0xFFFF

Reference Manual to LL API cross reference:

- AUTOCR TDN LL_LPUART_GetNbTxData

LL_LPUART_SetTriggerPolarity

Function name

__STATIC_INLINE void LL_LPUART_SetTriggerPolarity (USART_TypeDef * LPUARTx, uint32_t Polarity)

Function description

Set the trigger polarity.

Parameters

- **LPUARTx:** LPUART Instance
- **Polarity:** This parameter can be one of the following values:
  - LL_LPUART_TRIG_POLARITY_RISING
  - LL_LPUART_TRIG_POLARITY_FALLING

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGPOL LL_LPUART_SetTriggerPolarity

LL_LPUART_GetTriggerPolarity

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetTriggerPolarity (const USART_TypeDef * LPUARTx)

Function description

Get the trigger polarity.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_TRIG_POLARITY_RISING
  - LL_LPUART_TRIG_POLARITY_FALLING

Reference Manual to LL API cross reference:

- AUTOCR TRIGPOL LL_LPUART_GetTriggerPolarity

LL_LPUART_SetSelectedTrigger

Function name

__STATIC_INLINE void LL_LPUART_SetSelectedTrigger (USART_TypeDef * LPUARTx, uint32_t Trigger)

Function description

Set the selected trigger.

Parameters

- **LPUARTx:** LPUART Instance
- **Trigger:** This parameter can be one of the following values:
  - LL_LPUART_GPDMA1_CH0_TCF_TRG
  - LL_LPUART_GPDMA1_CH1_TCF_TRG
  - LL_LPUART_GPDMA1_CH2_TCF_TRG
  - LL_LPUART_GPDMA1_CH3_TCF_TRG
  - LL_LPUART_EXTI_LINE6_TRG
  - LL_LPUART_EXTI_LINE8_TRG
  - LL_LPUART_LPTIM1_OUT_TRG
  - LL_LPUART_LPTIM3_OUT_TRG
  - LL_LPUART_COMP1_OUT_TRG
  - LL_LPUART_COMP2_OUT_TRG
  - LL_LPUART_RTC_ALRA_TRG
  - LL_LPUART_RTC_WUT_TRG

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGSEL LL_LPUART_SetSelectedTrigger

LL_LPUART_GetSelectedTrigger

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetSelectedTrigger (const USART_TypeDef * LPUARTx)

Function description

Get the selected trigger.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_GPDMA1_CH0_TCF_TRG
  - LL_LPUART_GPDMA1_CH1_TCF_TRG
  - LL_LPUART_GPDMA1_CH2_TCF_TRG
  - LL_LPUART_GPDMA1_CH3_TCF_TRG
  - LL_LPUART_EXTI_LINE6_TRG
  - LL_LPUART_EXTI_LINE8_TRG
  - LL_LPUART_LPTIM1_OUT_TRG
  - LL_LPUART_LPTIM3_OUT_TRG
  - LL_LPUART_COMP1_OUT_TRG
  - LL_LPUART_COMP2_OUT_TRG
  - LL_LPUART_RTC_ALRA_TRG
  - LL_LPUART_RTC_WUT_TRG

Reference Manual to LL API cross reference:

- AUTOCR TRIGSEL LL_LPUART_GetSelectedTrigger

LL_LPUART_DeInit

Function name

ErrorStatus LL_LPUART_DeInit (const USART_TypeDef * LPUARTx)

Function description

De-initialize LPUART registers (Registers restored to their default values).

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: LPUART registers are de-initialized
  - ERROR: not applicable

LL_LPUART_Init

Function name

ErrorStatus LL_LPUART_Init (USART_TypeDef * LPUARTx, const LL_LPUART_InitTypeDef * LPUART_InitStruct)

Function description

Initialize LPUART registers according to the specified parameters in LPUART_InitStruct.

Parameters

- **LPUARTx:** LPUART Instance
- **LPUART_InitStruct:** pointer to a LL_LPUART_InitTypeDef structure that contains the configuration information for the specified LPUART peripheral.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: LPUART registers are initialized according to LPUART_InitStruct content
  - ERROR: Problem occurred during LPUART Registers initialization

Notes

- As some bits in LPUART configuration registers can only be written when the LPUART is disabled (USART_CR1_UE bit =0), LPUART Peripheral should be in disabled state prior calling this function. Otherwise, ERROR result will be returned.
- Baud rate value stored in LPUART_InitStruct BaudRate field, should be valid (different from 0).

LL_LPUART_StructInit

Function name

void LL_LPUART_StructInit (LL_LPUART_InitTypeDef * LPUART_InitStruct)

Function description

Set each LL_LPUART_InitTypeDef field to default value.

Parameters

- **LPUART_InitStruct:** pointer to a LL_LPUART_InitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

90.3 LPUART Firmware driver defines

The following section lists the various define and macros of the module.

90.3.1 LPUART

LPUART

Address Length Detection

LL_LPUART_ADDRESS_DETECT_4B

4-bit address detection method selected

LL_LPUART_ADDRESS_DETECT_7B

7-bit address detection (in 8-bit data mode) method selected

Autonomous Trigger Polarity

LL_LPUART_TRIG_POLARITY_RISING

LPUART triggered on rising edge

LL_LPUART_TRIG_POLARITY_FALLING

LPUART triggered on falling edge

Autonomous Trigger selection

LL_LPUART_GPDMA1_CH0_TCF_TRG

LPUART GPDMA1 channel0 Internal Trigger

LL_LPUART_GPDMA1_CH1_TCF_TRG

LPUART GPDMA1 channel1 Internal Trigger

LL_LPUART_GPDMA1_CH2_TCF_TRG

LPUART GPDMA1 channel2 Internal Trigger

LL_LPUART_GPDMA1_CH3_TCF_TRG

LPUART GPDMA1 channel3 Internal Trigger

LL_LPUART_EXTI_LINE6_TRG

LPUART EXTI line 6 Internal Trigger

LL_LPUART_EXTI_LINE8_TRG

LPUART EXTI line 8 Internal Trigger

LL_LPUART_LPTIM1_OUT_TRG

LPUART LPTIM1 out Internal Trigger

LL_LPUART_LPTIM3_OUT_TRG

LPUART LPTIM3 out Internal Trigger

LL_LPUART_COMP1_OUT_TRG

LPUART COMP1 out Internal Trigger

LL_LPUART_COMP2_OUT_TRG

LPUART COMP2 out Internal Trigger

LL_LPUART_RTC_ALRA_TRG

LPUART RTC alarm Internal Trigger

LL_LPUART_RTC_WUT_TRG

LPUART RTC wakeup Internal Trigger

Binary Data Inversion

LL_LPUART_BINARY_LOGIC_POSITIVE

Logical data from the data register are send/received in positive/direct logic. (1=H, 0=L)

LL_LPUART_BINARY_LOGIC_NEGATIVE

Logical data from the data register are send/received in negative/inverse logic. (1=L, 0=H). The parity bit is also inverted.

Bit Order

LL_LPUART_BITORDER_LSBFIRST

data is transmitted/received with data bit 0 first, following the start bit

LL_LPUART_BITORDER_MSBFIRST

data is transmitted/received with the MSB first, following the start bit

Clear Flags Defines

LL_LPUART_ICR_PECF

Parity error clear flag

LL_LPUART_ICR_FECF

Framing error clear flag

LL_LPUART_ICR_NCF

Noise error detected clear flag

LL_LPUART_ICR_ORECF

Overrun error clear flag

LL_LPUART_ICR_IDLECF

Idle line detected clear flag

LL_LPUART_ICR_TCCF

Transmission complete clear flag

LL_LPUART_ICR_CTSCF

CTS clear flag

LL_LPUART_ICR_CMCF

Character match clear flag

Datawidth

LL_LPUART_DATAWIDTH_7B

7 bits word length : Start bit, 7 data bits, n stop bits

LL_LPUART_DATAWIDTH_8B

8 bits word length : Start bit, 8 data bits, n stop bits

LL_LPUART_DATAWIDTH_9B

9 bits word length : Start bit, 9 data bits, n stop bits

Driver Enable Polarity

LL_LPUART_DE_POLARITY_HIGH

DE signal is active high

LL_LPUART_DE_POLARITY_LOW

DE signal is active low

Direction

LL_LPUART_DIRECTION_NONE

Transmitter and Receiver are disabled

LL_LPUART_DIRECTION_RX

Transmitter is disabled and Receiver is enabled

LL_LPUART_DIRECTION_TX

Transmitter is enabled and Receiver is disabled

LL_LPUART_DIRECTION_TX_RX

Transmitter and Receiver are enabled

DMA Register Data

LL_LPUART_DMA_REG_DATA_TRANSMIT

Get address of data register used for transmission

LL_LPUART_DMA_REG_DATA_RECEIVE

Get address of data register used for reception

FIFO Threshold

LL_LPUART_FIFOTHRESHOLD_1_8

FIFO reaches 1/8 of its depth

LL_LPUART_FIFOTHRESHOLD_1_4

FIFO reaches 1/4 of its depth

LL_LPUART_FIFOTHRESHOLD_1_2

FIFO reaches 1/2 of its depth

LL_LPUART_FIFOTHRESHOLD_3_4

FIFO reaches 3/4 of its depth

LL_LPUART_FIFOTHRESHOLD_7_8

FIFO reaches 7/8 of its depth

LL_LPUART_FIFOTHRESHOLD_8_8

FIFO becomes empty for TX and full for RX

Get Flags Defines

LL_LPUART_ISR_PE

Parity error flag

LL_LPUART_ISR_FE

Framing error flag

LL_LPUART_ISR_NE

Noise detected flag

LL_LPUART_ISR_ORE

Overrun error flag

LL_LPUART_ISR_IDLE

Idle line detected flag

LL_LPUART_ISR_RXNE_RXFNE

Read data register or RX FIFO not empty flag

LL_LPUART_ISR_TC

Transmission complete flag

LL_LPUART_ISR_TXE_TXFNF

Transmit data register empty or TX FIFO Not Full flag

LL_LPUART_ISR_CTSIF

CTS interrupt flag

LL_LPUART_ISR_CTS

CTS flag

LL_LPUART_ISR_BUSY

Busy flag

LL_LPUART_ISR_CMF

Character match flag

LL_LPUART_ISR_SBKF

Send break flag

LL_LPUART_ISR_RWU

Receiver wakeup from Mute mode flag

LL_LPUART_ISR_TEACK

Transmit enable acknowledge flag

LL_LPUART_ISR_REACK

Receive enable acknowledge flag

LL_LPUART_ISR_TXFE

TX FIFO empty flag

LL_LPUART_ISR_RXFF

RX FIFO full flag

LL_LPUART_ISR_RXFT

RX FIFO threshold flag

LL_LPUART_ISR_TXFT

TX FIFO threshold flag

Hardware Control

LL_LPUART_HWCONTROL_NONE

CTS and RTS hardware flow control disabled

LL_LPUART_HWCONTROL_RTS

RTS output enabled, data is only requested when there is space in the receive buffer

LL_LPUART_HWCONTROL_CTS

CTS mode enabled, data is only transmitted when the nCTS input is asserted (tied to 0)

LL_LPUART_HWCONTROL_RTS_CTS

CTS and RTS hardware flow control enabled

IT Defines

LL_LPUART_CR1_IDLEIE

IDLE interrupt enable

LL_LPUART_CR1_RXNEIE_RXFNEIE

Read data register and RXFIFO not empty interrupt enable

LL_LPUART_CR1_TCIE

Transmission complete interrupt enable

LL_LPUART_CR1_TXEIE_TXFNFIE

Transmit data register empty and TX FIFO not full interrupt enable

LL_LPUART_CR1_PEIE

Parity error

LL_LPUART_CR1_CMIE

Character match interrupt enable

LL_LPUART_CR1_TXFEIE

TX FIFO empty interrupt enable

LL_LPUART_CR1_RXFFIE

RX FIFO full interrupt enable

LL_LPUART_CR3_EIE

Error interrupt enable

LL_LPUART_CR3_CTSIE

CTS interrupt enable

LL_LPUART_CR3_TXFTIE

TX FIFO threshold interrupt enable

LL_LPUART_CR3_RXFTIE

RX FIFO threshold interrupt enable

Parity Control

LL_LPUART_PARITY_NONE

Parity control disabled

LL_LPUART_PARITY_EVEN

Parity control enabled and Even Parity is selected

LL_LPUART_PARITY_ODD

Parity control enabled and Odd Parity is selected

Clock Source Prescaler

LL_LPUART_PRESCALER_DIV1

Input clock not divided

LL_LPUART_PRESCALER_DIV2

Input clock divided by 2

LL_LPUART_PRESCALER_DIV4

Input clock divided by 4

LL_LPUART_PRESCALER_DIV6

Input clock divided by 6

LL_LPUART_PRESCALER_DIV8

Input clock divided by 8

LL_LPUART_PRESCALER_DIV10

Input clock divided by 10

LL_LPUART_PRESCALER_DIV12

Input clock divided by 12

LL_LPUART_PRESCALER_DIV16

Input clock divided by 16

LL_LPUART_PRESCALER_DIV32

Input clock divided by 32

LL_LPUART_PRESCALER_DIV64

Input clock divided by 64

LL_LPUART_PRESCALER_DIV128

Input clock divided by 128

LL_LPUART_PRESCALER_DIV256

Input clock divided by 256

RX Pin Active Level Inversion

LL_LPUART_RXPIN_LEVEL_STANDARD

RX pin signal works using the standard logic levels

LL_LPUART_RXPIN_LEVEL_INVERTED

RX pin signal values are inverted.

Stop Bits

LL_LPUART_STOPBITS_1

1 stop bit

LL_LPUART_STOPBITS_2

2 stop bits

TX Pin Active Level Inversion

LL_LPUART_TXPIN_LEVEL_STANDARD

TX pin signal works using the standard logic levels

LL_LPUART_TXPIN_LEVEL_INVERTED

TX pin signal values are inverted.

TX RX Pins Swap

LL_LPUART_TXRX_STANDARD

TX/RX pins are used as defined in standard pinout

LL_LPUART_TXRX_SWAPPED

TX and RX pins functions are swapped.

Wakeup

LL_LPUART_WAKEUP_IDLELINE

LPUART wake up from Mute mode on Idle Line

LL_LPUART_WAKEUP_ADDRESSMARK

LPUART wake up from Mute mode on Address Mark

FLAG_Management

LL_LPUART_IsActiveFlag_RXNE

LL_LPUART_IsActiveFlag_TXE

IT_Management

LL_LPUART_EnableIT_RXNE

LL_LPUART_EnableIT_TXE

LL_LPUART_DisableIT_RXNE

LL_LPUART_DisableIT_TXE

LL_LPUART_IsEnabledIT_RXNE

LL_LPUART_IsEnabledIT_TXE

Helper Macros

__LL_LPUART_DIV

Description:

- Compute LPUARTDIV value according to Peripheral Clock and expected Baud Rate (20-bit value of LPUARTDIV is returned)

Parameters:

- __PERIPHCLK__: Peripheral Clock frequency used for LPUART Instance
- __PRESCALER__: This parameter can be one of the following values:
  - LL_LPUART_PRESCALER_DIV1
  - LL_LPUART_PRESCALER_DIV2
  - LL_LPUART_PRESCALER_DIV4
  - LL_LPUART_PRESCALER_DIV6
  - LL_LPUART_PRESCALER_DIV8
  - LL_LPUART_PRESCALER_DIV10
  - LL_LPUART_PRESCALER_DIV12
  - LL_LPUART_PRESCALER_DIV16
  - LL_LPUART_PRESCALER_DIV32
  - LL_LPUART_PRESCALER_DIV64
  - LL_LPUART_PRESCALER_DIV128
  - LL_LPUART_PRESCALER_DIV256
- __BAUDRATE__: Baud Rate value to achieve

Return value:

- LPUARTDIV: value to be used for BRR register filling

Common Write and read registers Macros

LL_LPUART_WriteReg

Description:

- Write a value in LPUART register.

Parameters:

- __INSTANCE__: LPUART Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_LPUART_ReadReg

Description:

- Read a value in LPUART register.

Parameters:

- __INSTANCE__: LPUART Instance
- __REG__: Register to be read

Return value:

- Register: value

91 LL OPAMP Generic Driver

91.1 OPAMP Firmware driver registers structures

91.1.1 LL_OPAMP_InitTypeDef

LL_OPAMP_InitTypeDef is defined in the stm32u3xx_ll_opamp.h

Data Fields

- ***uint32_t PowerMode***
- ***uint32_t FunctionalMode***
- ***uint32_t InputNonInverting***
- ***uint32_t InputInverting***

Field Documentation

- ***uint32_t LL_OPAMP_InitTypeDef::PowerMode***
  Set the power mode Normal or Low-Power and the speed mode Normal or High. This parameter can be a value of ***OPAMP_LL_EC_POWERMODE*** This feature can be modified afterwards using unitary function **LL_OPAMP_SetPowerMode()**.
- ***uint32_t LL_OPAMP_InitTypeDef::FunctionalMode***
  Set OPAMP functional mode by setting internal connections: OPAMP operation in standalone, follower, ... This parameter can be a value of ***OPAMP_LL_EC_FUNCTIONAL_MODE***
  Note:
  – If OPAMP is configured in mode PGA, the gain can be configured using function **LL_OPAMP_SetPGAGain()**. This feature can be modified afterwards using unitary function **LL_OPAMP_SetFunctionalMode()**.
- ***uint32_t LL_OPAMP_InitTypeDef::InputNonInverting***
  Set OPAMP input non-inverting connection. This parameter can be a value of ***OPAMP_LL_EC_INPUT_NONINVERTING*** This feature can be modified afterwards using unitary function **LL_OPAMP_SetInputNonInverting()**.
- ***uint32_t LL_OPAMP_InitTypeDef::InputInverting***
  Set OPAMP inverting input connection. This parameter can be a value of ***OPAMP_LL_EC_INPUT_INVERTING***
  Note:
  – OPAMP inverting input is used with OPAMP in mode standalone or PGA with external capacitors for filtering circuit. Otherwise (OPAMP in mode follower), OPAMP inverting input is not used (not connected to GPIO pin), this parameter is discarded. This feature can be modified afterwards using unitary function **LL_OPAMP_SetInputInverting()**.

91.2 OPAMP Firmware driver API description

The following section lists the various functions of the OPAMP library.

91.2.1 Detailed description of functions

LL_OPAMP_SetCommonPowerRange

Function name

__STATIC_INLINE void LL_OPAMP_SetCommonPowerRange (OPAMP_Common_TypeDef * OPAMPxy_COMMON, uint32_t PowerRange)

Function description

Set OPAMP power range.

Parameters

- **OPAMPxy_COMMON:** OPAMP common instance
- **PowerRange:** This parameter can be one of the following values:
  - LL_OPAMP_POWERSUPPLY_RANGE_LOW
  - LL_OPAMP_POWERSUPPLY_RANGE_HIGH

Return values

- **None:**

Notes

- The OPAMP power range applies to several OPAMP instances (if several OPAMP instances available on the selected device). It is mandatory to set already the power range to high for performance purpose.
- On this STM32 series, setting of this feature is conditioned to OPAMP state: All OPAMP instances of the OPAMP common group must be disabled. This check can be done with function LL_OPAMP_IsEnabled() for each OPAMP instance.
- LL_OPAMP_POWERSUPPLY_RANGE_HIGH parameter is highly recommended for performance purpose.

Reference Manual to LL API cross reference:

- CSR OPARANGE LL_OPAMP_SetCommonPowerRange

LL_OPAMP_GetCommonPowerRange

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetCommonPowerRange (const OPAMP_Common_TypeDef * OPAMPxy_COMMON)

Function description

Get OPAMP power range.

Parameters

- **OPAMPxy_COMMON:** OPAMP common instance

Return values

- **Returned:** value can be one of the following values:
  - LL_OPAMP_POWERSUPPLY_RANGE_LOW
  - LL_OPAMP_POWERSUPPLY_RANGE_HIGH

Notes

- The OPAMP power range applies to several OPAMP instances (if several OPAMP instances available on the selected device).

Reference Manual to LL API cross reference:

- CSR OPARANGE LL_OPAMP_GetCommonPowerRange

LL_OPAMP_SetPowerMode

Function name

__STATIC_INLINE void LL_OPAMP_SetPowerMode (OPAMP_TypeDef * OPAMPx, uint32_t PowerMode)

Function description

Set OPAMP power mode.

Parameters

- **OPAMPx:** OPAMP instance
- **PowerMode:** This parameter can be one of the following values:
  - LL_OPAMP_POWERMODE_NORMALPOWER_NORMALSPEED
  - LL_OPAMP_POWERMODE_LOWPOWER_NORMALSPEED
  - LL_OPAMP_POWERMODE_NORMALPOWER_HIGHSPEED
  - LL_OPAMP_POWERMODE_LOWPOWER_HIGHSPEED

Return values

- **None:**

Notes

- The OPAMP must be disabled to change this configuration.

Reference Manual to LL API cross reference:

- CSR OPALPM LL_OPAMP_SetPowerMode

LL_OPAMP_GetPowerMode

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetPowerMode (const OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP power mode.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **Returned:** value can be one of the following values:
  - LL_OPAMP_POWERMODE_NORMALPOWER_NORMALSPEED
  - LL_OPAMP_POWERMODE_LOWPOWER_NORMALSPEED
  - LL_OPAMP_POWERMODE_NORMALPOWER_HIGHSPEED
  - LL_OPAMP_POWERMODE_LOWPOWER_HIGHSPEED

Reference Manual to LL API cross reference:

- CSR OPALPM & HSM LL_OPAMP_GetPowerMode

LL_OPAMP_SetMode

Function name

__STATIC_INLINE void LL_OPAMP_SetMode (OPAMP_TypeDef * OPAMPx, uint32_t Mode)

Function description

Set OPAMP mode calibration or functional.

Parameters

- **OPAMPx:** OPAMP instance
- **Mode:** This parameter can be one of the following values:
  - LL_OPAMP_MODE_FUNCTIONAL
  - LL_OPAMP_MODE_CALIBRATION

Return values

- **None:**

Notes

- OPAMP mode corresponds to functional or calibration mode: functional mode: OPAMP operation in standalone, follower, ... Set functional mode using function LL_OPAMP_SetFunctionalMode().calibration mode: offset calibration of the selected transistors differential pair NMOS or PMOS.
- On this STM32 series, during calibration, OPAMP functional mode must be set to standalone or follower mode (in order to open internal connections to resistors of PGA mode). Refer to function LL_OPAMP_SetFunctionalMode().

Reference Manual to LL API cross reference:

- CSR CALON LL_OPAMP_SetMode

LL_OPAMP_GetMode

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetMode (const OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP mode calibration or functional.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **Returned:** value can be one of the following values:
  - LL_OPAMP_MODE_FUNCTIONAL
  - LL_OPAMP_MODE_CALIBRATION

Notes

- OPAMP mode corresponds to functional or calibration mode: functional mode: OPAMP operation in standalone, follower, ... Set functional mode using function LL_OPAMP_SetFunctionalMode().calibration mode: offset calibration of the selected transistors differential pair NMOS or PMOS.

Reference Manual to LL API cross reference:

- CSR CALON LL_OPAMP_GetMode

LL_OPAMP_SetFunctionalMode

Function name

__STATIC_INLINE void LL_OPAMP_SetFunctionalMode (OPAMP_TypeDef * OPAMPx, uint32_t FunctionalMode)

Function description

Set OPAMP functional mode by setting internal connections.

Parameters

- **OPAMPx:** OPAMP instance
- **FunctionalMode:** This parameter can be one of the following values:
  - LL_OPAMP_MODE_STANDALONE
  - LL_OPAMP_MODE_FOLLOWER
  - LL_OPAMP_MODE_PGA

Return values

- **None:**

Notes

- This function reset bit of calibration mode to ensure to be in functional mode, in order to have OPAMP parameters (inputs selection, ...) set with the corresponding OPAMP mode to be effective.

Reference Manual to LL API cross reference:

- CSR OPAMODE LL_OPAMP_SetFunctionalMode

LL_OPAMP_GetFunctionalMode

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetFunctionalMode (const OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP functional mode from setting of internal connections.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **Returned:** value can be one of the following values:
  - LL_OPAMP_MODE_STANDALONE
  - LL_OPAMP_MODE_FOLLOWER
  - LL_OPAMP_MODE_PGA

Reference Manual to LL API cross reference:

- CSR OPAMODE LL_OPAMP_GetFunctionalMode

LL_OPAMP_SetPGAGain

Function name

__STATIC_INLINE void LL_OPAMP_SetPGAGain (OPAMP_TypeDef * OPAMPx, uint32_t PGAGain)

Function description

Set OPAMP PGA gain.

Parameters

- **OPAMPx:** OPAMP instance
- **PGAGain:** This parameter can be one of the following values:
  - LL_OPAMP_PGA_GAIN_2
  - LL_OPAMP_PGA_GAIN_4
  - LL_OPAMP_PGA_GAIN_8
  - LL_OPAMP_PGA_GAIN_16

Return values

- **None:**

Notes

- Preliminarily, OPAMP must be set in mode PGA using function LL_OPAMP_SetFunctionalMode().

Reference Manual to LL API cross reference:

- CSR PGGAIN LL_OPAMP_SetPGAGain

LL_OPAMP_GetPGAGain

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetPGAGain (const OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP PGA gain.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **Returned:** value can be one of the following values:
  - LL_OPAMP_PGA_GAIN_2
  - LL_OPAMP_PGA_GAIN_4
  - LL_OPAMP_PGA_GAIN_8
  - LL_OPAMP_PGA_GAIN_16

Notes

- Preliminarily, OPAMP must be set in mode PGA using function LL_OPAMP_SetFunctionalMode().

Reference Manual to LL API cross reference:

- CSR PGGAIN LL_OPAMP_GetPGAGain

LL_OPAMP_SetInputNonInverting

Function name

__STATIC_INLINE void LL_OPAMP_SetInputNonInverting (OPAMP_TypeDef * OPAMPx, uint32_t InputNonInverting)

Function description

Set OPAMP non-inverting input connection.

Parameters

- **OPAMPx:** OPAMP instance
- **InputNonInverting:** This parameter can be one of the following values:
  - LL_OPAMP_INPUT_NONINVERT_IO0
  - LL_OPAMP_INPUT_NONINVERT_DAC

Return values

- **None:**

Reference Manual to LL API cross reference:

- CSR VPSEL LL_OPAMP_SetInputNonInverting

LL_OPAMP_GetInputNonInverting

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetInputNonInverting (const OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP non-inverting input connection.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **Returned:** value can be one of the following values:
  - LL_OPAMP_INPUT_NONINVERT_IO0
  - LL_OPAMP_INPUT_NONINVERT_DAC

Reference Manual to LL API cross reference:

- CSR VPSEL LL_OPAMP_GetInputNonInverting

LL_OPAMP_SetInputInverting

Function name

__STATIC_INLINE void LL_OPAMP_SetInputInverting (OPAMP_TypeDef * OPAMPx, uint32_t InputInverting)

Function description

Set OPAMP inverting input connection.

Parameters

- **OPAMPx:** OPAMP instance
- **InputInverting:** This parameter can be one of the following values:
  - LL_OPAMP_INPUT_INVERT_IO0
  - LL_OPAMP_INPUT_INVERT_CONNECT_NO

Return values

- **None:**

Notes

- OPAMP inverting input is used with OPAMP in mode standalone or PGA with external capacitors for filtering circuit. Otherwise (OPAMP in mode follower), OPAMP inverting input is not used (not connected to GPIO pin).

Reference Manual to LL API cross reference:

- CSR VMSEL LL_OPAMP_SetInputInverting

LL_OPAMP_GetInputInverting

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetInputInverting (const OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP inverting input connection.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **Returned:** value can be one of the following values:
  - LL_OPAMP_INPUT_INVERT_IO0
  - LL_OPAMP_INPUT_INVERT_CONNECT_NO

Reference Manual to LL API cross reference:

- CSR VMSEL LL_OPAMP_GetInputInverting

LL_OPAMP_SetNonInvertingInput

Function name

__STATIC_INLINE void LL_OPAMP_SetNonInvertingInput (OPAMP_TypeDef * OPAMPx, uint32_t NonInvertingInput)

Function description

LL_OPAMP_SetInvertingInput

Function name

__STATIC_INLINE void LL_OPAMP_SetInvertingInput (OPAMP_TypeDef * OPAMPx, uint32_t InvertingInput)

Function description

LL_OPAMP_SetTrimmingMode

Function name

__STATIC_INLINE void LL_OPAMP_SetTrimmingMode (OPAMP_TypeDef * OPAMPx, uint32_t TrimmingMode)

Function description

Set OPAMP trimming mode.

Parameters

- **OPAMPx:** OPAMP instance
- **TrimmingMode:** This parameter can be one of the following values:
  - LL_OPAMP_TRIMMING_FACTORY
  - LL_OPAMP_TRIMMING_USER

Return values

- **None:**

Reference Manual to LL API cross reference:

- CSR USERTRIM LL_OPAMP_SetTrimmingMode

LL_OPAMP_GetTrimmingMode

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetTrimmingMode (const OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP trimming mode.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **Returned:** value can be one of the following values:
  - LL_OPAMP_TRIMMING_FACTORY
  - LL_OPAMP_TRIMMING_USER

Reference Manual to LL API cross reference:

- CSR USERTRIM LL_OPAMP_GetTrimmingMode

LL_OPAMP_SetCalibrationSelection

Function name

__STATIC_INLINE void LL_OPAMP_SetCalibrationSelection (OPAMP_TypeDef * OPAMPx, uint32_t TransistorsDiffPair)

Function description

Set OPAMP offset to calibrate the selected transistors differential pair NMOS or PMOS.

Parameters

- **OPAMPx:** OPAMP instance
- **TransistorsDiffPair:** This parameter can be one of the following values:
  - LL_OPAMP_TRIMMING_NMOS
  - LL_OPAMP_TRIMMING_PMOS

Return values

- **None:**

Notes

- Preliminarily, OPAMP must be set in mode calibration using function LL_OPAMP_SetMode().

Reference Manual to LL API cross reference:

- CSR CALSEL LL_OPAMP_SetCalibrationSelection

LL_OPAMP_GetCalibrationSelection

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetCalibrationSelection (const OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP offset to calibrate the selected transistors differential pair NMOS or PMOS.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **Returned:** value can be one of the following values:
  - LL_OPAMP_TRIMMING_NMOS
  - LL_OPAMP_TRIMMING_PMOS

Notes

- Preliminarily, OPAMP must be set in mode calibration using function LL_OPAMP_SetMode().

Reference Manual to LL API cross reference:

- CSR CALSEL LL_OPAMP_GetCalibrationSelection

LL_OPAMP_IsCalibrationOutputSet

Function name

__STATIC_INLINE uint32_t LL_OPAMP_IsCalibrationOutputSet (const OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP calibration result of toggling output.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **State:** of bit (1 or 0).

Notes

- This functions returns: 0 if OPAMP calibration output is reset 1 if OPAMP calibration output is set

Reference Manual to LL API cross reference:

- CSR CALOUT LL_OPAMP_IsCalibrationOutputSet

LL_OPAMP_SetTrimmingValue

Function name

__STATIC_INLINE void LL_OPAMP_SetTrimmingValue (OPAMP_TypeDef * OPAMPx, uint32_t PowerMode, uint32_t TransistorsDiffPair, uint32_t TrimmingValue)

Function description

Set OPAMP trimming factor for the selected transistors differential pair NMOS or PMOS, corresponding to the selected power mode.

Parameters

- **OPAMPx:** OPAMP instance
- **PowerMode:** This parameter can be one of the following values:
  - LL_OPAMP_POWERMODE_NORMALPOWER_NORMALSPEED
  - LL_OPAMP_POWERMODE_LOWPOWER_NORMALSPEED
  - LL_OPAMP_POWERMODE_NORMALPOWER_HIGHSPEED
  - LL_OPAMP_POWERMODE_LOWPOWER_HIGHSPEED
- **TransistorsDiffPair:** This parameter can be one of the following values:
  - LL_OPAMP_TRIMMING_NMOS
  - LL_OPAMP_TRIMMING_PMOS
- **TrimmingValue:** 0x00...0x1F

Return values

- **None:**

Reference Manual to LL API cross reference:

- OTR TRIMOFFSETN LL_OPAMP_SetTrimmingValue
- OTR TRIMOFFSETP LL_OPAMP_SetTrimmingValue
- LPOTR TRIMLPOFFSETN LL_OPAMP_SetTrimmingValue
- LPOTR TRIMLPOFFSETP LL_OPAMP_SetTrimmingValue

LL_OPAMP_GetTrimmingValue

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetTrimmingValue (const OPAMP_TypeDef * OPAMPx, uint32_t PowerMode, uint32_t TransistorsDiffPair)

Function description

Get OPAMP trimming factor for the selected transistors differential pair NMOS or PMOS, corresponding to the selected power mode.

Parameters

- **OPAMPx:** OPAMP instance
- **PowerMode:** This parameter can be one of the following values:
  - LL_OPAMP_POWERMODE_NORMALPOWER_NORMALSPEED
  - LL_OPAMP_POWERMODE_LOWPOWER_NORMALSPEED
  - LL_OPAMP_POWERMODE_NORMALPOWER_HIGHSPEED
  - LL_OPAMP_POWERMODE_LOWPOWER_HIGHSPEED
- **TransistorsDiffPair:** This parameter can be one of the following values:
  - LL_OPAMP_TRIMMING_NMOS
  - LL_OPAMP_TRIMMING_PMOS

Return values

- **0x0...0x1F:**

Reference Manual to LL API cross reference:

- OTR TRIMOFFSETN LL_OPAMP_GetTrimmingValue
- OTR TRIMOFFSETP LL_OPAMP_GetTrimmingValue
- LPOTR TRIMLPOFFSETN LL_OPAMP_GetTrimmingValue
- LPOTR TRIMLPOFFSETP LL_OPAMP_GetTrimmingValue

LL_OPAMP_Enable

Function name

__STATIC_INLINE void LL_OPAMP_Enable (OPAMP_TypeDef * OPAMPx)

Function description

Enable OPAMP instance.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **None:**

Notes

- After enable from off state, OPAMP requires a delay to fulfill wake up time specification. Refer to device datasheet, parameter "tWAKEUP".

Reference Manual to LL API cross reference:

- CSR OPAMPXEN LL_OPAMP_Enable

LL_OPAMP_Disable

Function name

__STATIC_INLINE void LL_OPAMP_Disable (OPAMP_TypeDef * OPAMPx)

Function description

Disable OPAMP instance.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CSR OPAMPXEN LL_OPAMP_Disable

LL_OPAMP_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_OPAMP_IsEnabled (const OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP instance enable state (0: OPAMP is disabled, 1: OPAMP is enabled)

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR OPAMPXEN LL_OPAMP_IsEnabled

LL_OPAMP_DeInit

Function name

ErrorStatus LL_OPAMP_DeInit (OPAMP_TypeDef * OPAMPx)

Function description

De-initialize registers of the selected OPAMP instance to their default reset values.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: OPAMP registers are de-initialized
  - ERROR: OPAMP registers are not de-initialized

LL_OPAMP_Init

Function name

ErrorStatus LL_OPAMP_Init (OPAMP_TypeDef * OPAMPx, const LL_OPAMP_InitTypeDef * OPAMP_InitStruct)

Function description

Initialize some features of OPAMP instance.

Parameters

- **OPAMPx:** OPAMP instance
- **OPAMP_InitStruct:** Pointer to a LL_OPAMP_InitTypeDef structure

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: OPAMP registers are initialized
  - ERROR: OPAMP registers are not initialized

Notes

- This function reset bit of calibration mode to ensure to be in functional mode, in order to have OPAMP parameters (inputs selection, ...) set with the corresponding OPAMP mode to be effective.
- This function configures features of the selected OPAMP instance. Some features are also available at scope OPAMP common instance (common to several OPAMP instances).

LL_OPAMP_StructInit

Function name

void LL_OPAMP_StructInit (LL_OPAMP_InitTypeDef * OPAMP_InitStruct)

Function description

Set each LL_OPAMP_InitTypeDef field to default value.

Parameters

- **OPAMP_InitStruct:** pointer to a LL_OPAMP_InitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

91.3 OPAMP Firmware driver defines

The following section lists the various define and macros of the module.

91.3.1 OPAMP

OPAMP

OPAMP functional mode

LL_OPAMP_MODE_STANDALONE

OPAMP functional mode, OPAMP operation in standalone

LL_OPAMP_MODE_FOLLOWER

OPAMP functional mode, OPAMP operation in follower

LL_OPAMP_MODE_PGA

OPAMP functional mode, OPAMP operation in PGA

Definitions of OPAMP hardware constraints delays

LL_OPAMP_DELAY_STARTUP_US

Delay for OPAMP startup time

OPAMP input inverting

LL_OPAMP_INPUT_INVERT_IO0

OPAMP inverting input connected to GPIO pin (valid also in PGA mode for filtering). Note: OPAMP inverting input is used with OPAMP in mode standalone or PGA with external capacitors for filtering circuit. Otherwise (OPAMP in mode follower), OPAMP inverting input is not used (not connected to GPIO pin).

LL_OPAMP_INPUT_INVERT_CONNECT_NO

OPAMP inverting input not externally connected (intended for OPAMP in mode follower or PGA without external capacitors for filtering)

OPAMP input non-inverting

LL_OPAMP_INPUT_NONINVERT_IO0

OPAMP non inverting input connected to GPIO pin (pin PA1 for OPAMP1, pin PA7 for OPAMP2)

LL_OPAMP_INPUT_NONINVERT_DAC

OPAMP non inverting input connected to DAC1 channel output(channel1 for OPAMP1, channel2 for OPAMP2)

OPAMP mode calibration or functional.

LL_OPAMP_MODE_FUNCTIONAL

OPAMP functional mode

LL_OPAMP_MODE_CALIBRATION

OPAMP calibration mode

OPAMP PGA gain (relevant when OPAMP is in functional mode PGA)

LL_OPAMP_PGA_GAIN_2

OPAMP PGA gain 2

LL_OPAMP_PGA_GAIN_4

OPAMP PGA gain 4

LL_OPAMP_PGA_GAIN_8

OPAMP PGA gain 8

LL_OPAMP_PGA_GAIN_16

OPAMP PGA gain 16

OPAMP power mode

LL_OPAMP_POWERMODE_NORMALPOWER_NORMALSPEED

OPAMP power mode normal speed normal

LL_OPAMP_POWERMODE_LOWPOWER_NORMALSPEED

OPAMP power mode low-power speed normal

LL_OPAMP_POWERMODE_NORMALPOWER_HIGHSPEED

OPAMP power mode normal speed high

LL_OPAMP_POWERMODE_LOWPOWER_HIGHSPEED

OPAMP power mode low-power speed high

OPAMP power supply range

LL_OPAMP_POWERSUPPLY_RANGE_LOW

Power supply range low

LL_OPAMP_POWERSUPPLY_RANGE_HIGH

Power supply range high - recommended for performance purpose

OPAMP trimming mode

LL_OPAMP_TRIMMING_FACTORY

OPAMP trimming factors set to factory values

LL_OPAMP_TRIMMING_USER

OPAMP trimming factors set to user values

OPAMP trimming of transistors differential pair NMOS or PMOS

LL_OPAMP_TRIMMING_NMOS

OPAMP trimming of transistors differential pair NMOS

LL_OPAMP_TRIMMING_PMOS

OPAMP trimming of transistors differential pair PMOS

OPAMP helper macro

__LL_OPAMP_COMMON_INSTANCE

Description:

- Helper macro to select the OPAMP common instance to which is belonging the selected OPAMP instance.

Parameters:

- __OPAMPx__: OPAMP instance

Return value:

- OPAMP: common instance

Notes:

- OPAMP common register instance can be used to set parameters common to several OPAMP instances. Refer to functions having argument "OPAMPxy_COMMON" as parameter.

__LL_OPAMP_IS_ENABLED_ALL_COMMON_INSTANCE

Description:

- Helper macro to check if all OPAMP instances sharing the same OPAMP common instance are disabled.

Return value:

- 0: All OPAMP instances sharing the same OPAMP common instance are disabled. 1: At least one OPAMP instance sharing the same OPAMP common instance is enabled

Notes:

- This check is required by functions with setting conditioned to OPAMP state: All OPAMP instances of the OPAMP common group must be disabled. Refer to functions having argument "OPAMPxy_COMMON" as parameter.

Common write and read registers macro

LL_OPAMP_WriteReg

Description:

- Write a value in OPAMP register.

Parameters:

- __INSTANCE__: OPAMP Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_OPAMP_ReadReg

Description:

- Read a value in OPAMP register.

Parameters:

- __INSTANCE__: OPAMP Instance
- __REG__: Register to be read

Return value:

- Register: value

92 LL PKA Generic Driver

92.1 PKA Firmware driver registers structures

92.1.1 LL_PKA_InitTypeDef

LL_PKA_InitTypeDef is defined in the stm32u3xx_ll_pka.h

Data Fields

- ***uint32_t Mode***

Field Documentation

- ***uint32_t LL_PKA_InitTypeDef::Mode***
  Specifies the PKA operation mode. This parameter can be a value of ***PKA_LL_EC_MODE***.This feature can be modified afterwards using unitary function **LL_PKA_SetMode()**.

92.2 PKA Firmware driver API description

The following section lists the various functions of the PKA library.

92.2.1 Detailed description of functions

LL_PKA_Config

Function name

__STATIC_INLINE void LL_PKA_Config (PKA_TypeDef * PKAx, uint32_t Mode)

Function description

Configure PKA peripheral.

Parameters

- **PKAx:** PKA Instance.
- **Mode:** This parameter can be one of the following values:
  - LL_PKA_MODE_MONTGOMERY_PARAM
  - LL_PKA_MODE_MODULAR_EXP
  - LL_PKA_MODE_ECDSA_SIGNATURE
  - LL_PKA_MODE_ECDSA_VERIFICATION
  - LL_PKA_MODE_POINT_CHECK
  - LL_PKA_MODE_RSA_CRT_EXP
  - LL_PKA_MODE_MODULAR_INV
  - LL_PKA_MODE_ARITHMETIC_ADD
  - LL_PKA_MODE_ARITHMETIC_SUB
  - LL_PKA_MODE_ARITHMETIC_MUL
  - LL_PKA_MODE_COMPARISON
  - LL_PKA_MODE_MODULAR_REDUC
  - LL_PKA_MODE_MODULAR_ADD
  - LL_PKA_MODE_MODULAR_SUB
  - LL_PKA_MODE_MONTGOMERY_MUL
  - LL_PKA_MODE_MODULAR_EXP_PROTECT
  - LL_PKA_MODE_DOUBLE_BASE_LADDER
  - LL_PKA_MODE_ECC_PROJECTIVE_AFF
  - LL_PKA_MODE_ECC_COMPLETE_ADD
  - LL_PKA_MODE_ECC_MUL
  - LL_PKA_MODE_MODULAR_EXP_FAST

Reference Manual to LL API cross reference:

- CR MODE LL_PKA_Config

LL_PKA_Enable

Function name

__STATIC_INLINE void LL_PKA_Enable (PKA_TypeDef * PKAx)

Function description

Enable PKA peripheral.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR EN LL_PKA_Enable

LL_PKA_Disable

Function name

__STATIC_INLINE void LL_PKA_Disable (PKA_TypeDef * PKAx)

Function description

Disable PKA peripheral.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR EN LL_PKA_Disable

LL_PKA_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_PKA_IsEnabled (const PKA_TypeDef * PKAx)

Function description

Check if the PKA peripheral is enabled or disabled.

Parameters

- **PKAx:** PKA Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR EN LL_PKA_IsEnabled

LL_PKA_SetMode

Function name

__STATIC_INLINE void LL_PKA_SetMode (PKA_TypeDef * PKAx, uint32_t Mode)

Function description

Set PKA operating mode.

Parameters

- **PKAx:** PKA Instance.
- **Mode:** This parameter can be one of the following values:
  - LL_PKA_MODE_MONTGOMERY_PARAM
  - LL_PKA_MODE_MODULAR_EXP
  - LL_PKA_MODE_ECDSA_SIGNATURE
  - LL_PKA_MODE_ECDSA_VERIFICATION
  - LL_PKA_MODE_POINT_CHECK
  - LL_PKA_MODE_RSA_CRT_EXP
  - LL_PKA_MODE_MODULAR_INV
  - LL_PKA_MODE_ARITHMETIC_ADD
  - LL_PKA_MODE_ARITHMETIC_SUB
  - LL_PKA_MODE_ARITHMETIC_MUL
  - LL_PKA_MODE_COMPARISON
  - LL_PKA_MODE_MODULAR_REDUC
  - LL_PKA_MODE_MODULAR_ADD
  - LL_PKA_MODE_MODULAR_SUB
  - LL_PKA_MODE_MONTGOMERY_MUL
  - LL_PKA_MODE_MODULAR_EXP_PROTECT
  - LL_PKA_MODE_DOUBLE_BASE_LADDER
  - LL_PKA_MODE_ECC_PROJECTIVE_AFF
  - LL_PKA_MODE_ECC_COMPLETE_ADD
  - LL_PKA_MODE_ECC_MUL
  - LL_PKA_MODE_MODULAR_EXP_FAST

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR MODE LL_PKA_SetMode

LL_PKA_GetMode

Function name

__STATIC_INLINE uint32_t LL_PKA_GetMode (const PKA_TypeDef * PKAx)

Function description

Get PKA operating mode.

Parameters

- **PKAx:** PKA Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_PKA_MODE_MONTGOMERY_PARAM
  - LL_PKA_MODE_MODULAR_EXP
  - LL_PKA_MODE_ECDSA_SIGNATURE
  - LL_PKA_MODE_ECDSA_VERIFICATION
  - LL_PKA_MODE_POINT_CHECK
  - LL_PKA_MODE_RSA_CRT_EXP
  - LL_PKA_MODE_MODULAR_INV
  - LL_PKA_MODE_ARITHMETIC_ADD
  - LL_PKA_MODE_ARITHMETIC_SUB
  - LL_PKA_MODE_ARITHMETIC_MUL
  - LL_PKA_MODE_COMPARISON
  - LL_PKA_MODE_MODULAR_REDUC
  - LL_PKA_MODE_MODULAR_ADD
  - LL_PKA_MODE_MODULAR_SUB
  - LL_PKA_MODE_MONTGOMERY_MUL
  - LL_PKA_MODE_MODULAR_EXP_PROTECT
  - LL_PKA_MODE_DOUBLE_BASE_LADDER
  - LL_PKA_MODE_ECC_PROJECTIVE_AFF
  - LL_PKA_MODE_ECC_COMPLETE_ADD
  - LL_PKA_MODE_ECC_MUL
  - LL_PKA_MODE_MODULAR_EXP_FAST

Reference Manual to LL API cross reference:

- CR MODE LL_PKA_GetMode

LL_PKA_Start

Function name

__STATIC_INLINE void LL_PKA_Start (PKA_TypeDef * PKAx)

Function description

Start the operation selected using LL_PKA_SetMode.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR START LL_PKA_Start

LL_PKA_EnableIT_ADDRERR

Function name

__STATIC_INLINE void LL_PKA_EnableIT_ADDRERR (PKA_TypeDef * PKAx)

Function description

Enable address error interrupt.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR ADDRERRIE LL_PKA_EnableIT_ADDRERR

LL_PKA_EnableIT_RAMERR

Function name

__STATIC_INLINE void LL_PKA_EnableIT_RAMERR (PKA_TypeDef * PKAx)

Function description

Enable RAM error interrupt.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RAMERRIE LL_PKA_EnableIT_RAMERR

LL_PKA_EnableIT_OPERR

Function name

__STATIC_INLINE void LL_PKA_EnableIT_OPERR (PKA_TypeDef * PKAx)

Function description

Enable OPERATION error interrupt.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR OPERRIE LL_PKA_EnableIT_OPERR

LL_PKA_EnableIT_PROCEND

Function name

__STATIC_INLINE void LL_PKA_EnableIT_PROCEND (PKA_TypeDef * PKAx)

Function description

Enable end of operation interrupt.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR PROCENDIE LL_PKA_EnableIT_PROCEND

LL_PKA_DisableIT_ADDERR

Function name

__STATIC_INLINE void LL_PKA_DisableIT_ADDERR (PKA_TypeDef * PKAx)

Function description

Disable address error interrupt.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR ADDRERRIE LL_PKA_DisableIT_ADDERR

LL_PKA_DisableIT_RAMERR

Function name

__STATIC_INLINE void LL_PKA_DisableIT_RAMERR (PKA_TypeDef * PKAx)

Function description

Disable RAM error interrupt.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RAMERRIE LL_PKA_DisableIT_RAMERR

LL_PKA_DisableIT_PROCEND

Function name

__STATIC_INLINE void LL_PKA_DisableIT_PROCEND (PKA_TypeDef * PKAx)

Function description

Disable End of operation interrupt.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR PROCENDIE LL_PKA_DisableIT_PROCEND

LL_PKA_DisableIT_OPERR

Function name

__STATIC_INLINE void LL_PKA_DisableIT_OPERR (PKA_TypeDef * PKAx)

Function description

Disable OPERATION error interrupt.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR OPERRIE LL_PKA_EnableIT_OPERR

LL_PKA_IsEnabledIT_ADDRERR

Function name

__STATIC_INLINE uint32_t LL_PKA_IsEnabledIT_ADDRERR (const PKA_TypeDef * PKAx)

Function description

Check if address error interrupt is enabled.

Parameters

- **PKAx:** PKA Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR ADDRERRIE LL_PKA_IsEnabledIT_ADDRERR

LL_PKA_IsEnabledIT_RAMERR

Function name

__STATIC_INLINE uint32_t LL_PKA_IsEnabledIT_RAMERR (const PKA_TypeDef * PKAx)

Function description

Check if RAM error interrupt is enabled.

Parameters

- **PKAx:** PKA Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR RAMERRIE LL_PKA_IsEnabledIT_RAMERR

LL_PKA_IsEnabledIT_OPERR

Function name

__STATIC_INLINE uint32_t LL_PKA_IsEnabledIT_OPERR (const PKA_TypeDef * PKAx)

Function description

Check if OPERATION error interrupt is enabled.

Parameters

- **PKAx:** PKA Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR OPERRIE LL_PKA_IsEnabledIT_OPERR

LL_PKA_IsEnabledIT_PROCEND

Function name

__STATIC_INLINE uint32_t LL_PKA_IsEnabledIT_PROCEND (const PKA_TypeDef * PKAx)

Function description

Check if end of operation interrupt is enabled.

Parameters

- **PKAx:** PKA Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR PROCENDIE LL_PKA_IsEnabledIT_PROCEND

LL_PKA_IsActiveFlag_ADDRERR

Function name

__STATIC_INLINE uint32_t LL_PKA_IsActiveFlag_ADDRERR (const PKA_TypeDef * PKAx)

Function description

Get PKA address error flag.

Parameters

- **PKAx:** PKA Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR ADDRERRF LL_PKA_IsActiveFlag_ADDRERR

LL_PKA_IsActiveFlag_RAMERR

Function name

__STATIC_INLINE uint32_t LL_PKA_IsActiveFlag_RAMERR (const PKA_TypeDef * PKAx)

Function description

Get PKA RAM error flag.

Parameters

- **PKAx:** PKA Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR RAMERRF LL_PKA_IsActiveFlag_RAMERR

LL_PKA_IsActiveFlag_OPERR

Function name

__STATIC_INLINE uint32_t LL_PKA_IsActiveFlag_OPERR (const PKA_TypeDef * PKAx)

Function description

Get PKA OPERATION error flag.

Parameters

- **PKAx:** PKA Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR OPERRF LL_PKA_IsActiveFlag_OPERR

LL_PKA_IsActiveFlag_PROCEND

Function name

__STATIC_INLINE uint32_t LL_PKA_IsActiveFlag_PROCEND (const PKA_TypeDef * PKAx)

Function description

Get PKA end of operation flag.

Parameters

- **PKAx:** PKA Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR PROCENDF LL_PKA_IsActiveFlag_PROCEND

LL_PKA_IsActiveFlag_BUSY

Function name

__STATIC_INLINE uint32_t LL_PKA_IsActiveFlag_BUSY (const PKA_TypeDef * PKAx)

Function description

Get PKA busy flag.

Parameters

- **PKAx:** PKA Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR BUSY LL_PKA_IsActiveFlag_BUSY

LL_PKA_ClearFlag_ADDERR

Function name

__STATIC_INLINE void LL_PKA_ClearFlag_ADDERR (PKA_TypeDef * PKAx)

Function description

Clear PKA address error flag.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CLRFR ADDRERRFC LL_PKA_ClearFlag_ADDERR

LL_PKA_ClearFlag_RAMERR

Function name

__STATIC_INLINE void LL_PKA_ClearFlag_RAMERR (PKA_TypeDef * PKAx)

Function description

Clear PKA RAM error flag.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CLRFR RAMERRFC LL_PKA_ClearFlag_RAMERR

LL_PKA_ClearFlag_OPERR

Function name

__STATIC_INLINE void LL_PKA_ClearFlag_OPERR (PKA_TypeDef * PKAx)

Function description

Clear PKA OPERATION error flag.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CLRFR OPERRFC LL_PKA_ClearFlag_OPERR

LL_PKA_ClearFlag_PROCEND

Function name

__STATIC_INLINE void LL_PKA_ClearFlag_PROCEND (PKA_TypeDef * PKAx)

Function description

Clear PKA end of operation flag.

Parameters

- **PKAx:** PKA Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CLRFR PROCENDFC LL_PKA_ClearFlag_PROCEND

LL_PKA_DeInit

Function name

ErrorStatus LL_PKA_DeInit (const PKA_TypeDef * PKAx)

Function description

De-initialize PKA registers (Registers restored to their default values).

Parameters

- **PKAx:** PKA Instance.

Return values

- **ErrorStatus:**
  - SUCCESS: PKA registers are de-initialized
  - ERROR: PKA registers are not de-initialized

LL_PKA_Init

Function name

ErrorStatus LL_PKA_Init (PKA_TypeDef * PKAx, LL_PKA_InitTypeDef * PKA_InitStruct)

Function description

Initialize PKA registers according to the specified parameters in PKA_InitStruct.

Parameters

- **PKAx:** PKA Instance.
- **PKA_InitStruct:** pointer to a LL_PKA_InitTypeDef structure that contains the configuration information for the specified PKA peripheral.

Return values

- **ErrorStatus:**
  - SUCCESS: PKA registers are initialized according to PKA_InitStruct content
  - ERROR: Not applicable

LL_PKA_StructInit

Function name

void LL_PKA_StructInit (LL_PKA_InitTypeDef * PKA_InitStruct)

Function description

Set each LL_PKA_InitTypeDef field to default value.

Parameters

- **PKA_InitStruct:** pointer to a LL_PKA_InitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

Montgomery multiplication

LL_PKA_MODE_DOUBLE_BASE_LADDER

Double base ladder

LL_PKA_MODE_ECC_PROJECTIVE_AFF

ECC projective to affine

Common Write and read registers Macros

LL_PKA_WriteReg

Description:

- Write a value in PKA register.

Parameters:

- __INSTANCE__: PKA Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_PKA_ReadReg

Description:

- Read a value in PKA register.

Parameters:

- __INSTANCE__: PKA Instance
- __REG__: Register to be read

Return value:

- Register: value

93 LL PWR Generic Driver

93.1 PWR Firmware driver API description

The following section lists the various functions of the PWR library.

93.1.1 Detailed description of functions

LL_PWR_SetPowerMode

Function name

__STATIC_INLINE void LL_PWR_SetPowerMode (uint32_t Mode)

Function description

Set system power mode.

Parameters

- **Mode:** This parameter can be one of the following values:
  - LL_PWR_MODE_STOP0
  - LL_PWR_MODE_STOP1
  - LL_PWR_MODE_STOP2
  - LL_PWR_MODE_STOP3
  - LL_PWR_MODE_STANDBY
  - LL_PWR_MODE_SHUTDOWN

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 LPMS LL_PWR_SetPowerMode

LL_PWR_GetPowerMode

Function name

__STATIC_INLINE uint32_t LL_PWR_GetPowerMode (void)

Function description

Get system power mode.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_MODE_STOP0
  - LL_PWR_MODE_STOP1
  - LL_PWR_MODE_STOP2
  - LL_PWR_MODE_STOP3
  - LL_PWR_MODE_STANDBY
  - LL_PWR_MODE_SHUTDOWN

Reference Manual to LL API cross reference:

- CR1 LPMS LL_PWR_GetPowerMode

LL_PWR_EnableSRAM1PowerDown

Function name

__STATIC_INLINE void LL_PWR_EnableSRAM1PowerDown (void)

Function description

Enable SRAM1 power down.

Return values

- **None:**
- **None:**

Reference Manual to LL API cross reference:

- CR1 SRAM1PD LL_PWR_EnableSRAM1PowerDown

LL_PWR_DisableSRAM1PowerDown

Function name

__STATIC_INLINE void LL_PWR_DisableSRAM1PowerDown (void)

Function description

Disable SRAM1 power down.

Return values

- **None:**
- **None:**

Reference Manual to LL API cross reference:

- CR1 SRAM1PD LL_PWR_DisableSRAM1PowerDown

LL_PWR_IsEnabledSRAM1PowerDown

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledSRAM1PowerDown (void)

Function description

Check if SRAM1 power down is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 SRAM1PD LL_PWR_IsEnabledSRAM1PowerDown

LL_PWR_EnableSRAM2PowerDown

Function name

__STATIC_INLINE void LL_PWR_EnableSRAM2PowerDown (void)

Function description

Enable SRAM2 power down.

Return values

- **None:**
- **None:**

Reference Manual to LL API cross reference:

- CR1 SRAM2PD LL_PWR_EnableSRAM2PowerDown

LL_PWR_DisableSRAM2PowerDown

Function name

__STATIC_INLINE void LL_PWR_DisableSRAM2PowerDown (void)

Function description

Disable SRAM2 power down.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 SRAM2PD LL_PWR_DisableSRAM2PowerDown

LL_PWR_IsEnabledSRAM2PowerDown

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledSRAM2PowerDown (void)

Function description

Check if SRAM2 power down is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 SRAM2PD LL_PWR_IsEnabledSRAM2PowerDown

LL_PWR_SetSRAM2SBRetention

Function name

__STATIC_INLINE void LL_PWR_SetSRAM2SBRetention (uint32_t SRAM2PageRetention)

Function description

Set the SRAM2 page(s) retention in Standby mode.

Parameters

- **SRAM2PageRetention:** This parameter can be one of the following values:
  - LL_PWR_SRAM2_SB_NO_RETENTION
  - LL_PWR_SRAM2_SB_PAGE1_RETENTION
  - LL_PWR_SRAM2_SB_PAGE2_RETENTION
  - LL_PWR_SRAM2_SB_PAGE3_RETENTION
  - LL_PWR_SRAM2_SB_FULL_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RRSB1 LL_PWR_SetSRAM2SBRetention
- CR1 RRSB2 LL_PWR_SetSRAM2SBRetention
- CR1 RRSB3 LL_PWR_SetSRAM2SBRetention

LL_PWR_GetSRAM2SBRetention

Function name

__STATIC_INLINE uint32_t LL_PWR_GetSRAM2SBRetention (void)

Function description

Get the SRAM2 page(s) retention in Standby mode.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_SRAM2_SB_NO_RETENTION
  - LL_PWR_SRAM2_SB_FULL_RETENTION

Reference Manual to LL API cross reference:

- CR1 RRSB1 LL_PWR_GetSRAM2SBRetention
- CR1 RRSB2 LL_PWR_GetSRAM2SBRetention
- CR1 RRSB3 LL_PWR_GetSRAM2SBRetention

LL_PWR_EnableUltraLowPowerMode

Function name

__STATIC_INLINE void LL_PWR_EnableUltraLowPowerMode (void)

Function description

Enable BOR ultra low power mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 UPLMEN LL_PWR_EnableUltraLowPowerMode

LL_PWR_DisableUltraLowPowerMode

Function name

__STATIC_INLINE void LL_PWR_DisableUltraLowPowerMode (void)

Function description

Disable BOR ultra low-power mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 UPLMEN LL_PWR_DisableUltraLowPowerMode

LL_PWR_IsEnabledUltraLowPowerMode

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledUltraLowPowerMode (void)

Function description

Check if BOR ultra low power mode is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 UPLMEN LL_PWR_IsEnabledUltraLowPowerMode

LL_PWR_SetSRAM1StopRetention

Function name

__STATIC_INLINE void LL_PWR_SetSRAM1StopRetention (uint32_t SRAM1PageRetention)

Function description

Set the SRAM1 page(s) retention in Stop modes (Stop 0, 1, 2, 3).

Parameters

- **SRAM1PageRetention:** This parameter can be a combination of the following values:
  - LL_PWR_SRAM1_STOP_NO_RETENTION
  - LL_PWR_SRAM1_STOP_PAGE1_RETENTION
  - LL_PWR_SRAM1_STOP_PAGE2_RETENTION
  - LL_PWR_SRAM1_STOP_PAGE3_RETENTION
  - LL_PWR_SRAM1_STOP_PAGE4_RETENTION
  - LL_PWR_SRAM1_STOP_PAGE5_RETENTION
  - LL_PWR_SRAM1_STOP_PAGE6_RETENTION
  - LL_PWR_SRAM1_STOP_PAGE7_RETENTION
  - LL_PWR_SRAM1_STOP_FULL_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 SRAM1PDSi LL_PWR_SetSRAM1StopRetention

LL_PWR_GetSRAM1StopRetention

Function name

__STATIC_INLINE uint32_t LL_PWR_GetSRAM1StopRetention (void)

Function description

Get the SRAM1 page(s) retention in Stop modes (Stop 0, 1, 2, 3).

Return values

- **Returned:** value can be a combination of the following values:
  - LL_PWR_SRAM1_STOP_NO_RETENTION
  - LL_PWR_SRAM1_STOP_PAGE1_RETENTION
  - LL_PWR_SRAM1_STOP_PAGE2_RETENTION
  - LL_PWR_SRAM1_STOP_PAGE3_RETENTION
  - LL_PWR_SRAM1_STOP_PAGE4_RETENTION
  - LL_PWR_SRAM1_STOP_PAGE5_RETENTION
  - LL_PWR_SRAM1_STOP_PAGE6_RETENTION
  - LL_PWR_SRAM1_STOP_PAGE7_RETENTION
  - LL_PWR_SRAM1_STOP_FULL_RETENTION

Reference Manual to LL API cross reference:

- CR2 SRAM1PDSi LL_PWR_GetSRAM1StopRetention

LL_PWR_SetSRAM2StopRetention

Function name

__STATIC_INLINE void LL_PWR_SetSRAM2StopRetention (uint32_t SRAM2PageRetention)

Function description

Set the SRAM2 page(s) retention in Stop modes (Stop 0, 1, 2, 3).

Parameters

- **SRAM2PageRetention:** This parameter can be a combination of the following values:
  - LL_PWR_SRAM2_STOP_NO_RETENTION
  - LL_PWR_SRAM2_STOP_PAGE1_RETENTION
  - LL_PWR_SRAM2_STOP_PAGE2_RETENTION
  - LL_PWR_SRAM2_STOP_PAGE3_RETENTION
  - LL_PWR_SRAM2_STOP_FULL_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 SRAM2PDSi LL_PWR_SetSRAM2StopRetention

LL_PWR_GetSRAM2StopRetention

Function name

__STATIC_INLINE uint32_t LL_PWR_GetSRAM2StopRetention (void)

Function description

Get the SRAM2 page(s) retention in Stop modes (Stop 0, 1, 2, 3).

Return values

- **Returned:** value can be a combination of the following values:
  - LL_PWR_SRAM2_STOP_NO_RETENTION
  - LL_PWR_SRAM2_STOP_PAGE1_RETENTION
  - LL_PWR_SRAM2_STOP_PAGE2_RETENTION
  - LL_PWR_SRAM2_STOP_PAGE3_RETENTION
  - LL_PWR_SRAM2_STOP_FULL_RETENTION

Reference Manual to LL API cross reference:

- CR2 SRAM2PDSi LL_PWR_GetSRAM2StopRetention

LL_PWR_SetPKARAMStopRetention

Function name

__STATIC_INLINE void LL_PWR_SetPKARAMStopRetention (uint32_t Retention)

Function description

Set the PKA SRAM retention in Stop modes (Stop 0, 1, 2, 3).

Parameters

- **Retention:** This parameter can be one of the following values:
  - LL_PWR_PKARAM_STOP_NO_RETENTION
  - LL_PWR_PKARAM_STOP_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 PKARAMPDS LL_PWR_SetPKARAMStopRetention

LL_PWR_GetPKARAMStopRetention

Function name

__STATIC_INLINE uint32_t LL_PWR_GetPKARAMStopRetention (void)

Function description

Get the PKA SRAM retention in Stop modes (Stop 0, 1, 2, 3).

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_PKARAM_STOP_NO_RETENTION
  - LL_PWR_PKARAM_STOP_RETENTION

Reference Manual to LL API cross reference:

- CR2 PKARAMPDS LL_PWR_GetPKARAMStopRetention

LL_PWR_SetFDCANUSBRAMStopRetention

Function name

__STATIC_INLINE void LL_PWR_SetFDCANUSBRAMStopRetention (uint32_t Retention)

Function description

Set the FDCAN and USB SRAM power-down in Stop modes (Stop 0,1,2,3).

Parameters

- **Retention:** This parameter can be one of the following values:
  - LL_PWR_FDCANUSBRAM_STOP_NO_RETENTION
  - LL_PWR_FDCANUSBRAM_STOP_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 PRAMPDS LL_PWR_SetFDCANUSBRAMStopRetention

LL_PWR_GetFDCANUSBRAMStopRetention

Function name

__STATIC_INLINE uint32_t LL_PWR_GetFDCANUSBRAMStopRetention (void)

Function description

Get the PKA SRAM retention in Stop mode.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_FDCANUSBRAM_STOP_NO_RETENTION
  - LL_PWR_FDCANUSBRAM_STOP_RETENTION

Reference Manual to LL API cross reference:

- CR2 PRAMPDS LL_PWR_GetFDCANUSBRAMStopRetention

LL_PWR_SetICacheRAMStopRetention

Function name

__STATIC_INLINE void LL_PWR_SetICacheRAMStopRetention (uint32_t Retention)

Function description

Set the ICACHE SRAM retention in Stop mode.

Parameters

- **Retention:** This parameter can be one of the following values:
  - LL_PWR_ICACHERAM_STOP_NO_RETENTION
  - LL_PWR_ICACHERAM_STOP_RETENTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 ICRAMPDS LL_PWR_SetICacheRAMStopRetention

LL_PWR_GetICacheRAMStopRetention

Function name

__STATIC_INLINE uint32_t LL_PWR_GetICacheRAMStopRetention (void)

Function description

Get the ICACHE SRAM retention in Stop mode.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_ICACHERAM_STOP_NO_RETENTION
  - LL_PWR_ICACHERAM_STOP_RETENTION

Reference Manual to LL API cross reference:

- CR2 ICRAMPDS LL_PWR_GetICacheRAMStopRetention

LL_PWR_EnableFlashFastWakeUp

Function name

__STATIC_INLINE void LL_PWR_EnableFlashFastWakeUp (void)

Function description

Enable the flash memory fast wakeup from Stop mode (Stop 0, 1).

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 FLASHFWU LL_PWR_EnableFlashFastWakeUp

LL_PWR_DisableFlashFastWakeUp

Function name

__STATIC_INLINE void LL_PWR_DisableFlashFastWakeUp (void)

Function description

Disable the flash memory fast wakeup from Stop mode (Stop 0, 1).

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 FLASHFWU LL_PWR_DisableFlashFastWakeUp

LL_PWR_IsEnabledFlashFastWakeUp

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledFlashFastWakeUp (void)

Function description

Check if the flash memory fast wakeup from Stop mode (Stop 0, 1) is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR2 FLASHFWU LL_PWR_IsEnabledFlashFastWakeUp

LL_PWR_EnableSRAMFastWakeUp

Function name

__STATIC_INLINE void LL_PWR_EnableSRAMFastWakeUp (void)

Function description

Enable the SRAM memory fast wakeup from Stop mode (Stop 0, 1).

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 SRAMFWU LL_PWR_EnableSRAMFastWakeUp

LL_PWR_DisableSRAMFastWakeUp

Function name

__STATIC_INLINE void LL_PWR_DisableSRAMFastWakeUp (void)

Function description

Disable the SRAM memory fast wakeup from Stop mode (Stop 0, 1).

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 SRAMFWU LL_PWR_DisableSRAMFastWakeUp

LL_PWR_IsEnabledSRAMFastWakeUp

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledSRAMFastWakeUp (void)

Function description

Check if the SRAM memory fast wakeup from Stop mode (Stop 0, 1) is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR2 SRAMFWU LL_PWR_IsEnabledSRAMFastWakeUp

LL_PWR_SetRegulatorSupply

Function name

__STATIC_INLINE void LL_PWR_SetRegulatorSupply (uint32_t RegulatorSupply)

Function description

Set the VCore regulator supply.

Parameters

- **RegulatorSupply:** This parameter can be one of the following values:
  - LL_PWR_LDO_SUPPLY
  - LL_PWR_SMPS_SUPPLY

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 REGSEL LL_PWR_SetRegulatorSupply

LL_PWR_GetRegulatorSupply

Function name

__STATIC_INLINE uint32_t LL_PWR_GetRegulatorSupply (void)

Function description

Get the VCore regulator supply.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_LDO_SUPPLY
  - LL_PWR_SMPS_SUPPLY

Reference Manual to LL API cross reference:

- CR3 REGSEL LL_PWR_GetRegulatorSupply

LL_PWR_EnableFastSoftStart

Function name

__STATIC_INLINE void LL_PWR_EnableFastSoftStart (void)

Function description

Enable the fast soft start for selected regulator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 FSTEN LL_PWR_EnableFastSoftStart

LL_PWR_DisableFastSoftStart

Function name

__STATIC_INLINE void LL_PWR_DisableFastSoftStart (void)

Function description

Disable the fast soft start for selected regulator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 FSTEN LL_PWR_DisableFastSoftStart

LL_PWR_IsEnabledFastSoftStart

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledFastSoftStart (void)

Function description

Check if the fast soft start for selected regulator is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 FSTEN LL_PWR_IsEnabledFastSoftStart

LL_PWR_SetRegulVoltageScaling

Function name

__STATIC_INLINE void LL_PWR_SetRegulVoltageScaling (uint32_t VoltageScaling)

Function description

Set the regulator supply output voltage.

Parameters

- **VoltageScaling:** This parameter can be one of the following values:
  - LL_PWR_REGU_VOLTAGE_SCALE1
  - LL_PWR_REGU_VOLTAGE_SCALE2

Return values

- **None:**

Notes

- R1EN and R2EN must be at opposite value. Any attempt to write R1EN and R2EN to same value is ignored. Modifying R1EN and R2EN is possible only when current range is ready (R1RDY=R1EN and R2RDY=R2EN).

Reference Manual to LL API cross reference:

- VOSR R1EN LL_PWR_SetRegulVoltageScaling
- VOSR R2EN LL_PWR_SetRegulVoltageScaling

LL_PWR_GetRegulVoltageScaling

Function name

__STATIC_INLINE uint32_t LL_PWR_GetRegulVoltageScaling (void)

Function description

Get the regulator supply output voltage.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_REGU_VOLTAGE_SCALE1
  - LL_PWR_REGU_VOLTAGE_SCALE2

Reference Manual to LL API cross reference:

- VOSR R1EN LL_PWR_SetRegulVoltageScaling
- VOSR R2EN LL_PWR_SetRegulVoltageScaling

LL_PWR_EnableEPODBooster

Function name

__STATIC_INLINE void LL_PWR_EnableEPODBooster (void)

Function description

Enable the EPOD (Embedded Power Distribution) booster.

Return values

- **None:**

Reference Manual to LL API cross reference:

- VOSR BOOSTEN LL_PWR_EnableEPODBooster

LL_PWR_DisableEPODBooster

Function name

__STATIC_INLINE void LL_PWR_DisableEPODBooster (void)

Function description

Disable the EPOD (Embedded Power Distribution) booster.

Return values

- **None:**

Reference Manual to LL API cross reference:

- VOSR BOOSTEN LL_PWR_DisableEPODBooster

LL_PWR_IsEnabledEPODBooster

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledEPODBooster (void)

Function description

Check if the EPOD (Embedded Power Distribution) booster is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- VOSR BOOSTEN LL_PWR_IsEnabledEPODBooster

LL_PWR_GetRegulCurrentVOS

Function name

__STATIC_INLINE uint32_t LL_PWR_GetRegulCurrentVOS (void)

Function description

Get currently voltage scaling applied to VCORE.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_REGU_VOLTAGE_SCALE1
  - LL_PWR_REGU_VOLTAGE_SCALE2

Reference Manual to LL API cross reference:

- VOSR R1RDY LL_PWR_GetRegulCurrentVOS
- VOSR R2RDY LL_PWR_GetRegulCurrentVOS

LL_PWR_SetPVDLevel

Function name

__STATIC_INLINE void LL_PWR_SetPVDLevel (uint32_t PVDLevel)

Function description

Set the Power voltage detector level.

Parameters

- **PVDLevel:** This parameter can be one of the following values:
  - LL_PWR_PVDLEVEL_0
  - LL_PWR_PVDLEVEL_1
  - LL_PWR_PVDLEVEL_2
  - LL_PWR_PVDLEVEL_3
  - LL_PWR_PVDLEVEL_4
  - LL_PWR_PVDLEVEL_5
  - LL_PWR_PVDLEVEL_6
  - LL_PWR_PVDLEVEL_7

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR PVDLS LL_PWR_SetPVDLevel

LL_PWR_GetPVDLevel

Function name

__STATIC_INLINE uint32_t LL_PWR_GetPVDLevel (void)

Function description

Get the Power voltage detector level.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_PVDLEVEL_0
  - LL_PWR_PVDLEVEL_1
  - LL_PWR_PVDLEVEL_2
  - LL_PWR_PVDLEVEL_3
  - LL_PWR_PVDLEVEL_4
  - LL_PWR_PVDLEVEL_5
  - LL_PWR_PVDLEVEL_6
  - LL_PWR_PVDLEVEL_7

Reference Manual to LL API cross reference:

- SVMCR PVDLS LL_PWR_GetPVDLevel

LL_PWR_EnablePVD

Function name

__STATIC_INLINE void LL_PWR_EnablePVD (void)

Function description

Enable the power voltage detector.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR PVDE LL_PWR_EnablePVD

LL_PWR_DisablePVD

Function name

__STATIC_INLINE void LL_PWR_DisablePVD (void)

Function description

Disable the power voltage detector.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR PVDE LL_PWR_DisablePVD

LL_PWR_IsEnabledPVD

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledPVD (void)

Function description

Check if the power voltage detector is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMCR PVDE LL_PWR_IsEnabledPVD

LL_PWR_EnableVDDUSB

Function name

__STATIC_INLINE void LL_PWR_EnableVDDUSB (void)

Function description

Enable the independent USB supply.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR USV LL_PWR_EnableVDDUSB

LL_PWR_DisableVDDUSB

Function name

__STATIC_INLINE void LL_PWR_DisableVDDUSB (void)

Function description

Disable the independent USB supply.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR USV LL_PWR_DisableVDDUSB

LL_PWR_IsEnabledVDDUSB

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledVDDUSB (void)

Function description

Check if the independent USB supply is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMCR USV LL_PWR_IsEnabledVDDUSB

LL_PWR_EnableVDDIO2

Function name

__STATIC_INLINE void LL_PWR_EnableVDDIO2 (void)

Function description

Enable the independent I/Os supply.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR IO2SV LL_PWR_EnableVDDIO2

LL_PWR_DisableVDDIO2

Function name

__STATIC_INLINE void LL_PWR_DisableVDDIO2 (void)

Function description

Disable the independent I/Os supply.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR IO2SV LL_PWR_DisableVDDIO2

LL_PWR_IsEnabledVDDIO2

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledVDDIO2 (void)

Function description

Check if the independent I/Os supply is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMCR IO2SV LL_PWR_IsEnabledVDDIO2

LL_PWR_EnableVDDA

Function name

__STATIC_INLINE void LL_PWR_EnableVDDA (void)

Function description

Enable the independent analog supply.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR ASV LL_PWR_EnableVDDA

LL_PWR_DisableVDDA

Function name

__STATIC_INLINE void LL_PWR_DisableVDDA (void)

Function description

Disable the independent analog supply.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR ASV LL_PWR_DisableVDDA

LL_PWR_IsEnabledVDDA

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledVDDA (void)

Function description

Check if the independent analog supply is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMCR ASV LL_PWR_IsEnabledVDDA

LL_PWR_EnableVDDUSBMonitor

Function name

__STATIC_INLINE void LL_PWR_EnableVDDUSBMonitor (void)

Function description

Enable the independent USB supply monitor.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR UVMEN LL_PWR_EnableVDDUSBMonitor

LL_PWR_DisableVDDUSBMonitor

Function name

__STATIC_INLINE void LL_PWR_DisableVDDUSBMonitor (void)

Function description

Disable the independent USB supply monitor.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR UVMEN LL_PWR_DisableVDDUSBMonitor

LL_PWR_IsEnabledVDDUSBMonitor

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledVDDUSBMonitor (void)

Function description

Check if the independent USB supply monitor is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMCR UVMEN LL_PWR_IsEnabledVDDUSBMonitor

LL_PWR_EnableVDDIO2Monitor

Function name

__STATIC_INLINE void LL_PWR_EnableVDDIO2Monitor (void)

Function description

Enable the independent I/Os supply monitor.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR IO2VMEN LL_PWR_EnableVDDIO2Monitor

LL_PWR_DisableVDDIO2Monitor

Function name

__STATIC_INLINE void LL_PWR_DisableVDDIO2Monitor (void)

Function description

Disable the independent I/Os supply monitor.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR IO2VMEN LL_PWR_DisableVDDIO2Monitor

LL_PWR_IsEnabledVDDIO2Monitor

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledVDDIO2Monitor (void)

Function description

Check if the independent I/Os supply monitor is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMCR IO2VMEN LL_PWR_IsEnabledVDDIO2Monitor

LL_PWR_EnableVDDAMonitor1

Function name

__STATIC_INLINE void LL_PWR_EnableVDDAMonitor1 (void)

Function description

Enable the independent analog supply monitor 1.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR AVM1EN LL_PWR_EnableVDDAMonitor1

LL_PWR_DisableVDDAMonitor1

Function name

__STATIC_INLINE void LL_PWR_DisableVDDAMonitor1 (void)

Function description

Disable the independent analog supply monitor 1.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR AVM1EN LL_PWR_DisableVDDAMonitor1

LL_PWR_IsEnabledVDDAMonitor1

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledVDDAMonitor1 (void)

Function description

Check if the independent analog supply monitor 1 is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMCR AVM1EN LL_PWR_IsEnabledVDDAMonitor1

LL_PWR_EnableVDDAMonitor2

Function name

__STATIC_INLINE void LL_PWR_EnableVDDAMonitor2 (void)

Function description

Enable the independent analog supply monitor 2.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR AVM2EN LL_PWR_EnableVDDAMonitor2

LL_PWR_DisableVDDAMonitor2

Function name

__STATIC_INLINE void LL_PWR_DisableVDDAMonitor2 (void)

Function description

Disable the independent analog supply monitor 2.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SVMCR AVM2EN LL_PWR_DisableVDDAMonitor2

LL_PWR_IsEnabledVDDAMonitor2

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledVDDAMonitor2 (void)

Function description

Check if the independent analog supply monitor 2 is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMCR AVM2EN LL_PWR_IsEnabledVDDAMonitor2

LL_PWR_EnableWakeUpLine

Function name

__STATIC_INLINE void LL_PWR_EnableWakeUpLine (uint32_t WakeUpLine)

Function description

Enable the wake up line_x.

Parameters

- **WakeUpLine:** This parameter can be a combination of the following values:
  - LL_PWR_WAKEUP_LINE1
  - LL_PWR_WAKEUP_LINE2
  - LL_PWR_WAKEUP_LINE3
  - LL_PWR_WAKEUP_LINE4
  - LL_PWR_WAKEUP_LINE5
  - LL_PWR_WAKEUP_LINE6
  - LL_PWR_WAKEUP_LINE7
  - LL_PWR_WAKEUP_LINE8
  - LL_PWR_WAKEUP_LINE9
  - LL_PWR_WAKEUP_LINE10

Return values

- **None:**

Reference Manual to LL API cross reference:

- WUCR1 WUPENx LL_PWR_EnableWakeUpLine

LL_PWR_DisableWakeUpLine

Function name

__STATIC_INLINE void LL_PWR_DisableWakeUpLine (uint32_t WakeUpLine)

Function description

Disable the wake up line_x.

Parameters

- **WakeUpLine:** This parameter can be a combination of the following values:
  - LL_PWR_WAKEUP_LINE1
  - LL_PWR_WAKEUP_LINE2
  - LL_PWR_WAKEUP_LINE3
  - LL_PWR_WAKEUP_LINE4
  - LL_PWR_WAKEUP_LINE5
  - LL_PWR_WAKEUP_LINE6
  - LL_PWR_WAKEUP_LINE7
  - LL_PWR_WAKEUP_LINE8
  - LL_PWR_WAKEUP_LINE9
  - LL_PWR_WAKEUP_LINE10

Return values

- **None:**

Reference Manual to LL API cross reference:

- WUCR1 WUPENx LL_PWR_DisableWakeUpLine

LL_PWR_IsEnabledWakeUpLine

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledWakeUpLine (uint32_t WakeUpLine)

Function description

Check if the wake up line_x is enabled.

Parameters

- **WakeUpLine:** This parameter can be one of the following values:
  - LL_PWR_WAKEUP_LINE1
  - LL_PWR_WAKEUP_LINE2
  - LL_PWR_WAKEUP_LINE3
  - LL_PWR_WAKEUP_LINE4
  - LL_PWR_WAKEUP_LINE5
  - LL_PWR_WAKEUP_LINE6
  - LL_PWR_WAKEUP_LINE7
  - LL_PWR_WAKEUP_LINE8
  - LL_PWR_WAKEUP_LINE9
  - LL_PWR_WAKEUP_LINE10

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- WUCR1 WUPENx LL_PWR_IsEnabledWakeUpLine

LL_PWR_SetWakeUpLinePolarityLow

Function name

__STATIC_INLINE void LL_PWR_SetWakeUpLinePolarityLow (uint32_t WakeUpLine)

Function description

Set the wake up line polarity low for the event detection.

Parameters

- **WakeUpLine:** This parameter can be a combination of the following values:
  - LL_PWR_WAKEUP_LINE1
  - LL_PWR_WAKEUP_LINE2
  - LL_PWR_WAKEUP_LINE3
  - LL_PWR_WAKEUP_LINE4
  - LL_PWR_WAKEUP_LINE5
  - LL_PWR_WAKEUP_LINE6
  - LL_PWR_WAKEUP_LINE7
  - LL_PWR_WAKEUP_LINE8

Return values

- **None:**

Reference Manual to LL API cross reference:

- WUCR2 WUPPx LL_PWR_SetWakeUpLinePolarityLow

LL_PWR_SetWakeUpLinePolarityHigh

Function name

__STATIC_INLINE void LL_PWR_SetWakeUpLinePolarityHigh (uint32_t WakeUpLine)

Function description

Set the wake up line polarity high for the event detection.

Parameters

- **WakeUpLine:** This parameter can be a combination of the following values:
  - LL_PWR_WAKEUP_LINE1
  - LL_PWR_WAKEUP_LINE2
  - LL_PWR_WAKEUP_LINE3
  - LL_PWR_WAKEUP_LINE4
  - LL_PWR_WAKEUP_LINE5
  - LL_PWR_WAKEUP_LINE6
  - LL_PWR_WAKEUP_LINE7
  - LL_PWR_WAKEUP_LINE8

Return values

- **None:**

Reference Manual to LL API cross reference:

- WUCR2 WUPPx LL_PWR_SetWakeUpLinePolarityHigh

LL_PWR_GetWakeUpLinePolarity

Function name

__STATIC_INLINE uint32_t LL_PWR_GetWakeUpLinePolarity (uint32_t WakeUpLine)

Function description

Get the wake up line polarity for the event detection.

Parameters

- **WakeUpLine:** This parameter can be one of the following values:
  - LL_PWR_WAKEUP_LINE1
  - LL_PWR_WAKEUP_LINE2
  - LL_PWR_WAKEUP_LINE3
  - LL_PWR_WAKEUP_LINE4
  - LL_PWR_WAKEUP_LINE5
  - LL_PWR_WAKEUP_LINE6
  - LL_PWR_WAKEUP_LINE7
  - LL_PWR_WAKEUP_LINE8

Return values

- **State:** of bit (1 : polarity or 0 : polarity high).

Reference Manual to LL API cross reference:

- WUCR2 WUPPx LL_PWR_GetWakeUpLinePolarity

LL_PWR_SetWakeUpLineSignal0Selection

Function name

__STATIC_INLINE void LL_PWR_SetWakeUpLineSignal0Selection (uint32_t WakeUpLine)

Function description

Set the wakeup line_x selection 0.

Parameters

- **WakeUpLine:** This parameter can be one of the following values:
  - LL_PWR_WAKEUP_LINE1
  - LL_PWR_WAKEUP_LINE2
  - LL_PWR_WAKEUP_LINE3
  - LL_PWR_WAKEUP_LINE4
  - LL_PWR_WAKEUP_LINE5
  - LL_PWR_WAKEUP_LINE6
  - LL_PWR_WAKEUP_LINE7
  - LL_PWR_WAKEUP_LINE8

Return values

- **None:**

Reference Manual to LL API cross reference:

- WUCR3 WUSELx LL_PWR_SetWakeUpLineSignal0Selection

LL_PWR_SetWakeUpLineSignal1Selection

Function name

__STATIC_INLINE void LL_PWR_SetWakeUpLineSignal1Selection (uint32_t WakeUpLine)

Function description

Set the wakeup line_x selection 1.

Parameters

- **WakeUpLine:** This parameter can be one of the following values:
  - LL_PWR_WAKEUP_LINE1
  - LL_PWR_WAKEUP_LINE2
  - LL_PWR_WAKEUP_LINE3
  - LL_PWR_WAKEUP_LINE4
  - LL_PWR_WAKEUP_LINE5
  - LL_PWR_WAKEUP_LINE6
  - LL_PWR_WAKEUP_LINE7
  - LL_PWR_WAKEUP_LINE8

Return values

- **None:**

Reference Manual to LL API cross reference:

- WUCR3 WUSELx LL_PWR_SetWakeUpLineSignal1Selection

LL_PWR_SetWakeUpLineSignal2Selection

Function name

__STATIC_INLINE void LL_PWR_SetWakeUpLineSignal2Selection (uint32_t WakeUpLine)

Function description

Set the wakeup line_x selection 2.

Parameters

- **WakeUpLine:** This parameter can be one of the following values:
  - LL_PWR_WAKEUP_LINE1
  - LL_PWR_WAKEUP_LINE2
  - LL_PWR_WAKEUP_LINE3
  - LL_PWR_WAKEUP_LINE4
  - LL_PWR_WAKEUP_LINE5
  - LL_PWR_WAKEUP_LINE6
  - LL_PWR_WAKEUP_LINE7
  - LL_PWR_WAKEUP_LINE8

Return values

- **None:**

Reference Manual to LL API cross reference:

- WUCR3 WUSELx LL_PWR_SetWakeUpLineSignal2Selection

LL_PWR_SetWakeUpLineSignal3Selection

Function name

__STATIC_INLINE void LL_PWR_SetWakeUpLineSignal3Selection (uint32_t WakeUpLine)

Function description

Set the wakeup line_x selection 3.

Parameters

- **WakeUpLine:** This parameter can be one of the following values:
  - LL_PWR_WAKEUP_LINE1
  - LL_PWR_WAKEUP_LINE2
  - LL_PWR_WAKEUP_LINE3
  - LL_PWR_WAKEUP_LINE4
  - LL_PWR_WAKEUP_LINE5
  - LL_PWR_WAKEUP_LINE6
  - LL_PWR_WAKEUP_LINE7
  - LL_PWR_WAKEUP_LINE8

Return values

- **None:**

Reference Manual to LL API cross reference:

- WUCR3 WUSELx LL_PWR_SetWakeUpLineSignal3Selection

LL_PWR_GetWakeUpLineSignalSelection

Function name

__STATIC_INLINE uint32_t LL_PWR_GetWakeUpLineSignalSelection (uint32_t WakeUpLine)

Function description

Get the wakeup line_x selection.

Parameters

- **WakeUpLine:** This parameter can be one of the following values:
  - LL_PWR_WAKEUP_LINE1
  - LL_PWR_WAKEUP_LINE2
  - LL_PWR_WAKEUP_LINE3
  - LL_PWR_WAKEUP_LINE4
  - LL_PWR_WAKEUP_LINE5
  - LL_PWR_WAKEUP_LINE6
  - LL_PWR_WAKEUP_LINE7
  - LL_PWR_WAKEUP_LINE8

Reference Manual to LL API cross reference:

- WUCR3 WUSELx LL_PWR_GetWakeUpLineSignalSelection

LL_PWR_EnableBatteryCharging

Function name

__STATIC_INLINE void LL_PWR_EnableBatteryCharging (void)

Function description

Enable battery charging.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR VBE LL_PWR_EnableBatteryCharging

LL_PWR_DisableBatteryCharging

Function name

__STATIC_INLINE void LL_PWR_DisableBatteryCharging (void)

Function description

Disable battery charging.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR VBE LL_PWR_DisableBatteryCharging

LL_PWR_IsEnabledBatteryCharging

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledBatteryCharging (void)

Function description

Check if battery charging is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- BDCR VBE LL_PWR_IsEnabledBatteryCharging

LL_PWR_SetBattChargResistor

Function name

__STATIC_INLINE void LL_PWR_SetBattChargResistor (uint32_t Resistor)

Function description

Set the Battery charge resistor impedance.

Parameters

- **Resistor:** This parameter can be one of the following values:
  - LL_PWR_BATT_CHARG_RESISTOR_5K
  - LL_PWR_BATT_CHARG_RESISTOR_1_5K

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR VBRS LL_PWR_SetBattChargResistor

LL_PWR_GetBattChargResistor

Function name

__STATIC_INLINE uint32_t LL_PWR_GetBattChargResistor (void)

Function description

Get the Battery charge resistor impedance.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_BATT_CHARG_RESISTOR_5K
  - LL_PWR_BATT_CHARG_RESISTOR_1_5K

Reference Manual to LL API cross reference:

- BDCR VBRS LL_PWR_GetBattChargResistor

LL_PWR_EnableBkUpAccess

Function name

__STATIC_INLINE void LL_PWR_EnableBkUpAccess (void)

Function description

Enable access to the backup domain.

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBPR DBP LL_PWR_EnableBkUpAccess

LL_PWR_DisableBkUpAccess

Function name

__STATIC_INLINE void LL_PWR_DisableBkUpAccess (void)

Function description

Disable access to the backup domain.

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBPR DBP LL_PWR_DisableBkUpAccess

LL_PWR_IsEnabledBkUpAccess

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledBkUpAccess (void)

Function description

Check if the access to backup domain is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DBPR DBP LL_PWR_IsEnabledBkUpAccess

LL_PWR_EnablePUPDConfig

Function name

__STATIC_INLINE void LL_PWR_EnablePUPDConfig (void)

Function description

Enable the pull-up and pull-down configuration.

Return values

- **None:**

Reference Manual to LL API cross reference:

- APCR APC LL_PWR_EnablePUPDConfig

LL_PWR_DisablePUPDConfig

Function name

__STATIC_INLINE void LL_PWR_DisablePUPDConfig (void)

Function description

Disable the pull-up and pull-down configuration.

Return values

- **None:**

Reference Manual to LL API cross reference:

- APCR APC LL_PWR_DisablePUPDConfig

LL_PWR_IsEnabledPUPDConfig

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledPUPDConfig (void)

Function description

Check if the pull-up and pull-down configuration is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- APCR APC LL_PWR_IsEnabledPUPDConfig

LL_PWR_EnableGPIOPullUp

Function name

__STATIC_INLINE void LL_PWR_EnableGPIOPullUp (uint32_t GPIOPort, uint32_t GPIOPin)

Function description

Enable GPIO pull-up in Standby and Shutdown modes #ifdef SRAM3_BASE.

Parameters

- **GPIOPort:** This parameter can be one of the following values:
  - LL_PWR_GPIO_PORTA
  - LL_PWR_GPIO_PORTB
  - LL_PWR_GPIO_PORTC
  - LL_PWR_GPIO_PORTD
  - LL_PWR_GPIO_PORTE #ifdef SRAM3_BASE
  - LL_PWR_GPIO_PORTF (*) #endif
  - LL_PWR_GPIO_PORTG
  - LL_PWR_GPIO_PORTH
- **GPIOPin:** This parameter can be a combination of the following values:
  - LL_PWR_GPIO_PIN_0
  - LL_PWR_GPIO_PIN_1
  - LL_PWR_GPIO_PIN_2
  - LL_PWR_GPIO_PIN_3
  - LL_PWR_GPIO_PIN_4
  - LL_PWR_GPIO_PIN_5
  - LL_PWR_GPIO_PIN_6
  - LL_PWR_GPIO_PIN_7
  - LL_PWR_GPIO_PIN_8
  - LL_PWR_GPIO_PIN_9
  - LL_PWR_GPIO_PIN_10
  - LL_PWR_GPIO_PIN_11
  - LL_PWR_GPIO_PIN_12
  - LL_PWR_GPIO_PIN_13
  - LL_PWR_GPIO_PIN_14
  - LL_PWR_GPIO_PIN_15

Return values

- **None.:**

Notes

- Parameters noted (*) are only available on STM32U3B5xx/STM32U3C5xx devices. #endif

Reference Manual to LL API cross reference:

- PUCRx PUx LL_PWR_EnableGPIOPullUp

LL_PWR_DisableGPIOPullUp

Function name

__STATIC_INLINE void LL_PWR_DisableGPIOPullUp (uint32_t GPIOPort, uint32_t GPIOPin)

Function description

Disable GPIO pull-up in Standby and Shutdown modes #ifdef SRAM3_BASE.

Parameters

- **GPIOPort:** This parameter can be one of the following values:
  - LL_PWR_GPIO_PORTA
  - LL_PWR_GPIO_PORTB
  - LL_PWR_GPIO_PORTC
  - LL_PWR_GPIO_PORTD
  - LL_PWR_GPIO_PORTE #ifdef SRAM3_BASE

LL_PWR_SetI3CPullUpConfig2

Function name

__STATIC_INLINE void LL_PWR_SetI3CPullUpConfig2 (uint32_t Gpio)

Function description

Set I3C pull-up configuration for GPIO on port C-D-G-H.

Parameters

- **Gpio:** This parameter can be a combination of the following values:
  - LL_PWR_I3CPUCR2_PC0
  - LL_PWR_I3CPUCR2_PC1
  - LL_PWR_I3CPUCR2_PD12
  - LL_PWR_I3CPUCR2_PD13
  - LL_PWR_I3CPUCR2_PG7
  - LL_PWR_I3CPUCR2_PG8
  - LL_PWR_I3CPUCR2_PG13
  - LL_PWR_I3CPUCR2_PG14
  - LL_PWR_I3CPUCR2_PH3
  - LL_PWR_I3CPUCR2_ALL

Return values

- **None:**

- I3CPUCR2 PHx_I3CPU LL_PWR_GetI3CPullUpConfig2

LL_PWR_GetI3CPullUpConfig2

Function name

__STATIC_INLINE uint32_t LL_PWR_GetI3CPullUpConfig2 (void)

Function description

Get I3C pull-up configuration for GPIO on port C-D-G-H.

Return values

- **Returned:** value can be a combination of the following values:
  - LL_PWR_I3CPUCR1_PA1
  - LL_PWR_I3CPUCR1_PA6
  - LL_PWR_I3CPUCR1_PA7
  - LL_PWR_I3CPUCR1_PB2
  - LL_PWR_I3CPUCR1_PB6

LL_PWR_IsActiveFlag_SB

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_SB (void)

Function description

Indicate whether the system was in standby mode or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR SBF LL_PWR_IsActiveFlag_SB

LL_PWR_IsActiveFlag_STOP

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_STOP (void)

Function description

Indicate whether the system was in stop mode or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR STOPF LL_PWR_IsActiveFlag_STOP

LL_PWR_IsActiveFlag_BOOST

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_BOOST (void)

Function description

Indicate whether the EPOD (Embedded Power Distribution) booster is ready OR not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- VOSR BOOSTRDY LL_PWR_IsActiveFlag_BOOST

LL_PWR_IsActiveFlag_REGULATOR

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_REGULATOR (void)

Function description

Indicate whether the regulator supply is LDO or SMPS.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMSR REGS LL_PWR_IsActiveFlag_REGULATOR

LL_PWR_IsActiveFlag_PVDO

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_PVDO (void)

Function description

Indicate whether the VDD voltage is below the threshold or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMSR PVDO LL_PWR_IsActiveFlag_PVDO

LL_PWR_IsActiveFlag_VDDUSB

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_VDDUSB (void)

Function description

Indicate whether the VDDUSB is below the threshold of monitor or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMSR VDDUSBRDY LL_PWR_IsActiveFlag_VDDUSB

LL_PWR_IsActiveFlag_VDDIO2

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_VDDIO2 (void)

Function description

Indicate whether the VDDIO2 is below the threshold of monitor or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMSR VDDIO2RDY LL_PWR_IsActiveFlag_VDDIO2

LL_PWR_IsActiveFlag_VDDA1

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_VDDA1 (void)

Function description

Indicate whether the VDDA1 is below the threshold of monitor 1 or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMSR VDDA1RDY LL_PWR_IsActiveFlag_VDDA1

LL_PWR_IsActiveFlag_VDDA2

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_VDDA2 (void)

Function description

Indicate whether the VDDA2 is below the threshold of monitor 2 or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SVMSR VDDA2RDY LL_PWR_IsActiveFlag_VDDA2

LL_PWR_IsActiveFlag_WU1

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_WU1 (void)

Function description

Indicate whether a wakeup event is detected on wake up line 1.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- WUSR WUF1 LL_PWR_IsActiveFlag_WU1

LL_PWR_IsActiveFlag_WU2

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_WU2 (void)

Function description

Indicate whether a wakeup event is detected on wake up line 2.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- WUSR WUF2 LL_PWR_IsActiveFlag_WU2

LL_PWR_IsActiveFlag_WU3

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_WU3 (void)

Function description

Indicate whether a wakeup event is detected on wake up line 3.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- WUSR WUF3 LL_PWR_IsActiveFlag_WU3

LL_PWR_IsActiveFlag_WU4

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_WU4 (void)

Function description

Indicate whether a wakeup event is detected on wake up line 4.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- WUSR WUF4 LL_PWR_IsActiveFlag_WU4

LL_PWR_IsActiveFlag_WU5

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_WU5 (void)

Function description

Indicate whether a wakeup event is detected on wake up line 5.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- WUSR WUF5 LL_PWR_IsActiveFlag_WU5

LL_PWR_IsActiveFlag_WU6

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_WU6 (void)

Function description

Indicate whether a wakeup event is detected on wake up line 6.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- WUSR WUF6 LL_PWR_IsActiveFlag_WU6

LL_PWR_IsActiveFlag_WU7

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_WU7 (void)

Function description

Indicate whether a wakeup event is detected on wake up line 7.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- WUSR WUF7 LL_PWR_IsActiveFlag_WU7

LL_PWR_IsActiveFlag_WU8

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_WU8 (void)

Function description

Indicate whether a wakeup event is detected on wake up line 8.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- WUSR WUF8 LL_PWR_IsActiveFlag_WU8

LL_PWR_IsActiveFlag_WU9

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_WU9 (void)

Function description

Indicate whether a wakeup event is detected on wake up line 9.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- WUSR WUF9 LL_PWR_IsActiveFlag_WU9

LL_PWR_IsActiveFlag_WU10

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_WU10 (void)

Function description

Indicate whether a wakeup event is detected on wake up line 10.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- WUSR WUF10 LL_PWR_IsActiveFlag_WU10

LL_PWR_ClearFlag_STOP

Function name

__STATIC_INLINE void LL_PWR_ClearFlag_STOP (void)

Function description

Clear stop flag.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CSSF LL_PWR_ClearFlag_STOP

LL_PWR_ClearFlag_SB

Function name

__STATIC_INLINE void LL_PWR_ClearFlag_SB (void)

Function description

Clear standby flag.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CSSF LL_PWR_ClearFlag_SB

LL_PWR_ClearFlag_WU1

Function name

__STATIC_INLINE void LL_PWR_ClearFlag_WU1 (void)

Check if privileged mode for secure items is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- PRIVCFGR SPRIV LL_PWR_IsEnabledSecurePrivilege

LL_PWR_ConfigSecure

Function name

__STATIC_INLINE void LL_PWR_ConfigSecure (uint32_t SecureConfig)

Function description

Configure secure attribute mode.

Parameters

- **SecureConfig:** This parameter can be the full combination of the following values:
  - LL_PWR_WAKEUP_LINE1_NSEC or LL_PWR_WAKEUP_LINE1_SEC
  - LL_PWR_WAKEUP_LINE2_NSEC or LL_PWR_WAKEUP_LINE2_SEC
  - LL_PWR_WAKEUP_LINE3_NSEC or LL_PWR_WAKEUP_LINE3_SEC
  - LL_PWR_WAKEUP_LINE4_NSEC or LL_PWR_WAKEUP_LINE4_SEC
  - LL_PWR_WAKEUP_LINE5_NSEC or LL_PWR_WAKEUP_LINE5_SEC
  - LL_PWR_WAKEUP_LINE6_NSEC or LL_PWR_WAKEUP_LINE6_SEC
  - LL_PWR_WAKEUP_LINE7_NSEC or LL_PWR_WAKEUP_LINE7_SEC
  - LL_PWR_WAKEUP_LINE8_NSEC or LL_PWR_WAKEUP_LINE8_SEC
  - LL_PWR_WAKEUP_LINE9_NSEC or LL_PWR_WAKEUP_LINE9_SEC
  - LL_PWR_WAKEUP_LINE10_NSEC or LL_PWR_WAKEUP_LINE10_SEC
  - LL_PWR_LPM_NSEC or LL_PWR_LPM_SEC
  - LL_PWR_VDM_NSEC or LL_PWR_VDM_SEC
  - LL_PWR_VB_NSEC or LL_PWR_VB_SEC
  - LL_PWR_APC_NSEC or LL_PWR_APC_SEC

Return values

- **None.:**

Notes

- This API can be executed only by CPU in secure mode.

- SECCFGR APCSEC LL_PWR_ConfigSecure

LL_PWR_GetConfigSecure

Function name

__STATIC_INLINE uint32_t LL_PWR_GetConfigSecure (void)

Function description

Get secure attribute configuration.

Return values

- **Returned:** value is the combination of the following values:
  - LL_PWR_WAKEUP_LINE1_NSEC or LL_PWR_WAKEUP_LINE1_SEC
  - LL_PWR_WAKEUP_LINE2_NSEC or LL_PWR_WAKEUP_LINE2_SEC
  - LL_PWR_WAKEUP_LINE3_NSEC or LL_PWR_WAKEUP_LINE3_SEC
  - LL_PWR_WAKEUP_LINE4_NSEC or LL_PWR_WAKEUP_LINE4_SEC
  - LL_PWR_WAKEUP_LINE5_NSEC or LL_PWR_WAKEUP_LINE5_SEC
  - LL_PWR_WAKEUP_LINE6_NSEC or LL_PWR_WAKEUP_LINE6_SEC
  - LL_PWR_WAKEUP_LINE7_NSEC or LL_PWR_WAKEUP_LINE7_SEC
  - LL_PWR_WAKEUP_LINE8_NSEC or LL_PWR_WAKEUP_LINE8_SEC
  - LL_PWR_WAKEUP_LINE9_NSEC or LL_PWR_WAKEUP_LINE9_SEC
  - LL_PWR_WAKEUP_LINE10_NSEC or LL_PWR_WAKEUP_LINE10_SEC
  - LL_PWR_LPM_NSEC or LL_PWR_LPM_SEC
  - LL_PWR_VDM_NSEC or LL_PWR_VDM_SEC
  - LL_PWR_VB_NSEC or LL_PWR_VB_SEC
  - LL_PWR_APC_NSEC or LL_PWR_APC_SEC

LL_PWR_WAKEUP_LINE4_NSEC

Wake up line 4 nsecure mode

LL_PWR_WAKEUP_LINE4_SEC

Wake up line 4 secure mode

LL_PWR_WAKEUP_LINE5_NSEC

Wake up line 5 nsecure mode

LL_PWR_WAKEUP_LINE5_SEC

Wake up line 5 secure mode

LL_PWR_WAKEUP_LINE6_NSEC

Wake up line 6 nsecure mode

LL_PWR_WAKEUP_LINE6_SEC

Wake up line 6 secure mode

LL_PWR_WAKEUP_LINE7_NSEC

Wake up line 7 nsecure mode

LL_PWR_WAKEUP_LINE7_SEC

Wake up line 7 secure mode

LL_PWR_WAKEUP_LINE8_NSEC

Wake up line 8 nsecure mode

LL_PWR_WAKEUP_LINE8_SEC

Wake up line 8 secure mode

LL_PWR_WAKEUP_LINE9_NSEC

Wake up line 9 nsecure mode

LL_PWR_WAKEUP_LINE9_SEC

Wake up line 9 secure mode

LL_PWR_WAKEUP_LINE10_NSEC

Wake up line 10 nsecure mode

LL_PWR_WAKEUP_LINE10_SEC

Wake up line 10 secure mode

LL_PWR_LPM_NSEC

Low-power modes nsecure mode

LL_PWR_LPM_SEC

Low-power modes secure mode

LL_PWR_VDM_NSEC

Voltage detection and monitoring nsecure mode

LL_PWR_VDM_SEC

Voltage detection and monitoring secure mode

LL_PWR_VB_NSEC

Backup domain nsecure mode

LL_PWR_VB_SEC

Backup domain secure mode

LL_PWR_APC_NSEC

Pull-up/pull-down nsecure mode

LL_PWR_APC_SEC

Pull-up/pull-down secure mode

Low Power Mode Selection

LL_PWR_MODE_STOP0

Stop 0 mode

LL_PWR_MODE_STOP1

Stop 1 mode

LL_PWR_MODE_STOP2

Stop 2 mode

LL_PWR_MODE_STOP3

Stop 3 mode

LL_PWR_MODE_STANDBY

Standby mode

LL_PWR_MODE_SHUTDOWN

Shutdown mode

PWR PKA SRAM Content Retention in Stop Mode

LL_PWR_PKARAM_STOP_NO_RETENTION

PKA SRAM no retention in Stop modes (Stop 0, 1, 2, 3)

LL_PWR_PKARAM_STOP_RETENTION

PKA SRAM content retained in Stop modes (Stop 0, 1, 2, 3)

PWR Power Voltage Detector Level Selection

LL_PWR_PVDLEVEL_0

Voltage threshold detected by PVD 2.0 V

LL_PWR_PVDLEVEL_1

Voltage threshold detected by PVD 2.2 V

LL_PWR_PVDLEVEL_2

Voltage threshold detected by PVD 2.4 V

LL_PWR_PVDLEVEL_3

Voltage threshold detected by PVD 2.5 V

LL_PWR_PVDLEVEL_4

Voltage threshold detected by PVD 2.6 V

LL_PWR_PVDLEVEL_5

Voltage threshold detected by PVD 2.8 V

LL_PWR_PVDLEVEL_6

Voltage threshold detected by PVD 2.9 V

LL_PWR_PVDLEVEL_7

External input analog voltage on PVD_IN pin, compared to internal VREFINT level

PWR Regulator Supply Selection

LL_PWR_LDO_SUPPLY

LDO regulator supply

LL_PWR_SMPS_SUPPLY

SMPS regulator supply

PWR SRAM1 Content Retention in Stop Mode

LL_PWR_SRAM1_STOP_NO_RETENTION

SRAM1 no retention in Stop modes (Stop 0, 1, 2, 3)

LL_PWR_SRAM1_STOP_PAGE1_RETENTION

SRAM1 page 1 retention Stop modes (Stop 0, 1, 2, 3)

LL_PWR_SRAM1_STOP_PAGE2_RETENTION

SRAM1 page 2 retention Stop modes (Stop 0, 1, 2, 3)

LL_PWR_SRAM1_STOP_PAGE3_RETENTION

SRAM1 page 3 retention Stop modes (Stop 0, 1, 2, 3)

LL_PWR_SRAM1_STOP_PAGE4_RETENTION

SRAM1 page 4 retention Stop modes (Stop 0, 1, 2, 3)

LL_PWR_SRAM1_STOP_PAGE5_RETENTION

SRAM1 page 5 retention Stop modes (Stop 0, 1, 2, 3)

LL_PWR_SRAM1_STOP_PAGE6_RETENTION

SRAM1 page 6 retention Stop modes (Stop 0, 1, 2, 3)

LL_PWR_SRAM1_STOP_PAGE7_RETENTION

SRAM1 page 7 retention Stop modes (Stop 0, 1, 2, 3)

LL_PWR_SRAM1_STOP_FULL_RETENTION

SRAM1 all pages retention in Stop modes (Stop 0, 1, 2, 3)

PWR SRAM2 Content Retention in Standby Mode

LL_PWR_SRAM2_SB_NO_RETENTION

SRAM2 no retention in Standby mode

LL_PWR_SRAM2_SB_PAGE1_RETENTION

SRAM2 page 1 retention in Standby mode

LL_PWR_SRAM2_SB_PAGE2_RETENTION

SRAM2 page 2 retention in Standby mode

LL_PWR_SRAM2_SB_PAGE3_RETENTION

SRAM2 page 3 retention in Standby mode

LL_PWR_SRAM2_SB_FULL_RETENTION

SRAM2 all pages retention in Standby mode

PWR SRAM2 Content Retention in Stop Mode

LL_PWR_SRAM2_STOP_NO_RETENTION

SRAM2 no retention in Stop modes (Stop 0, 1, 2, 3)

LL_PWR_SRAM2_STOP_PAGE1_RETENTION

SRAM2 page 1 retention Stop modes (Stop 0, 1, 2, 3)

LL_PWR_SRAM2_STOP_PAGE2_RETENTION

SRAM2 page 2 retention Stop modes (Stop 0, 1, 2, 3)

LL_PWR_SRAM2_STOP_PAGE3_RETENTION

SRAM2 page 3 retention Stop modes (Stop 0, 1, 2, 3)

LL_PWR_SRAM2_STOP_FULL_RETENTION

SRAM2 all pages retention in Stop modes (Stop 0, 1, 2, 3)

PWR Voltage scaling range selection

LL_PWR_REGU_VOLTAGE_SCALE1

Voltage scaling range 1 (highest frequency)

LL_PWR_REGU_VOLTAGE_SCALE2

Voltage scaling range 2 (lowest power)

PWR Wake Up Line

LL_PWR_WAKEUP_LINE1

Wakeup line 1 enable

LL_PWR_WAKEUP_LINE2

Wakeup line 2 enable

LL_PWR_WAKEUP_LINE3

Wakeup line 3 enable

LL_PWR_WAKEUP_LINE4

Wakeup line 4 enable

LL_PWR_WAKEUP_LINE5

Wakeup line 5 enable

LL_PWR_WAKEUP_LINE6

Wakeup line 6 enable

LL_PWR_WAKEUP_LINE7

Wakeup line 7 enable

LL_PWR_WAKEUP_LINE8

Wakeup line 8 enable

Wakeup line 9 enable

LL_PWR_WAKEUP_LINE10

Wakeup line 10 enable

PWR Wakeup line Selection

LL_PWR_WAKEUP_LINE_SELECTION_0

Wakeup line selection 0

LL_PWR_WAKEUP_LINE_SELECTION_1

Wakeup line selection 1

LL_PWR_WAKEUP_LINE_SELECTION_2

Wakeup line selection 2

LL_PWR_WAKEUP_LINE_SELECTION_3

Wakeup line selection 3

Common Write and Read Registers Macros

LL_PWR_WriteReg

Description:

- Write a value in PWR register.

Parameters:

- __REG__: Register to be written.
- __VALUE__: Value to be written in the register.

Return value:

- None.

LL_PWR_ReadReg

Description:

- Read a value in PWR register.

Parameters:

- __REG__: Register to be read.

Return value:

- Register: value.

PWR SRAM Power Down

LL_PWR_SRAM1_POWERDOWN

SRAM1 power down

LL_PWR_SRAM2_POWERDOWN

SRAM2 power down

94 LL RCC Generic Driver

94.1 RCC Firmware driver registers structures

94.1.1 LL_RCC_ClocksTypeDef

LL_RCC_ClocksTypeDef is defined in the stm32u3xx_ll_rcc.h

Data Fields

- ***uint32_t SYSCLK_Frequency***
- ***uint32_t HCLK_Frequency***
- ***uint32_t PCLK1_Frequency***
- ***uint32_t PCLK2_Frequency***
- ***uint32_t PCLK3_Frequency***

Field Documentation

- ***uint32_t LL_RCC_ClocksTypeDef::SYSCLK_Frequency***
  SYSCLK clock frequency
- ***uint32_t LL_RCC_ClocksTypeDef::HCLK_Frequency***
  HCLK clock frequency
- ***uint32_t LL_RCC_ClocksTypeDef::PCLK1_Frequency***
  PCLK1 clock frequency
- ***uint32_t LL_RCC_ClocksTypeDef::PCLK2_Frequency***
  PCLK2 clock frequency
- ***uint32_t LL_RCC_ClocksTypeDef::PCLK3_Frequency***
  PCLK7 clock frequency

94.2 RCC Firmware driver API description

The following section lists the various functions of the RCC library.

94.2.1 Detailed description of functions

LL_RCC_HSE_Enable

Function name

__STATIC_INLINE void LL_RCC_HSE_Enable (void)

Function description

Enable HSE crystal oscillator (HSE ON)

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSEON LL_RCC_HSE_Enable

LL_RCC_HSE_Disable

Function name

__STATIC_INLINE void LL_RCC_HSE_Disable (void)

Function description

Disable HSE crystal oscillator (HSE ON)

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSEON LL_RCC_HSE_Disable

LL_RCC_HSE_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RCC_HSE_IsEnabled (void)

Function description

Check if HSE is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR HSEON LL_RCC_HSE_IsEnabled

LL_RCC_HSE_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_HSE_IsReady (void)

Function description

Check if HSE oscillator Ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR HSERDY LL_RCC_HSE_IsReady

LL_RCC_HSE_EnableCSS

Function name

__STATIC_INLINE void LL_RCC_HSE_EnableCSS (void)

Function description

Enable the Clock Security System.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSECSSON LL_RCC_HSE_EnableCSS

LL_RCC_HSE_IsEnabledCSS

Function name

__STATIC_INLINE uint32_t LL_RCC_HSE_IsEnabledCSS (void)

Function description

Check if HSE CSS is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR HSECSSON LL_RCC_HSE_IsEnabledCSS

LL_RCC_HSE_EnableBypass

Function name

__STATIC_INLINE void LL_RCC_HSE_EnableBypass (void)

Function description

Enable bypass of the oscillator with an external clock.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSEBYP LL_RCC_HSE_EnableBypass

LL_RCC_HSE_DisableBypass

Function name

__STATIC_INLINE void LL_RCC_HSE_DisableBypass (void)

Function description

Disable bypass the oscillator with an external clock.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSEBYP LL_RCC_HSE_DisableBypass

LL_RCC_HSE_IsEnabledBypass

Function name

__STATIC_INLINE uint32_t LL_RCC_HSE_IsEnabledBypass (void)

Function description

Check if HSE bypass is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR HSEBYP LL_RCC_HSE_IsEnabledBypass

LL_RCC_HSE_SetClockMode

Function name

__STATIC_INLINE void LL_RCC_HSE_SetClockMode (uint32_t ClockMode)

Function description

Set external clock mode in bypass mode.

Parameters

- **ClockMode:** This parameter can be one of the following values:
  - LL_RCC_HSE_ANALOG_MODE
  - LL_RCC_HSE_DIGITAL_MODE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSEEXT LL_RCC_HSE_SetClockMode

LL_RCC_HSE_GetClockMode

Function name

__STATIC_INLINE uint32_t LL_RCC_HSE_GetClockMode (void)

Function description

Get external clock mode in bypass mode.

Return values

- **Return:** can be one of the following values:
  - LL_RCC_HSE_ANALOG_MODE
  - LL_RCC_HSE_DIGITAL_MODE

Reference Manual to LL API cross reference:

- CR HSEEXT LL_RCC_HSE_GetClockMode

LL_RCC_HSI_EnableInStopMode

Function name

__STATIC_INLINE void LL_RCC_HSI_EnableInStopMode (void)

Function description

Enable HSI even in stop mode.

Return values

- **None:**

Notes

- HSI oscillator is forced ON even in Stop mode

Reference Manual to LL API cross reference:

- CR HSIKERON LL_RCC_HSI_EnableInStopMode

LL_RCC_HSI_DisableInStopMode

Function name

__STATIC_INLINE void LL_RCC_HSI_DisableInStopMode (void)

Function description

Disable HSI in stop mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSIKERON LL_RCC_HSI_DisableInStopMode

LL_RCC_HSI_IsEnabledInStopMode

Function name

__STATIC_INLINE uint32_t LL_RCC_HSI_IsEnabledInStopMode (void)

Function description

Check if HSI is enabled in stop mode.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR HSIKERON LL_RCC_HSI_IsEnabledInStopMode

LL_RCC_HSI_Enable

Function name

__STATIC_INLINE void LL_RCC_HSI_Enable (void)

Function description

Enable HSI oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSION LL_RCC_HSI_Enable

LL_RCC_HSI_Disable

Function name

__STATIC_INLINE void LL_RCC_HSI_Disable (void)

Function description

Disable HSI oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSION LL_RCC_HSI_Disable

LL_RCC_HSI_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RCC_HSI_IsEnabled (void)

Function description

Check if HSI is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR HSION LL_RCC_HSI_IsEnabled

LL_RCC_HSI_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_HSI_IsReady (void)

Function description

Check if HSI clock is ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR HSIRDY LL_RCC_HSI_IsReady

LL_RCC_HSI_GetCalibration

Function name

__STATIC_INLINE uint32_t LL_RCC_HSI_GetCalibration (void)

Function description

Get HSI Calibration value.

Return values

- **Between:** Min_Data = 0 and Max_Data = 4095

Notes

- When HSITRIM is written, HSICAL is updated with the sum of HSITRIM and the factory trim value

Reference Manual to LL API cross reference:

- ICSCR3 HSICAL LL_RCC_HSI_GetCalibration

LL_RCC_HSI_SetCalibTrimming

Function name

__STATIC_INLINE void LL_RCC_HSI_SetCalibTrimming (uint32_t Value)

Function description

Set HSI Calibration trimming.

Parameters

- **Value:** Between Min_Data = 0 and Max_Data = 31

Return values

- **None:**

Notes

- user-programmable trimming value that is added to the HSICAL
- Default value is 16, which, when added to the HSICAL value, should trim the HSI to 16 MHz +/- 1 %

Reference Manual to LL API cross reference:

- ICSCR3 HSITRIM LL_RCC_HSI_SetCalibTrimming

LL_RCC_HSI_GetCalibTrimming

Function name

__STATIC_INLINE uint32_t LL_RCC_HSI_GetCalibTrimming (void)

Function description

Get HSI Calibration trimming.

Return values

- **Between:** Min_Data = 0 and Max_Data = 31

Reference Manual to LL API cross reference:

- ICSCR3 HSITRIM LL_RCC_HSI_GetCalibTrimming

LL_RCC_HSI48_Enable

Function name

__STATIC_INLINE void LL_RCC_HSI48_Enable (void)

Function description

Enable HSI48 oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSI48ON LL_RCC_HSI48_Enable

LL_RCC_HSI48_Disable

Function name

__STATIC_INLINE void LL_RCC_HSI48_Disable (void)

Function description

Disable HSI48 oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSI48ON LL_RCC_HSI48_Disable

LL_RCC_HSI48_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RCC_HSI48_IsEnabled (void)

Function description

Check if HSI48 is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR HSI48ON LL_RCC_HSI48_IsEnabled

LL_RCC_HSI48_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_HSI48_IsReady (void)

Function description

Check if HSI48 clock is ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR HSI48RDY LL_RCC_HSI48_IsReady

LL_RCC_HSI48_GetCalibration

Function name

__STATIC_INLINE uint32_t LL_RCC_HSI48_GetCalibration (void)

Function description

Get HSI48 Calibration value.

Return values

- **Between:** Min_Data = 0 and Max_Data = 512

Notes

- Read value initialized at startup with the factory-programmed HSI48 calibration trim value

Reference Manual to LL API cross reference:

- CRRCR HSI48CAL LL_RCC_HSI48_GetCalibration

LL_RCC_MSI_SetMSIxClockRange

Function name

__STATIC_INLINE void LL_RCC_MSI_SetMSIxClockRange (void)

Function description

Set MSI clock range with (MSISDIV[1:0] and MSIKDIV[1:0])

Return values

- **None:**

Notes

- Set the MSIS and MSIK clocks range with (MSISDIV[1:0] and MSIKDIV[1:0]) instead of (MSISDIVS[1:0] and MSIKDIVS[1:0])

Reference Manual to LL API cross reference:

- ICSCR1 MSIRGSEL LL_RCC_MSI_SetMSIxClockRange

LL_RCC_MSI_GetMSIxClockRange

Function name

__STATIC_INLINE uint32_t LL_RCC_MSI_GetMSIxClockRange (void)

Function description

Get MSI clock range.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_MSI_CLOCK_RANGE_MSIXDIVS
  - LL_RCC_MSI_CLOCK_RANGE_MSIXDIV

Reference Manual to LL API cross reference:

- ICSCR1 MSIRGSEL LL_RCC_MSI_GetMSIxClockRange

LL_RCC_MSI_SetBiasMode

Function name

__STATIC_INLINE void LL_RCC_MSI_SetBiasMode (uint32_t MSIBiasMode)

Function description

Set MSI bias mode.

Parameters

- **MSIBiasMode:** This parameter can be one of the following values:
  - LL_RCC_MSI_BIAS_MODE_CONTINUOUS
  - LL_RCC_MSI_BIAS_MODE_SAMPLING

Return values

- **None:**

Notes

- Set MSI bias mode - continuous mode maintains the output clocks accuracy but lead to higher consumption

Reference Manual to LL API cross reference:

- ICSCR1 MSIBIAS LL_RCC_MSI_SetBiasMode

LL_RCC_MSI_GetBiasMode

Function name

__STATIC_INLINE uint32_t LL_RCC_MSI_GetBiasMode (void)

Function description

Get MSI bias mode.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_MSI_BIAS_MODE_CONTINUOUS
  - LL_RCC_MSI_BIAS_MODE_SAMPLING

Reference Manual to LL API cross reference:

- ICSCR1 MSIBIAS LL_RCC_MSI_GetBiasMode

LL_RCC_MSIS_Enable

Function name

__STATIC_INLINE void LL_RCC_MSIS_Enable (void)

Function description

Enable MSIS oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR MSISON LL_RCC_MSIS_Enable

LL_RCC_MSIS_Disable

Function name

__STATIC_INLINE void LL_RCC_MSIS_Disable (void)

Function description

Disable MSIS oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR MSISON LL_RCC_MSIS_Disable

LL_RCC_MSIS_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RCC_MSIS_IsEnabled (void)

Function description

Check if MSIS is enabled or not.

Return values

- **1:** or 0

Reference Manual to LL API cross reference:

- CR MSISON LL_RCC_MSIS_IsEnabled

LL_RCC_MSIS_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_MSIS_IsReady (void)

Function description

Check if MSIS clock is ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR MSISRDY LL_RCC_MSIS_IsReady

LL_RCC_MSIS_SetClockSource

Function name

__STATIC_INLINE void LL_RCC_MSIS_SetClockSource (uint32_t MSISClockSource)

Function description

Set MSIS clock source.

Parameters

- **MSISClockSource:** This parameter can be one of the following values:
  - LL_RCC_MSIS_CLOCK_SOURCE_RC0 (96MHz)
  - LL_RCC_MSIS_CLOCK_SOURCE_RC1 (24MHz)

Return values

- **None:**

Notes

- Select the RC oscillator used to generate MSIS clock

Reference Manual to LL API cross reference:

- ICSCR1 MSISSEL LL_RCC_MSIS_SetClockSource

LL_RCC_MSIS_GetClockSource

Function name

__STATIC_INLINE uint32_t LL_RCC_MSIS_GetClockSource (void)

Function description

Get MSIS clock source.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_MSIS_CLOCK_SOURCE_RC0 (96MHz)
  - LL_RCC_MSIS_CLOCK_SOURCE_RC1 (24MHz)

Reference Manual to LL API cross reference:

- ICSCR1 MSISSEL LL_RCC_MSIS_GetClockSource

LL_RCC_MSIS_SetClockDivision

Function name

__STATIC_INLINE void LL_RCC_MSIS_SetClockDivision (uint32_t MSISClockDivision)

Function description

Set MSIS clock division.

Parameters

- **MSISClockDivision:** This parameter can be one of the following values:
  - LL_RCC_MSIS_CLOCK_SOURCE_RC_DIV_1
  - LL_RCC_MSIS_CLOCK_SOURCE_RC_DIV_2
  - LL_RCC_MSIS_CLOCK_SOURCE_RC_DIV_4
  - LL_RCC_MSIS_CLOCK_SOURCE_RC_DIV_8

Return values

- **None:**

Notes

- Select the MSIS division factor if MSIS clock source is LL_RCC_MSIS_CLOCK_SOURCE_RC0 LL_RCC_MSIS_CLOCK_SOURCE_RC_DIV_1: MSIRC0 /1 is selected for MSIS (range 0 around 96 MHz) LL_RCC_MSIS_CLOCK_SOURCE_RC_DIV_2: MSIRC0 /2 is selected for MSIS (range 1 around 48 MHz) LL_RCC_MSIS_CLOCK_SOURCE_RC_DIV_4: MSIRC0 /4 is selected for MSIS (range 2 around 24 MHz) LL_RCC_MSIS_CLOCK_SOURCE_RC_DIV_8: MSIRC0 /8 is selected for MSIS (range 3 around 12 MHz) if MSIS clock source is LL_RCC_MSIS_CLOCK_SOURCE_RC1 LL_RCC_MSIS_CLOCK_SOURCE_RC_DIV_1: MSIRC1 /1 is selected for MSIS (range 4 around 24 MHz) LL_RCC_MSIS_CLOCK_SOURCE_RC_DIV_2: MSIRC1 /2 is selected for MSIS (range 5 around 12 MHz) LL_RCC_MSIS_CLOCK_SOURCE_RC_DIV_4: MSIRC1 /4 is selected for MSIS (range 6 around 6 MHz) LL_RCC_MSIS_CLOCK_SOURCE_RC_DIV_8: MSIRC1 /8 is selected for MSIS (range 7 around 3 MHz)

Reference Manual to LL API cross reference:

- ICSCR1 MSISDIV LL_RCC_MSIS_SetClockDivision

LL_RCC_MSIS_GetClockDivision

Function name

__STATIC_INLINE uint32_t LL_RCC_MSIS_GetClockDivision (void)

Function description

Get MSIS clock division.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_MSIS_CLOCK_SOURCE_RC_DIV_1
  - LL_RCC_MSIS_CLOCK_SOURCE_RC_DIV_2
  - LL_RCC_MSIS_CLOCK_SOURCE_RC_DIV_4
  - LL_RCC_MSIS_CLOCK_SOURCE_RC_DIV_8

Reference Manual to LL API cross reference:

- ICSCR1 MSISDIV LL_RCC_MSIS_GetClockDivision

LL_RCC_MSIS_SetFreqAfterStandby

Function name

__STATIC_INLINE void LL_RCC_MSIS_SetFreqAfterStandby (uint32_t MSISdivs)

Function description

Set MSIS oscillator division after Standby mode.

Parameters

- **MSISdivs:** This parameter can be one of the following values:
  - LL_RCC_MSISDIVS_RANGE_5
  - LL_RCC_MSISDIVS_RANGE_6
  - LL_RCC_MSISDIVS_RANGE_7

Return values

- **None:**

Notes

- Set MSIS frequency at Standby mode exit and until MSIRGSEL is set

Reference Manual to LL API cross reference:

- CSR MSISDIVS LL_RCC_MSIS_SetFreqAfterStandby

LL_RCC_MSIS_GetFreqAfterStandby

Function name

__STATIC_INLINE uint32_t LL_RCC_MSIS_GetFreqAfterStandby (void)

Function description

Get MSIS oscillator division after Standby mode.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_MSISDIVS_RANGE_5
  - LL_RCC_MSISDIVS_RANGE_6
  - LL_RCC_MSISDIVS_RANGE_7

Reference Manual to LL API cross reference:

- CSR MSISDIVS LL_RCC_MSIS_GetFreqAfterStandby

LL_RCC_MSIKER_Enable

Function name

__STATIC_INLINE void LL_RCC_MSIKER_Enable (void)

Function description

Enable MSI for some peripheral kernels.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR MSIKERON LL_RCC_MSIKER_Enable

LL_RCC_MSIKER_Disable

Function name

__STATIC_INLINE void LL_RCC_MSIKER_Disable (void)

Function description

Disable MSI for some peripheral kernels.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR MSIKERON LL_RCC_MSIKER_Disable

LL_RCC_MSIKER_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RCC_MSIKER_IsEnabled (void)

Function description

Check if MSIKER is enabled or not.

Return values

- **1:** or 0

Reference Manual to LL API cross reference:

- CR MSIKERON LL_RCC_MSIKER_IsEnabled

LL_RCC_MSIK_Enable

Function name

__STATIC_INLINE void LL_RCC_MSIK_Enable (void)

Function description

Enable MSIK oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR MSIKON LL_RCC_MSIK_Enable

LL_RCC_MSIK_Disable

Function name

__STATIC_INLINE void LL_RCC_MSIK_Disable (void)

Function description

Disable MSIK oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR MSIKON LL_RCC_MSIK_Disable

LL_RCC_MSIK_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RCC_MSIK_IsEnabled (void)

Function description

Check if MSIK is enabled or not.

Return values

- **1:** or 0

Reference Manual to LL API cross reference:

- CR MSIKON LL_RCC_MSIK_IsEnabled

LL_RCC_MSIK_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_MSIK_IsReady (void)

Function description

Check if MSIK clock is ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR MSIKRDY LL_RCC_MSIK_IsReady

LL_RCC_MSIK_SetClockSource

Function name

__STATIC_INLINE void LL_RCC_MSIK_SetClockSource (uint32_t MSIKClockSource)

Function description

Set MSIK clock source.

Parameters

- **MSIKClockSource:** This parameter can be one of the following values:
  - LL_RCC_MSIK_CLOCK_SOURCE_RC0 (96MHz)
  - LL_RCC_MSIK_CLOCK_SOURCE_RC1 (24MHz)

Return values

- **None:**

Notes

- Select the RC oscillator used to generate MSIK clock

Reference Manual to LL API cross reference:

- ICSCR1 MSIKSEL LL_RCC_MSIK_SetClockSource

LL_RCC_MSIK_GetClockSource

Function name

__STATIC_INLINE uint32_t LL_RCC_MSIK_GetClockSource (void)

Function description

Get MSIK clock source.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_MSIK_CLOCK_SOURCE_RC0 (96MHz)
  - LL_RCC_MSIK_CLOCK_SOURCE_RC1 (24MHz)

Reference Manual to LL API cross reference:

- ICSCR1 MSIKSEL LL_RCC_MSIK_GetClockSource

LL_RCC_MSIK_SetClockDivision

Function name

__STATIC_INLINE void LL_RCC_MSIK_SetClockDivision (uint32_t MSIKClockDivision)

Function description

Set MSIK clock division.

Parameters

- **MSIKClockDivision:** This parameter can be one of the following values:
  - LL_RCC_MSIK_CLOCK_SOURCE_RC_DIV_1
  - LL_RCC_MSIK_CLOCK_SOURCE_RC_DIV_2
  - LL_RCC_MSIK_CLOCK_SOURCE_RC_DIV_4
  - LL_RCC_MSIK_CLOCK_SOURCE_RC_DIV_8

Return values

- **None:**

Notes

- Select the MSIK division factor if MSIK clock source is LL_RCC_MSIK_CLOCK_SOURCE_RC0 LL_RCC_MSIK_CLOCK_SOURCE_RC_DIV_1: MSIRC0 /1 is selected for MSIK (range 0 around 96 MHz) LL_RCC_MSIK_CLOCK_SOURCE_RC_DIV_2: MSIRC0 /2 is selected for MSIK (range 1 around 48 MHz) LL_RCC_MSIK_CLOCK_SOURCE_RC_DIV_4: MSIRC0 /4 is selected for MSIK (range 2 around 24 MHz) LL_RCC_MSIK_CLOCK_SOURCE_RC_DIV_8: MSIRC0 /8 is selected for MSIK (range 3 around 12 MHz) if MSIK clock source is LL_RCC_MSIK_CLOCK_SOURCE_RC1 LL_RCC_MSIK_CLOCK_SOURCE_RC_DIV_1: MSIRC1 /1 is selected for MSIK (range 4 around 24 MHz) LL_RCC_MSIK_CLOCK_SOURCE_RC_DIV_2: MSIRC1 /2 is selected for MSIK (range 5 around 12 MHz) LL_RCC_MSIK_CLOCK_SOURCE_RC_DIV_4: MSIRC1 /4 is selected for MSIK (range 6 around 6 MHz) LL_RCC_MSIK_CLOCK_SOURCE_RC_DIV_8: MSIRC1 /8 is selected for MSIK (range 7 around 3 MHz)

Reference Manual to LL API cross reference:

- ICSCR1 MSIKDIV LL_RCC_MSIK_SetClockDivision

LL_RCC_MSIK_GetClockDivision

Function name

__STATIC_INLINE uint32_t LL_RCC_MSIK_GetClockDivision (void)

Function description

Get MSIK clock division.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_MSIK_CLOCK_SOURCE_RC_DIV_1
  - LL_RCC_MSIK_CLOCK_SOURCE_RC_DIV_2
  - LL_RCC_MSIK_CLOCK_SOURCE_RC_DIV_4
  - LL_RCC_MSIK_CLOCK_SOURCE_RC_DIV_8

Reference Manual to LL API cross reference:

- ICSCR1 MSIKDIV LL_RCC_MSIK_GetClockDivision

LL_RCC_MSIK_SetFreqAfterStandby

Function name

__STATIC_INLINE void LL_RCC_MSIK_SetFreqAfterStandby (uint32_t MSIKdivs)

Function description

Set MSIK oscillator division after Standby mode.

Parameters

- **MSIKdivs:** This parameter can be one of the following values:
  - LL_RCC_MSIKDIVS_RANGE_5
  - LL_RCC_MSIKDIVS_RANGE_6
  - LL_RCC_MSIKDIVS_RANGE_7

Return values

- **None:**

Notes

- Set MSIK frequency at Standby mode exit and until MSIRGSEL is set

Reference Manual to LL API cross reference:

- CSR MSIKDIVS LL_RCC_MSIK_SetFreqAfterStandby

LL_RCC_MSIK_GetFreqAfterStandby

Function name

__STATIC_INLINE uint32_t LL_RCC_MSIK_GetFreqAfterStandby (void)

Function description

Get MSIK oscillator division after Standby mode.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_MSIKDIVS_RANGE_5
  - LL_RCC_MSIKDIVS_RANGE_6
  - LL_RCC_MSIKDIVS_RANGE_7

Reference Manual to LL API cross reference:

- CSR MSIKDIVS LL_RCC_MSIK_GetFreqAfterStandby

LL_RCC_MSI_RCx_SetPLLmodeHSEInputDiv

Function name

__STATIC_INLINE void LL_RCC_MSI_RCx_SetPLLmodeHSEInputDiv (uint32_t HSEInputDiv)

Function description

Set MSIRCx PLL-mode HSE input division.

Parameters

- **HSEInputDiv:** This parameter can be one of the following values:
  - LL_RCC_MSIRCx_PLLMODE_INPUT_HSE
  - LL_RCC_MSIRCx_PLLMODE_INPUT_HSE_DIV_2

Return values

- **None:**

Notes

- Divide HSE input clock when used by MSI in PLL-mode. MSI high speed input clock must be 16 Mhz.

Reference Manual to LL API cross reference:

- ICSCR1 MSIHSINDIV LL_RCC_MSI_RCx_SetPLLmodeHSEInputDiv

LL_RCC_MSI_RCx_GetPLLmodeHSEInputDiv

Function name

__STATIC_INLINE uint32_t LL_RCC_MSI_RCx_GetPLLmodeHSEInputDiv (void)

Function description

Get MSIRCx PLL-mode HSE input division.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_MSIRCx_PLLMODE_INPUT_HSE
  - LL_RCC_MSIRCx_PLLMODE_INPUT_HSE_DIV_2

Reference Manual to LL API cross reference:

- ICSCR1 MSIHSINDIV LL_RCC_MSI_RCx_GetPLLmodeHSEInputDiv

LL_RCC_MSI_RC0_PLLmode_Enable

Function name

__STATIC_INLINE void LL_RCC_MSI_RC0_PLLmode_Enable (void)

Function description

Enable MSI RC0 PLL-mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR MSIPLL0EN LL_RCC_MSI_RC0_PLLmode_Enable

LL_RCC_MSI_RC0_PLLmode_Disable

Function name

__STATIC_INLINE void LL_RCC_MSI_RC0_PLLmode_Disable (void)

Function description

Disable MSI RC0 PLL-mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR MSIPLL0EN LL_RCC_MSI_RC0_PLLmode_Disable

LL_RCC_MSI_RC0_PLLmode_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RCC_MSI_RC0_PLLmode_IsEnabled (void)

Function description

Check if MSI RC0 PLL-mode is enabled or not.

Return values

- **1:** or 0

Reference Manual to LL API cross reference:

- CR MSIPLL1EN LL_RCC_MSI_RC0_PLLmode_IsEnabled

LL_RCC_MSI_RC0_PLLmode_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_MSI_RC0_PLLmode_IsReady (void)

Function description

Check if MSI RC0 PLL mode is ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR MSIPLL0RDY LL_RCC_MSI_RC0_PLLmode_IsReady

LL_RCC_MSI_RC0_SetPLLInputClk

Function name

__STATIC_INLINE void LL_RCC_MSI_RC0_SetPLLInputClk (uint32_t MSIPLL0sel)

Function description

Set MSIRC0 PLL-mode input clock.

Parameters

- **MSIPLL0sel:** This parameter can be one of the following values:
  - LL_RCC_MSIPLL0SEL_LSE
  - LL_RCC_MSIPLL0SEL_HSE_OR_HSEDIV2

Return values

- **None:**

Notes

- LSE or HSE must be enabled and ready before selecting this oscillator as MSIRC0 input clock

Reference Manual to LL API cross reference:

- ICSCR1 MSIPLL0SEL LL_RCC_MSI_RC0_SetPLLInputClk

LL_RCC_MSI_RC0_GetPLLInputClk

Function name

__STATIC_INLINE uint32_t LL_RCC_MSI_RC0_GetPLLInputClk (void)

Function description

Get MSIRC0 PLL-mode input clock.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_MSIPLL0SEL_LSE
  - LL_RCC_MSIPLL0SEL_HSE_OR_HSEDIV2

Reference Manual to LL API cross reference:

- ICSCR1 MSIPLL0SEL LL_RCC_MSI_RC0_GetPLLInputClk

LL_RCC_MSI_RC0_PLLmode_FastStartup

Function name

__STATIC_INLINE void LL_RCC_MSI_RC0_PLLmode_FastStartup (void)

Function description

MSI RC0 PLL mode fast startup.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR MSIPLL0FAST LL_RCC_MSI_RC0_PLLmode_FastStartup

LL_RCC_MSI_RC0_PLLmode_NormalStartup

Function name

__STATIC_INLINE void LL_RCC_MSI_RC0_PLLmode_NormalStartup (void)

Function description

MSI RC0 PLL mode normal startup.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR MSIPLL0FAST LL_RCC_MSI_RC0_PLLmode_NormalStartup

LL_RCC_MSI_RC0_PLLmode_GetStartupStatus

Function name

__STATIC_INLINE uint32_t LL_RCC_MSI_RC0_PLLmode_GetStartupStatus (void)

Function description

Get MSIRC0 PLL-mode startup status.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_MSIPLL0_STARTUP_NORMAL
  - LL_RCC_MSIPLL0_STARTUP_FAST

Reference Manual to LL API cross reference:

- CR MSIPLL0FAST LL_RCC_MSI_RC0_PLLmode_GetStartupStatus

LL_RCC_MSI_RC0_SetTrimming

Function name

__STATIC_INLINE void LL_RCC_MSI_RC0_SetTrimming (uint32_t TrimValue)

Function description

Set MSI clock trimming for ranges 0 to 3.

Parameters

- **TrimValue:**

Return values

- **None:**

Notes

- Additional user-programmable trimming value that is added to the factory-programmed calibration trim value MSIRC0[5:0] bits.

Reference Manual to LL API cross reference:

- ICSCR2 MSITRIM0 LL_RCC_MSI_RC0_SetTrimming

LL_RCC_MSI_RC0_GetTrimming

Function name

__STATIC_INLINE uint32_t LL_RCC_MSI_RC0_GetTrimming (void)

Function description

Get MSI clock trimming for ranges 0 to 3.

Return values

- **TrimValue:**

Notes

- Additional user-programmable trimming value that is added to the factory-programmed calibration trim value MSIRC0[5:0] bits.

Reference Manual to LL API cross reference:

- ICSCR2 MSITRIM0 LL_RCC_MSI_RC0_GetTrimming

LL_RCC_MSI_RC0_GetCalibration

Function name

__STATIC_INLINE uint32_t LL_RCC_MSI_RC0_GetCalibration (void)

Function description

Get MSIRC0 clock calibration for MSI ranges 0 to 3.

Return values

- **None:**

Notes

- Field initialized at startup with the factory-programmed MSIRC0 calibration trim value for ranges 0 to 3. When MSITRIM0 is written, MSICAL0 is updated with the sum of MSITRIM0[5:0] and the factory-programmed calibration trim value MSIRC0[5:0].

Reference Manual to LL API cross reference:

- ICSCR1 MSICAL0 LL_RCC_MSI_RC0_GetCalibration

LL_RCC_MSI_RC1_PLLmode_Enable

Function name

__STATIC_INLINE void LL_RCC_MSI_RC1_PLLmode_Enable (void)

Function description

Enable MSI RC1 PLL-mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR MSIPLL1EN LL_RCC_MSI_RC1_PLLmode_Enable

LL_RCC_MSI_RC1_PLLmode_Disable

Function name

__STATIC_INLINE void LL_RCC_MSI_RC1_PLLmode_Disable (void)

Function description

Disable MSI RC1 PLL-mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR MSIPLL1EN LL_RCC_MSI_RC1_PLLmode_Disable

LL_RCC_MSI_RC1_PLLmode_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RCC_MSI_RC1_PLLmode_IsEnabled (void)

Function description

Check if MSI RC1 PLL-mode is enabled or not.

Return values

- **1:** or 0

Reference Manual to LL API cross reference:

- CR MSIPLL1EN LL_RCC_MSI_RC1_PLLmode_IsEnabled

LL_RCC_MSI_RC1_PLLmode_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_MSI_RC1_PLLmode_IsReady (void)

Function description

Check if MSI RC1 PLL mode is ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR MSIPLL1RDY LL_RCC_MSI_RC1_PLLmode_IsReady

LL_RCC_MSI_RC1_SetPLLInputClk

Function name

__STATIC_INLINE void LL_RCC_MSI_RC1_SetPLLInputClk (uint32_t MSIPLL1sel)

Function description

Set MSIRC1 PLL-mode input clock.

Parameters

- **MSIPLL1sel:** This parameter can be one of the following values:
  - LL_RCC_MSIPLL1SEL_LSE
  - LL_RCC_MSIPLL1SEL_HSE_OR_HSEDIV2

Return values

- **None:**

Notes

- LSE or HSE must be enabled and ready before selecting this oscillator as MSIRC1 input clock

Reference Manual to LL API cross reference:

- ICSCR1 MSIPLL1SEL LL_RCC_MSI_RC1_SetPLLInputClk

LL_RCC_MSI_RC1_GetPLLInputClk

Function name

__STATIC_INLINE uint32_t LL_RCC_MSI_RC1_GetPLLInputClk (void)

Function description

Get MSIRC1 PLL-mode input clock.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_MSIPLL1SEL_LSE
  - LL_RCC_MSIPLL1SEL_HSE_OR_HSEDIV2

Reference Manual to LL API cross reference:

- ICSCR1 MSIPLL1SEL LL_RCC_MSI_RC1_GetPLLInputClk

LL_RCC_MSI_RC1_SetLSEMultiplicationFactor

Function name

__STATIC_INLINE void LL_RCC_MSI_RC1_SetLSEMultiplicationFactor (uint32_t LSEMultiplicationFactor)

Function description

Set MSIRC1 PLL-mode LSE multiplication factor MSIRC1 frequency is MSIPLL1N * fLSE.

Parameters

- **LSEMultiplicationFactor:** This parameter can be one of the following values:
  - LL_RCC_MSIRC1_PLLMODE_LSE_MULT_732 (Freq MSIRC1 = 23.9862 MHz)
  - LL_RCC_MSIRC1_PLLMODE_LSE_MULT_689 (Freq MSIRC1 = 22.5772 MHz)
  - LL_RCC_MSIRC1_PLLMODE_LSE_MULT_750 (Freq MSIRC1 = 24.576 MHz)

Return values

- **None:**

Notes

- LSE or HSE must be enabled and ready before selecting this oscillator as MSIRC1 input clock MSIS and MSIK ranges 4, 5 6 and 7 frequencies are therefore impacted accordingly

Reference Manual to LL API cross reference:

- ICSCR1 MSIPLL1N[1:0] LL_RCC_MSI_RC1_SetLSEMultiplicationFactor

LL_RCC_MSI_RC1_GetLSEMultiplicationFactor

Function name

__STATIC_INLINE uint32_t LL_RCC_MSI_RC1_GetLSEMultiplicationFactor (void)

Function description

Get MSIRC1 PLL-mode LSE multiplication factor.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_MSIRC1_PLLMODE_LSE_MULT_732
  - LL_RCC_MSIRC1_PLLMODE_LSE_MULT_689
  - LL_RCC_MSIRC1_PLLMODE_LSE_MULT_750
- **None:**

Reference Manual to LL API cross reference:

- ICSCR1 MSIPLL1N[1:0] LL_RCC_MSI_RC1_GetLSEMultiplicationFactor

LL_RCC_MSI_RC1_PLLmode_FastStartup

Function name

__STATIC_INLINE void LL_RCC_MSI_RC1_PLLmode_FastStartup (void)

Function description

MSI RC1 PLL mode fast startup.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR MSIPLL1FAST LL_RCC_MSI_RC1_PLLmode_FastStartup

LL_RCC_MSI_RC1_PLLmode_NormalStartup

Function name

__STATIC_INLINE void LL_RCC_MSI_RC1_PLLmode_NormalStartup (void)

Function description

MSI RC1 PLL mode normal startup.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR MSIPLL1FAST LL_RCC_MSI_RC1_PLLmode_NormalStartup

LL_RCC_MSI_RC1_PLLmode_GetStartupStatus

Function name

__STATIC_INLINE uint32_t LL_RCC_MSI_RC1_PLLmode_GetStartupStatus (void)

Function description

Get MSIRC1 PLL-mode startup status.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_MSIPLL1_STARTUP_NORMAL
  - LL_RCC_MSIPLL1_STARTUP_FAST

Reference Manual to LL API cross reference:

- CR MSIPLL1FAST LL_RCC_MSI_RC1_PLLmode_GetStartupStatus

LL_RCC_MSI_RC1_SetTrimming

Function name

__STATIC_INLINE void LL_RCC_MSI_RC1_SetTrimming (uint32_t TrimValue)

Function description

Set MSI clock trimming for ranges 4 to 7.

Parameters

- **TrimValue:**

Return values

- **None:**

Notes

- Additional user-programmable trimming value that is added to the factory-programmed calibration trim value MSIRC1[5:0] bits.

Reference Manual to LL API cross reference:

- ICSCR2 MSITRIM1 LL_RCC_MSI_RC1_SetTrimming

LL_RCC_MSI_RC1_GetTrimming

Function name

__STATIC_INLINE uint32_t LL_RCC_MSI_RC1_GetTrimming (void)

Function description

Get MSI clock trimming for ranges 4 to 7.

Return values

- **TrimValue:**

Notes

- Additional user-programmable trimming value that is added to the factory-programmed calibration trim value MSIRC1[5:0] bits.

Reference Manual to LL API cross reference:

- ICSCR2 MSITRIM1 LL_RCC_MSI_RC1_GetTrimming

LL_RCC_MSI_RC1_GetCalibration

Function name

__STATIC_INLINE uint32_t LL_RCC_MSI_RC1_GetCalibration (void)

Function description

Get MSIRC1 clock calibration for MSI ranges 0 to 3.

Return values

- **None:**

Notes

- Field initialized at startup with the factory-programmed MSIRC1 calibration trim value for ranges 4 to 7. When MSITRIM1 is written, MSICAL1 is updated with the sum of MSITRIM1[5:0] and the factory-programmed calibration trim value MSIRC1[5:0].

Reference Manual to LL API cross reference:

- ICSCR1 MSICAL1 LL_RCC_MSI_RC1_GetCalibration

LL_RCC_LSE_Enable

Function name

__STATIC_INLINE void LL_RCC_LSE_Enable (void)

Function description

Enable Low Speed External (LSE) crystal.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSEON LL_RCC_LSE_Enable

LL_RCC_LSE_Disable

Function name

__STATIC_INLINE void LL_RCC_LSE_Disable (void)

Function description

Disable Low Speed External (LSE) crystal.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSEON LL_RCC_LSE_Disable

LL_RCC_LSE_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RCC_LSE_IsEnabled (void)

Function description

Check if LSE is enabled or not.

Return values

- **1:** or 0

Reference Manual to LL API cross reference:

- BDCR LSEON LL_RCC_LSE_IsEnabled

LL_RCC_LSE_EnableBypass

Function name

__STATIC_INLINE void LL_RCC_LSE_EnableBypass (void)

Function description

Enable external clock source (LSE bypass).

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSEBYP LL_RCC_LSE_EnableBypass

LL_RCC_LSE_DisableBypass

Function name

__STATIC_INLINE void LL_RCC_LSE_DisableBypass (void)

Function description

Disable external clock source (LSE bypass).

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSEBYP LL_RCC_LSE_DisableBypass

LL_RCC_LSE_IsEnabledBypass

Function name

__STATIC_INLINE uint32_t LL_RCC_LSE_IsEnabledBypass (void)

Function description

Check if LSE bypass is enabled or not.

Return values

- **1:** or 0

Reference Manual to LL API cross reference:

- BDCR LSEBYP LL_RCC_LSE_IsEnabledBypass

LL_RCC_LSE_EnableGLITCH_FILTER

Function name

__STATIC_INLINE void LL_RCC_LSE_EnableGLITCH_FILTER (void)

Function description

Enable LSE clock glitch filter.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSEGFON LL_RCC_LSE_EnableGLITCH_FILTER

LL_RCC_LSE_DisableGLITCH_FILTER

Function name

__STATIC_INLINE void LL_RCC_LSE_DisableGLITCH_FILTER (void)

Function description

Disable LSE clock glitch filter.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSEGFON LL_RCC_LSE_DisableGLITCH_FILTER

LL_RCC_LSE_IsEnabledGLITCH_FILTER

Function name

__STATIC_INLINE uint32_t LL_RCC_LSE_IsEnabledGLITCH_FILTER (void)

Function description

Check if LSE clock glitch filter is enabled or not.

Return values

- **1:** or 0

Reference Manual to LL API cross reference:

- BDCR LSEGFON LL_RCC_LSE_IsEnabledGLITCH_FILTER

LL_RCC_LSE_SetDriveCapability

Function name

__STATIC_INLINE void LL_RCC_LSE_SetDriveCapability (uint32_t LSEDrive)

Function description

Set LSE oscillator drive capability.

Parameters

- **LSEDrive:** This parameter can be one of the following values:
  - LL_RCC_LSEDRIVE_LOW
  - LL_RCC_LSEDRIVE_MEDIUMLOW
  - LL_RCC_LSEDRIVE_MEDIUMHIGH
  - LL_RCC_LSEDRIVE_HIGH

Return values

- **None:**

Notes

- The oscillator is in Xtal mode when it is not in bypass mode.

Reference Manual to LL API cross reference:

- BDCR LSEDRV LL_RCC_LSE_SetDriveCapability

LL_RCC_LSE_GetDriveCapability

Function name

__STATIC_INLINE uint32_t LL_RCC_LSE_GetDriveCapability (void)

Function description

Get LSE oscillator drive capability.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_LSEDRIVE_LOW
  - LL_RCC_LSEDRIVE_MEDIUMLOW
  - LL_RCC_LSEDRIVE_MEDIUMHIGH
  - LL_RCC_LSEDRIVE_HIGH

Reference Manual to LL API cross reference:

- BDCR LSEDRV LL_RCC_LSE_GetDriveCapability

LL_RCC_LSE_EnableCSS

Function name

__STATIC_INLINE void LL_RCC_LSE_EnableCSS (void)

Function description

Enable Clock security system on LSE.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSECSSON LL_RCC_LSE_EnableCSS

LL_RCC_LSE_DisableCSS

Function name

__STATIC_INLINE void LL_RCC_LSE_DisableCSS (void)

Function description

Disable Clock security system on LSE.

Return values

- **None:**

Notes

- Clock security system can be disabled only after a LSE failure detection. In that case it MUST be disabled by software.

Reference Manual to LL API cross reference:

- BDCR LSECSSON LL_RCC_LSE_DisableCSS

LL_RCC_LSE_IsEnabledCSS

Function name

__STATIC_INLINE uint32_t LL_RCC_LSE_IsEnabledCSS (void)

Function description

Check if LSE CSS is enabled or not.

Return values

- **1:** or 0

Reference Manual to LL API cross reference:

- BDCR LSECSSON LL_RCC_LSE_IsEnabledCSS

LL_RCC_LSE_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_LSE_IsReady (void)

Function description

Check if LSE oscillator Ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- BDCR LSERDY LL_RCC_LSE_IsReady

LL_RCC_LSE_EnablePropagation

Function name

__STATIC_INLINE void LL_RCC_LSE_EnablePropagation (void)

Function description

Enable LSE oscillator propagation for system clock.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSESYSEN LL_RCC_LSE_EnablePropagation

LL_RCC_LSE_DisablePropagation

Function name

__STATIC_INLINE void LL_RCC_LSE_DisablePropagation (void)

Function description

Disable LSE oscillator propagation for system clock.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSESYSEN LL_RCC_LSE_DisablePropagation

LL_RCC_LSE_IsEnabledPropagation

Function name

__STATIC_INLINE uint32_t LL_RCC_LSE_IsEnabledPropagation (void)

Function description

Check if LSE oscillator propagation is enabled or not.

Return values

- **1:** or 0

Reference Manual to LL API cross reference:

- BDCR LSESYSEN LL_RCC_LSE_IsEnabledPropagation

LL_RCC_LSE_IsPropagationReady

Function name

__STATIC_INLINE uint32_t LL_RCC_LSE_IsPropagationReady (void)

Function description

Check if LSE oscillator propagation for system clock Ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- BDCR LSESYSRDY LL_RCC_LSE_IsPropagationReady

LL_RCC_LSE_IsCSSDetected

Function name

__STATIC_INLINE uint32_t LL_RCC_LSE_IsCSSDetected (void)

Function description

Check if CSS on LSE failure Detection.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- BDCR LSECSSD LL_RCC_LSE_IsCSSDetected

LL_RCC_LSI_Enable

Function name

__STATIC_INLINE void LL_RCC_LSI_Enable (void)

Function description

Enable Low Speed Internal (LSI) oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CSR LSION LL_RCC_LSI_Enable

LL_RCC_LSI_Disable

Function name

__STATIC_INLINE void LL_RCC_LSI_Disable (void)

Function description

Disable Low Speed Internal (LSI) oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CSR LSION LL_RCC_LSI_Disable

LL_RCC_LSI_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RCC_LSI_IsEnabled (void)

Function description

Check if LSI is enabled or not.

Return values

- **1:** or 0

Reference Manual to LL API cross reference:

- CSR LSION LL_RCC_LSI_IsEnabled

LL_RCC_LSI_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_LSI_IsReady (void)

Function description

Check if LSI oscillator Ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR LSIRDY LL_RCC_LSI_IsReady

LL_RCC_LSI_SetClockPrediv

Function name

__STATIC_INLINE void LL_RCC_LSI_SetClockPrediv (uint32_t LSIprediv)

Function description

Set LSI divider configuration.

Parameters

- **LSIprediv:** This parameter can be one of the following values:
  - LL_RCC_LSI_PREDIV_NONE
  - LL_RCC_LSI_PREDIV_128

Return values

- **None:**

Notes

- Set low-speed clock divider configuration

Reference Manual to LL API cross reference:

- CSR LSIPREDIV LL_RCC_LSI_SetClockPrediv

LL_RCC_LSI_GetClockPrediv

Function name

__STATIC_INLINE uint32_t LL_RCC_LSI_GetClockPrediv (void)

Function description

Get LSI divider configuration.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_LSI_PREDIV_NONE
  - LL_RCC_LSI_PREDIV_128

Notes

- Get low-speed clock divider configuration

Reference Manual to LL API cross reference:

- CSR LSIPREDIV LL_RCC_LSI_GetClockPrediv

LL_RCC_SetRTCClockSource

Function name

__STATIC_INLINE void LL_RCC_SetRTCClockSource (uint32_t Source)

Function description

Set RTC Clock Source.

Parameters

- **Source:** This parameter can be one of the following values:
  - LL_RCC_RTC_CLKSOURCE_NONE
  - LL_RCC_RTC_CLKSOURCE_LSE
  - LL_RCC_RTC_CLKSOURCE_LSI
  - LL_RCC_RTC_CLKSOURCE_HSE_DIV32

Return values

- **None:**

Notes

- Once the RTC clock source has been selected, it cannot be changed anymore unless the Backup domain is reset, or unless a failure is detected on LSE (LSECSSD is set). The BDRST bit can be used to reset them.

Reference Manual to LL API cross reference:

- BDCR RTCSEL LL_RCC_SetRTCClockSource

LL_RCC_GetRTCClockSource

Function name

__STATIC_INLINE uint32_t LL_RCC_GetRTCClockSource (uint32_t RTCx_clksource)

Function description

Get RTC Clock Source.

Parameters

- **RTCx_clksource:** This parameter can be one of the following values:
  - LL_RCC_RTC_CLKSOURCE

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_RTC_CLKSOURCE_NONE
  - LL_RCC_RTC_CLKSOURCE_LSE
  - LL_RCC_RTC_CLKSOURCE_LSI
  - LL_RCC_RTC_CLKSOURCE_HSE_DIV32

Reference Manual to LL API cross reference:

- BDCR RTCSEL LL_RCC_GetRTCClockSource

LL_RCC_RTC_ClockEnable

Function name

__STATIC_INLINE void LL_RCC_RTC_ClockEnable (void)

Function description

Enable RTC and TAMP clock.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR RTCEN LL_RCC_RTC_ClockEnable

LL_RCC_RTC_ClockDisable

Function name

__STATIC_INLINE void LL_RCC_RTC_ClockDisable (void)

Function description

Disable RTC and TAMP clock.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR RTCEN LL_RCC_RTC_ClockDisable

LL_RCC_RTC_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RCC_RTC_IsEnabled (void)

Function description

Check if RTC and TAMP clock is enabled or not.

Return values

- **1:** or 0

Reference Manual to LL API cross reference:

- BDCR RTCEN LL_RCC_RTC_IsEnabled

LL_RCC_ForceBackupDomainReset

Function name

__STATIC_INLINE void LL_RCC_ForceBackupDomainReset (void)

Function description

Force the Backup domain reset.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR BDRST LL_RCC_ForceBackupDomainReset

LL_RCC_ReleaseBackupDomainReset

Function name

__STATIC_INLINE void LL_RCC_ReleaseBackupDomainReset (void)

Function description

Release the Backup domain reset.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR BDRST LL_RCC_ReleaseBackupDomainReset

LL_RCC_LSCO_Enable

Function name

__STATIC_INLINE void LL_RCC_LSCO_Enable (void)

Function description

Enable Low speed clock.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSCOEN LL_RCC_LSCO_Enable

LL_RCC_LSCO_Disable

Function name

__STATIC_INLINE void LL_RCC_LSCO_Disable (void)

Function description

Disable Low speed clock.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSCOEN LL_RCC_LSCO_Disable

LL_RCC_LSCO_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RCC_LSCO_IsEnabled (void)

Function description

Check if LSCO is enabled or not.

Return values

- **1:** or 0

Reference Manual to LL API cross reference:

- BDCR LSCOEN LL_RCC_LSCO_IsEnabled

LL_RCC_LSCO_SetSource

Function name

__STATIC_INLINE void LL_RCC_LSCO_SetSource (uint32_t Source)

Function description

Configure Low speed clock selection.

Parameters

- **Source:** This parameter can be one of the following values:
  - LL_RCC_LSCO_CLKSOURCE_LSI
  - LL_RCC_LSCO_CLKSOURCE_LSE

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSCOSEL LL_RCC_LSCO_SetSource

LL_RCC_LSCO_GetSource

Function name

__STATIC_INLINE uint32_t LL_RCC_LSCO_GetSource (void)

Function description

Get Low speed clock selection.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_LSCO_CLKSOURCE_LSI
  - LL_RCC_LSCO_CLKSOURCE_LSE

Reference Manual to LL API cross reference:

- BDCR LSCOSEL LL_RCC_LSCO_GetSource

LL_RCC_SetSysClkSource

Function name

__STATIC_INLINE void LL_RCC_SetSysClkSource (uint32_t Source)

Function description

Configure the system clock source.

Parameters

- **Source:** This parameter can be one of the following values:
  - LL_RCC_SYS_CLKSOURCE_MSIS
  - LL_RCC_SYS_CLKSOURCE_HSI16
  - LL_RCC_SYS_CLKSOURCE_HSE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR1 SW LL_RCC_SetSysClkSource

LL_RCC_GetSysClkSource

Function name

__STATIC_INLINE uint32_t LL_RCC_GetSysClkSource (void)

Function description

Get the system clock source.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_SYS_CLKSOURCE_MSIS
  - LL_RCC_SYS_CLKSOURCE_HSI16
  - LL_RCC_SYS_CLKSOURCE_HSE

Reference Manual to LL API cross reference:

- CFGR1 SWS LL_RCC_GetSysClkSource

LL_RCC_SetStopWakeupClock

Function name

__STATIC_INLINE void LL_RCC_SetStopWakeupClock (uint32_t Clock)

Function description

Select Wakeup from Stop and CSS backup clock.

Parameters

- **Clock:** This parameter can be one of the following values:
  - LL_RCC_STOP_WAKEUP_CLK_MSIS
  - LL_RCC_STOP_WAKEUP_CLK_HSI16

Return values

- **None:**

Notes

- Select the system clock used when exiting Stop mode

Reference Manual to LL API cross reference:

- CFGR1 STOPWUCK LL_RCC_SetStopWakeupClock

LL_RCC_GetStopWakeupClock

Function name

__STATIC_INLINE uint32_t LL_RCC_GetStopWakeupClock (void)

Function description

Get Wakeup from Stop and CSS backup clock.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_STOP_WAKEUP_CLK_MSIS
  - LL_RCC_STOP_WAKEUP_CLK_HSI16

Reference Manual to LL API cross reference:

- CFGR1 STOPWUCK LL_RCC_GetStopWakeupClock

LL_RCC_SetStopWakeupKernelClock

Function name

__STATIC_INLINE void LL_RCC_SetStopWakeupKernelClock (uint32_t Clock)

Function description

Select Wakeup from Stop kernel clock.

Parameters

- **Clock:** This parameter can be one of the following values:
  - LL_RCC_STOP_WAKEUP_KERCLK_MSIK
  - LL_RCC_STOP_WAKEUP_KERCLK_HSI16

Return values

- **None:**

Notes

- Select the kernel clock used when exiting Stop mode

Reference Manual to LL API cross reference:

- CFGR1 STOPKERWUCK LL_RCC_SetStopWakeupKernelClock

LL_RCC_GetStopWakeupKernelClock

Function name

__STATIC_INLINE uint32_t LL_RCC_GetStopWakeupKernelClock (void)

Function description

Get Wakeup from Stop kernel clock.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_STOP_WAKEUP_KERCLK_MSIK
  - LL_RCC_STOP_WAKEUP_KERCLK_HSI16

Reference Manual to LL API cross reference:

- CFGR1 STOPKERWUCK LL_RCC_GetStopWakeupKernelClock

LL_RCC_SetAHBPrescaler

Function name

__STATIC_INLINE void LL_RCC_SetAHBPrescaler (uint32_t Prescaler)

Function description

Set AHB prescaler.

Parameters

- **Prescaler:** This parameter can be one of the following values:
  - LL_RCC_HCLK_SYSCLK_DIV_1
  - LL_RCC_HCLK_SYSCLK_DIV_2
  - LL_RCC_HCLK_SYSCLK_DIV_4
  - LL_RCC_HCLK_SYSCLK_DIV_8
  - LL_RCC_HCLK_SYSCLK_DIV_16
  - LL_RCC_HCLK_SYSCLK_DIV_64
  - LL_RCC_HCLK_SYSCLK_DIV_128
  - LL_RCC_HCLK_SYSCLK_DIV_256
  - LL_RCC_HCLK_SYSCLK_DIV_512

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR2 HPRE LL_RCC_SetAHBPrescaler

LL_RCC_GetAHBPrescaler

Function name

__STATIC_INLINE uint32_t LL_RCC_GetAHBPrescaler (void)

Function description

Get AHB prescaler.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_HCLK_SYSCLK_DIV_1
  - LL_RCC_HCLK_SYSCLK_DIV_2
  - LL_RCC_HCLK_SYSCLK_DIV_4
  - LL_RCC_HCLK_SYSCLK_DIV_8
  - LL_RCC_HCLK_SYSCLK_DIV_16
  - LL_RCC_HCLK_SYSCLK_DIV_64
  - LL_RCC_HCLK_SYSCLK_DIV_128
  - LL_RCC_HCLK_SYSCLK_DIV_256
  - LL_RCC_HCLK_SYSCLK_DIV_512

Reference Manual to LL API cross reference:

- CFGR2 HPRE LL_RCC_GetAHBPrescaler

LL_RCC_SetAPB1Prescaler

Function name

__STATIC_INLINE void LL_RCC_SetAPB1Prescaler (uint32_t Prescaler)

Function description

Set APB1 prescaler.

Parameters

- **Prescaler:** This parameter can be one of the following values:
  - LL_RCC_APB1_HCLK_DIV_1
  - LL_RCC_APB1_HCLK_DIV_2
  - LL_RCC_APB1_HCLK_DIV_4
  - LL_RCC_APB1_HCLK_DIV_8
  - LL_RCC_APB1_HCLK_DIV_16

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR2 PPRE1 LL_RCC_SetAPB1Prescaler

LL_RCC_GetAPB1Prescaler

Function name

__STATIC_INLINE uint32_t LL_RCC_GetAPB1Prescaler (void)

Function description

Get APB1 prescaler.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_APB1_HCLK_DIV_1
  - LL_RCC_APB1_HCLK_DIV_2
  - LL_RCC_APB1_HCLK_DIV_4
  - LL_RCC_APB1_HCLK_DIV_8
  - LL_RCC_APB1_HCLK_DIV_16

Reference Manual to LL API cross reference:

- CFGR2 PPRE1 LL_RCC_GetAPB1Prescaler

LL_RCC_SetAPB2Prescaler

Function name

__STATIC_INLINE void LL_RCC_SetAPB2Prescaler (uint32_t Prescaler)

Function description

Set APB2 prescaler.

Parameters

- **Prescaler:** This parameter can be one of the following values:
  - LL_RCC_APB2_HCLK_DIV_1
  - LL_RCC_APB2_HCLK_DIV_2
  - LL_RCC_APB2_HCLK_DIV_4
  - LL_RCC_APB2_HCLK_DIV_8
  - LL_RCC_APB2_HCLK_DIV_16

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR2 PPRE2 LL_RCC_SetAPB2Prescaler

LL_RCC_GetAPB2Prescaler

Function name

__STATIC_INLINE uint32_t LL_RCC_GetAPB2Prescaler (void)

Function description

Get APB2 prescaler.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_APB2_HCLK_DIV_1
  - LL_RCC_APB2_HCLK_DIV_2
  - LL_RCC_APB2_HCLK_DIV_4
  - LL_RCC_APB2_HCLK_DIV_8
  - LL_RCC_APB2_HCLK_DIV_16

Reference Manual to LL API cross reference:

- CFGR2 PPRE2 LL_RCC_GetAPB2Prescaler

LL_RCC_SetAPB3Prescaler

Function name

__STATIC_INLINE void LL_RCC_SetAPB3Prescaler (uint32_t Prescaler)

Function description

Set APB3 prescaler.

Parameters

- **Prescaler:** This parameter can be one of the following values:
  - LL_RCC_APB3_HCLK_DIV_1
  - LL_RCC_APB3_HCLK_DIV_2
  - LL_RCC_APB3_HCLK_DIV_4
  - LL_RCC_APB3_HCLK_DIV_8
  - LL_RCC_APB3_HCLK_DIV_16

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR3 PPRE3 LL_RCC_SetAPB3Prescaler

LL_RCC_GetAPB3Prescaler

Function name

LL_RCC_SetSystickClockSource

Function name

__STATIC_INLINE void LL_RCC_SetSystickClockSource (uint32_t SystickSource)

Function description

Set Systick clock source.

Parameters

- **SystickSource:** This parameter can be one of the following values:
  - LL_RCC_SYSTICK_CLKSOURCE_LSI
  - LL_RCC_SYSTICK_CLKSOURCE_LSE
  - LL_RCC_SYSTICK_CLKSOURCE_HCLKDIV8

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR1 SYSTICKSEL LL_RCC_SetSystickClockSource

LL_RCC_GetSystickClockSource

Function name

__STATIC_INLINE uint32_t LL_RCC_GetSystickClockSource (void)

Function description

Get Sysctick clock source.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_SYSTICK_CLKSOURCE_LSI
  - LL_RCC_SYSTICK_CLKSOURCE_LSE
  - LL_RCC_SYSTICK_CLKSOURCE_HCLKDIV8

Reference Manual to LL API cross reference:

- CCIPR1 SYSTICKSEL LL_RCC_GetSystickClockSource

LL_RCC_SetSourceClockMCO

Function name

__STATIC_INLINE void LL_RCC_SetSourceClockMCO (uint32_t MCOSourceClock)

Function description

Set MCO clock source.

Parameters

- **MCOSourceClock:** This parameter can be one of the following values:
  - LL_RCC_MCOSOURCE_NOCLOCK
  - LL_RCC_MCOSOURCE_SYSCLK
  - LL_RCC_MCOSOURCE_MSIS
  - LL_RCC_MCOSOURCE_HSI16
  - LL_RCC_MCOSOURCE_HSE
  - LL_RCC_MCOSOURCE_LSI
  - LL_RCC_MCOSOURCE_LSE
  - LL_RCC_MCOSOURCE_HSI48
  - LL_RCC_MCOSOURCE_MSIK

Return values

- **None:**

LL_RCC_SetSPIClockSource

Function name

__STATIC_INLINE void LL_RCC_SetSPIClockSource (uint32_t SPIxSource)

Function description

Configure SPIx clock source.

Parameters

- **SPIxSource:** This parameter can be one of the following values:
  - LL_RCC_SPI1_CLKSOURCE_PCLK2
  - LL_RCC_SPI1_CLKSOURCE_MSIK
  - LL_RCC_SPI2_CLKSOURCE_PCLK1
  - LL_RCC_SPI2_CLKSOURCE_MSIK
  - LL_RCC_SPI3_CLKSOURCE_PCLK1
  - LL_RCC_SPI3_CLKSOURCE_MSIK
  - LL_RCC_SPI4_CLKSOURCE_PCLK1 (*)
  - LL_RCC_SPI4_CLKSOURCE_MSIK (*)

  (*) value not defined in all devices.

Return values

- **None:**

Reference Manual to LL API cross reference:

-

LL_RCC_GetSPIClockSource

Function name

__STATIC_INLINE uint32_t LL_RCC_GetSPIClockSource (uint32_t SPIx_clksource)

Function description

Get SPIx clock source.

Parameters

- **SPIx_clksource:** This parameter can be one of the following values:
  - LL_RCC_SPI1_CLKSOURCE
  - LL_RCC_SPI2_CLKSOURCE
  - LL_RCC_SPI3_CLKSOURCE
  - LL_RCC_SPI4_CLKSOURCE

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_SPI1_CLKSOURCE_PCLK2
  - LL_RCC_SPI1_CLKSOURCE_MSIK
  - LL_RCC_SPI2_CLKSOURCE_PCLK1
  - LL_RCC_SPI2_CLKSOURCE_MSIK
  - LL_RCC_SPI3_CLKSOURCE_PCLK1
  - LL_RCC_SPI3_CLKSOURCE_MSIK
  - LL_RCC_SPI4_CLKSOURCE_PCLK1 (*)
  - LL_RCC_SPI4_CLKSOURCE_MSIK (*)

  (*) value not defined in all devices.

-

LL_RCC_SetLPTIMClockSource

Function name

__STATIC_INLINE void LL_RCC_SetLPTIMClockSource (uint32_t LPTIMxSource)

Function description

Configure LPTIMx clock source.

Parameters

- **LPTIMxSource:** This parameter can be one of the following values:
  - LL_RCC_LPTIM1_CLKSOURCE_MSIK
  - LL_RCC_LPTIM1_CLKSOURCE_LSI
  - LL_RCC_LPTIM1_CLKSOURCE_HSI16
  - LL_RCC_LPTIM1_CLKSOURCE_LSE

-

LL_RCC_SetFDCANClockSource

Function name

__STATIC_INLINE void LL_RCC_SetFDCANClockSource (uint32_t FDCANxSource)

Function description

Set FDCANx clock source.

Parameters

- **FDCANxSource:** This parameter can be one of the following values:
  - LL_RCC_FDCAN_CLKSOURCE_SYSCLK
  - LL_RCC_FDCAN_CLKSOURCE_MSIK

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR1 FDCANSEL LL_RCC_SetFDCANClockSource

LL_RCC_GetFDCANClockSource

Function name

__STATIC_INLINE uint32_t LL_RCC_GetFDCANClockSource (uint32_t FDCANx_clksource)

Function description

Get FDCANx clock source.

Parameters

- **FDCANx_clksource:** This parameter can be one of the following values:
  - LL_RCC_FDCAN_CLKSOURCE

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_FDCAN_CLKSOURCE_SYSCLK
  - LL_RCC_FDCAN_CLKSOURCE_MSIK

Reference Manual to LL API cross reference:

- CCIPR1 FDCANSEL LL_RCC_GetFDCANClockSource

LL_RCC_SetICLKClockSource

Function name

__STATIC_INLINE void LL_RCC_SetICLKClockSource (uint32_t ICLKSource)

Function description

Set ICLK clock source.

Parameters

- **ICLKSource:** This parameter can be one of the following values:
  - LL_RCC_ICLK_CLKSOURCE_HSI48
  - LL_RCC_ICLK_CLKSOURCE_MSIK
  - LL_RCC_ICLK_CLKSOURCE_HSE
  - LL_RCC_ICLK_CLKSOURCE_SYSCLK

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR1 ICLKSEL LL_RCC_SetICLKClockSource

LL_RCC_GetICLKClockSource

Function name

__STATIC_INLINE uint32_t LL_RCC_GetICLKClockSource (uint32_t ICLK_clksource)

Function description

Get ICLK clock source.

Parameters

- **ICLK_clksource:** This parameter can be one of the following values:
  - LL_RCC_ICLK_CLKSOURCE

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_ICLK_CLKSOURCE_HSI48
  - LL_RCC_ICLK_CLKSOURCE_MSIK
  - LL_RCC_ICLK_CLKSOURCE_HSE
  - LL_RCC_ICLK_CLKSOURCE_SYSCLK

- CCIPR1 ICLKSEL LL_RCC_GetICLKClockSource

LL_RCC_SetUSBClockSource

Function name

__STATIC_INLINE void LL_RCC_SetUSBClockSource (uint32_t USBxSource)

Function description

Set USBx clock source.

Parameters

- **USBxSource:** This parameter can be one of the following values:
  - LL_RCC_USB1_CLKSOURCE_ICLK
  - LL_RCC_USB1_CLKSOURCE_ICLKDIV2

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR1 USB1SEL LL_RCC_SetUSBClockSource

LL_RCC_GetUSBClockSource

Function name

__STATIC_INLINE uint32_t LL_RCC_GetUSBClockSource (uint32_t USBx_clksource)

Function description

Get USB clock source.

Parameters

- **USBx_clksource:** This parameter can be one of the following values:
  - LL_RCC_USB1_CLKSOURCE

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_USB1_CLKSOURCE_ICLK
  - LL_RCC_USB1_CLKSOURCE_ICLKDIV2

Reference Manual to LL API cross reference:

- CCIPR1 USB1SEL LL_RCC_GetUSBClockSource

LL_RCC_SetTIMICClockSource

Function name

__STATIC_INLINE void LL_RCC_SetTIMICClockSource (uint32_t TIMICxSource)

Function description

Set TIMIC clock source.

Parameters

- **TIMICxSource:** This parameter can be one of the following values:
  - LL_RCC_TIMIC_CLKSOURCE_NONE
  - LL_RCC_TIMIC_CLKSOURCE_HSIDIV256_MSISDIV1024_MSISDIV4
  - LL_RCC_TIMIC_CLKSOURCE_HSIDIV256_MSISDIV1024_MSIKDIV4
  - LL_RCC_TIMIC_CLKSOURCE_HSIDIV256_MSIKDIV1024_MSISDIV4
  - LL_RCC_TIMIC_CLKSOURCE_HSIDIV256_MSIKDIV1024_MSIKDIV4

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR1 TIMICSEL LL_RCC_SetTIMICClockSource

LL_RCC_GetTIMICClockSource

Function name

__STATIC_INLINE uint32_t LL_RCC_GetTIMICClockSource (uint32_t TIMICx_clksource)

Function description

Get TIMICx clock source.

Parameters

- **TIMICx_clksource:** This parameter can be one of the following values:
  - LL_RCC_TIMIC_CLKSOURCE

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_TIMIC_CLKSOURCE_NONE
  - LL_RCC_TIMIC_CLKSOURCE_HSIDIV256_MSISDIV1024_MSISDIV4
  - LL_RCC_TIMIC_CLKSOURCE_HSIDIV256_MSISDIV1024_MSIKDIV4
  - LL_RCC_TIMIC_CLKSOURCE_HSIDIV256_MSIKDIV1024_MSISDIV4

LL_RCC_SetADFClockSource

Function name

__STATIC_INLINE void LL_RCC_SetADFClockSource (uint32_t ADFxSource)

Function description

Set ADFx clock source.

Parameters

- **ADFxSource:** This parameter can be one of the following values:
  - LL_RCC_ADF1_CLKSOURCE_SAI1
  - LL_RCC_ADF1_CLKSOURCE_AUDCLKIN
  - LL_RCC_ADF1_CLKSOURCE_MSIK

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR2 ADF1SEL LL_RCC_SetADFClockSource

LL_RCC_GetADFClockSource

Function name

__STATIC_INLINE uint32_t LL_RCC_GetADFClockSource (uint32_t ADFx_clksource)

Function description

Get ADFx clock source.

Parameters

- **ADFx_clksource:** This parameter can be one of the following values:
  - LL_RCC_ADF1_CLKSOURCE

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_ADF1_CLKSOURCE_SAI1
  - LL_RCC_ADF1_CLKSOURCE_AUDCLKIN
  - LL_RCC_ADF1_CLKSOURCE_MSIK

- CCIPR2 ADF1SEL LL_RCC_GetADFClockSource

LL_RCC_SetSAIClockSource

Function name

__STATIC_INLINE void LL_RCC_SetSAIClockSource (uint32_t SAIxSource)

Function description

Set SAIx clock source.

Parameters

- **SAIxSource:** This parameter can be one of the following values:
  - LL_RCC_SAI1_CLKSOURCE_MSIK
  - LL_RCC_SAI1_CLKSOURCE_AUDCLKIN
  - LL_RCC_SAI1_CLKSOURCE_HSE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR2 SAI1SEL LL_RCC_SetSAIClockSource

LL_RCC_GetSAIClockSource

Function name

__STATIC_INLINE uint32_t LL_RCC_GetSAIClockSource (uint32_t SAIx_clksource)

Function description

Get SAIx clock source.

Parameters

- **SAIx_clksource:** This parameter can be one of the following values:
  - LL_RCC_SAI1_CLKSOURCE

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_SAI1_CLKSOURCE_MSIK
  - LL_RCC_SAI1_CLKSOURCE_AUDCLKIN
  - LL_RCC_SAI1_CLKSOURCE_HSE

Reference Manual to LL API cross reference:

- CCIPR2 SAI1SEL LL_RCC_GetSAIClockSource

LL_RCC_SetRNGClockSource

Function name

__STATIC_INLINE void LL_RCC_SetRNGClockSource (uint32_t RNGxSource)

Function description

Set RNGx clock source.

Parameters

- **RNGxSource:** This parameter can be one of the following values:
  - LL_RCC_RNG_CLKSOURCE_HSI48
  - LL_RCC_RNG_CLKSOURCE_MSIK

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCIPR2 RNGSEL LL_RCC_SetRNGClockSource

LL_RCC_GetRNGClockSource

Function name

__STATIC_INLINE uint32_t LL_RCC_GetRNGClockSource (uint32_t RNGx_clksource)

Function description

Get RNGx clock source.

Parameters

- **RNGx_clksource:** This parameter can be one of the following values:
  - LL_RCC_RNG_CLKSOURCE

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_RNG_CLKSOURCE_HSI48
  - LL_RCC_RNG_CLKSOURCE_MSIK

Reference Manual to LL API cross reference:

- CCIPR2 RNGSEL LL_RCC_GetRNGClockSource

LL_RCC_SetADCDACClockPrescaler

Function name

__STATIC_INLINE void LL_RCC_SetADCDACClockPrescaler (uint32_t ADCDACxPrescaler)

Function description

Set ADCDACx kernel clock prescaler.

Parameters

- **ADCDACxPrescaler:** This parameter can be one of the following values:
  - LL_RCC_ADCDAC_CLKPRESCALER_ICLK
  - LL_RCC_ADCDAC_CLKPRESCALER_ICLK_DIV_2
  - LL_RCC_ADCDAC_CLKPRESCALER_ICLK_DIV_4
  - LL_RCC_ADCDAC_CLKPRESCALER_ICLK_DIV_8

LL_RCC_DeInit

Function name

ErrorStatus LL_RCC_DeInit (void)

Function description

Reset the RCC clock configuration to the default reset state.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: RCC registers are de-initialized
  - ERROR: not applicable

Notes

- The default reset state of the clock configuration is given below: MSIS ON (RC1, 12MHz) and used as system clock sourceother clocks OFFAHB, APB1, APB2 and APB3 prescaler set to 1.CSS, MCO OFFAll interrupts disabled
- This function doesn't modify the configuration of the Peripheral clocksLSI, LSE and RTC clocks

LL_RCC_GetSystemClocksFreq

Function name

void LL_RCC_GetSystemClocksFreq (LL_RCC_ClocksTypeDef * RCC_Clocks)

Function description

Return the frequencies of different on chip clocks; System, AHB, APB1 and APB2 buses clocks.

Parameters

- **RCC_Clocks:** pointer to a LL_RCC_ClocksTypeDef structure which will hold the clocks frequencies

Return values

- **None:**

Notes

- Each time SYSCLK, HCLK and/or PCLK1, PCLK2 and/or PCLK3 clock changes, this function must be called to update structure fields. Otherwise, any configuration based on this function will be incorrect.

LL_RCC_GetUSARTClockFreq

Function name

uint32_t LL_RCC_GetUSARTClockFreq (uint32_t USARTxSource)

Function description

Return USARTx clock frequency.

Parameters

- **USARTxSource:** This parameter can be one of the following values:
  - LL_RCC_USART1_CLKSOURCE
  - LL_RCC_USART2_CLKSOURCE
  - LL_RCC_USART3_CLKSOURCE

Return values

- **USART:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator (HSI) is not ready

LL_RCC_GetUARTClockFreq

Function name

uint32_t LL_RCC_GetUARTClockFreq (uint32_t UARTxSource)

Function description

Return UARTx clock frequency.

Parameters

- **UARTxSource:** This parameter can be one of the following values:
  - LL_RCC_UART4_CLKSOURCE
  - LL_RCC_UART5_CLKSOURCE

Return values

- **UART:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator (HSI or LSE) is not ready

LL_RCC_GetLPUARTClockFreq

Function name

uint32_t LL_RCC_GetLPUARTClockFreq (uint32_t LPUARTxSource)

Function description

Return LPUARTx clock frequency.

Parameters

- **LPUARTxSource:** This parameter can be one of the following values:
  - LL_RCC_LPUART1_CLKSOURCE

Return values

- **LPUART:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator (HSI or LSE) is not ready

LL_RCC_GetSPIClockFreq

Function name

uint32_t LL_RCC_GetSPIClockFreq (uint32_t SPIxSource)

Function description

Return SPIx clock frequency.

Parameters

- **SPIxSource:** This parameter can be one of the following values:
  - LL_RCC_SPI1_CLKSOURCE
  - LL_RCC_SPI2_CLKSOURCE
  - LL_RCC_SPI3_CLKSOURCE
  - LL_RCC_SPI4_CLKSOURCE

Return values

- **SPI:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates error

LL_RCC_GetOCTOSPIClockFreq

Function name

uint32_t LL_RCC_GetOCTOSPIClockFreq (uint32_t OCTOSPIxSource)

Function description

Return OCTOSPIx clock frequency.

Parameters

- **OCTOSPIxSource:** This parameter can be one of the following values:
  - LL_RCC_OCTOSPI_CLKSOURCE

Return values

- **OCTOSPI:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates error

LL_RCC_GetI2CClockFreq

Function name

uint32_t LL_RCC_GetI2CClockFreq (uint32_t I2CxSource)

Function description

Return I2Cx clock frequency.

Parameters

- **I2CxSource:** This parameter can be one of the following values:
  - LL_RCC_I2C1_CLKSOURCE
  - LL_RCC_I2C2_CLKSOURCE
  - LL_RCC_I2C3_CLKSOURCE
  - LL_RCC_I2C4_CLKSOURCE

Return values

- **I2C:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates error

LL_RCC_GetI3CClockFreq

Function name

uint32_t LL_RCC_GetI3CClockFreq (uint32_t I3CxSource)

Function description

Return I3Cx clock frequency.

Parameters

- **I3CxSource:** This parameter can be one of the following values:
  - LL_RCC_I3C1_CLKSOURCE
  - LL_RCC_I3C2_CLKSOURCE

Return values

- **I3C:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates error

LL_RCC_GetADCDACClockFreq

Function name

uint32_t LL_RCC_GetADCDACClockFreq (uint32_t ADCDACxSource)

Function description

Return ADCDACx clock frequency.

Parameters

- **ADCDACxSource:** This parameter can be one of the following values:
  - LL_RCC_ADCDAC_CLKSOURCE

Return values

- **ADC:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator (HSE) or MSIK is not ready

LL_RCC_GetLPTIMClockFreq

Function name

uint32_t LL_RCC_GetLPTIMClockFreq (uint32_t LPTIMxSource)

Function description

Return LPTIMx clock frequency.

Parameters

- **LPTIMxSource:** This parameter can be one of the following values:
  - LL_RCC_LPTIM1_CLKSOURCE
  - LL_RCC_LPTIM2_CLKSOURCE
  - LL_RCC_LPTIM34_CLKSOURCE

Return values

- **LPTIM:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator (HSI16, LSI or LSE) is not ready

LL_RCC_GetRNGClockFreq

Function name

uint32_t LL_RCC_GetRNGClockFreq (uint32_t RNGxSource)

Function description

Return RNGx clock frequency.

Parameters

- **RNGxSource:** This parameter can be one of the following values:
  - LL_RCC_RNG_CLKSOURCE

Return values

- **RNG:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator (HSI48) or MSIK is not ready

LL_RCC_GetSAIClockFreq

Function name

uint32_t LL_RCC_GetSAIClockFreq (uint32_t SAIxSource)

Function description

Return SAIx clock frequency.

Parameters

- **SAIxSource:** This parameter can be one of the following values:
  - LL_RCC_SAI1_CLKSOURCE

Return values

- **SAI:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that MSIK or HSE is not ready

LL_RCC_GetRTCClockFreq

Function name

uint32_t LL_RCC_GetRTCClockFreq (uint32_t RTCxSource)

Function description

Return RTCx clock frequency.

Parameters

- **RTCxSource:** This parameter can be one of the following values:
  - LL_RCC_RTC_CLKSOURCE

Return values

- **RTC:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator (HSE, LSI or LSE) is not ready

LL_RCC_GetFDCANClockFreq

Function name

uint32_t LL_RCC_GetFDCANClockFreq (uint32_t FDCANxSource)

Function description

Return FDCANx clock frequency.

Parameters

- **FDCANxSource:** This parameter can be one of the following values:
  - LL_RCC_FDCAN_CLKSOURCE

Return values

- **FDCAN:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates error

LL_RCC_GetUSBClockFreq

Function name

uint32_t LL_RCC_GetUSBClockFreq (uint32_t USBxSource)

Function description

Return USBx clock frequency.

Parameters

- **USBxSource:** This parameter can be one of the following values:
  - LL_RCC_USB1_CLKSOURCE

Return values

- **USB:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates error

LL_RCC_GetSDMMCClockFreq

Function name

uint32_t LL_RCC_GetSDMMCClockFreq (uint32_t SDMMCxSource)

Function description

Return SDMMCx clock frequency.

Parameters

- **SDMMCxSource:** This parameter can be one of the following values:
  - LL_RCC_SDMMC1_CLKSOURCE

Return values

- **SDMMC:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates error

LL_RCC_GetADFClockFreq

Function name

uint32_t LL_RCC_GetADFClockFreq (uint32_t ADFxSource)

Function description

Return ADFx clock frequency.

Parameters

- **ADFxSource:** This parameter can be one of the following values:
  - LL_RCC_ADF1_CLKSOURCE

Return values

- **ADF:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that MSIK or HSE is not ready

LL_RCC_GetDACSHClockFreq

Function name

uint32_t LL_RCC_GetDACSHClockFreq (uint32_t DACSHxSource)

Function description

Return DACSHx clock frequency.

Parameters

- **DACSHxSource:** This parameter can be one of the following values:
  - LL_RCC_DAC1SH_CLKSOURCE

Return values

- **DACSH:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that error occurred

94.3 RCC Firmware driver defines

The following section lists the various define and macros of the module.

94.3.1 RCC

RCC

Peripheral ADCDAC get clock source

LL_RCC_ADCDAC_CLKSOURCE

Mask to get ADCDAC clock source

Peripheral ADCDAC get kernel clock prescaler

LL_RCC_ADCDAC_CLKPRESCALER

Mask to get ADCDAC kernel clock prescaler

Peripheral ADCDAC clock prescaler selection

LL_RCC_ADCDAC_CLKPRESCALER_ICLK

ICLK clock used as ADCDAC clock prescaler

LL_RCC_ADCDAC_CLKPRESCALER_ICLK_DIV_2

ICLK/2 clock used as ADCDAC clock prescaler

LL_RCC_ADCDAC_CLKPRESCALER_ICLK_DIV_4

ICLK/4 clock used as ADCDAC clock prescaler

LL_RCC_ADCDAC_CLKPRESCALER_ICLK_DIV_8

ICLK/8 clock used as ADCDAC clock prescaler

LL_RCC_ADCDAC_CLKPRESCALER_ICLK_DIV_16

ICLK/16 clock used as ADCDAC clock prescaler

LL_RCC_ADCDAC_CLKPRESCALER_ICLK_DIV_32

ICLK/32 clock used as ADCDAC clock prescaler

LL_RCC_ADCDAC_CLKPRESCALER_ICLK_DIV_64

ICLK/64 clock used as ADCDAC clock prescaler

LL_RCC_ADCDAC_CLKPRESCALER_ICLK_DIV_128

ICLK/128 clock used as ADCDAC clock prescaler

LL_RCC_ADCDAC_CLKPRESCALER_ICLK_DIV_256

ICLK/256 clock used as ADCDAC clock prescaler

LL_RCC_ADCDAC_CLKPRESCALER_ICLK_DIV_512

ICLK/512 clock used as ADCDAC clock prescaler

Peripheral ADCDAC clock source selection

LL_RCC_ADCDAC_CLKSOURCE_HCLK

HCLK clock used as ADCDAC clock source

LL_RCC_ADCDAC_CLKSOURCE_HSE

HSE clock used as ADCDAC clock source

LL_RCC_ADCDAC_CLKSOURCE_MSIK

MSI clock used as ADCDAC clock source

Peripheral ADF1 get clock source

LL_RCC_ADF1_CLKSOURCE

Mask to get ADF1 clock source

Peripheral ADF1 clock source selection

LL_RCC_ADF1_CLKSOURCE_SAI1

SAI1 clock used as ADF1 clock source

LL_RCC_ADF1_CLKSOURCE_AUDCLKIN

input pin AUDIOCLK clock used as ADF1 clock source

LL_RCC_ADF1_CLKSOURCE_MSIK

MSIK clock used as ADF1 clock source

APB1 prescaler

LL_RCC_APB1_HCLK_DIV_1

HCLK not divided

LL_RCC_APB1_HCLK_DIV_2

HCLK divided by 2

LL_RCC_APB1_HCLK_DIV_4

HCLK divided by 4

LL_RCC_APB1_HCLK_DIV_8

HCLK divided by 8

LL_RCC_APB1_HCLK_DIV_16

HCLK divided by 16

APB2 prescaler

LL_RCC_APB2_HCLK_DIV_1

HCLK not divided

LL_RCC_APB2_HCLK_DIV_2

HCLK divided by 2

LL_RCC_APB2_HCLK_DIV_4

HCLK divided by 4

LL_RCC_APB2_HCLK_DIV_8

HCLK divided by 8

LL_RCC_APB2_HCLK_DIV_16

HCLK divided by 16

APB3 prescaler

LL_RCC_APB3_HCLK_DIV_1

HCLK not divided

LL_RCC_APB3_HCLK_DIV_2

HCLK divided by 2

LL_RCC_APB3_HCLK_DIV_4

HCLK divided by 4

LL_RCC_APB3_HCLK_DIV_8

HCLK divided by 8

LL_RCC_APB3_HCLK_DIV_16

HCLK divided by 16

Peripheral DAC1 get clock source

LL_RCC_DAC1SH_CLKSOURCE

Mask to get DAC1 sample & hold clock source

Peripheral DAC1 sample & hold clock source selection

LL_RCC_DAC1SH_CLKSOURCE_LSE

LSE clock used as DAC1 clock source

LL_RCC_DAC1SH_CLKSOURCE_LSI

LSI clock used as DAC1 clock source

EPOD clock prescaler

LL_RCC_EPODBOOSTCLKPRESCAL_1

LL_RCC_EPODBOOSTCLKPRESCAL_2

LL_RCC_EPODBOOSTCLKPRESCAL_4

LL_RCC_EPODBOOSTCLKPRESCAL_6

LL_RCC_EPODBOOSTCLKPRESCAL_8

LL_RCC_EPODBOOSTCLKPRESCAL_10

LL_RCC_EPODBOOSTCLKPRESCAL_12

LL_RCC_EPODBOOSTCLKPRESCAL_14

LL_RCC_EPODBOOSTCLKPRESCAL_16

EPOD clock source selection

LL_RCC_EPODBOOSTCLKSRCE_BYPASS

LL_RCC_EPODBOOSTCLKSRCE_MSIS

LL_RCC_EPODBOOSTCLKSRCE_HSI16

LL_RCC_EPODBOOSTCLKSRCE_HSE

Peripheral FDCAN get clock source

LL_RCC_FDCAN_CLKSOURCE

Mask to get FDCAN clock source

Peripheral FDCAN clock source selection

LL_RCC_FDCAN_CLKSOURCE_SYSCLK

SYSCLK clock used as FDCAN clock source

LL_RCC_FDCAN_CLKSOURCE_MSIK

MSIK clock used as FDCAN clock source

Peripheral I2Cx get clock source

LL_RCC_I2C1_CLKSOURCE

Mask to get I2C1SEL clock source

LL_RCC_I2C2_CLKSOURCE

Mask to get I2C2SEL clock source

LL_RCC_I2C3_CLKSOURCE

Mask to get I2C3SEL clock source

Peripheral I2Cx clock source selection

LL_RCC_I2C1_CLKSOURCE_PCLK1

PCLK1 clock used as I2C1 clock source

LL_RCC_I2C1_CLKSOURCE_MSIK

MSIK clock used as I2C1 clock source

LL_RCC_I2C2_CLKSOURCE_PCLK1

PCLK1 clock used as I2C2 clock source

LL_RCC_I2C2_CLKSOURCE_MSIK

MSIK clock used as I2C2 clock source

LL_RCC_I2C3_CLKSOURCE_PCLK3

PCLK3 clock used as I2C3 clock source

LL_RCC_I2C3_CLKSOURCE_MSIK

MSIK clock used as I2C3 clock source

Peripheral I3Cx get clock source

LL_RCC_I3C1_CLKSOURCE

Mask to get I3C1SEL clock source

LL_RCC_I3C2_CLKSOURCE

Mask to get I3C2SEL clock source

Peripheral I3Cx clock source selection

LL_RCC_I3C1_CLKSOURCE_PCLK1

PCLK1 clock used as I3C1 clock source

LL_RCC_I3C1_CLKSOURCE_MSIK

MSIK clock used as I3C1 clock source

LL_RCC_I3C2_CLKSOURCE_PCLK2

PCLK2 clock used as I3C2 clock source

LL_RCC_I3C2_CLKSOURCE_MSIK

MSIK clock used as I3C2 clock source

Mask to get SAI1 clock source

Peripheral SAI1 clock source selection

LL_RCC_SAI1_CLKSOURCE_MSIK

MSIK clock used as SAI1 clock source

LL_RCC_SAI1_CLKSOURCE_AUDCLKIN

External input clock used as SAI1 clock source

LL_RCC_SAI1_CLKSOURCE_HSE

HSE clock used as SAI1 clock source

Peripheral SPIx get clock source

LL_RCC_SPI1_CLKSOURCE

Mask to get SPI1SEL clock source

LL_RCC_SPI2_CLKSOURCE

Mask to get SPI2SEL clock source

LL_RCC_SPI3_CLKSOURCE

Mask to get SPI3SEL clock source

Peripheral SPIx clock source selection

LL_RCC_SPI1_CLKSOURCE_PCLK2

PCLK2 clock used as SPI1 clock source

LL_RCC_SPI1_CLKSOURCE_MSIK

MSIK clock used as SPI1 clock source

LL_RCC_SPI2_CLKSOURCE_PCLK1

PCLK1 clock used as SPI2 clock source

LL_RCC_SPI2_CLKSOURCE_MSIK

MSIK clock used as SPI2 clock source

LL_RCC_SPI3_CLKSOURCE_PCLK1

PCLK1 clock used as SPI3 clock source

LL_RCC_SPI3_CLKSOURCE_MSIK

MSIK clock used as SPI3 clock source

Stop wakeup clock

LL_RCC_STOP_WAKEUP_CLK_MSIS

MSIS oscillator selected as wakeup from stop clock and CSS backup clock

LL_RCC_STOP_WAKEUP_CLK_HSI16

HSI16 oscillator selected as wakeup from stop clock and CSS backup clock

Stop wakeup kernel clock

LL_RCC_STOP_WAKEUP_KERCLK_MSIK

MSIK oscillator selected as wakeup from stop kernel clock

LL_RCC_STOP_WAKEUP_KERCLK_HSI16

HSI16 oscillator selected as wakeup from stop kernel clock

AHB prescaler

LL_RCC_HCLK_SYSCLK_DIV_1

SYSCLK not divided

LL_RCC_HCLK_SYSCLK_DIV_2

SYSCLK divided by 2

LL_RCC_HCLK_SYSCLK_DIV_4

SYSCLK divided by 4

LL_RCC_HCLK_SYSCLK_DIV_8

SYSCLK divided by 8

LL_RCC_HCLK_SYSCLK_DIV_16

SYSCLK divided by 16

LL_RCC_HCLK_SYSCLK_DIV_64

SYSCLK divided by 64

LL_RCC_HCLK_SYSCLK_DIV_128

SYSCLK divided by 128

LL_RCC_HCLK_SYSCLK_DIV_256

SYSCLK divided by 256

LL_RCC_HCLK_SYSCLK_DIV_512

SYSCLK divided by 512

Peripheral SYSTICK get clock source

LL_RCC_SYSTICK_CLKSOURCE

Mask to get SYSTICK clock source

Peripheral SYSTICK clock source selection

LL_RCC_SYSTICK_CLKSOURCE_HCLKDIV8

HCLKDIV8 clock used as SYSTICK clock source

LL_RCC_SYSTICK_CLKSOURCE_LSI

LSI clock used as SYSTICK clock source

LL_RCC_SYSTICK_CLKSOURCE_LSE

LSE clock used as SYSTICK clock source

System clock switch

LL_RCC_SYS_CLKSOURCE_MSIS

MSIS selection as system clock

LL_RCC_SYS_CLKSOURCE_HSI16

HSI16 selection as system clock

LL_RCC_SYS_CLKSOURCE_HSE

HSE selection as system clock

System clock switch status

LL_RCC_SYS_CLKSOURCE_STATUS_MSIS

MSIS used as system clock

LL_RCC_SYS_CLKSOURCE_STATUS_HSI16

HSI16 used as system clock

LL_RCC_SYS_CLKSOURCE_STATUS_HSE

HSE used as system clock

Peripheral TIMIC get clock source

LL_RCC_TIMIC_CLKSOURCE

Mask to get TIMIC clock source

Peripheral TIMIC clock source selection

LL_RCC_TIMIC_CLKSOURCE_NONE

No clock available for TIM16/TIM17 and LPTIM2 input capture

LL_RCC_TIMIC_CLKSOURCE_HSIDIV256_MSISDIV1024_MSISDIV4

HSI/256, MSIS/1024 and MSIS/4 generated and can be selected for TIM16/TIM17 and LPTIM2 input capture

LL_RCC_TIMIC_CLKSOURCE_HSIDIV256_MSISDIV1024_MSIKDIV4

HSI/256, MSIS/1024 and MSIK/4 generated and can be selected for TIM16/TIM17 and LPTIM2 input capture

LL_RCC_TIMIC_CLKSOURCE_HSIDIV256_MSIKDIV1024_MSISDIV4

HSI/256, MSIK/1024 and MSIS/4 generated and can be selected for TIM16/TIM17 and LPTIM2 input capture

LL_RCC_TIMIC_CLKSOURCE_HSIDIV256_MSIKDIV1024_MSIKDIV4

HSI/256, MSIK/1024 and MSIK/4 generated and can be selected for TIM16/TIM17 and LPTIM2 input capture

Peripheral USB1 get clock source

LL_RCC_USB1_CLKSOURCE

Mask to get USB1 clock source

Peripheral USB1 clock source selection

LL_RCC_USB1_CLKSOURCE_ICLK

ICLK clock used as USB1 clock source

LL_RCC_USB1_CLKSOURCE_ICLKDIV2

ICLK/2 clock used as USB1 clock source

Peripheral UxARTx get clock source

LL_RCC_USART1_CLKSOURCE

Mask to get USART1SEL clock source

LL_RCC_USART3_CLKSOURCE

Mask to get USART3SEL clock source

LL_RCC_UART4_CLKSOURCE

Mask to get UART4SEL clock source

LL_RCC_UART5_CLKSOURCE

Mask to get UART5SEL clock source

Peripheral UxARTx clock source selection

LL_RCC_USART1_CLKSOURCE_PCLK2

PCLK2 clock used as USART1 clock source

LL_RCC_USART1_CLKSOURCE_HSI16

HSI16 clock used as USART1 clock source

LL_RCC_USART3_CLKSOURCE_PCLK1

PCLK1 clock used as USART3 clock source

LL_RCC_USART3_CLKSOURCE_HSI16

HSI16 clock used as USART3 clock source

LL_RCC_UART4_CLKSOURCE_PCLK1

PCLK1 clock used as UART4 clock source

LL_RCC_UART4_CLKSOURCE_HSI16

HSI16 clock used as UART4 clock source

LL_RCC_UART5_CLKSOURCE_PCLK1

PCLK1 clock used as UART5 clock source

LL_RCC_UART5_CLKSOURCE_HSI16

HSI16 clock used as UART5 clock source

Security Services

LL_RCC_ALL_NSEC

No security on RCC resources (default)

LL_RCC_ALL_SEC

Security on all RCC resources

LL_RCC_HSI_SEC

HSI clock configuration secure-only access

LL_RCC_HSI_NSEC

HSI clock configuration secure/non-secure access

LL_RCC_HSE_SEC

HSE clock configuration secure-only access

LL_RCC_HSE_NSEC

HSE clock configuration secure/non-secure access

LL_RCC_MSI_SEC

MSI clock configuration secure-only access

LL_RCC_MSI_NSEC

MSI clock configuration secure/non-secure access

LL_RCC_LSI_SEC

LSI clock configuration secure-only access

LL_RCC_LSI_NSEC

LSI clock configuration secure/non-secure access

LL_RCC_LSE_SEC

LSE clock configuration secure-only access

LL_RCC_LSE_NSEC

LSE clock configuration secure/non-secure access

LL_RCC_SYSCLK_SEC

SYSCLK clock; STOPWUCK and MCO output configuration secure-only access

LL_RCC_SYSCLK_NSEC

SYSCLK clock; STOPWUCK and MCO output configuration secure/non-secure access

LL_RCC_PRESCALERS_SEC

AHBx/APBx prescaler configuration secure-only access

LL_RCC_PRESCALERS_NSEC

AHBx/APBx prescaler configuration secure/non-secure access

LL_RCC_BOOST_SEC

BOOST clock configuration secure-only access

LL_RCC_BOOST_NSEC

BOOST clock configuration secure/non-secure access

LL_RCC_ICLK_SEC

ICLK clock configuration secure-only access

LL_RCC_ICLK_NSEC

ICLK clock configuration secure/non-secure access

LL_RCC_HSI48_SEC

HSI48 clock configuration secure-only access

LL_RCC_HSI48_NSEC

HSI48 clock configuration secure/non-secure access

LL_RCC_RESET_FLAGS_SEC

Remove reset flag secure-only access

LL_RCC_RESET_FLAGS_NSEC

Remove reset flag secure/non-secure access

Calculate frequencies

__LL_RCC_CALC_HCLK_FREQ

Description:

- Helper macro to calculate the HCLK frequency.

Parameters:

- __SYSCLKFREQ__: SYSCLK frequency (based on HSE/MSIS/HSI16)
- __AHBPRESCALER__: This parameter can be one of the following values:
  - LL_RCC_HCLK_SYSCLK_DIV_1
  - LL_RCC_HCLK_SYSCLK_DIV_2
  - LL_RCC_HCLK_SYSCLK_DIV_4
  - LL_RCC_HCLK_SYSCLK_DIV_8
  - LL_RCC_HCLK_SYSCLK_DIV_16
  - LL_RCC_HCLK_SYSCLK_DIV_64
  - LL_RCC_HCLK_SYSCLK_DIV_128
  - LL_RCC_HCLK_SYSCLK_DIV_256
  - LL_RCC_HCLK_SYSCLK_DIV_512

Return value:

- HCLK: clock frequency (in Hz)

__LL_RCC_CALC_PCLK1_FREQ

Description:

- Helper macro to calculate the PCLK1 frequency (ABP1)

Parameters:

- __HCLKFREQ__: HCLK frequency
- __APB1PRESCALER__: This parameter can be one of the following values:
  - LL_RCC_APB1_HCLK_DIV_1
  - LL_RCC_APB1_HCLK_DIV_2
  - LL_RCC_APB1_HCLK_DIV_4
  - LL_RCC_APB1_HCLK_DIV_8
  - LL_RCC_APB1_HCLK_DIV_16

Return value:

- PCLK1: clock frequency (in Hz)

__LL_RCC_CALC_PCLK2_FREQ

Description:

- Helper macro to calculate the PCLK2 frequency (ABP2)

Parameters:

- __HCLKFREQ__: HCLK frequency
- __APB2PRESCALER__: This parameter can be one of the following values:
  - LL_RCC_APB2_HCLK_DIV_1
  - LL_RCC_APB2_HCLK_DIV_2
  - LL_RCC_APB2_HCLK_DIV_4
  - LL_RCC_APB2_HCLK_DIV_8
  - LL_RCC_APB2_HCLK_DIV_16

Return value:

- PCLK2: clock frequency (in Hz)

__LL_RCC_CALC_PCLK3_FREQ

Description:

- Helper macro to calculate the PCLK3 frequency (ABP3)

Parameters:

- __HCLKFREQ__: HCLK frequency
- __APB3PRESCALER__: This parameter can be one of the following values:
  - LL_RCC_APB3_HCLK_DIV_1
  - LL_RCC_APB3_HCLK_DIV_2
  - LL_RCC_APB3_HCLK_DIV_4
  - LL_RCC_APB3_HCLK_DIV_8
  - LL_RCC_APB3_HCLK_DIV_16

Return value:

- PCLK3: clock frequency (in Hz)

RCC Exported Constants

LL_RCC_MSI_CLOCK_RANGE_MSIXDIVS

MSIS/MSIK ranges provided by MSISSRANGE[3:0] and MSIKSRANGE[3:0] in RCC_CSR

LL_RCC_MSI_CLOCK_RANGE_MSIXDIV

MSIS/MSIK ranges provided by MSISRANGE[3:0] and MSIKRANGE[3:0] in RCC_ICSCR1

LL_RCC_MSI_BIAS_MODE_CONTINUOUS

MSI bias continuous mode (clock accuracy fast settling time)

LL_RCC_MSI_BIAS_MODE_SAMPLING

MSI bias sampling mode when the device is in Stop 1 or Stop 2 (ultra-low-power mode)

LL_RCC_MSIS_CLOCK_SOURCE_RC0

MSIRC0 (96 MHz) is selected as source to generate MSISSRANGE

LL_RCC_MSIS_CLOCK_SOURCE_RC1

MSIRC1 (24 MHz) is selected as source to generate MSISSRANGE

LL_RCC_MSIS_CLOCK_SOURCE_RC_DIV_1

MSIRCx /1 is selected for MSIS (RC0 : range 0 around 96 MHz / RC1 : range 4 around 24 MHz)

LL_RCC_MSIS_CLOCK_SOURCE_RC_DIV_2

MSIRCx /2 is selected for MSIS (RC0 : range 0 around 48 MHz / RC1 : range 4 around 12 MHz)

LL_RCC_MSIS_CLOCK_SOURCE_RC_DIV_4

MSIRCx /4 is selected for MSIS (RC0 : range 0 around 24 MHz / RC1 : range 4 around 6 MHz)

LL_RCC_MSIS_CLOCK_SOURCE_RC_DIV_8

MSIRCx /8 is selected for MSIS (RC0 : range 0 around 12 MHz / RC1 : range 4 around 3 MHz)

LL_RCC_MSIK_CLOCK_SOURCE_RC0

MSIRC0 (96 MHz) is selected as source to generate MSIKSRANGE

LL_RCC_MSIK_CLOCK_SOURCE_RC1

MSIRC1 (24 MHz) is selected as source to generate MSIKSRANGE

LL_RCC_MSIK_CLOCK_SOURCE_RC_DIV_1

MSIRCx /1 is selected for MSIK (RC0 : range 0 around 96 MHz / RC1 : range 4 around 24 MHz)

LL_RCC_MSIK_CLOCK_SOURCE_RC_DIV_2

MSIRCx /2 is selected for MSIK (RC0 : range 0 around 48 MHz / RC1 : range 4 around 12 MHz)

LL_RCC_MSIK_CLOCK_SOURCE_RC_DIV_4

MSIRCx /4 is selected for MSIK (RC0 : range 0 around 24 MHz / RC1 : range 4 around 6 MHz)

LL_RCC_MSIK_CLOCK_SOURCE_RC_DIV_8

MSIRCx /8 is selected for MSIK (RC0 : range 0 around 12 MHz / RC1 : range 4 around 3 MHz)

LL_RCC_MSIRC1_PLLMODE_LSE_MULT_732

Freq MSIRC1 = 23.9862 MHz

LL_RCC_MSIRC1_PLLMODE_LSE_MULT_689

Freq MSIRC1 = 22.5772 MHz

LL_RCC_MSIRC1_PLLMODE_LSE_MULT_750

Freq MSIRC1 = 24.576 MHz

95 LL RNG Generic Driver

95.1 RNG Firmware driver registers structures

95.1.1 LL_RNG_InitTypeDef

LL_RNG_InitTypeDef is defined in the stm32u3xx_ll_rng.h

Data Fields

- ***uint32_t ClockErrorDetection***

Field Documentation

- ***uint32_t LL_RNG_InitTypeDef::ClockErrorDetection***
  Clock error detection. This parameter can be one value of ***RNG_LL_CED***. This parameter can be modified using unitary functions **LL_RNG_EnableClkErrorDetect()**.

95.2 RNG Firmware driver API description

The following section lists the various functions of the RNG library.

95.2.1 Detailed description of functions

LL_RNG_Enable

Function name

__STATIC_INLINE void LL_RNG_Enable (RNG_TypeDef * RNGx)

Function description

Enable Random Number Generation.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RNGEN LL_RNG_Enable

LL_RNG_Disable

Function name

__STATIC_INLINE void LL_RNG_Disable (RNG_TypeDef * RNGx)

Function description

Disable Random Number Generation.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RNGEN LL_RNG_Disable

LL_RNG_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RNG_IsEnabled (const RNG_TypeDef * RNGx)

Function description

Check if Random Number Generator is enabled.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR RNGEN LL_RNG_IsEnabled

LL_RNG_EnableClkErrorDetect

Function name

__STATIC_INLINE void LL_RNG_EnableClkErrorDetect (RNG_TypeDef * RNGx)

Function description

Enable Clock Error Detection.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CED LL_RNG_EnableClkErrorDetect

LL_RNG_DisableClkErrorDetect

Function name

__STATIC_INLINE void LL_RNG_DisableClkErrorDetect (RNG_TypeDef * RNGx)

Function description

Disable RNG Clock Error Detection.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CED LL_RNG_DisableClkErrorDetect

LL_RNG_IsEnabledClkErrorDetect

Function name

__STATIC_INLINE uint32_t LL_RNG_IsEnabledClkErrorDetect (const RNG_TypeDef * RNGx)

Function description

Check if RNG Clock Error Detection is enabled.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR CED LL_RNG_IsEnabledClkErrorDetect

LL_RNG_EnableCondReset

Function name

__STATIC_INLINE void LL_RNG_EnableCondReset (RNG_TypeDef * RNGx)

Function description

Set RNG Conditioning Soft Reset bit.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CONDRST LL_RNG_EnableCondReset

LL_RNG_DisableCondReset

Function name

__STATIC_INLINE void LL_RNG_DisableCondReset (RNG_TypeDef * RNGx)

Function description

Reset RNG Conditioning Soft Reset bit.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CONDRST LL_RNG_DisableCondReset

LL_RNG_IsEnabledCondReset

Function name

__STATIC_INLINE uint32_t LL_RNG_IsEnabledCondReset (const RNG_TypeDef * RNGx)

Function description

Check if RNG Conditioning Soft Reset bit is set.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR CONDRST LL_RNG_IsEnabledCondReset

LL_RNG_ConfigLock

Function name

__STATIC_INLINE void LL_RNG_ConfigLock (RNG_TypeDef * RNGx)

Function description

Enable RNG Config Lock.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CONFIGLOCK LL_RNG_ConfigLock

LL_RNG_IsConfigLocked

Function name

__STATIC_INLINE uint32_t LL_RNG_IsConfigLocked (const RNG_TypeDef * RNGx)

Function description

Check if RNG Config Lock is enabled.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR CONFIGLOCK LL_RNG_IsConfigLocked

LL_RNG_EnableNistCompliance

Function name

__STATIC_INLINE void LL_RNG_EnableNistCompliance (RNG_TypeDef * RNGx)

Function description

Enable NIST Compliance.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR NISTC LL_RNG_EnableNistCompliance

LL_RNG_DisableNistCompliance

Function name

__STATIC_INLINE void LL_RNG_DisableNistCompliance (RNG_TypeDef * RNGx)

Function description

Disable NIST Compliance.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR NISTC LL_RNG_DisableNistCompliance

LL_RNG_IsEnabledNistCompliance

Function name

__STATIC_INLINE uint32_t LL_RNG_IsEnabledNistCompliance (const RNG_TypeDef * RNGx)

Function description

Check if NIST Compliance is enabled.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR NISTC LL_RNG_IsEnabledNistCompliance

LL_RNG_SetConfig1

Function name

__STATIC_INLINE void LL_RNG_SetConfig1 (RNG_TypeDef * RNGx, uint32_t Config1)

Function description

Set RNG Config1 Configuration field value.

Parameters

- **RNGx:** RNG Instance
- **Config1:** Value between 0 and 0x3F

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RNG_CONFIG1 LL_RNG_SetConfig1

LL_RNG_GetConfig1

Function name

__STATIC_INLINE uint32_t LL_RNG_GetConfig1 (const RNG_TypeDef * RNGx)

Function description

Get RNG Config1 Configuration field value.

Parameters

- **RNGx:** RNG Instance

Return values

- **Returned:** Value expressed on 6 bits : Value between 0 and 0x3F

Reference Manual to LL API cross reference:

- CR RNG_CONFIG1 LL_RNG_GetConfig1

LL_RNG_SetConfig2

Function name

__STATIC_INLINE void LL_RNG_SetConfig2 (RNG_TypeDef * RNGx, uint32_t Config2)

Function description

Set RNG Config2 Configuration field value.

Parameters

- **RNGx:** RNG Instance
- **Config2:** Value between 0 and 0x7

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RNG_CONFIG2 LL_RNG_SetConfig2

LL_RNG_GetConfig2

Function name

__STATIC_INLINE uint32_t LL_RNG_GetConfig2 (const RNG_TypeDef * RNGx)

Function description

Get RNG Config2 Configuration field value.

Parameters

- **RNGx:** RNG Instance

Return values

- **Returned:** Value expressed on 3 bits : Value between 0 and 0x7

Reference Manual to LL API cross reference:

- CR RNG_CONFIG2 LL_RNG_GetConfig2

LL_RNG_SetConfig3

Function name

__STATIC_INLINE void LL_RNG_SetConfig3 (RNG_TypeDef * RNGx, uint32_t Config3)

Function description

Set RNG Config3 Configuration field value.

Parameters

- **RNGx:** RNG Instance
- **Config3:** Value between 0 and 0xF

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RNG_CONFIG3 LL_RNG_SetConfig3

LL_RNG_GetConfig3

Function name

__STATIC_INLINE uint32_t LL_RNG_GetConfig3 (const RNG_TypeDef * RNGx)

Function description

Get RNG Config3 Configuration field value.

Parameters

- **RNGx:** RNG Instance

Return values

- **Returned:** Value expressed on 4 bits : Value between 0 and 0xF

Reference Manual to LL API cross reference:

- CR RNG_CONFIG3 LL_RNG_GetConfig3

LL_RNG_SetClockDivider

Function name

__STATIC_INLINE void LL_RNG_SetClockDivider (RNG_TypeDef * RNGx, uint32_t Divider)

Function description

Set RNG Clock divider factor.

Parameters

- **RNGx:** RNG Instance
- **Divider:** can be one of the following values:
  - LL_RNG_CLKDIV_BY_1
  - LL_RNG_CLKDIV_BY_2
  - LL_RNG_CLKDIV_BY_4
  - LL_RNG_CLKDIV_BY_8
  - LL_RNG_CLKDIV_BY_16
  - LL_RNG_CLKDIV_BY_32
  - LL_RNG_CLKDIV_BY_64
  - LL_RNG_CLKDIV_BY_128
  - LL_RNG_CLKDIV_BY_256
  - LL_RNG_CLKDIV_BY_512
  - LL_RNG_CLKDIV_BY_1024
  - LL_RNG_CLKDIV_BY_2048
  - LL_RNG_CLKDIV_BY_4096
  - LL_RNG_CLKDIV_BY_8192
  - LL_RNG_CLKDIV_BY_16384
  - LL_RNG_CLKDIV_BY_32768

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CLKDIV LL_RNG_SetClockDivider

LL_RNG_GetClockDivider

Function name

__STATIC_INLINE uint32_t LL_RNG_GetClockDivider (const RNG_TypeDef * RNGx)

Function description

Get RNG Clock divider factor.

Parameters

- **RNGx:** RNG Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RNG_CLKDIV_BY_1
  - LL_RNG_CLKDIV_BY_2
  - LL_RNG_CLKDIV_BY_4
  - LL_RNG_CLKDIV_BY_8
  - LL_RNG_CLKDIV_BY_16
  - LL_RNG_CLKDIV_BY_32
  - LL_RNG_CLKDIV_BY_64
  - LL_RNG_CLKDIV_BY_128
  - LL_RNG_CLKDIV_BY_256
  - LL_RNG_CLKDIV_BY_512
  - LL_RNG_CLKDIV_BY_1024
  - LL_RNG_CLKDIV_BY_2048
  - LL_RNG_CLKDIV_BY_4096
  - LL_RNG_CLKDIV_BY_8192
  - LL_RNG_CLKDIV_BY_16384
  - LL_RNG_CLKDIV_BY_32768

Reference Manual to LL API cross reference:

- CR CLKDIV LL_RNG_GetClockDivider

LL_RNG_IsActiveFlag_DRDY

Function name

__STATIC_INLINE uint32_t LL_RNG_IsActiveFlag_DRDY (const RNG_TypeDef * RNGx)

Function description

Indicate if the RNG Data ready Flag is set or not.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR DRDY LL_RNG_IsActiveFlag_DRDY

LL_RNG_IsActiveFlag_CECS

Function name

__STATIC_INLINE uint32_t LL_RNG_IsActiveFlag_CECS (const RNG_TypeDef * RNGx)

Function description

Indicate if the Clock Error Current Status Flag is set or not.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CECS LL_RNG_IsActiveFlag_CECS

LL_RNG_IsActiveFlag_SECS

Function name

__STATIC_INLINE uint32_t LL_RNG_IsActiveFlag_SECS (const RNG_TypeDef * RNGx)

Function description

Indicate if the Seed Error Current Status Flag is set or not.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR SECS LL_RNG_IsActiveFlag_SECS

LL_RNG_IsActiveFlag_CEIS

Function name

__STATIC_INLINE uint32_t LL_RNG_IsActiveFlag_CEIS (const RNG_TypeDef * RNGx)

Function description

Indicate if the Clock Error Interrupt Status Flag is set or not.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CEIS LL_RNG_IsActiveFlag_CEIS

LL_RNG_IsActiveFlag_SEIS

Function name

__STATIC_INLINE uint32_t LL_RNG_IsActiveFlag_SEIS (const RNG_TypeDef * RNGx)

Function description

Indicate if the Seed Error Interrupt Status Flag is set or not.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR SEIS LL_RNG_IsActiveFlag_SEIS

LL_RNG_ClearFlag_CEIS

Function name

__STATIC_INLINE void LL_RNG_ClearFlag_CEIS (RNG_TypeDef * RNGx)

Function description

Clear Clock Error interrupt Status (CEIS) Flag.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CEIS LL_RNG_ClearFlag_CEIS

LL_RNG_ClearFlag_SEIS

Function name

__STATIC_INLINE void LL_RNG_ClearFlag_SEIS (RNG_TypeDef * RNGx)

Function description

Clear Seed Error interrupt Status (SEIS) Flag.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR SEIS LL_RNG_ClearFlag_SEIS

LL_RNG_EnableIT

Function name

__STATIC_INLINE void LL_RNG_EnableIT (RNG_TypeDef * RNGx)

Function description

Enable Random Number Generator Interrupt (applies for either Seed error, Clock Error or Data ready interrupts)

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR IE LL_RNG_EnableIT

LL_RNG_DisableIT

Function name

__STATIC_INLINE void LL_RNG_DisableIT (RNG_TypeDef * RNGx)

Function description

Disable Random Number Generator Interrupt (applies for either Seed error, Clock Error or Data ready interrupts)

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR IE LL_RNG_DisableIT

LL_RNG_IsEnabledIT

Function name

__STATIC_INLINE uint32_t LL_RNG_IsEnabledIT (const RNG_TypeDef * RNGx)

Function description

Check if Random Number Generator Interrupt is enabled (applies for either Seed error, Clock Error or Data ready interrupts)

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR IE LL_RNG_IsEnabledIT

LL_RNG_ReadRandData32

Function name

__STATIC_INLINE uint32_t LL_RNG_ReadRandData32 (const RNG_TypeDef * RNGx)

Function description

Return32-bit Random Number value.

Parameters

- **RNGx:** RNG Instance

Return values

- **Generated:** 32-bit random value

Reference Manual to LL API cross reference:

- DR RNDATA LL_RNG_ReadRandData32

LL_RNG_EnableArdis

Function name

__STATIC_INLINE void LL_RNG_EnableArdis (RNG_TypeDef * RNGx)

Function description

Enable Auto reset.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR ARDIS LL_RNG_EnableArdis

LL_RNG_DisableArdis

Function name

__STATIC_INLINE void LL_RNG_DisableArdis (RNG_TypeDef * RNGx)

Function description

Disable Auto reset.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR ARDIS LL_RNG_DisableArdis

LL_RNG_IsEnabledArdis

Function name

__STATIC_INLINE uint32_t LL_RNG_IsEnabledArdis (const RNG_TypeDef * RNGx)

Function description

Check if RNG Auto reset is enabled.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR ARDIS LL_RNG_IsEnabledArdis

LL_RNG_SetHealthConfig

Function name

__STATIC_INLINE void LL_RNG_SetHealthConfig (RNG_TypeDef * RNGx, uint32_t HTCFG)

Function description

Set RNG Health Test Control.

Parameters

- **RNGx:** RNG Instance
- **HTCFG:** can be values of 32 bits

Return values

- **None:**

Reference Manual to LL API cross reference:

- HTCR HTCFG LL_RNG_SetHealthConfig

LL_RNG_GetHealthConfig

Function name

__STATIC_INLINE uint32_t LL_RNG_GetHealthConfig (const RNG_TypeDef * RNGx)

Function description

Get RNG Health Test Control.

Parameters

- **RNGx:** RNG Instance

Return values

- **Return:** 32-bit RNG Health Test configuration

Reference Manual to LL API cross reference:

- HTCR HTCFG LL_RNG_GetHealthConfig

LL_RNG_Init

Function name

ErrorStatus LL_RNG_Init (RNG_TypeDef * RNGx, const LL_RNG_InitTypeDef * RNG_InitStruct)

Function description

Initialize RNG registers according to the specified parameters in RNG_InitStruct.

Parameters

- **RNGx:** RNG Instance
- **RNG_InitStruct:** pointer to a LL_RNG_InitTypeDef structure that contains the configuration information for the specified RNG peripheral.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: RNG registers are initialized according to RNG_InitStruct content
  - ERROR: not applicable

LL_RNG_StructInit

Function name

void LL_RNG_StructInit (LL_RNG_InitTypeDef * RNG_InitStruct)

Function description

Set each LL_RNG_InitTypeDef field to default value.

Parameters

- **RNG_InitStruct:** pointer to a LL_RNG_InitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

LL_RNG_DeInit

Function name

ErrorStatus LL_RNG_DeInit (const RNG_TypeDef * RNGx)

Function description

De-initialize RNG registers (Registers restored to their default values).

Parameters

- **RNGx:** RNG Instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: RNG registers are de-initialized
  - ERROR: not applicable

95.3 RNG Firmware driver defines

The following section lists the various define and macros of the module.

95.3.1 RNG

RNG

Auto reset disable

LL_RNG_ARDIS_ENABLE

ARDIS enabled automatic reset to clear SECS bit

LL_RNG_ARDIS_DISABLE

ARDIS disabled no automatic reset to clear SECS bit

Clock Error Detection

LL_RNG_CED_ENABLE

Clock error detection enabled

LL_RNG_CED_DISABLE

Clock error detection disabled

Value used to configure an internal

LL_RNG_CLKDIV_BY_1

No clock division

LL_RNG_CLKDIV_BY_2

2 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_4

4 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_8

8 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_16

16 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_32

32 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_64

64 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_128

128 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_256

256 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_512

512 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_1024

1024 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_2048

2048 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_4096

4096 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_8192

8192 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_16384

16384 RNG clock cycles per internal RNG clock

LL_RNG_CLKDIV_BY_32768

32768 RNG clock cycles per internal RNG clock

Get Flags Defines

LL_RNG_SR_DRDY

Register contains valid random data

LL_RNG_SR_CECS

Clock error current status

LL_RNG_SR_SECS

Seed error current status

LL_RNG_SR_CEIS

Clock error interrupt status

LL_RNG_SR_SEIS

Seed error interrupt status

IT Defines

LL_RNG_CR_IE

RNG Interrupt enable

Common Write and read registers Macros

LL_RNG_WriteReg

Description:

- Write a value in RNG register.

Parameters:

- __INSTANCE__: RNG Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_RNG_ReadReg

Description:

- Read a value in RNG register.

Parameters:

- __INSTANCE__: RNG Instance
- __REG__: Register to be read

Return value:

- Register: value

NIST Compliance configuration

LL_RNG_NIST_COMPLIANT

Default NIST compliant configuration

LL_RNG_CUSTOM_NIST

Custom NIST configuration

96 LL RTC Generic Driver

96.1 RTC Firmware driver registers structures

96.1.1 LL_RTC_InitTypeDef

LL_RTC_InitTypeDef is defined in the stm32u3xx_ll_rtc.h

Data Fields

- ***uint32_t HourFormat***
- ***uint32_t AsynchPrescaler***
- ***uint32_t SynchPrescaler***

Field Documentation

- ***uint32_t LL_RTC_InitTypeDef::HourFormat***
  Specifies the RTC Hours Format. This parameter can be a value of ***RTC_LL_EC_HOURFORMAT***This feature can be modified afterwards using unitary function **LL_RTC_SetHourFormat()**.
- ***uint32_t LL_RTC_InitTypeDef::AsynchPrescaler***
  Specifies the RTC Asynchronous Predivider value. This parameter must be a number between Min_Data = 0x00 and Max_Data = 0x7FThis feature can be modified afterwards using unitary function **LL_RTC_SetAsynchPrescaler()**.
- ***uint32_t LL_RTC_InitTypeDef::SynchPrescaler***
  Specifies the RTC Synchronous Predivider value. This parameter must be a number between Min_Data = 0x00 and Max_Data = 0x7FFFThis feature can be modified afterwards using unitary function **LL_RTC_SetSynchPrescaler()**.

96.1.2 LL_RTC_TimeTypeDef

LL_RTC_TimeTypeDef is defined in the stm32u3xx_ll_rtc.h

Data Fields

- ***uint32_t TimeFormat***
- ***uint8_t Hours***
- ***uint8_t Minutes***
- ***uint8_t Seconds***

Field Documentation

- ***uint32_t LL_RTC_TimeTypeDef::TimeFormat***
  Specifies the RTC AM/PM Time. This parameter can be a value of ***RTC_LL_EC_TIME_FORMAT***This feature can be modified afterwards using unitary function **LL_RTC_TIME_SetFormat()**.
- ***uint8_t LL_RTC_TimeTypeDef::Hours***
  Specifies the RTC Time Hours. This parameter must be a number between Min_Data = 0 and Max_Data = 12 if the **LL_RTC_TIME_FORMAT_PM** is selected.This parameter must be a number between Min_Data = 0 and Max_Data = 23 if the **LL_RTC_TIME_FORMAT_AM_OR_24** is selected.This feature can be modified afterwards using unitary function **LL_RTC_TIME_SetHour()**.
- ***uint8_t LL_RTC_TimeTypeDef::Minutes***
  Specifies the RTC Time Minutes. This parameter must be a number between Min_Data = 0 and Max_Data = 59This feature can be modified afterwards using unitary function **LL_RTC_TIME_SetMinute()**.
- ***uint8_t LL_RTC_TimeTypeDef::Seconds***
  Specifies the RTC Time Seconds. This parameter must be a number between Min_Data = 0 and Max_Data = 59This feature can be modified afterwards using unitary function **LL_RTC_TIME_SetSecond()**.

96.1.3 LL_RTC_DateTypeDef

LL_RTC_DateTypeDef is defined in the stm32u3xx_ll_rtc.h

Data Fields

- ***uint8_t WeekDay***
- ***uint8_t Month***
- ***uint8_t Day***

- ***uint8_t Year***

Field Documentation

- ***uint8_t LL_RTC_DateTypeDef::WeekDay***
  Specifies the RTC Date WeekDay. This parameter can be a value of ***RTC_LL_EC_WEEKDAY***This feature can be modified afterwards using unitary function **LL_RTC_DATE_SetWeekDay()**.
- ***uint8_t LL_RTC_DateTypeDef::Month***
  Specifies the RTC Date Month. This parameter can be a value of ***RTC_LL_EC_MONTH***This feature can be modified afterwards using unitary function **LL_RTC_DATE_SetMonth()**.
- ***uint8_t LL_RTC_DateTypeDef::Day***
  Specifies the RTC Date Day. This parameter must be a number between Min_Data = 1 and Max_Data = 31This feature can be modified afterwards using unitary function **LL_RTC_DATE_SetDay()**.
- ***uint8_t LL_RTC_DateTypeDef::Year***
  Specifies the RTC Date Year. This parameter must be a number between Min_Data = 0 and Max_Data = 99This feature can be modified afterwards using unitary function **LL_RTC_DATE_SetYear()**.

96.1.4 LL_RTC_AlarmTypeDef

LL_RTC_AlarmTypeDef is defined in the stm32u3xx_ll_rtc.h

Data Fields

- ***LL_RTC_TimeTypeDef AlarmTime***
- ***uint32_t AlarmMask***
- ***uint32_t AlarmDateWeekDaySel***
- ***uint8_t AlarmDateWeekDay***

Field Documentation

- ***LL_RTC_TimeTypeDef LL_RTC_AlarmTypeDef::AlarmTime***
  Specifies the RTC Alarm Time members.
- ***uint32_t LL_RTC_AlarmTypeDef::AlarmMask***
  Specifies the RTC Alarm Masks. This parameter can be a value of ***RTC_LL_EC_ALMA_MASK*** for ALARM A or ***RTC_LL_EC_ALMB_MASK*** for ALARM B.This feature can be modified afterwards using unitary function **LL_RTC_ALMA_SetMask()** for ALARM A or **LL_RTC_ALMB_SetMask()** for ALARM B.
- ***uint32_t LL_RTC_AlarmTypeDef::AlarmDateWeekDaySel***
  Specifies the RTC Alarm is on day or WeekDay. This parameter can be a value of ***RTC_LL_EC_ALMA_WEEKDAY_SELECTION*** for ALARM A or ***RTC_LL_EC_ALMB_WEEKDAY_SELECTION*** for ALARM B.This feature can be modified afterwards using unitary function **LL_RTC_ALMA_EnableWeekday()** or **LL_RTC_ALMA_DisableWeekday()** for ALARM A or **LL_RTC_ALMB_EnableWeekday()** or **LL_RTC_ALMB_DisableWeekday()** for ALARM B.
- ***uint8_t LL_RTC_AlarmTypeDef::AlarmDateWeekDay***
  Specifies the RTC Alarm Day/WeekDay. If AlarmDateWeekDaySel set to day, this parameter must be a number between Min_Data = 1 and Max_Data = 31.This feature can be modified afterwards using unitary function **LL_RTC_ALMA_SetDay()** for ALARM A or **LL_RTC_ALMB_SetDay()** for ALARM B.If AlarmDateWeekDaySel set to Weekday, this parameter can be a value of ***RTC_LL_EC_WEEKDAY***.This feature can be modified afterwards using unitary function **LL_RTC_ALMA_SetWeekDay()** for ALARM A or **LL_RTC_ALMB_SetWeekDay()** for ALARM B.

96.2 RTC Firmware driver API description

The following section lists the various functions of the RTC library.

96.2.1 Detailed description of functions

LL_RTC_SetHourFormat

Function name

__STATIC_INLINE void LL_RTC_SetHourFormat (RTC_TypeDef * RTCx, uint32_t HourFormat)

Function description

Set Hours format (24 hour/day or AM/PM hour format)

Parameters

- **RTCx:** RTC Instance
- **HourFormat:** This parameter can be one of the following values:
  - LL_RTC_HOURFORMAT_24HOUR
  - LL_RTC_HOURFORMAT_AMPM

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function)

Reference Manual to LL API cross reference:

- RTC_CR FMT LL_RTC_SetHourFormat

LL_RTC_GetHourFormat

Function name

__STATIC_INLINE uint32_t LL_RTC_GetHourFormat (const RTC_TypeDef * RTCx)

Function description

Get Hours format (24 hour/day or AM/PM hour format)

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_HOURFORMAT_24HOUR
  - LL_RTC_HOURFORMAT_AMPM

Reference Manual to LL API cross reference:

- RTC_CR FMT LL_RTC_GetHourFormat

LL_RTC_SetAlarmOutEvent

Function name

__STATIC_INLINE void LL_RTC_SetAlarmOutEvent (RTC_TypeDef * RTCx, uint32_t AlarmOutput)

Function description

Select the flag to be routed to RTC_ALARM output.

Parameters

- **RTCx:** RTC Instance
- **AlarmOutput:** This parameter can be one of the following values:
  - LL_RTC_ALARMOUT_DISABLE
  - LL_RTC_ALARMOUT_ALMA
  - LL_RTC_ALARMOUT_ALMB
  - LL_RTC_ALARMOUT_WAKEUP

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR OSEL LL_RTC_SetAlarmOutEvent

LL_RTC_GetAlarmOutEvent

Function name

__STATIC_INLINE uint32_t LL_RTC_GetAlarmOutEvent (const RTC_TypeDef * RTCx)

Function description

Get the flag to be routed to RTC_ALARM output.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_ALARMOUT_DISABLE
  - LL_RTC_ALARMOUT_ALMA
  - LL_RTC_ALARMOUT_ALMB
  - LL_RTC_ALARMOUT_WAKEUP

Reference Manual to LL API cross reference:

- RTC_CR OSEL LL_RTC_GetAlarmOutEvent

LL_RTC_SetAlarmOutputType

Function name

__STATIC_INLINE void LL_RTC_SetAlarmOutputType (RTC_TypeDef * RTCx, uint32_t Output)

Function description

Set RTC_ALARM output type (ALARM in push-pull or open-drain output)

Parameters

- **RTCx:** RTC Instance
- **Output:** This parameter can be one of the following values:
  - LL_RTC_ALARM_OUTPUTTYPE_OPENDRAIN
  - LL_RTC_ALARM_OUTPUTTYPE_PUSHPULL

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_CR TAMPALRM_TYPE LL_RTC_SetAlarmOutputType

LL_RTC_GetAlarmOutputType

Function name

__STATIC_INLINE uint32_t LL_RTC_GetAlarmOutputType (const RTC_TypeDef * RTCx)

Function description

Get RTC_ALARM output type (ALARM in push-pull or open-drain output)

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_ALARM_OUTPUTTYPE_OPENDRAIN
  - LL_RTC_ALARM_OUTPUTTYPE_PUSHPULL

Reference Manual to LL API cross reference:

- RTC_CR TAMPALRM_TYPE LL_RTC_GetAlarmOutputType

LL_RTC_EnableInitMode

Function name

__STATIC_INLINE void LL_RTC_EnableInitMode (RTC_TypeDef * RTCx)

Function description

Enable initialization mode.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Initialization mode is used to program time and date register (RTC_TR and RTC_DR) and prescaler register (RTC_PRER). Counters are stopped and start counting from the new value when INIT is reset.

Reference Manual to LL API cross reference:

- RTC_ICSR INIT LL_RTC_EnableInitMode

LL_RTC_DisableInitMode

Function name

__STATIC_INLINE void LL_RTC_DisableInitMode (RTC_TypeDef * RTCx)

Function description

Disable initialization mode (Free running mode)

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ICSR INIT LL_RTC_DisableInitMode

LL_RTC_SetBinaryMode

Function name

__STATIC_INLINE void LL_RTC_SetBinaryMode (RTC_TypeDef * RTCx, uint32_t BinaryMode)

Function description

Set Binary mode (Sub Second Register)

Parameters

- **RTCx:** RTC Instance
- **BinaryMode:** can be one of the following values:
  - LL_RTC_BINARY_NONE
  - LL_RTC_BINARY_ONLY
  - LL_RTC_BINARY_MIX

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function).

Reference Manual to LL API cross reference:

- RTC_ICSR BIN LL_RTC_SetBinaryMode

LL_RTC_GetBinaryMode

Function name

__STATIC_INLINE uint32_t LL_RTC_GetBinaryMode (const RTC_TypeDef * RTCx)

Function description

Get Binary mode (Sub Second Register)

Parameters

- **RTCx:** RTC Instance

Return values

- **This:** parameter can be one of the following values:
  - LL_RTC_BINARY_NONE
  - LL_RTC_BINARY_ONLY
  - LL_RTC_BINARY_MIX
- **None:**

Reference Manual to LL API cross reference:

- RTC_ICSR BIN LL_RTC_GetBinaryMode

LL_RTC_SetBinMixBCDU

Function name

__STATIC_INLINE void LL_RTC_SetBinMixBCDU (RTC_TypeDef * RTCx, uint32_t BinMixBcdU)

Function description

Set Binary Mix mode BCDU.

Parameters

- **RTCx:** RTC Instance
- **BinMixBcdU:** can be one of the following values:
  - LL_RTC_BINARY_MIX_BCDU_0
  - LL_RTC_BINARY_MIX_BCDU_1
  - LL_RTC_BINARY_MIX_BCDU_2
  - LL_RTC_BINARY_MIX_BCDU_3
  - LL_RTC_BINARY_MIX_BCDU_4
  - LL_RTC_BINARY_MIX_BCDU_5
  - LL_RTC_BINARY_MIX_BCDU_6
  - LL_RTC_BINARY_MIX_BCDU_7

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function).

Reference Manual to LL API cross reference:

- RTC_ICSR BCDU LL_RTC_SetBinMixBCDU

LL_RTC_GetBinMixBCDU

Function name

__STATIC_INLINE uint32_t LL_RTC_GetBinMixBCDU (const RTC_TypeDef * RTCx)

Function description

Get Binary Mix mode BCDU.

Parameters

- **RTCx:** RTC Instance

Return values

- **This:** parameter can be one of the following values:
  - LL_RTC_BINARY_MIX_BCDU_0
  - LL_RTC_BINARY_MIX_BCDU_1
  - LL_RTC_BINARY_MIX_BCDU_2
  - LL_RTC_BINARY_MIX_BCDU_3
  - LL_RTC_BINARY_MIX_BCDU_4
  - LL_RTC_BINARY_MIX_BCDU_5
  - LL_RTC_BINARY_MIX_BCDU_6
  - LL_RTC_BINARY_MIX_BCDU_7
- **None:**

Reference Manual to LL API cross reference:

- RTC_ICSR BCDU LL_RTC_GetBinMixBCDU

LL_RTC_SetOutputPolarity

Function name

__STATIC_INLINE void LL_RTC_SetOutputPolarity (RTC_TypeDef * RTCx, uint32_t Polarity)

Function description

Set Output polarity (pin is low when ALRAF/ALRBF/WUTF is asserted)

Parameters

- **RTCx:** RTC Instance
- **Polarity:** This parameter can be one of the following values:
  - LL_RTC_OUTPUTPOLARITY_PIN_HIGH
  - LL_RTC_OUTPUTPOLARITY_PIN_LOW

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR POL LL_RTC_SetOutputPolarity

LL_RTC_GetOutputPolarity

Function name

__STATIC_INLINE uint32_t LL_RTC_GetOutputPolarity (const RTC_TypeDef * RTCx)

Function description

Get Output polarity.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_OUTPUTPOLARITY_PIN_HIGH
  - LL_RTC_OUTPUTPOLARITY_PIN_LOW

Reference Manual to LL API cross reference:

- RTC_CR POL LL_RTC_GetOutputPolarity

LL_RTC_EnableShadowRegBypass

Function name

__STATIC_INLINE void LL_RTC_EnableShadowRegBypass (RTC_TypeDef * RTCx)

Function description

Enable Bypass the shadow registers.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR BYPSHAD LL_RTC_EnableShadowRegBypass

LL_RTC_DisableShadowRegBypass

Function name

__STATIC_INLINE void LL_RTC_DisableShadowRegBypass (RTC_TypeDef * RTCx)

Function description

Disable Bypass the shadow registers.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_CR BYPSHAD LL_RTC_DisableShadowRegBypass

LL_RTC_IsShadowRegBypassEnabled

Function name

__STATIC_INLINE uint32_t LL_RTC_IsShadowRegBypassEnabled (const RTC_TypeDef * RTCx)

Function description

Check if Shadow registers bypass is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CR BYPSHAD LL_RTC_IsShadowRegBypassEnabled

LL_RTC_EnableRefClock

Function name

__STATIC_INLINE void LL_RTC_EnableRefClock (RTC_TypeDef * RTCx)

Function description

Enable RTC_REFIN reference clock detection (50 or 60 Hz)

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function)

Reference Manual to LL API cross reference:

- RTC_CR REFCKON LL_RTC_EnableRefClock

LL_RTC_DisableRefClock

Function name

__STATIC_INLINE void LL_RTC_DisableRefClock (RTC_TypeDef * RTCx)

Function description

Disable RTC_REFIN reference clock detection (50 or 60 Hz)

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function)

Reference Manual to LL API cross reference:

- RTC_CR REFCKON LL_RTC_DisableRefClock

LL_RTC_SetAsynchPrescaler

Function name

__STATIC_INLINE void LL_RTC_SetAsynchPrescaler (RTC_TypeDef * RTCx, uint32_t AsynchPrescaler)

Function description

Set Asynchronous prescaler factor.

Parameters

- **RTCx:** RTC Instance
- **AsynchPrescaler:** Value between Min_Data = 0 and Max_Data = 0x7F

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_PRER PREDIV_A LL_RTC_SetAsynchPrescaler

LL_RTC_SetSynchPrescaler

Function name

__STATIC_INLINE void LL_RTC_SetSynchPrescaler (RTC_TypeDef * RTCx, uint32_t SynchPrescaler)

Function description

Set Synchronous prescaler factor.

Parameters

- **RTCx:** RTC Instance
- **SynchPrescaler:** Value between Min_Data = 0 and Max_Data = 0x7FFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_PRER PREDIV_S LL_RTC_SetSynchPrescaler

LL_RTC_GetAsynchPrescaler

Function name

__STATIC_INLINE uint32_t LL_RTC_GetAsynchPrescaler (const RTC_TypeDef * RTCx)

Function description

Get Asynchronous prescaler factor.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data = 0 and Max_Data = 0x7F

Reference Manual to LL API cross reference:

- RTC_PRER PREDIV_A LL_RTC_GetAsynchPrescaler

LL_RTC_GetSynchPrescaler

Function name

__STATIC_INLINE uint32_t LL_RTC_GetSynchPrescaler (const RTC_TypeDef * RTCx)

Function description

Get Synchronous prescaler factor.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data = 0 and Max_Data = 0x7FFF

Reference Manual to LL API cross reference:

- RTC_PRER PREDIV_S LL_RTC_GetSynchPrescaler

LL_RTC_EnableWriteProtection

Function name

__STATIC_INLINE void LL_RTC_EnableWriteProtection (RTC_TypeDef * RTCx)

Function description

Enable the write protection for RTC registers.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_WPR KEY LL_RTC_EnableWriteProtection

LL_RTC_DisableWriteProtection

Function name

__STATIC_INLINE void LL_RTC_DisableWriteProtection (RTC_TypeDef * RTCx)

Function description

Disable the write protection for RTC registers.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_WPR KEY LL_RTC_DisableWriteProtection

LL_RTC_EnableTamperOutput

Function name

__STATIC_INLINE void LL_RTC_EnableTamperOutput (RTC_TypeDef * RTCx)

Function description

Enable tamper output.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- When the tamper output is enabled, all external and internal tamper flags are ORed and routed to the TAMPALRM output.

Reference Manual to LL API cross reference:

- RTC_CR TAMPOE LL_RTC_EnableTamperOutput

LL_RTC_DisableTamperOutput

Function name

__STATIC_INLINE void LL_RTC_DisableTamperOutput (RTC_TypeDef * RTCx)

Function description

Disable tamper output.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_CR TAMPOE LL_RTC_DisableTamperOutput

LL_RTC_IsTamperOutputEnabled

Function name

__STATIC_INLINE uint32_t LL_RTC_IsTamperOutputEnabled (const RTC_TypeDef * RTCx)

Function description

Check if tamper output is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CR TAMPOE LL_RTC_IsTamperOutputEnabled

LL_RTC_EnableAlarmPullUp

Function name

__STATIC_INLINE void LL_RTC_EnableAlarmPullUp (RTC_TypeDef * RTCx)

Function description

Enable internal pull-up in output mode.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_CR TAMPALRM_PU LL_RTC_EnableAlarmPullUp

LL_RTC_DisableAlarmPullUp

Function name

__STATIC_INLINE void LL_RTC_DisableAlarmPullUp (RTC_TypeDef * RTCx)

Function description

Disable internal pull-up in output mode.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_CR TAMPALRM_PU LL_RTC_EnableAlarmPullUp

LL_RTC_IsAlarmPullUpEnabled

Function name

__STATIC_INLINE uint32_t LL_RTC_IsAlarmPullUpEnabled (const RTC_TypeDef * RTCx)

Function description

Check if internal pull-up in output mode is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CR TAMPALRM_PU LL_RTC_IsAlarmPullUpEnabled

LL_RTC_EnableOutput2

Function name

__STATIC_INLINE void LL_RTC_EnableOutput2 (RTC_TypeDef * RTCx)

Function description

Enable RTC_OUT2 output.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- RTC_OUT2 mapping depends on both OSEL (LL_RTC_SetAlarmOutEvent) and COE (LL_RTC_CAL_SetOutputFreq) settings.
- RTC_OUT2 is not available in VBAT mode.

Reference Manual to LL API cross reference:

- RTC_CR OUT2EN LL_RTC_EnableOutput2

LL_RTC_DisableOutput2

Function name

__STATIC_INLINE void LL_RTC_DisableOutput2 (RTC_TypeDef * RTCx)

Function description

Disable RTC_OUT2 output.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_CR OUT2EN LL_RTC_DisableOutput2

LL_RTC_IsOutput2Enabled

Function name

__STATIC_INLINE uint32_t LL_RTC_IsOutput2Enabled (const RTC_TypeDef * RTCx)

Function description

Check if RTC_OUT2 output is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CR OUT2EN LL_RTC_IsOutput2Enabled

LL_RTC_TIME_SetFormat

Function name

__STATIC_INLINE void LL_RTC_TIME_SetFormat (RTC_TypeDef * RTCx, uint32_t TimeFormat)

Function description

Set time format (AM/24-hour or PM notation)

Parameters

- **RTCx:** RTC Instance
- **TimeFormat:** This parameter can be one of the following values:
  - LL_RTC_TIME_FORMAT_AM_OR_24
  - LL_RTC_TIME_FORMAT_PM

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function)

Reference Manual to LL API cross reference:

- RTC_TR PM LL_RTC_TIME_SetFormat

LL_RTC_TIME_GetFormat

Function name

__STATIC_INLINE uint32_t LL_RTC_TIME_GetFormat (const RTC_TypeDef * RTCx)

Function description

Get time format (AM or PM notation)

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_TIME_FORMAT_AM_OR_24
  - LL_RTC_TIME_FORMAT_PM

Notes

- if RTC shadow registers are not bypassed (BYPSHAD=0), need to check if RSF flag is set before reading this bit
- Read either RTC_SSR or RTC_TR locks the values in the higher-order calendar shadow registers until RTC_DR is read (LL_RTC_ReadReg(RTC, DR)).

Reference Manual to LL API cross reference:

- RTC_TR PM LL_RTC_TIME_GetFormat

LL_RTC_TIME_SetHour

Function name

__STATIC_INLINE void LL_RTC_TIME_SetHour (RTC_TypeDef * RTCx, uint32_t Hours)

Function description

Set Hours in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Hours:** Value between Min_Data=0x01 and Max_Data=0x12 or between Min_Data=0x00 and Max_Data=0x23

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function)
- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert hour from binary to BCD format

Reference Manual to LL API cross reference:

- RTC_TR HT LL_RTC_TIME_SetHour
- RTC_TR HU LL_RTC_TIME_SetHour

LL_RTC_TIME_GetHour

Function name

__STATIC_INLINE uint32_t LL_RTC_TIME_GetHour (const RTC_TypeDef * RTCx)

Function description

Get Hours in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x01 and Max_Data=0x12 or between Min_Data=0x00 and Max_Data=0x23

Notes

- if RTC shadow registers are not bypassed (BYPSHAD=0), need to check if RSF flag is set before reading this bit
- Read either RTC_SSR or RTC_TR locks the values in the higher-order calendar shadow registers until RTC_DR is read (LL_RTC_ReadReg(RTC, DR)).
- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert hour from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_TR HT LL_RTC_TIME_GetHour
- RTC_TR HU LL_RTC_TIME_GetHour

LL_RTC_TIME_SetMinute

Function name

__STATIC_INLINE void LL_RTC_TIME_SetMinute (RTC_TypeDef * RTCx, uint32_t Minutes)

Function description

Set Minutes in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Minutes:** Value between Min_Data=0x00 and Max_Data=0x59

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function)
- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Minutes from binary to BCD format

Reference Manual to LL API cross reference:

- RTC_TR MNT LL_RTC_TIME_SetMinute
- RTC_TR MNU LL_RTC_TIME_SetMinute

LL_RTC_TIME_GetMinute

Function name

__STATIC_INLINE uint32_t LL_RTC_TIME_GetMinute (const RTC_TypeDef * RTCx)

Function description

Get Minutes in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x59

Notes

- if RTC shadow registers are not bypassed (BYPSHAD=0), need to check if RSF flag is set before reading this bit
- Read either RTC_SSR or RTC_TR locks the values in the higher-order calendar shadow registers until RTC_DR is read (LL_RTC_ReadReg(RTC, DR)).
- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert minute from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_TR MNT LL_RTC_TIME_GetMinute
- RTC_TR MNU LL_RTC_TIME_GetMinute

LL_RTC_TIME_SetSecond

Function name

__STATIC_INLINE void LL_RTC_TIME_SetSecond (RTC_TypeDef * RTCx, uint32_t Seconds)

Function description

Set Seconds in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Seconds:** Value between Min_Data=0x00 and Max_Data=0x59

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function)
- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Seconds from binary to BCD format

Reference Manual to LL API cross reference:

- RTC_TR ST LL_RTC_TIME_SetSecond
- RTC_TR SU LL_RTC_TIME_SetSecond

LL_RTC_TIME_GetSecond

Function name

__STATIC_INLINE uint32_t LL_RTC_TIME_GetSecond (const RTC_TypeDef * RTCx)

Function description

Get Seconds in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x59

Notes

- if RTC shadow registers are not bypassed (BYPSHAD=0), need to check if RSF flag is set before reading this bit
- Read either RTC_SSR or RTC_TR locks the values in the higher-order calendar shadow registers until RTC_DR is read (LL_RTC_ReadReg(RTC, DR)).
- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Seconds from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_TR ST LL_RTC_TIME_GetSecond
- RTC_TR SU LL_RTC_TIME_GetSecond

LL_RTC_TIME_Config

Function name

__STATIC_INLINE void LL_RTC_TIME_Config (RTC_TypeDef * RTCx, uint32_t Format12_24, uint32_t Hours, uint32_t Minutes, uint32_t Seconds)

Function description

Set time (hour, minute and second) in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Format12_24:** This parameter can be one of the following values:
  - LL_RTC_TIME_FORMAT_AM_OR_24
  - LL_RTC_TIME_FORMAT_PM
- **Hours:** Value between Min_Data=0x01 and Max_Data=0x12 or between Min_Data=0x00 and Max_Data=0x23
- **Minutes:** Value between Min_Data=0x00 and Max_Data=0x59
- **Seconds:** Value between Min_Data=0x00 and Max_Data=0x59

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function)
- TimeFormat and Hours should follow the same format

Reference Manual to LL API cross reference:

- RTC_TR PM LL_RTC_TIME_Config
- RTC_TR HT LL_RTC_TIME_Config
- RTC_TR HU LL_RTC_TIME_Config
- RTC_TR MNT LL_RTC_TIME_Config
- RTC_TR MNU LL_RTC_TIME_Config
- RTC_TR ST LL_RTC_TIME_Config
- RTC_TR SU LL_RTC_TIME_Config

LL_RTC_TIME_Get

Function name

__STATIC_INLINE uint32_t LL_RTC_TIME_Get (const RTC_TypeDef * RTCx)

Function description

Get time (hour, minute and second) in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Combination:** of hours, minutes and seconds (Format: 0x00HHMMSS).

Notes

- if RTC shadow registers are not bypassed (BYPSHAD=0), need to check if RSF flag is set before reading this bit
- Read either RTC_SSR or RTC_TR locks the values in the higher-order calendar shadow registers until RTC_DR is read (LL_RTC_ReadReg(RTC, DR)).
- helper macros __LL_RTC_GET_HOUR, __LL_RTC_GET_MINUTE and __LL_RTC_GET_SECOND are available to get independently each parameter.

Reference Manual to LL API cross reference:

- RTC_TR HT LL_RTC_TIME_Get
- RTC_TR HU LL_RTC_TIME_Get
- RTC_TR MNT LL_RTC_TIME_Get
- RTC_TR MNU LL_RTC_TIME_Get
- RTC_TR ST LL_RTC_TIME_Get
- RTC_TR SU LL_RTC_TIME_Get

LL_RTC_TIME_EnableDayLightStore

Function name

__STATIC_INLINE void LL_RTC_TIME_EnableDayLightStore (RTC_TypeDef * RTCx)

Function description

Memorize whether the daylight saving time change has been performed.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR BKP LL_RTC_TIME_EnableDayLightStore

LL_RTC_TIME_DisableDayLightStore

Function name

__STATIC_INLINE void LL_RTC_TIME_DisableDayLightStore (RTC_TypeDef * RTCx)

Function description

Disable memorization whether the daylight saving time change has been performed.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR BKP LL_RTC_TIME_DisableDayLightStore

LL_RTC_TIME_IsDayLightStoreEnabled

Function name

__STATIC_INLINE uint32_t LL_RTC_TIME_IsDayLightStoreEnabled (const RTC_TypeDef * RTCx)

Function description

Check if RTC Day Light Saving stored operation has been enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CR BKP LL_RTC_TIME_IsDayLightStoreEnabled

LL_RTC_TIME_DecHour

Function name

__STATIC_INLINE void LL_RTC_TIME_DecHour (RTC_TypeDef * RTCx)

Function description

Subtract 1 hour (winter time change)

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR SUB1H LL_RTC_TIME_DecHour

LL_RTC_TIME_IncHour

Function name

__STATIC_INLINE void LL_RTC_TIME_IncHour (RTC_TypeDef * RTCx)

Function description

Add 1 hour (summer time change)

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ADD1H LL_RTC_TIME_IncHour

LL_RTC_TIME_GetSubSecond

Function name

__STATIC_INLINE uint32_t LL_RTC_TIME_GetSubSecond (const RTC_TypeDef * RTCx)

Function description

Get Sub second value in the synchronous prescaler counter.

Parameters

- **RTCx:** RTC Instance

Return values

- **If:** binary mode is none, Value between Min_Data=0x0 and Max_Data=0x7FFF else Value between Min_Data=0x0 and Max_Data=0xFFFFFFFF

Notes

- You can use both SubSeconds value and SecondFraction (PREDIV_S through LL_RTC_GetSynchPrescaler function) terms returned to convert Calendar SubSeconds value in second fraction ratio with time unit following generic formula: ==> Seconds fraction ratio * time_unit= [(SecondFraction-SubSeconds)/(SecondFraction+1)] * time_unit This conversion can be performed only if no shift operation is pending (ie. SHFP=0) when PREDIV_S >= SS.

Reference Manual to LL API cross reference:

- RTC_SSR SS LL_RTC_TIME_GetSubSecond

LL_RTC_TIME_Synchronize

Function name

__STATIC_INLINE void LL_RTC_TIME_Synchronize (RTC_TypeDef * RTCx, uint32_t ShiftSecond, uint32_t Fraction)

Function description

Synchronize to a remote clock with a high degree of precision.

Parameters

- **RTCx:** RTC Instance
- **ShiftSecond:** This parameter can be one of the following values:
  - LL_RTC_SHIFT_SECOND_DELAY
  - LL_RTC_SHIFT_SECOND_ADVANCE
- **Fraction:** Number of Seconds Fractions (any value from 0 to 0x7FFF)

Return values

- **None:**

Notes

- This operation effectively subtracts from (delays) or advance the clock of a fraction of a second.
- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- When REFCKON is set, firmware must not write to Shift control register.

Reference Manual to LL API cross reference:

- RTC_SHIFTR ADD1S LL_RTC_TIME_Synchronize
- RTC_SHIFTR SUBFS LL_RTC_TIME_Synchronize

LL_RTC_DATE_SetYear

Function name

__STATIC_INLINE void LL_RTC_DATE_SetYear (RTC_TypeDef * RTCx, uint32_t Year)

Function description

Set Year in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Year:** Value between Min_Data=0x00 and Max_Data=0x99

Return values

- **None:**

Notes

- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Year from binary to BCD format

Reference Manual to LL API cross reference:

- RTC_DR YT LL_RTC_DATE_SetYear
- RTC_DR YU LL_RTC_DATE_SetYear

LL_RTC_DATE_GetYear

Function name

__STATIC_INLINE uint32_t LL_RTC_DATE_GetYear (const RTC_TypeDef * RTCx)

Function description

Get Year in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x99

Notes

- if RTC shadow registers are not bypassed (BYPSHAD=0), need to check if RSF flag is set before reading this bit
- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Year from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_DR YT LL_RTC_DATE_GetYear

LL_RTC_DATE_SetWeekDay

Function name

__STATIC_INLINE void LL_RTC_DATE_SetWeekDay (RTC_TypeDef * RTCx, uint32_t WeekDay)

Function description

Set Week day.

Parameters

- **RTCx:** RTC Instance
- **WeekDay:** This parameter can be one of the following values:
  - LL_RTC_WEEKDAY_MONDAY
  - LL_RTC_WEEKDAY_TUESDAY
  - LL_RTC_WEEKDAY_WEDNESDAY
  - LL_RTC_WEEKDAY_THURSDAY
  - LL_RTC_WEEKDAY_FRIDAY
  - LL_RTC_WEEKDAY_SATURDAY
  - LL_RTC_WEEKDAY_SUNDAY

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_DR WDU LL_RTC_DATE_SetWeekDay

LL_RTC_DATE_GetWeekDay

Function name

__STATIC_INLINE uint32_t LL_RTC_DATE_GetWeekDay (const RTC_TypeDef * RTCx)

Function description

Get Week day.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_WEEKDAY_MONDAY
  - LL_RTC_WEEKDAY_TUESDAY
  - LL_RTC_WEEKDAY_WEDNESDAY
  - LL_RTC_WEEKDAY_THURSDAY
  - LL_RTC_WEEKDAY_FRIDAY
  - LL_RTC_WEEKDAY_SATURDAY
  - LL_RTC_WEEKDAY_SUNDAY

Notes

- if RTC shadow registers are not bypassed (BYPSHAD=0), need to check if RSF flag is set before reading this bit

Reference Manual to LL API cross reference:

- RTC_DR WDU LL_RTC_DATE_GetWeekDay

LL_RTC_DATE_SetMonth

Function name

__STATIC_INLINE void LL_RTC_DATE_SetMonth (RTC_TypeDef * RTCx, uint32_t Month)

Function description

Set Month in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Month:** This parameter can be one of the following values:
  - LL_RTC_MONTH_JANUARY
  - LL_RTC_MONTH_FEBRUARY
  - LL_RTC_MONTH_MARCH
  - LL_RTC_MONTH_APRIL
  - LL_RTC_MONTH_MAY
  - LL_RTC_MONTH_JUNE
  - LL_RTC_MONTH_JULY
  - LL_RTC_MONTH_AUGUST
  - LL_RTC_MONTH_SEPTEMBER
  - LL_RTC_MONTH_OCTOBER
  - LL_RTC_MONTH_NOVEMBER
  - LL_RTC_MONTH_DECEMBER

Return values

- **None:**

Notes

- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Month from binary to BCD format

Reference Manual to LL API cross reference:

Reference Manual to LL API cross reference:

- RTC_DR MT LL_RTC_DATE_GetMonth
- RTC_DR MU LL_RTC_DATE_GetMonth

LL_RTC_DATE_SetDay

Function name

__STATIC_INLINE void LL_RTC_DATE_SetDay (RTC_TypeDef * RTCx, uint32_t Day)

Function description

Set Day in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Day:** Value between Min_Data=0x01 and Max_Data=0x31

Return values

- **None:**

Notes

- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Day from binary to BCD format

Reference Manual to LL API cross reference:

- RTC_DR DT LL_RTC_DATE_SetDay
- RTC_DR DU LL_RTC_DATE_SetDay

LL_RTC_DATE_GetDay

Function name

__STATIC_INLINE uint32_t LL_RTC_DATE_GetDay (const RTC_TypeDef * RTCx)

Function description

Get Day in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x01 and Max_Data=0x31

Notes

- if RTC shadow registers are not bypassed (BYPSHAD=0), need to check if RSF flag is set before reading this bit
- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Day from BCD to Binary format

Reference Manual to LL API cross reference:

LL_RTC_DATE_Config

Function name

__STATIC_INLINE void LL_RTC_DATE_Config (RTC_TypeDef * RTCx, uint32_t WeekDay, uint32_t Day, uint32_t Month, uint32_t Year)

Function description

Set date (WeekDay, Day, Month and Year) in BCD format.

Parameters

- **RTCx:** RTC Instance
- **WeekDay:** This parameter can be one of the following values:
  - LL_RTC_WEEKDAY_MONDAY
  - LL_RTC_WEEKDAY_TUESDAY
  - LL_RTC_WEEKDAY_WEDNESDAY
  - LL_RTC_WEEKDAY_THURSDAY
  - LL_RTC_WEEKDAY_FRIDAY
  - LL_RTC_WEEKDAY_SATURDAY
  - LL_RTC_WEEKDAY_SUNDAY
- **Day:** Value between Min_Data=0x01 and Max_Data=0x31
- **Month:** This parameter can be one of the following values:
  - LL_RTC_MONTH_JANUARY
  - LL_RTC_MONTH_FEBRUARY
  - LL_RTC_MONTH_MARCH
  - LL_RTC_MONTH_APRIL
  - LL_RTC_MONTH_MAY
  - LL_RTC_MONTH_JUNE
  - LL_RTC_MONTH_JULY
  - LL_RTC_MONTH_AUGUST
  - LL_RTC_MONTH_SEPTEMBER
  - LL_RTC_MONTH_OCTOBER
  - LL_RTC_MONTH_NOVEMBER
  - LL_RTC_MONTH_DECEMBER
- **Year:** Value between Min_Data=0x00 and Max_Data=0x99

Return values

- **None:**

LL_RTC_ALMA_Enable

Function name

__STATIC_INLINE void LL_RTC_ALMA_Enable (RTC_TypeDef * RTCx)

Function description

Enable Alarm A.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ALRAE LL_RTC_ALMA_Enable

LL_RTC_ALMA_Disable

Function name

__STATIC_INLINE void LL_RTC_ALMA_Disable (RTC_TypeDef * RTCx)

Function description

Disable Alarm A.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ALRAE LL_RTC_ALMA_Disable

LL_RTC_ALMA_SetMask

Function name

__STATIC_INLINE void LL_RTC_ALMA_SetMask (RTC_TypeDef * RTCx, uint32_t Mask)

Function description

Specify the Alarm A masks.

Parameters

- **RTCx:** RTC Instance
- **Mask:** This parameter can be a combination of the following values:
  - LL_RTC_ALMA_MASK_NONE
  - LL_RTC_ALMA_MASK_DATEWEEKDAY
  - LL_RTC_ALMA_MASK_HOURS
  - LL_RTC_ALMA_MASK_MINUTES
  - LL_RTC_ALMA_MASK_SECONDS
  - LL_RTC_ALMA_MASK_ALL

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ALRMAR MSK4 LL_RTC_ALMA_SetMask
- RTC_ALRMAR MSK3 LL_RTC_ALMA_SetMask
- RTC_ALRMAR MSK2 LL_RTC_ALMA_SetMask
- RTC_ALRMAR MSK1 LL_RTC_ALMA_SetMask

LL_RTC_ALMA_GetMask

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMA_GetMask (const RTC_TypeDef * RTCx)

Function description

Get the Alarm A masks.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be can be a combination of the following values:
  - LL_RTC_ALMA_MASK_NONE
  - LL_RTC_ALMA_MASK_DATEWEEKDAY
  - LL_RTC_ALMA_MASK_HOURS
  - LL_RTC_ALMA_MASK_MINUTES
  - LL_RTC_ALMA_MASK_SECONDS
  - LL_RTC_ALMA_MASK_ALL

LL_RTC_ALMA_EnableWeekday

Function name

__STATIC_INLINE void LL_RTC_ALMA_EnableWeekday (RTC_TypeDef * RTCx)

Function description

Enable AlarmA Week day selection (DU[3:0] represents the week day.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ALRMAR WDSEL LL_RTC_ALMA_EnableWeekday

LL_RTC_ALMA_DisableWeekday

Function name

__STATIC_INLINE void LL_RTC_ALMA_DisableWeekday (RTC_TypeDef * RTCx)

Function description

Disable AlarmA Week day selection (DU[3:0] represents the date)

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ALRMAR WDSEL LL_RTC_ALMA_DisableWeekday

LL_RTC_ALMA_SetDay

Function name

__STATIC_INLINE void LL_RTC_ALMA_SetDay (RTC_TypeDef * RTCx, uint32_t Day)

Function description

Set ALARM A Day in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Day:** Value between Min_Data=0x01 and Max_Data=0x31

Return values

- **None:**

Notes

- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Day from binary to BCD format

Reference Manual to LL API cross reference:

- RTC_ALRMAR DT LL_RTC_ALMA_SetDay
- RTC_ALRMAR DU LL_RTC_ALMA_SetDay

LL_RTC_ALMA_GetDay

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMA_GetDay (const RTC_TypeDef * RTCx)

Function description

Get ALARM A Day in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x01 and Max_Data=0x31

Notes

- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Day from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_ALRMAR DT LL_RTC_ALMA_GetDay

LL_RTC_ALMA_SetWeekDay

Function name

__STATIC_INLINE void LL_RTC_ALMA_SetWeekDay (RTC_TypeDef * RTCx, uint32_t WeekDay)

Function description

Set ALARM A Weekday.

Parameters

- **RTCx:** RTC Instance
- **WeekDay:** This parameter can be one of the following values:
  - LL_RTC_WEEKDAY_MONDAY
  - LL_RTC_WEEKDAY_TUESDAY
  - LL_RTC_WEEKDAY_WEDNESDAY
  - LL_RTC_WEEKDAY_THURSDAY
  - LL_RTC_WEEKDAY_FRIDAY
  - LL_RTC_WEEKDAY_SATURDAY
  - LL_RTC_WEEKDAY_SUNDAY

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ALRMAR DU LL_RTC_ALMA_SetWeekDay

LL_RTC_ALMA_GetWeekDay

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMA_GetWeekDay (const RTC_TypeDef * RTCx)

Function description

Get ALARM A Weekday.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_WEEKDAY_MONDAY
  - LL_RTC_WEEKDAY_TUESDAY
  - LL_RTC_WEEKDAY_WEDNESDAY
  - LL_RTC_WEEKDAY_THURSDAY
  - LL_RTC_WEEKDAY_FRIDAY
  - LL_RTC_WEEKDAY_SATURDAY
  - LL_RTC_WEEKDAY_SUNDAY

Reference Manual to LL API cross reference:

- RTC_ALRMAR DU LL_RTC_ALMA_GetWeekDay

LL_RTC_ALMA_SetTimeFormat

Function name

__STATIC_INLINE void LL_RTC_ALMA_SetTimeFormat (RTC_TypeDef * RTCx, uint32_t TimeFormat)

Function description

Set Alarm A time format (AM/24-hour or PM notation)

Parameters

- **RTCx:** RTC Instance
- **TimeFormat:** This parameter can be one of the following values:
  - LL_RTC_ALMA_TIME_FORMAT_AM
  - LL_RTC_ALMA_TIME_FORMAT_PM

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ALRMAR PM LL_RTC_ALMA_SetTimeFormat

LL_RTC_ALMA_GetTimeFormat

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMA_GetTimeFormat (const RTC_TypeDef * RTCx)

Function description

Get Alarm A time format (AM or PM notation)

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_ALMA_TIME_FORMAT_AM
  - LL_RTC_ALMA_TIME_FORMAT_PM

Reference Manual to LL API cross reference:

- RTC_ALRMAR PM LL_RTC_ALMA_GetTimeFormat

LL_RTC_ALMA_SetHour

Function name

__STATIC_INLINE void LL_RTC_ALMA_SetHour (RTC_TypeDef * RTCx, uint32_t Hours)

Function description

Set ALARM A Hours in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Hours:** Value between Min_Data=0x01 and Max_Data=0x12 or between Min_Data=0x00 and Max_Data=0x23

Return values

- **None:**

Notes

- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Hours from binary to BCD format

Reference Manual to LL API cross reference:

- RTC_ALRMAR HT LL_RTC_ALMA_SetHour
- RTC_ALRMAR HU LL_RTC_ALMA_SetHour

LL_RTC_ALMA_GetHour

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMA_GetHour (const RTC_TypeDef * RTCx)

Function description

Get ALARM A Hours in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x01 and Max_Data=0x12 or between Min_Data=0x00 and Max_Data=0x23

Notes

- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Hours from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_ALRMAR HT LL_RTC_ALMA_GetHour
- RTC_ALRMAR HU LL_RTC_ALMA_GetHour

LL_RTC_ALMA_SetMinute

Function name

__STATIC_INLINE void LL_RTC_ALMA_SetMinute (RTC_TypeDef * RTCx, uint32_t Minutes)

Function description

Set ALARM A Minutes in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Minutes:** Value between Min_Data=0x00 and Max_Data=0x59

Return values

- **None:**

Notes

- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Minutes from binary to BCD format

Reference Manual to LL API cross reference:

- RTC_ALRMAR MNT LL_RTC_ALMA_SetMinute
- RTC_ALRMAR MNU LL_RTC_ALMA_SetMinute

LL_RTC_ALMA_GetMinute

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMA_GetMinute (const RTC_TypeDef * RTCx)

Function description

Get ALARM A Minutes in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x59

Notes

- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Minutes from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_ALRMAR MNT LL_RTC_ALMA_GetMinute
- RTC_ALRMAR MNU LL_RTC_ALMA_GetMinute

LL_RTC_ALMA_SetSecond

Function name

__STATIC_INLINE void LL_RTC_ALMA_SetSecond (RTC_TypeDef * RTCx, uint32_t Seconds)

Function description

Set ALARM A Seconds in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Seconds:** Value between Min_Data=0x00 and Max_Data=0x59

Return values

- **None:**

Notes

- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Seconds from binary to BCD format

Reference Manual to LL API cross reference:

- RTC_ALRMAR ST LL_RTC_ALMA_SetSecond
- RTC_ALRMAR SU LL_RTC_ALMA_SetSecond

LL_RTC_ALMA_GetSecond

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMA_GetSecond (const RTC_TypeDef * RTCx)

Function description

Get ALARM A Seconds in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x59

Notes

- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Seconds from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_ALRMAR ST LL_RTC_ALMA_GetSecond
- RTC_ALRMAR SU LL_RTC_ALMA_GetSecond

LL_RTC_ALMA_ConfigTime

Function name

__STATIC_INLINE void LL_RTC_ALMA_ConfigTime (RTC_TypeDef * RTCx, uint32_t Format12_24, uint32_t Hours, uint32_t Minutes, uint32_t Seconds)

Function description

Set Alarm A Time (hour, minute and second) in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Format12_24:** This parameter can be one of the following values:
  - LL_RTC_ALMA_TIME_FORMAT_AM
  - LL_RTC_ALMA_TIME_FORMAT_PM
- **Hours:** Value between Min_Data=0x01 and Max_Data=0x12 or between Min_Data=0x00 and Max_Data=0x23
- **Minutes:** Value between Min_Data=0x00 and Max_Data=0x59
- **Seconds:** Value between Min_Data=0x00 and Max_Data=0x59

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ALRMAR PM LL_RTC_ALMA_ConfigTime
- RTC_ALRMAR HT LL_RTC_ALMA_ConfigTime
- RTC_ALRMAR HU LL_RTC_ALMA_ConfigTime

- RTC_ALRMAR MNU LL_RTC_ALMA_ConfigTime
- RTC_ALRMAR ST LL_RTC_ALMA_ConfigTime
- RTC_ALRMAR SU LL_RTC_ALMA_ConfigTime

LL_RTC_ALMA_GetTime

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMA_GetTime (const RTC_TypeDef * RTCx)

Function description

Get Alarm B Time (hour, minute and second) in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Combination:** of hours, minutes and seconds.

Notes

- helper macros __LL_RTC_GET_HOUR, __LL_RTC_GET_MINUTE and __LL_RTC_GET_SECOND are available to get independently each parameter.

Reference Manual to LL API cross reference:

- RTC_ALRMAR HT LL_RTC_ALMA_GetTime

LL_RTC_ALMA_SetSubSecondMask

Function name

__STATIC_INLINE void LL_RTC_ALMA_SetSubSecondMask (RTC_TypeDef * RTCx, uint32_t Mask)

Function description

Set Alarm A Mask the most-significant bits starting at this bit.

Parameters

- **RTCx:** RTC Instance
- **Mask:** If binary mode is none, Value between Min_Data=0x0 and Max_Data=0xF else Value between Min_Data=0x0 and Max_Data=0x3F

Return values

- **None:**

Notes

- This register can be written only when ALRAE is reset in RTC_CR register, or in initialization mode.

Reference Manual to LL API cross reference:

- RTC_ALRMASSR MASKSS LL_RTC_ALMA_SetSubSecondMask

LL_RTC_ALMA_GetSubSecondMask

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMA_GetSubSecondMask (const RTC_TypeDef * RTCx)

Function description

Get Alarm A Mask the most-significant bits starting at this bit.

Parameters

- **RTCx:** RTC Instance

Return values

- **If:** binary mode is none, Value between Min_Data=0x0 and Max_Data=0xF else Value between Min_Data=0x0 and Max_Data=0x3F

Reference Manual to LL API cross reference:

- RTC_ALRMASSR MASKSS LL_RTC_ALMA_GetSubSecondMask

LL_RTC_ALMA_SetBinAutoClr

Function name

__STATIC_INLINE void LL_RTC_ALMA_SetBinAutoClr (RTC_TypeDef * RTCx, uint32_t BinaryAutoClr)

Function description

Set Alarm A Binary mode auto clear.

Parameters

- **RTCx:** RTC Instance
- **BinaryAutoClr:** This parameter can be one of the following values:
  - LL_RTC_ALMA_SUBSECONDBIN_AUTOCLR_NO
  - LL_RTC_ALMA_SUBSECONDBIN_AUTOCLR_YES

Return values

- **None:**

Notes

- This register can be written only when ALRAE is reset in RTC_CR register, or in initialization mode.

Reference Manual to LL API cross reference:

- RTC_ALRABINR SSCLR LL_RTC_ALMA_SetBinAutoClr

LL_RTC_ALMA_GetBinAutoClr

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMA_GetBinAutoClr (const RTC_TypeDef * RTCx)

Function description

Get Alarm A Binary mode auto clear.

Parameters

- **RTCx:** RTC Instance

Return values

- **It:** can be one of the following values:
  - LL_RTC_ALMA_SUBSECONDBIN_AUTOCLR_NO
  - LL_RTC_ALMA_SUBSECONDBIN_AUTOCLR_YES

Reference Manual to LL API cross reference:

- RTC_ALRABINR SSCLR LL_RTC_ALMA_GetBinAutoClr

LL_RTC_ALMA_SetSubSecond

Function name

__STATIC_INLINE void LL_RTC_ALMA_SetSubSecond (RTC_TypeDef * RTCx, uint32_t Subsecond)

Function description

Set Alarm A Sub seconds value.

Parameters

- **RTCx:** RTC Instance
- **Subsecond:** If binary mode is none, Value between Min_Data=0x0 and Max_Data=0x7FFF else Value between Min_Data=0x0 and Max_Data=0xFFFFFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- RCT_ALRMASSR SS LL_RTC_ALMA_SetSubSecond

LL_RTC_ALMA_GetSubSecond

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMA_GetSubSecond (const RTC_TypeDef * RTCx)

Function description

Get Alarm A Sub seconds value.

Parameters

- **RTCx:** RTC Instance

Return values

- **If:** binary mode is none, Value between Min_Data=0x0 and Max_Data=0x7FFF else Value between Min_Data=0x0 and Max_Data=0xFFFFFFFF

Reference Manual to LL API cross reference:

- RCT_ALRMASSR SS LL_RTC_ALMA_GetSubSecond

LL_RTC_ALMB_Enable

Function name

__STATIC_INLINE void LL_RTC_ALMB_Enable (RTC_TypeDef * RTCx)

Function description

Enable Alarm B.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ALRBE LL_RTC_ALMB_Enable

LL_RTC_ALMB_Disable

Function name

__STATIC_INLINE void LL_RTC_ALMB_Disable (RTC_TypeDef * RTCx)

Function description

Disable Alarm B.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ALRBE LL_RTC_ALMB_Disable

LL_RTC_ALMB_SetMask

Function name

__STATIC_INLINE void LL_RTC_ALMB_SetMask (RTC_TypeDef * RTCx, uint32_t Mask)

Function description

Specify the Alarm B masks.

Parameters

- **RTCx:** RTC Instance
- **Mask:** This parameter can be a combination of the following values:
  - LL_RTC_ALMB_MASK_NONE
  - LL_RTC_ALMB_MASK_DATEWEEKDAY
  - LL_RTC_ALMB_MASK_HOURS
  - LL_RTC_ALMB_MASK_MINUTES
  - LL_RTC_ALMB_MASK_SECONDS
  - LL_RTC_ALMB_MASK_ALL

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ALRMBR MSK4 LL_RTC_ALMB_SetMask
- RTC_ALRMBR MSK3 LL_RTC_ALMB_SetMask
- RTC_ALRMBR MSK2 LL_RTC_ALMB_SetMask
- RTC_ALRMBR MSK1 LL_RTC_ALMB_SetMask

LL_RTC_ALMB_GetMask

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMB_GetMask (const RTC_TypeDef * RTCx)

Function description

Get the Alarm B masks.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be can be a combination of the following values:
  - LL_RTC_ALMB_MASK_NONE
  - LL_RTC_ALMB_MASK_DATEWEEKDAY
  - LL_RTC_ALMB_MASK_HOURS
  - LL_RTC_ALMB_MASK_MINUTES
  - LL_RTC_ALMB_MASK_SECONDS
  - LL_RTC_ALMB_MASK_ALL

LL_RTC_ALMB_EnableWeekday

Function name

__STATIC_INLINE void LL_RTC_ALMB_EnableWeekday (RTC_TypeDef * RTCx)

Function description

Enable AlarmB Week day selection (DU[3:0] represents the week day.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ALRMBR WDSEL LL_RTC_ALMB_EnableWeekday

LL_RTC_ALMB_DisableWeekday

Function name

__STATIC_INLINE void LL_RTC_ALMB_DisableWeekday (RTC_TypeDef * RTCx)

Function description

Disable AlarmB Week day selection (DU[3:0] represents the date)

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ALRMBR WDSEL LL_RTC_ALMB_DisableWeekday

LL_RTC_ALMB_SetDay

Function name

__STATIC_INLINE void LL_RTC_ALMB_SetDay (RTC_TypeDef * RTCx, uint32_t Day)

Function description

Set ALARM B Day in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Day:** Value between Min_Data=0x01 and Max_Data=0x31

Return values

- **None:**

Notes

- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Day from binary to BCD format

Reference Manual to LL API cross reference:

- RTC_ALRMBR DT LL_RTC_ALMB_SetDay
- RTC_ALRMBR DU LL_RTC_ALMB_SetDay

LL_RTC_ALMB_GetDay

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMB_GetDay (const RTC_TypeDef * RTCx)

Function description

Get ALARM B Day in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x01 and Max_Data=0x31

Notes

- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Day from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_ALRMBR DT LL_RTC_ALMB_GetDay

LL_RTC_ALMB_SetTimeFormat

Function name

__STATIC_INLINE void LL_RTC_ALMB_SetTimeFormat (RTC_TypeDef * RTCx, uint32_t TimeFormat)

Function description

Set ALARM B time format (AM/24-hour or PM notation)

Parameters

- **RTCx:** RTC Instance
- **TimeFormat:** This parameter can be one of the following values:
  - LL_RTC_ALMB_TIME_FORMAT_AM
  - LL_RTC_ALMB_TIME_FORMAT_PM

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ALRMBR PM LL_RTC_ALMB_SetTimeFormat

LL_RTC_ALMB_GetTimeFormat

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMB_GetTimeFormat (const RTC_TypeDef * RTCx)

Function description

Get ALARM B time format (AM or PM notation)

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_ALMB_TIME_FORMAT_AM
  - LL_RTC_ALMB_TIME_FORMAT_PM

Reference Manual to LL API cross reference:

- RTC_ALRMBR PM LL_RTC_ALMB_GetTimeFormat

LL_RTC_ALMB_SetHour

Function name

__STATIC_INLINE void LL_RTC_ALMB_SetHour (RTC_TypeDef * RTCx, uint32_t Hours)

Function description

Set ALARM B Hours in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Hours:** Value between Min_Data=0x01 and Max_Data=0x12 or between Min_Data=0x00 and Max_Data=0x23

Return values

- **None:**

Notes

- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Hours from binary to BCD format

Reference Manual to LL API cross reference:

LL_RTC_ALMB_SetSecond

Function name

__STATIC_INLINE void LL_RTC_ALMB_SetSecond (RTC_TypeDef * RTCx, uint32_t Seconds)

Function description

Set ALARM B Seconds in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Seconds:** Value between Min_Data=0x00 and Max_Data=0x59

Return values

- **None:**

Notes

- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Seconds from binary to BCD format

Reference Manual to LL API cross reference:

- RTC_ALRMBR ST LL_RTC_ALMB_SetSecond
- RTC_ALRMBR SU LL_RTC_ALMB_SetSecond

LL_RTC_ALMB_GetSecond

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMB_GetSecond (const RTC_TypeDef * RTCx)

Function description

Get ALARM B Seconds in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x59

Notes

- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Seconds from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_ALRMBR ST LL_RTC_ALMB_GetSecond
- RTC_ALRMBR SU LL_RTC_ALMB_GetSecond

LL_RTC_ALMB_ConfigTime

Function name

__STATIC_INLINE void LL_RTC_ALMB_ConfigTime (RTC_TypeDef * RTCx, uint32_t Format12_24, uint32_t Hours, uint32_t Minutes, uint32_t Seconds)

Function description

Set Alarm B Time (hour, minute and second) in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Format12_24:** This parameter can be one of the following values:
  - LL_RTC_ALMB_TIME_FORMAT_AM
  - LL_RTC_ALMB_TIME_FORMAT_PM
- **Hours:** Value between Min_Data=0x01 and Max_Data=0x12 or between Min_Data=0x00 and Max_Data=0x23
- **Minutes:** Value between Min_Data=0x00 and Max_Data=0x59
- **Seconds:** Value between Min_Data=0x00 and Max_Data=0x59

Return values

- **None:**

Reference Manual to LL API cross reference:

LL_RTC_ALMB_SetSubSecond

Function name

__STATIC_INLINE void LL_RTC_ALMB_SetSubSecond (RTC_TypeDef * RTCx, uint32_t Subsecond)

Function description

Set Alarm B Sub seconds value.

Parameters

- **RTCx:** RTC Instance
- **Subsecond:** If binary mode is none, Value between Min_Data=0x0 and Max_Data=0x7FFF else Value between Min_Data=0x0 and Max_Data=0xFFFFFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ALRMBSSR SS LL_RTC_ALMB_SetSubSecond

LL_RTC_ALMB_GetSubSecond

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMB_GetSubSecond (const RTC_TypeDef * RTCx)

Function description

Get Alarm B Sub seconds value.

Parameters

- **RTCx:** RTC Instance

Return values

- **If:** binary mode is none, Value between Min_Data=0x0 and Max_Data=0x7FFF else Value between Min_Data=0x0 and Max_Data=0xFFFFFFFF

Reference Manual to LL API cross reference:

- RTC_ALRMBSSR SS LL_RTC_ALMB_GetSubSecond

LL_RTC_TS_EnableInternalEvent

Function name

__STATIC_INLINE void LL_RTC_TS_EnableInternalEvent (RTC_TypeDef * RTCx)

Function description

Enable internal event timestamp.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ITSE LL_RTC_TS_EnableInternalEvent

LL_RTC_TS_DisableInternalEvent

Function name

__STATIC_INLINE void LL_RTC_TS_DisableInternalEvent (RTC_TypeDef * RTCx)

Function description

Disable internal event timestamp.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ITSE LL_RTC_TS_DisableInternalEvent

LL_RTC_TS_Enable

Function name

__STATIC_INLINE void LL_RTC_TS_Enable (RTC_TypeDef * RTCx)

Function description

Enable Timestamp.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR TSE LL_RTC_TS_Enable

LL_RTC_TS_Disable

Function name

__STATIC_INLINE void LL_RTC_TS_Disable (RTC_TypeDef * RTCx)

Function description

Disable Timestamp.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR TSE LL_RTC_TS_Disable

LL_RTC_TS_SetActiveEdge

Function name

__STATIC_INLINE void LL_RTC_TS_SetActiveEdge (RTC_TypeDef * RTCx, uint32_t Edge)

Function description

Set Time-stamp event active edge.

Parameters

- **RTCx:** RTC Instance
- **Edge:** This parameter can be one of the following values:
  - LL_RTC_TIMESTAMP_EDGE_RISING
  - LL_RTC_TIMESTAMP_EDGE_FALLING

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- TSE must be reset when TSEDGE is changed to avoid unwanted TSF setting

Reference Manual to LL API cross reference:

- RTC_CR TSEDGE LL_RTC_TS_SetActiveEdge

LL_RTC_TS_GetActiveEdge

Function name

__STATIC_INLINE uint32_t LL_RTC_TS_GetActiveEdge (const RTC_TypeDef * RTCx)

Function description

Get Time-stamp event active edge.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_TIMESTAMP_EDGE_RISING
  - LL_RTC_TIMESTAMP_EDGE_FALLING

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR TSEDGE LL_RTC_TS_GetActiveEdge

LL_RTC_TS_GetTimeFormat

Function name

__STATIC_INLINE uint32_t LL_RTC_TS_GetTimeFormat (const RTC_TypeDef * RTCx)

Function description

Get Timestamp AM/PM notation (AM or 24-hour format)

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_TS_TIME_FORMAT_AM
  - LL_RTC_TS_TIME_FORMAT_PM

Reference Manual to LL API cross reference:

- RTC_TSTR PM LL_RTC_TS_GetTimeFormat

LL_RTC_TS_GetHour

Function name

__STATIC_INLINE uint32_t LL_RTC_TS_GetHour (const RTC_TypeDef * RTCx)

Function description

Get Timestamp Hours in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x01 and Max_Data=0x12 or between Min_Data=0x00 and Max_Data=0x23

Notes

- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Hours from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_TSTR HT LL_RTC_TS_GetHour
- RTC_TSTR HU LL_RTC_TS_GetHour

LL_RTC_TS_GetMinute

Function name

__STATIC_INLINE uint32_t LL_RTC_TS_GetMinute (const RTC_TypeDef * RTCx)

Function description

Get Timestamp Minutes in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x59

Notes

- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Minutes from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_TSTR MNT LL_RTC_TS_GetMinute
- RTC_TSTR MNU LL_RTC_TS_GetMinute

LL_RTC_TS_GetSecond

Function name

__STATIC_INLINE uint32_t LL_RTC_TS_GetSecond (const RTC_TypeDef * RTCx)

Function description

Get Timestamp Seconds in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x59

Notes

- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Seconds from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_TSTR ST LL_RTC_TS_GetSecond
- RTC_TSTR SU LL_RTC_TS_GetSecond

LL_RTC_TS_GetTime

Function name

__STATIC_INLINE uint32_t LL_RTC_TS_GetTime (const RTC_TypeDef * RTCx)

Function description

Get Timestamp time (hour, minute and second) in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Combination:** of hours, minutes and seconds.

Notes

- helper macros __LL_RTC_GET_HOUR, __LL_RTC_GET_MINUTE and __LL_RTC_GET_SECOND are available to get independently each parameter.

Reference Manual to LL API cross reference:

- RTC_TSTR HT LL_RTC_TS_GetTime
- RTC_TSTR HU LL_RTC_TS_GetTime
- RTC_TSTR MNT LL_RTC_TS_GetTime
- RTC_TSTR MNU LL_RTC_TS_GetTime
- RTC_TSTR ST LL_RTC_TS_GetTime
- RTC_TSTR SU LL_RTC_TS_GetTime

LL_RTC_TS_GetWeekDay

Function name

__STATIC_INLINE uint32_t LL_RTC_TS_GetWeekDay (const RTC_TypeDef * RTCx)

Function description

Get Timestamp Week day.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_WEEKDAY_MONDAY
  - LL_RTC_WEEKDAY_TUESDAY
  - LL_RTC_WEEKDAY_WEDNESDAY
  - LL_RTC_WEEKDAY_THURSDAY
  - LL_RTC_WEEKDAY_FRIDAY
  - LL_RTC_WEEKDAY_SATURDAY
  - LL_RTC_WEEKDAY_SUNDAY

Reference Manual to LL API cross reference:

- RTC_TSDR WDU LL_RTC_TS_GetWeekDay

LL_RTC_TS_GetMonth

Function name

__STATIC_INLINE uint32_t LL_RTC_TS_GetMonth (const RTC_TypeDef * RTCx)

Function description

Get Timestamp Month in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_MONTH_JANUARY
  - LL_RTC_MONTH_FEBRUARY
  - LL_RTC_MONTH_MARCH
  - LL_RTC_MONTH_APRIL
  - LL_RTC_MONTH_MAY
  - LL_RTC_MONTH_JUNE
  - LL_RTC_MONTH_JULY
  - LL_RTC_MONTH_AUGUST
  - LL_RTC_MONTH_SEPTEMBER
  - LL_RTC_MONTH_OCTOBER
  - LL_RTC_MONTH_NOVEMBER
  - LL_RTC_MONTH_DECEMBER

Notes

- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Month from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_TSDR MT LL_RTC_TS_GetMonth
- RTC_TSDR MU LL_RTC_TS_GetMonth

LL_RTC_TS_GetDay

Function name

__STATIC_INLINE uint32_t LL_RTC_TS_GetDay (const RTC_TypeDef * RTCx)

Function description

Get Timestamp Day in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x01 and Max_Data=0x31

Notes

- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Day from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_TSDR DT LL_RTC_TS_GetDay
- RTC_TSDR DU LL_RTC_TS_GetDay

LL_RTC_TS_GetDate

Function name

__STATIC_INLINE uint32_t LL_RTC_TS_GetDate (const RTC_TypeDef * RTCx)

Function description

Get Timestamp date (WeekDay, Day and Month) in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Combination:** of Weekday, Day and Month

Notes

- helper macros __LL_RTC_GET_WEEKDAY, __LL_RTC_GET_MONTH, and __LL_RTC_GET_DAY are available to get independently each parameter.

Reference Manual to LL API cross reference:

- RTC_TSDR WDU LL_RTC_TS_GetDate
- RTC_TSDR MT LL_RTC_TS_GetDate
- RTC_TSDR MU LL_RTC_TS_GetDate
- RTC_TSDR DT LL_RTC_TS_GetDate
- RTC_TSDR DU LL_RTC_TS_GetDate

LL_RTC_TS_GetSubSecond

Function name

__STATIC_INLINE uint32_t LL_RTC_TS_GetSubSecond (const RTC_TypeDef * RTCx)

Function description

Get time-stamp sub second value.

Parameters

- **RTCx:** RTC Instance

Return values

- **If:** binary mode is none, Value between Min_Data=0x0 and Max_Data=0x7FFF else Value between Min_Data=0x0 and Max_Data=0xFFFFFFFF

Reference Manual to LL API cross reference:

- RTC_TSDR SS LL_RTC_TS_GetSubSecond

LL_RTC_TS_EnableOnTamper

Function name

__STATIC_INLINE void LL_RTC_TS_EnableOnTamper (RTC_TypeDef * RTCx)

Function description

Activate timestamp on tamper detection event.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_CR TAMPTS LL_RTC_TS_EnableOnTamper

LL_RTC_TS_DisableOnTamper

Function name

__STATIC_INLINE void LL_RTC_TS_DisableOnTamper (RTC_TypeDef * RTCx)

Function description

Disable timestamp on tamper detection event.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_CR TAMPTS LL_RTC_TS_DisableOnTamper

LL_RTC_TS_SetTamperSource

Function name

__STATIC_INLINE void LL_RTC_TS_SetTamperSource (RTC_TypeDef * RTCx, uint32_t TamperSelection)

Function description

Set timestamp on specific tamper detection event.

Parameters

- **RTCx:** RTC Instance
- **TamperSelection:** This parameter can be a combination of the following values:
  - LL_RTC_TS_TAMPERSOURCE_ITAMP
  - LL_RTC_TS_TAMPERSOURCE_TAMP1
  - LL_RTC_TS_TAMPERSOURCE_TAMP2
  - LL_RTC_TS_TAMPERSOURCE_TAMP3
  - LL_RTC_TS_TAMPERSOURCE_TAMP4
  - LL_RTC_TS_TAMPERSOURCE_TAMP5

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_TAMPTSCR ITAMPTS LL_RTC_TS_SetTamperSource RTC_TAMPTSCR TAMP1TS LL_RTC_TS_SetTamperSource RTC_TAMPTSCR TAMP2TS... LL_RTC_TS_SetTamperSource

LL_RTC_TS_GetTamperSource

Function name

__STATIC_INLINE uint32_t LL_RTC_TS_GetTamperSource (const RTC_TypeDef * RTCx)

Function description

Get timestamp on specific tamper detection event configuration.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be combination of the following values:
  - LL_RTC_TS_TAMPERSOURCE_ITAMP
  - LL_RTC_TS_TAMPERSOURCE_TAMP1
  - LL_RTC_TS_TAMPERSOURCE_TAMP2
  - LL_RTC_TS_TAMPERSOURCE_TAMP3
  - LL_RTC_TS_TAMPERSOURCE_TAMP4
  - LL_RTC_TS_TAMPERSOURCE_TAMP5

Reference Manual to LL API cross reference:

- RTC_TAMPTSCR ITAMPTS LL_RTC_TS_GetTamperSource RTC_TAMPTSCR TAMP1TS LL_RTC_TS_GetTamperSource RTC_TAMPTSCR TAMP2TS... LL_RTC_TS_GetTamperSource

LL_RTC_TS_GetTimestampFlagSource

Function name

__STATIC_INLINE uint32_t LL_RTC_TS_GetTimestampFlagSource (const RTC_TypeDef * RTCx)

Function description

Get timestamp flag source event.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_TS_FLAG_SOURCE_RTC_TS
  - LL_RTC_TS_FLAG_SOURCE_TAMP1
  - LL_RTC_TS_FLAG_SOURCE_TAMP2
  - LL_RTC_TS_FLAG_SOURCE_TAMP3
  - LL_RTC_TS_FLAG_SOURCE_TAMP4
  - LL_RTC_TS_FLAG_SOURCE_TAMP5
  - LL_RTC_TS_FLAG_SOURCE_ITAMP
  - LL_RTC_TS_FLAG_SOURCE_ITS

Notes

- It is updated at each TSF event, and is not affected by TSOVF event.

Reference Manual to LL API cross reference:

- RTC_TSIDR TSID LL_RTC_TS_GetTimestampFlagSource

LL_RTC_TAMPER_Enable

Function name

__STATIC_INLINE void LL_RTC_TAMPER_Enable (const RTC_TypeDef * RTCx, uint32_t Tamper)

Function description

Enable TAMPx input detection.

Parameters

- **RTCx:** RTC Instance
- **Tamper:** This parameter can be a combination of the following values:
  - TAMPER

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_CR1 TAMP1E LL_RTC_TAMPER_Enable
- TAMP_CR1 TAMP2E... LL_RTC_TAMPER_Enable
-

LL_RTC_TAMPER_Disable

Function name

__STATIC_INLINE void LL_RTC_TAMPER_Disable (const RTC_TypeDef * RTCx, uint32_t Tamper)

Function description

Clear TAMPx input detection.

Parameters

- **RTCx:** RTC Instance
- **Tamper:** This parameter can be a combination of the following values:
  - TAMPER

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_CR1 TAMP1E LL_RTC_TAMPER_Disable
- TAMP_CR1 TAMP2E... LL_RTC_TAMPER_Disable

LL_RTC_TAMPER_EnableMask

Function name

__STATIC_INLINE void LL_RTC_TAMPER_EnableMask (const RTC_TypeDef * RTCx, uint32_t Mask)

Function description

Enable Tamper mask flag.

Parameters

- **RTCx:** RTC Instance
- **Mask:** This parameter can be a combination of the following values:
  - TAMPER MASK

Return values

- **None:**

Notes

- Associated Tamper IT must not enabled when tamper mask is set.

Reference Manual to LL API cross reference:

- TAMP_CR2 TAMP1MF LL_RTC_TAMPER_EnableMask
- TAMP_CR2 TAMP2MF... LL_RTC_TAMPER_EnableMask

LL_RTC_TAMPER_DisableMask

Function name

__STATIC_INLINE void LL_RTC_TAMPER_DisableMask (const RTC_TypeDef * RTCx, uint32_t Mask)

Function description

Disable Tamper mask flag.

Parameters

- **RTCx:** RTC Instance
- **Mask:** This parameter can be a combination of the following values:
  - TAMPER MASK

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_CR2 TAMP1MF LL_RTC_TAMPER_DisableMask
- TAMP_CR2 TAMP2MF... LL_RTC_TAMPER_DisableMask

LL_RTC_TAMPER_EnableEraseBKP

Function name

__STATIC_INLINE void LL_RTC_TAMPER_EnableEraseBKP (const RTC_TypeDef * RTCx, uint32_t Tamper)

Function description

Enable backup register erase after Tamper event detection.

Parameters

- **RTCx:** RTC Instance
- **Tamper:** This parameter can be a combination of the following values:
  - TAMPER NO ERASE

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_CR2 TAMP1POM LL_RTC_TAMPER_EnableEraseBKP
- TAMP_CR2 TAMP2POM... LL_RTC_TAMPER_EnableEraseBKP

LL_RTC_TAMPER_DisableEraseBKP

Function name

__STATIC_INLINE void LL_RTC_TAMPER_DisableEraseBKP (const RTC_TypeDef * RTCx, uint32_t Tamper)

Function description

Disable backup register erase after Tamper event detection.

Parameters

- **RTCx:** RTC Instance
- **Tamper:** This parameter can be a combination of the following values:
  - TAMPER NO ERASE

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_CR2 TAMP1POM LL_RTC_TAMPER_DisableEraseBKP
- TAMP_CR2 TAMP2POM... LL_RTC_TAMPER_DisableEraseBKP

LL_RTC_TAMPER_DisablePullUp

Function name

__STATIC_INLINE void LL_RTC_TAMPER_DisablePullUp (const RTC_TypeDef * RTCx)

Function description

Disable RTC_TAMPx pull-up disable (Disable precharge of RTC_TAMPx pins)

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_FLTCR TAMPPUDIS LL_RTC_TAMPER_DisablePullUp

LL_RTC_TAMPER_EnablePullUp

Function name

__STATIC_INLINE void LL_RTC_TAMPER_EnablePullUp (const RTC_TypeDef * RTCx)

Function description

Enable RTC_TAMPx pull-up disable (Precharge RTC_TAMPx pins before sampling)

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_FLTCR TAMPPUDIS LL_RTC_TAMPER_EnablePullUp

LL_RTC_TAMPER_SetPrecharge

Function name

__STATIC_INLINE void LL_RTC_TAMPER_SetPrecharge (const RTC_TypeDef * RTCx, uint32_t Duration)

Function description

Set RTC_TAMPx precharge duration.

Parameters

- **RTCx:** RTC Instance
- **Duration:** This parameter can be one of the following values:
  - LL_RTC_TAMPER_DURATION_1RTCCLK
  - LL_RTC_TAMPER_DURATION_2RTCCLK
  - LL_RTC_TAMPER_DURATION_4RTCCLK
  - LL_RTC_TAMPER_DURATION_8RTCCLK

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_FLTCR TAMPPRCH LL_RTC_TAMPER_SetPrecharge

LL_RTC_TAMPER_GetPrecharge

Function name

__STATIC_INLINE uint32_t LL_RTC_TAMPER_GetPrecharge (const RTC_TypeDef * RTCx)

Function description

Get RTC_TAMPx precharge duration.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_TAMPER_DURATION_1RTCCLK
  - LL_RTC_TAMPER_DURATION_2RTCCLK
  - LL_RTC_TAMPER_DURATION_4RTCCLK
  - LL_RTC_TAMPER_DURATION_8RTCCLK

Reference Manual to LL API cross reference:

- TAMP_FLTCR TAMPPRCH LL_RTC_TAMPER_GetPrecharge

LL_RTC_TAMPER_SetFilterCount

Function name

__STATIC_INLINE void LL_RTC_TAMPER_SetFilterCount (const RTC_TypeDef * RTCx, uint32_t FilterCount)

Function description

Set RTC_TAMPx filter count.

Parameters

- **RTCx:** RTC Instance
- **FilterCount:** This parameter can be one of the following values:
  - LL_RTC_TAMPER_FILTER_DISABLE
  - LL_RTC_TAMPER_FILTER_2SAMPLE
  - LL_RTC_TAMPER_FILTER_4SAMPLE
  - LL_RTC_TAMPER_FILTER_8SAMPLE

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_FLTCR TAMPFLT LL_RTC_TAMPER_SetFilterCount

LL_RTC_TAMPER_GetFilterCount

Function name

__STATIC_INLINE uint32_t LL_RTC_TAMPER_GetFilterCount (const RTC_TypeDef * RTCx)

Function description

Get RTC_TAMPx filter count.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_TAMPER_FILTER_DISABLE
  - LL_RTC_TAMPER_FILTER_2SAMPLE
  - LL_RTC_TAMPER_FILTER_4SAMPLE
  - LL_RTC_TAMPER_FILTER_8SAMPLE

Reference Manual to LL API cross reference:

- TAMP_FLTCR TAMPFLT LL_RTC_TAMPER_GetFilterCount

LL_RTC_TAMPER_SetSamplingFreq

Function name

__STATIC_INLINE void LL_RTC_TAMPER_SetSamplingFreq (const RTC_TypeDef * RTCx, uint32_t SamplingFreq)

Function description

Set Tamper sampling frequency.

Parameters

- **RTCx:** RTC Instance
- **SamplingFreq:** This parameter can be one of the following values:
  - LL_RTC_TAMPER_SAMPLFREQDIV_32768
  - LL_RTC_TAMPER_SAMPLFREQDIV_16384
  - LL_RTC_TAMPER_SAMPLFREQDIV_8192
  - LL_RTC_TAMPER_SAMPLFREQDIV_4096
  - LL_RTC_TAMPER_SAMPLFREQDIV_2048
  - LL_RTC_TAMPER_SAMPLFREQDIV_1024
  - LL_RTC_TAMPER_SAMPLFREQDIV_512
  - LL_RTC_TAMPER_SAMPLFREQDIV_256

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_FLTCR TAMPFREQ LL_RTC_TAMPER_SetSamplingFreq

LL_RTC_TAMPER_GetSamplingFreq

Function name

__STATIC_INLINE uint32_t LL_RTC_TAMPER_GetSamplingFreq (const RTC_TypeDef * RTCx)

Function description

Get Tamper sampling frequency.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_TAMPER_SAMPLFREQDIV_32768
  - LL_RTC_TAMPER_SAMPLFREQDIV_16384
  - LL_RTC_TAMPER_SAMPLFREQDIV_8192
  - LL_RTC_TAMPER_SAMPLFREQDIV_4096
  - LL_RTC_TAMPER_SAMPLFREQDIV_2048
  - LL_RTC_TAMPER_SAMPLFREQDIV_1024
  - LL_RTC_TAMPER_SAMPLFREQDIV_512
  - LL_RTC_TAMPER_SAMPLFREQDIV_256

Reference Manual to LL API cross reference:

- TAMP_FLTCR TAMPFREQ LL_RTC_TAMPER_GetSamplingFreq

LL_RTC_TAMPER_EnableActiveLevel

Function name

__STATIC_INLINE void LL_RTC_TAMPER_EnableActiveLevel (const RTC_TypeDef * RTCx, uint32_t Tamper)

Function description

Enable Active level for Tamper input.

Parameters

- **RTCx:** RTC Instance
- **Tamper:** This parameter can be a combination of the following values:
  - TAMPER ACTIVE LEVEL

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_CR2 TAMP1TRG LL_RTC_TAMPER_EnableActiveLevel
- TAMP_CR2 TAMP2TRG LL_RTC_TAMPER_EnableActiveLevel
- TAMP_CR2 TAMPxTRG LL_RTC_TAMPER_EnableActiveLevel
-

LL_RTC_TAMPER_DisableActiveLevel

Function name

__STATIC_INLINE void LL_RTC_TAMPER_DisableActiveLevel (const RTC_TypeDef * RTCx, uint32_t Tamper)

Function description

Disable Active level for Tamper input.

Parameters

- **RTCx:** RTC Instance
- **Tamper:** This parameter can be a combination of the following values:
  - TAMPER ACTIVE LEVEL

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_CR2 TAMP1TRG LL_RTC_TAMPER_DisableActiveLevel
- TAMP_CR2 TAMP2TRG LL_RTC_TAMPER_DisableActiveLevel
- TAMP_CR2 TAMPxTRG LL_RTC_TAMPER_DisableActiveLevel
-

LL_RTC_TAMPER_ITAMP_Enable

Function name

__STATIC_INLINE void LL_RTC_TAMPER_ITAMP_Enable (const RTC_TypeDef * RTCx, uint32_t InternalTamper)

Function description

Enable internal tamper detection.

Parameters

- **RTCx:** RTC Instance
- **InternalTamper:** This parameter can be a combination of the following values:
  - INTERNAL TAMPER

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_CR1 ITAMP3E LL_RTC_TAMPER_ITAMP_Enable
- TAMP_CR1 ITAMP5E LL_RTC_TAMPER_ITAMP_Enable
- TAMP_CR1 ITAMPxE.. LL_RTC_TAMPER_ITAMP_Enable
-

LL_RTC_TAMPER_ITAMP_Disable

Function name

__STATIC_INLINE void LL_RTC_TAMPER_ITAMP_Disable (const RTC_TypeDef * RTCx, uint32_t InternalTamper)

Function description

Disable internal tamper detection.

Parameters

- **RTCx:** RTC Instance
- **InternalTamper:** This parameter can be a combination of the following values:
  - INTERNAL TAMPER

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_CR1 ITAMP3E LL_RTC_TAMPER_ITAMP_Disable
- TAMP_CR1 ITAMP5E LL_RTC_TAMPER_ITAMP_Disable
- TAMP_CR1 ITAMPxE LL_RTC_TAMPER_ITAMP_Disable
-

LL_RTC_TAMPER_ITAMP_EnableEraseBKP

Function name

__STATIC_INLINE void LL_RTC_TAMPER_ITAMP_EnableEraseBKP (const RTC_TypeDef * RTCx, uint32_t InternalTamper)

Function description

Enable backup register erase after internal tamper event detection.

Parameters

- **RTCx:** RTC Instance
- **InternalTamper:** This parameter can be a combination of the following values:
  - INTERNAL TAMPER NO ERASE

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_CR3 ITAMP3POM LL_RTC_TAMPER_ITAMP_EnableEraseBKP TAMP_CR3 ITAMP5POM... LL_RTC_TAMPER_ITAMP_EnableEraseBKP

LL_RTC_TAMPER_ITAMP_DisableEraseBKP

Function name

__STATIC_INLINE void LL_RTC_TAMPER_ITAMP_DisableEraseBKP (const RTC_TypeDef * RTCx, uint32_t InternalTamper)

Function description

Disable backup register erase after internal tamper event detection.

Parameters

- **RTCx:** RTC Instance
- **InternalTamper:** This parameter can be a combination of the following values:
  - INTERNAL TAMPER NO ERASE

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_CR3 ITAMP3POM LL_RTC_TAMPER_ITAMP_DisableEraseBKP TAMP_CR3 ITAMP5POM... LL_RTC_TAMPER_ITAMP_DisableEraseBKP

LL_RTC_WAKEUP_Enable

Function name

__STATIC_INLINE void LL_RTC_WAKEUP_Enable (RTC_TypeDef * RTCx)

Function description

Enable Wakeup timer.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR WUTE LL_RTC_WAKEUP_Enable

LL_RTC_WAKEUP_Disable

Function name

__STATIC_INLINE void LL_RTC_WAKEUP_Disable (RTC_TypeDef * RTCx)

Function description

Disable Wakeup timer.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR WUTE LL_RTC_WAKEUP_Disable

LL_RTC_WAKEUP_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RTC_WAKEUP_IsEnabled (const RTC_TypeDef * RTCx)

Function description

Check if Wakeup timer is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CR WUTE LL_RTC_WAKEUP_IsEnabled

LL_RTC_WAKEUP_SetClock

Function name

__STATIC_INLINE void LL_RTC_WAKEUP_SetClock (RTC_TypeDef * RTCx, uint32_t WakeupClock)

Function description

Select Wakeup clock.

Parameters

- **RTCx:** RTC Instance
- **WakeupClock:** This parameter can be one of the following values:
  - LL_RTC_WAKEUPCLOCK_DIV_16
  - LL_RTC_WAKEUPCLOCK_DIV_8
  - LL_RTC_WAKEUPCLOCK_DIV_4
  - LL_RTC_WAKEUPCLOCK_DIV_2
  - LL_RTC_WAKEUPCLOCK_CKSPRE
  - LL_RTC_WAKEUPCLOCK_CKSPRE_WUT

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- Bit can be written only when RTC_CR WUTE bit = 0 and RTC_ICSR WUTWF bit = 1

Reference Manual to LL API cross reference:

- RTC_CR WUCKSEL LL_RTC_WAKEUP_SetClock

LL_RTC_WAKEUP_GetClock

Function name

__STATIC_INLINE uint32_t LL_RTC_WAKEUP_GetClock (const RTC_TypeDef * RTCx)

Function description

Get Wakeup clock.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_WAKEUPCLOCK_DIV_16
  - LL_RTC_WAKEUPCLOCK_DIV_8
  - LL_RTC_WAKEUPCLOCK_DIV_4
  - LL_RTC_WAKEUPCLOCK_DIV_2
  - LL_RTC_WAKEUPCLOCK_CKSPRE
  - LL_RTC_WAKEUPCLOCK_CKSPRE_WUT

Reference Manual to LL API cross reference:

- RTC_CR WUCKSEL LL_RTC_WAKEUP_GetClock

LL_RTC_WAKEUP_SetAutoReload

Function name

__STATIC_INLINE void LL_RTC_WAKEUP_SetAutoReload (RTC_TypeDef * RTCx, uint32_t Value)

Function description

Set Wakeup auto-reload value.

Parameters

- **RTCx:** RTC Instance
- **Value:** Value between Min_Data=0x00 and Max_Data=0xFFFF

Return values

- **None:**

Notes

- Bit can be written only when WUTWF is set to 1 in RTC_ICSR

Reference Manual to LL API cross reference:

- RTC_WUTR WUT LL_RTC_WAKEUP_SetAutoReload

LL_RTC_WAKEUP_GetAutoReload

Function name

__STATIC_INLINE uint32_t LL_RTC_WAKEUP_GetAutoReload (const RTC_TypeDef * RTCx)

Function description

Get Wakeup auto-reload value.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0xFFFF

Reference Manual to LL API cross reference:

- RTC_WUTR WUT LL_RTC_WAKEUP_GetAutoReload

LL_RTC_BKP_SetRegister

Function name

__STATIC_INLINE void LL_RTC_BKP_SetRegister (const RTC_TypeDef * RTCx, uint32_t BackupRegister, uint32_t Data)

Function description

Writes a data in a specified Backup data register.

Parameters

- **RTCx:** RTC Instance
- **BackupRegister:** This parameter can be one of the following values:
  - LL_RTC_BKP_DR0
  - LL_RTC_BKP_DR1
  - LL_RTC_BKP_DR2
  - LL_RTC_BKP_DR3
  - LL_RTC_BKP_DR4
  - LL_RTC_BKP_DRx ...
- **Data:** Value between Min_Data=0x00 and Max_Data=0xFFFFFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_BKPxR BKP LL_RTC_BKP_SetRegister

LL_RTC_BKP_GetRegister

Function name

__STATIC_INLINE uint32_t LL_RTC_BKP_GetRegister (const RTC_TypeDef * RTCx, uint32_t BackupRegister)

Function description

Reads data from the specified RTC Backup data Register.

Parameters

- **RTCx:** RTC Instance
- **BackupRegister:** This parameter can be one of the following values:
  - LL_RTC_BKP_DR0
  - LL_RTC_BKP_DR1
  - LL_RTC_BKP_DR2
  - LL_RTC_BKP_DR3
  - LL_RTC_BKP_DR4
  - LL_RTC_BKP_DRx ...

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0xFFFFFFFF

Reference Manual to LL API cross reference:

- TAMP_BKPxR BKP LL_RTC_BKP_GetRegister

LL_RTC_CAL_SetOutputFreq

Function name

__STATIC_INLINE void LL_RTC_CAL_SetOutputFreq (RTC_TypeDef * RTCx, uint32_t Frequency)

Function description

Set Calibration output frequency (1 Hz or 512 Hz)

Parameters

- **RTCx:** RTC Instance
- **Frequency:** This parameter can be one of the following values:
  - LL_RTC_CALIB_OUTPUT_NONE
  - LL_RTC_CALIB_OUTPUT_1HZ
  - LL_RTC_CALIB_OUTPUT_512HZ

Return values

- **None:**

Notes

- Bits are write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR COE LL_RTC_CAL_SetOutputFreq
- RTC_CR COSEL LL_RTC_CAL_SetOutputFreq

LL_RTC_CAL_GetOutputFreq

Function name

__STATIC_INLINE uint32_t LL_RTC_CAL_GetOutputFreq (const RTC_TypeDef * RTCx)

Function description

Get Calibration output frequency (1 Hz or 512 Hz)

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_CALIB_OUTPUT_NONE
  - LL_RTC_CALIB_OUTPUT_1HZ
  - LL_RTC_CALIB_OUTPUT_512HZ

Reference Manual to LL API cross reference:

- RTC_CR COE LL_RTC_CAL_GetOutputFreq
- RTC_CR COSEL LL_RTC_CAL_GetOutputFreq

LL_RTC_CAL_SetPulse

Function name

__STATIC_INLINE void LL_RTC_CAL_SetPulse (RTC_TypeDef * RTCx, uint32_t Pulse)

Function description

Insert or not One RTCCLK pulse every 2exp11 pulses (frequency increased by 488.5 ppm)

Parameters

- **RTCx:** RTC Instance
- **Pulse:** This parameter can be one of the following values:
  - LL_RTC_CALIB_INSERTPULSE_NONE
  - LL_RTC_CALIB_INSERTPULSE_SET

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- Bit can be written only when RECALPF is set to 0 in RTC_ICSR

Reference Manual to LL API cross reference:

- RTC_CALR CALP LL_RTC_CAL_SetPulse

LL_RTC_CAL_IsPulseInserted

Function name

__STATIC_INLINE uint32_t LL_RTC_CAL_IsPulseInserted (const RTC_TypeDef * RTCx)

Function description

Check if one RTCCLK has been inserted or not every 2exp11 pulses (frequency increased by 488.5 ppm)

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CALR CALP LL_RTC_CAL_IsPulseInserted

LL_RTC_CAL_SetPeriod

Function name

__STATIC_INLINE void LL_RTC_CAL_SetPeriod (RTC_TypeDef * RTCx, uint32_t Period)

Function description

Set the calibration cycle period.

Parameters

- **RTCx:** RTC Instance
- **Period:** This parameter can be one of the following values:
  - LL_RTC_CALIB_PERIOD_32SEC
  - LL_RTC_CALIB_PERIOD_16SEC
  - LL_RTC_CALIB_PERIOD_8SEC

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- Bit can be written only when RECALPF is set to 0 in RTC_ICSR

Reference Manual to LL API cross reference:

- RTC_CALR CALW8 LL_RTC_CAL_SetPeriod
- RTC_CALR CALW16 LL_RTC_CAL_SetPeriod

LL_RTC_CAL_GetPeriod

Function name

__STATIC_INLINE uint32_t LL_RTC_CAL_GetPeriod (const RTC_TypeDef * RTCx)

Function description

Get the calibration cycle period.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_CALIB_PERIOD_32SEC
  - LL_RTC_CALIB_PERIOD_16SEC
  - LL_RTC_CALIB_PERIOD_8SEC

Reference Manual to LL API cross reference:

- RTC_CALR CALW8 LL_RTC_CAL_GetPeriod
- RTC_CALR CALW16 LL_RTC_CAL_GetPeriod

LL_RTC_CAL_SetMinus

Function name

__STATIC_INLINE void LL_RTC_CAL_SetMinus (RTC_TypeDef * RTCx, uint32_t CalibMinus)

Function description

Set Calibration minus.

Parameters

- **RTCx:** RTC Instance
- **CalibMinus:** Value between Min_Data=0x00 and Max_Data=0x1FF

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- Bit can be written only when RECALPF is set to 0 in RTC_ICSR

Reference Manual to LL API cross reference:

- RTC_CALR CALM LL_RTC_CAL_SetMinus

LL_RTC_CAL_GetMinus

Function name

__STATIC_INLINE uint32_t LL_RTC_CAL_GetMinus (const RTC_TypeDef * RTCx)

Function description

Get Calibration minus.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data= 0x1FF

Reference Manual to LL API cross reference:

- RTC_CALR CALM LL_RTC_CAL_GetMinus

LL_RTC_CAL_LowPower_Enable

Function name

__STATIC_INLINE void LL_RTC_CAL_LowPower_Enable (RTC_TypeDef * RTCx)

Function description

Enable Calibration Low Power.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- Bit can be written only when RECALPF is set to 0

Reference Manual to LL API cross reference:

- RTC_CALR LPCAL LL_RTC_CAL_LowPower_Enable

LL_RTC_CAL_LowPower_Disable

Function name

__STATIC_INLINE void LL_RTC_CAL_LowPower_Disable (RTC_TypeDef * RTCx)

Function description

Disable Calibration Low Power.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- Bit can be written only when RECALPF is set to 0

Reference Manual to LL API cross reference:

- RTC_CALR LPCAL LL_RTC_CAL_LowPower_Disable

LL_RTC_CAL_LowPower_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RTC_CAL_LowPower_IsEnabled (const RTC_TypeDef * RTCx)

Function description

Check if Calibration Low Power is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CALR LPCAL LL_RTC_CAL_LowPower_IsEnabled

LL_RTC_IsActiveFlag_ITS

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITS (const RTC_TypeDef * RTCx)

Function description

Get Internal Time-stamp flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_SR ITSF LL_RTC_IsActiveFlag_ITS

LL_RTC_IsActiveFlag_RECALP

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_RECALP (const RTC_TypeDef * RTCx)

Function description

Get Recalibration pending Flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_ICSR RECALPF LL_RTC_IsActiveFlag_RECALP

LL_RTC_IsActiveFlag_TSOV

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TSOV (const RTC_TypeDef * RTCx)

Function description

Get Time-stamp overflow flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_SR TSOVF LL_RTC_IsActiveFlag_TSOV

LL_RTC_IsActiveFlag_TS

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TS (const RTC_TypeDef * RTCx)

Function description

Get Time-stamp flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_SR TSF LL_RTC_IsActiveFlag_TS

LL_RTC_IsActiveFlag_WUT

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_WUT (const RTC_TypeDef * RTCx)

Function description

Get Wakeup timer flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_SR WUTF LL_RTC_IsActiveFlag_WUT

LL_RTC_IsActiveFlag_ALRB

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ALRB (const RTC_TypeDef * RTCx)

Function description

Get Alarm B flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_SR ALRBF LL_RTC_IsActiveFlag_ALRB

LL_RTC_IsActiveFlag_ALRA

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ALRA (const RTC_TypeDef * RTCx)

Function description

Get Alarm A flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_SR ALRAF LL_RTC_IsActiveFlag_ALRA

LL_RTC_IsActiveFlag_SSRU

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_SSRU (const RTC_TypeDef * RTCx)

Function description

Get SSR Underflow flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_SR SSRUF LL_RTC_IsActiveFlag_SSRU

LL_RTC_ClearFlag_ITS

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_ITS (RTC_TypeDef * RTCx)

Function description

Clear Internal Time-stamp flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_SCR CITSF LL_RTC_ClearFlag_ITS

LL_RTC_ClearFlag_TSOV

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_TSOV (RTC_TypeDef * RTCx)

Function description

Clear Time-stamp overflow flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_SCR CTSOVF LL_RTC_ClearFlag_TSOV

LL_RTC_ClearFlag_TS

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_TS (RTC_TypeDef * RTCx)

Function description

Clear Time-stamp flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_SCR CTSF LL_RTC_ClearFlag_TS

LL_RTC_ClearFlag_WUT

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_WUT (RTC_TypeDef * RTCx)

Function description

Clear Wakeup timer flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_SCR CWUTF LL_RTC_ClearFlag_WUT

LL_RTC_ClearFlag_ALRB

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_ALRB (RTC_TypeDef * RTCx)

Function description

Clear Alarm B flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_SCR CALRBF LL_RTC_ClearFlag_ALRB

LL_RTC_ClearFlag_ALRA

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_ALRA (RTC_TypeDef * RTCx)

Function description

Clear Alarm A flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_SCR CALRAF LL_RTC_ClearFlag_ALRA

LL_RTC_ClearFlag_SSRU

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_SSRU (RTC_TypeDef * RTCx)

Function description

Clear SSR Underflow flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_SCR CSSRUF LL_RTC_ClearFlag_SSRU

LL_RTC_IsActiveFlag_INIT

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_INIT (const RTC_TypeDef * RTCx)

Function description

Get Initialization flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_ICSR INITF LL_RTC_IsActiveFlag_INIT

LL_RTC_IsActiveFlag_RS

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_RS (const RTC_TypeDef * RTCx)

Function description

Get Registers synchronization flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_ICSR RSF LL_RTC_IsActiveFlag_RS

LL_RTC_ClearFlag_RS

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_RS (RTC_TypeDef * RTCx)

Function description

Clear Registers synchronization flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ICSR RSF LL_RTC_ClearFlag_RS

LL_RTC_IsActiveFlag_INITS

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_INITS (const RTC_TypeDef * RTCx)

Function description

Get Initialization status flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_ICSR INITS LL_RTC_IsActiveFlag_INITS

LL_RTC_IsActiveFlag_SHP

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_SHP (const RTC_TypeDef * RTCx)

Function description

Get Shift operation pending flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_ICSR SHPF LL_RTC_IsActiveFlag_SHP

LL_RTC_IsActiveFlag_WUTW

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_WUTW (const RTC_TypeDef * RTCx)

Function description

Get Wakeup timer write flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_ICSR WUTWF LL_RTC_IsActiveFlag_WUTW

LL_RTC_IsActiveFlag_ALRAM

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ALRAM (const RTC_TypeDef * RTCx)

Function description

Get Alarm A masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_MISR ALRAMF LL_RTC_IsActiveFlag_ALRAM

LL_RTC_IsActiveFlag_SSRUM

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_SSRUM (const RTC_TypeDef * RTCx)

Function description

Get SSR Underflow masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_MISR SSRUMF LL_RTC_IsActiveFlag_SSRUM

LL_RTC_IsActiveFlag_ALRBM

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ALRBM (const RTC_TypeDef * RTCx)

Function description

Get Alarm B masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_MISR ALRBMF LL_RTC_IsActiveFlag_ALRBM

LL_RTC_IsActiveFlag_WUTM

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_WUTM (const RTC_TypeDef * RTCx)

Function description

Get Wakeup timer masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_MISR WUTMF LL_RTC_IsActiveFlag_WUTM

LL_RTC_IsActiveFlag_TSM

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TSM (const RTC_TypeDef * RTCx)

Function description

Get Time-stamp masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_MISR TSMF LL_RTC_IsActiveFlag_TSM

LL_RTC_IsActiveFlag_TSOVM

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TSOVM (const RTC_TypeDef * RTCx)

Function description

Get Time-stamp overflow masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_MISR TSOVMF LL_RTC_IsActiveFlag_TSOVM

LL_RTC_IsActiveFlag_ITSM

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITSM (const RTC_TypeDef * RTCx)

Function description

Get Internal Time-stamp masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_MISR ITSMF LL_RTC_IsActiveFlag_ITSM

LL_RTC_IsActiveFlag_TAMP1

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TAMP1 (const RTC_TypeDef * RTCx)

Function description

Get tamper 1 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR TAMP1F LL_RTC_IsActiveFlag_TAMP1

LL_RTC_IsActiveFlag_TAMP2

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TAMP2 (const RTC_TypeDef * RTCx)

Function description

Get tamper 2 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR TAMP2F LL_RTC_IsActiveFlag_TAMP2

LL_RTC_IsActiveFlag_TAMP3

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TAMP3 (const RTC_TypeDef * RTCx)

Function description

Get tamper 3 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR TAMP3F LL_RTC_IsActiveFlag_TAMP3

LL_RTC_IsActiveFlag_TAMP4

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TAMP4 (const RTC_TypeDef * RTCx)

Function description

Get tamper 4 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR TAMP4F LL_RTC_IsActiveFlag_TAMP4

LL_RTC_IsActiveFlag_TAMP5

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TAMP5 (const RTC_TypeDef * RTCx)

Function description

Get tamper 5 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR TAMP5F LL_RTC_IsActiveFlag_TAMP5

LL_RTC_IsActiveFlag_ITAMP3

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP3 (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 3 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR ITAMP3F LL_RTC_IsActiveFlag_ITAMP3

LL_RTC_IsActiveFlag_ITAMP5

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP5 (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 5 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR ITAMP5F LL_RTC_IsActiveFlag_ITAMP5

LL_RTC_IsActiveFlag_ITAMP6

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP6 (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 6 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR ITAMP6F LL_RTC_IsActiveFlag_ITAMP6

LL_RTC_IsActiveFlag_ITAMP7

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP7 (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 7 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR ITAMP7F LL_RTC_IsActiveFlag_ITAMP7

LL_RTC_IsActiveFlag_ITAMP8

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP8 (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 8 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR ITAMP8F LL_RTC_IsActiveFlag_ITAMP8

LL_RTC_IsActiveFlag_ITAMP9

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP9 (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 9 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR ITAMP9F LL_RTC_IsActiveFlag_ITAMP9

LL_RTC_IsActiveFlag_ITAMP11

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP11 (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 11 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR ITAMP11F LL_RTC_IsActiveFlag_ITAMP11

LL_RTC_IsActiveFlag_ITAMP12

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP12 (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 12 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR ITAMP12F LL_RTC_IsActiveFlag_ITAMP12

LL_RTC_IsActiveFlag_ITAMP13

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP13 (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 13 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_SR ITAMP13F LL_RTC_IsActiveFlag_ITAMP13

LL_RTC_IsActiveFlag_TAMP1M

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TAMP1M (const RTC_TypeDef * RTCx)

Function description

Get tamper 1 interrupt masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_MISR TAMP1MF LL_RTC_IsActiveFlag_TAMP1M

LL_RTC_IsActiveFlag_TAMP2M

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TAMP2M (const RTC_TypeDef * RTCx)

Function description

Get tamper 2 interrupt masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_MISR TAMP2MF LL_RTC_IsActiveFlag_TAMP2M

LL_RTC_IsActiveFlag_TAMP3M

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TAMP3M (const RTC_TypeDef * RTCx)

Function description

Get tamper 3 interrupt masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_MISR TAMP3MF LL_RTC_IsActiveFlag_TAMP3M

LL_RTC_IsActiveFlag_TAMP4M

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TAMP4M (const RTC_TypeDef * RTCx)

Function description

Get tamper 4 interrupt masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_MISR TAMP4MF LL_RTC_IsActiveFlag_TAMP4M

LL_RTC_IsActiveFlag_TAMP5M

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TAMP5M (const RTC_TypeDef * RTCx)

Function description

Get tamper 5 interrupt masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_MISR TAMP5MF LL_RTC_IsActiveFlag_TAMP5M

LL_RTC_IsActiveFlag_ITAMP3M

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP3M (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 3 interrupt masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_MISR ITAMP3MF LL_RTC_IsActiveFlag_ITAMP3M

LL_RTC_IsActiveFlag_ITAMP5M

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP5M (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 5 interrupt masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_MISR ITAMP5MF LL_RTC_IsActiveFlag_ITAMP5M

LL_RTC_IsActiveFlag_ITAMP6M

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP6M (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 6 interrupt masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_MISR ITAMP6MF LL_RTC_IsActiveFlag_ITAMP6M

LL_RTC_IsActiveFlag_ITAMP7M

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP7M (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 7 interrupt masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_MISR ITAMP7MF LL_RTC_IsActiveFlag_ITAMP7M

LL_RTC_IsActiveFlag_ITAMP8M

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP8M (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 8 interrupt masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_MISR ITAMP8MF LL_RTC_IsActiveFlag_ITAMP8M

LL_RTC_IsActiveFlag_ITAMP9M

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP9M (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 9 interrupt masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_MISR ITAMP9MF LL_RTC_IsActiveFlag_ITAMP9M

LL_RTC_IsActiveFlag_ITAMP11M

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP11M (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 11 interrupt masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_MISR ITAMP11MF LL_RTC_IsActiveFlag_ITAMP11M

LL_RTC_IsActiveFlag_ITAMP12M

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP12M (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 12 interrupt masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_MISR ITAMP12MF LL_RTC_IsActiveFlag_ITAMP12M

LL_RTC_IsActiveFlag_ITAMP13M

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITAMP13M (const RTC_TypeDef * RTCx)

Function description

Get internal tamper 13 interrupt masked flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_MISR ITAMP13MF LL_RTC_IsActiveFlag_ITAMP13M

LL_RTC_ClearFlag_TAMP1

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_TAMP1 (const RTC_TypeDef * RTCx)

Function description

Clear tamper 1 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_SCR CTAMP1F LL_RTC_ClearFlag_TAMP1

LL_RTC_ClearFlag_TAMP2

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_TAMP2 (const RTC_TypeDef * RTCx)

Function description

Clear tamper 2 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_SCR CTAMP2F LL_RTC_ClearFlag_TAMP2

LL_RTC_ClearFlag_TAMP3

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_TAMP3 (const RTC_TypeDef * RTCx)

Function description

Clear tamper 3 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_SCR CTAMP3F LL_RTC_ClearFlag_TAMP3

LL_RTC_ClearFlag_TAMP4

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_TAMP4 (const RTC_TypeDef * RTCx)

Function description

Clear tamper 4 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_SCR CTAMP4F LL_RTC_ClearFlag_TAMP4

LL_RTC_ClearFlag_TAMP5

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_TAMP5 (const RTC_TypeDef * RTCx)

Function description

Clear tamper 5 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_SCR CTAMP5F LL_RTC_ClearFlag_TAMP5

LL_RTC_ClearFlag_ITAMP3

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_ITAMP3 (const RTC_TypeDef * RTCx)

Function description

Clear internal tamper 3 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_SCR CITAMP3F LL_RTC_ClearFlag_ITAMP3

LL_RTC_ClearFlag_ITAMP5

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_ITAMP5 (const RTC_TypeDef * RTCx)

Function description

Clear internal tamper 5 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_SCR CITAMP5F LL_RTC_ClearFlag_ITAMP5

LL_RTC_ClearFlag_ITAMP6

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_ITAMP6 (const RTC_TypeDef * RTCx)

Function description

Clear internal tamper 6 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_SCR CITAMP6F LL_RTC_ClearFlag_ITAMP6

LL_RTC_ClearFlag_ITAMP7

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_ITAMP7 (const RTC_TypeDef * RTCx)

Function description

Clear internal tamper 7 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_SCR CITAMP7F LL_RTC_ClearFlag_ITAMP7

LL_RTC_ClearFlag_ITAMP8

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_ITAMP8 (const RTC_TypeDef * RTCx)

Function description

Clear internal tamper 8 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_SCR CITAMP8F LL_RTC_ClearFlag_ITAMP8

LL_RTC_ClearFlag_ITAMP9

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_ITAMP9 (const RTC_TypeDef * RTCx)

Function description

Clear internal tamper 9 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_SCR CITAMP9F LL_RTC_ClearFlag_ITAMP9

LL_RTC_ClearFlag_ITAMP11

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_ITAMP11 (const RTC_TypeDef * RTCx)

Function description

Clear internal tamper 11 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_SCR CITAMP11F LL_RTC_ClearFlag_ITAMP11

LL_RTC_ClearFlag_ITAMP12

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_ITAMP12 (const RTC_TypeDef * RTCx)

Function description

Clear internal tamper 12 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_SCR CITAMP12F LL_RTC_ClearFlag_ITAMP12

LL_RTC_ClearFlag_ITAMP13

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_ITAMP13 (const RTC_TypeDef * RTCx)

Function description

Clear internal tamper 13 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_SCR CITAMP13F LL_RTC_ClearFlag_ITAMP13

LL_RTC_SetRtcSecure

Function name

__STATIC_INLINE void LL_RTC_SetRtcSecure (RTC_TypeDef * RTCx, uint32_t rtcSecure)

Function description

Set RTC secure level.

Parameters

- **RTCx:** RTC Instance
- **rtcSecure:** This parameter can be a combination of the following values:
  - LL_RTC_SECURE_FULL_YES
  - LL_RTC_SECURE_FULL_NO
  - LL_RTC_SECURE_FEATURE_INIT
  - LL_RTC_SECURE_FEATURE_CAL
  - LL_RTC_SECURE_FEATURE_TS
  - LL_RTC_SECURE_FEATURE_WUT
  - LL_RTC_SECURE_FEATURE_ALRA
  - LL_RTC_SECURE_FEATURE_ALRB

Return values

- **None:**

Notes

- secure features are relevant if LL_RTC_SECURE_FULL_NO.

Reference Manual to LL API cross reference:

- RTC_SECCFGR SEC LL_RTC_SetRtcSecure
- RTC_SECCFGR INITSEC LL_RTC_SetRtcSecure
- RTC_SECCFGR CALSEC LL_RTC_SetRtcSecure
- RTC_SECCFGR TSSEC LL_RTC_SetRtcSecure
- RTC_SECCFGR WUTSEC LL_RTC_SetRtcSecure
- RTC_SECCFGR ALRASEC LL_RTC_SetRtcSecure
- RTC_SECCFGR ALRBSEC LL_RTC_SetRtcSecure

LL_RTC_GetRtcSecure

Function name

__STATIC_INLINE uint32_t LL_RTC_GetRtcSecure (const RTC_TypeDef * RTCx)

Function description

Get RTC secure level.

Parameters

- **RTCx:** RTC Instance

Return values

- **Combination:** of the following values:
  - LL_RTC_SECURE_FULL_YES
  - LL_RTC_SECURE_FULL_NO
  - LL_RTC_SECURE_FEATURE_INIT
  - LL_RTC_SECURE_FEATURE_CAL
  - LL_RTC_SECURE_FEATURE_TS
  - LL_RTC_SECURE_FEATURE_WUT
  - LL_RTC_SECURE_FEATURE_ALRA
  - LL_RTC_SECURE_FEATURE_ALRB

Notes

- Secure features is relevant if LL_RTC_SECURE_FULL_NO.

Reference Manual to LL API cross reference:

- RTC_SECCFGR SEC LL_RTC_SetRtcSecure
- RTC_SECCFGR INISEC LL_RTC_SetRtcSecure
- RTC_SECCFGR CALSEC LL_RTC_SetRtcSecure
- RTC_SECCFGR TSSEC LL_RTC_SetRtcSecure

- RTC_SECCFGR ALRASEC LL_RTC_SetRtcSecure
- RTC_SECCFGR ALRBSEC LL_RTC_SetRtcSecure

LL_RTC_SetTampSecure

Function name

__STATIC_INLINE void LL_RTC_SetTampSecure (const RTC_TypeDef * RTCx, uint32_t tampSecure)

Function description

Set TAMPER secure level.

Parameters

- **RTCx:** RTC Instance
- **tampSecure:** This parameter can be one of the following values:
  - LL_TAMP_SECURE_FULL_YES
  - LL_TAMP_SECURE_FULL_NO

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_SECCFGR TAMPSEC LL_RTC_SetTampSecure

LL_RTC_GetTampSecure

Function name

__STATIC_INLINE uint32_t LL_RTC_GetTampSecure (const RTC_TypeDef * RTCx)

Function description

Get TAMPER secure level.

Parameters

- **RTCx:** RTC Instance

Return values

- **This:** parameter can be one of the following values:
  - LL_TAMP_SECURE_FULL_YES
  - LL_TAMP_SECURE_FULL_NO

Reference Manual to LL API cross reference:

- TAMP_SECCFGR TAMPSEC LL_RTC_GetTampSecure

LL_RTC_SetRtcPrivilege

Function name

__STATIC_INLINE void LL_RTC_SetRtcPrivilege (RTC_TypeDef * RTCx, uint32_t rtcPrivilege)

Function description

Set RTC privilege level.

Parameters

- **RTCx:** RTC Instance
- **rtcPrivilege:** This parameter can be a combination of the following values:
  - LL_RTC_PRIVILEGE_FULL_YES
  - LL_RTC_PRIVILEGE_FULL_NO
  - LL_RTC_PRIVILEGE_FEATURE_INIT
  - LL_RTC_PRIVILEGE_FEATURE_CAL
  - LL_RTC_PRIVILEGE_FEATURE_TS
  - LL_RTC_PRIVILEGE_FEATURE_WUT
  - LL_RTC_PRIVILEGE_FEATURE_ALRA
  - LL_RTC_PRIVILEGE_FEATURE_ALRB

Return values

- **None:**

Notes

- Privilege features are relevant if LL_RTC_PRIVILEGE_FULL_NO.

Reference Manual to LL API cross reference:

- RTC_PRIVCFGR PRIV LL_RTC_SetRtcPrivilege
- RTC_PRIVCFGR INITPRIV LL_RTC_SetRtcPrivilege

- RTC_PRIVCFGR WUTPRIV LL_RTC_SetRtcPrivilege
- RTC_PRIVCFGR ALRAPRIV LL_RTC_SetRtcPrivilege
- RTC_PRIVCFGR ALRBPRIV LL_RTC_SetRtcPrivilege

LL_RTC_GetRtcPrivilege

Function name

__STATIC_INLINE uint32_t LL_RTC_GetRtcPrivilege (const RTC_TypeDef * RTCx)

Function description

Get RTC privilege level.

Parameters

- **RTCx:** RTC Instance

Return values

- **Combination:** of the following values:
  - LL_RTC_PRIVILEGE_FULL_YES
  - LL_RTC_PRIVILEGE_FULL_NO
  - LL_RTC_PRIVILEGE_FEATURE_INIT
  - LL_RTC_PRIVILEGE_FEATURE_CAL
  - LL_RTC_PRIVILEGE_FEATURE_TS
  - LL_RTC_PRIVILEGE_FEATURE_WUT
  - LL_RTC_PRIVILEGE_FEATURE_ALRA
  - LL_RTC_PRIVILEGE_FEATURE_ALRB

Notes

- Privilege features are relevant if LL_RTC_PRIVILEGE_FULL_NO.

LL_RTC_SetTampPrivilege

Function name

__STATIC_INLINE void LL_RTC_SetTampPrivilege (const RTC_TypeDef * RTCx, uint32_t tampPrivilege)

Function description

Set TAMPER privilege level.

Parameters

- **RTCx:** RTC Instance
- **tampPrivilege:** This parameter can be one of the following values:
  - LL_TAMP_PRIVILEGE_FULL_YES
  - LL_TAMP_PRIVILEGE_FULL_NO

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_PRIVCFGR TAMPPRIV LL_RTC_SetTampPrivilege

LL_RTC_GetTampPrivilege

Function name

__STATIC_INLINE uint32_t LL_RTC_GetTampPrivilege (const RTC_TypeDef * RTCx)

Function description

Get TAMPER privilege level.

Parameters

- **RTCx:** RTC Instance

Return values

- **This:** parameter can be one of the following values:
  - LL_TAMP_PRIVILEGE_FULL_YES
  - LL_TAMP_PRIVILEGE_FULL_NO

Reference Manual to LL API cross reference:

- TAMP_PRIVCFGR TAMPPRIV LL_RTC_GetTampPrivilege

LL_RTC_SetBackupRegisterPrivilege

Function name

__STATIC_INLINE void LL_RTC_SetBackupRegisterPrivilege (const RTC_TypeDef * RTCx, uint32_t bckupRegisterPrivilege)

Function description

Set Backup Registers privilege level.

Parameters

- **RTCx:** RTC Instance
- **bckupRegisterPrivilege:** This parameter can be one of the following values:
  - LL_RTC_PRIVILEGE_BKUP_ZONE_NONE
  - LL_RTC_PRIVILEGE_BKUP_ZONE_1
  - LL_RTC_PRIVILEGE_BKUP_ZONE_2
  - LL_RTC_PRIVILEGE_BKUP_ZONE_ALL

Return values

- **None:**

Notes

- bckupRegisterPrivilege is only writable in secure mode or if trustzone is disabled

Reference Manual to LL API cross reference:

- TAMP_PRIVCFGR BKPWPRIV LL_RTC_SetBackupRegisterPrivilege
- TAMP_PRIVCFGR BKPRWPRIV LL_RTC_SetBackupRegisterPrivilege

LL_RTC_GetBackupRegisterPrivilege

Function name

__STATIC_INLINE uint32_t LL_RTC_GetBackupRegisterPrivilege (const RTC_TypeDef * RTCx)

Function description

Get Backup Registers privilege level.

Parameters

- **RTCx:** RTC Instance

Return values

- **This:** parameter can be one of the following values:
  - LL_RTC_PRIVILEGE_BKUP_ZONE_NONE
  - LL_RTC_PRIVILEGE_BKUP_ZONE_1
  - LL_RTC_PRIVILEGE_BKUP_ZONE_2
  - LL_RTC_PRIVILEGE_BKUP_ZONE_ALL

Reference Manual to LL API cross reference:

- TAMP_PRIVCFGR BKPWPRIV LL_RTC_GetBackupRegisterPrivilege
- TAMP_PRIVCFGR BKPRWPRIV LL_RTC_GetBackupRegisterPrivilege

LL_RTC_SetBackupRegProtection

Function name

__STATIC_INLINE void LL_RTC_SetBackupRegProtection (const RTC_TypeDef * RTCx, uint32_t startZone2, uint32_t startZone3)

Function description

Set Backup registers protection level.

Parameters

- **RTCx:** RTC Instance
- **startZone2:** This parameter can be one of the following values:
  - LL_RTC_BKP_DR0
  - LL_RTC_BKP_DR1
  - LL_RTC_BKP_DR2
  - LL_RTC_BKP_DR3
  - LL_RTC_BKP_DR4
  - LL_RTC_BKP_DRx ...
- **startZone3:** This parameter can be one of the following values:
  - LL_RTC_BKP_DR0
  - LL_RTC_BKP_DR1
  - LL_RTC_BKP_DR2
  - LL_RTC_BKP_DR3
  - LL_RTC_BKP_DR4
  - LL_RTC_BKP_DRx ...

Return values

- **None:**

Notes

- Zone 1 : read protection write protection
- Zone 2 : read non-protection write protection
- Zone 3 : read non-protection write non-protection
- zone 1 : start from 0 to startZone2 start value
- zone 2 : start from startZone2 start value to startZone3 start value
- zone 3 : start from to startZone3 to the end of BACKUPREG
- Warning : this parameter is only writable in secure mode or if trustzone is disabled

Reference Manual to LL API cross reference:

LL_RTC_GetBackupRegProtectionStartZone2

Function name

__STATIC_INLINE uint32_t LL_RTC_GetBackupRegProtectionStartZone2 (const RTC_TypeDef * RTCx)

Function description

Get Backup registers protection level start zone 2.

Parameters

- **RTCx:** RTC Instance

Return values

- **Start:** zone 2

Notes

- Zone 1 : read protection write protection
- Zone 2 : read non-protection/non-privile write protection
- Zone 3 : read non-protection write non-protection

Reference Manual to LL API cross reference:

- TAMP_SECCFGR BKPRWSEC LL_RTC_GetBackupRegProtectionStartZone2

LL_RTC_GetBackupRegProtectionStartZone3

Function name

__STATIC_INLINE uint32_t LL_RTC_GetBackupRegProtectionStartZone3 (const RTC_TypeDef * RTCx)

Function description

Get Backup registers protection level start zone 3.

Parameters

- **RTCx:** RTC Instance

Return values

- **Start:** zone 2

Notes

- Zone 1 : read protection write protection
- Zone 2 : read non-protection write protection
- Zone 3 : read non-protection write non-protection

Reference Manual to LL API cross reference:

- TAMP_SECCFGR BKPWSEC LL_RTC_GetBackupRegProtectionStartZone3

LL_RTC_EnableIT_TS

Function name

__STATIC_INLINE void LL_RTC_EnableIT_TS (RTC_TypeDef * RTCx)

Function description

Enable Time-stamp interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR TSIE LL_RTC_EnableIT_TS

LL_RTC_DisableIT_TS

Function name

__STATIC_INLINE void LL_RTC_DisableIT_TS (RTC_TypeDef * RTCx)

Function description

Disable Time-stamp interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR TSIE LL_RTC_DisableIT_TS

LL_RTC_EnableIT_WUT

Function name

__STATIC_INLINE void LL_RTC_EnableIT_WUT (RTC_TypeDef * RTCx)

Function description

Enable Wakeup timer interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR WUTIE LL_RTC_EnableIT_WUT

LL_RTC_DisableIT_WUT

Function name

__STATIC_INLINE void LL_RTC_DisableIT_WUT (RTC_TypeDef * RTCx)

Function description

Disable Wakeup timer interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR WUTIE LL_RTC_DisableIT_WUT

LL_RTC_EnableIT_ALRB

Function name

__STATIC_INLINE void LL_RTC_EnableIT_ALRB (RTC_TypeDef * RTCx)

Function description

Enable Alarm B interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ALRBIE LL_RTC_EnableIT_ALRB

LL_RTC_DisableIT_ALRB

Function name

__STATIC_INLINE void LL_RTC_DisableIT_ALRB (RTC_TypeDef * RTCx)

Function description

Disable Alarm B interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ALRBIE LL_RTC_DisableIT_ALRB

LL_RTC_EnableIT_ALRA

Function name

__STATIC_INLINE void LL_RTC_EnableIT_ALRA (RTC_TypeDef * RTCx)

Function description

Enable Alarm A interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ALRAIE LL_RTC_EnableIT_ALRA

LL_RTC_DisableIT_ALRA

Function name

__STATIC_INLINE void LL_RTC_DisableIT_ALRA (RTC_TypeDef * RTCx)

Function description

Disable Alarm A interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ALRAIE LL_RTC_DisableIT_ALRA

LL_RTC_EnableIT_SSRU

Function name

__STATIC_INLINE void LL_RTC_EnableIT_SSRU (RTC_TypeDef * RTCx)

Function description

Enable SSR Underflow interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR SSRUIE LL_RTC_EnableIT_SSRU

LL_RTC_DisableIT_SSRU

Function name

__STATIC_INLINE void LL_RTC_DisableIT_SSRU (RTC_TypeDef * RTCx)

Function description

Disable SSR Underflow interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR SSRUIE LL_RTC_DisableIT_SSRU

LL_RTC_IsEnabledIT_TS

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_TS (const RTC_TypeDef * RTCx)

Function description

Check if Time-stamp interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CR TSIE LL_RTC_IsEnabledIT_TS

LL_RTC_IsEnabledIT_WUT

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_WUT (const RTC_TypeDef * RTCx)

Function description

Check if Wakeup timer interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CR WUTIE LL_RTC_IsEnabledIT_WUT

LL_RTC_IsEnabledIT_ALRB

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_ALRB (const RTC_TypeDef * RTCx)

Function description

Check if Alarm B interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CR ALRBIE LL_RTC_IsEnabledIT_ALRB

LL_RTC_IsEnabledIT_ALRA

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_ALRA (const RTC_TypeDef * RTCx)

Function description

Check if Alarm A interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CR ALRAIE LL_RTC_IsEnabledIT_ALRA

LL_RTC_IsEnabledIT_SSRU

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_SSRU (const RTC_TypeDef * RTCx)

Function description

Check if SSR Underflow interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CR SSRUIE LL_RTC_IsEnabledIT_SSRU

LL_RTC_EnableIT_TAMP1

Function name

__STATIC_INLINE void LL_RTC_EnableIT_TAMP1 (const RTC_TypeDef * RTCx)

Function description

Enable tamper 1 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER TAMP1IE LL_RTC_EnableIT_TAMP1

LL_RTC_DisableIT_TAMP1

Function name

__STATIC_INLINE void LL_RTC_DisableIT_TAMP1 (const RTC_TypeDef * RTCx)

Function description

Disable tamper 1 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER TAMP1IE LL_RTC_DisableIT_TAMP1

LL_RTC_EnableIT_TAMP2

Function name

__STATIC_INLINE void LL_RTC_EnableIT_TAMP2 (const RTC_TypeDef * RTCx)

Function description

Enable tamper 2 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER TAMP2IE LL_RTC_EnableIT_TAMP2

LL_RTC_DisableIT_TAMP2

Function name

__STATIC_INLINE void LL_RTC_DisableIT_TAMP2 (const RTC_TypeDef * RTCx)

Function description

Disable tamper 2 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER TAMP2IE LL_RTC_DisableIT_TAMP2

LL_RTC_EnableIT_TAMP3

Function name

__STATIC_INLINE void LL_RTC_EnableIT_TAMP3 (const RTC_TypeDef * RTCx)

Function description

Enable tamper 3 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER TAMP3IE LL_RTC_EnableIT_TAMP3

LL_RTC_DisableIT_TAMP3

Function name

__STATIC_INLINE void LL_RTC_DisableIT_TAMP3 (const RTC_TypeDef * RTCx)

Function description

Disable tamper 3 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER TAMP3IE LL_RTC_DisableIT_TAMP3

LL_RTC_EnableIT_TAMP4

Function name

__STATIC_INLINE void LL_RTC_EnableIT_TAMP4 (const RTC_TypeDef * RTCx)

Function description

Enable tamper 4 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER TAMP4IE LL_RTC_EnableIT_TAMP4

LL_RTC_DisableIT_TAMP4

Function name

__STATIC_INLINE void LL_RTC_DisableIT_TAMP4 (const RTC_TypeDef * RTCx)

Function description

Disable tamper 4 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER TAMP4IE LL_RTC_DisableIT_TAMP4

LL_RTC_EnableIT_TAMP5

Function name

__STATIC_INLINE void LL_RTC_EnableIT_TAMP5 (const RTC_TypeDef * RTCx)

Function description

Enable tamper 5 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER TAMP5IE LL_RTC_EnableIT_TAMP5

LL_RTC_DisableIT_TAMP5

Function name

__STATIC_INLINE void LL_RTC_DisableIT_TAMP5 (const RTC_TypeDef * RTCx)

Function description

Disable tamper 5 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER TAMP5IE LL_RTC_DisableIT_TAMP5

LL_RTC_EnableIT_ITAMP3

Function name

__STATIC_INLINE void LL_RTC_EnableIT_ITAMP3 (const RTC_TypeDef * RTCx)

Function description

Enable internal tamper 3 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP3IE LL_RTC_EnableIT_ITAMP3

LL_RTC_DisableIT_ITAMP3

Function name

__STATIC_INLINE void LL_RTC_DisableIT_ITAMP3 (const RTC_TypeDef * RTCx)

Function description

Disable internal tamper 3 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP3IE LL_RTC_DisableIT_ITAMP3

LL_RTC_EnableIT_ITAMP5

Function name

__STATIC_INLINE void LL_RTC_EnableIT_ITAMP5 (const RTC_TypeDef * RTCx)

Function description

Enable internal tamper 5 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP5IE LL_RTC_EnableIT_ITAMP5

LL_RTC_DisableIT_ITAMP5

Function name

__STATIC_INLINE void LL_RTC_DisableIT_ITAMP5 (const RTC_TypeDef * RTCx)

Function description

Disable internal tamper 5 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP5IE LL_RTC_DisableIT_ITAMP5

LL_RTC_EnableIT_ITAMP6

Function name

__STATIC_INLINE void LL_RTC_EnableIT_ITAMP6 (const RTC_TypeDef * RTCx)

Function description

Enable internal tamper 6 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP6IE LL_RTC_EnableIT_ITAMP6

LL_RTC_DisableIT_ITAMP6

Function name

__STATIC_INLINE void LL_RTC_DisableIT_ITAMP6 (const RTC_TypeDef * RTCx)

Function description

Disable internal tamper 6 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP6IE LL_RTC_DisableIT_ITAMP6

LL_RTC_EnableIT_ITAMP7

Function name

__STATIC_INLINE void LL_RTC_EnableIT_ITAMP7 (const RTC_TypeDef * RTCx)

Function description

Enable internal tamper 7 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP7IE LL_RTC_EnableIT_ITAMP7

LL_RTC_DisableIT_ITAMP7

Function name

__STATIC_INLINE void LL_RTC_DisableIT_ITAMP7 (const RTC_TypeDef * RTCx)

Function description

Disable internal tamper 7 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP7IE LL_RTC_DisableIT_ITAMP7

LL_RTC_EnableIT_ITAMP8

Function name

__STATIC_INLINE void LL_RTC_EnableIT_ITAMP8 (const RTC_TypeDef * RTCx)

Function description

Enable internal tamper 8 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP8IE LL_RTC_EnableIT_ITAMP8

LL_RTC_DisableIT_ITAMP8

Function name

__STATIC_INLINE void LL_RTC_DisableIT_ITAMP8 (const RTC_TypeDef * RTCx)

Function description

Disable internal tamper 8 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP8IE LL_RTC_DisableIT_ITAMP8

LL_RTC_EnableIT_ITAMP9

Function name

__STATIC_INLINE void LL_RTC_EnableIT_ITAMP9 (const RTC_TypeDef * RTCx)

Function description

Enable internal tamper 9 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP9IE LL_RTC_EnableIT_ITAMP9

LL_RTC_DisableIT_ITAMP9

Function name

__STATIC_INLINE void LL_RTC_DisableIT_ITAMP9 (const RTC_TypeDef * RTCx)

Function description

Disable internal tamper 9 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP9IE LL_RTC_DisableIT_ITAMP9

LL_RTC_EnableIT_ITAMP11

Function name

__STATIC_INLINE void LL_RTC_EnableIT_ITAMP11 (const RTC_TypeDef * RTCx)

Function description

Enable internal tamper 11 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP11IE LL_RTC_EnableIT_ITAMP11

LL_RTC_DisableIT_ITAMP11

Function name

__STATIC_INLINE void LL_RTC_DisableIT_ITAMP11 (const RTC_TypeDef * RTCx)

Function description

Disable internal tamper 11 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP11IE LL_RTC_DisableIT_ITAMP11

LL_RTC_EnableIT_ITAMP12

Function name

__STATIC_INLINE void LL_RTC_EnableIT_ITAMP12 (const RTC_TypeDef * RTCx)

Function description

Enable internal tamper 12 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP12IE LL_RTC_EnableIT_ITAMP12

LL_RTC_DisableIT_ITAMP12

Function name

__STATIC_INLINE void LL_RTC_DisableIT_ITAMP12 (const RTC_TypeDef * RTCx)

Function description

Disable internal tamper 12 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP12IE LL_RTC_DisableIT_ITAMP12

LL_RTC_EnableIT_ITAMP13

Function name

__STATIC_INLINE void LL_RTC_EnableIT_ITAMP13 (const RTC_TypeDef * RTCx)

Function description

Enable internal tamper 13 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP13IE LL_RTC_EnableIT_ITAMP13

LL_RTC_DisableIT_ITAMP13

Function name

__STATIC_INLINE void LL_RTC_DisableIT_ITAMP13 (const RTC_TypeDef * RTCx)

Function description

Disable internal tamper 13 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP13IE LL_RTC_DisableIT_ITAMP13

LL_RTC_IsEnabledIT_TAMP1

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_TAMP1 (const RTC_TypeDef * RTCx)

Function description

Check if tamper 1 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER TAMP1IE LL_RTC_IsEnabledIT_TAMP1

LL_RTC_IsEnabledIT_TAMP2

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_TAMP2 (const RTC_TypeDef * RTCx)

Function description

Check if tamper 2 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER TAMP2IE LL_RTC_IsEnabledIT_TAMP2

LL_RTC_IsEnabledIT_TAMP3

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_TAMP3 (const RTC_TypeDef * RTCx)

Function description

Check if tamper 3 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER TAMP3IE LL_RTC_IsEnabledIT_TAMP3

LL_RTC_IsEnabledIT_TAMP4

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_TAMP4 (const RTC_TypeDef * RTCx)

Function description

Check if tamper 4 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER TAMP4IE LL_RTC_IsEnabledIT_TAMP4

LL_RTC_IsEnabledIT_TAMP5

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_TAMP5 (const RTC_TypeDef * RTCx)

Function description

Check if tamper 5 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER TAMP5IE LL_RTC_IsEnabledIT_TAMP5

LL_RTC_IsEnabledIT_ITAMP3

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_ITAMP3 (const RTC_TypeDef * RTCx)

Function description

Check if internal tamper 3 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP3IE LL_RTC_IsEnabledIT_ITAMP3

LL_RTC_IsEnabledIT_ITAMP5

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_ITAMP5 (const RTC_TypeDef * RTCx)

Function description

Check if internal tamper 5 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP5IE LL_RTC_IsEnabledIT_ITAMP5

LL_RTC_IsEnabledIT_ITAMP6

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_ITAMP6 (const RTC_TypeDef * RTCx)

Function description

Check if internal tamper 6 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP6IE LL_RTC_IsEnabledIT_ITAMP6

LL_RTC_IsEnabledIT_ITAMP7

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_ITAMP7 (const RTC_TypeDef * RTCx)

Function description

Check if internal tamper 7 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP7IE LL_RTC_IsEnabledIT_ITAMP7

LL_RTC_IsEnabledIT_ITAMP8

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_ITAMP8 (const RTC_TypeDef * RTCx)

Function description

Check if internal tamper 8 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP8IE LL_RTC_IsEnabledIT_ITAMP8

LL_RTC_IsEnabledIT_ITAMP9

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_ITAMP9 (const RTC_TypeDef * RTCx)

Function description

Check if internal tamper 9 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP9IE LL_RTC_IsEnabledIT_ITAMP9

LL_RTC_IsEnabledIT_ITAMP11

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_ITAMP11 (const RTC_TypeDef * RTCx)

Function description

Check if internal tamper 11 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP11IE LL_RTC_IsEnabledIT_ITAMP11

LL_RTC_IsEnabledIT_ITAMP12

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_ITAMP12 (const RTC_TypeDef * RTCx)

Function description

Check if internal tamper 12 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP12IE LL_RTC_IsEnabledIT_ITAMP12

LL_RTC_IsEnabledIT_ITAMP13

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_ITAMP13 (const RTC_TypeDef * RTCx)

Function description

Check if internal tamper 13 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMP_IER ITAMP13IE LL_RTC_IsEnabledIT_ITAMP13

LL_RTC_IncrementMonotonicCounter

Function name

__STATIC_INLINE void LL_RTC_IncrementMonotonicCounter (const RTC_TypeDef * RTCx)

Function description

Increment Monotonic counter.

Parameters

- **RTCx:** RTC Instance

Return values

- **None.:**

Reference Manual to LL API cross reference:

- TAMP_COUNT1R COUNT LL_RTC_IncrementMonotonicCounter

LL_RTC_GetMonotonicCounter

Function name

__STATIC_INLINE uint32_t LL_RTC_GetMonotonicCounter (const RTC_TypeDef * RTCx)

Function description

Increment Monotonic counter.

Parameters

- **RTCx:** RTC Instance

Return values

- **Monotonic:** counter value.

Reference Manual to LL API cross reference:

- TAMP_COUNT1R COUNT LL_RTC_GetMonotonicCounter

LL_RTC_DeInit

Function name

ErrorStatus LL_RTC_DeInit (RTC_TypeDef * RTCx)

Function description

De-Initializes the RTC registers to their default reset values.

Parameters

- **RTCx:** RTC Instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: RTC registers are de-initialized
  - ERROR: RTC registers are not de-initialized

Notes

- This function does not reset the RTC Clock source and RTC Backup Data registers.

LL_RTC_Init

Function name

ErrorStatus LL_RTC_Init (RTC_TypeDef * RTCx, LL_RTC_InitTypeDef * RTC_InitStruct)

Function description

Initializes the RTC registers according to the specified parameters in RTC_InitStruct.

Parameters

- **RTCx:** RTC Instance
- **RTC_InitStruct:** pointer to a LL_RTC_InitTypeDef structure that contains the configuration information for the RTC peripheral.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: RTC registers are initialized
  - ERROR: RTC registers are not initialized

Notes

- The RTC Prescaler register is write protected and can be written in initialization mode only.

LL_RTC_StructInit

Function name

void LL_RTC_StructInit (LL_RTC_InitTypeDef * RTC_InitStruct)

Function description

Set each LL_RTC_InitTypeDef field to default value.

Parameters

- **RTC_InitStruct:** pointer to a LL_RTC_InitTypeDef structure which will be initialized.

Return values

- **None:**

LL_RTC_TIME_Init

Function name

ErrorStatus LL_RTC_TIME_Init (RTC_TypeDef * RTCx, uint32_t RTC_Format, LL_RTC_TimeTypeDef * RTC_TimeStruct)

Function description

Set the RTC current time.

Parameters

- **RTCx:** RTC Instance
- **RTC_Format:** This parameter can be one of the following values:
  - LL_RTC_FORMAT_BIN
  - LL_RTC_FORMAT_BCD
- **RTC_TimeStruct:** pointer to a RTC_TimeTypeDef structure that contains the time configuration information for the RTC.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: RTC Time register is configured
  - ERROR: RTC Time register is not configured

LL_RTC_TIME_StructInit

Function name

void LL_RTC_TIME_StructInit (LL_RTC_TimeTypeDef * RTC_TimeStruct)

Function description

Set each LL_RTC_TimeTypeDef field to default value (Time = 00h:00min:00sec).

Parameters

- **RTC_TimeStruct:** pointer to a LL_RTC_TimeTypeDef structure which will be initialized.

Return values

- **None:**

LL_RTC_DATE_Init

Function name

ErrorStatus LL_RTC_DATE_Init (RTC_TypeDef * RTCx, uint32_t RTC_Format, LL_RTC_DateTypeDef * RTC_DateStruct)

Function description

Set the RTC current date.

Parameters

- **RTCx:** RTC Instance
- **RTC_Format:** This parameter can be one of the following values:
  - LL_RTC_FORMAT_BIN
  - LL_RTC_FORMAT_BCD
- **RTC_DateStruct:** pointer to a RTC_DateTypeDef structure that contains the date configuration information for the RTC.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: RTC Day register is configured
  - ERROR: RTC Day register is not configured

LL_RTC_DATE_StructInit

Function name

void LL_RTC_DATE_StructInit (LL_RTC_DateTypeDef * RTC_DateStruct)

Function description

Set each LL_RTC_DateTypeDef field to default value (date = Monday, January 01 xx00)

Parameters

- **RTC_DateStruct:** pointer to a LL_RTC_DateTypeDef structure which will be initialized.

Return values

- **None:**

LL_RTC_ALMA_Init

Function name

ErrorStatus LL_RTC_ALMA_Init (RTC_TypeDef * RTCx, uint32_t RTC_Format, LL_RTC_AlarmTypeDef * RTC_AlarmStruct)

Function description

Set the RTC Alarm A.

Parameters

- **RTCx:** RTC Instance
- **RTC_Format:** This parameter can be one of the following values:
  - LL_RTC_FORMAT_BIN
  - LL_RTC_FORMAT_BCD
- **RTC_AlarmStruct:** pointer to a LL_RTC_AlarmTypeDef structure that contains the alarm configuration parameters.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: ALARMA registers are configured
  - ERROR: ALARMA registers are not configured

Notes

- The Alarm register can only be written when the corresponding Alarm is disabled (Use LL_RTC_ALMA_Disable function).

LL_RTC_ALMB_Init

Function name

ErrorStatus LL_RTC_ALMB_Init (RTC_TypeDef * RTCx, uint32_t RTC_Format, LL_RTC_AlarmTypeDef * RTC_AlarmStruct)

Function description

Set the RTC Alarm B.

Parameters

- **RTCx:** RTC Instance
- **RTC_Format:** This parameter can be one of the following values:
  - LL_RTC_FORMAT_BIN
  - LL_RTC_FORMAT_BCD
- **RTC_AlarmStruct:** pointer to a LL_RTC_AlarmTypeDef structure that contains the alarm configuration parameters.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: ALARMB registers are configured
  - ERROR: ALARMB registers are not configured

Notes

- The Alarm register can only be written when the corresponding Alarm is disabled (LL_RTC_ALMB_Disable function).

LL_RTC_ALMA_StructInit

Function name

void LL_RTC_ALMA_StructInit (LL_RTC_AlarmTypeDef * RTC_AlarmStruct)

Function description

Set each LL_RTC_AlarmTypeDef of ALARMA field to default value (Time = 00h:00mn:00sec / Day = 1st day of the month/Mask = all fields are masked).

Parameters

- **RTC_AlarmStruct:** pointer to a LL_RTC_AlarmTypeDef structure which will be initialized.

Return values

- **None:**

LL_RTC_ALMB_StructInit

Function name

void LL_RTC_ALMB_StructInit (LL_RTC_AlarmTypeDef * RTC_AlarmStruct)

Function description

Set each LL_RTC_AlarmTypeDef of ALARMA field to default value (Time = 00h:00mn:00sec / Day = 1st day of the month/Mask = all fields are masked).

Parameters

- **RTC_AlarmStruct:** pointer to a LL_RTC_AlarmTypeDef structure which will be initialized.

Return values

- **None:**

LL_RTC_EnterInitMode

Function name

ErrorStatus LL_RTC_EnterInitMode (RTC_TypeDef * RTCx)

Function description

Enters the RTC Initialization mode.

Parameters

- **RTCx:** RTC Instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: RTC is in Init mode
  - ERROR: RTC is not in Init mode

Notes

- The RTC Initialization mode is write protected, use the LL_RTC_DisableWriteProtection before calling this function.

LL_RTC_ExitInitMode

Function name

ErrorStatus LL_RTC_ExitInitMode (RTC_TypeDef * RTCx)

Function description

Exit the RTC Initialization mode.

Parameters

- **RTCx:** RTC Instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: RTC exited from in Init mode
  - ERROR: Not applicable

Notes

- When the initialization sequence is complete, the calendar restarts counting after 4 RTCCLK cycles.
- The RTC Initialization mode is write protected, use the LL_RTC_DisableWriteProtection before calling this function.

LL_RTC_WaitForSynchro

Function name

ErrorStatus LL_RTC_WaitForSynchro (RTC_TypeDef * RTCx)

Function description

Waits until the RTC Time and Day registers (RTC_TR and RTC_DR) are synchronized with RTC APB clock.

Parameters

- **RTCx:** RTC Instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: RTC registers are synchronised
  - ERROR: RTC registers are not synchronised

Notes

- The RTC Resynchronization mode is write protected, use the LL_RTC_DisableWriteProtection before calling this function.
- To read the calendar through the shadow registers after Calendar initialization, calendar update or after wakeup from low power modes the software must first clear the RSF flag. The software must then wait until it is set again before reading the calendar, which means that the calendar registers have been correctly copied into the RTC_TR and RTC_DR shadow registers.

96.3 RTC Firmware driver defines

The following section lists the various define and macros of the module.

96.3.1 RTC

RTC

ALARM OUTPUT

LL_RTC_ALARMOUT_DISABLE

Output disabled

LL_RTC_ALARMOUT_ALMA

Alarm A output enabled

LL_RTC_ALARMOUT_ALMB

Alarm B output enabled

LL_RTC_ALARMOUT_WAKEUP

Wakeup output enabled

ALARM OUTPUT TYPE

LL_RTC_ALARM_OUTPUTTYPE_PUSHPULL

RTC_ALARM is push-pull output

LL_RTC_ALARM_OUTPUTTYPE_OPENDRAIN

RTC_ALARM is open-drain output

ALARMA MASK

LL_RTC_ALMA_MASK_NONE

No masks applied on Alarm A

LL_RTC_ALMA_MASK_DATEWEEKDAY

Date/day do not care in Alarm A comparison

LL_RTC_ALMA_MASK_HOURS

Hours do not care in Alarm A comparison

LL_RTC_ALMA_MASK_MINUTES

Minutes do not care in Alarm A comparison

LL_RTC_ALMA_MASK_SECONDS

Seconds do not care in Alarm A comparison

LL_RTC_ALMA_MASK_ALL

Masks all

RTC Alarm Sub Seconds with binary mode auto clear Definitions

LL_RTC_ALMA_SUBSECONDBIN_AUTOCLR_NO

The synchronous binary counter (SS[31:0] in RTC_SSR) is free-running.

LL_RTC_ALMA_SUBSECONDBIN_AUTOCLR_YES

The synchronous binary counter (SS[31:0] in RTC_SSR) is running from 0xFFFF FFFF to RTC_ALRMABINR -> SS[31:0] value and is automatically reloaded with 0xFFFF FFFF when reaching RTC_ALRMABINR -> SS[31:0].

ALARMA TIME FORMAT

LL_RTC_ALMA_TIME_FORMAT_AM

AM or 24-hour format

LL_RTC_ALMA_TIME_FORMAT_PM

PM

RTC Alarm A Date WeekDay

LL_RTC_ALMA_DATEWEEKDAYSEL_DATE

Alarm A Date is selected

LL_RTC_ALMA_DATEWEEKDAYSEL_WEEKDAY

Alarm A WeekDay is selected

ALARMB MASK

LL_RTC_ALMB_MASK_NONE

No masks applied on Alarm B

LL_RTC_ALMB_MASK_DATEWEEKDAY

Date/day do not care in Alarm B comparison

LL_RTC_ALMB_MASK_HOURS

Hours do not care in Alarm B comparison

LL_RTC_ALMB_MASK_MINUTES

Minutes do not care in Alarm B comparison

LL_RTC_ALMB_MASK_SECONDS

Seconds do not care in Alarm B comparison

LL_RTC_ALMB_MASK_ALL

Masks all

Alarm Sub Seconds with binary mode auto clear Definitions

LL_RTC_ALMB_SUBSECONDBIN_AUTOCLR_NO

The synchronous binary counter (SS[31:0] in RTC_SSR) is free-running.

LL_RTC_ALMB_SUBSECONDBIN_AUTOCLR_YES

The synchronous binary counter (SS[31:0] in RTC_SSR) is running from 0xFFFF FFFF to RTC_ALRMBBINR -> SS[31:0] value and is automatically reloaded with 0xFFFF FFFF when reaching RTC_ALRMBBINR -> SS[31:0].

ALARMB TIME FORMAT

LL_RTC_ALMB_TIME_FORMAT_AM

AM or 24-hour format

LL_RTC_ALMB_TIME_FORMAT_PM

PM

RTC Alarm B Date WeekDay

LL_RTC_ALMB_DATEWEEKDAYSEL_DATE

Alarm B Date is selected

LL_RTC_ALMB_DATEWEEKDAYSEL_WEEKDAY

Alarm B WeekDay is selected

Calendar second incrementation in Binary mix mode

LL_RTC_BINARY_MIX_BCDU_0

1s calendar increment is generated each time SS[7:0] = 0

LL_RTC_BINARY_MIX_BCDU_1

1s calendar increment is generated each time SS[8:0] = 0

LL_RTC_BINARY_MIX_BCDU_2

1s calendar increment is generated each time SS[9:0] = 0

LL_RTC_BINARY_MIX_BCDU_3

1s calendar increment is generated each time SS[10:0] = 0

LL_RTC_BINARY_MIX_BCDU_4

1s calendar increment is generated each time SS[11:0] = 0

LL_RTC_BINARY_MIX_BCDU_5

1s calendar increment is generated each time SS[12:0] = 0

LL_RTC_BINARY_MIX_BCDU_6

1s calendar increment is generated each time SS[13:0] = 0

LL_RTC_BINARY_MIX_BCDU_7

1s calendar increment is generated each time SS[14:0] = 0

Binary mode (Sub Second Register)

LL_RTC_BINARY_NONE

Free running BCD calendar mode (Binary mode disabled)

LL_RTC_BINARY_ONLY

Free running Binary mode (BCD mode disabled)

LL_RTC_BINARY_MIX

Free running BCD calendar and Binary mode enable

Calibration pulse insertion

LL_RTC_CALIB_INSERTPULSE_NONE

No RTCCLK pulses are added

LL_RTC_CALIB_INSERTPULSE_SET

One RTCCLK pulse is effectively inserted every 2exp11 pulses (frequency increased by 488.5 ppm)

Calibration low power

LL_RTC_CALIB_LOWPOWER_NONE

High conso mode

LL_RTC_CALIB_LOWPOWER_SET

Low power mode

Calibration output

LL_RTC_CALIB_OUTPUT_NONE

Calibration output disabled

LL_RTC_CALIB_OUTPUT_1HZ

Calibration output is 1 Hz

LL_RTC_CALIB_OUTPUT_512HZ

Calibration output is 512 Hz

Calibration period

LL_RTC_CALIB_PERIOD_32SEC

Use a 32-second calibration cycle period

LL_RTC_CALIB_PERIOD_16SEC

Use a 16-second calibration cycle period

LL_RTC_CALIB_PERIOD_8SEC

Use a 8-second calibration cycle period

FORMAT

OUTPUT POLARITY PIN

LL_RTC_OUTPUTPOLARITY_PIN_HIGH

Pin is high when ALRAF/ALRBF/WUTF is asserted (depending on OSEL)

LL_RTC_OUTPUTPOLARITY_PIN_LOW

Pin is low when ALRAF/ALRBF/WUTF is asserted (depending on OSEL)

Privilege Backup register privilege zone

LL_RTC_PRIVILEGE_BKUP_ZONE_NONE

LL_RTC_PRIVILEGE_BKUP_ZONE_1

LL_RTC_PRIVILEGE_BKUP_ZONE_2

LL_RTC_PRIVILEGE_BKUP_ZONE_ALL

Privilege rtc features in case of LL_RTC_PRIVILEGE_FULL_NO.

LL_RTC_PRIVILEGE_FEATURE_INIT

Initialization feature is privilege

LL_RTC_PRIVILEGE_FEATURE_CAL

Calibration feature is privilege

LL_RTC_PRIVILEGE_FEATURE_TS

Time stamp feature is privilege

LL_RTC_PRIVILEGE_FEATURE_WUT

Wake up timer feature is privilege

LL_RTC_PRIVILEGE_FEATURE_ALRA

Alarm A feature is privilege

LL_RTC_PRIVILEGE_FEATURE_ALRB

Alarm B feature is privilege

Privilege full rtc

LL_RTC_PRIVILEGE_FULL_YES

RTC full privilege

LL_RTC_PRIVILEGE_FULL_NO

RTC is not full privilege, features can be unprivilege. See RTC_LL_EC_PRIVILEGE_RTC_FEATURE

Privilege full tamp

LL_TAMP_PRIVILEGE_FULL_YES

TAMP full privilege

LL_TAMP_PRIVILEGE_FULL_NO

TAMP is not privilege

Secure features rtc in case of LL_RTC_SECURE_FULL_NO.

LL_RTC_SECURE_FEATURE_INIT

Initialization feature is secure

LL_RTC_SECURE_FEATURE_CAL

Calibration feature is secure

LL_RTC_SECURE_FEATURE_TS

Time stamp feature is secure

LL_RTC_SECURE_FEATURE_WUT

Wake up timer feature is secure

LL_RTC_SECURE_FEATURE_ALRA

Alarm A feature is secure

LL_RTC_SECURE_FEATURE_ALRB

Alarm B feature is secure

Secure full rtc

LL_RTC_SECURE_FULL_YES

RTC full secure

LL_RTC_SECURE_FULL_NO

RTC is not full secure, features can be secure. See RTC_LL_EC_SECURE_RTC_FEATURE

Secure tamp

LL_TAMP_SECURE_FULL_YES

TAMP full secure

LL_TAMP_SECURE_FULL_NO

TAMP is not secure

SHIFT SECOND

LL_RTC_SHIFT_SECOND_DELAY

Delay (seconds) = SUBFS / (PREDIV_S + 1)

LL_RTC_SHIFT_SECOND_ADVANCE

Advance (seconds) = (1 - (SUBFS / (PREDIV_S + 1)))

TAMPER

LL_RTC_TAMPER_1

Tamper 1 input detection

LL_RTC_TAMPER_2

Tamper 2 input detection

LL_RTC_TAMPER_3

Tamper 3 input detection

LL_RTC_TAMPER_4

Tamper 4 input detection

LL_RTC_TAMPER_5

Tamper 5 input detection

TAMPER ACTIVE LEVEL

LL_RTC_TAMPER_ACTIVELEVEL_TAMP1

Tamper 1 input falling edge (if TAMPFLT = 00) or staying high (if TAMPFLT != 00) triggers a tamper detection event

LL_RTC_TAMPER_ACTIVELEVEL_TAMP2

Tamper 2 input falling edge (if TAMPFLT = 00) or staying high (if TAMPFLT != 00) triggers a tamper detection event

LL_RTC_TAMPER_ACTIVELEVEL_TAMP3

Tamper 3 input falling edge (if TAMPFLT = 00) or staying high (if TAMPFLT != 00) triggers a tamper detection event

LL_RTC_TAMPER_ACTIVELEVEL_TAMP4

Tamper 4 input falling edge (if TAMPFLT = 00) or staying high (if TAMPFLT != 00) triggers a tamper detection event

LL_RTC_TAMPER_ACTIVELEVEL_TAMP5

Tamper 5 input falling edge (if TAMPFLT = 00) or staying high (if TAMPFLT != 00) triggers a tamper detection event

TAMPER DURATION

LL_RTC_TAMPER_DURATION_1RTCCLK

Tamper pins are pre-charged before sampling during 1 RTCCLK cycle

LL_RTC_TAMPER_DURATION_2RTCCLK

Tamper pins are pre-charged before sampling during 2 RTCCLK cycles

LL_RTC_TAMPER_DURATION_4RTCCLK

Tamper pins are pre-charged before sampling during 4 RTCCLK cycles

LL_RTC_TAMPER_DURATION_8RTCCLK

Tamper pins are pre-charged before sampling during 8 RTCCLK cycles

TAMPER FILTER

LL_RTC_TAMPER_FILTER_DISABLE

Tamper filter is disabled

LL_RTC_TAMPER_FILTER_2SAMPLE

Tamper is activated after 2 consecutive samples at the active level

LL_RTC_TAMPER_FILTER_4SAMPLE

Tamper is activated after 4 consecutive samples at the active level

LL_RTC_TAMPER_FILTER_8SAMPLE

Tamper is activated after 8 consecutive samples at the active level

TAMPER MASK

LL_RTC_TAMPER_MASK_TAMPER1

Tamper 1 event generates a trigger event. TAMP1F is masked and internally cleared by hardware. The backup registers are not erased

LL_RTC_TAMPER_MASK_TAMPER2

Tamper 2 event generates a trigger event. TAMP2F is masked and internally cleared by hardware. The backup registers are not erased

LL_RTC_TAMPER_MASK_TAMPER3

Tamper 3 event generates a trigger event. TAMP3F is masked and internally cleared by hardware. The backup registers are not erased

TAMPER NO ERASE

LL_RTC_TAMPER_NOERASE_TAMPER1

Tamper 1 event does not erase the backup registers

LL_RTC_TAMPER_NOERASE_TAMPER2

Tamper 2 event does not erase the backup registers

LL_RTC_TAMPER_NOERASE_TAMPER3

Tamper 3 event does not erase the backup registers

LL_RTC_TAMPER_NOERASE_TAMPER4

Tamper 4 event does not erase the backup registers

LL_RTC_TAMPER_NOERASE_TAMPER5

Tamper 5 event does not erase the backup registers

TAMPER SAMPLING FREQUENCY DIVIDER

LL_RTC_TAMPER_SAMPLFREQDIV_32768

Each of the tamper inputs are sampled with a frequency = RTCCLK / 32768

LL_RTC_TAMPER_SAMPLFREQDIV_16384

Each of the tamper inputs are sampled with a frequency = RTCCLK / 16384

LL_RTC_TAMPER_SAMPLFREQDIV_8192

Each of the tamper inputs are sampled with a frequency = RTCCLK / 8192

LL_RTC_TAMPER_SAMPLFREQDIV_4096

Each of the tamper inputs are sampled with a frequency = RTCCLK / 4096

LL_RTC_TAMPER_SAMPLFREQDIV_2048

Each of the tamper inputs are sampled with a frequency = RTCCLK / 2048

LL_RTC_TAMPER_SAMPLFREQDIV_1024

Each of the tamper inputs are sampled with a frequency = RTCCLK / 1024

LL_RTC_TAMPER_SAMPLFREQDIV_512

Each of the tamper inputs are sampled with a frequency = RTCCLK / 512

LL_RTC_TAMPER_SAMPLFREQDIV_256

Each of the tamper inputs are sampled with a frequency = RTCCLK / 256

TIMESTAMP EDGE

LL_RTC_TIMESTAMP_EDGE_RISING

RTC_TS input rising edge generates a time-stamp event

LL_RTC_TIMESTAMP_EDGE_FALLING

RTC_TS input falling edge generates a time-stamp even

TIME FORMAT

LL_RTC_TIME_FORMAT_AM_OR_24

AM or 24-hour format

LL_RTC_TIME_FORMAT_PM

PM

TIMESTAMP ON TAMPER DETECTION EVENT

LL_RTC_TS_TAMPERSOURCE_ITAMP

Timestamp on internal tamper event

LL_RTC_TS_TAMPERSOURCE_TAMP1

Timestamp on external tamper TAMP1 event

LL_RTC_TS_TAMPERSOURCE_TAMP2

Timestamp on external tamper TAMP2 event

LL_RTC_TS_TAMPERSOURCE_TAMP3

Timestamp on external tamper TAMP3 event

LL_RTC_TS_TAMPERSOURCE_TAMP4

Timestamp on external tamper TAMP4 event

LL_RTC_TS_TAMPERSOURCE_TAMP5

Timestamp on external tamper TAMP5 event

TIMESTAMP FLAG SOURCE ID

LL_RTC_TS_FLAG_SOURCE_RTC_TS

RTC_TS pin event

LL_RTC_TS_FLAG_SOURCE_TAMP1

TAMP1F event

LL_RTC_TS_FLAG_SOURCE_TAMP2

TAMP2F event

LL_RTC_TS_FLAG_SOURCE_TAMP3

TAMP3F event

LL_RTC_TS_FLAG_SOURCE_TAMP4

TAMP4F event

LL_RTC_TS_FLAG_SOURCE_TAMP5

TAMP5F event

LL_RTC_TS_FLAG_SOURCE_ITAMP

Internal tamper event

LL_RTC_TS_FLAG_SOURCE_ITS

internal timestamp event

TIMESTAMP TIME FORMAT

LL_RTC_TS_TIME_FORMAT_AM

AM or 24-hour format

LL_RTC_TS_TIME_FORMAT_PM

PM

WAKEUP CLOCK DIV

LL_RTC_WAKEUPCLOCK_DIV_16

RTC/16 clock is selected

LL_RTC_WAKEUPCLOCK_DIV_8

RTC/8 clock is selected

LL_RTC_WAKEUPCLOCK_DIV_4

RTC/4 clock is selected

LL_RTC_WAKEUPCLOCK_DIV_2

RTC/2 clock is selected

LL_RTC_WAKEUPCLOCK_CKSPRE

ck_spre (usually 1 Hz) clock is selected

LL_RTC_WAKEUPCLOCK_CKSPRE_WUT

ck_spre (usually 1 Hz) clock is selected and 2exp16 is added to the WUT counter value

WEEK DAY

LL_RTC_WEEKDAY_MONDAY

Monday

LL_RTC_WEEKDAY_TUESDAY

Tuesday

LL_RTC_WEEKDAY_WEDNESDAY

Wednesday

LL_RTC_WEEKDAY_THURSDAY

Thrusday

LL_RTC_WEEKDAY_FRIDAY

Friday

LL_RTC_WEEKDAY_SATURDAY

Saturday

LL_RTC_WEEKDAY_SUNDAY

Sunday

Convert helper Macros

__LL_RTC_CONVERT_BIN2BCD

Description:

- Helper macro to convert a value from 2 digit decimal format to BCD format.

Parameters:

- __VALUE__: Byte to be converted

Return value:

- Converted: byte

__LL_RTC_CONVERT_BCD2BIN

Description:

- Helper macro to convert a value from BCD format to 2 digit decimal format.

Parameters:

- __VALUE__: BCD value to be converted

Return value:

- Converted: byte

Date helper Macros

__LL_RTC_GET_WEEKDAY

Description:

- Helper macro to retrieve weekday.

Parameters:

- __RTC_DATE__: Date returned by

Return value:

- Returned: value can be one of the following values:
  - LL_RTC_WEEKDAY_MONDAY
  - LL_RTC_WEEKDAY_TUESDAY
  - LL_RTC_WEEKDAY_WEDNESDAY
  - LL_RTC_WEEKDAY_THURSDAY
  - LL_RTC_WEEKDAY_FRIDAY
  - LL_RTC_WEEKDAY_SATURDAY
  - LL_RTC_WEEKDAY_SUNDAY

__LL_RTC_GET_YEAR

Description:

- Helper macro to retrieve Year in BCD format.

Parameters:

- __RTC_DATE__: Value returned by

Return value:

- Year: in BCD format (0x00 . . . 0x99)

__LL_RTC_GET_MONTH

Description:

- Helper macro to retrieve Month in BCD format.

Parameters:

- __RTC_DATE__: Value returned by

Return value:

- Returned: value can be one of the following values:
  - LL_RTC_MONTH_JANUARY
  - LL_RTC_MONTH_FEBRUARY
  - LL_RTC_MONTH_MARCH
  - LL_RTC_MONTH_APRIL
  - LL_RTC_MONTH_MAY
  - LL_RTC_MONTH_JUNE
  - LL_RTC_MONTH_JULY
  - LL_RTC_MONTH_AUGUST
  - LL_RTC_MONTH_SEPTEMBER
  - LL_RTC_MONTH_OCTOBER
  - LL_RTC_MONTH_NOVEMBER
  - LL_RTC_MONTH_DECEMBER

__LL_RTC_GET_DAY

Description:

- Helper macro to retrieve Day in BCD format.

Parameters:

- __RTC_DATE__: Value returned by

Return value:

- Day: in BCD format (0x01 . . . 0x31)

Time helper Macros

__LL_RTC_GET_HOUR

Description:

- Helper macro to retrieve hour in BCD format.

Parameters:

- __RTC_TIME__: RTC time returned by

Return value:

- Hours: in BCD format (0x01. . .0x12 or between Min_Data=0x00 and Max_Data=0x23)

__LL_RTC_GET_MINUTE

Description:

- Helper macro to retrieve minute in BCD format.

Parameters:

- __RTC_TIME__: RTC time returned by

Return value:

- Minutes: in BCD format (0x00. . .0x59)

__LL_RTC_GET_SECOND

Description:

- Helper macro to retrieve second in BCD format.

Parameters:

- __RTC_TIME__: RTC time returned by

Return value:

- Seconds: in format (0x00. . .0x59)

Common Write and read registers Macros

LL_RTC_WriteReg

Description:

- Write a value in RTC register.

Parameters:

- __INSTANCE__: RTC Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_RTC_ReadReg

Description:

- Read a value in RTC register.

Parameters:

- __INSTANCE__: RTC Instance
- __REG__: Register to be read

Return value:

- Register: value

97 LL SPI Generic Driver

97.1 SPI Firmware driver registers structures

97.1.1 LL_SPI_InitTypeDef

LL_SPI_InitTypeDef is defined in the stm32u3xx_ll_spi.h

Data Fields

- ***uint32_t TransferDirection***
- ***uint32_t Mode***
- ***uint32_t DataWidth***
- ***uint32_t ClockPolarity***
- ***uint32_t ClockPhase***
- ***uint32_t NSS***
- ***uint32_t BaudRate***
- ***uint32_t BitOrder***
- ***uint32_t CRCCalculation***
- ***uint32_t CRCPoly***

Field Documentation

- ***uint32_t LL_SPI_InitTypeDef::TransferDirection***
  Specifies the SPI unidirectional or bidirectional data mode. This parameter can be a value of ***SPI_LL_EC_TRANSFER_MODE***.This feature can be modified afterwards using unitary function **LL_SPI_SetTransferDirection()**.
- ***uint32_t LL_SPI_InitTypeDef::Mode***
  Specifies the SPI mode (Master/Slave). This parameter can be a value of ***SPI_LL_EC_MODE***.This feature can be modified afterwards using unitary function **LL_SPI_SetMode()**.
- ***uint32_t LL_SPI_InitTypeDef::DataWidth***
  Specifies the SPI data width. This parameter can be a value of ***SPI_LL_EC_DATAWIDTH***.This feature can be modified afterwards using unitary function **LL_SPI_SetDataWidth()**.
- ***uint32_t LL_SPI_InitTypeDef::ClockPolarity***
  Specifies the serial clock steady state. This parameter can be a value of ***SPI_LL_EC_POLARITY***.This feature can be modified afterwards using unitary function **LL_SPI_SetClockPolarity()**.
- ***uint32_t LL_SPI_InitTypeDef::ClockPhase***
  Specifies the clock active edge for the bit capture. This parameter can be a value of ***SPI_LL_EC_PHASE***.This feature can be modified afterwards using unitary function **LL_SPI_SetClockPhase()**.
- ***uint32_t LL_SPI_InitTypeDef::NSS***
  Specifies whether the NSS signal is managed by hardware (NSS pin) or by software using the SSI bit.This parameter can be a value of ***SPI_LL_EC_NSS_MODE***.This feature can be modified afterwards using unitary function **LL_SPI_SetNSSMode()**.
- ***uint32_t LL_SPI_InitTypeDef::BaudRate***
  Specifies the BaudRate prescaler value which will be used to configure the transmit and receive SCK clock. This parameter can be a value of ***SPI_LL_EC_BAUDRATEPRESCALER***.
  Note:
  – The communication clock is derived from the master clock. The slave clock does not need to be set.

  This feature can be modified afterwards using unitary function **LL_SPI_SetBaudRatePrescaler()**.
- ***uint32_t LL_SPI_InitTypeDef::BitOrder***
  Specifies whether data transfers start from MSB or LSB bit. This parameter can be a value of ***SPI_LL_EC_BIT_ORDER***.This feature can be modified afterwards using unitary function **LL_SPI_SetTransferBitOrder()**.
- ***uint32_t LL_SPI_InitTypeDef::CRCCalculation***
  Specifies if the CRC calculation is enabled or not. This parameter can be a value of ***SPI_LL_EC_CRC_CALCULATION***.This feature can be modified afterwards using unitary functions **LL_SPI_EnableCRC()** and **LL_SPI_DisableCRC()**.

- ***uint32_t LL_SPI_InitTypeDef::CRCPoly***
  Specifies the polynomial used for the CRC calculation. This parameter must be a number between Min_Data = 0x00 and Max_Data = 0xFFFFFFFF.This feature can be modified afterwards using unitary function **LL_SPI_SetCRCPolynomial()**.

97.2 SPI Firmware driver API description

The following section lists the various functions of the SPI library.

97.2.1 Detailed description of functions

LL_SPI_Enable

Function name

__STATIC_INLINE void LL_SPI_Enable (SPI_TypeDef * SPIx)

Function description

Enable SPI peripheral.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 SPE LL_SPI_Enable

LL_SPI_Disable

Function name

__STATIC_INLINE void LL_SPI_Disable (SPI_TypeDef * SPIx)

Function description

Disable SPI peripheral.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- When disabling the SPI, follow the procedure described in the Reference Manual.

Reference Manual to LL API cross reference:

- CR1 SPE LL_SPI_Disable

LL_SPI_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabled (const SPI_TypeDef * SPIx)

Function description

Check if SPI peripheral is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CR1 SPE LL_SPI_IsEnabled

LL_SPI_EnableIOSwap

Function name

__STATIC_INLINE void LL_SPI_EnableIOSwap (SPI_TypeDef * SPIx)

Function description

Swap the MOSI and MISO pin.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG2 IOSWP LL_SPI_EnableIOSwap

LL_SPI_DisableIOSwap

Function name

__STATIC_INLINE void LL_SPI_DisableIOSwap (SPI_TypeDef * SPIx)

Function description

Restore default function for MOSI and MISO pin.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG2 IOSWP LL_SPI_DisableIOSwap

LL_SPI_IsEnabledIOSwap

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIOSwap (const SPI_TypeDef * SPIx)

Function description

Check if MOSI and MISO pin are swapped.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CFG2 IOSWP LL_SPI_IsEnabledIOSwap

LL_SPI_EnableGPIOControl

Function name

__STATIC_INLINE void LL_SPI_EnableGPIOControl (SPI_TypeDef * SPIx)

Function description

Enable GPIO control.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG2 AFCNTR LL_SPI_EnableGPIOControl

LL_SPI_DisableGPIOControl

Function name

__STATIC_INLINE void LL_SPI_DisableGPIOControl (SPI_TypeDef * SPIx)

Function description

Disable GPIO control.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG2 AFCNTR LL_SPI_DisableGPIOControl

LL_SPI_IsEnabledGPIOControl

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledGPIOControl (const SPI_TypeDef * SPIx)

Function description

Check if GPIO control is active.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CFG2 AFCNTR LL_SPI_IsEnabledGPIOControl

LL_SPI_SetMode

Function name

__STATIC_INLINE void LL_SPI_SetMode (SPI_TypeDef * SPIx, uint32_t Mode)

Function description

Set SPI Mode to Master or Slave.

Parameters

- **SPIx:** SPI Instance
- **Mode:** This parameter can be one of the following values:
  - LL_SPI_MODE_MASTER
  - LL_SPI_MODE_SLAVE

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG2 MASTER LL_SPI_SetMode

LL_SPI_GetMode

Function name

__STATIC_INLINE uint32_t LL_SPI_GetMode (const SPI_TypeDef * SPIx)

Function description

Get SPI Mode (Master or Slave)

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_MODE_MASTER
  - LL_SPI_MODE_SLAVE

Reference Manual to LL API cross reference:

- CFG2 MASTER LL_SPI_GetMode

LL_SPI_SetMasterSSIdleness

Function name

__STATIC_INLINE void LL_SPI_SetMasterSSIdleness (SPI_TypeDef * SPIx, uint32_t MasterSSIdleness)

Function description

Configure the Idleness applied by master between active edge of SS and first send data.

Parameters

- **SPIx:** SPI Instance
- **MasterSSIdleness:** This parameter can be one of the following values:
  - LL_SPI_SS_IDLENESS_00CYCLE
  - LL_SPI_SS_IDLENESS_01CYCLE
  - LL_SPI_SS_IDLENESS_02CYCLE
  - LL_SPI_SS_IDLENESS_03CYCLE
  - LL_SPI_SS_IDLENESS_04CYCLE
  - LL_SPI_SS_IDLENESS_05CYCLE
  - LL_SPI_SS_IDLENESS_06CYCLE
  - LL_SPI_SS_IDLENESS_07CYCLE
  - LL_SPI_SS_IDLENESS_08CYCLE
  - LL_SPI_SS_IDLENESS_09CYCLE
  - LL_SPI_SS_IDLENESS_10CYCLE
  - LL_SPI_SS_IDLENESS_11CYCLE
  - LL_SPI_SS_IDLENESS_12CYCLE
  - LL_SPI_SS_IDLENESS_13CYCLE
  - LL_SPI_SS_IDLENESS_14CYCLE
  - LL_SPI_SS_IDLENESS_15CYCLE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG2 MSSI LL_SPI_SetMasterSSIdleness

LL_SPI_GetMasterSSIdleness

Function name

__STATIC_INLINE uint32_t LL_SPI_GetMasterSSIdleness (const SPI_TypeDef * SPIx)

Function description

Get the configured Idleness applied by master.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_SS_IDLENESS_00CYCLE
  - LL_SPI_SS_IDLENESS_01CYCLE
  - LL_SPI_SS_IDLENESS_02CYCLE
  - LL_SPI_SS_IDLENESS_03CYCLE
  - LL_SPI_SS_IDLENESS_04CYCLE
  - LL_SPI_SS_IDLENESS_05CYCLE
  - LL_SPI_SS_IDLENESS_06CYCLE
  - LL_SPI_SS_IDLENESS_07CYCLE
  - LL_SPI_SS_IDLENESS_08CYCLE
  - LL_SPI_SS_IDLENESS_09CYCLE
  - LL_SPI_SS_IDLENESS_10CYCLE
  - LL_SPI_SS_IDLENESS_11CYCLE
  - LL_SPI_SS_IDLENESS_12CYCLE
  - LL_SPI_SS_IDLENESS_13CYCLE
  - LL_SPI_SS_IDLENESS_14CYCLE
  - LL_SPI_SS_IDLENESS_15CYCLE

Reference Manual to LL API cross reference:

- CFG2 MSSI LL_SPI_GetMasterSSIdleness

LL_SPI_SetInterDataIdleness

Function name

__STATIC_INLINE void LL_SPI_SetInterDataIdleness (SPI_TypeDef * SPIx, uint32_t MasterInterDataIdleness)

Function description

Configure the idleness applied by master between data frame.

Parameters

- **SPIx:** SPI Instance
- **MasterInterDataIdleness:** This parameter can be one of the following values:
  - LL_SPI_ID_IDLENESS_00CYCLE
  - LL_SPI_ID_IDLENESS_01CYCLE
  - LL_SPI_ID_IDLENESS_02CYCLE
  - LL_SPI_ID_IDLENESS_03CYCLE
  - LL_SPI_ID_IDLENESS_04CYCLE
  - LL_SPI_ID_IDLENESS_05CYCLE
  - LL_SPI_ID_IDLENESS_06CYCLE
  - LL_SPI_ID_IDLENESS_07CYCLE
  - LL_SPI_ID_IDLENESS_08CYCLE
  - LL_SPI_ID_IDLENESS_09CYCLE
  - LL_SPI_ID_IDLENESS_10CYCLE
  - LL_SPI_ID_IDLENESS_11CYCLE
  - LL_SPI_ID_IDLENESS_12CYCLE
  - LL_SPI_ID_IDLENESS_13CYCLE
  - LL_SPI_ID_IDLENESS_14CYCLE
  - LL_SPI_ID_IDLENESS_15CYCLE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG2 MIDI LL_SPI_SetInterDataIdleness

LL_SPI_GetInterDataIdleness

Function name

__STATIC_INLINE uint32_t LL_SPI_GetInterDataIdleness (const SPI_TypeDef * SPIx)

Function description

Get the configured inter data idleness.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_ID_IDLENESS_00CYCLE
  - LL_SPI_ID_IDLENESS_01CYCLE
  - LL_SPI_ID_IDLENESS_02CYCLE
  - LL_SPI_ID_IDLENESS_03CYCLE
  - LL_SPI_ID_IDLENESS_04CYCLE
  - LL_SPI_ID_IDLENESS_05CYCLE
  - LL_SPI_ID_IDLENESS_06CYCLE
  - LL_SPI_ID_IDLENESS_07CYCLE
  - LL_SPI_ID_IDLENESS_08CYCLE
  - LL_SPI_ID_IDLENESS_09CYCLE
  - LL_SPI_ID_IDLENESS_10CYCLE
  - LL_SPI_ID_IDLENESS_11CYCLE
  - LL_SPI_ID_IDLENESS_12CYCLE
  - LL_SPI_ID_IDLENESS_13CYCLE
  - LL_SPI_ID_IDLENESS_14CYCLE
  - LL_SPI_ID_IDLENESS_15CYCLE

Reference Manual to LL API cross reference:

- CFG2 MIDI LL_SPI_SetInterDataIdleness

LL_SPI_SetTransferSize

Function name

__STATIC_INLINE void LL_SPI_SetTransferSize (SPI_TypeDef * SPIx, uint32_t Count)

Function description

Set transfer size.

Parameters

- **SPIx:** SPI Instance
- **Count:** 0..0xFFFF

Return values

- **None:**

Notes

- Count is the number of frame to be transferred

Reference Manual to LL API cross reference:

- CR2 TSIZE LL_SPI_SetTransferSize

LL_SPI_GetTransferSize

Function name

__STATIC_INLINE uint32_t LL_SPI_GetTransferSize (const SPI_TypeDef * SPIx)

Function description

Get transfer size.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFFFF:**

Notes

- Count is the number of frame to be transferred

Reference Manual to LL API cross reference:

- CR2 TSIZE LL_SPI_GetTransferSize

LL_SPI_EnableIOLock

Function name

__STATIC_INLINE void LL_SPI_EnableIOLock (SPI_TypeDef * SPIx)

Function description

Lock the AF configuration of associated IOs.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- Once this bit is set, the AF configuration remains locked until a hardware reset occurs. the reset of the IOLock bit is done by hardware. for that, LL_SPI_DisableIOLock can not exist.

Reference Manual to LL API cross reference:

- CR1 IOLOCK LL_SPI_EnableIOLock

LL_SPI_IsEnabledIOLock

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIOLock (const SPI_TypeDef * SPIx)

Function description

Check if the AF configuration is locked.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CR1 IOLOCK LL_SPI_IsEnabledIOLock

LL_SPI_SetTxCRCInitPattern

Function name

__STATIC_INLINE void LL_SPI_SetTxCRCInitPattern (SPI_TypeDef * SPIx, uint32_t TXCRCInitAll)

Function description

Set Tx CRC Initialization Pattern.

Parameters

- **SPIx:** SPI Instance
- **TXCRCInitAll:** This parameter can be one of the following values:
  - LL_SPI_TXCRCINIT_ALL_ZERO_PATTERN
  - LL_SPI_TXCRCINIT_ALL_ONES_PATTERN

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TCRCINI LL_SPI_SetTxCRCInitPattern

LL_SPI_GetTxCRCInitPattern

Function name

__STATIC_INLINE uint32_t LL_SPI_GetTxCRCInitPattern (const SPI_TypeDef * SPIx)

Function description

Get Tx CRC Initialization Pattern.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_TXCRCINIT_ALL_ZERO_PATTERN
  - LL_SPI_TXCRCINIT_ALL_ONES_PATTERN

Reference Manual to LL API cross reference:

- CR1 TCRCINI LL_SPI_GetTxCRCInitPattern

LL_SPI_SetRxCRCInitPattern

Function name

__STATIC_INLINE void LL_SPI_SetRxCRCInitPattern (SPI_TypeDef * SPIx, uint32_t RXCRCInitAll)

Function description

Set Rx CRC Initialization Pattern.

Parameters

- **SPIx:** SPI Instance
- **RXCRCInitAll:** This parameter can be one of the following values:
  - LL_SPI_RXCRCINIT_ALL_ZERO_PATTERN
  - LL_SPI_RXCRCINIT_ALL_ONES_PATTERN

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RCRCINI LL_SPI_SetRxCRCInitPattern

LL_SPI_GetRxCRCInitPattern

Function name

__STATIC_INLINE uint32_t LL_SPI_GetRxCRCInitPattern (const SPI_TypeDef * SPIx)

Function description

Get Rx CRC Initialization Pattern.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_RXCRCINIT_ALL_ZERO_PATTERN
  - LL_SPI_RXCRCINIT_ALL_ONES_PATTERN

Reference Manual to LL API cross reference:

- CR1 RCRCINI LL_SPI_GetRxCRCInitPattern

LL_SPI_SetInternalSSLevel

Function name

__STATIC_INLINE void LL_SPI_SetInternalSSLevel (SPI_TypeDef * SPIx, uint32_t SSLevel)

Function description

Set internal SS input level ignoring what comes from PIN.

Parameters

- **SPIx:** SPI Instance
- **SSLevel:** This parameter can be one of the following values:
  - LL_SPI_SS_LEVEL_HIGH
  - LL_SPI_SS_LEVEL_LOW

Return values

- **None:**

Notes

- This configuration has effect only with config LL_SPI_NSS_SOFT

Reference Manual to LL API cross reference:

- CR1 SSI LL_SPI_SetInternalSSLevel

LL_SPI_GetInternalSSLevel

Function name

__STATIC_INLINE uint32_t LL_SPI_GetInternalSSLevel (const SPI_TypeDef * SPIx)

Function description

Get internal SS input level.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_SS_LEVEL_HIGH
  - LL_SPI_SS_LEVEL_LOW

Reference Manual to LL API cross reference:

- CR1 SSI LL_SPI_GetInternalSSLevel

LL_SPI_EnableFullSizeCRC

Function name

__STATIC_INLINE void LL_SPI_EnableFullSizeCRC (SPI_TypeDef * SPIx)

Function description

Enable CRC computation on 33/17 bits.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CRC33_17 LL_SPI_EnableFullSizeCRC

LL_SPI_DisableFullSizeCRC

Function name

__STATIC_INLINE void LL_SPI_DisableFullSizeCRC (SPI_TypeDef * SPIx)

Function description

Disable CRC computation on 33/17 bits.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CRC33_17 LL_SPI_DisableFullSizeCRC

LL_SPI_IsEnabledFullSizeCRC

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledFullSizeCRC (const SPI_TypeDef * SPIx)

Function description

Check if Enable CRC computation on 33/17 bits is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CR1 CRC33_17 LL_SPI_IsEnabledFullSizeCRC

LL_SPI_SuspendMasterTransfer

Function name

__STATIC_INLINE void LL_SPI_SuspendMasterTransfer (SPI_TypeDef * SPIx)

Function description

Suspend an ongoing transfer for Master configuration.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CSUSP LL_SPI_SuspendMasterTransfer

LL_SPI_StartMasterTransfer

Function name

__STATIC_INLINE void LL_SPI_StartMasterTransfer (SPI_TypeDef * SPIx)

Function description

Start effective transfer on wire for Master configuration.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CSTART LL_SPI_StartMasterTransfer

LL_SPI_IsActiveMasterTransfer

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveMasterTransfer (const SPI_TypeDef * SPIx)

Function description

Check if there is an unfinished master transfer.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CR1 CSTART LL_SPI_IsActiveMasterTransfer

LL_SPI_EnableMasterRxAutoSuspend

Function name

__STATIC_INLINE void LL_SPI_EnableMasterRxAutoSuspend (SPI_TypeDef * SPIx)

Function description

Enable Master Rx auto suspend in case of overrun.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 MASRX LL_SPI_EnableMasterRxAutoSuspend

LL_SPI_DisableMasterRxAutoSuspend

Function name

__STATIC_INLINE void LL_SPI_DisableMasterRxAutoSuspend (SPI_TypeDef * SPIx)

Function description

Disable Master Rx auto suspend in case of overrun.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 MASRX LL_SPI_DisableMasterRxAutoSuspend

LL_SPI_IsEnabledMasterRxAutoSuspend

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledMasterRxAutoSuspend (const SPI_TypeDef * SPIx)

Function description

Check if Master Rx auto suspend is activated.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CR1 MASRX LL_SPI_IsEnabledMasterRxAutoSuspend

LL_SPI_SetUDRConfiguration

Function name

__STATIC_INLINE void LL_SPI_SetUDRConfiguration (SPI_TypeDef * SPIx, uint32_t UDRConfig)

Function description

Set Underrun behavior.

Parameters

- **SPIx:** SPI Instance
- **UDRConfig:** This parameter can be one of the following values:
  - LL_SPI_UDR_CONFIG_REGISTER_PATTERN
  - LL_SPI_UDR_CONFIG_LAST_RECEIVED

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG1 UDRCFG LL_SPI_SetUDRConfiguration

LL_SPI_GetUDRConfiguration

Function name

__STATIC_INLINE uint32_t LL_SPI_GetUDRConfiguration (const SPI_TypeDef * SPIx)

Function description

Get Underrun behavior.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_UDR_CONFIG_REGISTER_PATTERN
  - LL_SPI_UDR_CONFIG_LAST_RECEIVED

Reference Manual to LL API cross reference:

- CFG1 UDRCFG LL_SPI_GetUDRConfiguration

LL_SPI_SetStandard

Function name

__STATIC_INLINE void LL_SPI_SetStandard (SPI_TypeDef * SPIx, uint32_t Standard)

Function description

Set Serial protocol used.

Parameters

- **SPIx:** SPI Instance
- **Standard:** This parameter can be one of the following values:
  - LL_SPI_PROTOCOL_MOTOROLA
  - LL_SPI_PROTOCOL_TI

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG2 SP LL_SPI_SetStandard

LL_SPI_GetStandard

Function name

__STATIC_INLINE uint32_t LL_SPI_GetStandard (const SPI_TypeDef * SPIx)

Function description

Get Serial protocol used.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_PROTOCOL_MOTOROLA
  - LL_SPI_PROTOCOL_TI

Reference Manual to LL API cross reference:

- CFG2 SP LL_SPI_GetStandard

LL_SPI_SetClockPhase

Function name

__STATIC_INLINE void LL_SPI_SetClockPhase (SPI_TypeDef * SPIx, uint32_t ClockPhase)

Function description

Set Clock phase.

Parameters

- **SPIx:** SPI Instance
- **ClockPhase:** This parameter can be one of the following values:
  - LL_SPI_PHASE_1EDGE
  - LL_SPI_PHASE_2EDGE

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled. This bit is not used in SPI TI mode.

Reference Manual to LL API cross reference:

- CFG2 CPHA LL_SPI_SetClockPhase

LL_SPI_GetClockPhase

Function name

__STATIC_INLINE uint32_t LL_SPI_GetClockPhase (const SPI_TypeDef * SPIx)

Function description

Get Clock phase.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_PHASE_1EDGE
  - LL_SPI_PHASE_2EDGE

Reference Manual to LL API cross reference:

- CFG2 CPHA LL_SPI_GetClockPhase

LL_SPI_SetClockPolarity

Function name

__STATIC_INLINE void LL_SPI_SetClockPolarity (SPI_TypeDef * SPIx, uint32_t ClockPolarity)

Function description

Set Clock polarity.

Parameters

- **SPIx:** SPI Instance
- **ClockPolarity:** This parameter can be one of the following values:
  - LL_SPI_POLARITY_LOW
  - LL_SPI_POLARITY_HIGH

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled. This bit is not used in SPI TI mode.

Reference Manual to LL API cross reference:

- CFG2 CPOL LL_SPI_SetClockPolarity

LL_SPI_GetClockPolarity

Function name

__STATIC_INLINE uint32_t LL_SPI_GetClockPolarity (const SPI_TypeDef * SPIx)

Function description

Get Clock polarity.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_POLARITY_LOW
  - LL_SPI_POLARITY_HIGH

Reference Manual to LL API cross reference:

- CFG2 CPOL LL_SPI_GetClockPolarity

LL_SPI_SetNSSPolarity

Function name

__STATIC_INLINE void LL_SPI_SetNSSPolarity (SPI_TypeDef * SPIx, uint32_t NSSPolarity)

Function description

Set NSS polarity.

Parameters

- **SPIx:** SPI Instance
- **NSSPolarity:** This parameter can be one of the following values:
  - LL_SPI_NSS_POLARITY_LOW
  - LL_SPI_NSS_POLARITY_HIGH

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled. This bit is not used in SPI TI mode.

Reference Manual to LL API cross reference:

- CFG2 SSIOP LL_SPI_SetNSSPolarity

LL_SPI_GetNSSPolarity

Function name

__STATIC_INLINE uint32_t LL_SPI_GetNSSPolarity (const SPI_TypeDef * SPIx)

Function description

Get NSS polarity.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_NSS_POLARITY_LOW
  - LL_SPI_NSS_POLARITY_HIGH

Reference Manual to LL API cross reference:

- CFG2 SSIOP LL_SPI_GetNSSPolarity

LL_SPI_SetBaudRatePrescaler

Function name

__STATIC_INLINE void LL_SPI_SetBaudRatePrescaler (SPI_TypeDef * SPIx, uint32_t Baudrate)

Function description

Set Baudrate Prescaler.

Parameters

- **SPIx:** SPI Instance
- **Baudrate:** This parameter can be one of the following values:
  - LL_SPI_BAUDRATEPRESCALER_BYPASS
  - LL_SPI_BAUDRATEPRESCALER_DIV2
  - LL_SPI_BAUDRATEPRESCALER_DIV4
  - LL_SPI_BAUDRATEPRESCALER_DIV8
  - LL_SPI_BAUDRATEPRESCALER_DIV16
  - LL_SPI_BAUDRATEPRESCALER_DIV32
  - LL_SPI_BAUDRATEPRESCALER_DIV64
  - LL_SPI_BAUDRATEPRESCALER_DIV128
  - LL_SPI_BAUDRATEPRESCALER_DIV256

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled. SPI BaudRate = fPCLK/Pescaler.

Reference Manual to LL API cross reference:

- CFG1 MBR LL_SPI_SetBaudRatePrescaler
- CFG1 BPASS LL_SPI_SetBaudRatePrescaler

LL_SPI_GetBaudRatePrescaler

Function name

__STATIC_INLINE uint32_t LL_SPI_GetBaudRatePrescaler (const SPI_TypeDef * SPIx)

Function description

Get Baudrate Prescaler.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_BAUDRATEPRESCALER_BYPASS
  - LL_SPI_BAUDRATEPRESCALER_DIV2
  - LL_SPI_BAUDRATEPRESCALER_DIV4
  - LL_SPI_BAUDRATEPRESCALER_DIV8
  - LL_SPI_BAUDRATEPRESCALER_DIV16
  - LL_SPI_BAUDRATEPRESCALER_DIV32
  - LL_SPI_BAUDRATEPRESCALER_DIV64
  - LL_SPI_BAUDRATEPRESCALER_DIV128
  - LL_SPI_BAUDRATEPRESCALER_DIV256

Reference Manual to LL API cross reference:

- CFG1 MBR LL_SPI_GetBaudRatePrescaler
- CFG1 BPASS LL_SPI_GetBaudRatePrescaler

LL_SPI_SetTransferBitOrder

Function name

__STATIC_INLINE void LL_SPI_SetTransferBitOrder (SPI_TypeDef * SPIx, uint32_t BitOrder)

Function description

Set Transfer Bit Order.

Parameters

- **SPIx:** SPI Instance
- **BitOrder:** This parameter can be one of the following values:
  - LL_SPI_LSB_FIRST
  - LL_SPI_MSB_FIRST

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled. This bit is not used in SPI TI mode.

Reference Manual to LL API cross reference:

- CFG2 LSBFRST LL_SPI_SetTransferBitOrder

LL_SPI_GetTransferBitOrder

Function name

__STATIC_INLINE uint32_t LL_SPI_GetTransferBitOrder (const SPI_TypeDef * SPIx)

Function description

Get Transfer Bit Order.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_LSB_FIRST
  - LL_SPI_MSB_FIRST

Reference Manual to LL API cross reference:

- CFG2 LSBFRST LL_SPI_GetTransferBitOrder

LL_SPI_SetTransferDirection

Function name

__STATIC_INLINE void LL_SPI_SetTransferDirection (SPI_TypeDef * SPIx, uint32_t TransferDirection)

Function description

Set Transfer Mode.

Parameters

- **SPIx:** SPI Instance
- **TransferDirection:** This parameter can be one of the following values:
  - LL_SPI_FULL_DUPLEX
  - LL_SPI_SIMPLEX_TX
  - LL_SPI_SIMPLEX_RX
  - LL_SPI_HALF_DUPLEX_RX
  - LL_SPI_HALF_DUPLEX_TX

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled except for half duplex direction using LL_SPI_SetHalfDuplexDirection.

Reference Manual to LL API cross reference:

- CR1 HDDIR LL_SPI_SetTransferDirection
- CFG2 COMM LL_SPI_SetTransferDirection

LL_SPI_GetTransferDirection

Function name

__STATIC_INLINE uint32_t LL_SPI_GetTransferDirection (const SPI_TypeDef * SPIx)

Function description

Get Transfer Mode.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_FULL_DUPLEX
  - LL_SPI_SIMPLEX_TX
  - LL_SPI_SIMPLEX_RX
  - LL_SPI_HALF_DUPLEX_RX
  - LL_SPI_HALF_DUPLEX_TX

Reference Manual to LL API cross reference:

- CR1 HDDIR LL_SPI_GetTransferDirection
- CFG2 COMM LL_SPI_GetTransferDirection

LL_SPI_SetHalfDuplexDirection

Function name

__STATIC_INLINE void LL_SPI_SetHalfDuplexDirection (SPI_TypeDef * SPIx, uint32_t HalfDuplexDirection)

Function description

Set direction for Half-Duplex Mode.

Parameters

- **SPIx:** SPI Instance
- **HalfDuplexDirection:** This parameter can be one of the following values:
  - LL_SPI_HALF_DUPLEX_RX
  - LL_SPI_HALF_DUPLEX_TX

Return values

- **None:**

Notes

- In master mode the MOSI pin is used and in slave mode the MISO pin is used for Half-Duplex.

Reference Manual to LL API cross reference:

- CR1 HDDIR LL_SPI_SetHalfDuplexDirection

LL_SPI_GetHalfDuplexDirection

Function name

__STATIC_INLINE uint32_t LL_SPI_GetHalfDuplexDirection (const SPI_TypeDef * SPIx)

Function description

Get direction for Half-Duplex Mode.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_HALF_DUPLEX_RX
  - LL_SPI_HALF_DUPLEX_TX

Notes

- In master mode the MOSI pin is used and in slave mode the MISO pin is used for Half-Duplex.

Reference Manual to LL API cross reference:

- CR1 HDDIR LL_SPI_GetHalfDuplexDirection

LL_SPI_SetDataWidth

Function name

__STATIC_INLINE void LL_SPI_SetDataWidth (SPI_TypeDef * SPIx, uint32_t DataWidth)

Function description

Set Frame Data Size.

Parameters

- **SPIx:** SPI Instance
- **DataWidth:** This parameter can be one of the following values:
  - LL_SPI_DATAWIDTH_4BIT
  - LL_SPI_DATAWIDTH_5BIT
  - LL_SPI_DATAWIDTH_6BIT
  - LL_SPI_DATAWIDTH_7BIT
  - LL_SPI_DATAWIDTH_8BIT
  - LL_SPI_DATAWIDTH_9BIT
  - LL_SPI_DATAWIDTH_10BIT
  - LL_SPI_DATAWIDTH_11BIT
  - LL_SPI_DATAWIDTH_12BIT
  - LL_SPI_DATAWIDTH_13BIT
  - LL_SPI_DATAWIDTH_14BIT
  - LL_SPI_DATAWIDTH_15BIT

  - LL_SPI_DATAWIDTH_17BIT
  - LL_SPI_DATAWIDTH_18BIT
  - LL_SPI_DATAWIDTH_19BIT
  - LL_SPI_DATAWIDTH_20BIT
  - LL_SPI_DATAWIDTH_21BIT
  - LL_SPI_DATAWIDTH_22BIT
  - LL_SPI_DATAWIDTH_23BIT
  - LL_SPI_DATAWIDTH_24BIT
  - LL_SPI_DATAWIDTH_25BIT
  - LL_SPI_DATAWIDTH_26BIT
  - LL_SPI_DATAWIDTH_27BIT
  - LL_SPI_DATAWIDTH_28BIT
  - LL_SPI_DATAWIDTH_29BIT
  - LL_SPI_DATAWIDTH_30BIT
  - LL_SPI_DATAWIDTH_31BIT
  - LL_SPI_DATAWIDTH_32BIT

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG1 DSIZE LL_SPI_SetDataWidth

LL_SPI_GetDataWidth

Function name

__STATIC_INLINE uint32_t LL_SPI_GetDataWidth (const SPI_TypeDef * SPIx)

Function description

Get Frame Data Size.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_DATAWIDTH_4BIT
  - LL_SPI_DATAWIDTH_5BIT
  - LL_SPI_DATAWIDTH_6BIT
  - LL_SPI_DATAWIDTH_7BIT
  - LL_SPI_DATAWIDTH_8BIT
  - LL_SPI_DATAWIDTH_9BIT
  - LL_SPI_DATAWIDTH_10BIT
  - LL_SPI_DATAWIDTH_11BIT
  - LL_SPI_DATAWIDTH_12BIT
  - LL_SPI_DATAWIDTH_13BIT
  - LL_SPI_DATAWIDTH_14BIT
  - LL_SPI_DATAWIDTH_15BIT
  - LL_SPI_DATAWIDTH_16BIT
  - LL_SPI_DATAWIDTH_17BIT

- CFG1 DSIZE LL_SPI_GetDataWidth

LL_SPI_SetFIFOThreshold

Function name

__STATIC_INLINE void LL_SPI_SetFIFOThreshold (SPI_TypeDef * SPIx, uint32_t Threshold)

Function description

Set threshold of FIFO that triggers a transfer event.

Parameters

- **SPIx:** SPI Instance
- **Threshold:** This parameter can be one of the following values:
  - LL_SPI_FIFO_TH_01DATA
  - LL_SPI_FIFO_TH_02DATA
  - LL_SPI_FIFO_TH_03DATA
  - LL_SPI_FIFO_TH_04DATA
  - LL_SPI_FIFO_TH_05DATA
  - LL_SPI_FIFO_TH_06DATA
  - LL_SPI_FIFO_TH_07DATA
  - LL_SPI_FIFO_TH_08DATA
  - LL_SPI_FIFO_TH_09DATA
  - LL_SPI_FIFO_TH_10DATA
  - LL_SPI_FIFO_TH_11DATA
  - LL_SPI_FIFO_TH_12DATA
  - LL_SPI_FIFO_TH_13DATA
  - LL_SPI_FIFO_TH_14DATA
  - LL_SPI_FIFO_TH_15DATA
  - LL_SPI_FIFO_TH_16DATA

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG1 FTHLV LL_SPI_SetFIFOThreshold

LL_SPI_GetFIFOThreshold

Function name

__STATIC_INLINE uint32_t LL_SPI_GetFIFOThreshold (const SPI_TypeDef * SPIx)

Function description

Get threshold of FIFO that triggers a transfer event.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_FIFO_TH_01DATA
  - LL_SPI_FIFO_TH_02DATA
  - LL_SPI_FIFO_TH_03DATA
  - LL_SPI_FIFO_TH_04DATA
  - LL_SPI_FIFO_TH_05DATA
  - LL_SPI_FIFO_TH_06DATA
  - LL_SPI_FIFO_TH_07DATA
  - LL_SPI_FIFO_TH_08DATA
  - LL_SPI_FIFO_TH_09DATA
  - LL_SPI_FIFO_TH_10DATA
  - LL_SPI_FIFO_TH_11DATA
  - LL_SPI_FIFO_TH_12DATA
  - LL_SPI_FIFO_TH_13DATA
  - LL_SPI_FIFO_TH_14DATA
  - LL_SPI_FIFO_TH_15DATA
  - LL_SPI_FIFO_TH_16DATA

Reference Manual to LL API cross reference:

- CFG1 FTHLV LL_SPI_GetFIFOThreshold

LL_SPI_EnableCRC

Function name

__STATIC_INLINE void LL_SPI_EnableCRC (SPI_TypeDef * SPIx)

Function description

Enable CRC.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG1 CRCEN LL_SPI_EnableCRC

LL_SPI_DisableCRC

Function name

__STATIC_INLINE void LL_SPI_DisableCRC (SPI_TypeDef * SPIx)

Function description

Disable CRC.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 CRCEN LL_SPI_DisableCRC

LL_SPI_IsEnabledCRC

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledCRC (const SPI_TypeDef * SPIx)

Function description

Check if CRC is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CFG1 CRCEN LL_SPI_IsEnabledCRC

LL_SPI_SetCRCWidth

Function name

__STATIC_INLINE void LL_SPI_SetCRCWidth (SPI_TypeDef * SPIx, uint32_t CRCLength)

Function description

Set CRC Length.

Parameters

- **SPIx:** SPI Instance
- **CRCLength:** This parameter can be one of the following values:
  - LL_SPI_CRC_4BIT
  - LL_SPI_CRC_5BIT
  - LL_SPI_CRC_6BIT
  - LL_SPI_CRC_7BIT
  - LL_SPI_CRC_8BIT
  - LL_SPI_CRC_9BIT
  - LL_SPI_CRC_10BIT
  - LL_SPI_CRC_11BIT
  - LL_SPI_CRC_12BIT
  - LL_SPI_CRC_13BIT
  - LL_SPI_CRC_14BIT
  - LL_SPI_CRC_15BIT
  - LL_SPI_CRC_16BIT
  - LL_SPI_CRC_17BIT
  - LL_SPI_CRC_18BIT
  - LL_SPI_CRC_19BIT
  - LL_SPI_CRC_20BIT
  - LL_SPI_CRC_21BIT
  - LL_SPI_CRC_22BIT
  - LL_SPI_CRC_23BIT
  - LL_SPI_CRC_24BIT
  - LL_SPI_CRC_25BIT
  - LL_SPI_CRC_26BIT
  - LL_SPI_CRC_27BIT
  - LL_SPI_CRC_28BIT
  - LL_SPI_CRC_29BIT
  - LL_SPI_CRC_30BIT
  - LL_SPI_CRC_31BIT
  - LL_SPI_CRC_32BIT

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG1 CRCSIZE LL_SPI_SetCRCWidth

LL_SPI_GetCRCWidth

Function name

__STATIC_INLINE uint32_t LL_SPI_GetCRCWidth (const SPI_TypeDef * SPIx)

Function description

Get CRC Length.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_CRC_4BIT
  - LL_SPI_CRC_5BIT
  - LL_SPI_CRC_6BIT
  - LL_SPI_CRC_7BIT
  - LL_SPI_CRC_8BIT
  - LL_SPI_CRC_9BIT
  - LL_SPI_CRC_10BIT
  - LL_SPI_CRC_11BIT
  - LL_SPI_CRC_12BIT
  - LL_SPI_CRC_13BIT
  - LL_SPI_CRC_14BIT
  - LL_SPI_CRC_15BIT
  - LL_SPI_CRC_16BIT
  - LL_SPI_CRC_17BIT
  - LL_SPI_CRC_18BIT
  - LL_SPI_CRC_19BIT
  - LL_SPI_CRC_20BIT
  - LL_SPI_CRC_21BIT
  - LL_SPI_CRC_22BIT
  - LL_SPI_CRC_23BIT
  - LL_SPI_CRC_24BIT
  - LL_SPI_CRC_25BIT
  - LL_SPI_CRC_26BIT
  - LL_SPI_CRC_27BIT
  - LL_SPI_CRC_28BIT
  - LL_SPI_CRC_29BIT
  - LL_SPI_CRC_30BIT
  - LL_SPI_CRC_31BIT
  - LL_SPI_CRC_32BIT

Reference Manual to LL API cross reference:

- CFG1 CRCSIZE LL_SPI_GetCRCWidth

LL_SPI_SetNSSMode

Function name

__STATIC_INLINE void LL_SPI_SetNSSMode (SPI_TypeDef * SPIx, uint32_t NSS)

Function description

Set NSS Mode.

Parameters

- **SPIx:** SPI Instance
- **NSS:** This parameter can be one of the following values:
  - LL_SPI_NSS_SOFT
  - LL_SPI_NSS_HARD_INPUT
  - LL_SPI_NSS_HARD_OUTPUT

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled. This bit is not used in SPI TI mode.

Reference Manual to LL API cross reference:

- CFG2 SSM LL_SPI_SetNSSMode
- CFG2 SSOE LL_SPI_SetNSSMode

LL_SPI_GetNSSMode

Function name

__STATIC_INLINE uint32_t LL_SPI_GetNSSMode (const SPI_TypeDef * SPIx)

Function description

Set NSS Mode.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_NSS_SOFT
  - LL_SPI_NSS_HARD_INPUT
  - LL_SPI_NSS_HARD_OUTPUT

Reference Manual to LL API cross reference:

- CFG2 SSM LL_SPI_GetNSSMode
- CFG2 SSOE LL_SPI_GetNSSMode

LL_SPI_EnableNSSPulseMgt

Function name

__STATIC_INLINE void LL_SPI_EnableNSSPulseMgt (SPI_TypeDef * SPIx)

Function description

Enable NSS pulse mgt.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled. This bit is not used in SPI TI mode.

Reference Manual to LL API cross reference:

- CFG2 SSOM LL_SPI_EnableNSSPulseMgt

LL_SPI_DisableNSSPulseMgt

Function name

__STATIC_INLINE void LL_SPI_DisableNSSPulseMgt (SPI_TypeDef * SPIx)

Function description

Disable NSS pulse mgt.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled. This bit is not used in SPI TI mode.

Reference Manual to LL API cross reference:

- CFG2 SSOM LL_SPI_DisableNSSPulseMgt

LL_SPI_IsEnabledNSSPulse

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledNSSPulse (const SPI_TypeDef * SPIx)

Function description

Check if NSS pulse is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CFG2 SSOM LL_SPI_IsEnabledNSSPulse

LL_SPI_IsActiveFlag_RXP

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_RXP (const SPI_TypeDef * SPIx)

Function description

Check if there is enough data in FIFO to read a full packet.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- SR RXP LL_SPI_IsActiveFlag_RXP

LL_SPI_IsActiveFlag_TXP

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_TXP (const SPI_TypeDef * SPIx)

Function description

Check if there is enough space in FIFO to hold a full packet.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- SR TXP LL_SPI_IsActiveFlag_TXP

LL_SPI_IsActiveFlag_DXP

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_DXP (const SPI_TypeDef * SPIx)

Function description

Check if there enough space in FIFO to hold a full packet, AND enough data to read a full packet.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- SR DXP LL_SPI_IsActiveFlag_DXP

LL_SPI_IsActiveFlag_EOT

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_EOT (const SPI_TypeDef * SPIx)

Function description

Check that end of transfer event occurred.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR EOT LL_SPI_IsActiveFlag_EOT

LL_SPI_IsActiveFlag_TXTF

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_TXTF (const SPI_TypeDef * SPIx)

Function description

Check that all required data has been filled in the fifo according to transfer size.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR TXTF LL_SPI_IsActiveFlag_TXTF

LL_SPI_IsActiveFlag_UDR

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_UDR (const SPI_TypeDef * SPIx)

Function description

Get Underrun error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR UDR LL_SPI_IsActiveFlag_UDR

LL_SPI_IsActiveFlag_CRCERR

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_CRCERR (const SPI_TypeDef * SPIx)

Function description

Get CRC error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CRCE LL_SPI_IsActiveFlag_CRCERR

LL_SPI_IsActiveFlag_MODF

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_MODF (const SPI_TypeDef * SPIx)

Function description

Get Mode fault error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR MODF LL_SPI_IsActiveFlag_MODF

LL_SPI_IsActiveFlag_OVR

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_OVR (const SPI_TypeDef * SPIx)

Function description

Get Overrun error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR OVR LL_SPI_IsActiveFlag_OVR

LL_SPI_IsActiveFlag_FRE

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_FRE (const SPI_TypeDef * SPIx)

Function description

Get TI Frame format error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR TIFRE LL_SPI_IsActiveFlag_FRE

LL_SPI_IsActiveFlag_SUSP

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_SUSP (const SPI_TypeDef * SPIx)

Function description

Check if a suspend operation is done.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- SR SUSP LL_SPI_IsActiveFlag_SUSP

LL_SPI_IsActiveFlag_TXC

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_TXC (const SPI_TypeDef * SPIx)

Function description

Check if last TxFIFO or CRC frame transmission is completed.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR TXC LL_SPI_IsActiveFlag_TXC

LL_SPI_IsActiveFlag_RXWNE

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_RXWNE (const SPI_TypeDef * SPIx)

Function description

Check if at least one 32-bit data is available in RxFIFO.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- SR RXWNE LL_SPI_IsActiveFlag_RXWNE

LL_SPI_GetRemainingDataFrames

Function name

__STATIC_INLINE uint32_t LL_SPI_GetRemainingDataFrames (const SPI_TypeDef * SPIx)

Function description

Get number of data framed remaining in current TSIZE.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFFFF:**

Reference Manual to LL API cross reference:

- SR CTSIZE LL_SPI_GetRemainingDataFrames

LL_SPI_GetRxFIFOPackingLevel

Function name

__STATIC_INLINE uint32_t LL_SPI_GetRxFIFOPackingLevel (const SPI_TypeDef * SPIx)

Function description

Get RxFIFO packing Level.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_RX_FIFO_0PACKET
  - LL_SPI_RX_FIFO_1PACKET
  - LL_SPI_RX_FIFO_2PACKET
  - LL_SPI_RX_FIFO_3PACKET

Reference Manual to LL API cross reference:

- SR RXPLVL LL_SPI_GetRxFIFOPackingLevel

LL_SPI_ClearFlag_EOT

Function name

__STATIC_INLINE void LL_SPI_ClearFlag_EOT (SPI_TypeDef * SPIx)

Function description

Clear End Of Transfer flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR EOTC LL_SPI_ClearFlag_EOT

LL_SPI_ClearFlag_TXTF

Function name

__STATIC_INLINE void LL_SPI_ClearFlag_TXTF (SPI_TypeDef * SPIx)

Function description

Clear TXTF flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR TXTFC LL_SPI_ClearFlag_TXTF

LL_SPI_ClearFlag_UDR

Function name

__STATIC_INLINE void LL_SPI_ClearFlag_UDR (SPI_TypeDef * SPIx)

Function description

Clear Underrun error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR UDRC LL_SPI_ClearFlag_UDR

LL_SPI_ClearFlag_OVR

Function name

__STATIC_INLINE void LL_SPI_ClearFlag_OVR (SPI_TypeDef * SPIx)

Function description

Clear Overrun error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR OVRC LL_SPI_ClearFlag_OVR

LL_SPI_ClearFlag_CRCERR

Function name

__STATIC_INLINE void LL_SPI_ClearFlag_CRCERR (SPI_TypeDef * SPIx)

Function description

Clear CRC error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR CRCEC LL_SPI_ClearFlag_CRCERR

LL_SPI_ClearFlag_MODF

Function name

__STATIC_INLINE void LL_SPI_ClearFlag_MODF (SPI_TypeDef * SPIx)

Function description

Clear Mode fault error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR MODFC LL_SPI_ClearFlag_MODF

LL_SPI_ClearFlag_FRE

Function name

__STATIC_INLINE void LL_SPI_ClearFlag_FRE (SPI_TypeDef * SPIx)

Function description

Clear Frame format error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR TIFREC LL_SPI_ClearFlag_FRE

LL_SPI_ClearFlag_SUSP

Function name

__STATIC_INLINE void LL_SPI_ClearFlag_SUSP (SPI_TypeDef * SPIx)

Function description

Clear SUSP flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR SUSPC LL_SPI_ClearFlag_SUSP

LL_SPI_EnableIT_RXP

Function name

__STATIC_INLINE void LL_SPI_EnableIT_RXP (SPI_TypeDef * SPIx)

Function description

Enable Rx Packet available IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER RXPIE LL_SPI_EnableIT_RXP

LL_SPI_EnableIT_TXP

Function name

__STATIC_INLINE void LL_SPI_EnableIT_TXP (SPI_TypeDef * SPIx)

Function description

Enable Tx Packet space available IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TXPIE LL_SPI_EnableIT_TXP

LL_SPI_EnableIT_DXP

Function name

__STATIC_INLINE void LL_SPI_EnableIT_DXP (SPI_TypeDef * SPIx)

Function description

Enable Duplex Packet available IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER DXPIE LL_SPI_EnableIT_DXP

LL_SPI_EnableIT_EOT

Function name

__STATIC_INLINE void LL_SPI_EnableIT_EOT (SPI_TypeDef * SPIx)

Function description

Enable End Of Transfer IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER EOTIE LL_SPI_EnableIT_EOT

LL_SPI_EnableIT_TXTF

Function name

__STATIC_INLINE void LL_SPI_EnableIT_TXTF (SPI_TypeDef * SPIx)

Function description

Enable TXTF IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TXTFIE LL_SPI_EnableIT_TXTF

LL_SPI_EnableIT_UDR

Function name

__STATIC_INLINE void LL_SPI_EnableIT_UDR (SPI_TypeDef * SPIx)

Function description

Enable Underrun IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER UDRIE LL_SPI_EnableIT_UDR

LL_SPI_EnableIT_OVR

Function name

__STATIC_INLINE void LL_SPI_EnableIT_OVR (SPI_TypeDef * SPIx)

Function description

Enable Overrun IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER OVRIE LL_SPI_EnableIT_OVR

LL_SPI_EnableIT_CRCERR

Function name

__STATIC_INLINE void LL_SPI_EnableIT_CRCERR (SPI_TypeDef * SPIx)

Function description

Enable CRC Error IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER CRCEIE LL_SPI_EnableIT_CRCERR

LL_SPI_EnableIT_FRE

Function name

__STATIC_INLINE void LL_SPI_EnableIT_FRE (SPI_TypeDef * SPIx)

Function description

Enable TI Frame Format Error IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TIFREIE LL_SPI_EnableIT_FRE

LL_SPI_EnableIT_MODF

Function name

__STATIC_INLINE void LL_SPI_EnableIT_MODF (SPI_TypeDef * SPIx)

Function description

Enable MODF IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER MODFIE LL_SPI_EnableIT_MODF

LL_SPI_DisableIT_RXP

Function name

__STATIC_INLINE void LL_SPI_DisableIT_RXP (SPI_TypeDef * SPIx)

Function description

Disable Rx Packet available IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER RXPIE LL_SPI_DisableIT_RXP

LL_SPI_DisableIT_TXP

Function name

__STATIC_INLINE void LL_SPI_DisableIT_TXP (SPI_TypeDef * SPIx)

Function description

Disable Tx Packet space available IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TXPIE LL_SPI_DisableIT_TXP

LL_SPI_DisableIT_DXP

Function name

__STATIC_INLINE void LL_SPI_DisableIT_DXP (SPI_TypeDef * SPIx)

Function description

Disable Duplex Packet available IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER DXPIE LL_SPI_DisableIT_DXP

LL_SPI_DisableIT_EOT

Function name

__STATIC_INLINE void LL_SPI_DisableIT_EOT (SPI_TypeDef * SPIx)

Function description

Disable End Of Transfer IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER EOTIE LL_SPI_DisableIT_EOT

LL_SPI_DisableIT_TXTF

Function name

__STATIC_INLINE void LL_SPI_DisableIT_TXTF (SPI_TypeDef * SPIx)

Function description

Disable TXTF IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TXTFIE LL_SPI_DisableIT_TXTF

LL_SPI_DisableIT_UDR

Function name

__STATIC_INLINE void LL_SPI_DisableIT_UDR (SPI_TypeDef * SPIx)

Function description

Disable Underrun IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER UDRIE LL_SPI_DisableIT_UDR

LL_SPI_DisableIT_OVR

Function name

__STATIC_INLINE void LL_SPI_DisableIT_OVR (SPI_TypeDef * SPIx)

Function description

Disable Overrun IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER OVRIE LL_SPI_DisableIT_OVR

LL_SPI_DisableIT_CRCERR

Function name

__STATIC_INLINE void LL_SPI_DisableIT_CRCERR (SPI_TypeDef * SPIx)

Function description

Disable CRC Error IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER CRCEIE LL_SPI_DisableIT_CRCERR

LL_SPI_DisableIT_FRE

Function name

__STATIC_INLINE void LL_SPI_DisableIT_FRE (SPI_TypeDef * SPIx)

Function description

Disable TI Frame Format Error IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TIFREIE LL_SPI_DisableIT_FRE

LL_SPI_DisableIT_MODF

Function name

__STATIC_INLINE void LL_SPI_DisableIT_MODF (SPI_TypeDef * SPIx)

Function description

Disable MODF IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER MODFIE LL_SPI_DisableIT_MODF

LL_SPI_IsEnabledIT_RXP

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_RXP (const SPI_TypeDef * SPIx)

Function description

Check if Rx Packet available IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER RXPIE LL_SPI_IsEnabledIT_RXP

LL_SPI_IsEnabledIT_TXP

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_TXP (const SPI_TypeDef * SPIx)

Function description

Check if Tx Packet space available IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER TXPIE LL_SPI_IsEnabledIT_TXP

LL_SPI_IsEnabledIT_DXP

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_DXP (const SPI_TypeDef * SPIx)

Function description

Check if Duplex Packet available IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER DXPIE LL_SPI_IsEnabledIT_DXP

LL_SPI_IsEnabledIT_EOT

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_EOT (const SPI_TypeDef * SPIx)

Function description

Check if End Of Transfer IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER EOTIE LL_SPI_IsEnabledIT_EOT

LL_SPI_IsEnabledIT_TXTF

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_TXTF (const SPI_TypeDef * SPIx)

Function description

Check if TXTF IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER TXTFIE LL_SPI_IsEnabledIT_TXTF

LL_SPI_IsEnabledIT_UDR

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_UDR (const SPI_TypeDef * SPIx)

Function description

Check if Underrun IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER UDRIE LL_SPI_IsEnabledIT_UDR

LL_SPI_IsEnabledIT_OVR

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_OVR (const SPI_TypeDef * SPIx)

Function description

Check if Overrun IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER OVRIE LL_SPI_IsEnabledIT_OVR

LL_SPI_IsEnabledIT_CRCERR

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_CRCERR (const SPI_TypeDef * SPIx)

Function description

Check if CRC Error IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER CRCEIE LL_SPI_IsEnabledIT_CRCERR

LL_SPI_IsEnabledIT_FRE

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_FRE (const SPI_TypeDef * SPIx)

Function description

Check if TI Frame Format Error IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER TIFREIE LL_SPI_IsEnabledIT_FRE

LL_SPI_IsEnabledIT_MODF

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_MODF (const SPI_TypeDef * SPIx)

Function description

Check if MODF IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER MODFIE LL_SPI_IsEnabledIT_MODF

LL_SPI_EnableDMAReq_RX

Function name

__STATIC_INLINE void LL_SPI_EnableDMAReq_RX (SPI_TypeDef * SPIx)

Function description

Enable DMA Rx.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 RXDMAEN LL_SPI_EnableDMAReq_RX

LL_SPI_DisableDMAReq_RX

Function name

__STATIC_INLINE void LL_SPI_DisableDMAReq_RX (SPI_TypeDef * SPIx)

Function description

Disable DMA Rx.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 RXDMAEN LL_SPI_DisableDMAReq_RX

LL_SPI_IsEnabledDMAReq_RX

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledDMAReq_RX (const SPI_TypeDef * SPIx)

Function description

Check if DMA Rx is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CFG1 RXDMAEN LL_SPI_IsEnabledDMAReq_RX

LL_SPI_EnableDMAReq_TX

Function name

__STATIC_INLINE void LL_SPI_EnableDMAReq_TX (SPI_TypeDef * SPIx)

Function description

Enable DMA Tx.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 TXDMAEN LL_SPI_EnableDMAReq_TX

LL_SPI_DisableDMAReq_TX

Function name

__STATIC_INLINE void LL_SPI_DisableDMAReq_TX (SPI_TypeDef * SPIx)

Function description

Disable DMA Tx.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 TXDMAEN LL_SPI_DisableDMAReq_TX

LL_SPI_IsEnabledDMAReq_TX

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledDMAReq_TX (const SPI_TypeDef * SPIx)

Function description

Check if DMA Tx is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CFG1 TXDMAEN LL_SPI_IsEnabledDMAReq_TX

LL_SPI_DMA_GetTxRegAddr

Function name

__STATIC_INLINE uint32_t LL_SPI_DMA_GetTxRegAddr (const SPI_TypeDef * SPIx)

Function description

Get the data register address used for DMA transfer.

Parameters

- **SPIx:** SPI Instance

Return values

- **Address:** of data register

Reference Manual to LL API cross reference:

- TXDR TXDR LL_SPI_DMA_GetTxRegAddr

LL_SPI_DMA_GetRxRegAddr

Function name

__STATIC_INLINE uint32_t LL_SPI_DMA_GetRxRegAddr (const SPI_TypeDef * SPIx)

Function description

Get the data register address used for DMA transfer.

Parameters

- **SPIx:** SPI Instance

Return values

- **Address:** of data register

Reference Manual to LL API cross reference:

- RXDR RXDR LL_SPI_DMA_GetRxRegAddr

LL_SPI_ReceiveData8

Function name

__STATIC_INLINE uint8_t LL_SPI_ReceiveData8 (SPI_TypeDef * SPIx)

Function description

Read Data Register.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFF:**

Reference Manual to LL API cross reference:

- RXDR . LL_SPI_ReceiveData8

LL_SPI_ReceiveData16

Function name

__STATIC_INLINE uint16_t LL_SPI_ReceiveData16 (SPI_TypeDef * SPIx)

Function description

Read Data Register.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFFFF:**

Reference Manual to LL API cross reference:

- RXDR . LL_SPI_ReceiveData16

LL_SPI_ReceiveData32

Function name

__STATIC_INLINE uint32_t LL_SPI_ReceiveData32 (SPI_TypeDef * SPIx)

Function description

Read Data Register.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFFFFFFFF:**

Reference Manual to LL API cross reference:

- RXDR . LL_SPI_ReceiveData32

LL_SPI_TransmitData8

Function name

__STATIC_INLINE void LL_SPI_TransmitData8 (SPI_TypeDef * SPIx, uint8_t TxData)

Function description

Write Data Register.

Parameters

- **SPIx:** SPI Instance
- **TxData:** 0..0xFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TXDR . LL_SPI_TransmitData8

LL_SPI_TransmitData16

Function name

__STATIC_INLINE void LL_SPI_TransmitData16 (SPI_TypeDef * SPIx, uint16_t TxData)

Function description

Write Data Register.

Parameters

- **SPIx:** SPI Instance
- **TxData:** 0..0xFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TXDR . LL_SPI_TransmitData16

LL_SPI_TransmitData32

Function name

__STATIC_INLINE void LL_SPI_TransmitData32 (SPI_TypeDef * SPIx, uint32_t TxData)

Function description

Write Data Register.

Parameters

- **SPIx:** SPI Instance
- **TxData:** 0..0xFFFFFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TXDR . LL_SPI_TransmitData32

LL_SPI_SetCRCPolynomial

Function name

__STATIC_INLINE void LL_SPI_SetCRCPolynomial (SPI_TypeDef * SPIx, uint32_t CRCPoly)

Function description

Set polynomial for CRC calcul.

Parameters

- **SPIx:** SPI Instance
- **CRCPoly:** 0..0xFFFFFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- CRCPOLY CRCPOLY LL_SPI_SetCRCPolynomial

LL_SPI_GetCRCPolynomial

Function name

__STATIC_INLINE uint32_t LL_SPI_GetCRCPolynomial (const SPI_TypeDef * SPIx)

Function description

Get polynomial for CRC calcul.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFFFFFFFF:**

Reference Manual to LL API cross reference:

- CRCPOLY CRCPOLY LL_SPI_GetCRCPolynomial

LL_SPI_SetUDRPattern

Function name

__STATIC_INLINE void LL_SPI_SetUDRPattern (SPI_TypeDef * SPIx, uint32_t Pattern)

Function description

Set the underrun pattern.

Parameters

- **SPIx:** SPI Instance
- **Pattern:** 0..0xFFFFFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- UDRDR UDRDR LL_SPI_SetUDRPattern

LL_SPI_GetUDRPattern

Function name

__STATIC_INLINE uint32_t LL_SPI_GetUDRPattern (const SPI_TypeDef * SPIx)

Function description

Get the underrun pattern.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFFFFFFFF:**

Reference Manual to LL API cross reference:

- UDRDR UDRDR LL_SPI_GetUDRPattern

LL_SPI_GetRxCRC

Function name

__STATIC_INLINE uint32_t LL_SPI_GetRxCRC (const SPI_TypeDef * SPIx)

Function description

Get Rx CRC.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFFFFFFFF:**

Reference Manual to LL API cross reference:

- RXCRCR RXCRC LL_SPI_GetRxCRC

LL_SPI_GetTxCRC

Function name

__STATIC_INLINE uint32_t LL_SPI_GetTxCRC (const SPI_TypeDef * SPIx)

Function description

Get Tx CRC.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFFFFFFFF:**

Reference Manual to LL API cross reference:

- TXCRCR TXCRC LL_SPI_GetTxCRC

LL_SPI_Enable_SelectedTrigger

Function name

__STATIC_INLINE void LL_SPI_Enable_SelectedTrigger (SPI_TypeDef * SPIx)

Function description

Enable Selected Trigger.

Parameters

- **SPIx:** SPI Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGEN LL_SPI_Enable_SelectedTrigger

LL_SPI_Disable_SelectedTrigger

Function name

__STATIC_INLINE void LL_SPI_Disable_SelectedTrigger (SPI_TypeDef * SPIx)

Function description

Disable Selected Trigger.

Parameters

- **SPIx:** SPI Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGEN LL_SPI_Disable_SelectedTrigger

LL_SPI_IsEnabled_SelectedTrigger

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabled_SelectedTrigger (const SPI_TypeDef * SPIx)

Function description

Indicate if selected Trigger is disabled or enabled.

Parameters

- **SPIx:** SPI Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- AUTOCR TRIGEN LL_SPI_IsEnabled_SelectedTrigger

LL_SPI_SetTriggerPolarity

Function name

__STATIC_INLINE void LL_SPI_SetTriggerPolarity (SPI_TypeDef * SPIx, uint32_t Polarity)

Function description

Set the trigger polarity.

Parameters

- **SPIx:** SPI Instance.
- **Polarity:** This parameter can be one of the following values:
  - LL_SPI_TRIG_POLARITY_RISING
  - LL_SPI_TRIG_POLARITY_FALLING

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGPOL LL_SPI_SetTriggerPolarity

LL_SPI_GetTriggerPolarity

Function name

__STATIC_INLINE uint32_t LL_SPI_GetTriggerPolarity (const SPI_TypeDef * SPIx)

Function description

Get the trigger polarity.

Parameters

- **SPIx:** SPI Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_TRIG_POLARITY_RISING
  - LL_SPI_TRIG_POLARITY_FALLING

Reference Manual to LL API cross reference:

- AUTOCR TRIGPOL LL_SPI_GetTriggerPolarity

LL_SPI_SetSelectedTrigger

Function name

__STATIC_INLINE void LL_SPI_SetSelectedTrigger (SPI_TypeDef * SPIx, uint32_t Trigger)

Function description

Set the selected trigger.

Parameters

- **SPIx:** SPI Instance.
- **Trigger:** This parameter can be one of the following values:
  - LL_SPI_GRP1_GPDMA_CH0_TCF_TRG
  - LL_SPI_GRP1_GPDMA_CH1_TCF_TRG
  - LL_SPI_GRP1_GPDMA_CH2_TCF_TRG
  - LL_SPI_GRP1_GPDMA_CH3_TCF_TRG
  - LL_SPI_GRP1_EXTI4_TRG
  - LL_SPI_GRP1_EXTI9_TRG
  - LL_SPI_GRP1_LPTIM1_CH1_TRG
  - LL_SPI_GRP1_LPTIM2_CH1_TRG
  - LL_SPI_GRP1_COMP1_TRG
  - LL_SPI_GRP1_COMP2_TRG
  - LL_SPI_GRP1_RTC_ALRA_TRG
  - LL_SPI_GRP1_RTC_WUT_TRG
  - LL_SPI_GRP2_GPDMA_CH0_TCF_TRG
  - LL_SPI_GRP2_GPDMA_CH1_TCF_TRG
  - LL_SPI_GRP2_GPDMA_CH2_TCF_TRG
  - LL_SPI_GRP2_GPDMA_CH3_TCF_TRG
  - LL_SPI_GRP2_EXTI4_TRG
  - LL_SPI_GRP2_EXTI8_TRG
  - LL_SPI_GRP2_LPTIM1_CH1_TRG
  - LL_SPI_GRP2_LPTIM3_CH1_TRG
  - LL_SPI_GRP2_COMP1_TRG
  - LL_SPI_GRP2_COMP2_TRG
  - LL_SPI_GRP2_RTC_ALRA_TRG
  - LL_SPI_GRP2_RTC_WUT_TRG

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGSEL LL_SPI_SetSelectedTrigger

LL_SPI_GetSelectedTrigger

Function name

__STATIC_INLINE uint32_t LL_SPI_GetSelectedTrigger (const SPI_TypeDef * SPIx)

Function description

Get the selected trigger.

Parameters

- **SPIx:** SPI Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_GRP1_GPDMA_CH0_TCF_TRG
  - LL_SPI_GRP1_GPDMA_CH1_TCF_TRG
  - LL_SPI_GRP1_GPDMA_CH2_TCF_TRG
  - LL_SPI_GRP1_GPDMA_CH3_TCF_TRG
  - LL_SPI_GRP1_EXTI4_TRG
  - LL_SPI_GRP1_EXTI9_TRG
  - LL_SPI_GRP1_LPTIM1_CH1_TRG
  - LL_SPI_GRP1_LPTIM2_CH1_TRG
  - LL_SPI_GRP1_COMP1_TRG
  - LL_SPI_GRP1_COMP2_TRG
  - LL_SPI_GRP1_RTC_ALRA_TRG
  - LL_SPI_GRP1_RTC_WUT_TRG
  - LL_SPI_GRP2_GPDMA_CH0_TCF_TRG
  - LL_SPI_GRP2_GPDMA_CH1_TCF_TRG
  - LL_SPI_GRP2_GPDMA_CH2_TCF_TRG
  - LL_SPI_GRP2_GPDMA_CH3_TCF_TRG
  - LL_SPI_GRP2_EXTI4_TRG
  - LL_SPI_GRP2_EXTI8_TRG
  - LL_SPI_GRP2_LPTIM1_CH1_TRG
  - LL_SPI_GRP2_LPTIM3_CH1_TRG
  - LL_SPI_GRP2_COMP1_TRG
  - LL_SPI_GRP2_COMP2_TRG
  - LL_SPI_GRP2_RTC_ALRA_TRG
  - LL_SPI_GRP2_RTC_WUT_TRG

Reference Manual to LL API cross reference:

- AUTOCR TRIGSEL LL_SPI_GetSelectedTrigger

LL_SPI_DeInit

Function name

ErrorStatus LL_SPI_DeInit (const SPI_TypeDef * SPIx)

Function description

De-initialize the SPI registers to their default reset values.

Parameters

- **SPIx:** SPI Instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: SPI registers are de-initialized
  - ERROR: SPI registers are not de-initialized

LL_SPI_Init

Function name

ErrorStatus LL_SPI_Init (SPI_TypeDef * SPIx, LL_SPI_InitTypeDef * SPI_InitStruct)

Function description

Initialize the SPI registers according to the specified parameters in SPI_InitStruct.

Parameters

- **SPIx:** SPI Instance
- **SPI_InitStruct:** pointer to a LL_SPI_InitTypeDef structure

Return values

- **An:** ErrorStatus enumeration value. (Return always SUCCESS)

Notes

- As some bits in SPI configuration registers can only be written when the SPI is disabled (SPI_CR1_SPE bit =0), SPI IP should be in disabled state prior calling this function. Otherwise, ERROR result will be returned.

LL_SPI_StructInit

Function name

void LL_SPI_StructInit (LL_SPI_InitTypeDef * SPI_InitStruct)

Function description

Set each LL_SPI_InitTypeDef field to default value.

Parameters

- **SPI_InitStruct:** pointer to a LL_SPI_InitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

97.3 SPI Firmware driver defines

The following section lists the various define and macros of the module.

97.3.1 SPI

Common Write and read registers Macros

LL_SPI_WriteReg

Description:

- Write a value in SPI register.

Parameters:

- __INSTANCE__: SPI Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_SPI_ReadReg

Description:

- Read a value in SPI register.

Parameters:

- __INSTANCE__: SPI Instance
- __REG__: Register to be read

Return value:

- Register: value

LL_SPI_WriteReg

Description:

- Write a value in SPI register.

Parameters:

- __INSTANCE__: SPI Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_SPI_ReadReg

Description:

- Read a value in SPI register.

Parameters:

- __INSTANCE__: SPI Instance
- __REG__: Register to be read

Return value:

- Register: value

98 LL SYSTEM Generic Driver

98.1 SYSTEM Firmware driver API description

The following section lists the various functions of the SYSTEM library.

98.1.1 Detailed description of functions

LL_SYSCFG_EnableAnalogSwitchVdd

Function name

__STATIC_INLINE void LL_SYSCFG_EnableAnalogSwitchVdd (void)

Function description

Enable I/O analog switches supplied by VDD.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_CFGR1 ANASWVDD LL_SYSCFG_EnableAnalogSwitchVdd

LL_SYSCFG_DisableAnalogSwitchVdd

Function name

__STATIC_INLINE void LL_SYSCFG_DisableAnalogSwitchVdd (void)

Function description

Disable I/O analog switches supplied by VDD.

Return values

- **None:**

Notes

- I/O analog switches are supplied by VDDA or booster when booster in on. Dedicated voltage booster (supplied by VDD) is the recommended configuration with low VDDA voltage operation.

Reference Manual to LL API cross reference:

- SYSCFG_CFGR1 ANASWVDD LL_SYSCFG_DisableAnalogSwitchVdd

LL_SYSCFG_EnableAnalogBooster

Function name

__STATIC_INLINE void LL_SYSCFG_EnableAnalogBooster (void)

Function description

Enable I/O analog switch voltage booster.

Return values

- **None:**

Notes

- When voltage booster is enabled, I/O analog switches are supplied by a dedicated voltage booster, from VDD power domain. This is the recommended configuration with low VDDA voltage operation.
- The I/O analog switch voltage booster is relevant for peripherals using I/O in analog input: ADC, COMP, OPAMP. However, COMP and OPAMP inputs have a high impedance and voltage booster do not impact performance significantly. Therefore, the voltage booster is mainly intended for usage with ADC.

Reference Manual to LL API cross reference:

- SYSCFG_CFGR1 BOOSTEN LL_SYSCFG_EnableAnalogBooster

LL_SYSCFG_DisableAnalogBooster

Function name

__STATIC_INLINE void LL_SYSCFG_DisableAnalogBooster (void)

Function description

Disable I/O analog switch voltage booster.

Return values

- **None:**

Notes

- When voltage booster is enabled, I/O analog switches are supplied by a dedicated voltage booster, from VDD power domain. This is the recommended configuration with low VDDA voltage operation.
- The I/O analog switch voltage booster is relevant for peripherals using I/O in analog input: ADC, COMP, OPAMP. However, COMP and OPAMP inputs have a high impedance and voltage booster do not impact performance significantly. Therefore, the voltage booster is mainly intended for usage with ADC.

Reference Manual to LL API cross reference:

- SYSCFG_CFGR1 BOOSTEN LL_SYSCFG_DisableAnalogBooster

LL_SYSCFG_EnableFastModePlus

Function name

__STATIC_INLINE void LL_SYSCFG_EnableFastModePlus (uint32_t ConfigFastModePlus)

Function description

Enable the fast mode plus driving capability.

Parameters

- **ConfigFastModePlus:** This parameter can be a combination of the following values:
  - LL_SYSCFG_FASTMODEPLUS_PB6
  - LL_SYSCFG_FASTMODEPLUS_PB7
  - LL_SYSCFG_FASTMODEPLUS_PB8
  - LL_SYSCFG_FASTMODEPLUS_PB9

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_CFGR1 PBx_FMP LL_SYSCFG_EnableFastModePlus

LL_SYSCFG_DisableFastModePlus

Function name

__STATIC_INLINE void LL_SYSCFG_DisableFastModePlus (uint32_t ConfigFastModePlus)

Function description

Disable the fast mode plus driving capability.

Parameters

- **ConfigFastModePlus:** This parameter can be a combination of the following values:
  - LL_SYSCFG_FASTMODEPLUS_PB6
  - LL_SYSCFG_FASTMODEPLUS_PB7
  - LL_SYSCFG_FASTMODEPLUS_PB8
  - LL_SYSCFG_FASTMODEPLUS_PB9

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_CFGR1 PBx_FMP LL_SYSCFG_DisableFastModePlus

LL_SYSCFG_EnableIT_FPU_IOC

Function name

__STATIC_INLINE void LL_SYSCFG_EnableIT_FPU_IOC (void)

Function description

Enable Floating Point Unit Invalid operation Interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_IOIE LL_SYSCFG_EnableIT_FPU_IOC

LL_SYSCFG_EnableIT_FPU_DZC

Function name

__STATIC_INLINE void LL_SYSCFG_EnableIT_FPU_DZC (void)

Function description

Enable Floating Point Unit Divide-by-zero Interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_DZIE LL_SYSCFG_EnableIT_FPU_DZC

LL_SYSCFG_EnableIT_FPU_UFC

Function name

__STATIC_INLINE void LL_SYSCFG_EnableIT_FPU_UFC (void)

Function description

Enable Floating Point Unit Underflow Interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_UFIE LL_SYSCFG_EnableIT_FPU_UFC

LL_SYSCFG_EnableIT_FPU_OFC

Function name

__STATIC_INLINE void LL_SYSCFG_EnableIT_FPU_OFC (void)

Function description

Enable Floating Point Unit Overflow Interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_OFIE LL_SYSCFG_EnableIT_FPU_OFC

LL_SYSCFG_EnableIT_FPU_IDC

Function name

__STATIC_INLINE void LL_SYSCFG_EnableIT_FPU_IDC (void)

Function description

Enable Floating Point Unit Input denormal Interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_IDIE LL_SYSCFG_EnableIT_FPU_IDC

LL_SYSCFG_EnableIT_FPU_IXC

Function name

__STATIC_INLINE void LL_SYSCFG_EnableIT_FPU_IXC (void)

Function description

Enable Floating Point Unit Inexact Interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_IXIE LL_SYSCFG_EnableIT_FPU_IXC

LL_SYSCFG_DisableIT_FPU_IOC

Function name

__STATIC_INLINE void LL_SYSCFG_DisableIT_FPU_IOC (void)

Function description

Disable Floating Point Unit Invalid operation Interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_IOIE LL_SYSCFG_DisableIT_FPU_IOC

LL_SYSCFG_DisableIT_FPU_DZC

Function name

__STATIC_INLINE void LL_SYSCFG_DisableIT_FPU_DZC (void)

Function description

Disable Floating Point Unit Divide-by-zero Interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_DZIE LL_SYSCFG_DisableIT_FPU_DZC

LL_SYSCFG_DisableIT_FPU_UFC

Function name

__STATIC_INLINE void LL_SYSCFG_DisableIT_FPU_UFC (void)

Function description

Disable Floating Point Unit Underflow Interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_UFIE LL_SYSCFG_DisableIT_FPU_UFC

LL_SYSCFG_DisableIT_FPU_OFC

Function name

__STATIC_INLINE void LL_SYSCFG_DisableIT_FPU_OFC (void)

Function description

Disable Floating Point Unit Overflow Interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_OFIE LL_SYSCFG_DisableIT_FPU_OFC

LL_SYSCFG_DisableIT_FPU_IDC

Function name

__STATIC_INLINE void LL_SYSCFG_DisableIT_FPU_IDC (void)

Function description

Disable Floating Point Unit Input denormal Interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_IDIE LL_SYSCFG_DisableIT_FPU_IDC

LL_SYSCFG_DisableIT_FPU_IXC

Function name

__STATIC_INLINE void LL_SYSCFG_DisableIT_FPU_IXC (void)

Function description

Disable Floating Point Unit Inexact Interrupt.

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_IXIE LL_SYSCFG_DisableIT_FPU_IXC

LL_SYSCFG_IsEnabledIT_FPU_IOC

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsEnabledIT_FPU_IOC (void)

Function description

Check if Floating Point Unit Invalid operation Interrupt source is enabled or disabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_IOIE LL_SYSCFG_IsEnabledIT_FPU_IOC

LL_SYSCFG_IsEnabledIT_FPU_DZC

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsEnabledIT_FPU_DZC (void)

Function description

Check if Floating Point Unit Divide-by-zero Interrupt source is enabled or disabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_DZIE LL_SYSCFG_IsEnabledIT_FPU_DZC

LL_SYSCFG_IsEnabledIT_FPU_UFC

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsEnabledIT_FPU_UFC (void)

Function description

Check if Floating Point Unit Underflow Interrupt source is enabled or disabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_UFIE LL_SYSCFG_IsEnabledIT_FPU_UFC

LL_SYSCFG_IsEnabledIT_FPU_OFC

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsEnabledIT_FPU_OFC (void)

Function description

Check if Floating Point Unit Overflow Interrupt source is enabled or disabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_OFIE LL_SYSCFG_IsEnabledIT_FPU_OFC

LL_SYSCFG_IsEnabledIT_FPU_IDC

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsEnabledIT_FPU_IDC (void)

Function description

Check if Floating Point Unit Input denormal Interrupt source is enabled or disabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_IDIE LL_SYSCFG_IsEnabledIT_FPU_IDC

LL_SYSCFG_IsEnabledIT_FPU_IXC

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsEnabledIT_FPU_IXC (void)

Function description

Check if Floating Point Unit Inexact Interrupt source is enabled or disabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SYSCFG_FPUIMR FPU_IXIE LL_SYSCFG_IsEnabledIT_FPU_IXC

LL_SYSCFG_SetTIMBreakInputs

Function name

__STATIC_INLINE void LL_SYSCFG_SetTIMBreakInputs (uint32_t Break)

Function description

Set connections to TIM1/8/15/16/17 Break inputs.

Parameters

- **Break:** This parameter can be a combination of the following values:
  - LL_SYSCFG_TIMBREAK_ECC
  - LL_SYSCFG_TIMBREAK_PVD
  - LL_SYSCFG_TIMBREAK_SRAM_ECC_LOCK
  - LL_SYSCFG_TIMBREAK_LOCKUP

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_CFGR2 CLL LL_SYSCFG_SetTIMBreakInputs
- SYSCFG_CFGR2 SPL LL_SYSCFG_SetTIMBreakInputs
- SYSCFG_CFGR2 PVDL LL_SYSCFG_SetTIMBreakInputs
- SYSCFG_CFGR2 ECCL LL_SYSCFG_SetTIMBreakInputs

LL_SYSCFG_GetTIMBreakInputs

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetTIMBreakInputs (void)

Function description

Get connections to TIM1/8/15/16/17 Break inputs.

Return values

- **Returned:** value can be can be a combination of the following values:
  - LL_SYSCFG_TIMBREAK_ECC
  - LL_SYSCFG_TIMBREAK_PVD
  - LL_SYSCFG_TIMBREAK_SRAM_ECC_LOCK
  - LL_SYSCFG_TIMBREAK_LOCKUP

Reference Manual to LL API cross reference:

- SYSCFG_CFGR2 CLL LL_SYSCFG_GetTIMBreakInputs
- SYSCFG_CFGR2 SPL LL_SYSCFG_GetTIMBreakInputs
- SYSCFG_CFGR2 PVDL LL_SYSCFG_GetTIMBreakInputs
- SYSCFG_CFGR2 ECCL LL_SYSCFG_GetTIMBreakInputs

LL_SYSCFG_ConfigSecure

Function name

__STATIC_INLINE void LL_SYSCFG_ConfigSecure (uint32_t Configuration)

Function description

Configure Secure mode.

Parameters

- **Configuration:** This parameter shall be the full combination of the following values:
  - LL_SYSCFG_CLOCK_SEC or LL_SYSCFG_CLOCK_NSEC
  - LL_SYSCFG_CLASSB_SEC or LL_SYSCFG_CLASSB_NSEC
  - LL_SYSCFG_FPU_SEC or LL_SYSCFG_FPU_NSEC

Return values

- **None:**

Notes

- Only available from secure state when system implements security (TZEN=1)

Reference Manual to LL API cross reference:

- SECCFGR SYSCFGSEC LL_SYSCFG_ConfigSecure
- SECCFGR CLASSBSEC LL_SYSCFG_ConfigSecure
- SECCFGR FPUSEC LL_SYSCFG_ConfigSecure

LL_SYSCFG_GetConfigSecure

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetConfigSecure (void)

Function description

Get Secure mode configuration.

Return values

- **Returned:** value is the combination of the following values:
  - LL_SYSCFG_CLOCK_SEC or LL_SYSCFG_CLOCK_NSEC
  - LL_SYSCFG_CLASSB_SEC or LL_SYSCFG_CLASSB_NSEC
  - LL_SYSCFG_FPU_SEC or LL_SYSCFG_FPU_NSEC

Notes

- Only available when system implements security (TZEN=1)

Reference Manual to LL API cross reference:

- SECCFGR SYSCFGSEC LL_SYSCFG_ConfigSecure
- SECCFGR CLASSBSEC LL_SYSCFG_ConfigSecure
- SECCFGR FPUSEC LL_SYSCFG_ConfigSecure

LL_SYSCFG_GetPMOSVddCompensationValue

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetPMOSVddCompensationValue (void)

Function description

Get the compensation cell value of the GPIO PMOS transistor supplied by VDD.

Return values

- **Returned:** value is the PMOS compensation cell

Reference Manual to LL API cross reference:

- CCVR PCV1 LL_SYSCFG_GetPMOSVddCompensationValue

LL_SYSCFG_GetNMOSVddCompensationValue

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetNMOSVddCompensationValue (void)

Function description

Get the compensation cell value of the GPIO NMOS transistor supplied by VDD.

Return values

- **Returned:** value is the NMOS compensation cell

Reference Manual to LL API cross reference:

- CCVR NCV1 LL_SYSCFG_GetNMOSVddCompensationValue

LL_SYSCFG_GetPMOSVddIO2CompensationValue

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetPMOSVddIO2CompensationValue (void)

Function description

Get the compensation cell value of the GPIO PMOS transistor supplied by VDDIO2.

Return values

- **Returned:** value is the PMOS compensation cell

Reference Manual to LL API cross reference:

- CCVR PCV2 LL_SYSCFG_GetPMOSVddIO2CompensationValue

LL_SYSCFG_GetNMOSVddIO2CompensationValue

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetNMOSVddIO2CompensationValue (void)

Function description

Get the compensation cell value of the GPIO NMOS transistor supplied by VDDIO2.

Return values

- **Returned:** value is the NMOS compensation cell

Reference Manual to LL API cross reference:

- CCVR NCV2 LL_SYSCFG_GetNMOSVddIO2CompensationValue

LL_SYSCFG_SetPMOSVddCompensationCode

Function name

__STATIC_INLINE void LL_SYSCFG_SetPMOSVddCompensationCode (uint32_t PMOSCode)

Function description

Set the compensation cell code of the GPIO PMOS transistor supplied by VDD.

Parameters

- **PMOSCode:** PMOS compensation code This code is applied to the PMOS compensation cell when the CS1 bit of the SYSCFG_CCCSR is set

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCCR PCC1 LL_SYSCFG_SetPMOSVddCompensationCode

LL_SYSCFG_GetPMOSVddCompensationCode

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetPMOSVddCompensationCode (void)

Function description

Get the compensation cell code of the GPIO PMOS transistor supplied by VDD.

Return values

- **Returned:** value is the PMOS compensation cell

Reference Manual to LL API cross reference:

- CCCR PCC1 LL_SYSCFG_GetPMOSVddCompensationCode

LL_SYSCFG_SetPMOSVddIO2CompensationCode

Function name

__STATIC_INLINE void LL_SYSCFG_SetPMOSVddIO2CompensationCode (uint32_t PMOSCode)

Function description

Set the compensation cell code of the GPIO PMOS transistor supplied by VDDIO2.

Parameters

- **PMOSCode:** PMOS compensation code This code is applied to the PMOS compensation cell when the CS2 bit of the SYSCFG_CCCSR is set

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCCR PCC2 LL_SYSCFG_SetPMOSVddIO2CompensationCode

LL_SYSCFG_GetPMOSVddIO2CompensationCode

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetPMOSVddIO2CompensationCode (void)

Function description

Get the compensation cell code of the GPIO PMOS transistor supplied by VDDIO2.

Return values

- **Returned:** value is the PMOS compensation

Reference Manual to LL API cross reference:

- CCCR PCC2 LL_SYSCFG_GetPMOSVddIO2CompensationCode

LL_SYSCFG_SetNMOSVddCompensationCode

Function name

__STATIC_INLINE void LL_SYSCFG_SetNMOSVddCompensationCode (uint32_t NMOSCode)

Function description

Set the compensation cell code of the GPIO NMOS transistor supplied by VDD.

Parameters

- **NMOSCode:** NMOS compensation code This code is applied to the NMOS compensation cell when the CS2 bit of the SYSCFG_CMPCR is set

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCCR PCC2 LL_SYSCFG_SetNMOSVddCompensationCode

LL_SYSCFG_GetNMOSVddCompensationCode

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetNMOSVddCompensationCode (void)

Function description

Get the compensation cell code of the GPIO NMOS transistor supplied by VDD.

Return values

- **Returned:** value is the Vdd compensation cell code for NMOS transistors

Reference Manual to LL API cross reference:

- CCCR NCC1 LL_SYSCFG_GetNMOSVddCompensationCode

LL_SYSCFG_SetNMOSVddIO2CompensationCode

Function name

__STATIC_INLINE void LL_SYSCFG_SetNMOSVddIO2CompensationCode (uint32_t NMOSCode)

Function description

Set the compensation cell code of the GPIO NMOS transistor supplied by VDDIO2.

Parameters

- **NMOSCode:** NMOS compensation code This code is applied to the NMOS compensation cell when the CS2 bit of the SYSCFG_CMPCR is set

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCCR NCC2 LL_SYSCFG_SetNMOSVddIO2CompensationCode

LL_SYSCFG_GetNMOSVddIO2CompensationCode

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetNMOSVddIO2CompensationCode (void)

Function description

Get the compensation cell code of the GPIO NMOS transistor supplied by VDDIO2.

Return values

- **Returned:** value is the NMOS compensation cell code

Reference Manual to LL API cross reference:

- CCCR NCC2 LL_SYSCFG_GetNMOSVddIO2CompensationCode

LL_SYSCFG_EnableVddCompensationCell

Function name

__STATIC_INLINE void LL_SYSCFG_EnableVddCompensationCell (void)

Function description

Enable the Compensation Cell of GPIO supplied by VDD.

Return values

- **None:**

Notes

- The vdd compensation cell can be used only when the device supply voltage ranges from 1.71 to 3.6 V

Reference Manual to LL API cross reference:

- CCCSR EN1 LL_SYSCFG_EnableVddCompensationCell

LL_SYSCFG_EnableVddIO2CompensationCell

Function name

__STATIC_INLINE void LL_SYSCFG_EnableVddIO2CompensationCell (void)

Function description

Enable the Compensation Cell of GPIO supplied by VDDIO2.

Return values

- **None:**

Notes

- The Vdd I/O compensation cell can be used only when the device supply voltage ranges from 1.08 to 3.6 V

Reference Manual to LL API cross reference:

- CCCSR EN2 LL_SYSCFG_EnableVddIO2CompensationCell

LL_SYSCFG_DisableVddCompensationCell

Function name

__STATIC_INLINE void LL_SYSCFG_DisableVddCompensationCell (void)

Function description

Disable the Compensation Cell of GPIO supplied by VDD.

Return values

- **None:**

Notes

- The Vdd compensation cell can be used only when the device supply voltage ranges from 1.71 to 3.6 V

Reference Manual to LL API cross reference:

- CCCSR EN1 LL_SYSCFG_DisableVddCompensationCell

LL_SYSCFG_DisableVddIO2CompensationCell

Function name

__STATIC_INLINE void LL_SYSCFG_DisableVddIO2CompensationCell (void)

Function description

Disable the Compensation Cell of GPIO supplied by VDDIO2.

Return values

- **None:**

Notes

- The Vdd I/O compensation cell can be used only when the device supply voltage ranges from 1.08 to 3.6 V

Reference Manual to LL API cross reference:

- CCCSR EN2 LL_SYSCFG_DisableVddIO2CompensationCell

LL_SYSCFG_IsEnabled_VddCompensationCell

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsEnabled_VddCompensationCell (void)

Function description

Check if the Compensation Cell of GPIO supplied by VDD is enable.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CCCSR EN1 LL_SYSCFG_IsEnabled_VddCompensationCell

LL_SYSCFG_IsEnabled_VddIO2CompensationCell

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsEnabled_VddIO2CompensationCell (void)

Function description

Check if the Compensation Cell of GPIO supplied by VDDIO2 is enable.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CCCSR EN2 LL_SYSCFG_IsEnabled_VddIO2CompensationCell

LL_SYSCFG_IsActiveFlag_VddCMPCR

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsActiveFlag_VddCMPCR (void)

Function description

Get Compensation Cell ready Flag of GPIO supplied by VDD.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CCCSR RDY1 LL_SYSCFG_IsActiveFlag_VddCMPCR

LL_SYSCFG_IsActiveFlag_VddIO2CMPCR

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsActiveFlag_VddIO2CMPCR (void)

Function description

Get Compensation Cell ready Flag of GPIO supplied by VDDIO2.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CCCSR RDY2 LL_SYSCFG_IsActiveFlag_VddIO2CMPCR

LL_SYSCFG_SetVddCellCompensationCode

Function name

__STATIC_INLINE void LL_SYSCFG_SetVddCellCompensationCode (uint32_t CompCode)

Function description

Set the compensation cell code selection of GPIO supplied by VDD.

Parameters

- **CompCode:** Selects the code to be applied for the Vdd compensation cell This parameter can be one of the following values:
  - LL_SYSCFG_VDD_CELL_CODE : Select Code from the cell (available in the SYSCFG_CCVR)
  - LL_SYSCFG_VDD_REGISTER_CODE: Select Code from the SYSCFG compensation cell code register (SYSCFG_CCCR)

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCCSR CS1 LL_SYSCFG_SetVddCellCompensationCode

LL_SYSCFG_SetVddIO2CellCompensationCode

Function name

__STATIC_INLINE void LL_SYSCFG_SetVddIO2CellCompensationCode (uint32_t CompCode)

Function description

Set the compensation cell code selection of GPIO supplied by VDDIO2.

Parameters

- **CompCode:** Selects the code to be applied for the VddIO compensation cell This parameter can be one of the following values:
  - LL_SYSCFG_VDDIO2_CELL_CODE : Select Code from the cell (available in the SYSCFG_CCVR)
  - LL_SYSCFG_VDDIO2_REGISTER_CODE: Select Code from the SYSCFG compensation cell code register (SYSCFG_CCCR)

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCCSR CS2 LL_SYSCFG_SetVddIO2CellCompensationCode

LL_SYSCFG_GetVddCellCompensationCode

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetVddCellCompensationCode (void)

Function description

Get the compensation cell code selection of GPIO supplied by VDD.

Return values

- **Returned:** value can be one of the following values:
  - LL_SYSCFG_VDD_CELL_CODE : Selected Code is from the cell (available in the SYSCFG_CCVR)
  - LL_SYSCFG_VDD_REGISTER_CODE: Selected Code is from the SYSCFG compensation cell code register (SYSCFG_CCCR)

Reference Manual to LL API cross reference:

- CCCSR CS1 LL_SYSCFG_GetVddCellCompensationCode

LL_SYSCFG_GetVddIO2CellCompensationCode

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetVddIO2CellCompensationCode (void)

Function description

Get the compensation cell code selection of GPIO supplied by VDDIO2.

Return values

- **Returned:** value can be one of the following values:
  - LL_SYSCFG_VDDIO2_CELL_CODE : Selected Code is from the cell (available in the SYSCFG_CCVR)
  - LL_SYSCFG_VDDIO2_REGISTER_CODE: Selected Code is from the SYSCFG compensation cell code register (SYSCFG_CCCR)

Reference Manual to LL API cross reference:

- CCCSR CS2 LL_SYSCFG_GetVddIO2CellCompensationCode

LL_SYSCFG_SetIROutputPol

Function name

__STATIC_INLINE void LL_SYSCFG_SetIROutputPol (uint32_t OutputPol)

Function description

Set the output polarity of the infrared (IR)

Parameters

- **OutputPol:** Selects the output polarity
  - LL_SYSCFG_IR_OUTPUTPOL_NONINVERTED : output of IRTIM (IR_OUT) is not inverted
  - LL_SYSCFG_IR_OUTPUTPOL_INVERTED : output of IRTIM (IR_OUT) is inverted

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR1 IR_POL LL_SYSCFG_SetIROutputPol

LL_SYSCFG_GetIROutputPol

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetIROutputPol (void)

Function description

Get the output polarity of the infrared (IR)

Return values

- **Returned:** value can be one of the following values:
  - LL_SYSCFG_IR_OUTPUTPOL_NONINVERTED : output of IRTIM (IR_OUT) is not inverted
  - LL_SYSCFG_IR_OUTPUTPOL_INVERTED : output of IRTIM (IR_OUT) is inverted

Reference Manual to LL API cross reference:

- CFGR1 IR_POL LL_SYSCFG_GetIROutputPol

LL_SYSCFG_SetIRModEnvelopeSignal

Function name

__STATIC_INLINE void LL_SYSCFG_SetIRModEnvelopeSignal (uint32_t Modulation)

Function description

Set the signal selected for the infrared (IR) modulation envelope generation.

Parameters

- **Modulation:** Selects the signal to use
  - LL_SYSCFG_IR_MOD_TIM16 : signal selected is TIM16
  - LL_SYSCFG_IR_MOD_USART1 : signal selected is USART1
  - LL_SYSCFG_IR_MOD_UART4 : signal selected is UART4

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR1 IR_MOD LL_SYSCFG_SetIRModEnvelopeSignal

LL_SYSCFG_GetIRModEnvelopeSignal

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetIRModEnvelopeSignal (void)

Function description

Get the sinal selected for the infrared (IR) modulation envelope generation.

Return values

- **Returned:** value can be one of the following values:
  - LL_SYSCFG_IR_MOD_TIM16 : signal selected is TIM16
  - LL_SYSCFG_IR_MOD_USART1 : signal selected is USART1
  - LL_SYSCFG_IR_MOD_UART4 : signal selected is UART4

Reference Manual to LL API cross reference:

- CFGR1 IR_MOD LL_SYSCFG_GetIRModEnvelopeSignal

LL_DBGMCU_GetDeviceID

Function name

__STATIC_INLINE uint32_t LL_DBGMCU_GetDeviceID (void)

Function description

Return the device identifier.

Return values

- **Values:** between Min_Data=0x00 and Max_Data=0xFFFF (ex: device ID is 0x6415)

Reference Manual to LL API cross reference:

- DBGMCU_IDCODE DEV_ID LL_DBGMCU_GetDeviceID

LL_DBGMCU_GetRevisionID

Function name

__STATIC_INLINE uint32_t LL_DBGMCU_GetRevisionID (void)

Function description

Return the device revision identifier.

Return values

- **Values:** between Min_Data=0x00 and Max_Data=0xFFFF

Notes

- This field indicates the revision of the device.

Reference Manual to LL API cross reference:

- DBGMCU_IDCODE REV_ID LL_DBGMCU_GetRevisionID

LL_DBGMCU_EnableDBGStopMode

Function name

__STATIC_INLINE void LL_DBGMCU_EnableDBGStopMode (void)

Function description

Enable the Debug Module during STOP mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_CR DBG_STOP LL_DBGMCU_EnableDBGStopMode

LL_DBGMCU_DisableDBGStopMode

Function name

__STATIC_INLINE void LL_DBGMCU_DisableDBGStopMode (void)

Function description

Disable the Debug Module during STOP mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_CR DBG_STOP LL_DBGMCU_DisableDBGStopMode

LL_DBGMCU_EnableDBGStandbyMode

Function name

__STATIC_INLINE void LL_DBGMCU_EnableDBGStandbyMode (void)

Function description

Enable the Debug Module during STANDBY mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_CR DBG_STANDBY LL_DBGMCU_EnableDBGStandbyMode

LL_DBGMCU_DisableDBGStandbyMode

Function name

__STATIC_INLINE void LL_DBGMCU_DisableDBGStandbyMode (void)

Function description

Disable the Debug Module during STANDBY mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_CR DBG_STANDBY LL_DBGMCU_DisableDBGStandbyMode

LL_DBGMCU_EnableTraceClock

Function name

__STATIC_INLINE void LL_DBGMCU_EnableTraceClock (void)

Function description

Enable the Debug Clock Trace.

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_CR TRACE_EN LL_DBGMCU_EnableTraceClock

LL_DBGMCU_DisableTraceClock

Function name

__STATIC_INLINE void LL_DBGMCU_DisableTraceClock (void)

Function description

Disable the Debug Clock Trace.

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_CR TRACE_EN LL_DBGMCU_DisableTraceClock

LL_DBGMCU_IsEnabledTraceClock

Function name

__STATIC_INLINE uint32_t LL_DBGMCU_IsEnabledTraceClock (void)

Function description

Check if clock trace is enabled or disabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DBGMCU_CR_TRACE_EN LL_DBGMCU_IsEnabledTraceClock

LL_DBGMCU_SetTracePinAssignment

Function name

__STATIC_INLINE void LL_DBGMCU_SetTracePinAssignment (uint32_t PinAssignment)

Function description

Set Trace pin assignment control.

Parameters

- **PinAssignment:** This parameter can be one of the following values:
  - LL_DBGMCU_TRACE_NONE
  - LL_DBGMCU_TRACE_ASYNCH
  - LL_DBGMCU_TRACE_SYNCH_SIZE1
  - LL_DBGMCU_TRACE_SYNCH_SIZE2
  - LL_DBGMCU_TRACE_SYNCH_SIZE4

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_CR TRACE_IOEN LL_DBGMCU_SetTracePinAssignment
- DBGMCU_CR TRACE_MODE LL_DBGMCU_SetTracePinAssignment

LL_DBGMCU_GetTracePinAssignment

Function name

__STATIC_INLINE uint32_t LL_DBGMCU_GetTracePinAssignment (void)

Function description

Get Trace pin assignment control.

Return values

- **Returned:** value can be one of the following values:
  - LL_DBGMCU_TRACE_NONE
  - LL_DBGMCU_TRACE_ASYNCH
  - LL_DBGMCU_TRACE_SYNCH_SIZE1
  - LL_DBGMCU_TRACE_SYNCH_SIZE2
  - LL_DBGMCU_TRACE_SYNCH_SIZE4

Reference Manual to LL API cross reference:

- DBGMCU_CR TRACE_IOEN LL_DBGMCU_GetTracePinAssignment
- DBGMCU_CR TRACE_MODE LL_DBGMCU_GetTracePinAssignment

LL_DBGMCU_APB1_GRP1_FreezePeriph

Function name

__STATIC_INLINE void LL_DBGMCU_APB1_GRP1_FreezePeriph (uint32_t Periphs)

Function description

Freeze APB1 peripherals (group1 peripherals)

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_DBGMCU_APB1_GRP1_TIM2_STOP
  - LL_DBGMCU_APB1_GRP1_TIM3_STOP
  - LL_DBGMCU_APB1_GRP1_TIM4_STOP
  - LL_DBGMCU_APB1_GRP1_TIM6_STOP
  - LL_DBGMCU_APB1_GRP1_TIM7_STOP
  - LL_DBGMCU_APB1_GRP1_WWDG_STOP
  - LL_DBGMCU_APB1_GRP1_IWDG_STOP
  - LL_DBGMCU_APB1_GRP1_I2C1_STOP
  - LL_DBGMCU_APB1_GRP1_I2C2_STOP
  - LL_DBGMCU_APB1_GRP1_I3C1_STOP
  - LL_DBGMCU_APB1_GRP1_RTC_STOP

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_APB1FZR1 DBG_xxxx_STOP LL_DBGMCU_APB1_GRP1_FreezePeriph

LL_DBGMCU_APB1_GRP2_FreezePeriph

Function name

__STATIC_INLINE void LL_DBGMCU_APB1_GRP2_FreezePeriph (uint32_t Periphs)

Function description

Freeze APB1 peripherals (group2 peripherals)

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_DBGMCU_APB1_GRP2_LPTIM2_STOP

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_APB1FZR2 DBG_xxxx_STOP LL_DBGMCU_APB1_GRP2_FreezePeriph

LL_DBGMCU_APB1_GRP1_UnFreezePeriph

Function name

__STATIC_INLINE void LL_DBGMCU_APB1_GRP1_UnFreezePeriph (uint32_t Periphs)

Function description

Unfreeze APB1 peripherals (group1 peripherals)

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_DBGMCU_APB1_GRP1_TIM2_STOP
  - LL_DBGMCU_APB1_GRP1_TIM3_STOP
  - LL_DBGMCU_APB1_GRP1_TIM4_STOP
  - LL_DBGMCU_APB1_GRP1_TIM6_STOP
  - LL_DBGMCU_APB1_GRP1_TIM7_STOP
  - LL_DBGMCU_APB1_GRP1_WWDG_STOP
  - LL_DBGMCU_APB1_GRP1_IWDG_STOP
  - LL_DBGMCU_APB1_GRP1_I2C1_STOP
  - LL_DBGMCU_APB1_GRP1_I2C2_STOP
  - LL_DBGMCU_APB1_GRP1_I3C1_STOP
  - LL_DBGMCU_APB1_GRP1_RTC_STOP

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_APB1FZR1 DBG_xxxx_STOP LL_DBGMCU_APB1_GRP1_UnFreezePeriph

LL_DBGMCU_APB1_GRP2_UnFreezePeriph

Function name

__STATIC_INLINE void LL_DBGMCU_APB1_GRP2_UnFreezePeriph (uint32_t Periphs)

Function description

Unfreeze APB1 peripherals (group2 peripherals)

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_DBGMCU_APB1_GRP2_LPTIM2_STOP

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_APB1FZR2 DBG_xxxx_STOP LL_DBGMCU_APB1_GRP2_UnFreezePeriph

LL_DBGMCU_APB2_GRP1_FreezePeriph

Function name

__STATIC_INLINE void LL_DBGMCU_APB2_GRP1_FreezePeriph (uint32_t Periphs)

Function description

Freeze APB2 peripherals.

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_DBGMCU_APB2_GRP1_TIM1_STOP
  - LL_DBGMCU_APB2_GRP1_TIM15_STOP
  - LL_DBGMCU_APB2_GRP1_TIM16_STOP
  - LL_DBGMCU_APB2_GRP1_TIM17_STOP
  - LL_DBGMCU_APB2_GRP1_I3C2_STOP

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_APB2FZ DBG_TIMx_STOP LL_DBGMCU_APB2_GRP1_FreezePeriph

LL_DBGMCU_APB2_GRP1_UnFreezePeriph

Function name

__STATIC_INLINE void LL_DBGMCU_APB2_GRP1_UnFreezePeriph (uint32_t Periphs)

Function description

Unfreeze APB2 peripherals.

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_DBGMCU_APB2_GRP1_TIM1_STOP
  - LL_DBGMCU_APB2_GRP1_TIM15_STOP
  - LL_DBGMCU_APB2_GRP1_TIM16_STOP
  - LL_DBGMCU_APB2_GRP1_TIM17_STOP
  - LL_DBGMCU_APB2_GRP1_I3C2_STOP

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_APB2FZR DBG_TIMx_STOP LL_DBGMCU_APB2_GRP1_UnFreezePeriph

LL_DBGMCU_APB3_GRP1_FreezePeriph

Function name

__STATIC_INLINE void LL_DBGMCU_APB3_GRP1_FreezePeriph (uint32_t Periphs)

Function description

Freeze APB3 peripherals.

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_DBGMCU_APB3_GRP1_I2C3_STOP
  - LL_DBGMCU_APB3_GRP1_LPTIM1_STOP
  - LL_DBGMCU_APB3_GRP1_LPTIM3_STOP
  - LL_DBGMCU_APB3_GRP1_LPTIM4_STOP

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_APB3FZ DBG_TIMx_STOP LL_DBGMCU_APB3_GRP1_FreezePeriph

LL_DBGMCU_APB3_GRP1_UnFreezePeriph

Function name

__STATIC_INLINE void LL_DBGMCU_APB3_GRP1_UnFreezePeriph (uint32_t Periphs)

Function description

Unfreeze APB3 peripherals.

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_DBGMCU_APB3_GRP1_I2C3_STOP
  - LL_DBGMCU_APB3_GRP1_LPTIM1_STOP
  - LL_DBGMCU_APB3_GRP1_LPTIM3_STOP
  - LL_DBGMCU_APB3_GRP1_LPTIM4_STOP

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_APB3FZR DBG_TIMx_STOP LL_DBGMCU_APB3_GRP1_UnFreezePeriph

LL_DBGMCU_AHB1_GRP1_FreezePeriph

Function name

__STATIC_INLINE void LL_DBGMCU_AHB1_GRP1_FreezePeriph (uint32_t Periphs)

Function description

Freeze AHB1 peripherals.

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_DBGMCU_AHB1_GRP1_GPDMA0_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA1_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA2_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA3_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA4_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA5_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA6_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA7_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA8_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA9_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA10_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA11_STOP

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_AHB1FZ DBG_GPDMAx_STOP LL_DBGMCU_AHB1_GRP1_FreezePeriph

LL_DBGMCU_AHB1_GRP1_UnFreezePeriph

Function name

__STATIC_INLINE void LL_DBGMCU_AHB1_GRP1_UnFreezePeriph (uint32_t Periphs)

Function description

Unfreeze AHB1 peripherals.

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_DBGMCU_AHB1_GRP1_GPDMA0_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA1_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA2_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA3_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA4_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA5_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA6_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA7_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA8_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA9_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA10_STOP
  - LL_DBGMCU_AHB1_GRP1_GPDMA11_STOP

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_AHB1FZ DBG_GPDMAx_STOP LL_DBGMCU_AHB1_GRP1_FreezePeriph

LL_VREFBUF_Enable

Function name

__STATIC_INLINE void LL_VREFBUF_Enable (void)

Function description

Enable Internal voltage reference.

Return values

- **None:**

Reference Manual to LL API cross reference:

- VREFBUF_CSR ENVR LL_VREFBUF_Enable

LL_VREFBUF_Disable

Function name

__STATIC_INLINE void LL_VREFBUF_Disable (void)

Function description

Disable Internal voltage reference.

Return values

- **None:**

Reference Manual to LL API cross reference:

- VREFBUF_CSR ENVR LL_VREFBUF_Disable

LL_VREFBUF_EnableHIZ

Function name

__STATIC_INLINE void LL_VREFBUF_EnableHIZ (void)

Function description

Enable high impedance (VREF+pin is high impedance)

Return values

- **None:**

Reference Manual to LL API cross reference:

- VREFBUF_CSR HIZ LL_VREFBUF_EnableHIZ

LL_VREFBUF_DisableHIZ

Function name

__STATIC_INLINE void LL_VREFBUF_DisableHIZ (void)

Function description

Disable high impedance (VREF+pin is internally connected to the voltage reference buffer output)

Return values

- **None:**

Reference Manual to LL API cross reference:

- VREFBUF_CSR HIZ LL_VREFBUF_DisableHIZ

LL_VREFBUF_SetVoltageScaling

Function name

__STATIC_INLINE void LL_VREFBUF_SetVoltageScaling (uint32_t Scale)

Function description

Set the Voltage reference scale.

Parameters

- **Scale:** This parameter can be one of the following values:
  - LL_VREFBUF_VOLTAGE_SCALE0
  - LL_VREFBUF_VOLTAGE_SCALE1
  - LL_VREFBUF_VOLTAGE_SCALE2
  - LL_VREFBUF_VOLTAGE_SCALE3

Return values

- **None:**

Reference Manual to LL API cross reference:

- VREFBUF_CSR VRS LL_VREFBUF_SetVoltageScaling

LL_VREFBUF_GetVoltageScaling

Function name

__STATIC_INLINE uint32_t LL_VREFBUF_GetVoltageScaling (void)

Function description

Get the Voltage reference scale.

Return values

- **Returned:** value can be one of the following values:
  - LL_VREFBUF_VOLTAGE_SCALE0
  - LL_VREFBUF_VOLTAGE_SCALE1
  - LL_VREFBUF_VOLTAGE_SCALE2
  - LL_VREFBUF_VOLTAGE_SCALE3

Reference Manual to LL API cross reference:

- VREFBUF_CSR VRS LL_VREFBUF_GetVoltageScaling

LL_VREFBUF_IsVREFReady

Function name

__STATIC_INLINE uint32_t LL_VREFBUF_IsVREFReady (void)

Function description

Check if Voltage reference buffer is ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- VREFBUF_CSR VRR LL_VREFBUF_IsVREFReady

LL_VREFBUF_GetTrimming

Function name

__STATIC_INLINE uint32_t LL_VREFBUF_GetTrimming (void)

Function description

Get the trimming code for VREFBUF calibration.

Return values

- **Between:** 0 and 0x3F

Reference Manual to LL API cross reference:

- VREFBUF_CCR TRIM LL_VREFBUF_GetTrimming

LL_VREFBUF_SetTrimming

Function name

__STATIC_INLINE void LL_VREFBUF_SetTrimming (uint32_t Value)

Function description

Set the trimming code for VREFBUF calibration (Tune the internal reference buffer voltage)

Parameters

- **Value:** Between 0 and 0x3F

Return values

- **None:**

Reference Manual to LL API cross reference:

- VREFBUF_CCR TRIM LL_VREFBUF_SetTrimming

LL_FLASH_SetLatency

Function name

__STATIC_INLINE void LL_FLASH_SetLatency (uint32_t Latency)

Function description

Set FLASH Latency.

Parameters

- **Latency:** This parameter can be one of the following values:
  - LL_FLASH_LATENCY_0
  - LL_FLASH_LATENCY_1
  - LL_FLASH_LATENCY_2
  - LL_FLASH_LATENCY_3
  - LL_FLASH_LATENCY_4
  - LL_FLASH_LATENCY_5
  - LL_FLASH_LATENCY_6
  - LL_FLASH_LATENCY_7
  - LL_FLASH_LATENCY_8
  - LL_FLASH_LATENCY_9
  - LL_FLASH_LATENCY_10
  - LL_FLASH_LATENCY_11
  - LL_FLASH_LATENCY_12
  - LL_FLASH_LATENCY_13
  - LL_FLASH_LATENCY_14
  - LL_FLASH_LATENCY_15

Return values

- **None:**

Reference Manual to LL API cross reference:

- FLASH_ACR LATENCY LL_FLASH_SetLatency

LL_FLASH_GetLatency

Function name

__STATIC_INLINE uint32_t LL_FLASH_GetLatency (void)

Function description

Get FLASH Latency.

Return values

- **Returned:** value can be one of the following values:
  - LL_FLASH_LATENCY_0
  - LL_FLASH_LATENCY_1
  - LL_FLASH_LATENCY_2
  - LL_FLASH_LATENCY_3
  - LL_FLASH_LATENCY_4
  - LL_FLASH_LATENCY_5
  - LL_FLASH_LATENCY_6
  - LL_FLASH_LATENCY_7
  - LL_FLASH_LATENCY_8
  - LL_FLASH_LATENCY_9
  - LL_FLASH_LATENCY_10
  - LL_FLASH_LATENCY_11
  - LL_FLASH_LATENCY_12
  - LL_FLASH_LATENCY_13
  - LL_FLASH_LATENCY_14
  - LL_FLASH_LATENCY_15

Reference Manual to LL API cross reference:

- FLASH_ACR LATENCY LL_FLASH_GetLatency

LL_FLASH_EnableRunPowerDown

Function name

__STATIC_INLINE void LL_FLASH_EnableRunPowerDown (void)

Function description

Enable Flash Power-down mode during run mode or Low-power run mode.

Return values

- **None:**

Notes

- Flash memory can be put in power-down mode only when the code is executed from RAM
- Flash must not be accessed when power down is enabled
- Flash must not be put in power-down while a program or an erase operation is on-going

Reference Manual to LL API cross reference:

- FLASH_ACR RUN_PD LL_FLASH_EnableRunPowerDown
- FLASH_PDKEYR PDKEY1_1 LL_FLASH_EnableRunPowerDown
- FLASH_PDKEYR PDKEY1_2 LL_FLASH_EnableRunPowerDown
- FLASH_PDKEYR PDKEY2_1 LL_FLASH_EnableRunPowerDown
- FLASH_PDKEYR PDKEY2_2 LL_FLASH_EnableRunPowerDown

LL_FLASH_EnableRunPowerDownBank1

Function name

__STATIC_INLINE void LL_FLASH_EnableRunPowerDownBank1 (void)

Function description

Enable flash Power-down mode during run mode or Low-power run mode of bank1.

Return values

- **None:**

Notes

- Bank 1 of flash memory can be put in power-down mode only when the code is executed from RAM
- Bank1 of flash must not be accessed when power down is enabled
- Bank1 of flash must not be put in power-down while a program or an erase operation is on-going

Reference Manual to LL API cross reference:

- FLASH_ACR RUN_PD LL_FLASH_EnableRunPowerDown
- FLASH_PDKEYR PDKEY1_1 LL_FLASH_EnableRunPowerDown
- FLASH_PDKEYR PDKEY1_2 LL_FLASH_EnableRunPowerDown
-

LL_FLASH_EnableRunPowerDownBank2

Function name

__STATIC_INLINE void LL_FLASH_EnableRunPowerDownBank2 (void)

Function description

Enable flash Power-down mode during run mode or Low-power run mode of Bank2.

Return values

- **None:**

Notes

- Bank 2 of flash memory can be put in power-down mode only when the code is executed from RAM
- Bank2 of flash must not be accessed when power down is enabled
- Bank2 of flash must not be put in power-down while a program or an erase operation is on-going

Reference Manual to LL API cross reference:

- FLASH_ACR RUN_PD LL_FLASH_EnableRunPowerDown
- FLASH_PDKEYR PDKEY2_1 LL_FLASH_EnableRunPowerDown
- FLASH_PDKEYR PDKEY2_2 LL_FLASH_EnableRunPowerDown
-

LL_FLASH_EnableSleepPowerDown

Function name

__STATIC_INLINE void LL_FLASH_EnableSleepPowerDown (void)

Function description

Enable Flash Power-down mode during Sleep or Low-power sleep mode.

Return values

- **None:**

Notes

- Flash must not be put in power-down while a program or an erase operation is on-going

Reference Manual to LL API cross reference:

- FLASH_ACR SLEEP_PD LL_FLASH_EnableSleepPowerDown

LL_FLASH_DisableSleepPowerDown

Function name

__STATIC_INLINE void LL_FLASH_DisableSleepPowerDown (void)

Function description

Disable Flash Power-down mode during Sleep or Low-power sleep mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- FLASH_ACR SLEEP_PD LL_FLASH_DisableSleepPowerDown

98.2 SYSTEM Firmware driver defines

The following section lists the various define and macros of the module.

98.2.1 SYSTEM

SYSTEM

DBGMCU AHB1 GRP1 STOP IP

LL_DBGMCU_AHB1_GRP1_GPDMA0_STOP

The counter clock of GPDMA0 is stopped when the core is halted

LL_DBGMCU_AHB1_GRP1_GPDMA1_STOP

The counter clock of GPDMA1 is stopped when the core is halted

LL_DBGMCU_AHB1_GRP1_GPDMA2_STOP

The counter clock of GPDMA2 is stopped when the core is halted

LL_DBGMCU_AHB1_GRP1_GPDMA3_STOP

The counter clock of GPDMA3 is stopped when the core is halted

LL_DBGMCU_AHB1_GRP1_GPDMA4_STOP

The counter clock of GPDMA4 is stopped when the core is halted

LL_DBGMCU_AHB1_GRP1_GPDMA5_STOP

The counter clock of GPDMA5 is stopped when the core is halted

LL_DBGMCU_AHB1_GRP1_GPDMA6_STOP

The counter clock of GPDMA6 is stopped when the core is halted

LL_DBGMCU_AHB1_GRP1_GPDMA7_STOP

The counter clock of GPDMA7 is stopped when the core is halted

LL_DBGMCU_AHB1_GRP1_GPDMA8_STOP

The counter clock of GPDMA8 is stopped when the core is halted

LL_DBGMCU_AHB1_GRP1_GPDMA9_STOP

The counter clock of GPDMA9 is stopped when the core is halted

LL_DBGMCU_AHB1_GRP1_GPDMA10_STOP

The counter clock of GPDMA10 is stopped when the core is halted

LL_DBGMCU_AHB1_GRP1_GPDMA11_STOP

The counter clock of GPDMA11 is stopped when the core is halted

DBGMCU APB1 GRP1 STOP IP

LL_DBGMCU_APB1_GRP1_TIM2_STOP

The counter clock of TIM2 is stopped when the core is halted

LL_DBGMCU_APB1_GRP1_TIM3_STOP

The counter clock of TIM3 is stopped when the core is halted

LL_DBGMCU_APB1_GRP1_TIM4_STOP

The counter clock of TIM4 is stopped when the core is halted

LL_DBGMCU_APB1_GRP1_TIM6_STOP

The counter clock of TIM6 is stopped when the core is halted

LL_DBGMCU_APB1_GRP1_TIM7_STOP

The counter clock of TIM7 is stopped when the core is halted

LL_DBGMCU_APB1_GRP1_WWDG_STOP

The window watchdog counter clock is stopped when the core is halted

LL_DBGMCU_APB1_GRP1_IWDG_STOP

The independent watchdog counter clock is stopped when the core is halted

LL_DBGMCU_APB1_GRP1_I2C1_STOP

The I2C1 SMBus timeout is frozen

LL_DBGMCU_APB1_GRP1_I2C2_STOP

The I2C2 SMBus timeout is frozen

LL_DBGMCU_APB1_GRP1_I3C1_STOP

The I3C1 SMBus timeout is frozen

LL_DBGMCU_APB1_GRP1_RTC_STOP

The counter clock of RTC is stopped when the core is halted

DBGMCU APB1 GRP2 STOP IP

LL_DBGMCU_APB1_GRP2_LPTIM2_STOP

The counter clock of LPTIM2 is stopped when the core is halted

DBGMCU APB2 GRP1 STOP IP

LL_DBGMCU_APB2_GRP1_TIM1_STOP

The counter clock of TIM1 is stopped when the core is halted

LL_DBGMCU_APB2_GRP1_TIM15_STOP

The counter clock of TIM15 is stopped when the core is halted

LL_DBGMCU_APB2_GRP1_TIM16_STOP

The counter clock of TIM16 is stopped when the core is halted

LL_DBGMCU_APB2_GRP1_TIM17_STOP

The counter clock of TIM17 is stopped when the core is halted

LL_DBGMCU_APB2_GRP1_I3C2_STOP

The I3C2 SMBus timeout is frozen

DBGMCU APB3 GRP1 STOP IP

LL_DBGMCU_APB3_GRP1_I2C3_STOP

The counter clock of I2C3 is stopped when the core is halted

LL_DBGMCU_APB3_GRP1_LPTIM1_STOP

The counter clock of LPTIM1 is stopped when the core is halted

LL_DBGMCU_APB3_GRP1_LPTIM3_STOP

The counter clock of LPTIM3 is stopped when the core is halted

LL_DBGMCU_APB3_GRP1_LPTIM4_STOP

The counter clock of LPTIM4 is stopped when the core is halted

SYSCFG Vdd compensation cell Code selection

LL_SYSCFG_VDD_CELL_CODE

VDD I/Os code from the cell (available in the SYSCFG_CCVR)

LL_SYSCFG_VDD_REGISTER_CODE

VDD I/Os code from the SYSCFG compensation cell code register (SYSCFG_CCCR)

SYSCFG VddIO2 compensation cell Code selection

LL_SYSCFG_VDDIO2_CELL_CODE

VDDIO2 I/Os code from the cell (available in the SYSCFG_CCVR)

SYSCFG TIMER BREAK

LL_SYSCFG_TIMBREAK_ECC

Enables and locks the ECC error signal with Break Input of TIM1/8/15/16/17

LL_SYSCFG_TIMBREAK_PVD

Enables and locks the PVD connection with TIM1/8/15/16/17 Break Input and also the PVDE and PLS bits of the Power Control Interface

LL_SYSCFG_TIMBREAK_SRAM_ECC_LOCK

Enables and locks the SRAM ECC double error signal with Break Input of TIM1/8/15/16/17

LL_SYSCFG_TIMBREAK_LOCKUP

Enables and locks the LOCKUP output of CortexM33 with Break Input of TIM1/15/16/17

DBGMCU TRACE Pin Assignment

LL_DBGMCU_TRACE_NONE

TRACE pins not assigned (default state)

LL_DBGMCU_TRACE_ASYNCH

TRACE pin assignment for Asynchronous Mode

LL_DBGMCU_TRACE_SYNCH_SIZE1

TRACE pin assignment for Synchronous Mode with a TRACEDATA size of 1

LL_DBGMCU_TRACE_SYNCH_SIZE2

TRACE pin assignment for Synchronous Mode with a TRACEDATA size of 2

LL_DBGMCU_TRACE_SYNCH_SIZE4

TRACE pin assignment for Synchronous Mode with a TRACEDATA size of 4

VREFBUF VOLTAGE

LL_VREFBUF_VOLTAGE_SCALE0

Voltage reference scale 0 (VREF_OUT1)

LL_VREFBUF_VOLTAGE_SCALE1

Voltage reference scale 1 (VREF_OUT2)

LL_VREFBUF_VOLTAGE_SCALE2

Voltage reference scale 0 (VREF_OUT3)

LL_VREFBUF_VOLTAGE_SCALE3

Voltage reference scale 1 (VREF_OUT4)

99 LL TIM Generic Driver

99.1 TIM Firmware driver registers structures

99.1.1 LL_TIM_InitTypeDef

LL_TIM_InitTypeDef is defined in the stm32u3xx_ll_tim.h

Data Fields

- ***uint16_t Prescaler***
- ***uint32_t CounterMode***
- ***uint32_t Autoreload***
- ***uint32_t ClockDivision***
- ***uint32_t RepetitionCounter***

Field Documentation

- ***uint16_t LL_TIM_InitTypeDef::Prescaler***
  Specifies the prescaler value used to divide the TIM clock. This parameter can be a number between Min_Data=0x0000 and Max_Data=0xFFFF.This feature can be modified afterwards using unitary function **LL_TIM_SetPrescaler()**.
- ***uint32_t LL_TIM_InitTypeDef::CounterMode***
  Specifies the counter mode. This parameter can be a value of ***TIM_LL_EC_COUNTERMODE***.This feature can be modified afterwards using unitary function **LL_TIM_SetCounterMode()**.
- ***uint32_t LL_TIM_InitTypeDef::Autoreload***
  Specifies the auto reload value to be loaded into the active Auto-Reload Register at the next update event. This parameter must be a number between Min_Data=0x0000 and Max_Data=0xFFFF. Some timer instances may support 32 bits counters. In that case this parameter must be a number between 0x0000 and 0xFFFFFFFF.This feature can be modified afterwards using unitary function **LL_TIM_SetAutoReload()**.
- ***uint32_t LL_TIM_InitTypeDef::ClockDivision***
  Specifies the clock division. This parameter can be a value of ***TIM_LL_EC_CLOCKDIVISION***.This feature can be modified afterwards using unitary function **LL_TIM_SetClockDivision()**.
- ***uint32_t LL_TIM_InitTypeDef::RepetitionCounter***
  Specifies the repetition counter value. Each time the RCR downcounter reaches zero, an update event is generated and counting restarts from the RCR value (N). This means in PWM mode that (N+1) corresponds to:
  - the number of PWM periods in edge-aligned mode
  - the number of half PWM period in center-aligned mode GP timers: this parameter must be a number between Min_Data = 0x00 and Max_Data = 0xFF. Advanced timers: this parameter must be a number between Min_Data = 0x0000 and Max_Data = 0xFFFF.

  This feature can be modified afterwards using unitary function **LL_TIM_SetRepetitionCounter()**.

99.1.2 LL_TIM_OC_InitTypeDef

LL_TIM_OC_InitTypeDef is defined in the stm32u3xx_ll_tim.h

Data Fields

- ***uint32_t OCMode***
- ***uint32_t OCState***
- ***uint32_t OCNState***
- ***uint32_t CompareValue***
- ***uint32_t OCPolarity***
- ***uint32_t OCNPolarity***
- ***uint32_t OCIdleState***
- ***uint32_t OCNIdleState***

Field Documentation

- ***uint32_t LL_TIM_OC_InitTypeDef::OCMode***
  Specifies the output mode. This parameter can be a value of ***TIM_LL_EC_OCMODE***.This feature can be modified afterwards using unitary function **LL_TIM_OC_SetMode()**.
- ***uint32_t LL_TIM_OC_InitTypeDef::OCState***
  Specifies the TIM Output Compare state. This parameter can be a value of ***TIM_LL_EC_OCSTATE***.This feature can be modified afterwards using unitary functions **LL_TIM_CC_EnableChannel()** or **LL_TIM_CC_DisableChannel()**.
- ***uint32_t LL_TIM_OC_InitTypeDef::OCNState***
  Specifies the TIM complementary Output Compare state. This parameter can be a value of ***TIM_LL_EC_OCSTATE***.This feature can be modified afterwards using unitary functions **LL_TIM_CC_EnableChannel()** or **LL_TIM_CC_DisableChannel()**.
- ***uint32_t LL_TIM_OC_InitTypeDef::CompareValue***
  Specifies the Compare value to be loaded into the Capture Compare Register. This parameter can be a number between Min_Data=0x0000 and Max_Data=0xFFFF.This feature can be modified afterwards using unitary function LL_TIM_OC_SetCompareCHx (x=1..6).
- ***uint32_t LL_TIM_OC_InitTypeDef::OCPolarity***
  Specifies the output polarity. This parameter can be a value of ***TIM_LL_EC_OCPOLARITY***.This feature can be modified afterwards using unitary function **LL_TIM_OC_SetPolarity()**.
- ***uint32_t LL_TIM_OC_InitTypeDef::OCNPolarity***
  Specifies the complementary output polarity. This parameter can be a value of ***TIM_LL_EC_OCPOLARITY***.This feature can be modified afterwards using unitary function **LL_TIM_OC_SetPolarity()**.
- ***uint32_t LL_TIM_OC_InitTypeDef::OCIdleState***
  Specifies the TIM Output Compare pin state during Idle state. This parameter can be a value of ***TIM_LL_EC_OCIDLESTATE***.This feature can be modified afterwards using unitary function **LL_TIM_OC_SetIdleState()**.
- ***uint32_t LL_TIM_OC_InitTypeDef::OCNIdleState***
  Specifies the TIM Output Compare pin state during Idle state. This parameter can be a value of ***TIM_LL_EC_OCIDLESTATE***.This feature can be modified afterwards using unitary function **LL_TIM_OC_SetIdleState()**.

99.1.3 LL_TIM_IC_InitTypeDef

LL_TIM_IC_InitTypeDef is defined in the stm32u3xx_ll_tim.h

Data Fields

- ***uint32_t ICPolarity***
- ***uint32_t ICActiveInput***
- ***uint32_t ICPrescaler***
- ***uint32_t ICFilter***

Field Documentation

- ***uint32_t LL_TIM_IC_InitTypeDef::ICPolarity***
  Specifies the active edge of the input signal. This parameter can be a value of ***TIM_LL_EC_IC_POLARITY***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetPolarity()**.
- ***uint32_t LL_TIM_IC_InitTypeDef::ICActiveInput***
  Specifies the input. This parameter can be a value of ***TIM_LL_EC_ACTIVEINPUT***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetActiveInput()**.
- ***uint32_t LL_TIM_IC_InitTypeDef::ICPrescaler***
  Specifies the Input Capture Prescaler. This parameter can be a value of ***TIM_LL_EC_ICPSC***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetPrescaler()**.
- ***uint32_t LL_TIM_IC_InitTypeDef::ICFilter***
  Specifies the input capture filter. This parameter can be a value of ***TIM_LL_EC_IC_FILTER***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetFilter()**.

99.1.4 LL_TIM_ENCODER_InitTypeDef

LL_TIM_ENCODER_InitTypeDef is defined in the stm32u3xx_ll_tim.h

Data Fields

- ***uint32_t EncoderMode***
- ***uint32_t IC1Polarity***
- ***uint32_t IC1ActiveInput***
- ***uint32_t IC1Prescaler***
- ***uint32_t IC1Filter***
- ***uint32_t IC2Polarity***
- ***uint32_t IC2ActiveInput***
- ***uint32_t IC2Prescaler***
- ***uint32_t IC2Filter***

Field Documentation

- ***uint32_t LL_TIM_ENCODER_InitTypeDef::EncoderMode***
  Specifies the encoder resolution (x2 or x4). This parameter can be a value of ***TIM_LL_EC_ENCODERMODE***.This feature can be modified afterwards using unitary function **LL_TIM_SetEncoderMode()**.
- ***uint32_t LL_TIM_ENCODER_InitTypeDef::IC1Polarity***
  Specifies the active edge of TI1 input. This parameter can be a value of ***TIM_LL_EC_IC_POLARITY***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetPolarity()**.
- ***uint32_t LL_TIM_ENCODER_InitTypeDef::IC1ActiveInput***
  Specifies the TI1 input source This parameter can be a value of ***TIM_LL_EC_ACTIVEINPUT***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetActiveInput()**.
- ***uint32_t LL_TIM_ENCODER_InitTypeDef::IC1Prescaler***
  Specifies the TI1 input prescaler value. This parameter can be a value of ***TIM_LL_EC_ICPSC***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetPrescaler()**.
- ***uint32_t LL_TIM_ENCODER_InitTypeDef::IC1Filter***
  Specifies the TI1 input filter. This parameter can be a value of ***TIM_LL_EC_IC_FILTER***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetFilter()**.
- ***uint32_t LL_TIM_ENCODER_InitTypeDef::IC2Polarity***
  Specifies the active edge of TI2 input. This parameter can be a value of ***TIM_LL_EC_IC_POLARITY***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetPolarity()**.
- ***uint32_t LL_TIM_ENCODER_InitTypeDef::IC2ActiveInput***
  Specifies the TI2 input source This parameter can be a value of ***TIM_LL_EC_ACTIVEINPUT***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetActiveInput()**.
- ***uint32_t LL_TIM_ENCODER_InitTypeDef::IC2Prescaler***
  Specifies the TI2 input prescaler value. This parameter can be a value of ***TIM_LL_EC_ICPSC***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetPrescaler()**.
- ***uint32_t LL_TIM_ENCODER_InitTypeDef::IC2Filter***
  Specifies the TI2 input filter. This parameter can be a value of ***TIM_LL_EC_IC_FILTER***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetFilter()**.

99.1.5 LL_TIM_HALLSENSOR_InitTypeDef

LL_TIM_HALLSENSOR_InitTypeDef is defined in the stm32u3xx_ll_tim.h

Data Fields

- ***uint32_t IC1Polarity***
- ***uint32_t IC1Prescaler***
- ***uint32_t IC1Filter***
- ***uint32_t CommutationDelay***

Field Documentation

- ***uint32_t LL_TIM_HALLSENSOR_InitTypeDef::IC1Polarity***
  Specifies the active edge of TI1 input. This parameter can be a value of ***TIM_LL_EC_IC_POLARITY***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetPolarity()**.
- ***uint32_t LL_TIM_HALLSENSOR_InitTypeDef::IC1Prescaler***
  Specifies the TI1 input prescaler value. Prescaler must be set to get a maximum counter period longer than the time interval between 2 consecutive changes on the Hall inputs. This parameter can be a value of ***TIM_LL_EC_ICPSC***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetPrescaler()**.

- ***uint32_t LL_TIM_HALLSENSOR_InitTypeDef::IC1Filter***
  Specifies the TI1 input filter. This parameter can be a value of ***TIM_LL_EC_IC_FILTER***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetFilter()**.
- ***uint32_t LL_TIM_HALLSENSOR_InitTypeDef::CommutationDelay***
  Specifies the compare value to be loaded into the Capture Compare Register. A positive pulse (TRGO event) is generated with a programmable delay every time a change occurs on the Hall inputs. This parameter can be a number between Min_Data = 0x0000 and Max_Data = 0xFFFF.This feature can be modified afterwards using unitary function **LL_TIM_OC_SetCompareCH2()**.

99.1.6 LL_TIM_BDTR_InitTypeDef

LL_TIM_BDTR_InitTypeDef is defined in the stm32u3xx_ll_tim.h

Data Fields

- ***uint32_t OSSRState***
- ***uint32_t OSSIState***
- ***uint32_t LockLevel***
- ***uint8_t DeadTime***
- ***uint16_t BreakState***
- ***uint32_t BreakPolarity***
- ***uint32_t BreakFilter***
- ***uint32_t BreakAFMode***
- ***uint32_t Break2State***
- ***uint32_t Break2Polarity***
- ***uint32_t Break2Filter***
- ***uint32_t Break2AFMode***
- ***uint32_t AutomaticOutput***

Field Documentation

- ***uint32_t LL_TIM_BDTR_InitTypeDef::OSSRState***
  Specifies the Off-State selection used in Run mode. This parameter can be a value of ***TIM_LL_EC_OSSR***This feature can be modified afterwards using unitary function **LL_TIM_SetOffStates()**
  Note:
  – This bit-field cannot be modified as long as LOCK level 2 has been programmed.
- ***uint32_t LL_TIM_BDTR_InitTypeDef::OSSIState***
  Specifies the Off-State used in Idle state. This parameter can be a value of ***TIM_LL_EC_OSSI***This feature can be modified afterwards using unitary function **LL_TIM_SetOffStates()**
  Note:
  – This bit-field cannot be modified as long as LOCK level 2 has been programmed.
- ***uint32_t LL_TIM_BDTR_InitTypeDef::LockLevel***
  Specifies the LOCK level parameters. This parameter can be a value of ***TIM_LL_EC_LOCKLEVEL***
  Note:
  – The LOCK bits can be written only once after the reset. Once the TIMx_BDTR register has been written, their content is frozen until the next reset.
- ***uint8_t LL_TIM_BDTR_InitTypeDef::DeadTime***
  Specifies the delay time between the switching-off and the switching-on of the outputs. This parameter can be a number between Min_Data = 0x00 and Max_Data = 0xFF.This feature can be modified afterwards using unitary function **LL_TIM_OC_SetDeadTime()**
  Note:
  – This bit-field can not be modified as long as LOCK level 1, 2 or 3 has been programmed.
- ***uint16_t LL_TIM_BDTR_InitTypeDef::BreakState***
  Specifies whether the TIM Break input is enabled or not. This parameter can be a value of ***TIM_LL_EC_BREAK_ENABLE***This feature can be modified afterwards using unitary functions **LL_TIM_EnableBRK()** or **LL_TIM_DisableBRK()**
  Note:
  – This bit-field can not be modified as long as LOCK level 1 has been programmed.

- ***uint32_t LL_TIM_BDTR_InitTypeDef::BreakPolarity***
  Specifies the TIM Break Input pin polarity. This parameter can be a value of ***TIM_LL_EC_BREAK_POLARITY***This feature can be modified afterwards using unitary function **LL_TIM_ConfigBRK()**
  Note:
  – This bit-field can not be modified as long as LOCK level 1 has been programmed.
- ***uint32_t LL_TIM_BDTR_InitTypeDef::BreakFilter***
  Specifies the TIM Break Filter. This parameter can be a value of ***TIM_LL_EC_BREAK_FILTER***This feature can be modified afterwards using unitary function **LL_TIM_ConfigBRK()**
  Note:
  – This bit-field can not be modified as long as LOCK level 1 has been programmed.
- ***uint32_t LL_TIM_BDTR_InitTypeDef::BreakAFMode***
  Specifies the alternate function mode of the break input. This parameter can be a value of ***TIM_LL_EC_BREAK_AFMODE***This feature can be modified afterwards using unitary functions **LL_TIM_ConfigBRK()**
  Note:
  – Bidirectional break input is only supported by advanced timers instances.
  – This bit-field can not be modified as long as LOCK level 1 has been programmed.
- ***uint32_t LL_TIM_BDTR_InitTypeDef::Break2State***
  Specifies whether the TIM Break2 input is enabled or not. This parameter can be a value of ***TIM_LL_EC_BREAK2_ENABLE***This feature can be modified afterwards using unitary functions **LL_TIM_EnableBRK2()** or **LL_TIM_DisableBRK2()**
  Note:
  – This bit-field can not be modified as long as LOCK level 1 has been programmed.
- ***uint32_t LL_TIM_BDTR_InitTypeDef::Break2Polarity***
  Specifies the TIM Break2 Input pin polarity. This parameter can be a value of ***TIM_LL_EC_BREAK2_POLARITY***This feature can be modified afterwards using unitary function **LL_TIM_ConfigBRK2()**
  Note:
  – This bit-field can not be modified as long as LOCK level 1 has been programmed.
- ***uint32_t LL_TIM_BDTR_InitTypeDef::Break2Filter***
  Specifies the TIM Break2 Filter. This parameter can be a value of ***TIM_LL_EC_BREAK2_FILTER***This feature can be modified afterwards using unitary function **LL_TIM_ConfigBRK2()**
  Note:
  – This bit-field can not be modified as long as LOCK level 1 has been programmed.
- ***uint32_t LL_TIM_BDTR_InitTypeDef::Break2AFMode***
  Specifies the alternate function mode of the break2 input. This parameter can be a value of ***TIM_LL_EC_BREAK2_AFMODE***This feature can be modified afterwards using unitary functions **LL_TIM_ConfigBRK2()**
  Note:
  – Bidirectional break input is only supported by advanced timers instances.
  – This bit-field can not be modified as long as LOCK level 1 has been programmed.
- ***uint32_t LL_TIM_BDTR_InitTypeDef::AutomaticOutput***
  Specifies whether the TIM Automatic Output feature is enabled or not. This parameter can be a value of ***TIM_LL_EC_AUTOMATICOUTPUT_ENABLE***This feature can be modified afterwards using unitary functions **LL_TIM_EnableAutomaticOutput()** or **LL_TIM_DisableAutomaticOutput()**
  Note:
  – This bit-field can not be modified as long as LOCK level 1 has been programmed.

99.2 TIM Firmware driver API description

The following section lists the various functions of the TIM library.

99.2.1 Detailed description of functions

LL_TIM_EnableCounter

Function name

__STATIC_INLINE void LL_TIM_EnableCounter (TIM_TypeDef * TIMx)

Function description

Enable timer counter.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CEN LL_TIM_EnableCounter

LL_TIM_DisableCounter

Function name

__STATIC_INLINE void LL_TIM_DisableCounter (TIM_TypeDef * TIMx)

Function description

Disable timer counter.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CEN LL_TIM_DisableCounter

LL_TIM_IsEnabledCounter

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledCounter (const TIM_TypeDef * TIMx)

Function description

Indicates whether the timer counter is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 CEN LL_TIM_IsEnabledCounter

LL_TIM_EnableUpdateEvent

Function name

__STATIC_INLINE void LL_TIM_EnableUpdateEvent (TIM_TypeDef * TIMx)

Function description

Enable update event generation.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 UDIS LL_TIM_EnableUpdateEvent

LL_TIM_DisableUpdateEvent

Function name

__STATIC_INLINE void LL_TIM_DisableUpdateEvent (TIM_TypeDef * TIMx)

Function description

Disable update event generation.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 UDIS LL_TIM_DisableUpdateEvent

LL_TIM_IsEnabledUpdateEvent

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledUpdateEvent (const TIM_TypeDef * TIMx)

Function description

Indicates whether update event generation is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **Inverted:** state of bit (0 or 1).

Reference Manual to LL API cross reference:

- CR1 UDIS LL_TIM_IsEnabledUpdateEvent

LL_TIM_SetUpdateSource

Function name

__STATIC_INLINE void LL_TIM_SetUpdateSource (TIM_TypeDef * TIMx, uint32_t UpdateSource)

Function description

Set update event source.

Parameters

- **TIMx:** Timer instance
- **UpdateSource:** This parameter can be one of the following values:
  - LL_TIM_UPDATESOURCE_REGULAR
  - LL_TIM_UPDATESOURCE_COUNTER

Return values

- **None:**

Notes

- Update event source set to LL_TIM_UPDATESOURCE_REGULAR: any of the following events generate an update interrupt or DMA request if enabled: Counter overflow/underflowSetting the UG bitUpdate generation through the slave mode controller
- Update event source set to LL_TIM_UPDATESOURCE_COUNTER: only counter overflow/underflow generates an update interrupt or DMA request if enabled.

Reference Manual to LL API cross reference:

- CR1 URS LL_TIM_SetUpdateSource

LL_TIM_GetUpdateSource

Function name

__STATIC_INLINE uint32_t LL_TIM_GetUpdateSource (const TIM_TypeDef * TIMx)

Function description

Get actual event update source.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_UPDATESOURCE_REGULAR
  - LL_TIM_UPDATESOURCE_COUNTER

Reference Manual to LL API cross reference:

- CR1 URS LL_TIM_GetUpdateSource

LL_TIM_SetOnePulseMode

Function name

__STATIC_INLINE void LL_TIM_SetOnePulseMode (TIM_TypeDef * TIMx, uint32_t OnePulseMode)

Function description

Set one pulse mode (one shot v.s.

Parameters

- **TIMx:** Timer instance
- **OnePulseMode:** This parameter can be one of the following values:
  - LL_TIM_ONEPULSEMODE_SINGLE
  - LL_TIM_ONEPULSEMODE_REPETITIVE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 OPM LL_TIM_SetOnePulseMode

LL_TIM_GetOnePulseMode

Function name

__STATIC_INLINE uint32_t LL_TIM_GetOnePulseMode (const TIM_TypeDef * TIMx)

Function description

Get actual one pulse mode.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_ONEPULSEMODE_SINGLE
  - LL_TIM_ONEPULSEMODE_REPETITIVE

Reference Manual to LL API cross reference:

- CR1 OPM LL_TIM_GetOnePulseMode

LL_TIM_SetCounterMode

Function name

__STATIC_INLINE void LL_TIM_SetCounterMode (TIM_TypeDef * TIMx, uint32_t CounterMode)

Function description

Set the timer counter counting mode.

Parameters

- **TIMx:** Timer instance
- **CounterMode:** This parameter can be one of the following values:
  - LL_TIM_COUNTERMODE_UP
  - LL_TIM_COUNTERMODE_DOWN
  - LL_TIM_COUNTERMODE_CENTER_UP
  - LL_TIM_COUNTERMODE_CENTER_DOWN
  - LL_TIM_COUNTERMODE_CENTER_UP_DOWN

Return values

- **None:**

Notes

- Macro IS_TIM_COUNTER_MODE_SELECT_INSTANCE(TIMx) can be used to check whether or not the counter mode selection feature is supported by a timer instance.
- Switching from Center Aligned counter mode to Edge counter mode (or reverse) requires a timer reset to avoid unexpected direction due to DIR bit readonly in center aligned mode.

Reference Manual to LL API cross reference:

- CR1 DIR LL_TIM_SetCounterMode
- CR1 CMS LL_TIM_SetCounterMode

LL_TIM_GetCounterMode

Function name

__STATIC_INLINE uint32_t LL_TIM_GetCounterMode (const TIM_TypeDef * TIMx)

Function description

Get actual counter mode.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_COUNTERMODE_UP
  - LL_TIM_COUNTERMODE_DOWN
  - LL_TIM_COUNTERMODE_CENTER_UP
  - LL_TIM_COUNTERMODE_CENTER_DOWN
  - LL_TIM_COUNTERMODE_CENTER_UP_DOWN

Notes

- Macro IS_TIM_COUNTER_MODE_SELECT_INSTANCE(TIMx) can be used to check whether or not the counter mode selection feature is supported by a timer instance.

Reference Manual to LL API cross reference:

- CR1 DIR LL_TIM_GetCounterMode
- CR1 CMS LL_TIM_GetCounterMode

LL_TIM_EnableARRPreload

Function name

__STATIC_INLINE void LL_TIM_EnableARRPreload (TIM_TypeDef * TIMx)

Function description

Enable auto-reload (ARR) preload.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 ARPE LL_TIM_EnableARRPreload

LL_TIM_DisableARRPreload

Function name

__STATIC_INLINE void LL_TIM_DisableARRPreload (TIM_TypeDef * TIMx)

Function description

Disable auto-reload (ARR) preload.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 ARPE LL_TIM_DisableARRPreload

LL_TIM_IsEnabledARRPreload

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledARRPreload (const TIM_TypeDef * TIMx)

Function description

Indicates whether auto-reload (ARR) preload is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 ARPE LL_TIM_IsEnabledARRPreload

LL_TIM_SetClockDivision

Function name

__STATIC_INLINE void LL_TIM_SetClockDivision (TIM_TypeDef * TIMx, uint32_t ClockDivision)

Function description

Set the division ratio between the timer clock and the sampling clock used by the dead-time generators (when supported) and the digital filters.

Parameters

- **TIMx:** Timer instance
- **ClockDivision:** This parameter can be one of the following values:
  - LL_TIM_CLOCKDIVISION_DIV1
  - LL_TIM_CLOCKDIVISION_DIV2
  - LL_TIM_CLOCKDIVISION_DIV4

Return values

- **None:**

Notes

- Macro IS_TIM_CLOCK_DIVISION_INSTANCE(TIMx) can be used to check whether or not the clock division feature is supported by the timer instance.

Reference Manual to LL API cross reference:

- CR1 CKD LL_TIM_SetClockDivision

LL_TIM_GetClockDivision

Function name

__STATIC_INLINE uint32_t LL_TIM_GetClockDivision (const TIM_TypeDef * TIMx)

Function description

Get the actual division ratio between the timer clock and the sampling clock used by the dead-time generators (when supported) and the digital filters.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_CLOCKDIVISION_DIV1
  - LL_TIM_CLOCKDIVISION_DIV2
  - LL_TIM_CLOCKDIVISION_DIV4

Notes

- Macro IS_TIM_CLOCK_DIVISION_INSTANCE(TIMx) can be used to check whether or not the clock division feature is supported by the timer instance.

Reference Manual to LL API cross reference:

- CR1 CKD LL_TIM_GetClockDivision

LL_TIM_SetCounter

Function name

__STATIC_INLINE void LL_TIM_SetCounter (TIM_TypeDef * TIMx, uint32_t Counter)

Function description

Set the counter value.

Parameters

- **TIMx:** Timer instance
- **Counter:** Counter value (between Min_Data=0 and Max_Data=0xFFFF or 0xFFFFFFFF)

Return values

- **None:**

Notes

- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- If dithering is activated, pay attention to the Counter value interpretation

Reference Manual to LL API cross reference:

- CNT CNT LL_TIM_SetCounter

LL_TIM_GetCounter

Function name

__STATIC_INLINE uint32_t LL_TIM_GetCounter (const TIM_TypeDef * TIMx)

Function description

Get the counter value.

Parameters

- **TIMx:** Timer instance

Return values

- **Counter:** value (between Min_Data=0 and Max_Data=0xFFFF or 0xFFFFFFFF)

Notes

- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- If dithering is activated, pay attention to the Counter value interpretation

Reference Manual to LL API cross reference:

- CNT CNT LL_TIM_GetCounter

LL_TIM_GetDirection

Function name

__STATIC_INLINE uint32_t LL_TIM_GetDirection (const TIM_TypeDef * TIMx)

Function description

Get the current direction of the counter.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_COUNTERDIRECTION_UP
  - LL_TIM_COUNTERDIRECTION_DOWN

Reference Manual to LL API cross reference:

- CR1 DIR LL_TIM_GetDirection

LL_TIM_SetPrescaler

Function name

__STATIC_INLINE void LL_TIM_SetPrescaler (TIM_TypeDef * TIMx, uint32_t Prescaler)

Function description

Set the prescaler value.

Parameters

- **TIMx:** Timer instance
- **Prescaler:** between Min_Data=0 and Max_Data=65535

Return values

- **None:**

Notes

- The counter clock frequency CK_CNT is equal to fCK_PSC / (PSC[15:0] + 1).
- The prescaler can be changed on the fly as this control register is buffered. The new prescaler ratio is taken into account at the next update event.
- Helper macro __LL_TIM_CALC_PSC can be used to calculate the Prescaler parameter

Reference Manual to LL API cross reference:

- PSC PSC LL_TIM_SetPrescaler

LL_TIM_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_TIM_GetPrescaler (const TIM_TypeDef * TIMx)

Function description

Get the prescaler value.

Parameters

- **TIMx:** Timer instance

Return values

- **Prescaler:** value between Min_Data=0 and Max_Data=65535

Reference Manual to LL API cross reference:

- PSC PSC LL_TIM_GetPrescaler

LL_TIM_SetAutoReload

Function name

__STATIC_INLINE void LL_TIM_SetAutoReload (TIM_TypeDef * TIMx, uint32_t AutoReload)

Function description

Set the auto-reload value.

Parameters

- **TIMx:** Timer instance
- **AutoReload:** between Min_Data=0 and Max_Data=65535

Return values

- **None:**

Notes

- The counter is blocked while the auto-reload value is null.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Helper macro __LL_TIM_CALC_ARR can be used to calculate the AutoReload parameter In case dithering is activated,macro __LL_TIM_CALC_ARR_DITHER can be used instead, to calculate the AutoReload parameter.

Reference Manual to LL API cross reference:

- ARR ARR LL_TIM_SetAutoReload

LL_TIM_GetAutoReload

Function name

__STATIC_INLINE uint32_t LL_TIM_GetAutoReload (const TIM_TypeDef * TIMx)

Function description

Get the auto-reload value.

Parameters

- **TIMx:** Timer instance

Return values

- **Auto-reload:** value

Notes

- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- If dithering is activated, pay attention to the returned value interpretation

Reference Manual to LL API cross reference:

- ARR ARR LL_TIM_GetAutoReload

LL_TIM_SetRepetitionCounter

Function name

__STATIC_INLINE void LL_TIM_SetRepetitionCounter (TIM_TypeDef * TIMx, uint32_t RepetitionCounter)

Function description

Set the repetition counter value.

Parameters

- **TIMx:** Timer instance
- **RepetitionCounter:** between Min_Data=0 and Max_Data=255 or 65535 for advanced timer.

Return values

- **None:**

Notes

- Macro IS_TIM_REPETITION_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a repetition counter.

Reference Manual to LL API cross reference:

- RCR REP LL_TIM_SetRepetitionCounter

LL_TIM_GetRepetitionCounter

Function name

__STATIC_INLINE uint32_t LL_TIM_GetRepetitionCounter (const TIM_TypeDef * TIMx)

Function description

Get the repetition counter value.

Parameters

- **TIMx:** Timer instance

Return values

- **Repetition:** counter value

Notes

- Macro IS_TIM_REPETITION_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a repetition counter.

Reference Manual to LL API cross reference:

- RCR REP LL_TIM_GetRepetitionCounter

LL_TIM_EnableUIFRemap

Function name

__STATIC_INLINE void LL_TIM_EnableUIFRemap (TIM_TypeDef * TIMx)

Function description

Force a continuous copy of the update interrupt flag (UIF) into the timer counter register (bit 31).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- This allows both the counter value and a potential roll-over condition signalled by the UIFCPY flag to be read in an atomic way.

Reference Manual to LL API cross reference:

- CR1 UIFREMAP LL_TIM_EnableUIFRemap

LL_TIM_DisableUIFRemap

Function name

__STATIC_INLINE void LL_TIM_DisableUIFRemap (TIM_TypeDef * TIMx)

Function description

Disable update interrupt flag (UIF) remapping.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 UIFREMAP LL_TIM_DisableUIFRemap

LL_TIM_IsActiveUIFCPY

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveUIFCPY (const uint32_t Counter)

Function description

Indicate whether update interrupt flag (UIF) copy is set.

Parameters

- **Counter:** Counter value

Return values

- **State:** of bit (1 or 0).

LL_TIM_EnableDithering

Function name

__STATIC_INLINE void LL_TIM_EnableDithering (TIM_TypeDef * TIMx)

Function description

Enable dithering.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_DITHERING_INSTANCE(TIMx) can be used to check whether or not a timer instance provides dithering.

Reference Manual to LL API cross reference:

- CR1 DITHEN LL_TIM_EnableDithering

LL_TIM_DisableDithering

Function name

__STATIC_INLINE void LL_TIM_DisableDithering (TIM_TypeDef * TIMx)

Function description

Disable dithering.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_DITHERING_INSTANCE(TIMx) can be used to check whether or not a timer instance provides dithering.

Reference Manual to LL API cross reference:

- CR1 DITHEN LL_TIM_DisableDithering

LL_TIM_IsEnabledDithering

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledDithering (const TIM_TypeDef * TIMx)

Function description

Indicates whether dithering is activated.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_DITHERING_INSTANCE(TIMx) can be used to check whether or not a timer instance provides dithering.

Reference Manual to LL API cross reference:

- CR1 DITHEN LL_TIM_IsEnabledDithering

LL_TIM_CC_EnablePreload

Function name

__STATIC_INLINE void LL_TIM_CC_EnablePreload (TIM_TypeDef * TIMx)

Function description

Enable the capture/compare control bits (CCxE, CCxNE and OCxM) preload.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- CCxE, CCxNE and OCxM bits are preloaded, after having been written, they are updated only when a commutation event (COM) occurs.
- Only on channels that have a complementary output.
- Macro IS_TIM_COMMUTATION_EVENT_INSTANCE(TIMx) can be used to check whether or not a timer instance is able to generate a commutation event.

Reference Manual to LL API cross reference:

- CR2 CCPC LL_TIM_CC_EnablePreload

LL_TIM_CC_DisablePreload

Function name

__STATIC_INLINE void LL_TIM_CC_DisablePreload (TIM_TypeDef * TIMx)

Function description

Disable the capture/compare control bits (CCxE, CCxNE and OCxM) preload.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_COMMUTATION_EVENT_INSTANCE(TIMx) can be used to check whether or not a timer instance is able to generate a commutation event.

Reference Manual to LL API cross reference:

- CR2 CCPC LL_TIM_CC_DisablePreload

LL_TIM_CC_IsEnabledPreload

Function name

__STATIC_INLINE uint32_t LL_TIM_CC_IsEnabledPreload (const TIM_TypeDef * TIMx)

Function description

Indicates whether the capture/compare control bits (CCxE, CCxNE and OCxM) preload is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR2 CCPC LL_TIM_CC_IsEnabledPreload

LL_TIM_CC_SetUpdate

Function name

__STATIC_INLINE void LL_TIM_CC_SetUpdate (TIM_TypeDef * TIMx, uint32_t CCUpdateSource)

Function description

Set the updated source of the capture/compare control bits (CCxE, CCxNE and OCxM).

Parameters

- **TIMx:** Timer instance
- **CCUpdateSource:** This parameter can be one of the following values:
  - LL_TIM_CCUPDATESOURCE_COMG_ONLY
  - LL_TIM_CCUPDATESOURCE_COMG_AND_TRGI

Return values

- **None:**

Notes

- Macro IS_TIM_COMMUTATION_EVENT_INSTANCE(TIMx) can be used to check whether or not a timer instance is able to generate a commutation event.

Reference Manual to LL API cross reference:

- CR2 CCUS LL_TIM_CC_SetUpdate

LL_TIM_CC_SetDMAReqTrigger

Function name

__STATIC_INLINE void LL_TIM_CC_SetDMAReqTrigger (TIM_TypeDef * TIMx, uint32_t DMAReqTrigger)

Function description

Set the trigger of the capture/compare DMA request.

Parameters

- **TIMx:** Timer instance
- **DMAReqTrigger:** This parameter can be one of the following values:
  - LL_TIM_CCDMAREQUEST_CC
  - LL_TIM_CCDMAREQUEST_UPDATE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 CCDS LL_TIM_CC_SetDMAReqTrigger

LL_TIM_CC_GetDMAReqTrigger

Function name

__STATIC_INLINE uint32_t LL_TIM_CC_GetDMAReqTrigger (const TIM_TypeDef * TIMx)

Function description

Get actual trigger of the capture/compare DMA request.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_CCDMAREQUEST_CC
  - LL_TIM_CCDMAREQUEST_UPDATE

Reference Manual to LL API cross reference:

- CR2 CCDS LL_TIM_CC_GetDMAReqTrigger

LL_TIM_CC_SetLockLevel

Function name

__STATIC_INLINE void LL_TIM_CC_SetLockLevel (TIM_TypeDef * TIMx, uint32_t LockLevel)

Function description

Set the lock level to freeze the configuration of several capture/compare parameters.

Parameters

- **TIMx:** Timer instance
- **LockLevel:** This parameter can be one of the following values:
  - LL_TIM_LOCKLEVEL_OFF
  - LL_TIM_LOCKLEVEL_1
  - LL_TIM_LOCKLEVEL_2
  - LL_TIM_LOCKLEVEL_3

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not the lock mechanism is supported by a timer instance.

Reference Manual to LL API cross reference:

- BDTR LOCK LL_TIM_CC_SetLockLevel

LL_TIM_CC_EnableChannel

Function name

__STATIC_INLINE void LL_TIM_CC_EnableChannel (TIM_TypeDef * TIMx, uint32_t Channels)

Function description

Enable capture/compare channels.

Parameters

- **TIMx:** Timer instance
- **Channels:** This parameter can be a combination of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH1N
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH2N
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH3N
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH4N
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCER CC1E LL_TIM_CC_EnableChannel
- CCER CC1NE LL_TIM_CC_EnableChannel
- CCER CC2E LL_TIM_CC_EnableChannel
- CCER CC2NE LL_TIM_CC_EnableChannel
- CCER CC3E LL_TIM_CC_EnableChannel
- CCER CC3NE LL_TIM_CC_EnableChannel
- CCER CC4E LL_TIM_CC_EnableChannel
- CCER CC4NE LL_TIM_CC_EnableChannel
- CCER CC5E LL_TIM_CC_EnableChannel
- CCER CC6E LL_TIM_CC_EnableChannel

LL_TIM_CC_DisableChannel

Function name

__STATIC_INLINE void LL_TIM_CC_DisableChannel (TIM_TypeDef * TIMx, uint32_t Channels)

Function description

Disable capture/compare channels.

Parameters

- **TIMx:** Timer instance
- **Channels:** This parameter can be a combination of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH1N
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH2N
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH3N
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH4N
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCER CC1E LL_TIM_CC_DisableChannel
- CCER CC1NE LL_TIM_CC_DisableChannel
- CCER CC2E LL_TIM_CC_DisableChannel
- CCER CC2NE LL_TIM_CC_DisableChannel
- CCER CC3E LL_TIM_CC_DisableChannel
- CCER CC3NE LL_TIM_CC_DisableChannel
- CCER CC4E LL_TIM_CC_DisableChannel
- CCER CC4NE LL_TIM_CC_DisableChannel
- CCER CC5E LL_TIM_CC_DisableChannel
- CCER CC6E LL_TIM_CC_DisableChannel

LL_TIM_CC_IsEnabledChannel

Function name

__STATIC_INLINE uint32_t LL_TIM_CC_IsEnabledChannel (const TIM_TypeDef * TIMx, uint32_t Channels)

Function description

Indicate whether channel(s) is(are) enabled.

Parameters

- **TIMx:** Timer instance
- **Channels:** This parameter can be a combination of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH1N
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH2N
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH3N
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH4N
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CCER CC1E LL_TIM_CC_IsEnabledChannel
- CCER CC1NE LL_TIM_CC_IsEnabledChannel
- CCER CC2E LL_TIM_CC_IsEnabledChannel
- CCER CC2NE LL_TIM_CC_IsEnabledChannel
- CCER CC3E LL_TIM_CC_IsEnabledChannel
- CCER CC3NE LL_TIM_CC_IsEnabledChannel
- CCER CC4E LL_TIM_CC_IsEnabledChannel
- CCER CC4NE LL_TIM_CC_IsEnabledChannel
- CCER CC5E LL_TIM_CC_IsEnabledChannel
- CCER CC6E LL_TIM_CC_IsEnabledChannel

LL_TIM_OC_ConfigOutput

Function name

__STATIC_INLINE void LL_TIM_OC_ConfigOutput (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t Configuration)

Function description

Configure an output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6
- **Configuration:** This parameter must be a combination of all the following values:
  - LL_TIM_OCPOLARITY_HIGH or LL_TIM_OCPOLARITY_LOW
  - LL_TIM_OCIDLESTATE_LOW or LL_TIM_OCIDLESTATE_HIGH

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCMR1 CC1S LL_TIM_OC_ConfigOutput
- CCMR1 CC2S LL_TIM_OC_ConfigOutput
- CCMR2 CC3S LL_TIM_OC_ConfigOutput
- CCMR2 CC4S LL_TIM_OC_ConfigOutput
- CCMR3 CC5S LL_TIM_OC_ConfigOutput
- CCMR3 CC6S LL_TIM_OC_ConfigOutput
- CCER CC1P LL_TIM_OC_ConfigOutput
- CCER CC2P LL_TIM_OC_ConfigOutput
- CCER CC3P LL_TIM_OC_ConfigOutput
- CCER CC4P LL_TIM_OC_ConfigOutput
- CCER CC5P LL_TIM_OC_ConfigOutput
- CCER CC6P LL_TIM_OC_ConfigOutput
- CR2 OIS1 LL_TIM_OC_ConfigOutput
- CR2 OIS2 LL_TIM_OC_ConfigOutput
- CR2 OIS3 LL_TIM_OC_ConfigOutput
- CR2 OIS4 LL_TIM_OC_ConfigOutput
- CR2 OIS5 LL_TIM_OC_ConfigOutput
- CR2 OIS6 LL_TIM_OC_ConfigOutput

LL_TIM_OC_SetMode

Function name

__STATIC_INLINE void LL_TIM_OC_SetMode (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t Mode)

Function description

Define the behavior of the output reference signal OCxREF from which OCx and OCxN (when relevant) are derived.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6
- **Mode:** This parameter can be one of the following values:
  - LL_TIM_OCMODE_FROZEN
  - LL_TIM_OCMODE_ACTIVE
  - LL_TIM_OCMODE_INACTIVE
  - LL_TIM_OCMODE_TOGGLE
  - LL_TIM_OCMODE_FORCED_INACTIVE
  - LL_TIM_OCMODE_FORCED_ACTIVE
  - LL_TIM_OCMODE_PWM1
  - LL_TIM_OCMODE_PWM2
  - LL_TIM_OCMODE_RETRIG_OPM1
  - LL_TIM_OCMODE_RETRIG_OPM2
  - LL_TIM_OCMODE_COMBINED_PWM1
  - LL_TIM_OCMODE_COMBINED_PWM2
  - LL_TIM_OCMODE_ASYMMETRIC_PWM1
  - LL_TIM_OCMODE_ASYMMETRIC_PWM2
  - LL_TIM_OCMODE_PULSE_ON_COMPARE (for channel 3 or channel 4 only)
  - LL_TIM_OCMODE_DIRECTION_OUTPUT (for channel 3 or channel 4 only)

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCMR1 OC1M LL_TIM_OC_SetMode
- CCMR1 OC2M LL_TIM_OC_SetMode

LL_TIM_OC_GetMode

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_GetMode (const TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Get the output compare mode of an output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_OCMODE_FROZEN
  - LL_TIM_OCMODE_ACTIVE
  - LL_TIM_OCMODE_INACTIVE
  - LL_TIM_OCMODE_TOGGLE
  - LL_TIM_OCMODE_FORCED_INACTIVE
  - LL_TIM_OCMODE_FORCED_ACTIVE
  - LL_TIM_OCMODE_PWM1
  - LL_TIM_OCMODE_PWM2
  - LL_TIM_OCMODE_RETRIG_OPM1
  - LL_TIM_OCMODE_RETRIG_OPM2
  - LL_TIM_OCMODE_COMBINED_PWM1
  - LL_TIM_OCMODE_COMBINED_PWM2
  - LL_TIM_OCMODE_ASYMMETRIC_PWM1
  - LL_TIM_OCMODE_ASYMMETRIC_PWM2
  - LL_TIM_OCMODE_PULSE_ON_COMPARE (for channel 3 or channel 4 only)
  - LL_TIM_OCMODE_DIRECTION_OUTPUT (for channel 3 or channel 4 only)

LL_TIM_OC_SetPolarity

Function name

__STATIC_INLINE void LL_TIM_OC_SetPolarity (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t Polarity)

Function description

Set the polarity of an output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH1N
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH2N
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH3N
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH4N
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6
- **Polarity:** This parameter can be one of the following values:
  - LL_TIM_OCPOLARITY_HIGH
  - LL_TIM_OCPOLARITY_LOW

Return values

- **None:**

LL_TIM_OC_GetPolarity

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_GetPolarity (const TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Get the polarity of an output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH1N
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH2N
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH3N
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH4N
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_OCPOLARITY_HIGH
  - LL_TIM_OCPOLARITY_LOW

Reference Manual to LL API cross reference:

LL_TIM_OC_SetIdleState

Function name

__STATIC_INLINE void LL_TIM_OC_SetIdleState (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t IdleState)

Function description

Set the IDLE state of an output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH1N
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH2N
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH3N
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH4N
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6
- **IdleState:** This parameter can be one of the following values:
  - LL_TIM_OCIDLESTATE_LOW
  - LL_TIM_OCIDLESTATE_HIGH

Return values

- **None:**

Notes

- This function is significant only for the timer instances supporting the break feature. Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

LL_TIM_OC_GetIdleState

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_GetIdleState (const TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Get the IDLE state of an output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH1N
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH2N
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH3N
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH4N
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_OCIDLESTATE_LOW
  - LL_TIM_OCIDLESTATE_HIGH

LL_TIM_OC_EnableFast

Function name

__STATIC_INLINE void LL_TIM_OC_EnableFast (TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Enable fast mode for the output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **None:**

Notes

- Acts only if the channel is configured in PWM1 or PWM2 mode.

Reference Manual to LL API cross reference:

- CCMR1 OC1FE LL_TIM_OC_EnableFast
- CCMR1 OC2FE LL_TIM_OC_EnableFast

LL_TIM_OC_DisableFast

Function name

__STATIC_INLINE void LL_TIM_OC_DisableFast (TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Disable fast mode for the output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **None:**

LL_TIM_OC_IsEnabledFast

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_IsEnabledFast (const TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Indicates whether fast mode is enabled for the output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **State:** of bit (1 or 0).

- CCMR3 OC6FE LL_TIM_OC_IsEnabledFast

LL_TIM_OC_EnablePreload

Function name

__STATIC_INLINE void LL_TIM_OC_EnablePreload (TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Enable compare register (TIMx_CCRx) preload for the output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCMR3 OC6PE LL_TIM_OC_EnablePreload

LL_TIM_OC_DisablePreload

Function name

__STATIC_INLINE void LL_TIM_OC_DisablePreload (TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Disable compare register (TIMx_CCRx) preload for the output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCMR1 OC1PE LL_TIM_OC_DisablePreload
- CCMR1 OC2PE LL_TIM_OC_DisablePreload
- CCMR2 OC3PE LL_TIM_OC_DisablePreload
- CCMR2 OC4PE LL_TIM_OC_DisablePreload
- CCMR3 OC5PE LL_TIM_OC_DisablePreload
- CCMR3 OC6PE LL_TIM_OC_DisablePreload

LL_TIM_OC_IsEnabledPreload

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_IsEnabledPreload (const TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Indicates whether compare register (TIMx_CCRx) preload is enabled for the output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **State:** of bit (1 or 0).

- CCMR3 OC6PE LL_TIM_OC_IsEnabledPreload

LL_TIM_OC_EnableClear

Function name

__STATIC_INLINE void LL_TIM_OC_EnableClear (TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Enable clearing the output channel on an external event.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **None:**

Notes

- This function can only be used in Output compare and PWM modes. It does not work in Forced mode.
- Macro IS_TIM_OCXREF_CLEAR_INSTANCE(TIMx) can be used to check whether or not a timer instance can clear the OCxREF signal on an external event.

Reference Manual to LL API cross reference:

- CCMR1 OC1CE LL_TIM_OC_EnableClear

- CCMR3 OC6CE LL_TIM_OC_EnableClear

LL_TIM_OC_DisableClear

Function name

__STATIC_INLINE void LL_TIM_OC_DisableClear (TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Disable clearing the output channel on an external event.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **None:**

Notes

- Macro IS_TIM_OCXREF_CLEAR_INSTANCE(TIMx) can be used to check whether or not a timer instance can clear the OCxREF signal on an external event.

Reference Manual to LL API cross reference:

- CCMR1 OC1CE LL_TIM_OC_DisableClear
- CCMR1 OC2CE LL_TIM_OC_DisableClear
- CCMR2 OC3CE LL_TIM_OC_DisableClear
- CCMR2 OC4CE LL_TIM_OC_DisableClear
- CCMR3 OC5CE LL_TIM_OC_DisableClear
- CCMR3 OC6CE LL_TIM_OC_DisableClear

LL_TIM_OC_IsEnabledClear

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_IsEnabledClear (const TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Indicates clearing the output channel on an external event is enabled for the output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **State:** of bit (1 or 0).

Notes

- This function enables clearing the output channel on an external event.
- This function can only be used in Output compare and PWM modes. It does not work in Forced mode.
- Macro IS_TIM_OCXREF_CLEAR_INSTANCE(TIMx) can be used to check whether or not a timer instance can clear the OCxREF signal on an external event.

- CCMR2 OC4CE LL_TIM_OC_IsEnabledClear
- CCMR3 OC5CE LL_TIM_OC_IsEnabledClear
- CCMR3 OC6CE LL_TIM_OC_IsEnabledClear

LL_TIM_OC_SetDeadTime

Function name

__STATIC_INLINE void LL_TIM_OC_SetDeadTime (TIM_TypeDef * TIMx, uint32_t DeadTime)

Function description

Set the dead-time delay (delay inserted between the rising edge of the OCxREF signal and the rising edge of the Ocx and OCxN signals).

Parameters

- **TIMx:** Timer instance
- **DeadTime:** between Min_Data=0 and Max_Data=255

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not dead-time insertion feature is supported by a timer instance.
- Helper macro __LL_TIM_CALC_DEADTIME can be used to calculate the DeadTime parameter

Reference Manual to LL API cross reference:

- BDTR DTG LL_TIM_OC_SetDeadTime

LL_TIM_OC_SetCompareCH1

Function name

__STATIC_INLINE void LL_TIM_OC_SetCompareCH1 (TIM_TypeDef * TIMx, uint32_t CompareValue)

Function description

Set compare value for output channel 1 (TIMx_CCR1).

Parameters

- **TIMx:** Timer instance
- **CompareValue:** between Min_Data=0 and Max_Data=65535

Return values

- **None:**

Notes

- In 32-bit timer implementations compare value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC1_INSTANCE(TIMx) can be used to check whether or not output channel 1 is supported by a timer instance.
- If dithering is activated, CompareValue can be calculated with macro __LL_TIM_CALC_DELAY_DITHER .

Reference Manual to LL API cross reference:

- CCR1 CCR1 LL_TIM_OC_SetCompareCH1

LL_TIM_OC_SetCompareCH2

Function name

__STATIC_INLINE void LL_TIM_OC_SetCompareCH2 (TIM_TypeDef * TIMx, uint32_t CompareValue)

Function description

Set compare value for output channel 2 (TIMx_CCR2).

Parameters

- **TIMx:** Timer instance
- **CompareValue:** between Min_Data=0 and Max_Data=65535

Return values

- **None:**

Notes

- In 32-bit timer implementations compare value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC2_INSTANCE(TIMx) can be used to check whether or not output channel 2 is supported by a timer instance.
- If dithering is activated, CompareValue can be calculated with macro __LL_TIM_CALC_DELAY_DITHER .

LL_TIM_OC_GetCompareCH5

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_GetCompareCH5 (const TIM_TypeDef * TIMx)

Function description

Get compare value (TIMx_CCR5) set for output channel 5.

Parameters

- **TIMx:** Timer instance

Return values

- **CompareValue:** (between Min_Data=0 and Max_Data=65535)

Notes

- Macro IS_TIM_CC5_INSTANCE(TIMx) can be used to check whether or not output channel 5 is supported by a timer instance.
- If dithering is activated, pay attention to the returned value interpretation.

Reference Manual to LL API cross reference:

- CCR5 CCR5 LL_TIM_OC_GetCompareCH5

LL_TIM_OC_GetCompareCH6

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_GetCompareCH6 (const TIM_TypeDef * TIMx)

Function description

Get compare value (TIMx_CCR6) set for output channel 6.

Parameters

- **TIMx:** Timer instance

Return values

- **CompareValue:** (between Min_Data=0 and Max_Data=65535)

Notes

- Macro IS_TIM_CC6_INSTANCE(TIMx) can be used to check whether or not output channel 6 is supported by a timer instance.
- If dithering is activated, pay attention to the returned value interpretation.

Reference Manual to LL API cross reference:

- CCR6 CCR6 LL_TIM_OC_GetCompareCH6

LL_TIM_SetCH5CombinedChannels

Function name

__STATIC_INLINE void LL_TIM_SetCH5CombinedChannels (TIM_TypeDef * TIMx, uint32_t GroupCH5)

Function description

Select on which reference signal the OC5REF is combined to.

Parameters

- **TIMx:** Timer instance
- **GroupCH5:** This parameter can be a combination of the following values:
  - LL_TIM_GROUPCH5_NONE
  - LL_TIM_GROUPCH5_OC1REFC
  - LL_TIM_GROUPCH5_OC2REFC
  - LL_TIM_GROUPCH5_OC3REFC

Return values

- **None:**

Notes

- Macro IS_TIM_COMBINED3PHASEPWM_INSTANCE(TIMx) can be used to check whether or not a timer instance supports the combined 3-phase PWM mode.

Reference Manual to LL API cross reference:

- CCR5 GC5C3 LL_TIM_SetCH5CombinedChannels
- CCR5 GC5C2 LL_TIM_SetCH5CombinedChannels
- CCR5 GC5C1 LL_TIM_SetCH5CombinedChannels

LL_TIM_OC_SetPulseWidthPrescaler

Function name

__STATIC_INLINE void LL_TIM_OC_SetPulseWidthPrescaler (TIM_TypeDef * TIMx, uint32_t PulseWidthPrescaler)

Function description

Set the pulse on compare pulse width prescaler.

Parameters

- **TIMx:** Timer instance
- **PulseWidthPrescaler:** This parameter can be one of the following values:
  - LL_TIM_PWPRSC_X1
  - LL_TIM_PWPRSC_X2
  - LL_TIM_PWPRSC_X4
  - LL_TIM_PWPRSC_X8
  - LL_TIM_PWPRSC_X16
  - LL_TIM_PWPRSC_X32
  - LL_TIM_PWPRSC_X64
  - LL_TIM_PWPRSC_X128

Return values

- **None:**

Notes

- Macro IS_TIM_PULSEONCOMPARE_INSTANCE(TIMx) can be used to check whether or not the pulse on compare feature is supported by the timer instance.

Reference Manual to LL API cross reference:

- ECR PWPRSC LL_TIM_OC_SetPulseWidthPrescaler

LL_TIM_OC_GetPulseWidthPrescaler

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_GetPulseWidthPrescaler (const TIM_TypeDef * TIMx)

Function description

Get the pulse on compare pulse width prescaler.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_PWPRSC_X1
  - LL_TIM_PWPRSC_X2
  - LL_TIM_PWPRSC_X4
  - LL_TIM_PWPRSC_X8
  - LL_TIM_PWPRSC_X16
  - LL_TIM_PWPRSC_X32
  - LL_TIM_PWPRSC_X64
  - LL_TIM_PWPRSC_X128

Notes

- Macro IS_TIM_PULSEONCOMPARE_INSTANCE(TIMx) can be used to check whether or not the pulse on compare feature is supported by the timer instance.

Reference Manual to LL API cross reference:

- ECR PWPRSC LL_TIM_OC_GetPulseWidthPrescaler

LL_TIM_OC_SetPulseWidth

Function name

__STATIC_INLINE void LL_TIM_OC_SetPulseWidth (TIM_TypeDef * TIMx, uint32_t PulseWidth)

Function description

Set the pulse on compare pulse width duration.

Parameters

- **TIMx:** Timer instance
- **PulseWidth:** This parameter can be between Min_Data=0 and Max_Data=255

Return values

- **None:**

Notes

- Macro IS_TIM_PULSEONCOMPARE_INSTANCE(TIMx) can be used to check whether or not the pulse on compare feature is supported by the timer instance.

Reference Manual to LL API cross reference:

- ECR PW LL_TIM_OC_SetPulseWidth

LL_TIM_OC_GetPulseWidth

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_GetPulseWidth (const TIM_TypeDef * TIMx)

Function description

Get the pulse on compare pulse width duration.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be between Min_Data=0 and Max_Data=255:

Notes

- Macro IS_TIM_PULSEONCOMPARE_INSTANCE(TIMx) can be used to check whether or not the pulse on compare feature is supported by the timer instance.

Reference Manual to LL API cross reference:

- ECR PW LL_TIM_OC_GetPulseWidth

LL_TIM_IC_Config

Function name

__STATIC_INLINE void LL_TIM_IC_Config (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t Configuration)

Function description

Configure input channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
- **Configuration:** This parameter must be a combination of all the following values:
  - LL_TIM_ACTIVEINPUT_DIRECTTI or LL_TIM_ACTIVEINPUT_INDIRECTTI or LL_TIM_ACTIVEINPUT_TRC
  - LL_TIM_ICPSC_DIV1 or ... or LL_TIM_ICPSC_DIV8
  - LL_TIM_IC_FILTER_FDIV1 or ... or LL_TIM_IC_FILTER_FDIV32_N8
  - LL_TIM_IC_POLARITY_RISING or LL_TIM_IC_POLARITY_FALLING or LL_TIM_IC_POLARITY_BOTHEDGE

Return values

- **None:**

LL_TIM_IC_SetActiveInput

Function name

__STATIC_INLINE void LL_TIM_IC_SetActiveInput (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t ICActiveInput)

Function description

Set the active input.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
- **ICActiveInput:** This parameter can be one of the following values:
  - LL_TIM_ACTIVEINPUT_DIRECTTI
  - LL_TIM_ACTIVEINPUT_INDIRECTTI
  - LL_TIM_ACTIVEINPUT_TRC

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCMR1 CC2S LL_TIM_IC_SetActiveInput
- CCMR2 CC3S LL_TIM_IC_SetActiveInput
- CCMR2 CC4S LL_TIM_IC_SetActiveInput

LL_TIM_IC_GetActiveInput

Function name

__STATIC_INLINE uint32_t LL_TIM_IC_GetActiveInput (const TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Get the current active input.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_ACTIVEINPUT_DIRECTTI
  - LL_TIM_ACTIVEINPUT_INDIRECTTI
  - LL_TIM_ACTIVEINPUT_TRC

Reference Manual to LL API cross reference:

- CCMR1 CC1S LL_TIM_IC_GetActiveInput

LL_TIM_IC_SetPrescaler

Function name

__STATIC_INLINE void LL_TIM_IC_SetPrescaler (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t ICPrescaler)

Function description

Set the prescaler of input channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
- **ICPrescaler:** This parameter can be one of the following values:
  - LL_TIM_ICPSC_DIV1
  - LL_TIM_ICPSC_DIV2
  - LL_TIM_ICPSC_DIV4
  - LL_TIM_ICPSC_DIV8

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCMR1 IC2PSC LL_TIM_IC_SetPrescaler
- CCMR2 IC3PSC LL_TIM_IC_SetPrescaler
- CCMR2 IC4PSC LL_TIM_IC_SetPrescaler

LL_TIM_IC_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_TIM_IC_GetPrescaler (const TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Get the current prescaler value acting on an input channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_ICPSC_DIV1
  - LL_TIM_ICPSC_DIV2
  - LL_TIM_ICPSC_DIV4
  - LL_TIM_ICPSC_DIV8

Reference Manual to LL API cross reference:

LL_TIM_IC_SetFilter

Function name

__STATIC_INLINE void LL_TIM_IC_SetFilter (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t ICFilter)

Function description

Set the input filter duration.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
- **ICFilter:** This parameter can be one of the following values:
  - LL_TIM_IC_FILTER_FDIV1
  - LL_TIM_IC_FILTER_FDIV1_N2
  - LL_TIM_IC_FILTER_FDIV1_N4
  - LL_TIM_IC_FILTER_FDIV1_N8
  - LL_TIM_IC_FILTER_FDIV2_N6
  - LL_TIM_IC_FILTER_FDIV2_N8
  - LL_TIM_IC_FILTER_FDIV4_N6
  - LL_TIM_IC_FILTER_FDIV4_N8
  - LL_TIM_IC_FILTER_FDIV8_N6
  - LL_TIM_IC_FILTER_FDIV8_N8
  - LL_TIM_IC_FILTER_FDIV16_N5
  - LL_TIM_IC_FILTER_FDIV16_N6
  - LL_TIM_IC_FILTER_FDIV16_N8
  - LL_TIM_IC_FILTER_FDIV32_N5
  - LL_TIM_IC_FILTER_FDIV32_N6
  - LL_TIM_IC_FILTER_FDIV32_N8

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCMR1 IC1F LL_TIM_IC_SetFilter
- CCMR1 IC2F LL_TIM_IC_SetFilter
- CCMR2 IC3F LL_TIM_IC_SetFilter
- CCMR2 IC4F LL_TIM_IC_SetFilter

LL_TIM_IC_GetFilter

Function name

__STATIC_INLINE uint32_t LL_TIM_IC_GetFilter (const TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Get the input filter duration.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_IC_FILTER_FDIV1
  - LL_TIM_IC_FILTER_FDIV1_N2
  - LL_TIM_IC_FILTER_FDIV1_N4
  - LL_TIM_IC_FILTER_FDIV1_N8
  - LL_TIM_IC_FILTER_FDIV2_N6
  - LL_TIM_IC_FILTER_FDIV2_N8
  - LL_TIM_IC_FILTER_FDIV4_N6
  - LL_TIM_IC_FILTER_FDIV4_N8
  - LL_TIM_IC_FILTER_FDIV8_N6
  - LL_TIM_IC_FILTER_FDIV8_N8
  - LL_TIM_IC_FILTER_FDIV16_N5
  - LL_TIM_IC_FILTER_FDIV16_N6
  - LL_TIM_IC_FILTER_FDIV16_N8
  - LL_TIM_IC_FILTER_FDIV32_N5
  - LL_TIM_IC_FILTER_FDIV32_N6
  - LL_TIM_IC_FILTER_FDIV32_N8

LL_TIM_IC_SetPolarity

Function name

__STATIC_INLINE void LL_TIM_IC_SetPolarity (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t ICPolarity)

Function description

Set the input channel polarity.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
- **ICPolarity:** This parameter can be one of the following values:
  - LL_TIM_IC_POLARITY_RISING
  - LL_TIM_IC_POLARITY_FALLING
  - LL_TIM_IC_POLARITY_BOTHEDGE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCER CC1P LL_TIM_IC_SetPolarity
- CCER CC1NP LL_TIM_IC_SetPolarity
- CCER CC2P LL_TIM_IC_SetPolarity
- CCER CC2NP LL_TIM_IC_SetPolarity
- CCER CC3P LL_TIM_IC_SetPolarity
- CCER CC3NP LL_TIM_IC_SetPolarity
- CCER CC4P LL_TIM_IC_SetPolarity
- CCER CC4NP LL_TIM_IC_SetPolarity

LL_TIM_IC_GetPolarity

Function name

__STATIC_INLINE uint32_t LL_TIM_IC_GetPolarity (const TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Get the current input channel polarity.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_IC_POLARITY_RISING
  - LL_TIM_IC_POLARITY_FALLING
  - LL_TIM_IC_POLARITY_BOTHEDGE

Reference Manual to LL API cross reference:

- CCER CC1P LL_TIM_IC_GetPolarity
- CCER CC1NP LL_TIM_IC_GetPolarity
- CCER CC2P LL_TIM_IC_GetPolarity
- CCER CC2NP LL_TIM_IC_GetPolarity
- CCER CC3P LL_TIM_IC_GetPolarity
- CCER CC3NP LL_TIM_IC_GetPolarity
- CCER CC4P LL_TIM_IC_GetPolarity
- CCER CC4NP LL_TIM_IC_GetPolarity

LL_TIM_IC_EnableXORCombination

Function name

__STATIC_INLINE void LL_TIM_IC_EnableXORCombination (TIM_TypeDef * TIMx)

Function description

Connect the TIMx_CH1, CH2 and CH3 pins to the TI1 input (XOR combination).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_XOR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an XOR input.

Reference Manual to LL API cross reference:

- CR2 TI1S LL_TIM_IC_EnableXORCombination

LL_TIM_IC_DisableXORCombination

Function name

__STATIC_INLINE void LL_TIM_IC_DisableXORCombination (TIM_TypeDef * TIMx)

Function description

Disconnect the TIMx_CH1, CH2 and CH3 pins from the TI1 input.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_XOR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an XOR input.

Reference Manual to LL API cross reference:

- CR2 TI1S LL_TIM_IC_DisableXORCombination

LL_TIM_IC_IsEnabledXORCombination

Function name

__STATIC_INLINE uint32_t LL_TIM_IC_IsEnabledXORCombination (const TIM_TypeDef * TIMx)

Function description

Indicates whether the TIMx_CH1, CH2 and CH3 pins are connectected to the TI1 input.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_XOR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an XOR input.

Reference Manual to LL API cross reference:

- CR2 TI1S LL_TIM_IC_IsEnabledXORCombination

LL_TIM_IC_GetCaptureCH1

Function name

__STATIC_INLINE uint32_t LL_TIM_IC_GetCaptureCH1 (const TIM_TypeDef * TIMx)

Function description

Get captured value for input channel 1.

Parameters

- **TIMx:** Timer instance

Return values

- **CapturedValue:** (between Min_Data=0 and Max_Data=65535)

Notes

- In 32-bit timer implementations returned captured value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC1_INSTANCE(TIMx) can be used to check whether or not input channel 1 is supported by a timer instance.
- If dithering is activated, pay attention to the returned value interpretation.

Reference Manual to LL API cross reference:

- CCR1 CCR1 LL_TIM_IC_GetCaptureCH1

LL_TIM_IC_GetCaptureCH2

Function name

__STATIC_INLINE uint32_t LL_TIM_IC_GetCaptureCH2 (const TIM_TypeDef * TIMx)

Function description

Get captured value for input channel 2.

Parameters

- **TIMx:** Timer instance

Return values

- **CapturedValue:** (between Min_Data=0 and Max_Data=65535)

Notes

- In 32-bit timer implementations returned captured value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC2_INSTANCE(TIMx) can be used to check whether or not input channel 2 is supported by a timer instance.
- If dithering is activated, pay attention to the returned value interpretation.

Reference Manual to LL API cross reference:

- CCR2 CCR2 LL_TIM_IC_GetCaptureCH2

LL_TIM_IC_GetCaptureCH3

Function name

__STATIC_INLINE uint32_t LL_TIM_IC_GetCaptureCH3 (const TIM_TypeDef * TIMx)

Function description

Get captured value for input channel 3.

Parameters

- **TIMx:** Timer instance

Return values

- **CapturedValue:** (between Min_Data=0 and Max_Data=65535)

Notes

- In 32-bit timer implementations returned captured value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC3_INSTANCE(TIMx) can be used to check whether or not input channel 3 is supported by a timer instance.
- If dithering is activated, pay attention to the returned value interpretation.

Reference Manual to LL API cross reference:

- CCR3 CCR3 LL_TIM_IC_GetCaptureCH3

LL_TIM_IC_GetCaptureCH4

Function name

__STATIC_INLINE uint32_t LL_TIM_IC_GetCaptureCH4 (const TIM_TypeDef * TIMx)

Function description

Get captured value for input channel 4.

Parameters

- **TIMx:** Timer instance

Return values

- **CapturedValue:** (between Min_Data=0 and Max_Data=65535)

Notes

- In 32-bit timer implementations returned captured value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC4_INSTANCE(TIMx) can be used to check whether or not input channel 4 is supported by a timer instance.
- If dithering is activated, pay attention to the returned value interpretation.

Reference Manual to LL API cross reference:

- CCR4 CCR4 LL_TIM_IC_GetCaptureCH4

LL_TIM_EnableExternalClock

Function name

__STATIC_INLINE void LL_TIM_EnableExternalClock (TIM_TypeDef * TIMx)

Function description

Enable external clock mode 2.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- When external clock mode 2 is enabled the counter is clocked by any active edge on the ETRF signal.
- Macro IS_TIM_CLOCKSOURCE_ETRMODE2_INSTANCE(TIMx) can be used to check whether or not a timer instance supports external clock mode2.

Reference Manual to LL API cross reference:

- SMCR ECE LL_TIM_EnableExternalClock

LL_TIM_DisableExternalClock

Function name

__STATIC_INLINE void LL_TIM_DisableExternalClock (TIM_TypeDef * TIMx)

Function description

Disable external clock mode 2.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_CLOCKSOURCE_ETRMODE2_INSTANCE(TIMx) can be used to check whether or not a timer instance supports external clock mode2.

Reference Manual to LL API cross reference:

- SMCR ECE LL_TIM_DisableExternalClock

LL_TIM_IsEnabledExternalClock

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledExternalClock (const TIM_TypeDef * TIMx)

Function description

Indicate whether external clock mode 2 is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_CLOCKSOURCE_ETRMODE2_INSTANCE(TIMx) can be used to check whether or not a timer instance supports external clock mode2.

Reference Manual to LL API cross reference:

- SMCR ECE LL_TIM_IsEnabledExternalClock

LL_TIM_SetClockSource

Function name

__STATIC_INLINE void LL_TIM_SetClockSource (TIM_TypeDef * TIMx, uint32_t ClockSource)

Function description

Set the clock source of the counter clock.

Parameters

- **TIMx:** Timer instance
- **ClockSource:** This parameter can be one of the following values:
  - LL_TIM_CLOCKSOURCE_INTERNAL
  - LL_TIM_CLOCKSOURCE_EXT_MODE1
  - LL_TIM_CLOCKSOURCE_EXT_MODE2

Return values

- **None:**

Notes

- when selected clock source is external clock mode 1, the timer input the external clock is applied is selected by calling the LL_TIM_SetTriggerInput() function. This timer input must be configured by calling the LL_TIM_IC_Config() function.
- Macro IS_TIM_CLOCKSOURCE_ETRMODE1_INSTANCE(TIMx) can be used to check whether or not a timer instance supports external clock mode1.
- Macro IS_TIM_CLOCKSOURCE_ETRMODE2_INSTANCE(TIMx) can be used to check whether or not a timer instance supports external clock mode2.

Reference Manual to LL API cross reference:

- SMCR SMS LL_TIM_SetClockSource
- SMCR ECE LL_TIM_SetClockSource

LL_TIM_SetEncoderMode

Function name

__STATIC_INLINE void LL_TIM_SetEncoderMode (TIM_TypeDef * TIMx, uint32_t EncoderMode)

Function description

Set the encoder interface mode.

Parameters

- **TIMx:** Timer instance
- **EncoderMode:** This parameter can be one of the following values:
  - LL_TIM_ENCODERMODE_X2_TI1
  - LL_TIM_ENCODERMODE_X2_TI2
  - LL_TIM_ENCODERMODE_X4_TI12
  - LL_TIM_ENCODERMODE_CLOCKPLUSDIRECTION_X2
  - LL_TIM_ENCODERMODE_CLOCKPLUSDIRECTION_X1
  - LL_TIM_ENCODERMODE_DIRECTIONALCLOCK_X2
  - LL_TIM_ENCODERMODE_DIRECTIONALCLOCK_X1_TI12
  - LL_TIM_ENCODERMODE_X1_TI1
  - LL_TIM_ENCODERMODE_X1_TI2

Return values

- **None:**

Notes

- Macro IS_TIM_ENCODER_INTERFACE_INSTANCE(TIMx) can be used to check whether or not a timer instance supports the encoder mode.

Reference Manual to LL API cross reference:

- SMCR SMS LL_TIM_SetEncoderMode

LL_TIM_SetTriggerOutput

Function name

__STATIC_INLINE void LL_TIM_SetTriggerOutput (TIM_TypeDef * TIMx, uint32_t TimerSynchronization)

Function description

Set the trigger output (TRGO) used for timer synchronization .

Parameters

- **TIMx:** Timer instance
- **TimerSynchronization:** This parameter can be one of the following values:
  - LL_TIM_TRGO_RESET
  - LL_TIM_TRGO_ENABLE
  - LL_TIM_TRGO_UPDATE
  - LL_TIM_TRGO_CC1IF
  - LL_TIM_TRGO_OC1REF
  - LL_TIM_TRGO_OC2REF
  - LL_TIM_TRGO_OC3REF
  - LL_TIM_TRGO_OC4REF
  - LL_TIM_TRGO_ENCODERCLK

Return values

- **None:**

Notes

- Macro IS_TIM_MASTER_INSTANCE(TIMx) can be used to check whether or not a timer instance can operate as a master timer.

Reference Manual to LL API cross reference:

- CR2 MMS LL_TIM_SetTriggerOutput

LL_TIM_SetTriggerOutput2

Function name

__STATIC_INLINE void LL_TIM_SetTriggerOutput2 (TIM_TypeDef * TIMx, uint32_t ADCSynchronization)

Function description

Set the trigger output 2 (TRGO2) used for ADC synchronization .

Parameters

- **TIMx:** Timer Instance
- **ADCSynchronization:** This parameter can be one of the following values:
  - LL_TIM_TRGO2_RESET
  - LL_TIM_TRGO2_ENABLE
  - LL_TIM_TRGO2_UPDATE
  - LL_TIM_TRGO2_CC1F
  - LL_TIM_TRGO2_OC1
  - LL_TIM_TRGO2_OC2
  - LL_TIM_TRGO2_OC3

  - LL_TIM_TRGO2_OC5_RISING_OC6_RISING
  - LL_TIM_TRGO2_OC5_RISING_OC6_FALLING

Return values

- **None:**

Notes

- Macro IS_TIM_TRGO2_INSTANCE(TIMx) can be used to check whether or not a timer instance can be used for ADC synchronization.

Reference Manual to LL API cross reference:

- CR2 MMS2 LL_TIM_SetTriggerOutput2

LL_TIM_SetSlaveMode

Function name

__STATIC_INLINE void LL_TIM_SetSlaveMode (TIM_TypeDef * TIMx, uint32_t SlaveMode)

Function description

Set the synchronization mode of a slave timer.

Parameters

- **TIMx:** Timer instance
- **SlaveMode:** This parameter can be one of the following values:
  - LL_TIM_SLAVEMODE_DISABLED
  - LL_TIM_SLAVEMODE_RESET
  - LL_TIM_SLAVEMODE_GATED
  - LL_TIM_SLAVEMODE_TRIGGER
  - LL_TIM_SLAVEMODE_COMBINED_RESETTRIGGER
  - LL_TIM_SLAVEMODE_COMBINED_GATEDRESET

Return values

- **None:**

Notes

- Macro IS_TIM_SLAVE_INSTANCE(TIMx) can be used to check whether or not a timer instance can operate as a slave timer.

Reference Manual to LL API cross reference:

- SMCR SMS LL_TIM_SetSlaveMode

LL_TIM_SetTriggerInput

Function name

__STATIC_INLINE void LL_TIM_SetTriggerInput (TIM_TypeDef * TIMx, uint32_t TriggerInput)

Function description

Set the selects the trigger input to be used to synchronize the counter.

Parameters

- **TIMx:** Timer instance
- **TriggerInput:** This parameter can be one of the following values:
  - LL_TIM_TS_ITR0
  - LL_TIM_TS_ITR1
  - LL_TIM_TS_ITR2
  - LL_TIM_TS_ITR3
  - LL_TIM_TS_ITR6
  - LL_TIM_TS_ITR7
  - LL_TIM_TS_ITR8
  - LL_TIM_TS_ITR11
  - LL_TIM_TS_TI1F_ED
  - LL_TIM_TS_TI1FP1
  - LL_TIM_TS_TI2FP2
  - LL_TIM_TS_ETRF

Return values

- **None:**

Notes

- Macro IS_TIM_SLAVE_INSTANCE(TIMx) can be used to check whether or not a timer instance can operate as a slave timer.

Reference Manual to LL API cross reference:

- SMCR TS LL_TIM_SetTriggerInput

LL_TIM_EnableMasterSlaveMode

Function name

__STATIC_INLINE void LL_TIM_EnableMasterSlaveMode (TIM_TypeDef * TIMx)

Function description

Enable the Master/Slave mode.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_SLAVE_INSTANCE(TIMx) can be used to check whether or not a timer instance can operate as a slave timer.

Reference Manual to LL API cross reference:

- SMCR MSM LL_TIM_EnableMasterSlaveMode

LL_TIM_DisableMasterSlaveMode

Function name

__STATIC_INLINE void LL_TIM_DisableMasterSlaveMode (TIM_TypeDef * TIMx)

Function description

Disable the Master/Slave mode.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_SLAVE_INSTANCE(TIMx) can be used to check whether or not a timer instance can operate as a slave timer.

Reference Manual to LL API cross reference:

- SMCR MSM LL_TIM_DisableMasterSlaveMode

LL_TIM_IsEnabledMasterSlaveMode

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledMasterSlaveMode (const TIM_TypeDef * TIMx)

Function description

Indicates whether the Master/Slave mode is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_SLAVE_INSTANCE(TIMx) can be used to check whether or not a timer instance can operate as a slave timer.

Reference Manual to LL API cross reference:

- SMCR MSM LL_TIM_IsEnabledMasterSlaveMode

LL_TIM_ConfigETR

Function name

__STATIC_INLINE void LL_TIM_ConfigETR (TIM_TypeDef * TIMx, uint32_t ETRPolarity, uint32_t ETRPrescaler, uint32_t ETRFilter)

Function description

Configure the external trigger (ETR) input.

Parameters

- **TIMx:** Timer instance
- **ETRPolarity:** This parameter can be one of the following values:
  - LL_TIM_ETR_POLARITY_NONINVERTED
  - LL_TIM_ETR_POLARITY_INVERTED
- **ETRPrescaler:** This parameter can be one of the following values:
  - LL_TIM_ETR_PRESCALER_DIV1
  - LL_TIM_ETR_PRESCALER_DIV2
  - LL_TIM_ETR_PRESCALER_DIV4
  - LL_TIM_ETR_PRESCALER_DIV8
- **ETRFilter:** This parameter can be one of the following values:
  - LL_TIM_ETR_FILTER_FDIV1
  - LL_TIM_ETR_FILTER_FDIV1_N2
  - LL_TIM_ETR_FILTER_FDIV1_N4
  - LL_TIM_ETR_FILTER_FDIV1_N8
  - LL_TIM_ETR_FILTER_FDIV2_N6
  - LL_TIM_ETR_FILTER_FDIV2_N8
  - LL_TIM_ETR_FILTER_FDIV4_N6
  - LL_TIM_ETR_FILTER_FDIV4_N8
  - LL_TIM_ETR_FILTER_FDIV8_N6
  - LL_TIM_ETR_FILTER_FDIV8_N8
  - LL_TIM_ETR_FILTER_FDIV16_N5
  - LL_TIM_ETR_FILTER_FDIV16_N6
  - LL_TIM_ETR_FILTER_FDIV16_N8
  - LL_TIM_ETR_FILTER_FDIV32_N5
  - LL_TIM_ETR_FILTER_FDIV32_N6
  - LL_TIM_ETR_FILTER_FDIV32_N8

Return values

- **None:**

Notes

- Macro IS_TIM_ETR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an external trigger input.

Reference Manual to LL API cross reference:

- SMCR ETP LL_TIM_ConfigETR
- SMCR ETPS LL_TIM_ConfigETR
- SMCR ETF LL_TIM_ConfigETR

LL_TIM_SetETRSource

Function name

__STATIC_INLINE void LL_TIM_SetETRSource (TIM_TypeDef * TIMx, uint32_t ETRSource)

Function description

Select the external trigger (ETR) input source.

Parameters

- **TIMx:** Timer instance
- **ETRSource:** This parameter can be one of the following values:

Notes

- Macro IS_TIM_ETRSEL_INSTANCE(TIMx) can be used to check whether or not a timer instance supports ETR source selection.

Reference Manual to LL API cross reference:

- AF1 ETRSEL LL_TIM_SetETRSource

LL_TIM_EnableSMSPreload

Function name

__STATIC_INLINE void LL_TIM_EnableSMSPreload (TIM_TypeDef * TIMx)

Function description

Enable SMS preload.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_SMS_PRELOAD_INSTANCE(TIMx) can be used to check whether or not a timer instance supports the preload of SMS field in SMCR register.

Reference Manual to LL API cross reference:

- SMCR SMSPE LL_TIM_EnableSMSPreload

LL_TIM_DisableSMSPreload

Function name

__STATIC_INLINE void LL_TIM_DisableSMSPreload (TIM_TypeDef * TIMx)

Function description

Disable SMS preload.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_SMS_PRELOAD_INSTANCE(TIMx) can be used to check whether or not a timer instance supports the preload of SMS field in SMCR register.

Reference Manual to LL API cross reference:

- SMCR SMSPE LL_TIM_DisableSMSPreload

LL_TIM_IsEnabledSMSPreload

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledSMSPreload (const TIM_TypeDef * TIMx)

Function description

Indicate whether SMS preload is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_SMS_PRELOAD_INSTANCE(TIMx) can be used to check whether or not a timer instance supports the preload of SMS field in SMCR register.

Reference Manual to LL API cross reference:

- SMCR SMSPE LL_TIM_IsEnabledSMSPreload

LL_TIM_SetSMSPreloadSource

Function name

__STATIC_INLINE void LL_TIM_SetSMSPreloadSource (TIM_TypeDef * TIMx, uint32_t PreloadSource)

Function description

Set the preload source of SMS.

Parameters

- **TIMx:** Timer instance
- **PreloadSource:** This parameter can be one of the following values:
  - LL_TIM_SMSPS_TIMUPDATE
  - LL_TIM_SMSPS_INDEX

Return values

- **None:**

Notes

- Macro IS_TIM_SMS_PRELOAD_INSTANCE(TIMx) can be used to check whether or not a timer instance supports the preload of SMS field in SMCR register.

Reference Manual to LL API cross reference:

- SMCR SMSPS LL_TIM_SetSMSPreloadSource
-

LL_TIM_GetSMSPreloadSource

Function name

__STATIC_INLINE uint32_t LL_TIM_GetSMSPreloadSource (const TIM_TypeDef * TIMx)

Function description

Get the preload source of SMS.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_SMSPS_TIMUPDATE
  - LL_TIM_SMSPS_INDEX

Notes

- Macro IS_TIM_SMS_PRELOAD_INSTANCE(TIMx) can be used to check whether or not a timer instance supports the preload of SMS field in SMCR register.

Reference Manual to LL API cross reference:

- SMCR SMSPS LL_TIM_GetSMSPreloadSource
-

LL_TIM_EnableADCSynchronization

Function name

__STATIC_INLINE void LL_TIM_EnableADCSynchronization (TIM_TypeDef * TIMx)

Function description

Enable ADC synchronization.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_MASTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports ADC synchronization.

Reference Manual to LL API cross reference:

- CR2 ADSYNC LL_TIM_EnableADCSynchronization

LL_TIM_DisableADCSynchronization

Function name

__STATIC_INLINE void LL_TIM_DisableADCSynchronization (TIM_TypeDef * TIMx)

Function description

Enable ADC synchronization.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_MASTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports ADC synchronization.

Reference Manual to LL API cross reference:

- CR2 ADSYNC LL_TIM_DisableADCSynchronization

LL_TIM_IsEnabledADCSynchronization

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledADCSynchronization (const TIM_TypeDef * TIMx)

Function description

Indicate whether ADC sycnhronization is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_MASTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports ADC synchronization.

Reference Manual to LL API cross reference:

- CR2 ADSYNC LL_TIM_IsEnabledADCSynchronization

LL_TIM_EnableBRK

Function name

__STATIC_INLINE void LL_TIM_EnableBRK (TIM_TypeDef * TIMx)

Function description

Enable the break function.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR BKE LL_TIM_EnableBRK

LL_TIM_DisableBRK

Function name

__STATIC_INLINE void LL_TIM_DisableBRK (TIM_TypeDef * TIMx)

Function description

Disable the break function.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR BKE LL_TIM_DisableBRK

LL_TIM_ConfigBRK

Function name

__STATIC_INLINE void LL_TIM_ConfigBRK (TIM_TypeDef * TIMx, uint32_t BreakPolarity, uint32_t BreakFilter, uint32_t BreakAFMode)

Function description

Configure the break input.

Parameters

- **TIMx:** Timer instance
- **BreakPolarity:** This parameter can be one of the following values:
  - LL_TIM_BREAK_POLARITY_LOW
  - LL_TIM_BREAK_POLARITY_HIGH
- **BreakFilter:** This parameter can be one of the following values:
  - LL_TIM_BREAK_FILTER_FDIV1
  - LL_TIM_BREAK_FILTER_FDIV1_N2
  - LL_TIM_BREAK_FILTER_FDIV1_N4
  - LL_TIM_BREAK_FILTER_FDIV1_N8
  - LL_TIM_BREAK_FILTER_FDIV2_N6
  - LL_TIM_BREAK_FILTER_FDIV2_N8
  - LL_TIM_BREAK_FILTER_FDIV4_N6
  - LL_TIM_BREAK_FILTER_FDIV4_N8
  - LL_TIM_BREAK_FILTER_FDIV8_N6
  - LL_TIM_BREAK_FILTER_FDIV8_N8
  - LL_TIM_BREAK_FILTER_FDIV16_N5
  - LL_TIM_BREAK_FILTER_FDIV16_N6
  - LL_TIM_BREAK_FILTER_FDIV16_N8
  - LL_TIM_BREAK_FILTER_FDIV32_N5
  - LL_TIM_BREAK_FILTER_FDIV32_N6
  - LL_TIM_BREAK_FILTER_FDIV32_N8
- **BreakAFMode:** This parameter can be one of the following values:
  - LL_TIM_BREAK_AFMODE_INPUT
  - LL_TIM_BREAK_AFMODE_BIDIRECTIONAL

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.
- Bidirectional mode is only supported by advanced timer instances. Macro IS_TIM_ADVANCED_INSTANCE(TIMx) can be used to check whether or not a timer instance is an advanced-control timer.
- In bidirectional mode (BKBID bit set), the Break input is configured both in input mode and in open drain output mode. Any active Break event will assert a low logic level on the Break input to indicate an internal break event to external devices.
- When bidirectional mode isn't supported, BreakAFMode must be set to LL_TIM_BREAK_AFMODE_INPUT.

Reference Manual to LL API cross reference:

- BDTR BKP LL_TIM_ConfigBRK
- BDTR BKF LL_TIM_ConfigBRK
- BDTR BKBID LL_TIM_ConfigBRK

LL_TIM_DisarmBRK

Function name

__STATIC_INLINE void LL_TIM_DisarmBRK (TIM_TypeDef * TIMx)

Function description

Disarm the break input (when it operates in bidirectional mode).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- The break input can be disarmed only when it is configured in bidirectional mode and when when MOE is reset.
- Purpose is to be able to have the input voltage back to high-state, whatever the time constant on the output .

Reference Manual to LL API cross reference:

- BDTR BKDSRM LL_TIM_DisarmBRK

LL_TIM_EnableBRK2

Function name

__STATIC_INLINE void LL_TIM_EnableBRK2 (TIM_TypeDef * TIMx)

Function description

Enable the break 2 function.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_BKIN2_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a second break input.

Reference Manual to LL API cross reference:

- BDTR BK2E LL_TIM_EnableBRK2

LL_TIM_DisableBRK2

Function name

__STATIC_INLINE void LL_TIM_DisableBRK2 (TIM_TypeDef * TIMx)

Function description

Disable the break 2 function.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_BKIN2_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a second break input.

Reference Manual to LL API cross reference:

- BDTR BK2E LL_TIM_DisableBRK2

LL_TIM_ConfigBRK2

Function name

__STATIC_INLINE void LL_TIM_ConfigBRK2 (TIM_TypeDef * TIMx, uint32_t Break2Polarity, uint32_t Break2Filter, uint32_t Break2AFMode)

Function description

Configure the break 2 input.

Parameters

- **TIMx:** Timer instance
- **Break2Polarity:** This parameter can be one of the following values:
  - LL_TIM_BREAK2_POLARITY_LOW
  - LL_TIM_BREAK2_POLARITY_HIGH
- **Break2Filter:** This parameter can be one of the following values:
  - LL_TIM_BREAK2_FILTER_FDIV1
  - LL_TIM_BREAK2_FILTER_FDIV1_N2
  - LL_TIM_BREAK2_FILTER_FDIV1_N4
  - LL_TIM_BREAK2_FILTER_FDIV1_N8
  - LL_TIM_BREAK2_FILTER_FDIV2_N6
  - LL_TIM_BREAK2_FILTER_FDIV2_N8
  - LL_TIM_BREAK2_FILTER_FDIV4_N6
  - LL_TIM_BREAK2_FILTER_FDIV4_N8
  - LL_TIM_BREAK2_FILTER_FDIV8_N6
  - LL_TIM_BREAK2_FILTER_FDIV8_N8
  - LL_TIM_BREAK2_FILTER_FDIV16_N5
  - LL_TIM_BREAK2_FILTER_FDIV16_N6
  - LL_TIM_BREAK2_FILTER_FDIV16_N8
  - LL_TIM_BREAK2_FILTER_FDIV32_N5
  - LL_TIM_BREAK2_FILTER_FDIV32_N6
  - LL_TIM_BREAK2_FILTER_FDIV32_N8
- **Break2AFMode:** This parameter can be one of the following values:
  - LL_TIM_BREAK2_AFMODE_INPUT
  - LL_TIM_BREAK2_AFMODE_BIDIRECTIONAL

Return values

- **None:**

Notes

- Macro IS_TIM_BKIN2_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a second break input.
- Bidirectional mode is only supported by advanced timer instances. Macro IS_TIM_ADVANCED_INSTANCE(TIMx) can be used to check whether or not a timer instance is an advanced-control timer.
- In bidirectional mode (BK2BID bit set), the Break 2 input is configured both in input mode and in open drain output mode. Any active Break event will assert a low logic level on the Break 2 input to indicate an internal break event to external devices.
- When bidirectional mode isn't supported, Break2AFMode must be set to LL_TIM_BREAK2_AFMODE_INPUT.

Reference Manual to LL API cross reference:

- BDTR BK2P LL_TIM_ConfigBRK2
- BDTR BK2F LL_TIM_ConfigBRK2
- BDTR BK2BID LL_TIM_ConfigBRK2

LL_TIM_DisarmBRK2

Function name

__STATIC_INLINE void LL_TIM_DisarmBRK2 (TIM_TypeDef * TIMx)

Function description

Disarm the break 2 input (when it operates in bidirectional mode).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- The break 2 input can be disarmed only when it is configured in bidirectional mode and when when MOE is reset.
- Purpose is to be able to have the input voltage back to high-state, whatever the time constant on the output.

Reference Manual to LL API cross reference:

- BDTR BK2DSRM LL_TIM_DisarmBRK2

LL_TIM_SetOffStates

Function name

__STATIC_INLINE void LL_TIM_SetOffStates (TIM_TypeDef * TIMx, uint32_t OffStateIdle, uint32_t OffStateRun)

Function description

Select the outputs off state (enabled v.s.

Parameters

- **TIMx:** Timer instance
- **OffStateIdle:** This parameter can be one of the following values:
  - LL_TIM_OSSI_DISABLE
  - LL_TIM_OSSI_ENABLE
- **OffStateRun:** This parameter can be one of the following values:
  - LL_TIM_OSSR_DISABLE
  - LL_TIM_OSSR_ENABLE

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR OSSI LL_TIM_SetOffStates
- BDTR OSSR LL_TIM_SetOffStates

LL_TIM_EnableAutomaticOutput

Function name

__STATIC_INLINE void LL_TIM_EnableAutomaticOutput (TIM_TypeDef * TIMx)

Function description

Enable automatic output (MOE can be set by software or automatically when a break input is active).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR AOE LL_TIM_EnableAutomaticOutput

LL_TIM_DisableAutomaticOutput

Function name

__STATIC_INLINE void LL_TIM_DisableAutomaticOutput (TIM_TypeDef * TIMx)

Function description

Disable automatic output (MOE can be set only by software).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR AOE LL_TIM_DisableAutomaticOutput

LL_TIM_IsEnabledAutomaticOutput

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledAutomaticOutput (const TIM_TypeDef * TIMx)

Function description

Indicate whether automatic output is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR AOE LL_TIM_IsEnabledAutomaticOutput

LL_TIM_EnableAllOutputs

Function name

__STATIC_INLINE void LL_TIM_EnableAllOutputs (TIM_TypeDef * TIMx)

Function description

Enable the outputs (set the MOE bit in TIMx_BDTR register).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- The MOE bit in TIMx_BDTR register allows to enable /disable the outputs by software and is reset in case of break or break2 event
- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR MOE LL_TIM_EnableAllOutputs

LL_TIM_DisableAllOutputs

Function name

__STATIC_INLINE void LL_TIM_DisableAllOutputs (TIM_TypeDef * TIMx)

Function description

Disable the outputs (reset the MOE bit in TIMx_BDTR register).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- The MOE bit in TIMx_BDTR register allows to enable /disable the outputs by software and is reset in case of break or break2 event.
- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR MOE LL_TIM_DisableAllOutputs

LL_TIM_IsEnabledAllOutputs

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledAllOutputs (const TIM_TypeDef * TIMx)

Function description

Indicates whether outputs are enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR MOE LL_TIM_IsEnabledAllOutputs

LL_TIM_EnableBreakInputSource

Function name

__STATIC_INLINE void LL_TIM_EnableBreakInputSource (TIM_TypeDef * TIMx, uint32_t BreakInput, uint32_t Source)

Function description

Enable the signals connected to the designated timer break input.

Parameters

- **TIMx:** Timer instance
- **BreakInput:** This parameter can be one of the following values:
  - LL_TIM_BREAK_INPUT_BKIN
  - LL_TIM_BREAK_INPUT_BKIN2
- **Source:** This parameter can be one of the following values:
  - LL_TIM_BKIN_SOURCE_BKIN
  - LL_TIM_BKIN_SOURCE_BKCOMP1
  - LL_TIM_BKIN_SOURCE_BKCOMP2

Return values

- **None:**

Notes

- Macro IS_TIM_BREAKSOURCE_INSTANCE(TIMx) can be used to check whether or not a timer instance allows for break input selection.

Reference Manual to LL API cross reference:

- AF1 BKINE LL_TIM_EnableBreakInputSource
- AF1 BKCMP1E LL_TIM_EnableBreakInputSource

- AF2 BK2CMP1E LL_TIM_EnableBreakInputSource
- AF2 BK2CMP2E LL_TIM_EnableBreakInputSource
-

LL_TIM_DisableBreakInputSource

Function name

__STATIC_INLINE void LL_TIM_DisableBreakInputSource (TIM_TypeDef * TIMx, uint32_t BreakInput, uint32_t Source)

Function description

Disable the signals connected to the designated timer break input.

Parameters

- **TIMx:** Timer instance
- **BreakInput:** This parameter can be one of the following values:
  - LL_TIM_BREAK_INPUT_BKIN
  - LL_TIM_BREAK_INPUT_BKIN2
- **Source:** This parameter can be one of the following values:
  - LL_TIM_BKIN_SOURCE_BKIN
  - LL_TIM_BKIN_SOURCE_BKCOMP1
  - LL_TIM_BKIN_SOURCE_BKCOMP2

Return values

- **None:**

Notes

- Macro IS_TIM_BREAKSOURCE_INSTANCE(TIMx) can be used to check whether or not a timer instance allows for break input selection.

Reference Manual to LL API cross reference:

- AF1 BKINE LL_TIM_DisableBreakInputSource
- AF1 BKCMP1E LL_TIM_DisableBreakInputSource

- AF2 BK2CMP2E LL_TIM_DisableBreakInputSource
-

LL_TIM_SetBreakInputSourcePolarity

Function name

__STATIC_INLINE void LL_TIM_SetBreakInputSourcePolarity (TIM_TypeDef * TIMx, uint32_t BreakInput, uint32_t Source, uint32_t Polarity)

Function description

Set the polarity of the break signal for the timer break input.

Parameters

- **TIMx:** Timer instance
- **BreakInput:** This parameter can be one of the following values:
  - LL_TIM_BREAK_INPUT_BKIN
  - LL_TIM_BREAK_INPUT_BKIN2
- **Source:** This parameter can be one of the following values:
  - LL_TIM_BKIN_SOURCE_BKIN
  - LL_TIM_BKIN_SOURCE_BKCOMP1
  - LL_TIM_BKIN_SOURCE_BKCOMP2
- **Polarity:** This parameter can be one of the following values:
  - LL_TIM_BKIN_POLARITY_LOW
  - LL_TIM_BKIN_POLARITY_HIGH

Return values

- **None:**

Notes

- Macro IS_TIM_BREAKSOURCE_INSTANCE(TIMx) can be used to check whether or not a timer instance allows for break input selection.

Reference Manual to LL API cross reference:

- AF2 BK2CMP2P LL_TIM_SetBreakInputSourcePolarity

LL_TIM_EnableAsymmetricalDeadTime

Function name

__STATIC_INLINE void LL_TIM_EnableAsymmetricalDeadTime (TIM_TypeDef * TIMx)

Function description

Enable asymmetrical deadtime.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_DEADTIME_ASYMMETRICAL_INSTANCE(TIMx) can be used to check whether or not a timer instance provides asymmetrical deadtime.

Reference Manual to LL API cross reference:

- DTR2 DTAE LL_TIM_EnableAsymmetricalDeadTime

LL_TIM_DisableAsymmetricalDeadTime

Function name

__STATIC_INLINE void LL_TIM_DisableAsymmetricalDeadTime (TIM_TypeDef * TIMx)

Function description

Disable asymmetrical dead-time.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_DEADTIME_ASYMMETRICAL_INSTANCE(TIMx) can be used to check whether or not a timer instance provides asymmetrical deadtime.

Reference Manual to LL API cross reference:

- DTR2 DTAE LL_TIM_DisableAsymmetricalDeadTime

LL_TIM_IsEnabledAsymmetricalDeadTime

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledAsymmetricalDeadTime (const TIM_TypeDef * TIMx)

Function description

Indicates whether asymmetrical deadtime is activated.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_DEADTIME_ASYMMETRICAL_INSTANCE(TIMx) can be used to check whether or not a timer instance provides asymmetrical deadtime.

Reference Manual to LL API cross reference:

- DTR2 DTAE LL_TIM_IsEnabledAsymmetricalDeadTime

LL_TIM_SetFallingDeadTime

Function name

__STATIC_INLINE void LL_TIM_SetFallingDeadTime (TIM_TypeDef * TIMx, uint32_t DeadTime)

Function description

Set the falling edge dead-time delay (delay inserted between the falling edge of the OCxREF signal and the rising edge of OCxN signals).

Parameters

- **TIMx:** Timer instance
- **DeadTime:** between Min_Data=0 and Max_Data=255

Return values

- **None:**

Notes

- Macro IS_TIM_DEADTIME_ASYMMETRICAL_INSTANCE(TIMx) can be used to check whether or not asymmetrical dead-time insertion feature is supported by a timer instance.
- Helper macro __LL_TIM_CALC_DEADTIME can be used to calculate the DeadTime parameter
- This bit-field can not be modified as long as LOCK level 1, 2 or 3 has been programmed (LOCK bits in TIMx_BDTR register).

Reference Manual to LL API cross reference:

- DTR2 DTGF LL_TIM_SetFallingDeadTime

LL_TIM_GetFallingDeadTime

Function name

__STATIC_INLINE uint32_t LL_TIM_GetFallingDeadTime (const TIM_TypeDef * TIMx)

Function description

Get the falling edge dead-time delay (delay inserted between the falling edge of the OCxREF signal and the rising edge of OCxN signals).

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be between Min_Data=0 and Max_Data=255:

Notes

- Macro IS_TIM_DEADTIME_ASYMMETRICAL_INSTANCE(TIMx) can be used to check whether or not asymmetrical dead-time insertion feature is supported by a timer instance.
- This bit-field can not be modified as long as LOCK level 1, 2 or 3 has been programmed (LOCK bits in TIMx_BDTR register).

Reference Manual to LL API cross reference:

- DTR2 DTGF LL_TIM_GetFallingDeadTime

LL_TIM_EnableDeadTimePreload

Function name

__STATIC_INLINE void LL_TIM_EnableDeadTimePreload (TIM_TypeDef * TIMx)

Function description

Enable deadtime preload.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides deadtime preload.

Reference Manual to LL API cross reference:

- DTR2 DTPE LL_TIM_EnableDeadTimePreload

LL_TIM_DisableDeadTimePreload

Function name

__STATIC_INLINE void LL_TIM_DisableDeadTimePreload (TIM_TypeDef * TIMx)

Function description

Disable dead-time preload.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides deadtime preload.

Reference Manual to LL API cross reference:

- DTR2 DTPE LL_TIM_DisableDeadTimePreload

LL_TIM_IsEnabledDeadTimePreload

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledDeadTimePreload (const TIM_TypeDef * TIMx)

Function description

Indicates whether deadtime preload is activated.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides deadtime preload.

Reference Manual to LL API cross reference:

- DTR2 DTPE LL_TIM_IsEnabledDeadTimePreload

LL_TIM_ConfigDMABurst

Function name

__STATIC_INLINE void LL_TIM_ConfigDMABurst (TIM_TypeDef * TIMx, uint32_t DMABurstBaseAddress, uint32_t DMABurstLength, uint32_t DMABurstSource)

Function description

Configures the timer DMA burst feature.

Parameters

- **TIMx:** Timer instance
- **DMABurstBaseAddress:** This parameter can be one of the following values:
  - LL_TIM_DMABURST_BASEADDR_CR1
  - LL_TIM_DMABURST_BASEADDR_CR2
  - LL_TIM_DMABURST_BASEADDR_SMCR
  - LL_TIM_DMABURST_BASEADDR_DIER
  - LL_TIM_DMABURST_BASEADDR_SR
  - LL_TIM_DMABURST_BASEADDR_EGR
  - LL_TIM_DMABURST_BASEADDR_CCMR1
  - LL_TIM_DMABURST_BASEADDR_CCMR2
  - LL_TIM_DMABURST_BASEADDR_CCER
  - LL_TIM_DMABURST_BASEADDR_CNT
  - LL_TIM_DMABURST_BASEADDR_PSC
  - LL_TIM_DMABURST_BASEADDR_ARR
  - LL_TIM_DMABURST_BASEADDR_RCR
  - LL_TIM_DMABURST_BASEADDR_CCR1
  - LL_TIM_DMABURST_BASEADDR_CCR2
  - LL_TIM_DMABURST_BASEADDR_CCR3
  - LL_TIM_DMABURST_BASEADDR_CCR4
  - LL_TIM_DMABURST_BASEADDR_BDTR
  - LL_TIM_DMABURST_BASEADDR_CCR5
  - LL_TIM_DMABURST_BASEADDR_CCR6
  - LL_TIM_DMABURST_BASEADDR_CCMR3
  - LL_TIM_DMABURST_BASEADDR_DTR2
  - LL_TIM_DMABURST_BASEADDR_ECR
  - LL_TIM_DMABURST_BASEADDR_TISEL
  - LL_TIM_DMABURST_BASEADDR_AF1
  - LL_TIM_DMABURST_BASEADDR_AF2
  - LL_TIM_DMABURST_BASEADDR_OR1

- **DMABurstLength:** This parameter can be one of the following values:
  - LL_TIM_DMABURST_LENGTH_1TRANSFER
  - LL_TIM_DMABURST_LENGTH_2TRANSFERS
  - LL_TIM_DMABURST_LENGTH_3TRANSFERS
  - LL_TIM_DMABURST_LENGTH_4TRANSFERS
  - LL_TIM_DMABURST_LENGTH_5TRANSFERS
  - LL_TIM_DMABURST_LENGTH_6TRANSFERS
  - LL_TIM_DMABURST_LENGTH_7TRANSFERS
  - LL_TIM_DMABURST_LENGTH_8TRANSFERS
  - LL_TIM_DMABURST_LENGTH_9TRANSFERS
  - LL_TIM_DMABURST_LENGTH_10TRANSFERS
  - LL_TIM_DMABURST_LENGTH_11TRANSFERS
  - LL_TIM_DMABURST_LENGTH_12TRANSFERS
  - LL_TIM_DMABURST_LENGTH_13TRANSFERS
  - LL_TIM_DMABURST_LENGTH_14TRANSFERS
  - LL_TIM_DMABURST_LENGTH_15TRANSFERS
  - LL_TIM_DMABURST_LENGTH_16TRANSFERS
  - LL_TIM_DMABURST_LENGTH_17TRANSFERS
  - LL_TIM_DMABURST_LENGTH_18TRANSFERS
  - LL_TIM_DMABURST_LENGTH_19TRANSFERS
  - LL_TIM_DMABURST_LENGTH_20TRANSFERS
  - LL_TIM_DMABURST_LENGTH_21TRANSFERS
  - LL_TIM_DMABURST_LENGTH_22TRANSFERS
  - LL_TIM_DMABURST_LENGTH_23TRANSFERS
  - LL_TIM_DMABURST_LENGTH_24TRANSFERS
  - LL_TIM_DMABURST_LENGTH_25TRANSFERS
  - LL_TIM_DMABURST_LENGTH_26TRANSFERS
  - LL_TIM_DMABURST_LENGTH_27TRANSFERS
- **DMABurstSource:** This parameter can be one of the following values:
  - LL_TIM_DMA_UPDATE
  - LL_TIM_DMA_CC1
  - LL_TIM_DMA_CC2
  - LL_TIM_DMA_CC3
  - LL_TIM_DMA_CC4
  - LL_TIM_DMA_COM
  - LL_TIM_DMA_TRIGGER

Return values

- **None:**

Notes

- Macro IS_TIM_DMABURST_INSTANCE(TIMx) can be used to check whether or not a timer instance supports the DMA burst mode.

Reference Manual to LL API cross reference:

- DCR DBL LL_TIM_ConfigDMABurst
- DCR DBA LL_TIM_ConfigDMABurst

LL_TIM_EnableEncoderIndex

Function name

__STATIC_INLINE void LL_TIM_EnableEncoderIndex (TIM_TypeDef * TIMx)

Function description

Enable encoder index.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_INDEX_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an index input.

Reference Manual to LL API cross reference:

- ECR IE LL_TIM_EnableEncoderIndex

LL_TIM_DisableEncoderIndex

Function name

__STATIC_INLINE void LL_TIM_DisableEncoderIndex (TIM_TypeDef * TIMx)

Function description

Disable encoder index.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_INDEX_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an index input.

Reference Manual to LL API cross reference:

- ECR IE LL_TIM_DisableEncoderIndex

LL_TIM_IsEnabledEncoderIndex

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledEncoderIndex (const TIM_TypeDef * TIMx)

Function description

Indicate whether encoder index is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_INDEX_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an index input.

Reference Manual to LL API cross reference:

- ECR IE LL_TIM_IsEnabledEncoderIndex

LL_TIM_SetIndexDirection

Function name

__STATIC_INLINE void LL_TIM_SetIndexDirection (TIM_TypeDef * TIMx, uint32_t IndexDirection)

Function description

Set index direction.

Parameters

- **TIMx:** Timer instance
- **IndexDirection:** This parameter can be one of the following values:
  - LL_TIM_INDEX_UP_DOWN
  - LL_TIM_INDEX_UP
  - LL_TIM_INDEX_DOWN

Return values

- **None:**

Notes

- Macro IS_TIM_INDEX_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an index input.

Reference Manual to LL API cross reference:

- ECR IDIR LL_TIM_SetIndexDirection

LL_TIM_GetIndexDirection

Function name

__STATIC_INLINE uint32_t LL_TIM_GetIndexDirection (const TIM_TypeDef * TIMx)

Function description

Get actual index direction.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_INDEX_UP_DOWN
  - LL_TIM_INDEX_UP
  - LL_TIM_INDEX_DOWN

Notes

- Macro IS_TIM_INDEX_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an index input.

Reference Manual to LL API cross reference:

- ECR IDIR LL_TIM_GetIndexDirection

LL_TIM_SetIndexblanking

Function name

__STATIC_INLINE void LL_TIM_SetIndexblanking (TIM_TypeDef * TIMx, uint32_t Indexblanking)

Function description

Set index blanking.

Parameters

- **TIMx:** Timer instance
- **Indexblanking:** This parameter can be one of the following values:
  - LL_TIM_INDEX_BLANK_ALWAYS
  - LL_TIM_INDEX_BLANK_TI3
  - LL_TIM_INDEX_BLANK_TI4

Return values

- **None:**

Notes

- Macro IS_TIM_INDEX_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an index input.

Reference Manual to LL API cross reference:

- ECR IBLK LL_TIM_SetIndexblanking

LL_TIM_GetIndexblanking

Function name

__STATIC_INLINE uint32_t LL_TIM_GetIndexblanking (const TIM_TypeDef * TIMx)

Function description

Get actual index blanking.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_INDEX_BLANK_ALWAYS
  - LL_TIM_INDEX_BLANK_TI3
  - LL_TIM_INDEX_BLANK_TI4

Notes

- Macro IS_TIM_INDEX_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an index input.

Reference Manual to LL API cross reference:

- ECR IBLK LL_TIM_GetIndexblanking

LL_TIM_EnableFirstIndex

Function name

__STATIC_INLINE void LL_TIM_EnableFirstIndex (TIM_TypeDef * TIMx)

Function description

Enable first index.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_INDEX_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an index input.

Reference Manual to LL API cross reference:

- ECR FIDX LL_TIM_EnableFirstIndex

LL_TIM_DisableFirstIndex

Function name

__STATIC_INLINE void LL_TIM_DisableFirstIndex (TIM_TypeDef * TIMx)

Function description

Disable first index.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_INDEX_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an index input.

Reference Manual to LL API cross reference:

- ECR FIDX LL_TIM_DisableFirstIndex

LL_TIM_IsEnabledFirstIndex

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledFirstIndex (const TIM_TypeDef * TIMx)

Function description

Indicates whether first index is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_INDEX_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an index input.

Reference Manual to LL API cross reference:

- ECR FIDX LL_TIM_IsEnabledFirstIndex

LL_TIM_SetIndexPositionning

Function name

__STATIC_INLINE void LL_TIM_SetIndexPositionning (TIM_TypeDef * TIMx, uint32_t IndexPositionning)

Function description

Set index positioning.

Parameters

- **TIMx:** Timer instance
- **IndexPositionning:** This parameter can be one of the following values:
  - LL_TIM_INDEX_POSITION_DOWN_DOWN
  - LL_TIM_INDEX_POSITION_DOWN_UP
  - LL_TIM_INDEX_POSITION_UP_DOWN
  - LL_TIM_INDEX_POSITION_UP_UP
  - LL_TIM_INDEX_POSITION_DOWN
  - LL_TIM_INDEX_POSITION_UP

Return values

- **None:**

Notes

- Macro IS_TIM_INDEX_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an index input.

Reference Manual to LL API cross reference:

- ECR IPOS LL_TIM_SetIndexPositionning

LL_TIM_GetIndexPositionning

Function name

__STATIC_INLINE uint32_t LL_TIM_GetIndexPositionning (const TIM_TypeDef * TIMx)

Function description

Get actual index positioning.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_INDEX_POSITION_DOWN_DOWN
  - LL_TIM_INDEX_POSITION_DOWN_UP
  - LL_TIM_INDEX_POSITION_UP_DOWN
  - LL_TIM_INDEX_POSITION_UP_UP
  - LL_TIM_INDEX_POSITION_DOWN
  - LL_TIM_INDEX_POSITION_UP

Notes

- Macro IS_TIM_INDEX_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an index input.

Reference Manual to LL API cross reference:

- ECR IPOS LL_TIM_GetIndexPositionning

LL_TIM_ConfigIDX

Function name

__STATIC_INLINE void LL_TIM_ConfigIDX (TIM_TypeDef * TIMx, uint32_t Configuration)

Function description

Configure encoder index.

Parameters

- **TIMx:** Timer instance
- **Configuration:** This parameter must be a combination of all the following values:
  - LL_TIM_INDEX_UP or LL_TIM_INDEX_DOWN or LL_TIM_INDEX_UP_DOWN
  - LL_TIM_INDEX_BLANK_ALWAYS or LL_TIM_INDEX_BLANK_TI3 or LL_TIM_INDEX_BLANK_TI4
  - LL_TIM_INDEX_ALL or LL_TIM_INDEX_FIRST_ONLY
  - LL_TIM_INDEX_POSITION_DOWN_DOWN or ... or LL_TIM_INDEX_POSITION_UP

Return values

- **None:**

Notes

- Macro IS_TIM_INDEX_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an index input.

Reference Manual to LL API cross reference:

- ECR IDIR LL_TIM_ConfigIDX
- ECR IBLK LL_TIM_ConfigIDX
- ECR FIDX LL_TIM_ConfigIDX
- ECR IPOS LL_TIM_ConfigIDX

LL_TIM_SetRemap

Function name

__STATIC_INLINE void LL_TIM_SetRemap (TIM_TypeDef * TIMx, uint32_t Remap)

Function description

Remap TIM inputs (input channel, internal/external triggers).

Parameters

- **TIMx:** Timer instance
- **Remap:** Remap param depends on the TIMx. Description available only in CHM version of the User Manual (not in .pdf). Otherwise see Reference Manual description of TISEL registers.

Notes

- Macro IS_TIM_REMAP_INSTANCE(TIMx) can be used to check whether or not a some timer inputs can be remapped.

Reference Manual to LL API cross reference:

- TIM1_TISEL TI1SEL LL_TIM_SetRemap
- TIM2_TISEL TI1SEL LL_TIM_SetRemap
- TIM2_TISEL TI2SEL LL_TIM_SetRemap
- TIM2_TISEL TI4SEL LL_TIM_SetRemap
- TIM3_TISEL TI1SEL LL_TIM_SetRemap
- TIM3_TISEL TI2SEL LL_TIM_SetRemap
- TIM16_TISEL TI1SEL LL_TIM_SetRemap
- TIM17_TISEL TI1SEL LL_TIM_SetRemap

LL_TIM_EnableHSE32

Function name

__STATIC_INLINE void LL_TIM_EnableHSE32 (TIM_TypeDef * TIMx)

Function description

Enable request for HSE/32 clock used for TISEL remap.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Only TIM16 and TIM17 support HSE/32 remap

Reference Manual to LL API cross reference:

- OR1 HSE32EN LL_TIM_EnableHSE32

LL_TIM_DisableHSE32

Function name

__STATIC_INLINE void LL_TIM_DisableHSE32 (TIM_TypeDef * TIMx)

Function description

Disable request for HSE/32 clock used for TISEL remap.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Only TIM16 and TIM17 support HSE/32 remap

Reference Manual to LL API cross reference:

- OR1 HSE32EN LL_TIM_DisableHSE32

LL_TIM_IsEnabledHSE32

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledHSE32 (const TIM_TypeDef * TIMx)

Function description

Indicate whether request for HSE/32 clock is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Only TIM16 and TIM17 support HSE/32 remap

Reference Manual to LL API cross reference:

- OR1 HSE32EN LL_TIM_IsEnabledHSE32

LL_TIM_SetOCRefClearInputSource

Function name

__STATIC_INLINE void LL_TIM_SetOCRefClearInputSource (TIM_TypeDef * TIMx, uint32_t OCRefClearInputSource)

Function description

Set the OCREF clear input source.

Parameters

- **TIMx:** Timer instance
- **OCRefClearInputSource:** This parameter can be one of the following values:
  - LL_TIM_OCREF_CLR_INT_ETR
  - LL_TIM_OCREF_CLR_INT_COMP1
  - LL_TIM_OCREF_CLR_INT_COMP2

Return values

- **None:**

Notes

- The OCxREF signal of a given channel can be cleared when a high level is applied on the OCREF_CLR_INPUT
- This function can only be used in Output compare and PWM modes.
- Macro IS_TIM_OCCS_INSTANCE(TIMx) can be used to check whether or not a timer instance can configure OCREF clear input source.

Reference Manual to LL API cross reference:

- SMCR OCCS LL_TIM_SetOCRefClearInputSource
- AF2 OCRSEL LL_TIM_SetOCRefClearInputSource

LL_TIM_ClearFlag_UPDATE

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_UPDATE (TIM_TypeDef * TIMx)

Function description

Clear the update interrupt flag (UIF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR UIF LL_TIM_ClearFlag_UPDATE

LL_TIM_IsActiveFlag_UPDATE

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_UPDATE (const TIM_TypeDef * TIMx)

Function description

Indicate whether update interrupt flag (UIF) is set (update interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR UIF LL_TIM_IsActiveFlag_UPDATE

LL_TIM_ClearFlag_CC1

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC1 (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 1 interrupt flag (CC1F).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC1IF LL_TIM_ClearFlag_CC1

LL_TIM_IsActiveFlag_CC1

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC1 (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 1 interrupt flag (CC1F) is set (Capture/Compare 1 interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC1IF LL_TIM_IsActiveFlag_CC1

LL_TIM_ClearFlag_CC2

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC2 (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 2 interrupt flag (CC2F).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC2IF LL_TIM_ClearFlag_CC2

LL_TIM_IsActiveFlag_CC2

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC2 (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 2 interrupt flag (CC2F) is set (Capture/Compare 2 interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC2IF LL_TIM_IsActiveFlag_CC2

LL_TIM_ClearFlag_CC3

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC3 (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 3 interrupt flag (CC3F).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC3IF LL_TIM_ClearFlag_CC3

LL_TIM_IsActiveFlag_CC3

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC3 (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 3 interrupt flag (CC3F) is set (Capture/Compare 3 interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC3IF LL_TIM_IsActiveFlag_CC3

LL_TIM_ClearFlag_CC4

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC4 (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 4 interrupt flag (CC4F).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC4IF LL_TIM_ClearFlag_CC4

LL_TIM_IsActiveFlag_CC4

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC4 (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 4 interrupt flag (CC4F) is set (Capture/Compare 4 interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC4IF LL_TIM_IsActiveFlag_CC4

LL_TIM_ClearFlag_CC5

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC5 (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 5 interrupt flag (CC5F).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC5IF LL_TIM_ClearFlag_CC5

LL_TIM_IsActiveFlag_CC5

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC5 (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 5 interrupt flag (CC5F) is set (Capture/Compare 5 interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC5IF LL_TIM_IsActiveFlag_CC5

LL_TIM_ClearFlag_CC6

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC6 (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 6 interrupt flag (CC6F).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC6IF LL_TIM_ClearFlag_CC6

LL_TIM_IsActiveFlag_CC6

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC6 (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 6 interrupt flag (CC6F) is set (Capture/Compare 6 interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC6IF LL_TIM_IsActiveFlag_CC6

LL_TIM_ClearFlag_COM

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_COM (TIM_TypeDef * TIMx)

Function description

Clear the commutation interrupt flag (COMIF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR COMIF LL_TIM_ClearFlag_COM

LL_TIM_IsActiveFlag_COM

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_COM (const TIM_TypeDef * TIMx)

Function description

Indicate whether commutation interrupt flag (COMIF) is set (commutation interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR COMIF LL_TIM_IsActiveFlag_COM

LL_TIM_ClearFlag_TRIG

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_TRIG (TIM_TypeDef * TIMx)

Function description

Clear the trigger interrupt flag (TIF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR TIF LL_TIM_ClearFlag_TRIG

LL_TIM_IsActiveFlag_TRIG

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_TRIG (const TIM_TypeDef * TIMx)

Function description

Indicate whether trigger interrupt flag (TIF) is set (trigger interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR TIF LL_TIM_IsActiveFlag_TRIG

LL_TIM_ClearFlag_BRK

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_BRK (TIM_TypeDef * TIMx)

Function description

Clear the break interrupt flag (BIF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR BIF LL_TIM_ClearFlag_BRK

LL_TIM_IsActiveFlag_BRK

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_BRK (const TIM_TypeDef * TIMx)

Function description

Indicate whether break interrupt flag (BIF) is set (break interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR BIF LL_TIM_IsActiveFlag_BRK

LL_TIM_ClearFlag_BRK2

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_BRK2 (TIM_TypeDef * TIMx)

Function description

Clear the break 2 interrupt flag (B2IF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR B2IF LL_TIM_ClearFlag_BRK2

LL_TIM_IsActiveFlag_BRK2

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_BRK2 (const TIM_TypeDef * TIMx)

Function description

Indicate whether break 2 interrupt flag (B2IF) is set (break 2 interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR B2IF LL_TIM_IsActiveFlag_BRK2

LL_TIM_ClearFlag_CC1OVR

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC1OVR (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 1 over-capture interrupt flag (CC1OF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC1OF LL_TIM_ClearFlag_CC1OVR

LL_TIM_IsActiveFlag_CC1OVR

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC1OVR (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 1 over-capture interrupt flag (CC1OF) is set (Capture/Compare 1 interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC1OF LL_TIM_IsActiveFlag_CC1OVR

LL_TIM_ClearFlag_CC2OVR

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC2OVR (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 2 over-capture interrupt flag (CC2OF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC2OF LL_TIM_ClearFlag_CC2OVR

LL_TIM_IsActiveFlag_CC2OVR

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC2OVR (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 2 over-capture interrupt flag (CC2OF) is set (Capture/Compare 2 over-capture interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC2OF LL_TIM_IsActiveFlag_CC2OVR

LL_TIM_ClearFlag_CC3OVR

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC3OVR (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 3 over-capture interrupt flag (CC3OF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC3OF LL_TIM_ClearFlag_CC3OVR

LL_TIM_IsActiveFlag_CC3OVR

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC3OVR (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 3 over-capture interrupt flag (CC3OF) is set (Capture/Compare 3 over-capture interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC3OF LL_TIM_IsActiveFlag_CC3OVR

LL_TIM_ClearFlag_CC4OVR

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC4OVR (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 4 over-capture interrupt flag (CC4OF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC4OF LL_TIM_ClearFlag_CC4OVR

LL_TIM_IsActiveFlag_CC4OVR

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC4OVR (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 4 over-capture interrupt flag (CC4OF) is set (Capture/Compare 4 over-capture interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC4OF LL_TIM_IsActiveFlag_CC4OVR

LL_TIM_ClearFlag_SYSBRK

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_SYSBRK (TIM_TypeDef * TIMx)

Function description

Clear the system break interrupt flag (SBIF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR SBIF LL_TIM_ClearFlag_SYSBRK

LL_TIM_IsActiveFlag_SYSBRK

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_SYSBRK (const TIM_TypeDef * TIMx)

Function description

Indicate whether system break interrupt flag (SBIF) is set (system break interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR SBIF LL_TIM_IsActiveFlag_SYSBRK

LL_TIM_ClearFlag_TERR

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_TERR (TIM_TypeDef * TIMx)

Function description

Clear the transition error interrupt flag (TERRF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_ENCODER_ERROR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder error management.

Reference Manual to LL API cross reference:

- SR TERRF LL_TIM_ClearFlag_TERR

LL_TIM_IsActiveFlag_TERR

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_TERR (const TIM_TypeDef * TIMx)

Function description

Indicate whether transition error interrupt flag (TERRF) is set (transition error interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_ENCODER_ERROR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder error management.

Reference Manual to LL API cross reference:

- SR TERRF LL_TIM_IsActiveFlag_TERR

LL_TIM_ClearFlag_IERR

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_IERR (TIM_TypeDef * TIMx)

Function description

Clear the index error interrupt flag (IERRF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_ENCODER_ERROR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder error management.

Reference Manual to LL API cross reference:

- SR IERRF LL_TIM_ClearFlag_IERR

LL_TIM_IsActiveFlag_IERR

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_IERR (const TIM_TypeDef * TIMx)

Function description

Indicate whether index error interrupt flag (IERRF) is set (index error interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_ENCODER_ERROR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder error management.

Reference Manual to LL API cross reference:

- SR IERRF LL_TIM_IsActiveFlag_IERR

LL_TIM_ClearFlag_DIR

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_DIR (TIM_TypeDef * TIMx)

Function description

Clear the direction change interrupt flag (DIRF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_FUNCTINONAL_ENCODER_INTERRUPT_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder interrupt management.

Reference Manual to LL API cross reference:

- SR DIRF LL_TIM_ClearFlag_DIR

LL_TIM_IsActiveFlag_DIR

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_DIR (const TIM_TypeDef * TIMx)

Function description

Indicate whether direction change interrupt flag (DIRF) is set (direction change interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_FUNCTINONAL_ENCODER_INTERRUPT_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder interrupt management.

Reference Manual to LL API cross reference:

- SR DIRF LL_TIM_IsActiveFlag_DIR

LL_TIM_ClearFlag_IDX

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_IDX (TIM_TypeDef * TIMx)

Function description

Clear the index interrupt flag (IDXF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_FUNCTINONAL_ENCODER_INTERRUPT_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder interrupt management.

Reference Manual to LL API cross reference:

- SR IDXF LL_TIM_ClearFlag_IDX

LL_TIM_IsActiveFlag_IDX

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_IDX (const TIM_TypeDef * TIMx)

Function description

Indicate whether index interrupt flag (IDXF) is set (index interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_FUNCTINONAL_ENCODER_INTERRUPT_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder interrupt management.

Reference Manual to LL API cross reference:

- SR IDXF LL_TIM_IsActiveFlag_IDX

LL_TIM_EnableIT_UPDATE

Function name

__STATIC_INLINE void LL_TIM_EnableIT_UPDATE (TIM_TypeDef * TIMx)

Function description

Enable update interrupt (UIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER UIE LL_TIM_EnableIT_UPDATE

LL_TIM_DisableIT_UPDATE

Function name

__STATIC_INLINE void LL_TIM_DisableIT_UPDATE (TIM_TypeDef * TIMx)

Function description

Disable update interrupt (UIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER UIE LL_TIM_DisableIT_UPDATE

LL_TIM_IsEnabledIT_UPDATE

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_UPDATE (const TIM_TypeDef * TIMx)

Function description

Indicates whether the update interrupt (UIE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER UIE LL_TIM_IsEnabledIT_UPDATE

LL_TIM_EnableIT_CC1

Function name

__STATIC_INLINE void LL_TIM_EnableIT_CC1 (TIM_TypeDef * TIMx)

Function description

Enable capture/compare 1 interrupt (CC1IE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC1IE LL_TIM_EnableIT_CC1

LL_TIM_DisableIT_CC1

Function name

__STATIC_INLINE void LL_TIM_DisableIT_CC1 (TIM_TypeDef * TIMx)

Function description

Disable capture/compare 1 interrupt (CC1IE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC1IE LL_TIM_DisableIT_CC1

LL_TIM_IsEnabledIT_CC1

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_CC1 (const TIM_TypeDef * TIMx)

Function description

Indicates whether the capture/compare 1 interrupt (CC1IE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC1IE LL_TIM_IsEnabledIT_CC1

LL_TIM_EnableIT_CC2

Function name

__STATIC_INLINE void LL_TIM_EnableIT_CC2 (TIM_TypeDef * TIMx)

Function description

Enable capture/compare 2 interrupt (CC2IE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC2IE LL_TIM_EnableIT_CC2

LL_TIM_DisableIT_CC2

Function name

__STATIC_INLINE void LL_TIM_DisableIT_CC2 (TIM_TypeDef * TIMx)

Function description

Disable capture/compare 2 interrupt (CC2IE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC2IE LL_TIM_DisableIT_CC2

LL_TIM_IsEnabledIT_CC2

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_CC2 (const TIM_TypeDef * TIMx)

Function description

Indicates whether the capture/compare 2 interrupt (CC2IE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC2IE LL_TIM_IsEnabledIT_CC2

LL_TIM_EnableIT_CC3

Function name

__STATIC_INLINE void LL_TIM_EnableIT_CC3 (TIM_TypeDef * TIMx)

Function description

Enable capture/compare 3 interrupt (CC3IE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC3IE LL_TIM_EnableIT_CC3

LL_TIM_DisableIT_CC3

Function name

__STATIC_INLINE void LL_TIM_DisableIT_CC3 (TIM_TypeDef * TIMx)

Function description

Disable capture/compare 3 interrupt (CC3IE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC3IE LL_TIM_DisableIT_CC3

LL_TIM_IsEnabledIT_CC3

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_CC3 (const TIM_TypeDef * TIMx)

Function description

Indicates whether the capture/compare 3 interrupt (CC3IE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC3IE LL_TIM_IsEnabledIT_CC3

LL_TIM_EnableIT_CC4

Function name

__STATIC_INLINE void LL_TIM_EnableIT_CC4 (TIM_TypeDef * TIMx)

Function description

Enable capture/compare 4 interrupt (CC4IE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC4IE LL_TIM_EnableIT_CC4

LL_TIM_DisableIT_CC4

Function name

__STATIC_INLINE void LL_TIM_DisableIT_CC4 (TIM_TypeDef * TIMx)

Function description

Disable capture/compare 4 interrupt (CC4IE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC4IE LL_TIM_DisableIT_CC4

LL_TIM_IsEnabledIT_CC4

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_CC4 (const TIM_TypeDef * TIMx)

Function description

Indicates whether the capture/compare 4 interrupt (CC4IE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC4IE LL_TIM_IsEnabledIT_CC4

LL_TIM_EnableIT_COM

Function name

__STATIC_INLINE void LL_TIM_EnableIT_COM (TIM_TypeDef * TIMx)

Function description

Enable commutation interrupt (COMIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER COMIE LL_TIM_EnableIT_COM

LL_TIM_DisableIT_COM

Function name

__STATIC_INLINE void LL_TIM_DisableIT_COM (TIM_TypeDef * TIMx)

Function description

Disable commutation interrupt (COMIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER COMIE LL_TIM_DisableIT_COM

LL_TIM_IsEnabledIT_COM

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_COM (const TIM_TypeDef * TIMx)

Function description

Indicates whether the commutation interrupt (COMIE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER COMIE LL_TIM_IsEnabledIT_COM

LL_TIM_EnableIT_TRIG

Function name

__STATIC_INLINE void LL_TIM_EnableIT_TRIG (TIM_TypeDef * TIMx)

Function description

Enable trigger interrupt (TIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER TIE LL_TIM_EnableIT_TRIG

LL_TIM_DisableIT_TRIG

Function name

__STATIC_INLINE void LL_TIM_DisableIT_TRIG (TIM_TypeDef * TIMx)

Function description

Disable trigger interrupt (TIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER TIE LL_TIM_DisableIT_TRIG

LL_TIM_IsEnabledIT_TRIG

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_TRIG (const TIM_TypeDef * TIMx)

Function description

Indicates whether the trigger interrupt (TIE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER TIE LL_TIM_IsEnabledIT_TRIG

LL_TIM_EnableIT_BRK

Function name

__STATIC_INLINE void LL_TIM_EnableIT_BRK (TIM_TypeDef * TIMx)

Function description

Enable break interrupt (BIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER BIE LL_TIM_EnableIT_BRK

LL_TIM_DisableIT_BRK

Function name

__STATIC_INLINE void LL_TIM_DisableIT_BRK (TIM_TypeDef * TIMx)

Function description

Disable break interrupt (BIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER BIE LL_TIM_DisableIT_BRK

LL_TIM_IsEnabledIT_BRK

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_BRK (const TIM_TypeDef * TIMx)

Function description

Indicates whether the break interrupt (BIE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER BIE LL_TIM_IsEnabledIT_BRK

LL_TIM_EnableIT_TERR

Function name

__STATIC_INLINE void LL_TIM_EnableIT_TERR (TIM_TypeDef * TIMx)

Function description

Enable transition error interrupt (TERRIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_ENCODER_ERROR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder error management.

Reference Manual to LL API cross reference:

- DIER TERRIE LL_TIM_EnableIT_TERR

LL_TIM_DisableIT_TERR

Function name

__STATIC_INLINE void LL_TIM_DisableIT_TERR (TIM_TypeDef * TIMx)

Function description

Disable transition error interrupt (TERRIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_ENCODER_ERROR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder error management.

Reference Manual to LL API cross reference:

- DIER TERRIE LL_TIM_DisableIT_TERR

LL_TIM_IsEnabledIT_TERR

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_TERR (const TIM_TypeDef * TIMx)

Function description

Indicates whether the transition error interrupt (TERRIE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_ENCODER_ERROR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder error management.

Reference Manual to LL API cross reference:

- DIER TERRIE LL_TIM_IsEnabledIT_TERR

LL_TIM_EnableIT_IERR

Function name

__STATIC_INLINE void LL_TIM_EnableIT_IERR (TIM_TypeDef * TIMx)

Function description

Enable index error interrupt (IERRIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_ENCODER_ERROR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder error management.

Reference Manual to LL API cross reference:

- DIER IERRIE LL_TIM_EnableIT_IERR

LL_TIM_DisableIT_IERR

Function name

__STATIC_INLINE void LL_TIM_DisableIT_IERR (TIM_TypeDef * TIMx)

Function description

Disable index error interrupt (IERRIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_ENCODER_ERROR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder error management.

Reference Manual to LL API cross reference:

- DIER IERRIE LL_TIM_DisableIT_IERR

LL_TIM_IsEnabledIT_IERR

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_IERR (const TIM_TypeDef * TIMx)

Function description

Indicates whether the index error interrupt (IERRIE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_ENCODER_ERROR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder error management.

Reference Manual to LL API cross reference:

- DIER IERRIE LL_TIM_IsEnabledIT_IERR

LL_TIM_EnableIT_DIR

Function name

__STATIC_INLINE void LL_TIM_EnableIT_DIR (TIM_TypeDef * TIMx)

Function description

Enable direction change interrupt (DIRIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_FUNCTINONAL_ENCODER_INTERRUPT_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder interrupt management.

Reference Manual to LL API cross reference:

- DIER DIRIE LL_TIM_EnableIT_DIR

LL_TIM_DisableIT_DIR

Function name

__STATIC_INLINE void LL_TIM_DisableIT_DIR (TIM_TypeDef * TIMx)

Function description

Disable direction change interrupt (DIRIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_FUNCTINONAL_ENCODER_INTERRUPT_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder interrupt management.

Reference Manual to LL API cross reference:

- DIER DIRIE LL_TIM_DisableIT_DIR

LL_TIM_IsEnabledIT_DIR

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_DIR (const TIM_TypeDef * TIMx)

Function description

Indicates whether the direction change interrupt (DIRIE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_FUNCTINONAL_ENCODER_INTERRUPT_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder interrupt management.

Reference Manual to LL API cross reference:

- DIER DIRIE LL_TIM_IsEnabledIT_DIR

LL_TIM_EnableIT_IDX

Function name

__STATIC_INLINE void LL_TIM_EnableIT_IDX (TIM_TypeDef * TIMx)

Function description

Enable index interrupt (IDXIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_FUNCTINONAL_ENCODER_INTERRUPT_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder interrupt management.

Reference Manual to LL API cross reference:

- DIER IDXIE LL_TIM_EnableIT_IDX

LL_TIM_DisableIT_IDX

Function name

__STATIC_INLINE void LL_TIM_DisableIT_IDX (TIM_TypeDef * TIMx)

Function description

Disable index interrupt (IDXIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_FUNCTINONAL_ENCODER_INTERRUPT_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder interrupt management.

Reference Manual to LL API cross reference:

- DIER IDXIE LL_TIM_DisableIT_IDX

LL_TIM_IsEnabledIT_IDX

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_IDX (const TIM_TypeDef * TIMx)

Function description

Indicates whether the index interrupt (IDXIE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_FUNCTINONAL_ENCODER_INTERRUPT_INSTANCE(TIMx) can be used to check whether or not a timer instance provides encoder interrupt management.

Reference Manual to LL API cross reference:

- DIER IDXIE LL_TIM_IsEnabledIT_IDX

LL_TIM_EnableDMAReq_UPDATE

Function name

__STATIC_INLINE void LL_TIM_EnableDMAReq_UPDATE (TIM_TypeDef * TIMx)

Function description

Enable update DMA request (UDE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER UDE LL_TIM_EnableDMAReq_UPDATE

LL_TIM_DisableDMAReq_UPDATE

Function name

__STATIC_INLINE void LL_TIM_DisableDMAReq_UPDATE (TIM_TypeDef * TIMx)

Function description

Disable update DMA request (UDE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER UDE LL_TIM_DisableDMAReq_UPDATE

LL_TIM_IsEnabledDMAReq_UPDATE

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledDMAReq_UPDATE (const TIM_TypeDef * TIMx)

Function description

Indicates whether the update DMA request (UDE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER UDE LL_TIM_IsEnabledDMAReq_UPDATE

LL_TIM_EnableDMAReq_CC1

Function name

__STATIC_INLINE void LL_TIM_EnableDMAReq_CC1 (TIM_TypeDef * TIMx)

Function description

Enable capture/compare 1 DMA request (CC1DE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC1DE LL_TIM_EnableDMAReq_CC1

LL_TIM_DisableDMAReq_CC1

Function name

__STATIC_INLINE void LL_TIM_DisableDMAReq_CC1 (TIM_TypeDef * TIMx)

Function description

Disable capture/compare 1 DMA request (CC1DE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC1DE LL_TIM_DisableDMAReq_CC1

LL_TIM_IsEnabledDMAReq_CC1

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledDMAReq_CC1 (const TIM_TypeDef * TIMx)

Function description

Indicates whether the capture/compare 1 DMA request (CC1DE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC1DE LL_TIM_IsEnabledDMAReq_CC1

LL_TIM_EnableDMAReq_CC2

Function name

__STATIC_INLINE void LL_TIM_EnableDMAReq_CC2 (TIM_TypeDef * TIMx)

Function description

Enable capture/compare 2 DMA request (CC2DE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC2DE LL_TIM_EnableDMAReq_CC2

LL_TIM_DisableDMAReq_CC2

Function name

__STATIC_INLINE void LL_TIM_DisableDMAReq_CC2 (TIM_TypeDef * TIMx)

Function description

Disable capture/compare 2 DMA request (CC2DE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC2DE LL_TIM_DisableDMAReq_CC2

LL_TIM_IsEnabledDMAReq_CC2

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledDMAReq_CC2 (const TIM_TypeDef * TIMx)

Function description

Indicates whether the capture/compare 2 DMA request (CC2DE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC2DE LL_TIM_IsEnabledDMAReq_CC2

LL_TIM_EnableDMAReq_CC3

Function name

__STATIC_INLINE void LL_TIM_EnableDMAReq_CC3 (TIM_TypeDef * TIMx)

Function description

Enable capture/compare 3 DMA request (CC3DE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC3DE LL_TIM_EnableDMAReq_CC3

LL_TIM_DisableDMAReq_CC3

Function name

__STATIC_INLINE void LL_TIM_DisableDMAReq_CC3 (TIM_TypeDef * TIMx)

Function description

Disable capture/compare 3 DMA request (CC3DE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC3DE LL_TIM_DisableDMAReq_CC3

LL_TIM_IsEnabledDMAReq_CC3

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledDMAReq_CC3 (const TIM_TypeDef * TIMx)

Function description

Indicates whether the capture/compare 3 DMA request (CC3DE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC3DE LL_TIM_IsEnabledDMAReq_CC3

LL_TIM_EnableDMAReq_CC4

Function name

__STATIC_INLINE void LL_TIM_EnableDMAReq_CC4 (TIM_TypeDef * TIMx)

Function description

Enable capture/compare 4 DMA request (CC4DE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC4DE LL_TIM_EnableDMAReq_CC4

LL_TIM_DisableDMAReq_CC4

Function name

__STATIC_INLINE void LL_TIM_DisableDMAReq_CC4 (TIM_TypeDef * TIMx)

Function description

Disable capture/compare 4 DMA request (CC4DE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC4DE LL_TIM_DisableDMAReq_CC4

LL_TIM_IsEnabledDMAReq_CC4

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledDMAReq_CC4 (const TIM_TypeDef * TIMx)

Function description

Indicates whether the capture/compare 4 DMA request (CC4DE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC4DE LL_TIM_IsEnabledDMAReq_CC4

LL_TIM_EnableDMAReq_COM

Function name

__STATIC_INLINE void LL_TIM_EnableDMAReq_COM (TIM_TypeDef * TIMx)

Function description

Enable commutation DMA request (COMDE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER COMDE LL_TIM_EnableDMAReq_COM

LL_TIM_DisableDMAReq_COM

Function name

__STATIC_INLINE void LL_TIM_DisableDMAReq_COM (TIM_TypeDef * TIMx)

Function description

Disable commutation DMA request (COMDE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER COMDE LL_TIM_DisableDMAReq_COM

LL_TIM_IsEnabledDMAReq_COM

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledDMAReq_COM (const TIM_TypeDef * TIMx)

Function description

Indicates whether the commutation DMA request (COMDE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER COMDE LL_TIM_IsEnabledDMAReq_COM

LL_TIM_EnableDMAReq_TRIG

Function name

__STATIC_INLINE void LL_TIM_EnableDMAReq_TRIG (TIM_TypeDef * TIMx)

Function description

Enable trigger interrupt (TDE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER TDE LL_TIM_EnableDMAReq_TRIG

LL_TIM_DisableDMAReq_TRIG

Function name

__STATIC_INLINE void LL_TIM_DisableDMAReq_TRIG (TIM_TypeDef * TIMx)

Function description

Disable trigger interrupt (TDE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER TDE LL_TIM_DisableDMAReq_TRIG

LL_TIM_IsEnabledDMAReq_TRIG

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledDMAReq_TRIG (const TIM_TypeDef * TIMx)

Function description

Indicates whether the trigger interrupt (TDE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER TDE LL_TIM_IsEnabledDMAReq_TRIG

LL_TIM_GenerateEvent_UPDATE

Function name

__STATIC_INLINE void LL_TIM_GenerateEvent_UPDATE (TIM_TypeDef * TIMx)

Function description

Generate an update event.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EGR UG LL_TIM_GenerateEvent_UPDATE

LL_TIM_GenerateEvent_CC1

Function name

__STATIC_INLINE void LL_TIM_GenerateEvent_CC1 (TIM_TypeDef * TIMx)

Function description

Generate Capture/Compare 1 event.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EGR CC1G LL_TIM_GenerateEvent_CC1

LL_TIM_GenerateEvent_CC2

Function name

__STATIC_INLINE void LL_TIM_GenerateEvent_CC2 (TIM_TypeDef * TIMx)

Function description

Generate Capture/Compare 2 event.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EGR CC2G LL_TIM_GenerateEvent_CC2

LL_TIM_GenerateEvent_CC3

Function name

__STATIC_INLINE void LL_TIM_GenerateEvent_CC3 (TIM_TypeDef * TIMx)

Function description

Generate Capture/Compare 3 event.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EGR CC3G LL_TIM_GenerateEvent_CC3

LL_TIM_GenerateEvent_CC4

Function name

__STATIC_INLINE void LL_TIM_GenerateEvent_CC4 (TIM_TypeDef * TIMx)

Function description

Generate Capture/Compare 4 event.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EGR CC4G LL_TIM_GenerateEvent_CC4

LL_TIM_GenerateEvent_COM

Function name

__STATIC_INLINE void LL_TIM_GenerateEvent_COM (TIM_TypeDef * TIMx)

Function description

Generate commutation event.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EGR COMG LL_TIM_GenerateEvent_COM

LL_TIM_GenerateEvent_TRIG

Function name

__STATIC_INLINE void LL_TIM_GenerateEvent_TRIG (TIM_TypeDef * TIMx)

Function description

Generate trigger event.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EGR TG LL_TIM_GenerateEvent_TRIG

LL_TIM_GenerateEvent_BRK

Function name

__STATIC_INLINE void LL_TIM_GenerateEvent_BRK (TIM_TypeDef * TIMx)

Function description

Generate break event.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EGR BG LL_TIM_GenerateEvent_BRK

LL_TIM_GenerateEvent_BRK2

Function name

__STATIC_INLINE void LL_TIM_GenerateEvent_BRK2 (TIM_TypeDef * TIMx)

Function description

Generate break 2 event.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EGR B2G LL_TIM_GenerateEvent_BRK2

LL_TIM_DeInit

Function name

ErrorStatus LL_TIM_DeInit (const TIM_TypeDef * TIMx)

Function description

Set TIMx registers to their reset values.

Parameters

- **TIMx:** Timer instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: TIMx registers are de-initialized
  - ERROR: invalid TIMx instance

LL_TIM_StructInit

Function name

void LL_TIM_StructInit (LL_TIM_InitTypeDef * TIM_InitStruct)

Function description

Set the fields of the time base unit configuration data structure to their default values.

Parameters

- **TIM_InitStruct:** pointer to a LL_TIM_InitTypeDef structure (time base unit configuration data structure)

Return values

- **None:**

LL_TIM_Init

Function name

ErrorStatus LL_TIM_Init (TIM_TypeDef * TIMx, const LL_TIM_InitTypeDef * TIM_InitStruct)

Function description

Configure the TIMx time base unit.

Parameters

- **TIMx:** Timer Instance
- **TIM_InitStruct:** pointer to a LL_TIM_InitTypeDef structure (TIMx time base unit configuration data structure)

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: TIMx registers are de-initialized
  - ERROR: not applicable

LL_TIM_OC_StructInit

Function name

void LL_TIM_OC_StructInit (LL_TIM_OC_InitTypeDef * TIM_OC_InitStruct)

Function description

Set the fields of the TIMx output channel configuration data structure to their default values.

Parameters

- **TIM_OC_InitStruct:** pointer to a LL_TIM_OC_InitTypeDef structure (the output channel configuration data structure)

Return values

- **None:**

LL_TIM_OC_Init

Function name

ErrorStatus LL_TIM_OC_Init (TIM_TypeDef * TIMx, uint32_t Channel, const LL_TIM_OC_InitTypeDef * TIM_OC_InitStruct)

Function description

Configure the TIMx output channel.

Parameters

- **TIMx:** Timer Instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6
- **TIM_OC_InitStruct:** pointer to a LL_TIM_OC_InitTypeDef structure (TIMx output channel configuration data structure)

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: TIMx output channel is initialized
  - ERROR: TIMx output channel is not initialized

LL_TIM_IC_StructInit

Function name

void LL_TIM_IC_StructInit (LL_TIM_IC_InitTypeDef * TIM_ICInitStruct)

Function description

Set the fields of the TIMx input channel configuration data structure to their default values.

Parameters

- **TIM_ICInitStruct:** pointer to a LL_TIM_IC_InitTypeDef structure (the input channel configuration data structure)

Return values

- **None:**

LL_TIM_IC_Init

Function name

ErrorStatus LL_TIM_IC_Init (TIM_TypeDef * TIMx, uint32_t Channel, const LL_TIM_IC_InitTypeDef * TIM_IC_InitStruct)

Function description

Configure the TIMx input channel.

Parameters

- **TIMx:** Timer Instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
- **TIM_IC_InitStruct:** pointer to a LL_TIM_IC_InitTypeDef structure (TIMx input channel configuration data structure)

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: TIMx output channel is initialized
  - ERROR: TIMx output channel is not initialized

LL_TIM_ENCODER_StructInit

Function name

void LL_TIM_ENCODER_StructInit (LL_TIM_ENCODER_InitTypeDef * TIM_EncoderInitStruct)

Function description

Fills each TIM_EncoderInitStruct field with its default value.

Parameters

- **TIM_EncoderInitStruct:** pointer to a LL_TIM_ENCODER_InitTypeDef structure (encoder interface configuration data structure)

Return values

- **None:**

LL_TIM_ENCODER_Init

Function name

ErrorStatus LL_TIM_ENCODER_Init (TIM_TypeDef * TIMx, const LL_TIM_ENCODER_InitTypeDef * TIM_EncoderInitStruct)

Function description

Configure the encoder interface of the timer instance.

Parameters

- **TIMx:** Timer Instance
- **TIM_EncoderInitStruct:** pointer to a LL_TIM_ENCODER_InitTypeDef structure (TIMx encoder interface configuration data structure)

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: TIMx registers are de-initialized
  - ERROR: not applicable

LL_TIM_HALLSENSOR_StructInit

Function name

void LL_TIM_HALLSENSOR_StructInit (LL_TIM_HALLSENSOR_InitTypeDef * TIM_HallSensorInitStruct)

Function description

Set the fields of the TIMx Hall sensor interface configuration data structure to their default values.

Parameters

- **TIM_HallSensorInitStruct:** pointer to a LL_TIM_HALLSENSOR_InitTypeDef structure (HALL sensor interface configuration data structure)

Return values

- **None:**

LL_TIM_HALLSENSOR_Init

Function name

ErrorStatus LL_TIM_HALLSENSOR_Init (TIM_TypeDef * TIMx, const LL_TIM_HALLSENSOR_InitTypeDef * TIM_HallSensorInitStruct)

Function description

Configure the Hall sensor interface of the timer instance.

Parameters

- **TIMx:** Timer Instance
- **TIM_HallSensorInitStruct:** pointer to a LL_TIM_HALLSENSOR_InitTypeDef structure (TIMx HALL sensor interface configuration data structure)

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: TIMx registers are de-initialized
  - ERROR: not applicable

Notes

- TIMx CH1, CH2 and CH3 inputs connected through a XOR to the TI1 input channel
- TIMx slave mode controller is configured in reset mode. Selected internal trigger is TI1F_ED.
- Channel 1 is configured as input, IC1 is mapped on TRC.
- Captured value stored in TIMx_CCR1 correspond to the time elapsed between 2 changes on the inputs. It gives information about motor speed.
- Channel 2 is configured in output PWM 2 mode.
- Compare value stored in TIMx_CCR2 corresponds to the commutation delay.
- OC2REF is selected as trigger output on TRGO.
- LL_TIM_IC_POLARITY_BOTHEDGE must not be used for TI1 when it is used when TIMx operates in Hall sensor interface mode.

LL_TIM_BDTR_StructInit

Function name

void LL_TIM_BDTR_StructInit (LL_TIM_BDTR_InitTypeDef * TIM_BDTRInitStruct)

Function description

Set the fields of the Break and Dead Time configuration data structure to their default values.

Parameters

- **TIM_BDTRInitStruct:** pointer to a LL_TIM_BDTR_InitTypeDef structure (Break and Dead Time configuration data structure)

Return values

- **None:**

LL_TIM_BDTR_Init

Function name

ErrorStatus LL_TIM_BDTR_Init (TIM_TypeDef * TIMx, const LL_TIM_BDTR_InitTypeDef * TIM_BDTRInitStruct)

Function description

Configure the Break and Dead Time feature of the timer instance.

Parameters

- **TIMx:** Timer Instance
- **TIM_BDTRInitStruct:** pointer to a LL_TIM_BDTR_InitTypeDef structure (Break and Dead Time configuration data structure)

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: Break and Dead Time is initialized
  - ERROR: not applicable

Notes

- As the bits BK2P, BK2E, BK2F[3:0], BKF[3:0], AOE, BKP, BKE, OSSI, OSSR and DTG[7:0] can be write-locked depending on the LOCK configuration, it can be necessary to configure all of them during the first write access to the TIMx_BDTR register.
- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.
- Macro IS_TIM_BKIN2_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a second break input.

99.3 TIM Firmware driver defines

The following section lists the various define and macros of the module.

99.3.1 TIM

TIM

Active Input Selection

LL_TIM_ACTIVEINPUT_DIRECTTI

ICx is mapped on TIx

LL_TIM_ACTIVEINPUT_INDIRECTTI

ICx is mapped on TIy

LL_TIM_ACTIVEINPUT_TRC

ICx is mapped on TRC

Automatic output enable

LL_TIM_AUTOMATICOUTPUT_DISABLE

MOE can be set only by software

LL_TIM_AUTOMATICOUTPUT_ENABLE

MOE can be set by software or automatically at the next update event

BKIN POLARITY

LL_TIM_BKIN_POLARITY_LOW

BRK BKIN input is active low

LL_TIM_BKIN_POLARITY_HIGH

BRK BKIN input is active high

BKIN SOURCE

LL_TIM_BKIN_SOURCE_BKIN

BKIN input from AF controller

LL_TIM_BKIN_SOURCE_BKCOMP1

internal signal: COMP1 output

LL_TIM_BKIN_SOURCE_BKCOMP2

internal signal: COMP2 output

BREAK2 AF MODE

LL_TIM_BREAK2_AFMODE_INPUT

Break2 input BRK2 in input mode

LL_TIM_BREAK2_AFMODE_BIDIRECTIONAL

Break2 input BRK2 in bidirectional mode

Break2 Enable

LL_TIM_BREAK2_DISABLE

Break2 function disabled

LL_TIM_BREAK2_ENABLE

Break2 function enabled

BREAK2 FILTER

LL_TIM_BREAK2_FILTER_FDIV1

No filter, BRK acts asynchronously

LL_TIM_BREAK2_FILTER_FDIV1_N2

fSAMPLING=fCK_INT, N=2

LL_TIM_BREAK2_FILTER_FDIV1_N4

fSAMPLING=fCK_INT, N=4

LL_TIM_BREAK2_FILTER_FDIV1_N8

fSAMPLING=fCK_INT, N=8

LL_TIM_BREAK2_FILTER_FDIV2_N6

fSAMPLING=fDTS/2, N=6

LL_TIM_BREAK2_FILTER_FDIV2_N8

fSAMPLING=fDTS/2, N=8

LL_TIM_BREAK2_FILTER_FDIV4_N6

fSAMPLING=fDTS/4, N=6

LL_TIM_BREAK2_FILTER_FDIV4_N8

fSAMPLING=fDTS/4, N=8

LL_TIM_BREAK2_FILTER_FDIV8_N6

fSAMPLING=fDTS/8, N=6

LL_TIM_BREAK2_FILTER_FDIV8_N8

fSAMPLING=fDTS/8, N=8

LL_TIM_BREAK2_FILTER_FDIV16_N5

fSAMPLING=fDTS/16, N=5

LL_TIM_BREAK2_FILTER_FDIV16_N6

fSAMPLING=fDTS/16, N=6

LL_TIM_BREAK2_FILTER_FDIV16_N8

fSAMPLING=fDTS/16, N=8

LL_TIM_BREAK2_FILTER_FDIV32_N5

fSAMPLING=fDTS/32, N=5

LL_TIM_BREAK2_FILTER_FDIV32_N6

fSAMPLING=fDTS/32, N=6

LL_TIM_BREAK2_FILTER_FDIV32_N8

fSAMPLING=fDTS/32, N=8

BREAK2 POLARITY

LL_TIM_BREAK2_POLARITY_LOW

Break input BRK2 is active low

LL_TIM_BREAK2_POLARITY_HIGH

Break input BRK2 is active high

BREAK AF MODE

LL_TIM_BREAK_AFMODE_INPUT

Break input BRK in input mode

LL_TIM_BREAK_AFMODE_BIDIRECTIONAL

Break input BRK in bidirectional mode

Break Enable

LL_TIM_BREAK_DISABLE

Break function disabled

LL_TIM_BREAK_ENABLE

Break function enabled

break filter

LL_TIM_BREAK_FILTER_FDIV1

No filter, BRK acts asynchronously

LL_TIM_BREAK_FILTER_FDIV1_N2

fSAMPLING=fCK_INT, N=2

LL_TIM_BREAK_FILTER_FDIV1_N4

fSAMPLING=fCK_INT, N=4

LL_TIM_BREAK_FILTER_FDIV1_N8

fSAMPLING=fCK_INT, N=8

LL_TIM_BREAK_FILTER_FDIV2_N6

fSAMPLING=fDTS/2, N=6

LL_TIM_BREAK_FILTER_FDIV2_N8

fSAMPLING=fDTS/2, N=8

LL_TIM_BREAK_FILTER_FDIV4_N6

fSAMPLING=fDTS/4, N=6

LL_TIM_BREAK_FILTER_FDIV4_N8

fSAMPLING=fDTS/4, N=8

LL_TIM_BREAK_FILTER_FDIV8_N6

fSAMPLING=fDTS/8, N=6

LL_TIM_BREAK_FILTER_FDIV8_N8

fSAMPLING=fDTS/8, N=8

LL_TIM_BREAK_FILTER_FDIV16_N5

fSAMPLING=fDTS/16, N=5

LL_TIM_BREAK_FILTER_FDIV16_N6

fSAMPLING=fDTS/16, N=6

LL_TIM_BREAK_FILTER_FDIV16_N8

fSAMPLING=fDTS/16, N=8

LL_TIM_BREAK_FILTER_FDIV32_N5

fSAMPLING=fDTS/32, N=5

LL_TIM_BREAK_FILTER_FDIV32_N6

fSAMPLING=fDTS/32, N=6

LL_TIM_BREAK_FILTER_FDIV32_N8

fSAMPLING=fDTS/32, N=8

BREAK INPUT

LL_TIM_BREAK_INPUT_BKIN

TIMx_BKIN input

LL_TIM_BREAK_INPUT_BKIN2

TIMx_BKIN2 input

break polarity

LL_TIM_BREAK_POLARITY_LOW

Break input BRK is active low

LL_TIM_BREAK_POLARITY_HIGH

Break input BRK is active high

Capture Compare DMA Request

LL_TIM_CCDMAREQUEST_CC

CCx DMA request sent when CCx event occurs

LL_TIM_CCDMAREQUEST_UPDATE

CCx DMA requests sent when update event occurs

Capture Compare Update Source

LL_TIM_CCUPDATESOURCE_COMG_ONLY

Capture/compare control bits are updated by setting the COMG bit only

LL_TIM_CCUPDATESOURCE_COMG_AND_TRGI

Capture/compare control bits are updated by setting the COMG bit or when a rising edge occurs on trigger input (TRGI)

Channel

LL_LPTIM_CHANNEL_CH1

LPTIM input/output channel 1

LL_LPTIM_CHANNEL_CH2

LPTIM input/output channel 2

LL_TIM_CHANNEL_CH1

Timer input/output channel 1

LL_TIM_CHANNEL_CH1N

Timer complementary output channel 1

LL_TIM_CHANNEL_CH2

Timer input/output channel 2

LL_TIM_CHANNEL_CH2N

Timer complementary output channel 2

LL_TIM_CHANNEL_CH3

Timer input/output channel 3

LL_TIM_CHANNEL_CH3N

Timer complementary output channel 3

LL_TIM_CHANNEL_CH4

Timer input/output channel 4

LL_TIM_CHANNEL_CH4N

Timer complementary output channel 4

LL_TIM_CHANNEL_CH5

Timer output channel 5

LL_TIM_CHANNEL_CH6

Timer output channel 6

Clock Division

LL_TIM_CLOCKDIVISION_DIV1

tDTS=tCK_INT

LL_TIM_CLOCKDIVISION_DIV2

tDTS=2*tCK_INT

LL_TIM_CLOCKDIVISION_DIV4

tDTS=4*tCK_INT

Clock Source

LL_TIM_CLOCKSOURCE_INTERNAL

The timer is clocked by the internal clock provided from the RCC

LL_TIM_CLOCKSOURCE_EXT_MODE1

Counter counts at each rising or falling edge on a selected input

LL_TIM_CLOCKSOURCE_EXT_MODE2

Counter counts at each rising or falling edge on the external trigger input ETR

Counter Direction

LL_TIM_COUNTERDIRECTION_UP

Timer counter counts up

LL_TIM_COUNTERDIRECTION_DOWN

Timer counter counts down

Counter Mode

LL_TIM_COUNTERMODE_UP

Counter used as upcounter

LL_TIM_COUNTERMODE_DOWN

Counter used as downcounter

LL_TIM_COUNTERMODE_CENTER_DOWN

The counter counts up and down alternatively. Output compare interrupt flags of output channels are set only when the counter is counting down.

LL_TIM_COUNTERMODE_CENTER_UP

The counter counts up and down alternatively. Output compare interrupt flags of output channels are set only when the counter is counting up

LL_TIM_COUNTERMODE_CENTER_UP_DOWN

The counter counts up and down alternatively. Output compare interrupt flags of output channels are set only when the counter is counting up or down.

DMA Burst Base Address

LL_TIM_DMABURST_BASEADDR_CR1

TIMx_CR1 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CR2

TIMx_CR2 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_SMCR

TIMx_SMCR register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_DIER

TIMx_DIER register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_SR

TIMx_SR register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_EGR

TIMx_EGR register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCMR1

TIMx_CCMR1 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCMR2

TIMx_CCMR2 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCER

TIMx_CCER register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CNT

TIMx_CNT register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_PSC

TIMx_PSC register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_ARR

TIMx_ARR register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_RCR

TIMx_RCR register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCR1

TIMx_CCR1 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCR2

TIMx_CCR2 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCR3

TIMx_CCR3 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCR4

TIMx_CCR4 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_BDTR

TIMx_BDTR register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCR5

TIMx_CCR5 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCR6

TIMx_CCR6 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCMR3

TIMx_CCMR3 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_DTR2

TIMx_DTR2 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_ECR

TIMx_ECR register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_TISEL

TIMx_TISEL register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_AF1

TIMx_AF1 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_AF2

TIMx_AF2 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_OR1

TIMx_OR1 register is the DMA base address for DMA burst

DMA Burst Length

LL_TIM_DMABURST_LENGTH_1TRANSFER

Transfer is done to 1 register starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_2TRANSFERS

Transfer is done to 2 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_3TRANSFERS

Transfer is done to 3 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_4TRANSFERS

Transfer is done to 4 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_5TRANSFERS

Transfer is done to 5 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_6TRANSFERS

Transfer is done to 6 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_7TRANSFERS

Transfer is done to 7 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_8TRANSFERS

Transfer is done to 1 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_9TRANSFERS

Transfer is done to 9 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_10TRANSFERS

Transfer is done to 10 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_11TRANSFERS

Transfer is done to 11 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_12TRANSFERS

Transfer is done to 12 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_13TRANSFERS

Transfer is done to 13 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_14TRANSFERS

Transfer is done to 14 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_15TRANSFERS

Transfer is done to 15 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_16TRANSFERS

Transfer is done to 16 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_17TRANSFERS

Transfer is done to 17 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_18TRANSFERS

Transfer is done to 18 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_19TRANSFERS

Transfer is done to 19 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_20TRANSFERS

Transfer is done to 20 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_21TRANSFERS

Transfer is done to 21 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_22TRANSFERS

Transfer is done to 22 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_23TRANSFERS

Transfer is done to 23 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_24TRANSFERS

Transfer is done to 24 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_25TRANSFERS

Transfer is done to 25 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_26TRANSFERS

Transfer is done to 26 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_27TRANSFERS

Transfer is done to 27 registers starting from the DMA burst base address

DMA Burst Source

LL_TIM_DMA_UPDATE

Transfer source is update event

LL_TIM_DMA_CC1

Transfer source is CC1 event

LL_TIM_DMA_CC2

Transfer source is CC2 event

LL_TIM_DMA_CC3

Transfer source is CC3 event

LL_TIM_DMA_CC4

Transfer source is CC4 event

LL_TIM_DMA_COM

Transfer source is COM event

LL_TIM_DMA_TRIGGER

Transfer source is trigger event

Encoder Mode

LL_TIM_ENCODERMODE_X2_TI1

Quadrature encoder mode 1, x2 mode - Counter counts up/down on TI1FP1 edge depending on TI2FP2 level

LL_TIM_ENCODERMODE_X2_TI2

Quadrature encoder mode 2, x2 mode - Counter counts up/down on TI2FP2 edge depending on TI1FP1 level

LL_TIM_ENCODERMODE_X4_TI12

Quadrature encoder mode 3, x4 mode - Counter counts up/down on both TI1FP1 and TI2FP2 edges depending on the level of the other input

LL_TIM_ENCODERMODE_CLOCKPLUSDIRECTION_X2

Encoder mode: Clock plus direction - x2 mode

LL_TIM_ENCODERMODE_CLOCKPLUSDIRECTION_X1

Encoder mode: Clock plus direction, x1 mode, TI2FP2 edge sensitivity is set by CC2P

LL_TIM_ENCODERMODE_DIRECTIONALCLOCK_X2

Encoder mode: Directional Clock, x2 mode

LL_TIM_ENCODERMODE_DIRECTIONALCLOCK_X1_TI12

Encoder mode: Directional Clock, x1 mode, TI1FP1 and TI2FP2 edge sensitivity is set by CC1P and CC2P

LL_TIM_ENCODERMODE_X1_TI1

Quadrature encoder mode: x1 mode, counting on TI1FP1 edges only, edge sensitivity is set by CC1P

LL_TIM_ENCODERMODE_X1_TI2

Quadrature encoder mode: x1 mode, counting on TI2FP2 edges only, edge sensitivity is set by CC1P

External Trigger Filter

LL_TIM_ETR_FILTER_FDIV1

No filter, sampling is done at fDTS

LL_TIM_ETR_FILTER_FDIV1_N2

fSAMPLING=fCK_INT, N=2

LL_TIM_ETR_FILTER_FDIV1_N4

fSAMPLING=fCK_INT, N=4

LL_TIM_ETR_FILTER_FDIV1_N8

fSAMPLING=fCK_INT, N=8

LL_TIM_ETR_FILTER_FDIV2_N6

fSAMPLING=fDTS/2, N=6

LL_TIM_ETR_FILTER_FDIV2_N8

fSAMPLING=fDTS/2, N=8

LL_TIM_ETR_FILTER_FDIV4_N6

fSAMPLING=fDTS/4, N=6

LL_TIM_ETR_FILTER_FDIV4_N8

fSAMPLING=fDTS/4, N=8

LL_TIM_ETR_FILTER_FDIV8_N6

fSAMPLING=fDTS/8, N=6

LL_TIM_ETR_FILTER_FDIV8_N8

fSAMPLING=fDTS/16, N=8

LL_TIM_ETR_FILTER_FDIV16_N5

fSAMPLING=fDTS/16, N=5

LL_TIM_ETR_FILTER_FDIV16_N6

fSAMPLING=fDTS/16, N=6

LL_TIM_ETR_FILTER_FDIV16_N8

fSAMPLING=fDTS/16, N=8

LL_TIM_ETR_FILTER_FDIV32_N5

fSAMPLING=fDTS/32, N=5

LL_TIM_ETR_FILTER_FDIV32_N6

fSAMPLING=fDTS/32, N=6

LL_TIM_ETR_FILTER_FDIV32_N8

fSAMPLING=fDTS/32, N=8

External Trigger Polarity

LL_TIM_ETR_POLARITY_NONINVERTED

ETR is non-inverted, active at high level or rising edge

LL_TIM_ETR_POLARITY_INVERTED

ETR is inverted, active at low level or falling edge

External Trigger Prescaler

LL_TIM_ETR_PRESCALER_DIV1

ETR prescaler OFF

LL_TIM_ETR_PRESCALER_DIV2

ETR frequency is divided by 2

LL_TIM_ETR_PRESCALER_DIV4

ETR frequency is divided by 4

LL_TIM_ETR_PRESCALER_DIV8

ETR frequency is divided by 8

first index selection

LL_TIM_INDEX_ALL

Index is always active

LL_TIM_INDEX_FIRST_ONLY

The first Index only resets the counter

Get Flags Defines

LL_TIM_SR_UIF

Update interrupt flag

LL_TIM_SR_CC1IF

Capture/compare 1 interrupt flag

LL_TIM_SR_CC2IF

Capture/compare 2 interrupt flag

LL_TIM_SR_CC3IF

Capture/compare 3 interrupt flag

LL_TIM_SR_CC4IF

Capture/compare 4 interrupt flag

LL_TIM_SR_CC5IF

Capture/compare 5 interrupt flag

LL_TIM_SR_CC6IF

Capture/compare 6 interrupt flag

LL_TIM_SR_COMIF

COM interrupt flag

LL_TIM_SR_TIF

Trigger interrupt flag

LL_TIM_SR_BIF

Break interrupt flag

LL_TIM_SR_B2IF

Second break interrupt flag

LL_TIM_SR_CC1OF

Capture/Compare 1 overcapture flag

LL_TIM_SR_CC2OF

Capture/Compare 2 overcapture flag

LL_TIM_SR_CC3OF

Capture/Compare 3 overcapture flag

LL_TIM_SR_CC4OF

Capture/Compare 4 overcapture flag

LL_TIM_SR_SBIF

System Break interrupt flag

LL_TIM_SR_IDXF

Index interrupt flag

LL_TIM_SR_DIRF

Direction Change interrupt flag

LL_TIM_SR_IERRF

Index Error flag

LL_TIM_SR_TERRF

Transition Error flag

GROUPCH5

LL_TIM_GROUPCH5_NONE

No effect of OC5REF on OC1REFC, OC2REFC and OC3REFC

LL_TIM_GROUPCH5_OC1REFC

OC1REFC is the logical AND of OC1REFC and OC5REF

LL_TIM_GROUPCH5_OC2REFC

OC2REFC is the logical AND of OC2REFC and OC5REF

LL_TIM_GROUPCH5_OC3REFC

OC3REFC is the logical AND of OC3REFC and OC5REF

Input Configuration Prescaler

LL_TIM_ICPSC_DIV1

No prescaler, capture is done each time an edge is detected on the capture input

LL_TIM_ICPSC_DIV2

Capture is done once every 2 events

LL_TIM_ICPSC_DIV4

Capture is done once every 4 events

LL_TIM_ICPSC_DIV8

Capture is done once every 8 events

Input Configuration Filter

LL_TIM_IC_FILTER_FDIV1

No filter, sampling is done at fDTS

LL_TIM_IC_FILTER_FDIV1_N2

fSAMPLING=fCK_INT, N=2

LL_TIM_IC_FILTER_FDIV1_N4

fSAMPLING=fCK_INT, N=4

LL_TIM_IC_FILTER_FDIV1_N8

fSAMPLING=fCK_INT, N=8

LL_TIM_IC_FILTER_FDIV2_N6

fSAMPLING=fDTS/2, N=6

LL_TIM_IC_FILTER_FDIV2_N8

fSAMPLING=fDTS/2, N=8

LL_TIM_IC_FILTER_FDIV4_N6

fSAMPLING=fDTS/4, N=6

LL_TIM_IC_FILTER_FDIV4_N8

fSAMPLING=fDTS/4, N=8

LL_TIM_IC_FILTER_FDIV8_N6

fSAMPLING=fDTS/8, N=6

LL_TIM_IC_FILTER_FDIV8_N8

fSAMPLING=fDTS/8, N=8

LL_TIM_IC_FILTER_FDIV16_N5

fSAMPLING=fDTS/16, N=5

LL_TIM_IC_FILTER_FDIV16_N6

fSAMPLING=fDTS/16, N=6

LL_TIM_IC_FILTER_FDIV16_N8

fSAMPLING=fDTS/16, N=8

LL_TIM_IC_FILTER_FDIV32_N5

fSAMPLING=fDTS/32, N=5

LL_TIM_IC_FILTER_FDIV32_N6

fSAMPLING=fDTS/32, N=6

LL_TIM_IC_FILTER_FDIV32_N8

fSAMPLING=fDTS/32, N=8

Input Configuration Polarity

LL_TIM_IC_POLARITY_RISING

The circuit is sensitive to TIxFP1 rising edge, TIxFP1 is not inverted

LL_TIM_IC_POLARITY_FALLING

The circuit is sensitive to TIxFP1 falling edge, TIxFP1 is inverted

LL_TIM_IC_POLARITY_BOTHEDGE

The circuit is sensitive to both TIxFP1 rising and falling edges, TIxFP1 is not inverted

index blanking selection

LL_TIM_INDEX_BLANK_ALWAYS

Index always active

LL_TIM_INDEX_BLANK_TI3

Index disabled when TI3 input is active, as per CC3P bitfield

LL_TIM_INDEX_BLANK_TI4

Index disabled when TI4 input is active, as per CC4P bitfield

index direction selection

LL_TIM_INDEX_UP_DOWN

Index resets the counter whatever the direction

LL_TIM_INDEX_UP

Index resets the counter when up-counting only

LL_TIM_INDEX_DOWN

Index resets the counter when down-counting only

index positioning selection

LL_TIM_INDEX_POSITION_DOWN_DOWN

Index resets the counter when AB = 00

LL_TIM_INDEX_POSITION_DOWN_UP

Index resets the counter when AB = 01

LL_TIM_INDEX_POSITION_UP_DOWN

Index resets the counter when AB = 10

LL_TIM_INDEX_POSITION_UP_UP

Index resets the counter when AB = 11

LL_TIM_INDEX_POSITION_DOWN

Index resets the counter when clock is 0

LL_TIM_INDEX_POSITION_UP

Index resets the counter when clock is 1

IT Defines

LL_TIM_DIER_UIE

Update interrupt enable

LL_TIM_DIER_CC1IE

Capture/compare 1 interrupt enable

LL_TIM_DIER_CC2IE

Capture/compare 2 interrupt enable

LL_TIM_DIER_CC3IE

Capture/compare 3 interrupt enable

LL_TIM_DIER_CC4IE

Capture/compare 4 interrupt enable

LL_TIM_DIER_COMIE

COM interrupt enable

LL_TIM_DIER_TIE

Trigger interrupt enable

LL_TIM_DIER_BIE

Break interrupt enable

LL_TIM_DIER_IDXIE

Index interrupt enable

LL_TIM_DIER_DIRIE

Direction Change interrupt enable

LL_TIM_DIER_IERRIE

Index Error interrupt enable

LL_TIM_DIER_TERRIE

Transition Error interrupt enable

Lock Level

LL_TIM_LOCKLEVEL_OFF

LOCK OFF - No bit is write protected

LL_TIM_LOCKLEVEL_1

LOCK Level 1

LL_TIM_LOCKLEVEL_2

LOCK Level 2

LL_TIM_LOCKLEVEL_3

LOCK Level 3

Output Configuration Idle State

LL_TIM_OCIDLESTATE_LOW

OCx=0 (after a dead-time if OC is implemented) when MOE=0

LL_TIM_OCIDLESTATE_HIGH

OCx=1 (after a dead-time if OC is implemented) when MOE=0

Output Configuration Mode

LL_TIM_OCMODE_FROZEN

The comparison between the output compare register TIMx_CCRy and the counter TIMx_CNT has no effect on the output channel level

LL_TIM_OCMODE_ACTIVE

OCyREF is forced high on compare match

LL_TIM_OCMODE_INACTIVE

OCyREF is forced low on compare match

LL_TIM_OCMODE_TOGGLE

OCyREF toggles on compare match

LL_TIM_OCMODE_FORCED_INACTIVE

OCyREF is forced low

LL_TIM_OCMODE_FORCED_ACTIVE

OCyREF is forced high

LL_TIM_OCMODE_PWM1

In upcounting, channel y is active as long as TIMx_CNT<TIMx_CCRy else inactive. In downcounting, channel y is inactive as long as TIMx_CNT>TIMx_CCRy else active.

LL_TIM_OCMODE_PWM2

In upcounting, channel y is inactive as long as TIMx_CNT<TIMx_CCRy else active. In downcounting, channel y is active as long as TIMx_CNT>TIMx_CCRy else inactive

LL_TIM_OCMODE_RETRIG_OPM1

Retrigerrable OPM mode 1

LL_TIM_OCMODE_RETRIG_OPM2

Retrigerrable OPM mode 2

LL_TIM_OCMODE_COMBINED_PWM1

Combined PWM mode 1

LL_TIM_OCMODE_COMBINED_PWM2

Combined PWM mode 2

LL_TIM_OCMODE_ASYMMETRIC_PWM1

Asymmetric PWM mode 1

LL_TIM_OCMODE_ASYMMETRIC_PWM2

Asymmetric PWM mode 2

LL_TIM_OCMODE_PULSE_ON_COMPARE

Pulse on Compare mode

LL_TIM_OCMODE_DIRECTION_OUTPUT

Direction output mode

Output Configuration Polarity

LL_TIM_OCPOLARITY_HIGH

OCxactive high

LL_TIM_OCPOLARITY_LOW

OCxactive low

OCREF clear input selection

LL_TIM_OCREF_CLR_INT_ETR

OCREF_CLR_INT is connected to ETRF

LL_TIM_OCREF_CLR_INT_COMP1

OCREF clear input is connected to COMP1_OUT

LL_TIM_OCREF_CLR_INT_COMP2

OCREF clear input is connected to COMP2_OUT

Output Configuration State

LL_TIM_OCSTATE_DISABLE

OCx is not active

LL_TIM_OCSTATE_ENABLE

OCx signal is output on the corresponding output pin

One Pulse Mode

LL_TIM_ONEPULSEMODE_SINGLE

Counter stops counting at the next update event

LL_TIM_ONEPULSEMODE_REPETITIVE

Counter is not stopped at update event

OSSI

LL_TIM_OSSI_DISABLE

When inactive, OCx/OCxN outputs are disabled

LL_TIM_OSSI_ENABLE

When inactive, OxC/OCxN outputs are first forced with their inactive level then forced to their idle level after the deadtime

OSSR

LL_TIM_OSSR_DISABLE

When inactive, OCx/OCxN outputs are disabled

LL_TIM_OSSR_ENABLE

When inactive, OC/OCN outputs are enabled with their inactive level as soon as CCxE=1 or CCxNE=1

Pulse on compare pulse width prescaler

LL_TIM_PWPRSC_X1

Pulse on compare pulse width prescaler 1

LL_TIM_PWPRSC_X2

Pulse on compare pulse width prescaler 2

LL_TIM_PWPRSC_X4

Pulse on compare pulse width prescaler 4

LL_TIM_PWPRSC_X8

Pulse on compare pulse width prescaler 8

LL_TIM_PWPRSC_X16

Pulse on compare pulse width prescaler 16

LL_TIM_PWPRSC_X32

Pulse on compare pulse width prescaler 32

LL_TIM_PWPRSC_X64

Pulse on compare pulse width prescaler 64

LL_TIM_PWPRSC_X128

Pulse on compare pulse width prescaler 128

Slave Mode

LL_TIM_SLAVEMODE_DISABLED

Slave mode disabled

LL_TIM_SLAVEMODE_RESET

Reset Mode - Rising edge of the selected trigger input (TRGI) reinitializes the counter

LL_TIM_SLAVEMODE_GATED

Gated Mode - The counter clock is enabled when the trigger input (TRGI) is high

LL_TIM_SLAVEMODE_TRIGGER

Trigger Mode - The counter starts at a rising edge of the trigger TRGI

LL_TIM_SLAVEMODE_COMBINED_RESETTRIGGER

Combined reset + trigger mode - Rising edge of the selected trigger input (TRGI) reinitializes the counter, generates an update of the registers and starts the counter

LL_TIM_SLAVEMODE_COMBINED_GATEDRESET

Combined gated + reset mode - The counter clock is enabled when the trigger input (TRGI) is high. The counter stops and is reset) as soon as the trigger becomes low.Both startand stop of the counter are controlled.

SMS Preload Source

LL_TIM_SMSPS_TIMUPDATE

The SMS preload transfer is triggered by the Timer's Update event

LL_TIM_SMSPS_INDEX

The SMS preload transfer is triggered by the Index event

TIM15 External Input Ch1 Remap

TIM4 TI2 is connected to COMP2 output

Trigger Output

LL_TIM_TRGO_RESET

UG bit from the TIMx_EGR register is used as trigger output

LL_TIM_TRGO_ENABLE

Counter Enable signal (CNT_EN) is used as trigger output

LL_TIM_TRGO_UPDATE

Update event is used as trigger output

LL_TIM_TRGO_CC1IF

CC1 capture or a compare match is used as trigger output

LL_TIM_TRGO_OC1REF

OC1REF signal is used as trigger output

LL_TIM_TRGO_OC2REF

OC2REF signal is used as trigger output

LL_TIM_TRGO_OC3REF

OC3REF signal is used as trigger output

LL_TIM_TRGO_OC4REF

OC4REF signal is used as trigger output

LL_TIM_TRGO_ENCODERCLK

Encoder clock signal is used as trigger output

Trigger Output 2

LL_TIM_TRGO2_RESET

UG bit from the TIMx_EGR register is used as trigger output 2

LL_TIM_TRGO2_ENABLE

Counter Enable signal (CNT_EN) is used as trigger output 2

LL_TIM_TRGO2_UPDATE

Update event is used as trigger output 2

LL_TIM_TRGO2_CC1F

CC1 capture or a compare match is used as trigger output 2

LL_TIM_TRGO2_OC1

OC1REF signal is used as trigger output 2

LL_TIM_TRGO2_OC2

OC2REF signal is used as trigger output 2

LL_TIM_TRGO2_OC3

OC3REF signal is used as trigger output 2

LL_TIM_TRGO2_OC4

OC4REF signal is used as trigger output 2

LL_TIM_TRGO2_OC5

OC5REF signal is used as trigger output 2

LL_TIM_TRGO2_OC6

OC6REF signal is used as trigger output 2

LL_TIM_TRGO2_OC4_RISINGFALLING

OC4REF rising or falling edges are used as trigger output 2

LL_TIM_TRGO2_OC6_RISINGFALLING

OC6REF rising or falling edges are used as trigger output 2

LL_TIM_TRGO2_OC4_RISING_OC6_RISING

OC4REF or OC6REF rising edges are used as trigger output 2

LL_TIM_TRGO2_OC4_RISING_OC6_FALLING

OC4REF rising or OC6REF falling edges are used as trigger output 2

LL_TIM_TRGO2_OC5_RISING_OC6_RISING

OC5REF or OC6REF rising edges are used as trigger output 2

LL_TIM_TRGO2_OC5_RISING_OC6_FALLING

OC5REF rising or OC6REF falling edges are used as trigger output 2

Trigger Selection

LL_TIM_TS_ITR0

Internal Trigger 0 (ITR0) is used as trigger input

LL_TIM_TS_ITR1

Internal Trigger 1 (ITR1) is used as trigger input

LL_TIM_TS_ITR2

Internal Trigger 2 (ITR2) is used as trigger input

LL_TIM_TS_ITR3

Internal Trigger 3 (ITR3) is used as trigger input

LL_TIM_TS_ITR6

Internal Trigger 6 (ITR6) is used as trigger input

LL_TIM_TS_ITR7

Internal Trigger 7 (ITR7) is used as trigger input

LL_TIM_TS_ITR8

Internal Trigger 8 (ITR8) is used as trigger input

LL_TIM_TS_ITR11

Internal Trigger 11 (ITR11) is used as trigger input

LL_TIM_TS_TI1F_ED

TI1 Edge Detector (TI1F_ED) is used as trigger input

LL_TIM_TS_TI1FP1

Filtered Timer Input 1 (TI1FP1) is used as trigger input

LL_TIM_TS_TI2FP2

Filtered Timer Input 2 (TI12P2) is used as trigger input

LL_TIM_TS_ETRF

Filtered external Trigger (ETRF) is used as trigger input

Update Source

LL_TIM_UPDATESOURCE_REGULAR

Counter overflow/underflow, Setting the UG bit or Update generation through the slave mode controller generates an update request

LL_TIM_UPDATESOURCE_COUNTER

Only counter overflow/underflow generates an update request

Common Write and read registers Macros

LL_TIM_WriteReg

Description:

- Write a value in TIM register.

Parameters:

- __INSTANCE__: TIM Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_TIM_ReadReg

Description:

- Read a value in TIM register.

Parameters:

- __INSTANCE__: TIM Instance
- __REG__: Register to be read

Return value:

- Register: value

TIM Exported Macros

__LL_TIM_GETFLAG_UIFCPY

Description:

- HELPER macro retrieving the UIFCPY flag from the counter value.

Parameters:

- __CNT__: Counter value

Return value:

- UIF: status bit

Notes:

- ex: __LL_TIM_GETFLAG_UIFCPY (LL_TIM_GetCounter ()); Relevant only if UIF flag remapping has been enabled (UIF status bit is copied to TIMx_CNT register bit 31)

__LL_TIM_CALC_DEADTIME

Description:

- HELPER macro calculating DTG[0:7] in the TIMx_BDTR register to achieve the requested dead time duration.

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __CKD__: This parameter can be one of the following values:
  - LL_TIM_CLOCKDIVISION_DIV1
  - LL_TIM_CLOCKDIVISION_DIV2
  - LL_TIM_CLOCKDIVISION_DIV4
- __DT__: deadtime duration (in ns)

Return value:

- DTG[0:7]

Notes:

- ex: __LL_TIM_CALC_DEADTIME (80000000, LL_TIM_GetClockDivision (), 120);

__LL_TIM_CALC_PSC

Description:

- HELPER macro calculating the prescaler value to achieve the required counter clock frequency.

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __CNTCLK__: counter clock frequency (in Hz)

Return value:

- Prescaler: value (between Min_Data=0 and Max_Data=65535)

Notes:

- ex: __LL_TIM_CALC_PSC (80000000, 1000000);

__LL_TIM_CALC_ARR

Description:

- HELPER macro calculating the auto-reload value to achieve the required output signal frequency.

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __PSC__: prescaler
- __FREQ__: output signal frequency (in Hz)

Return value:

- Auto-reload: value (between Min_Data=0 and Max_Data=65535)

Notes:

- ex: __LL_TIM_CALC_ARR (1000000, LL_TIM_GetPrescaler (), 10000);

__LL_TIM_CALC_ARR_DITHER

Description:

- HELPER macro calculating the auto-reload value, with dithering feature enabled, to achieve the required output signal frequency.

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __PSC__: prescaler
- __FREQ__: output signal frequency (in Hz)

Return value:

- Auto-reload: value (between Min_Data=0 and Max_Data=65535)

Notes:

- ex: __LL_TIM_CALC_ARR_DITHER (1000000, LL_TIM_GetPrescaler (), 10000);

__LL_TIM_CALC_DELAY

Description:

- HELPER macro calculating the compare value required to achieve the required timer output compare active/inactive delay.

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __PSC__: prescaler
- __DELAY__: timer output compare active/inactive delay (in us)

Return value:

- Compare: value (between Min_Data=0 and Max_Data=65535)

Notes:

- ex: __LL_TIM_CALC_DELAY (1000000, LL_TIM_GetPrescaler (), 10);

__LL_TIM_CALC_DELAY_DITHER

Description:

- HELPER macro calculating the compare value, with dithering feature enabled, to achieve the required timer output compare active/inactive delay.

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __PSC__: prescaler
- __DELAY__: timer output compare active/inactive delay (in us)

Return value:

- Compare: value (between Min_Data=0 and Max_Data=65535)

Notes:

- ex: __LL_TIM_CALC_DELAY_DITHER (1000000, LL_TIM_GetPrescaler (), 10);

__LL_TIM_CALC_PULSE

Description:

- HELPER macro calculating the auto-reload value to achieve the required pulse duration (when the timer operates in one pulse mode).

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __PSC__: prescaler
- __DELAY__: timer output compare active/inactive delay (in us)
- __PULSE__: pulse duration (in us)

Return value:

- Auto-reload: value (between Min_Data=0 and Max_Data=65535)

Notes:

- ex: __LL_TIM_CALC_PULSE (1000000, LL_TIM_GetPrescaler (), 10, 20);

__LL_TIM_CALC_PULSE_DITHER

Description:

- HELPER macro calculating the auto-reload value, with dithering feature enabled, to achieve the required pulse duration (when the timer operates in one pulse mode).

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __PSC__: prescaler
- __DELAY__: timer output compare active/inactive delay (in us)
- __PULSE__: pulse duration (in us)

Return value:

- Auto-reload: value (between Min_Data=0 and Max_Data=65535)

Notes:

- ex: __LL_TIM_CALC_PULSE_DITHER (1000000, LL_TIM_GetPrescaler (), 10, 20);

__LL_TIM_GET_ICPSC_RATIO

Description:

- HELPER macro retrieving the ratio of the input capture prescaler.

Parameters:

- __ICPSC__: This parameter can be one of the following values:
  - LL_TIM_ICPSC_DIV1
  - LL_TIM_ICPSC_DIV2
  - LL_TIM_ICPSC_DIV4
  - LL_TIM_ICPSC_DIV8

Return value:

- Input: capture prescaler ratio (1, 2, 4 or 8)

Notes:

- ex: __LL_TIM_GET_ICPSC_RATIO (LL_TIM_IC_GetPrescaler ());

100 LL USART Generic Driver

100.1 USART Firmware driver registers structures

100.1.1 LL_USART_InitTypeDef

LL_USART_InitTypeDef is defined in the stm32u3xx_ll_usart.h

Data Fields

- ***uint32_t PrescalerValue***
- ***uint32_t BaudRate***
- ***uint32_t DataWidth***
- ***uint32_t StopBits***
- ***uint32_t Parity***
- ***uint32_t TransferDirection***
- ***uint32_t HardwareFlowControl***
- ***uint32_t OverSampling***

Field Documentation

- ***uint32_t LL_USART_InitTypeDef::PrescalerValue***
  Specifies the Prescaler to compute the communication baud rate. This parameter can be a value of ***USART_LL_EC_PRESCALER***.This feature can be modified afterwards using unitary function **LL_USART_SetPrescaler()**.
- ***uint32_t LL_USART_InitTypeDef::BaudRate***
  This field defines expected Usart communication baud rate.This feature can be modified afterwards using unitary function **LL_USART_SetBaudRate()**.
- ***uint32_t LL_USART_InitTypeDef::DataWidth***
  Specifies the number of data bits transmitted or received in a frame. This parameter can be a value of ***USART_LL_EC_DATAWIDTH***.This feature can be modified afterwards using unitary function **LL_USART_SetDataWidth()**.
- ***uint32_t LL_USART_InitTypeDef::StopBits***
  Specifies the number of stop bits transmitted. This parameter can be a value of ***USART_LL_EC_STOPBITS***.This feature can be modified afterwards using unitary function **LL_USART_SetStopBitsLength()**.
- ***uint32_t LL_USART_InitTypeDef::Parity***
  Specifies the parity mode. This parameter can be a value of ***USART_LL_EC_PARITY***.This feature can be modified afterwards using unitary function **LL_USART_SetParity()**.
- ***uint32_t LL_USART_InitTypeDef::TransferDirection***
  Specifies whether the Receive and/or Transmit mode is enabled or disabled. This parameter can be a value of ***USART_LL_EC_DIRECTION***.This feature can be modified afterwards using unitary function **LL_USART_SetTransferDirection()**.
- ***uint32_t LL_USART_InitTypeDef::HardwareFlowControl***
  Specifies whether the hardware flow control mode is enabled or disabled. This parameter can be a value of ***USART_LL_EC_HWCONTROL***.This feature can be modified afterwards using unitary function **LL_USART_SetHWFlowCtrl()**.
- ***uint32_t LL_USART_InitTypeDef::OverSampling***
  Specifies whether USART oversampling mode is 16 or 8. This parameter can be a value of ***USART_LL_EC_OVERSAMPLING***.This feature can be modified afterwards using unitary function **LL_USART_SetOverSampling()**.

100.1.2 LL_USART_ClockInitTypeDef

LL_USART_ClockInitTypeDef is defined in the stm32u3xx_ll_usart.h

Data Fields

- ***uint32_t ClockOutput***
- ***uint32_t ClockPolarity***
- ***uint32_t ClockPhase***

- ***uint32_t LastBitClockPulse***

Field Documentation

- ***uint32_t LL_USART_ClockInitTypeDef::ClockOutput***
  Specifies whether the USART clock is enabled or disabled. This parameter can be a value of ***USART_LL_EC_CLOCK***.USART HW configuration can be modified afterwards using unitary functions **LL_USART_EnableSCLKOutput()** or **LL_USART_DisableSCLKOutput()**. For more details, refer to description of this function.
- ***uint32_t LL_USART_ClockInitTypeDef::ClockPolarity***
  Specifies the steady state of the serial clock. This parameter can be a value of ***USART_LL_EC_POLARITY***.USART HW configuration can be modified afterwards using unitary functions **LL_USART_SetClockPolarity()**. For more details, refer to description of this function.
- ***uint32_t LL_USART_ClockInitTypeDef::ClockPhase***
  Specifies the clock transition on which the bit capture is made. This parameter can be a value of ***USART_LL_EC_PHASE***.USART HW configuration can be modified afterwards using unitary functions **LL_USART_SetClockPhase()**. For more details, refer to description of this function.
- ***uint32_t LL_USART_ClockInitTypeDef::LastBitClockPulse***
  Specifies whether the clock pulse corresponding to the last transmitted data bit (MSB) has to be output on the SCLK pin in synchronous mode. This parameter can be a value of ***USART_LL_EC_LASTCLKPULSE***.USART HW configuration can be modified afterwards using unitary functions **LL_USART_SetLastClkPulseOutput()**. For more details, refer to description of this function.

100.2 USART Firmware driver API description

The following section lists the various functions of the USART library.

100.2.1 Detailed description of functions

LL_USART_Enable

Function name

__STATIC_INLINE void LL_USART_Enable (USART_TypeDef * USARTx)

Function description

USART Enable.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 UE LL_USART_Enable

LL_USART_Disable

Function name

__STATIC_INLINE void LL_USART_Disable (USART_TypeDef * USARTx)

Function description

USART Disable (all USART prescalers and outputs are disabled)

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- When USART is disabled, USART prescalers and outputs are stopped immediately, and current operations are discarded. The configuration of the USART is kept, but all the status flags, in the USARTx_ISR are set to their default values.

Reference Manual to LL API cross reference:

- CR1 UE LL_USART_Disable

LL_USART_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabled (const USART_TypeDef * USARTx)

Function description

Indicate if USART is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 UE LL_USART_IsEnabled

LL_USART_EnableFIFO

Function name

__STATIC_INLINE void LL_USART_EnableFIFO (USART_TypeDef * USARTx)

Function description

FIFO Mode Enable.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 FIFOEN LL_USART_EnableFIFO

LL_USART_DisableFIFO

Function name

__STATIC_INLINE void LL_USART_DisableFIFO (USART_TypeDef * USARTx)

Function description

FIFO Mode Disable.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 FIFOEN LL_USART_DisableFIFO

LL_USART_IsEnabledFIFO

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledFIFO (const USART_TypeDef * USARTx)

Function description

Indicate if FIFO Mode is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 FIFOEN LL_USART_IsEnabledFIFO

LL_USART_SetTXFIFOThreshold

Function name

__STATIC_INLINE void LL_USART_SetTXFIFOThreshold (USART_TypeDef * USARTx, uint32_t Threshold)

Function description

Configure TX FIFO Threshold.

Parameters

- **USARTx:** USART Instance
- **Threshold:** This parameter can be one of the following values:
  - LL_USART_FIFOTHRESHOLD_1_8
  - LL_USART_FIFOTHRESHOLD_1_4
  - LL_USART_FIFOTHRESHOLD_1_2
  - LL_USART_FIFOTHRESHOLD_3_4
  - LL_USART_FIFOTHRESHOLD_7_8
  - LL_USART_FIFOTHRESHOLD_8_8

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 TXFTCFG LL_USART_SetTXFIFOThreshold

LL_USART_GetTXFIFOThreshold

Function name

__STATIC_INLINE uint32_t LL_USART_GetTXFIFOThreshold (const USART_TypeDef * USARTx)

Function description

Return TX FIFO Threshold Configuration.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_FIFOTHRESHOLD_1_8
  - LL_USART_FIFOTHRESHOLD_1_4
  - LL_USART_FIFOTHRESHOLD_1_2
  - LL_USART_FIFOTHRESHOLD_3_4
  - LL_USART_FIFOTHRESHOLD_7_8
  - LL_USART_FIFOTHRESHOLD_8_8

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 TXFTCFG LL_USART_GetTXFIFOThreshold

LL_USART_SetRXFIFOThreshold

Function name

__STATIC_INLINE void LL_USART_SetRXFIFOThreshold (USART_TypeDef * USARTx, uint32_t Threshold)

Function description

Configure RX FIFO Threshold.

Parameters

- **USARTx:** USART Instance
- **Threshold:** This parameter can be one of the following values:
  - LL_USART_FIFOTHRESHOLD_1_8
  - LL_USART_FIFOTHRESHOLD_1_4
  - LL_USART_FIFOTHRESHOLD_1_2
  - LL_USART_FIFOTHRESHOLD_3_4
  - LL_USART_FIFOTHRESHOLD_7_8
  - LL_USART_FIFOTHRESHOLD_8_8

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 RXFTCFG LL_USART_SetRXFIFOThreshold

LL_USART_GetRXFIFOThreshold

Function name

__STATIC_INLINE uint32_t LL_USART_GetRXFIFOThreshold (const USART_TypeDef * USARTx)

Function description

Return RX FIFO Threshold Configuration.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_FIFOTHRESHOLD_1_8
  - LL_USART_FIFOTHRESHOLD_1_4
  - LL_USART_FIFOTHRESHOLD_1_2
  - LL_USART_FIFOTHRESHOLD_3_4
  - LL_USART_FIFOTHRESHOLD_7_8
  - LL_USART_FIFOTHRESHOLD_8_8

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 RXFTCFG LL_USART_GetRXFIFOThreshold

LL_USART_ConfigFIFOsThreshold

Function name

__STATIC_INLINE void LL_USART_ConfigFIFOsThreshold (USART_TypeDef * USARTx, uint32_t TXThreshold, uint32_t RXThreshold)

Function description

Configure TX and RX FIFOs Threshold.

Parameters

- **USARTx:** USART Instance
- **TXThreshold:** This parameter can be one of the following values:
  - LL_USART_FIFOTHRESHOLD_1_8
  - LL_USART_FIFOTHRESHOLD_1_4
  - LL_USART_FIFOTHRESHOLD_1_2
  - LL_USART_FIFOTHRESHOLD_3_4
  - LL_USART_FIFOTHRESHOLD_7_8
  - LL_USART_FIFOTHRESHOLD_8_8
- **RXThreshold:** This parameter can be one of the following values:
  - LL_USART_FIFOTHRESHOLD_1_8
  - LL_USART_FIFOTHRESHOLD_1_4
  - LL_USART_FIFOTHRESHOLD_1_2
  - LL_USART_FIFOTHRESHOLD_3_4
  - LL_USART_FIFOTHRESHOLD_7_8
  - LL_USART_FIFOTHRESHOLD_8_8

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 TXFTCFG LL_USART_ConfigFIFOsThreshold
- CR3 RXFTCFG LL_USART_ConfigFIFOsThreshold

LL_USART_EnableInStopMode

Function name

__STATIC_INLINE void LL_USART_EnableInStopMode (USART_TypeDef * USARTx)

Function description

USART enabled in STOP Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- When this function is enabled, USART is able to wake up the MCU from Stop mode, provided that USART clock selection is HSI or LSE in RCC.
- Macro IS_UART_WAKEUP_FROMSTOP_INSTANCE(USARTx) can be used to check whether or not Wake-up from Stop mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 UESM LL_USART_EnableInStopMode

LL_USART_DisableInStopMode

Function name

__STATIC_INLINE void LL_USART_DisableInStopMode (USART_TypeDef * USARTx)

Function description

USART disabled in STOP Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- When this function is disabled, USART is not able to wake up the MCU from Stop mode
- Macro IS_UART_WAKEUP_FROMSTOP_INSTANCE(USARTx) can be used to check whether or not Wake-up from Stop mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 UESM LL_USART_DisableInStopMode

LL_USART_IsEnabledInStopMode

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledInStopMode (const USART_TypeDef * USARTx)

Function description

Indicate if USART is enabled in STOP Mode (able to wake up MCU from Stop mode or not)

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_WAKEUP_FROMSTOP_INSTANCE(USARTx) can be used to check whether or not Wake-up from Stop mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 UESM LL_USART_IsEnabledInStopMode

LL_USART_EnableDirectionRx

Function name

__STATIC_INLINE void LL_USART_EnableDirectionRx (USART_TypeDef * USARTx)

Function description

Receiver Enable (Receiver is enabled and begins searching for a start bit)

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RE LL_USART_EnableDirectionRx

LL_USART_DisableDirectionRx

Function name

__STATIC_INLINE void LL_USART_DisableDirectionRx (USART_TypeDef * USARTx)

Function description

Receiver Disable.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RE LL_USART_DisableDirectionRx

LL_USART_EnableDirectionTx

Function name

__STATIC_INLINE void LL_USART_EnableDirectionTx (USART_TypeDef * USARTx)

Function description

Transmitter Enable.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TE LL_USART_EnableDirectionTx

LL_USART_DisableDirectionTx

Function name

__STATIC_INLINE void LL_USART_DisableDirectionTx (USART_TypeDef * USARTx)

Function description

Transmitter Disable.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TE LL_USART_DisableDirectionTx

LL_USART_SetTransferDirection

Function name

__STATIC_INLINE void LL_USART_SetTransferDirection (USART_TypeDef * USARTx, uint32_t TransferDirection)

Function description

Configure simultaneously enabled/disabled states of Transmitter and Receiver.

Parameters

- **USARTx:** USART Instance
- **TransferDirection:** This parameter can be one of the following values:
  - LL_USART_DIRECTION_NONE
  - LL_USART_DIRECTION_RX
  - LL_USART_DIRECTION_TX
  - LL_USART_DIRECTION_TX_RX

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RE LL_USART_SetTransferDirection
- CR1 TE LL_USART_SetTransferDirection

LL_USART_GetTransferDirection

Function name

__STATIC_INLINE uint32_t LL_USART_GetTransferDirection (const USART_TypeDef * USARTx)

Function description

Return enabled/disabled states of Transmitter and Receiver.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_DIRECTION_NONE
  - LL_USART_DIRECTION_RX
  - LL_USART_DIRECTION_TX
  - LL_USART_DIRECTION_TX_RX

Reference Manual to LL API cross reference:

- CR1 RE LL_USART_GetTransferDirection
- CR1 TE LL_USART_GetTransferDirection

LL_USART_SetParity

Function name

__STATIC_INLINE void LL_USART_SetParity (USART_TypeDef * USARTx, uint32_t Parity)

Function description

Configure Parity (enabled/disabled and parity mode if enabled).

Parameters

- **USARTx:** USART Instance
- **Parity:** This parameter can be one of the following values:
  - LL_USART_PARITY_NONE
  - LL_USART_PARITY_EVEN
  - LL_USART_PARITY_ODD

Return values

- **None:**

Notes

- This function selects if hardware parity control (generation and detection) is enabled or disabled. When the parity control is enabled (Odd or Even), computed parity bit is inserted at the MSB position (9th or 8th bit depending on data width) and parity is checked on the received data.

Reference Manual to LL API cross reference:

- CR1 PS LL_USART_SetParity
- CR1 PCE LL_USART_SetParity

LL_USART_GetParity

Function name

__STATIC_INLINE uint32_t LL_USART_GetParity (const USART_TypeDef * USARTx)

Function description

Return Parity configuration (enabled/disabled and parity mode if enabled)

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_PARITY_NONE
  - LL_USART_PARITY_EVEN
  - LL_USART_PARITY_ODD

Reference Manual to LL API cross reference:

- CR1 PS LL_USART_GetParity
- CR1 PCE LL_USART_GetParity

LL_USART_SetWakeUpMethod

Function name

__STATIC_INLINE void LL_USART_SetWakeUpMethod (USART_TypeDef * USARTx, uint32_t Method)

Function description

Set Receiver Wake Up method from Mute mode.

Parameters

- **USARTx:** USART Instance
- **Method:** This parameter can be one of the following values:
  - LL_USART_WAKEUP_IDLELINE
  - LL_USART_WAKEUP_ADDRESSMARK

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 WAKE LL_USART_SetWakeUpMethod

LL_USART_GetWakeUpMethod

Function name

__STATIC_INLINE uint32_t LL_USART_GetWakeUpMethod (const USART_TypeDef * USARTx)

Function description

Return Receiver Wake Up method from Mute mode.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_WAKEUP_IDLELINE
  - LL_USART_WAKEUP_ADDRESSMARK

Reference Manual to LL API cross reference:

- CR1 WAKE LL_USART_GetWakeUpMethod

LL_USART_SetDataWidth

Function name

__STATIC_INLINE void LL_USART_SetDataWidth (USART_TypeDef * USARTx, uint32_t DataWidth)

Function description

Set Word length (i.e.

Parameters

- **USARTx:** USART Instance
- **DataWidth:** This parameter can be one of the following values:
  - LL_USART_DATAWIDTH_7B
  - LL_USART_DATAWIDTH_8B
  - LL_USART_DATAWIDTH_9B

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 M0 LL_USART_SetDataWidth
- CR1 M1 LL_USART_SetDataWidth

LL_USART_GetDataWidth

Function name

__STATIC_INLINE uint32_t LL_USART_GetDataWidth (const USART_TypeDef * USARTx)

Function description

Return Word length (i.e.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_DATAWIDTH_7B
  - LL_USART_DATAWIDTH_8B
  - LL_USART_DATAWIDTH_9B

Reference Manual to LL API cross reference:

- CR1 M0 LL_USART_GetDataWidth
- CR1 M1 LL_USART_GetDataWidth

LL_USART_EnableMuteMode

Function name

__STATIC_INLINE void LL_USART_EnableMuteMode (USART_TypeDef * USARTx)

Function description

Allow switch between Mute Mode and Active mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 MME LL_USART_EnableMuteMode

LL_USART_DisableMuteMode

Function name

__STATIC_INLINE void LL_USART_DisableMuteMode (USART_TypeDef * USARTx)

Function description

Prevent Mute Mode use.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 MME LL_USART_DisableMuteMode

LL_USART_IsEnabledMuteMode

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledMuteMode (const USART_TypeDef * USARTx)

Function description

Indicate if switch between Mute Mode and Active mode is allowed.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 MME LL_USART_IsEnabledMuteMode

LL_USART_SetOverSampling

Function name

__STATIC_INLINE void LL_USART_SetOverSampling (USART_TypeDef * USARTx, uint32_t OverSampling)

Function description

Set Oversampling to 8-bit or 16-bit mode.

Parameters

- **USARTx:** USART Instance
- **OverSampling:** This parameter can be one of the following values:
  - LL_USART_OVERSAMPLING_16
  - LL_USART_OVERSAMPLING_8

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 OVER8 LL_USART_SetOverSampling

LL_USART_GetOverSampling

Function name

__STATIC_INLINE uint32_t LL_USART_GetOverSampling (const USART_TypeDef * USARTx)

Function description

Return Oversampling mode.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_OVERSAMPLING_16
  - LL_USART_OVERSAMPLING_8

Reference Manual to LL API cross reference:

- CR1 OVER8 LL_USART_GetOverSampling

LL_USART_SetLastClkPulseOutput

Function name

__STATIC_INLINE void LL_USART_SetLastClkPulseOutput (USART_TypeDef * USARTx, uint32_t LastBitClockPulse)

Function description

Configure if Clock pulse of the last data bit is output to the SCLK pin or not.

Parameters

- **USARTx:** USART Instance
- **LastBitClockPulse:** This parameter can be one of the following values:
  - LL_USART_LASTCLKPULSE_NO_OUTPUT
  - LL_USART_LASTCLKPULSE_OUTPUT

Return values

- **None:**

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LBCL LL_USART_SetLastClkPulseOutput

LL_USART_GetLastClkPulseOutput

Function name

__STATIC_INLINE uint32_t LL_USART_GetLastClkPulseOutput (const USART_TypeDef * USARTx)

Function description

Retrieve Clock pulse of the last data bit output configuration (Last bit Clock pulse output to the SCLK pin or not)

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_LASTCLKPULSE_NO_OUTPUT
  - LL_USART_LASTCLKPULSE_OUTPUT

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LBCL LL_USART_GetLastClkPulseOutput

LL_USART_SetClockPhase

Function name

__STATIC_INLINE void LL_USART_SetClockPhase (USART_TypeDef * USARTx, uint32_t ClockPhase)

Function description

Select the phase of the clock output on the SCLK pin in synchronous mode.

Parameters

- **USARTx:** USART Instance
- **ClockPhase:** This parameter can be one of the following values:
  - LL_USART_PHASE_1EDGE
  - LL_USART_PHASE_2EDGE

Return values

- **None:**

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 CPHA LL_USART_SetClockPhase

LL_USART_GetClockPhase

Function name

__STATIC_INLINE uint32_t LL_USART_GetClockPhase (const USART_TypeDef * USARTx)

Function description

Return phase of the clock output on the SCLK pin in synchronous mode.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_PHASE_1EDGE
  - LL_USART_PHASE_2EDGE

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 CPHA LL_USART_GetClockPhase

LL_USART_SetClockPolarity

Function name

__STATIC_INLINE void LL_USART_SetClockPolarity (USART_TypeDef * USARTx, uint32_t ClockPolarity)

Function description

Select the polarity of the clock output on the SCLK pin in synchronous mode.

Parameters

- **USARTx:** USART Instance
- **ClockPolarity:** This parameter can be one of the following values:
  - LL_USART_POLARITY_LOW
  - LL_USART_POLARITY_HIGH

Return values

- **None:**

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 CPOL LL_USART_SetClockPolarity

LL_USART_GetClockPolarity

Function name

__STATIC_INLINE uint32_t LL_USART_GetClockPolarity (const USART_TypeDef * USARTx)

Function description

Return polarity of the clock output on the SCLK pin in synchronous mode.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_POLARITY_LOW
  - LL_USART_POLARITY_HIGH

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 CPOL LL_USART_GetClockPolarity

LL_USART_ConfigClock

Function name

__STATIC_INLINE void LL_USART_ConfigClock (USART_TypeDef * USARTx, uint32_t Phase, uint32_t Polarity, uint32_t LBCPOutput)

Function description

Configure Clock signal format (Phase Polarity and choice about output of last bit clock pulse)

Parameters

- **USARTx:** USART Instance
- **Phase:** This parameter can be one of the following values:
  - LL_USART_PHASE_1EDGE
  - LL_USART_PHASE_2EDGE
- **Polarity:** This parameter can be one of the following values:
  - LL_USART_POLARITY_LOW
  - LL_USART_POLARITY_HIGH
- **LBCPOutput:** This parameter can be one of the following values:
  - LL_USART_LASTCLKPULSE_NO_OUTPUT
  - LL_USART_LASTCLKPULSE_OUTPUT

Return values

- **None:**

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.
- Call of this function is equivalent to following function call sequence : Clock Phase configuration using LL_USART_SetClockPhase() functionClock Polarity configuration using LL_USART_SetClockPolarity() functionOutput of Last bit Clock pulse configuration using LL_USART_SetLastClkPulseOutput() function

Reference Manual to LL API cross reference:

- CR2 CPHA LL_USART_ConfigClock
- CR2 CPOL LL_USART_ConfigClock
- CR2 LBCL LL_USART_ConfigClock

LL_USART_SetPrescaler

Function name

__STATIC_INLINE void LL_USART_SetPrescaler (USART_TypeDef * USARTx, uint32_t PrescalerValue)

Function description

Configure Clock source prescaler for baudrate generator and oversampling.

Parameters

- **USARTx:** USART Instance
- **PrescalerValue:** This parameter can be one of the following values:
  - LL_USART_PRESCALER_DIV1
  - LL_USART_PRESCALER_DIV2
  - LL_USART_PRESCALER_DIV4
  - LL_USART_PRESCALER_DIV6
  - LL_USART_PRESCALER_DIV8
  - LL_USART_PRESCALER_DIV10
  - LL_USART_PRESCALER_DIV12
  - LL_USART_PRESCALER_DIV16
  - LL_USART_PRESCALER_DIV32
  - LL_USART_PRESCALER_DIV64
  - LL_USART_PRESCALER_DIV128
  - LL_USART_PRESCALER_DIV256

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- PRESC PRESCALER LL_USART_SetPrescaler

LL_USART_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_USART_GetPrescaler (const USART_TypeDef * USARTx)

Function description

Retrieve the Clock source prescaler for baudrate generator and oversampling.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_PRESCALER_DIV1
  - LL_USART_PRESCALER_DIV2
  - LL_USART_PRESCALER_DIV4
  - LL_USART_PRESCALER_DIV6
  - LL_USART_PRESCALER_DIV8
  - LL_USART_PRESCALER_DIV10
  - LL_USART_PRESCALER_DIV12
  - LL_USART_PRESCALER_DIV16
  - LL_USART_PRESCALER_DIV32
  - LL_USART_PRESCALER_DIV64
  - LL_USART_PRESCALER_DIV128
  - LL_USART_PRESCALER_DIV256

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- PRESC PRESCALER LL_USART_GetPrescaler

LL_USART_EnableSCLKOutput

Function name

__STATIC_INLINE void LL_USART_EnableSCLKOutput (USART_TypeDef * USARTx)

Function description

Enable Clock output on SCLK pin.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 CLKEN LL_USART_EnableSCLKOutput

LL_USART_DisableSCLKOutput

Function name

__STATIC_INLINE void LL_USART_DisableSCLKOutput (USART_TypeDef * USARTx)

Function description

Disable Clock output on SCLK pin.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 CLKEN LL_USART_DisableSCLKOutput

LL_USART_IsEnabledSCLKOutput

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledSCLKOutput (const USART_TypeDef * USARTx)

Function description

Indicate if Clock output on SCLK pin is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 CLKEN LL_USART_IsEnabledSCLKOutput

LL_USART_SetStopBitsLength

Function name

__STATIC_INLINE void LL_USART_SetStopBitsLength (USART_TypeDef * USARTx, uint32_t StopBits)

Function description

Set the length of the stop bits.

Parameters

- **USARTx:** USART Instance
- **StopBits:** This parameter can be one of the following values:
  - LL_USART_STOPBITS_0_5
  - LL_USART_STOPBITS_1
  - LL_USART_STOPBITS_1_5
  - LL_USART_STOPBITS_2

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 STOP LL_USART_SetStopBitsLength

LL_USART_GetStopBitsLength

Function name

__STATIC_INLINE uint32_t LL_USART_GetStopBitsLength (const USART_TypeDef * USARTx)

Function description

Retrieve the length of the stop bits.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_STOPBITS_0_5
  - LL_USART_STOPBITS_1
  - LL_USART_STOPBITS_1_5
  - LL_USART_STOPBITS_2

Reference Manual to LL API cross reference:

- CR2 STOP LL_USART_GetStopBitsLength

LL_USART_ConfigCharacter

Function name

__STATIC_INLINE void LL_USART_ConfigCharacter (USART_TypeDef * USARTx, uint32_t DataWidth, uint32_t Parity, uint32_t StopBits)

Function description

Configure Character frame format (Datawidth, Parity control, Stop Bits)

Parameters

- **USARTx:** USART Instance
- **DataWidth:** This parameter can be one of the following values:
  - LL_USART_DATAWIDTH_7B
  - LL_USART_DATAWIDTH_8B
  - LL_USART_DATAWIDTH_9B
- **Parity:** This parameter can be one of the following values:
  - LL_USART_PARITY_NONE
  - LL_USART_PARITY_EVEN
  - LL_USART_PARITY_ODD
- **StopBits:** This parameter can be one of the following values:
  - LL_USART_STOPBITS_0_5
  - LL_USART_STOPBITS_1
  - LL_USART_STOPBITS_1_5
  - LL_USART_STOPBITS_2

Return values

- **None:**

Notes

- Call of this function is equivalent to following function call sequence : Data Width configuration using LL_USART_SetDataWidth() functionParity Control and mode configuration using LL_USART_SetParity() functionStop bits configuration using LL_USART_SetStopBitsLength() function

Reference Manual to LL API cross reference:

- CR1 PS LL_USART_ConfigCharacter
- CR1 PCE LL_USART_ConfigCharacter
- CR1 M0 LL_USART_ConfigCharacter

- CR2 STOP LL_USART_ConfigCharacter

LL_USART_SetTXRXSwap

Function name

__STATIC_INLINE void LL_USART_SetTXRXSwap (USART_TypeDef * USARTx, uint32_t SwapConfig)

Function description

Configure TX/RX pins swapping setting.

Parameters

- **USARTx:** USART Instance
- **SwapConfig:** This parameter can be one of the following values:
  - LL_USART_TXRX_STANDARD
  - LL_USART_TXRX_SWAPPED

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 SWAP LL_USART_SetTXRXSwap

LL_USART_GetTXRXSwap

Function name

__STATIC_INLINE uint32_t LL_USART_GetTXRXSwap (const USART_TypeDef * USARTx)

Function description

Retrieve TX/RX pins swapping configuration.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_TXRX_STANDARD
  - LL_USART_TXRX_SWAPPED

Reference Manual to LL API cross reference:

- CR2 SWAP LL_USART_GetTXRXSwap

LL_USART_SetRXPinLevel

Function name

__STATIC_INLINE void LL_USART_SetRXPinLevel (USART_TypeDef * USARTx, uint32_t PinInvMethod)

Function description

Configure RX pin active level logic.

Parameters

- **USARTx:** USART Instance
- **PinInvMethod:** This parameter can be one of the following values:
  - LL_USART_RXPIN_LEVEL_STANDARD
  - LL_USART_RXPIN_LEVEL_INVERTED

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 RXINV LL_USART_SetRXPinLevel

LL_USART_GetRXPinLevel

Function name

__STATIC_INLINE uint32_t LL_USART_GetRXPinLevel (const USART_TypeDef * USARTx)

Function description

Retrieve RX pin active level logic configuration.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_RXPIN_LEVEL_STANDARD
  - LL_USART_RXPIN_LEVEL_INVERTED

Reference Manual to LL API cross reference:

- CR2 RXINV LL_USART_GetRXPinLevel

LL_USART_SetTXPinLevel

Function name

__STATIC_INLINE void LL_USART_SetTXPinLevel (USART_TypeDef * USARTx, uint32_t PinInvMethod)

Function description

Configure TX pin active level logic.

Parameters

- **USARTx:** USART Instance
- **PinInvMethod:** This parameter can be one of the following values:
  - LL_USART_TXPIN_LEVEL_STANDARD
  - LL_USART_TXPIN_LEVEL_INVERTED

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 TXINV LL_USART_SetTXPinLevel

LL_USART_GetTXPinLevel

Function name

__STATIC_INLINE uint32_t LL_USART_GetTXPinLevel (const USART_TypeDef * USARTx)

Function description

Retrieve TX pin active level logic configuration.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_TXPIN_LEVEL_STANDARD
  - LL_USART_TXPIN_LEVEL_INVERTED

Reference Manual to LL API cross reference:

- CR2 TXINV LL_USART_GetTXPinLevel

LL_USART_SetBinaryDataLogic

Function name

__STATIC_INLINE void LL_USART_SetBinaryDataLogic (USART_TypeDef * USARTx, uint32_t DataLogic)

Function description

Configure Binary data logic.

Parameters

- **USARTx:** USART Instance
- **DataLogic:** This parameter can be one of the following values:
  - LL_USART_BINARY_LOGIC_POSITIVE
  - LL_USART_BINARY_LOGIC_NEGATIVE

Return values

- **None:**

Notes

- Allow to define how Logical data from the data register are send/received : either in positive/direct logic (1=H, 0=L) or in negative/inverse logic (1=L, 0=H)

Reference Manual to LL API cross reference:

- CR2 DATAINV LL_USART_SetBinaryDataLogic

LL_USART_GetBinaryDataLogic

Function name

__STATIC_INLINE uint32_t LL_USART_GetBinaryDataLogic (const USART_TypeDef * USARTx)

Function description

Retrieve Binary data configuration.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_BINARY_LOGIC_POSITIVE
  - LL_USART_BINARY_LOGIC_NEGATIVE

Reference Manual to LL API cross reference:

- CR2 DATAINV LL_USART_GetBinaryDataLogic

LL_USART_SetTransferBitOrder

Function name

__STATIC_INLINE void LL_USART_SetTransferBitOrder (USART_TypeDef * USARTx, uint32_t BitOrder)

Function description

Configure transfer bit order (either Less or Most Significant Bit First)

Parameters

- **USARTx:** USART Instance
- **BitOrder:** This parameter can be one of the following values:
  - LL_USART_BITORDER_LSBFIRST
  - LL_USART_BITORDER_MSBFIRST

Return values

- **None:**

Notes

- MSB First means data is transmitted/received with the MSB first, following the start bit. LSB First means data is transmitted/received with data bit 0 first, following the start bit.

Reference Manual to LL API cross reference:

- CR2 MSBFIRST LL_USART_SetTransferBitOrder

LL_USART_GetTransferBitOrder

Function name

__STATIC_INLINE uint32_t LL_USART_GetTransferBitOrder (const USART_TypeDef * USARTx)

Function description

Return transfer bit order (either Less or Most Significant Bit First)

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_BITORDER_LSBFIRST
  - LL_USART_BITORDER_MSBFIRST

Notes

- MSB First means data is transmitted/received with the MSB first, following the start bit. LSB First means data is transmitted/received with data bit 0 first, following the start bit.

Reference Manual to LL API cross reference:

- CR2 MSBFIRST LL_USART_GetTransferBitOrder

LL_USART_EnableAutoBaudRate

Function name

__STATIC_INLINE void LL_USART_EnableAutoBaudRate (USART_TypeDef * USARTx)

Function description

Enable Auto Baud-Rate Detection.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_USART_AUTOBAUDRATE_DETECTION_INSTANCE(USARTx) can be used to check whether or not Auto Baud Rate detection feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 ABREN LL_USART_EnableAutoBaudRate

LL_USART_DisableAutoBaudRate

Function name

__STATIC_INLINE void LL_USART_DisableAutoBaudRate (USART_TypeDef * USARTx)

Function description

Disable Auto Baud-Rate Detection.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_USART_AUTOBAUDRATE_DETECTION_INSTANCE(USARTx) can be used to check whether or not Auto Baud Rate detection feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 ABREN LL_USART_DisableAutoBaudRate

LL_USART_IsEnabledAutoBaud

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledAutoBaud (const USART_TypeDef * USARTx)

Function description

Indicate if Auto Baud-Rate Detection mechanism is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_USART_AUTOBAUDRATE_DETECTION_INSTANCE(USARTx) can be used to check whether or not Auto Baud Rate detection feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 ABREN LL_USART_IsEnabledAutoBaud

LL_USART_SetAutoBaudRateMode

Function name

__STATIC_INLINE void LL_USART_SetAutoBaudRateMode (USART_TypeDef * USARTx, uint32_t AutoBaudRateMode)

Function description

Set Auto Baud-Rate mode bits.

Parameters

- **USARTx:** USART Instance
- **AutoBaudRateMode:** This parameter can be one of the following values:
  - LL_USART_AUTOBAUD_DETECT_ON_STARTBIT
  - LL_USART_AUTOBAUD_DETECT_ON_FALLINGEDGE
  - LL_USART_AUTOBAUD_DETECT_ON_7F_FRAME
  - LL_USART_AUTOBAUD_DETECT_ON_55_FRAME

Return values

- **None:**

Notes

- Macro IS_USART_AUTOBAUDRATE_DETECTION_INSTANCE(USARTx) can be used to check whether or not Auto Baud Rate detection feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 ABRMODE LL_USART_SetAutoBaudRateMode

LL_USART_GetAutoBaudRateMode

Function name

__STATIC_INLINE uint32_t LL_USART_GetAutoBaudRateMode (const USART_TypeDef * USARTx)

Function description

Return Auto Baud-Rate mode.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_AUTOBAUD_DETECT_ON_STARTBIT
  - LL_USART_AUTOBAUD_DETECT_ON_FALLINGEDGE
  - LL_USART_AUTOBAUD_DETECT_ON_7F_FRAME
  - LL_USART_AUTOBAUD_DETECT_ON_55_FRAME

Notes

- Macro IS_USART_AUTOBAUDRATE_DETECTION_INSTANCE(USARTx) can be used to check whether or not Auto Baud Rate detection feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 ABRMODE LL_USART_GetAutoBaudRateMode

LL_USART_EnableRxTimeout

Function name

__STATIC_INLINE void LL_USART_EnableRxTimeout (USART_TypeDef * USARTx)

Function description

Enable Receiver Timeout.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 RTOEN LL_USART_EnableRxTimeout

LL_USART_DisableRxTimeout

Function name

__STATIC_INLINE void LL_USART_DisableRxTimeout (USART_TypeDef * USARTx)

Function description

Disable Receiver Timeout.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 RTOEN LL_USART_DisableRxTimeout

LL_USART_IsEnabledRxTimeout

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledRxTimeout (const USART_TypeDef * USARTx)

Function description

Indicate if Receiver Timeout feature is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR2 RTOEN LL_USART_IsEnabledRxTimeout

LL_USART_ConfigNodeAddress

Function name

__STATIC_INLINE void LL_USART_ConfigNodeAddress (USART_TypeDef * USARTx, uint32_t AddressLen, uint32_t NodeAddress)

Function description

Set Address of the USART node.

Parameters

- **USARTx:** USART Instance
- **AddressLen:** This parameter can be one of the following values:
  - LL_USART_ADDRESS_DETECT_4B
  - LL_USART_ADDRESS_DETECT_7B
- **NodeAddress:** 4 or 7 bit Address of the USART node.

Return values

- **None:**

Notes

- This is used in multiprocessor communication during Mute mode or Stop mode, for wake up with address mark detection.
- 4bits address node is used when 4-bit Address Detection is selected in ADDM7. (b7-b4 should be set to 0) 8bits address node is used when 7-bit Address Detection is selected in ADDM7. (This is used in multiprocessor communication during Mute mode or Stop mode, for wake up with 7-bit address mark detection. The MSB of the character sent by the transmitter should be equal to 1. It may also be used for character detection during normal reception, Mute mode inactive (for example, end of block detection in ModBus protocol). In this case, the whole received character (8-bit) is compared to the ADD[7:0] value and CMF flag is set on match)

Reference Manual to LL API cross reference:

- CR2 ADD LL_USART_ConfigNodeAddress
- CR2 ADDM7 LL_USART_ConfigNodeAddress

LL_USART_GetNodeAddress

Function name

__STATIC_INLINE uint32_t LL_USART_GetNodeAddress (const USART_TypeDef * USARTx)

Function description

Return 8 bit Address of the USART node as set in ADD field of CR2.

Parameters

- **USARTx:** USART Instance

Return values

- **Address:** of the USART node (Value between Min_Data=0 and Max_Data=255)

Notes

- If 4-bit Address Detection is selected in ADDM7, only 4bits (b3-b0) of returned value are relevant (b31-b4 are not relevant) If 7-bit Address Detection is selected in ADDM7, only 8bits (b7-b0) of returned value are relevant (b31-b8 are not relevant)

Reference Manual to LL API cross reference:

- CR2 ADD LL_USART_GetNodeAddress

LL_USART_GetNodeAddressLen

Function name

__STATIC_INLINE uint32_t LL_USART_GetNodeAddressLen (const USART_TypeDef * USARTx)

Function description

Return Length of Node Address used in Address Detection mode (7-bit or 4-bit)

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_ADDRESS_DETECT_4B
  - LL_USART_ADDRESS_DETECT_7B

Reference Manual to LL API cross reference:

- CR2 ADDM7 LL_USART_GetNodeAddressLen

LL_USART_EnableRTSHWFlowCtrl

Function name

__STATIC_INLINE void LL_USART_EnableRTSHWFlowCtrl (USART_TypeDef * USARTx)

Function description

Enable RTS HW Flow Control.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 RTSE LL_USART_EnableRTSHWFlowCtrl

LL_USART_DisableRTSHWFlowCtrl

Function name

__STATIC_INLINE void LL_USART_DisableRTSHWFlowCtrl (USART_TypeDef * USARTx)

Function description

Disable RTS HW Flow Control.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 RTSE LL_USART_DisableRTSHWFlowCtrl

LL_USART_EnableCTSHWFlowCtrl

Function name

__STATIC_INLINE void LL_USART_EnableCTSHWFlowCtrl (USART_TypeDef * USARTx)

Function description

Enable CTS HW Flow Control.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 CTSE LL_USART_EnableCTSHWFlowCtrl

LL_USART_DisableCTSHWFlowCtrl

Function name

__STATIC_INLINE void LL_USART_DisableCTSHWFlowCtrl (USART_TypeDef * USARTx)

Function description

Disable CTS HW Flow Control.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 CTSE LL_USART_DisableCTSHWFlowCtrl

LL_USART_SetHWFlowCtrl

Function name

__STATIC_INLINE void LL_USART_SetHWFlowCtrl (USART_TypeDef * USARTx, uint32_t HardwareFlowControl)

Function description

Configure HW Flow Control mode (both CTS and RTS)

Parameters

- **USARTx:** USART Instance
- **HardwareFlowControl:** This parameter can be one of the following values:
  - LL_USART_HWCONTROL_NONE
  - LL_USART_HWCONTROL_RTS
  - LL_USART_HWCONTROL_CTS
  - LL_USART_HWCONTROL_RTS_CTS

Return values

- **None:**

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 RTSE LL_USART_SetHWFlowCtrl

LL_USART_EnableOneBitSamp

Function name

__STATIC_INLINE void LL_USART_EnableOneBitSamp (USART_TypeDef * USARTx)

Function description

Enable One bit sampling method.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 ONEBIT LL_USART_EnableOneBitSamp

LL_USART_DisableOneBitSamp

Function name

__STATIC_INLINE void LL_USART_DisableOneBitSamp (USART_TypeDef * USARTx)

Function description

Disable One bit sampling method.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 ONEBIT LL_USART_DisableOneBitSamp

LL_USART_IsEnabledOneBitSamp

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledOneBitSamp (const USART_TypeDef * USARTx)

Function description

Indicate if One bit sampling method is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 ONEBIT LL_USART_IsEnabledOneBitSamp

LL_USART_EnableOverrunDetect

Function name

__STATIC_INLINE void LL_USART_EnableOverrunDetect (USART_TypeDef * USARTx)

Function description

Enable Overrun detection.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 OVRDIS LL_USART_EnableOverrunDetect

LL_USART_DisableOverrunDetect

Function name

__STATIC_INLINE void LL_USART_DisableOverrunDetect (USART_TypeDef * USARTx)

Function description

Disable Overrun detection.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 OVRDIS LL_USART_DisableOverrunDetect

LL_USART_IsEnabledOverrunDetect

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledOverrunDetect (const USART_TypeDef * USARTx)

Function description

Indicate if Overrun detection is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 OVRDIS LL_USART_IsEnabledOverrunDetect

LL_USART_SetBaudRate

Function name

__STATIC_INLINE void LL_USART_SetBaudRate (USART_TypeDef * USARTx, uint32_t PeriphClk, uint32_t PrescalerValue, uint32_t OverSampling, uint32_t BaudRate)

Function description

Configure USART BRR register for achieving expected Baud Rate value.

Parameters

- **USARTx:** USART Instance
- **PeriphClk:** Peripheral Clock
- **PrescalerValue:** This parameter can be one of the following values:
  - LL_USART_PRESCALER_DIV1
  - LL_USART_PRESCALER_DIV2
  - LL_USART_PRESCALER_DIV4
  - LL_USART_PRESCALER_DIV6
  - LL_USART_PRESCALER_DIV8
  - LL_USART_PRESCALER_DIV10
  - LL_USART_PRESCALER_DIV12
  - LL_USART_PRESCALER_DIV16
  - LL_USART_PRESCALER_DIV32
  - LL_USART_PRESCALER_DIV64
  - LL_USART_PRESCALER_DIV128
  - LL_USART_PRESCALER_DIV256
- **OverSampling:** This parameter can be one of the following values:
  - LL_USART_OVERSAMPLING_16
  - LL_USART_OVERSAMPLING_8
- **BaudRate:** Baud Rate

Return values

- **None:**

Notes

- Compute and set USARTDIV value in BRR Register (full BRR content) according to used Peripheral Clock, Oversampling mode, and expected Baud Rate values
- Peripheral clock and Baud rate values provided as function parameters should be valid (Baud rate value != 0)
- In case of oversampling by 16 and 8, BRR content must be greater than or equal to 16d.

Reference Manual to LL API cross reference:

- BRR BRR LL_USART_SetBaudRate

LL_USART_GetBaudRate

Function name

__STATIC_INLINE uint32_t LL_USART_GetBaudRate (const USART_TypeDef * USARTx, uint32_t PeriphClk, uint32_t PrescalerValue, uint32_t OverSampling)

Function description

Return current Baud Rate value, according to USARTDIV present in BRR register (full BRR content), and to used Peripheral Clock and Oversampling mode values.

Parameters

- **USARTx:** USART Instance
- **PeriphClk:** Peripheral Clock
- **PrescalerValue:** This parameter can be one of the following values:
  - LL_USART_PRESCALER_DIV1
  - LL_USART_PRESCALER_DIV2
  - LL_USART_PRESCALER_DIV4
  - LL_USART_PRESCALER_DIV6
  - LL_USART_PRESCALER_DIV8
  - LL_USART_PRESCALER_DIV10
  - LL_USART_PRESCALER_DIV12
  - LL_USART_PRESCALER_DIV16
  - LL_USART_PRESCALER_DIV32
  - LL_USART_PRESCALER_DIV64
  - LL_USART_PRESCALER_DIV128
  - LL_USART_PRESCALER_DIV256
- **OverSampling:** This parameter can be one of the following values:
  - LL_USART_OVERSAMPLING_16
  - LL_USART_OVERSAMPLING_8

Return values

- **Baud:** Rate

Notes

- In case of non-initialized or invalid value stored in BRR register, value 0 will be returned.
- In case of oversampling by 16 and 8, BRR content must be greater than or equal to 16d.

Reference Manual to LL API cross reference:

- BRR BRR LL_USART_GetBaudRate

LL_USART_SetRxTimeout

Function name

__STATIC_INLINE void LL_USART_SetRxTimeout (USART_TypeDef * USARTx, uint32_t Timeout)

Function description

Set Receiver Time Out Value (expressed in nb of bits duration)

Parameters

- **USARTx:** USART Instance
- **Timeout:** Value between Min_Data=0x00 and Max_Data=0x00FFFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTOR RTO LL_USART_SetRxTimeout

LL_USART_GetRxTimeout

Function name

__STATIC_INLINE uint32_t LL_USART_GetRxTimeout (const USART_TypeDef * USARTx)

Function description

Get Receiver Time Out Value (expressed in nb of bits duration)

Parameters

- **USARTx:** USART Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x00FFFFFF

Reference Manual to LL API cross reference:

- RTOR RTO LL_USART_GetRxTimeout

LL_USART_SetBlockLength

Function name

__STATIC_INLINE void LL_USART_SetBlockLength (USART_TypeDef * USARTx, uint32_t BlockLength)

Function description

Set Block Length value in reception.

Parameters

- **USARTx:** USART Instance
- **BlockLength:** Value between Min_Data=0x00 and Max_Data=0xFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTOR BLEN LL_USART_SetBlockLength

LL_USART_GetBlockLength

Function name

__STATIC_INLINE uint32_t LL_USART_GetBlockLength (const USART_TypeDef * USARTx)

Function description

Get Block Length value in reception.

Parameters

- **USARTx:** USART Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0xFF

Reference Manual to LL API cross reference:

- RTOR BLEN LL_USART_GetBlockLength

LL_USART_EnableIrda

Function name

__STATIC_INLINE void LL_USART_EnableIrda (USART_TypeDef * USARTx)

Function description

Enable IrDA mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_IRDA_INSTANCE(USARTx) can be used to check whether or not IrDA feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 IREN LL_USART_EnableIrda

LL_USART_DisableIrda

Function name

__STATIC_INLINE void LL_USART_DisableIrda (USART_TypeDef * USARTx)

Function description

Disable IrDA mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_IRDA_INSTANCE(USARTx) can be used to check whether or not IrDA feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 IREN LL_USART_DisableIrda

LL_USART_IsEnabledIrda

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIrda (const USART_TypeDef * USARTx)

Function description

Indicate if IrDA mode is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_IRDA_INSTANCE(USARTx) can be used to check whether or not IrDA feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 IREN LL_USART_IsEnabledIrda

LL_USART_SetIrdaPowerMode

Function name

__STATIC_INLINE void LL_USART_SetIrdaPowerMode (USART_TypeDef * USARTx, uint32_t PowerMode)

Function description

Configure IrDA Power Mode (Normal or Low Power)

Parameters

- **USARTx:** USART Instance
- **PowerMode:** This parameter can be one of the following values:
  - LL_USART_IRDA_POWER_NORMAL
  - LL_USART_IRDA_POWER_LOW

Return values

- **None:**

Notes

- Macro IS_IRDA_INSTANCE(USARTx) can be used to check whether or not IrDA feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 IRLP LL_USART_SetIrdaPowerMode

LL_USART_GetIrdaPowerMode

Function name

__STATIC_INLINE uint32_t LL_USART_GetIrdaPowerMode (const USART_TypeDef * USARTx)

Function description

Retrieve IrDA Power Mode configuration (Normal or Low Power)

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_IRDA_POWER_NORMAL
  - LL_USART_PHASE_2EDGE

Notes

- Macro IS_IRDA_INSTANCE(USARTx) can be used to check whether or not IrDA feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 IRLP LL_USART_GetIrdaPowerMode

LL_USART_SetIrdaPrescaler

Function name

__STATIC_INLINE void LL_USART_SetIrdaPrescaler (USART_TypeDef * USARTx, uint32_t PrescalerValue)

Function description

Set Irda prescaler value, used for dividing the USART clock source to achieve the Irda Low Power frequency (8 bits value)

Parameters

- **USARTx:** USART Instance
- **PrescalerValue:** Value between Min_Data=0x00 and Max_Data=0xFF

Return values

- **None:**

Notes

- Macro IS_IRDA_INSTANCE(USARTx) can be used to check whether or not IrDA feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- GTPR PSC LL_USART_SetIrdaPrescaler

LL_USART_GetIrdaPrescaler

Function name

__STATIC_INLINE uint32_t LL_USART_GetIrdaPrescaler (const USART_TypeDef * USARTx)

Function description

Return Irda prescaler value, used for dividing the USART clock source to achieve the Irda Low Power frequency (8 bits value)

Parameters

- **USARTx:** USART Instance

Return values

- **Irda:** prescaler value (Value between Min_Data=0x00 and Max_Data=0xFF)

Notes

- Macro IS_IRDA_INSTANCE(USARTx) can be used to check whether or not IrDA feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- GTPR PSC LL_USART_GetIrdaPrescaler

LL_USART_EnableSmartcardNACK

Function name

__STATIC_INLINE void LL_USART_EnableSmartcardNACK (USART_TypeDef * USARTx)

Function description

Enable Smartcard NACK transmission.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 NACK LL_USART_EnableSmartcardNACK

LL_USART_DisableSmartcardNACK

Function name

__STATIC_INLINE void LL_USART_DisableSmartcardNACK (USART_TypeDef * USARTx)

Function description

Disable Smartcard NACK transmission.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 NACK LL_USART_DisableSmartcardNACK

LL_USART_IsEnabledSmartcardNACK

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledSmartcardNACK (const USART_TypeDef * USARTx)

Function description

Indicate if Smartcard NACK transmission is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 NACK LL_USART_IsEnabledSmartcardNACK

LL_USART_EnableSmartcard

Function name

__STATIC_INLINE void LL_USART_EnableSmartcard (USART_TypeDef * USARTx)

Function description

Enable Smartcard mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 SCEN LL_USART_EnableSmartcard

LL_USART_DisableSmartcard

Function name

__STATIC_INLINE void LL_USART_DisableSmartcard (USART_TypeDef * USARTx)

Function description

Disable Smartcard mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 SCEN LL_USART_DisableSmartcard

LL_USART_IsEnabledSmartcard

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledSmartcard (const USART_TypeDef * USARTx)

Function description

Indicate if Smartcard mode is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 SCEN LL_USART_IsEnabledSmartcard

LL_USART_SetSmartcardAutoRetryCount

Function name

__STATIC_INLINE void LL_USART_SetSmartcardAutoRetryCount (USART_TypeDef * USARTx, uint32_t AutoRetryCount)

Function description

Set Smartcard Auto-Retry Count value (SCARCNT[2:0] bits)

Parameters

- **USARTx:** USART Instance
- **AutoRetryCount:** Value between Min_Data=0 and Max_Data=7

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.
- This bit-field specifies the number of retries in transmit and receive, in Smartcard mode. In transmission mode, it specifies the number of automatic retransmission retries, before generating a transmission error (FE bit set). In reception mode, it specifies the number or erroneous reception trials, before generating a reception error (RXNE and PE bits set)

Reference Manual to LL API cross reference:

- CR3 SCARCNT LL_USART_SetSmartcardAutoRetryCount

LL_USART_GetSmartcardAutoRetryCount

Function name

__STATIC_INLINE uint32_t LL_USART_GetSmartcardAutoRetryCount (const USART_TypeDef * USARTx)

Function description

Return Smartcard Auto-Retry Count value (SCARCNT[2:0] bits)

Parameters

- **USARTx:** USART Instance

Return values

- **Smartcard:** Auto-Retry Count value (Value between Min_Data=0 and Max_Data=7)

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 SCARCNT LL_USART_GetSmartcardAutoRetryCount

LL_USART_SetSmartcardPrescaler

Function name

__STATIC_INLINE void LL_USART_SetSmartcardPrescaler (USART_TypeDef * USARTx, uint32_t PrescalerValue)

Function description

Set Smartcard prescaler value, used for dividing the USART clock source to provide the SMARTCARD Clock (5 bits value)

Parameters

- **USARTx:** USART Instance
- **PrescalerValue:** Value between Min_Data=0 and Max_Data=31

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- GTPR PSC LL_USART_SetSmartcardPrescaler

LL_USART_GetSmartcardPrescaler

Function name

__STATIC_INLINE uint32_t LL_USART_GetSmartcardPrescaler (const USART_TypeDef * USARTx)

Function description

Return Smartcard prescaler value, used for dividing the USART clock source to provide the SMARTCARD Clock (5 bits value)

Parameters

- **USARTx:** USART Instance

Return values

- **Smartcard:** prescaler value (Value between Min_Data=0 and Max_Data=31)

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- GTPR PSC LL_USART_GetSmartcardPrescaler

LL_USART_SetSmartcardGuardTime

Function name

__STATIC_INLINE void LL_USART_SetSmartcardGuardTime (USART_TypeDef * USARTx, uint32_t GuardTime)

Function description

Set Smartcard Guard time value, expressed in nb of baud clocks periods (GT[7:0] bits : Guard time value)

Parameters

- **USARTx:** USART Instance
- **GuardTime:** Value between Min_Data=0x00 and Max_Data=0xFF

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- GTPR GT LL_USART_SetSmartcardGuardTime

LL_USART_GetSmartcardGuardTime

Function name

__STATIC_INLINE uint32_t LL_USART_GetSmartcardGuardTime (const USART_TypeDef * USARTx)

Function description

Return Smartcard Guard time value, expressed in nb of baud clocks periods (GT[7:0] bits : Guard time value)

Parameters

- **USARTx:** USART Instance

Return values

- **Smartcard:** Guard time value (Value between Min_Data=0x00 and Max_Data=0xFF)

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- GTPR GT LL_USART_GetSmartcardGuardTime

LL_USART_EnableHalfDuplex

Function name

__STATIC_INLINE void LL_USART_EnableHalfDuplex (USART_TypeDef * USARTx)

Function description

Enable Single Wire Half-Duplex mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_HALFDUPLEX_INSTANCE(USARTx) can be used to check whether or not Half-Duplex mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 HDSEL LL_USART_EnableHalfDuplex

LL_USART_DisableHalfDuplex

Function name

__STATIC_INLINE void LL_USART_DisableHalfDuplex (USART_TypeDef * USARTx)

Function description

Disable Single Wire Half-Duplex mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_HALFDUPLEX_INSTANCE(USARTx) can be used to check whether or not Half-Duplex mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 HDSEL LL_USART_DisableHalfDuplex

LL_USART_IsEnabledHalfDuplex

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledHalfDuplex (const USART_TypeDef * USARTx)

Function description

Indicate if Single Wire Half-Duplex mode is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_HALFDUPLEX_INSTANCE(USARTx) can be used to check whether or not Half-Duplex mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 HDSEL LL_USART_IsEnabledHalfDuplex

LL_USART_EnableSPISlave

Function name

__STATIC_INLINE void LL_USART_EnableSPISlave (USART_TypeDef * USARTx)

Function description

Enable SPI Synchronous Slave mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_SPI_SLAVE_INSTANCE(USARTx) can be used to check whether or not SPI Slave mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 SLVEN LL_USART_EnableSPISlave

LL_USART_DisableSPISlave

Function name

__STATIC_INLINE void LL_USART_DisableSPISlave (USART_TypeDef * USARTx)

Function description

Disable SPI Synchronous Slave mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_SPI_SLAVE_INSTANCE(USARTx) can be used to check whether or not SPI Slave mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 SLVEN LL_USART_DisableSPISlave

LL_USART_IsEnabledSPISlave

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledSPISlave (const USART_TypeDef * USARTx)

Function description

Indicate if SPI Synchronous Slave mode is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_SPI_SLAVE_INSTANCE(USARTx) can be used to check whether or not SPI Slave mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 SLVEN LL_USART_IsEnabledSPISlave

LL_USART_EnableSPISlaveSelect

Function name

__STATIC_INLINE void LL_USART_EnableSPISlaveSelect (USART_TypeDef * USARTx)

Function description

Enable SPI Slave Selection using NSS input pin.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_SPI_SLAVE_INSTANCE(USARTx) can be used to check whether or not SPI Slave mode feature is supported by the USARTx instance.
- SPI Slave Selection depends on NSS input pin (The slave is selected when NSS is low and deselected when NSS is high).

Reference Manual to LL API cross reference:

- CR2 DIS_NSS LL_USART_EnableSPISlaveSelect

LL_USART_DisableSPISlaveSelect

Function name

__STATIC_INLINE void LL_USART_DisableSPISlaveSelect (USART_TypeDef * USARTx)

Function description

Disable SPI Slave Selection using NSS input pin.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_SPI_SLAVE_INSTANCE(USARTx) can be used to check whether or not SPI Slave mode feature is supported by the USARTx instance.
- SPI Slave will be always selected and NSS input pin will be ignored.

Reference Manual to LL API cross reference:

- CR2 DIS_NSS LL_USART_DisableSPISlaveSelect

LL_USART_IsEnabledSPISlaveSelect

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledSPISlaveSelect (const USART_TypeDef * USARTx)

Function description

Indicate if SPI Slave Selection depends on NSS input pin.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_SPI_SLAVE_INSTANCE(USARTx) can be used to check whether or not SPI Slave mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 DIS_NSS LL_USART_IsEnabledSPISlaveSelect

LL_USART_SetLINBrkDetectionLen

Function name

__STATIC_INLINE void LL_USART_SetLINBrkDetectionLen (USART_TypeDef * USARTx, uint32_t LINBDLength)

Function description

Set LIN Break Detection Length.

Parameters

- **USARTx:** USART Instance
- **LINBDLength:** This parameter can be one of the following values:
  - LL_USART_LINBREAK_DETECT_10B
  - LL_USART_LINBREAK_DETECT_11B

Return values

- **None:**

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LBDL LL_USART_SetLINBrkDetectionLen

LL_USART_GetLINBrkDetectionLen

Function name

__STATIC_INLINE uint32_t LL_USART_GetLINBrkDetectionLen (const USART_TypeDef * USARTx)

Function description

Return LIN Break Detection Length.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_LINBREAK_DETECT_10B
  - LL_USART_LINBREAK_DETECT_11B

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LBDL LL_USART_GetLINBrkDetectionLen

LL_USART_EnableLIN

Function name

__STATIC_INLINE void LL_USART_EnableLIN (USART_TypeDef * USARTx)

Function description

Enable LIN mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LINEN LL_USART_EnableLIN

LL_USART_DisableLIN

Function name

__STATIC_INLINE void LL_USART_DisableLIN (USART_TypeDef * USARTx)

Function description

Disable LIN mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LINEN LL_USART_DisableLIN

LL_USART_IsEnabledLIN

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledLIN (const USART_TypeDef * USARTx)

Function description

Indicate if LIN mode is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LINEN LL_USART_IsEnabledLIN

LL_USART_SetDEDeassertionTime

Function name

__STATIC_INLINE void LL_USART_SetDEDeassertionTime (USART_TypeDef * USARTx, uint32_t Time)

Function description

Set DEDT (Driver Enable De-Assertion Time), Time value expressed on 5 bits ([4:0] bits).

Parameters

- **USARTx:** USART Instance
- **Time:** Value between Min_Data=0 and Max_Data=31

Return values

- **None:**

Notes

- Macro IS_UART_DRIVER_ENABLE_INSTANCE(USARTx) can be used to check whether or not Driver Enable feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 DEDT LL_USART_SetDEDeassertionTime

LL_USART_GetDEDeassertionTime

Function name

__STATIC_INLINE uint32_t LL_USART_GetDEDeassertionTime (const USART_TypeDef * USARTx)

Function description

Return DEDT (Driver Enable De-Assertion Time)

Parameters

- **USARTx:** USART Instance

Return values

- **Time:** value expressed on 5 bits ([4:0] bits) : Value between Min_Data=0 and Max_Data=31

Notes

- Macro IS_UART_DRIVER_ENABLE_INSTANCE(USARTx) can be used to check whether or not Driver Enable feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

Function description

Set DEAT (Driver Enable Assertion Time), Time value expressed on 5 bits ([4:0] bits).

Parameters

- **USARTx:** USART Instance
- **Time:** Value between Min_Data=0 and Max_Data=31

Return values

- **None:**

Notes

- Macro IS_UART_DRIVER_ENABLE_INSTANCE(USARTx) can be used to check whether or not Driver Enable feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 DEAT LL_USART_SetDEAssertionTime

LL_USART_GetDEAssertionTime

Function name

__STATIC_INLINE uint32_t LL_USART_GetDEAssertionTime (const USART_TypeDef * USARTx)

Function description

Return DEAT (Driver Enable Assertion Time)

Parameters

- **USARTx:** USART Instance

Return values

- **Time:** value expressed on 5 bits ([4:0] bits) : Value between Min_Data=0 and Max_Data=31

Notes

- Macro IS_UART_DRIVER_ENABLE_INSTANCE(USARTx) can be used to check whether or not Driver Enable feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 DEAT LL_USART_GetDEAssertionTime

LL_USART_EnableDEMode

Function name

__STATIC_INLINE void LL_USART_EnableDEMode (USART_TypeDef * USARTx)

Function description

Enable Driver Enable (DE) Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_DRIVER_ENABLE_INSTANCE(USARTx) can be used to check whether or not Driver Enable feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 DEM LL_USART_EnableDEMode

LL_USART_DisableDEMode

Function name

__STATIC_INLINE void LL_USART_DisableDEMode (USART_TypeDef * USARTx)

Function description

Disable Driver Enable (DE) Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_DRIVER_ENABLE_INSTANCE(USARTx) can be used to check whether or not Driver Enable feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 DEM LL_USART_DisableDEMode

LL_USART_IsEnabledDEMode

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledDEMode (const USART_TypeDef * USARTx)

Function description

Indicate if Driver Enable (DE) Mode is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_DRIVER_ENABLE_INSTANCE(USARTx) can be used to check whether or not Driver Enable feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 DEM LL_USART_IsEnabledDEMode

LL_USART_SetDESignalPolarity

Function name

__STATIC_INLINE void LL_USART_SetDESignalPolarity (USART_TypeDef * USARTx, uint32_t Polarity)

Function description

Select Driver Enable Polarity.

Parameters

- **USARTx:** USART Instance
- **Polarity:** This parameter can be one of the following values:
  - LL_USART_DE_POLARITY_HIGH
  - LL_USART_DE_POLARITY_LOW

Return values

- **None:**

Notes

- Macro IS_UART_DRIVER_ENABLE_INSTANCE(USARTx) can be used to check whether or not Driver Enable feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 DEP LL_USART_SetDESignalPolarity

LL_USART_GetDESignalPolarity

Function name

__STATIC_INLINE uint32_t LL_USART_GetDESignalPolarity (const USART_TypeDef * USARTx)

Function description

Return Driver Enable Polarity.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_DE_POLARITY_HIGH
  - LL_USART_DE_POLARITY_LOW

Notes

- Macro IS_UART_DRIVER_ENABLE_INSTANCE(USARTx) can be used to check whether or not Driver Enable feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 DEP LL_USART_GetDESignalPolarity

LL_USART_ConfigAsyncMode

Function name

__STATIC_INLINE void LL_USART_ConfigAsyncMode (USART_TypeDef * USARTx)

Function description

Perform basic configuration of USART for enabling use in Asynchronous Mode (UART)

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- In UART mode, the following bits must be kept cleared: LINEN bit in the USART_CR2 register,CLKEN bit in the USART_CR2 register,SCEN bit in the USART_CR3 register,IREN bit in the USART_CR3 register,HDSEL bit in the USART_CR3 register.
- Call of this function is equivalent to following function call sequence : Clear LINEN in CR2 using LL_USART_DisableLIN() functionClear CLKEN in CR2 using LL_USART_DisableSCLKOutput() functionClear SCEN in CR3 using LL_USART_DisableSmartcard() functionClear IREN in CR3 using LL_USART_DisableIrda() functionClear HDSEL in CR3 using LL_USART_DisableHalfDuplex() function
- Other remaining configurations items related to Asynchronous Mode (as Baud Rate, Word length, Parity, ...) should be set using dedicated functions

Reference Manual to LL API cross reference:

- CR2 LINEN LL_USART_ConfigAsyncMode
- CR2 CLKEN LL_USART_ConfigAsyncMode
- CR3 SCEN LL_USART_ConfigAsyncMode
- CR3 IREN LL_USART_ConfigAsyncMode
- CR3 HDSEL LL_USART_ConfigAsyncMode

LL_USART_ConfigSyncMode

Function name

__STATIC_INLINE void LL_USART_ConfigSyncMode (USART_TypeDef * USARTx)

Function description

Perform basic configuration of USART for enabling use in Synchronous Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- In Synchronous mode, the following bits must be kept cleared: LINEN bit in the USART_CR2 register,SCEN bit in the USART_CR3 register,IREN bit in the USART_CR3 register,HDSEL bit in the USART_CR3 register. This function also sets the USART in Synchronous mode.
- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.
- Call of this function is equivalent to following function call sequence : Clear LINEN in CR2 using LL_USART_DisableLIN() functionClear IREN in CR3 using LL_USART_DisableIrda() functionClear SCEN in CR3 using LL_USART_DisableSmartcard() functionClear HDSEL in CR3 using LL_USART_DisableHalfDuplex() functionSet CLKEN in CR2 using LL_USART_EnableSCLKOutput() function
- Other remaining configurations items related to Synchronous Mode (as Baud Rate, Word length, Parity, Clock Polarity, ...) should be set using dedicated functions

Reference Manual to LL API cross reference:

- CR2 LINEN LL_USART_ConfigSyncMode
- CR2 CLKEN LL_USART_ConfigSyncMode
- CR3 SCEN LL_USART_ConfigSyncMode
- CR3 IREN LL_USART_ConfigSyncMode
- CR3 HDSEL LL_USART_ConfigSyncMode

LL_USART_ConfigLINMode

Function name

__STATIC_INLINE void LL_USART_ConfigLINMode (USART_TypeDef * USARTx)

Function description

Perform basic configuration of USART for enabling use in LIN Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- In LIN mode, the following bits must be kept cleared: STOP and CLKEN bits in the USART_CR2 register,SCEN bit in the USART_CR3 register,IREN bit in the USART_CR3 register,HDSEL bit in the USART_CR3 register. This function also set the UART/USART in LIN mode.
- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.
- Call of this function is equivalent to following function call sequence : Clear CLKEN in CR2 using LL_USART_DisableSCLKOutput() functionClear STOP in CR2 using LL_USART_SetStopBitsLength() functionClear SCEN in CR3 using LL_USART_DisableSmartcard() functionClear IREN in CR3 using LL_USART_DisableIrda() functionClear HDSEL in CR3 using LL_USART_DisableHalfDuplex() functionSet LINEN in CR2 using LL_USART_EnableLIN() function
- Other remaining configurations items related to LIN Mode (as Baud Rate, Word length, LIN Break Detection Length, ...) should be set using dedicated functions

Reference Manual to LL API cross reference:

- CR2 CLKEN LL_USART_ConfigLINMode
- CR2 STOP LL_USART_ConfigLINMode
- CR2 LINEN LL_USART_ConfigLINMode
- CR3 IREN LL_USART_ConfigLINMode
- CR3 SCEN LL_USART_ConfigLINMode
- CR3 HDSEL LL_USART_ConfigLINMode

LL_USART_ConfigHalfDuplexMode

Function name

__STATIC_INLINE void LL_USART_ConfigHalfDuplexMode (USART_TypeDef * USARTx)

Function description

Perform basic configuration of USART for enabling use in Half Duplex Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- In Half Duplex mode, the following bits must be kept cleared: LINEN bit in the USART_CR2 register,CLKEN bit in the USART_CR2 register,SCEN bit in the USART_CR3 register,IREN bit in the USART_CR3 register, This function also sets the UART/USART in Half Duplex mode.
- Macro IS_UART_HALFDUPLEX_INSTANCE(USARTx) can be used to check whether or not Half-Duplex mode is supported by the USARTx instance.
- Call of this function is equivalent to following function call sequence : Clear LINEN in CR2 using LL_USART_DisableLIN() functionClear CLKEN in CR2 using LL_USART_DisableSCLKOutput() functionClear SCEN in CR3 using LL_USART_DisableSmartcard() functionClear IREN in CR3 using LL_USART_DisableIrda() functionSet HDSEL in CR3 using LL_USART_EnableHalfDuplex() function
- Other remaining configurations items related to Half Duplex Mode (as Baud Rate, Word length, Parity, ...) should be set using dedicated functions

Reference Manual to LL API cross reference:

- CR2 LINEN LL_USART_ConfigHalfDuplexMode
- CR2 CLKEN LL_USART_ConfigHalfDuplexMode
- CR3 HDSEL LL_USART_ConfigHalfDuplexMode
- CR3 SCEN LL_USART_ConfigHalfDuplexMode
- CR3 IREN LL_USART_ConfigHalfDuplexMode

LL_USART_ConfigSmartcardMode

Function name

__STATIC_INLINE void LL_USART_ConfigSmartcardMode (USART_TypeDef * USARTx)

Function description

Perform basic configuration of USART for enabling use in Smartcard Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- In Smartcard mode, the following bits must be kept cleared: LINEN bit in the USART_CR2 register,IREN bit in the USART_CR3 register,HDSEL bit in the USART_CR3 register. This function also configures Stop bits to 1.5 bits and sets the USART in Smartcard mode (SCEN bit). Clock Output is also enabled (CLKEN).
- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.
- Call of this function is equivalent to following function call sequence : Clear LINEN in CR2 using LL_USART_DisableLIN() functionClear IREN in CR3 using LL_USART_DisableIrda() functionClear HDSEL in CR3 using LL_USART_DisableHalfDuplex() functionConfigure STOP in CR2 using LL_USART_SetStopBitsLength() functionSet CLKEN in CR2 using LL_USART_EnableSCLKOutput() functionSet SCEN in CR3 using LL_USART_EnableSmartcard() function
- Other remaining configurations items related to Smartcard Mode (as Baud Rate, Word length, Parity, ...) should be set using dedicated functions

Reference Manual to LL API cross reference:

- CR2 LINEN LL_USART_ConfigSmartcardMode
- CR2 STOP LL_USART_ConfigSmartcardMode
- CR2 CLKEN LL_USART_ConfigSmartcardMode
- CR3 HDSEL LL_USART_ConfigSmartcardMode
- CR3 SCEN LL_USART_ConfigSmartcardMode

LL_USART_ConfigIrdaMode

Function name

__STATIC_INLINE void LL_USART_ConfigIrdaMode (USART_TypeDef * USARTx)

Function description

Perform basic configuration of USART for enabling use in Irda Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- In IRDA mode, the following bits must be kept cleared: LINEN bit in the USART_CR2 register,STOP and CLKEN bits in the USART_CR2 register,SCEN bit in the USART_CR3 register,HDSEL bit in the USART_CR3 register. This function also sets the UART/USART in IRDA mode (IREN bit).
- Macro IS_IRDA_INSTANCE(USARTx) can be used to check whether or not IrDA feature is supported by the USARTx instance.
- Call of this function is equivalent to following function call sequence : Clear LINEN in CR2 using LL_USART_DisableLIN() functionClear CLKEN in CR2 using LL_USART_DisableSCLKOutput() functionClear SCEN in CR3 using LL_USART_DisableSmartcard() functionClear HDSEL in CR3 using LL_USART_DisableHalfDuplex() functionConfigure STOP in CR2 using LL_USART_SetStopBitsLength() functionSet IREN in CR3 using LL_USART_EnableIrda() function
- Other remaining configurations items related to Irda Mode (as Baud Rate, Word length, Power mode, ...) should be set using dedicated functions

Reference Manual to LL API cross reference:

- CR2 LINEN LL_USART_ConfigIrdaMode
- CR2 CLKEN LL_USART_ConfigIrdaMode
- CR2 STOP LL_USART_ConfigIrdaMode
- CR3 SCEN LL_USART_ConfigIrdaMode
- CR3 HDSEL LL_USART_ConfigIrdaMode
- CR3 IREN LL_USART_ConfigIrdaMode

LL_USART_ConfigMultiProcessMode

Function name

__STATIC_INLINE void LL_USART_ConfigMultiProcessMode (USART_TypeDef * USARTx)

Function description

Perform basic configuration of USART for enabling use in Multi processor Mode (several USARTs connected in a network, one of the USARTs can be the master, its TX output connected to the RX inputs of the other slaves USARTs).

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- In MultiProcessor mode, the following bits must be kept cleared: LINEN bit in the USART_CR2 register,CLKEN bit in the USART_CR2 register,SCEN bit in the USART_CR3 register,IREN bit in the USART_CR3 register,HDSEL bit in the USART_CR3 register.
- Call of this function is equivalent to following function call sequence : Clear LINEN in CR2 using LL_USART_DisableLIN() functionClear CLKEN in CR2 using LL_USART_DisableSCLKOutput() functionClear SCEN in CR3 using LL_USART_DisableSmartcard() functionClear IREN in CR3 using LL_USART_DisableIrda() functionClear HDSEL in CR3 using LL_USART_DisableHalfDuplex() function
- Other remaining configurations items related to Multi processor Mode (as Baud Rate, Wake Up Method, Node address, ...) should be set using dedicated functions

Reference Manual to LL API cross reference:

- CR2 LINEN LL_USART_ConfigMultiProcessMode
- CR2 CLKEN LL_USART_ConfigMultiProcessMode
- CR3 SCEN LL_USART_ConfigMultiProcessMode
- CR3 HDSEL LL_USART_ConfigMultiProcessMode
- CR3 IREN LL_USART_ConfigMultiProcessMode

LL_USART_IsActiveFlag_PE

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_PE (const USART_TypeDef * USARTx)

Function description

Check if the USART Parity Error Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR PE LL_USART_IsActiveFlag_PE

LL_USART_IsActiveFlag_FE

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_FE (const USART_TypeDef * USARTx)

Function description

Check if the USART Framing Error Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR FE LL_USART_IsActiveFlag_FE

LL_USART_IsActiveFlag_NE

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_NE (const USART_TypeDef * USARTx)

Function description

Check if the USART Noise error detected Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR NE LL_USART_IsActiveFlag_NE

LL_USART_IsActiveFlag_ORE

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_ORE (const USART_TypeDef * USARTx)

Function description

Check if the USART OverRun Error Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR ORE LL_USART_IsActiveFlag_ORE

LL_USART_IsActiveFlag_IDLE

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_IDLE (const USART_TypeDef * USARTx)

Function description

Check if the USART IDLE line detected Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR IDLE LL_USART_IsActiveFlag_IDLE

LL_USART_IsActiveFlag_RXNE_RXFNE

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_RXNE_RXFNE (const USART_TypeDef * USARTx)

Function description

Check if the USART Read Data Register or USART RX FIFO Not Empty Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR RXNE_RXFNE LL_USART_IsActiveFlag_RXNE_RXFNE

LL_USART_IsActiveFlag_TC

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_TC (const USART_TypeDef * USARTx)

Function description

Check if the USART Transmission Complete Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TC LL_USART_IsActiveFlag_TC

LL_USART_IsActiveFlag_TXE_TXFNF

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_TXE_TXFNF (const USART_TypeDef * USARTx)

Function description

Check if the USART Transmit Data Register Empty or USART TX FIFO Not Full Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR TXE_TXFNF LL_USART_IsActiveFlag_TXE_TXFNF

LL_USART_IsActiveFlag_LBD

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_LBD (const USART_TypeDef * USARTx)

Function description

Check if the USART LIN Break Detection Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR LBDF LL_USART_IsActiveFlag_LBD

LL_USART_IsActiveFlag_nCTS

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_nCTS (const USART_TypeDef * USARTx)

Function description

Check if the USART CTS interrupt Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR CTSIF LL_USART_IsActiveFlag_nCTS

LL_USART_IsActiveFlag_CTS

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_CTS (const USART_TypeDef * USARTx)

Function description

Check if the USART CTS Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR CTS LL_USART_IsActiveFlag_CTS

LL_USART_IsActiveFlag_RTO

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_RTO (const USART_TypeDef * USARTx)

Function description

Check if the USART Receiver Time Out Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR RTOF LL_USART_IsActiveFlag_RTO

LL_USART_IsActiveFlag_EOB

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_EOB (const USART_TypeDef * USARTx)

Function description

Check if the USART End Of Block Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR EOBF LL_USART_IsActiveFlag_EOB

LL_USART_IsActiveFlag_UDR

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_UDR (const USART_TypeDef * USARTx)

Function description

Check if the SPI Slave Underrun error flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_SPI_SLAVE_INSTANCE(USARTx) can be used to check whether or not SPI Slave mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR UDR LL_USART_IsActiveFlag_UDR

LL_USART_IsActiveFlag_ABRE

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_ABRE (const USART_TypeDef * USARTx)

Function description

Check if the USART Auto-Baud Rate Error Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_USART_AUTOBAUDRATE_DETECTION_INSTANCE(USARTx) can be used to check whether or not Auto Baud Rate detection feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR ABRE LL_USART_IsActiveFlag_ABRE

LL_USART_IsActiveFlag_ABR

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_ABR (const USART_TypeDef * USARTx)

Function description

Check if the USART Auto-Baud Rate Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_USART_AUTOBAUDRATE_DETECTION_INSTANCE(USARTx) can be used to check whether or not Auto Baud Rate detection feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR ABRF LL_USART_IsActiveFlag_ABR

LL_USART_IsActiveFlag_BUSY

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_BUSY (const USART_TypeDef * USARTx)

Function description

Check if the USART Busy Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR BUSY LL_USART_IsActiveFlag_BUSY

LL_USART_IsActiveFlag_CM

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_CM (const USART_TypeDef * USARTx)

Function description

Check if the USART Character Match Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR CMF LL_USART_IsActiveFlag_CM

LL_USART_IsActiveFlag_SBK

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_SBK (const USART_TypeDef * USARTx)

Function description

Check if the USART Send Break Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR SBKF LL_USART_IsActiveFlag_SBK

LL_USART_IsActiveFlag_RWU

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_RWU (const USART_TypeDef * USARTx)

Function description

Check if the USART Receive Wake Up from mute mode Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR RWU LL_USART_IsActiveFlag_RWU

LL_USART_IsActiveFlag_TEACK

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_TEACK (const USART_TypeDef * USARTx)

Function description

Check if the USART Transmit Enable Acknowledge Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TEACK LL_USART_IsActiveFlag_TEACK

LL_USART_IsActiveFlag_REACK

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_REACK (const USART_TypeDef * USARTx)

Function description

Check if the USART Receive Enable Acknowledge Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR REACK LL_USART_IsActiveFlag_REACK

LL_USART_IsActiveFlag_TXFE

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_TXFE (const USART_TypeDef * USARTx)

Function description

Check if the USART TX FIFO Empty Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR TXFE LL_USART_IsActiveFlag_TXFE

LL_USART_IsActiveFlag_RXFF

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_RXFF (const USART_TypeDef * USARTx)

Function description

Check if the USART RX FIFO Full Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR RXFF LL_USART_IsActiveFlag_RXFF

LL_USART_IsActiveFlag_TCBGT

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_TCBGT (const USART_TypeDef * USARTx)

Function description

Check if the Smartcard Transmission Complete Before Guard Time Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TCBGT LL_USART_IsActiveFlag_TCBGT

LL_USART_IsActiveFlag_TXFT

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_TXFT (const USART_TypeDef * USARTx)

Function description

Check if the USART TX FIFO Threshold Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR TXFT LL_USART_IsActiveFlag_TXFT

LL_USART_IsActiveFlag_RXFT

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_RXFT (const USART_TypeDef * USARTx)

Function description

Check if the USART RX FIFO Threshold Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR RXFT LL_USART_IsActiveFlag_RXFT

LL_USART_ClearFlag_PE

Function name

__STATIC_INLINE void LL_USART_ClearFlag_PE (USART_TypeDef * USARTx)

Function description

Clear Parity Error Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR PECF LL_USART_ClearFlag_PE

LL_USART_ClearFlag_FE

Function name

__STATIC_INLINE void LL_USART_ClearFlag_FE (USART_TypeDef * USARTx)

Function description

Clear Framing Error Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR FECF LL_USART_ClearFlag_FE

LL_USART_ClearFlag_NE

Function name

__STATIC_INLINE void LL_USART_ClearFlag_NE (USART_TypeDef * USARTx)

Function description

Clear Noise Error detected Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR NECF LL_USART_ClearFlag_NE

LL_USART_ClearFlag_ORE

Function name

__STATIC_INLINE void LL_USART_ClearFlag_ORE (USART_TypeDef * USARTx)

Function description

Clear OverRun Error Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR ORECF LL_USART_ClearFlag_ORE

LL_USART_ClearFlag_IDLE

Function name

__STATIC_INLINE void LL_USART_ClearFlag_IDLE (USART_TypeDef * USARTx)

Function description

Clear IDLE line detected Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR IDLECF LL_USART_ClearFlag_IDLE

LL_USART_ClearFlag_TXFE

Function name

__STATIC_INLINE void LL_USART_ClearFlag_TXFE (USART_TypeDef * USARTx)

Function description

Clear TX FIFO Empty Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ICR TXFECF LL_USART_ClearFlag_TXFE

LL_USART_ClearFlag_TC

Function name

__STATIC_INLINE void LL_USART_ClearFlag_TC (USART_TypeDef * USARTx)

Function description

Clear Transmission Complete Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR TCCF LL_USART_ClearFlag_TC

LL_USART_ClearFlag_TCBGT

Function name

__STATIC_INLINE void LL_USART_ClearFlag_TCBGT (USART_TypeDef * USARTx)

Function description

Clear Smartcard Transmission Complete Before Guard Time Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR TCBGTCF LL_USART_ClearFlag_TCBGT

LL_USART_ClearFlag_LBD

Function name

__STATIC_INLINE void LL_USART_ClearFlag_LBD (USART_TypeDef * USARTx)

Function description

Clear LIN Break Detection Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ICR LBDCF LL_USART_ClearFlag_LBD

LL_USART_ClearFlag_nCTS

Function name

__STATIC_INLINE void LL_USART_ClearFlag_nCTS (USART_TypeDef * USARTx)

Function description

Clear CTS Interrupt Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ICR CTSCF LL_USART_ClearFlag_nCTS

LL_USART_ClearFlag_RTO

Function name

__STATIC_INLINE void LL_USART_ClearFlag_RTO (USART_TypeDef * USARTx)

Function description

Clear Receiver Time Out Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR RTOCF LL_USART_ClearFlag_RTO

LL_USART_ClearFlag_EOB

Function name

__STATIC_INLINE void LL_USART_ClearFlag_EOB (USART_TypeDef * USARTx)

Function description

Clear End Of Block Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ICR EOBCF LL_USART_ClearFlag_EOB

LL_USART_ClearFlag_UDR

Function name

__STATIC_INLINE void LL_USART_ClearFlag_UDR (USART_TypeDef * USARTx)

Function description

Clear SPI Slave Underrun Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_SPI_SLAVE_INSTANCE(USARTx) can be used to check whether or not SPI Slave mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ICR UDRCF LL_USART_ClearFlag_UDR

LL_USART_ClearFlag_CM

Function name

__STATIC_INLINE void LL_USART_ClearFlag_CM (USART_TypeDef * USARTx)

Function description

Clear Character Match Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CMCF LL_USART_ClearFlag_CM

LL_USART_EnableIT_IDLE

Function name

__STATIC_INLINE void LL_USART_EnableIT_IDLE (USART_TypeDef * USARTx)

Function description

Enable IDLE Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 IDLEIE LL_USART_EnableIT_IDLE

LL_USART_EnableIT_RXNE_RXFNE

Function name

__STATIC_INLINE void LL_USART_EnableIT_RXNE_RXFNE (USART_TypeDef * USARTx)

Function description

Enable RX Not Empty and RX FIFO Not Empty Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 RXNEIE_RXFNEIE LL_USART_EnableIT_RXNE_RXFNE

LL_USART_EnableIT_TC

Function name

__STATIC_INLINE void LL_USART_EnableIT_TC (USART_TypeDef * USARTx)

Function description

Enable Transmission Complete Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TCIE LL_USART_EnableIT_TC

LL_USART_EnableIT_TXE_TXFNF

Function name

__STATIC_INLINE void LL_USART_EnableIT_TXE_TXFNF (USART_TypeDef * USARTx)

Function description

Enable TX Empty and TX FIFO Not Full Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 TXEIE_TXFNFIE LL_USART_EnableIT_TXE_TXFNF

LL_USART_EnableIT_PE

Function name

__STATIC_INLINE void LL_USART_EnableIT_PE (USART_TypeDef * USARTx)

Function description

Enable Parity Error Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 PEIE LL_USART_EnableIT_PE

LL_USART_EnableIT_CM

Function name

__STATIC_INLINE void LL_USART_EnableIT_CM (USART_TypeDef * USARTx)

Function description

Enable Character Match Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CMIE LL_USART_EnableIT_CM

LL_USART_EnableIT_RTO

Function name

__STATIC_INLINE void LL_USART_EnableIT_RTO (USART_TypeDef * USARTx)

Function description

Enable Receiver Timeout Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RTOIE LL_USART_EnableIT_RTO

LL_USART_EnableIT_EOB

Function name

__STATIC_INLINE void LL_USART_EnableIT_EOB (USART_TypeDef * USARTx)

Function description

Enable End Of Block Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 EOBIE LL_USART_EnableIT_EOB

LL_USART_EnableIT_TXFE

Function name

__STATIC_INLINE void LL_USART_EnableIT_TXFE (USART_TypeDef * USARTx)

Function description

Enable TX FIFO Empty Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 TXFEIE LL_USART_EnableIT_TXFE

LL_USART_EnableIT_RXFF

Function name

__STATIC_INLINE void LL_USART_EnableIT_RXFF (USART_TypeDef * USARTx)

Function description

Enable RX FIFO Full Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RXFFIE LL_USART_EnableIT_RXFF

LL_USART_EnableIT_LBD

Function name

__STATIC_INLINE void LL_USART_EnableIT_LBD (USART_TypeDef * USARTx)

Function description

Enable LIN Break Detection Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LBDIE LL_USART_EnableIT_LBD

LL_USART_EnableIT_ERROR

Function name

__STATIC_INLINE void LL_USART_EnableIT_ERROR (USART_TypeDef * USARTx)

Function description

Enable Error Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- When set, Error Interrupt Enable Bit is enabling interrupt generation in case of a framing error, overrun error or noise flag (FE=1 or ORE=1 or NF=1 in the USARTx_ISR register). 0: Interrupt is inhibited 1: An interrupt is generated when FE=1 or ORE=1 or NF=1 in the USARTx_ISR register.

Reference Manual to LL API cross reference:

- CR3 EIE LL_USART_EnableIT_ERROR

LL_USART_EnableIT_CTS

Function name

__STATIC_INLINE void LL_USART_EnableIT_CTS (USART_TypeDef * USARTx)

Function description

Enable CTS Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 CTSIE LL_USART_EnableIT_CTS

LL_USART_EnableIT_TXFT

Function name

__STATIC_INLINE void LL_USART_EnableIT_TXFT (USART_TypeDef * USARTx)

Function description

Enable TX FIFO Threshold Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 TXFTIE LL_USART_EnableIT_TXFT

LL_USART_EnableIT_TCBGT

Function name

__STATIC_INLINE void LL_USART_EnableIT_TCBGT (USART_TypeDef * USARTx)

Function description

Enable Smartcard Transmission Complete Before Guard Time Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 TCBGTIE LL_USART_EnableIT_TCBGT

LL_USART_EnableIT_RXFT

Function name

__STATIC_INLINE void LL_USART_EnableIT_RXFT (USART_TypeDef * USARTx)

Function description

Enable RX FIFO Threshold Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 RXFTIE LL_USART_EnableIT_RXFT

LL_USART_DisableIT_IDLE

Function name

__STATIC_INLINE void LL_USART_DisableIT_IDLE (USART_TypeDef * USARTx)

Function description

Disable IDLE Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 IDLEIE LL_USART_DisableIT_IDLE

LL_USART_DisableIT_RXNE_RXFNE

Function name

__STATIC_INLINE void LL_USART_DisableIT_RXNE_RXFNE (USART_TypeDef * USARTx)

Function description

Disable RX Not Empty and RX FIFO Not Empty Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 RXNEIE_RXFNEIE LL_USART_DisableIT_RXNE_RXFNE

LL_USART_DisableIT_TC

Function name

__STATIC_INLINE void LL_USART_DisableIT_TC (USART_TypeDef * USARTx)

Function description

Disable Transmission Complete Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TCIE LL_USART_DisableIT_TC

LL_USART_DisableIT_TXE_TXFNF

Function name

__STATIC_INLINE void LL_USART_DisableIT_TXE_TXFNF (USART_TypeDef * USARTx)

Function description

Disable TX Empty and TX FIFO Not Full Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 TXEIE_TXFNFIE LL_USART_DisableIT_TXE_TXFNF

LL_USART_DisableIT_PE

Function name

__STATIC_INLINE void LL_USART_DisableIT_PE (USART_TypeDef * USARTx)

Function description

Disable Parity Error Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 PEIE LL_USART_DisableIT_PE

LL_USART_DisableIT_CM

Function name

__STATIC_INLINE void LL_USART_DisableIT_CM (USART_TypeDef * USARTx)

Function description

Disable Character Match Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CMIE LL_USART_DisableIT_CM

LL_USART_DisableIT_RTO

Function name

__STATIC_INLINE void LL_USART_DisableIT_RTO (USART_TypeDef * USARTx)

Function description

Disable Receiver Timeout Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RTOIE LL_USART_DisableIT_RTO

LL_USART_DisableIT_EOB

Function name

__STATIC_INLINE void LL_USART_DisableIT_EOB (USART_TypeDef * USARTx)

Function description

Disable End Of Block Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 EOBIE LL_USART_DisableIT_EOB

LL_USART_DisableIT_TXFE

Function name

__STATIC_INLINE void LL_USART_DisableIT_TXFE (USART_TypeDef * USARTx)

Function description

Disable TX FIFO Empty Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 TXFEIE LL_USART_DisableIT_TXFE

LL_USART_DisableIT_RXFF

Function name

__STATIC_INLINE void LL_USART_DisableIT_RXFF (USART_TypeDef * USARTx)

Function description

Disable RX FIFO Full Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 RXFFIE LL_USART_DisableIT_RXFF

LL_USART_DisableIT_LBD

Function name

__STATIC_INLINE void LL_USART_DisableIT_LBD (USART_TypeDef * USARTx)

Function description

Disable LIN Break Detection Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LBDIE LL_USART_DisableIT_LBD

LL_USART_DisableIT_ERROR

Function name

__STATIC_INLINE void LL_USART_DisableIT_ERROR (USART_TypeDef * USARTx)

Function description

Disable Error Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- When set, Error Interrupt Enable Bit is enabling interrupt generation in case of a framing error, overrun error or noise flag (FE=1 or ORE=1 or NF=1 in the USARTx_ISR register). 0: Interrupt is inhibited 1: An interrupt is generated when FE=1 or ORE=1 or NF=1 in the USARTx_ISR register.

Reference Manual to LL API cross reference:

- CR3 EIE LL_USART_DisableIT_ERROR

LL_USART_DisableIT_CTS

Function name

__STATIC_INLINE void LL_USART_DisableIT_CTS (USART_TypeDef * USARTx)

Function description

Disable CTS Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 CTSIE LL_USART_DisableIT_CTS

LL_USART_DisableIT_TXFT

Function name

__STATIC_INLINE void LL_USART_DisableIT_TXFT (USART_TypeDef * USARTx)

Function description

Disable TX FIFO Threshold Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 TXFTIE LL_USART_DisableIT_TXFT

LL_USART_DisableIT_TCBGT

Function name

__STATIC_INLINE void LL_USART_DisableIT_TCBGT (USART_TypeDef * USARTx)

Function description

Disable Smartcard Transmission Complete Before Guard Time Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 TCBGTIE LL_USART_DisableIT_TCBGT

LL_USART_DisableIT_RXFT

Function name

__STATIC_INLINE void LL_USART_DisableIT_RXFT (USART_TypeDef * USARTx)

Function description

Disable RX FIFO Threshold Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 RXFTIE LL_USART_DisableIT_RXFT

LL_USART_IsEnabledIT_IDLE

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_IDLE (const USART_TypeDef * USARTx)

Function description

Check if the USART IDLE Interrupt source is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 IDLEIE LL_USART_IsEnabledIT_IDLE

LL_USART_IsEnabledIT_RXNE_RXFNE

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_RXNE_RXFNE (const USART_TypeDef * USARTx)

Function description

Check if the USART RX Not Empty and USART RX FIFO Not Empty Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 RXNEIE_RXFNEIE LL_USART_IsEnabledIT_RXNE_RXFNE

LL_USART_IsEnabledIT_TC

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_TC (const USART_TypeDef * USARTx)

Function description

Check if the USART Transmission Complete Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 TCIE LL_USART_IsEnabledIT_TC

LL_USART_IsEnabledIT_TXE_TXFNF

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_TXE_TXFNF (const USART_TypeDef * USARTx)

Function description

Check if the USART TX Empty and USART TX FIFO Not Full Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 TXEIE_TXFNFIE LL_USART_IsEnabledIT_TXE_TXFNF

LL_USART_IsEnabledIT_PE

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_PE (const USART_TypeDef * USARTx)

Function description

Check if the USART Parity Error Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 PEIE LL_USART_IsEnabledIT_PE

LL_USART_IsEnabledIT_CM

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_CM (const USART_TypeDef * USARTx)

Function description

Check if the USART Character Match Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 CMIE LL_USART_IsEnabledIT_CM

LL_USART_IsEnabledIT_RTO

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_RTO (const USART_TypeDef * USARTx)

Function description

Check if the USART Receiver Timeout Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 RTOIE LL_USART_IsEnabledIT_RTO

LL_USART_IsEnabledIT_EOB

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_EOB (const USART_TypeDef * USARTx)

Function description

Check if the USART End Of Block Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 EOBIE LL_USART_IsEnabledIT_EOB

LL_USART_IsEnabledIT_TXFE

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_TXFE (const USART_TypeDef * USARTx)

Function description

Check if the USART TX FIFO Empty Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 TXFEIE LL_USART_IsEnabledIT_TXFE

LL_USART_IsEnabledIT_RXFF

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_RXFF (const USART_TypeDef * USARTx)

Function description

Check if the USART RX FIFO Full Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 RXFFIE LL_USART_IsEnabledIT_RXFF

LL_USART_IsEnabledIT_LBD

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_LBD (const USART_TypeDef * USARTx)

Function description

Check if the USART LIN Break Detection Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LBDIE LL_USART_IsEnabledIT_LBD

LL_USART_IsEnabledIT_ERROR

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_ERROR (const USART_TypeDef * USARTx)

Function description

Check if the USART Error Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 EIE LL_USART_IsEnabledIT_ERROR

LL_USART_IsEnabledIT_CTS

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_CTS (const USART_TypeDef * USARTx)

Function description

Check if the USART CTS Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 CTSIE LL_USART_IsEnabledIT_CTS

LL_USART_IsEnabledIT_TXFT

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_TXFT (const USART_TypeDef * USARTx)

Function description

Check if USART TX FIFO Threshold Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 TXFTIE LL_USART_IsEnabledIT_TXFT

LL_USART_IsEnabledIT_TCBGT

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_TCBGT (const USART_TypeDef * USARTx)

Function description

Check if the Smartcard Transmission Complete Before Guard Time Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 TCBGTIE LL_USART_IsEnabledIT_TCBGT

LL_USART_IsEnabledIT_RXFT

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_RXFT (const USART_TypeDef * USARTx)

Function description

Check if USART RX FIFO Threshold Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 RXFTIE LL_USART_IsEnabledIT_RXFT

LL_USART_EnableDMAReq_RX

Function name

__STATIC_INLINE void LL_USART_EnableDMAReq_RX (USART_TypeDef * USARTx)

Function description

Enable DMA Mode for reception.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DMAR LL_USART_EnableDMAReq_RX

LL_USART_DisableDMAReq_RX

Function name

__STATIC_INLINE void LL_USART_DisableDMAReq_RX (USART_TypeDef * USARTx)

Function description

Disable DMA Mode for reception.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DMAR LL_USART_DisableDMAReq_RX

LL_USART_IsEnabledDMAReq_RX

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledDMAReq_RX (const USART_TypeDef * USARTx)

Function description

Check if DMA Mode is enabled for reception.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 DMAR LL_USART_IsEnabledDMAReq_RX

LL_USART_EnableDMAReq_TX

Function name

__STATIC_INLINE void LL_USART_EnableDMAReq_TX (USART_TypeDef * USARTx)

Function description

Enable DMA Mode for transmission.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DMAT LL_USART_EnableDMAReq_TX

LL_USART_DisableDMAReq_TX

Function name

__STATIC_INLINE void LL_USART_DisableDMAReq_TX (USART_TypeDef * USARTx)

Function description

Disable DMA Mode for transmission.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DMAT LL_USART_DisableDMAReq_TX

LL_USART_IsEnabledDMAReq_TX

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledDMAReq_TX (const USART_TypeDef * USARTx)

Function description

Check if DMA Mode is enabled for transmission.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 DMAT LL_USART_IsEnabledDMAReq_TX

LL_USART_EnableDMADeactOnRxErr

Function name

__STATIC_INLINE void LL_USART_EnableDMADeactOnRxErr (USART_TypeDef * USARTx)

Function description

Enable DMA Disabling on Reception Error.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DDRE LL_USART_EnableDMADeactOnRxErr

LL_USART_DisableDMADeactOnRxErr

Function name

__STATIC_INLINE void LL_USART_DisableDMADeactOnRxErr (USART_TypeDef * USARTx)

Function description

Disable DMA Disabling on Reception Error.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DDRE LL_USART_DisableDMADeactOnRxErr

LL_USART_IsEnabledDMADeactOnRxErr

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledDMADeactOnRxErr (const USART_TypeDef * USARTx)

Function description

Indicate if DMA Disabling on Reception Error is disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 DDRE LL_USART_IsEnabledDMADeactOnRxErr

LL_USART_DMA_GetRegAddr

Function name

__STATIC_INLINE uint32_t LL_USART_DMA_GetRegAddr (const USART_TypeDef * USARTx, uint32_t Direction)

Function description

Get the data register address used for DMA transfer.

Parameters

- **USARTx:** USART Instance
- **Direction:** This parameter can be one of the following values:
  - LL_USART_DMA_REG_DATA_TRANSMIT
  - LL_USART_DMA_REG_DATA_RECEIVE

Return values

- **Address:** of data register

Reference Manual to LL API cross reference:

- RDR RDR LL_USART_DMA_GetRegAddr
-
- TDR TDR LL_USART_DMA_GetRegAddr

LL_USART_ReceiveData8

Function name

__STATIC_INLINE uint8_t LL_USART_ReceiveData8 (const USART_TypeDef * USARTx)

Function description

Read Receiver Data register (Receive Data value, 8 bits)

Parameters

- **USARTx:** USART Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0xFF

Reference Manual to LL API cross reference:

- RDR RDR LL_USART_ReceiveData8

LL_USART_ReceiveData9

Function name

__STATIC_INLINE uint16_t LL_USART_ReceiveData9 (const USART_TypeDef * USARTx)

Function description

Read Receiver Data register (Receive Data value, 9 bits)

Parameters

- **USARTx:** USART Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x1FF

Reference Manual to LL API cross reference:

- RDR RDR LL_USART_ReceiveData9

LL_USART_TransmitData8

Function name

__STATIC_INLINE void LL_USART_TransmitData8 (USART_TypeDef * USARTx, uint8_t Value)

Function description

Write in Transmitter Data Register (Transmit Data value, 8 bits)

Parameters

- **USARTx:** USART Instance
- **Value:** between Min_Data=0x00 and Max_Data=0xFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TDR TDR LL_USART_TransmitData8

LL_USART_TransmitData9

Function name

__STATIC_INLINE void LL_USART_TransmitData9 (USART_TypeDef * USARTx, uint16_t Value)

Function description

Write in Transmitter Data Register (Transmit Data value, 9 bits)

Parameters

- **USARTx:** USART Instance
- **Value:** between Min_Data=0x00 and Max_Data=0x1FF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TDR TDR LL_USART_TransmitData9

LL_USART_RequestAutoBaudRate

Function name

__STATIC_INLINE void LL_USART_RequestAutoBaudRate (USART_TypeDef * USARTx)

Function description

Request an Automatic Baud Rate measurement on next received data frame.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_USART_AUTOBAUDRATE_DETECTION_INSTANCE(USARTx) can be used to check whether or not Auto Baud Rate detection feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- RQR ABRRQ LL_USART_RequestAutoBaudRate

LL_USART_RequestBreakSending

Function name

__STATIC_INLINE void LL_USART_RequestBreakSending (USART_TypeDef * USARTx)

Function description

Request Break sending.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RQR SBKRQ LL_USART_RequestBreakSending

LL_USART_RequestEnterMuteMode

Function name

__STATIC_INLINE void LL_USART_RequestEnterMuteMode (USART_TypeDef * USARTx)

Function description

Put USART in mute mode and set the RWU flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RQR MMRQ LL_USART_RequestEnterMuteMode

LL_USART_RequestRxDataFlush

Function name

__STATIC_INLINE void LL_USART_RequestRxDataFlush (USART_TypeDef * USARTx)

Function description

Request a Receive Data and FIFO flush.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.
- Allows to discard the received data without reading them, and avoid an overrun condition.

Reference Manual to LL API cross reference:

- RQR RXFRQ LL_USART_RequestRxDataFlush

LL_USART_RequestTxDataFlush

Function name

__STATIC_INLINE void LL_USART_RequestTxDataFlush (USART_TypeDef * USARTx)

Function description

Request a Transmit data and FIFO flush.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- RQR TXFRQ LL_USART_RequestTxDataFlush

LL_USART_Enable_SelectedTrigger

Function name

__STATIC_INLINE void LL_USART_Enable_SelectedTrigger (USART_TypeDef * USARTx)

Function description

Enable Selected Trigger.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGEN LL_USART_Enable_SelectedTrigger

LL_USART_Disable_SelectedTrigger

Function name

__STATIC_INLINE void LL_USART_Disable_SelectedTrigger (USART_TypeDef * USARTx)

Function description

Disable Selected Trigger.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGEN LL_USART_Disable_SelectedTrigger

LL_USART_IsEnabled_SelectedTrigger

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabled_SelectedTrigger (const USART_TypeDef * USARTx)

Function description

Indicate if Selected Trigger is disabled or enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- AUTOCR TRIGEN LL_USART_IsEnabled_SelectedTrigger

LL_USART_Enable_AutonomousSendIdleFrame

Function name

__STATIC_INLINE void LL_USART_Enable_AutonomousSendIdleFrame (USART_TypeDef * USARTx)

Function description

Enable Autonomous Send Idle Frame feature.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR IDLEDIS LL_USART_Enable_AutonomousSendIdleFrame

LL_USART_Disable_AutonomousSendIdleFrame

Function name

__STATIC_INLINE void LL_USART_Disable_AutonomousSendIdleFrame (USART_TypeDef * USARTx)

Function description

Disable Autonomous Send Idle Frame feature.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR IDLEDIS LL_USART_Disable_AutonomousSendIdleFrame

LL_USART_IsEnabled_AutonomousSendIdleFrame

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabled_AutonomousSendIdleFrame (const USART_TypeDef * USARTx)

Function description

Indicate if Autonomous send Idle Frame feature is disabled or enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- AUTOCR IDLEDIS LL_USART_IsEnabled_AutonomousSendIdleFrame

LL_USART_SetNbTxData

Function name

__STATIC_INLINE void LL_USART_SetNbTxData (USART_TypeDef * USARTx, uint32_t Nbdata)

Function description

Configure the Number of transferred data in bytes.

Parameters

- **USARTx:** USART Instance
- **Nbdata:** This parameter can be a value between 0 and 0xFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TDN LL_USART_SetNbTxData

LL_USART_GetNbTxData

Function name

__STATIC_INLINE uint32_t LL_USART_GetNbTxData (const USART_TypeDef * USARTx)

Function description

Retrieve the Number of transferred data in bytes.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be a value between 0 and 0xFFFF

Reference Manual to LL API cross reference:

- AUTOCR TDN LL_USART_GetNbTxData

LL_USART_SetTriggerPolarity

Function name

__STATIC_INLINE void LL_USART_SetTriggerPolarity (USART_TypeDef * USARTx, uint32_t Polarity)

Function description

Set the trigger polarity.

Parameters

- **USARTx:** USART Instance
- **Polarity:** This parameter can be one of the following values:
  - LL_USART_TRIG_POLARITY_RISING
  - LL_USART_TRIG_POLARITY_FALLING

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGPOL LL_USART_SetTriggerPolarity

LL_USART_GetTriggerPolarity

Function name

__STATIC_INLINE uint32_t LL_USART_GetTriggerPolarity (const USART_TypeDef * USARTx)

Function description

Get the trigger polarity.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_TRIG_POLARITY_RISING
  - LL_USART_TRIG_POLARITY_FALLING

Reference Manual to LL API cross reference:

- AUTOCR TRIGPOL LL_USART_GetTriggerPolarity

LL_USART_SetSelectedTrigger

Function name

__STATIC_INLINE void LL_USART_SetSelectedTrigger (USART_TypeDef * USARTx, uint32_t Trigger)

Function description

Set the selected trigger.

Parameters

- **USARTx:** USART Instance
- **Trigger:** This parameter can be one of the following values:
  - LL_USART_GPDMA1_CH0_TCF_TRG
  - LL_USART_GPDMA1_CH1_TCF_TRG
  - LL_USART_GPDMA1_CH2_TCF_TRG
  - LL_USART_GPDMA1_CH3_TCF_TRG
  - LL_USART_EXTI_LINE6_TRG
  - LL_USART_EXTI_LINE9_TRG
  - LL_USART_LPTIM1_OUT_TRG
  - LL_USART_LPTIM2_OUT_TRG
  - LL_USART_COMP1_OUT_TRG
  - LL_USART_COMP2_OUT_TRG
  - LL_USART_RTC_ALRA_TRG
  - LL_USART_RTC_WUT_TRG

Return values

- **None:**

Reference Manual to LL API cross reference:

- AUTOCR TRIGSEL LL_USART_SetSelectedTrigger

LL_USART_GetSelectedTrigger

Function name

__STATIC_INLINE uint32_t LL_USART_GetSelectedTrigger (const USART_TypeDef * USARTx)

Function description

Get the selected trigger.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_GPDMA1_CH0_TCF_TRG
  - LL_USART_GPDMA1_CH1_TCF_TRG
  - LL_USART_GPDMA1_CH2_TCF_TRG
  - LL_USART_GPDMA1_CH3_TCF_TRG
  - LL_USART_EXTI_LINE6_TRG
  - LL_USART_EXTI_LINE9_TRG
  - LL_USART_LPTIM1_OUT_TRG
  - LL_USART_LPTIM2_OUT_TRG
  - LL_USART_COMP1_OUT_TRG
  - LL_USART_COMP2_OUT_TRG
  - LL_USART_RTC_ALRA_TRG
  - LL_USART_RTC_WUT_TRG

Reference Manual to LL API cross reference:

- AUTOCR TRIGSEL LL_USART_GetSelectedTrigger

LL_USART_DeInit

Function name

ErrorStatus LL_USART_DeInit (const USART_TypeDef * USARTx)

Function description

De-initialize USART registers (Registers restored to their default values).

Parameters

- **USARTx:** USART Instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: USART registers are de-initialized
  - ERROR: USART registers are not de-initialized

LL_USART_Init

Function name

ErrorStatus LL_USART_Init (USART_TypeDef * USARTx, const LL_USART_InitTypeDef * USART_InitStruct)

Function description

Initialize USART registers according to the specified parameters in USART_InitStruct.

Parameters

- **USARTx:** USART Instance
- **USART_InitStruct:** pointer to a LL_USART_InitTypeDef structure that contains the configuration information for the specified USART peripheral.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: USART registers are initialized according to USART_InitStruct content
  - ERROR: Problem occurred during USART Registers initialization

Notes

- As some bits in USART configuration registers can only be written when the USART is disabled (USART_CR1_UE bit =0), USART Peripheral should be in disabled state prior calling this function. Otherwise, ERROR result will be returned.
- Baud rate value stored in USART_InitStruct BaudRate field, should be valid (different from 0).

LL_USART_StructInit

Function name

void LL_USART_StructInit (LL_USART_InitTypeDef * USART_InitStruct)

Function description

Set each LL_USART_InitTypeDef field to default value.

Parameters

- **USART_InitStruct:** pointer to a LL_USART_InitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

LL_USART_ClockInit

Function name

ErrorStatus LL_USART_ClockInit (USART_TypeDef * USARTx, const LL_USART_ClockInitTypeDef * USART_ClockInitStruct)

Function description

Initialize USART Clock related settings according to the specified parameters in the USART_ClockInitStruct.

Parameters

- **USARTx:** USART Instance
- **USART_ClockInitStruct:** pointer to a LL_USART_ClockInitTypeDef structure that contains the Clock configuration information for the specified USART peripheral.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: USART registers related to Clock settings are initialized according to USART_ClockInitStruct content
  - ERROR: Problem occurred during USART Registers initialization

Notes

- As some bits in USART configuration registers can only be written when the USART is disabled (USART_CR1_UE bit =0), USART Peripheral should be in disabled state prior calling this function. Otherwise, ERROR result will be returned.

LL_USART_ClockStructInit

Function name

void LL_USART_ClockStructInit (LL_USART_ClockInitTypeDef * USART_ClockInitStruct)

Function description

Set each field of a LL_USART_ClockInitTypeDef type structure to default value.

Parameters

- **USART_ClockInitStruct:** pointer to a LL_USART_ClockInitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

100.3 USART Firmware driver defines

The following section lists the various define and macros of the module.

100.3.1 USART

USART

Address Length Detection

LL_USART_ADDRESS_DETECT_4B

4-bit address detection method selected

LL_USART_ADDRESS_DETECT_7B

7-bit address detection (in 8-bit data mode) method selected

Autobaud Detection

LL_USART_AUTOBAUD_DETECT_ON_STARTBIT

Measurement of the start bit is used to detect the baud rate

LL_USART_AUTOBAUD_DETECT_ON_FALLINGEDGE

Falling edge to falling edge measurement. Received frame must start with a single bit = 1 -> Frame = Start10xxxxxx

LL_USART_AUTOBAUD_DETECT_ON_7F_FRAME

0x7F frame detection

LL_USART_AUTOBAUD_DETECT_ON_55_FRAME

0x55 frame detection

Autonomous Trigger Polarity

LL_USART_TRIG_POLARITY_RISING

USART triggered on rising edge

LL_USART_TRIG_POLARITY_FALLING

USART triggered on falling edge

Autonomous Trigger Selection

LL_USART_GPDMA1_CH0_TCF_TRG

USART GPDMA1 channel0 Internal Trigger

LL_USART_GPDMA1_CH1_TCF_TRG

USART GPDMA1 channel1 Internal Trigger

LL_USART_GPDMA1_CH2_TCF_TRG

USART GPDMA1 channel2 Internal Trigger

LL_USART_GPDMA1_CH3_TCF_TRG

USART GPDMA1 channel3 Internal Trigger

LL_USART_EXTI_LINE6_TRG

USART EXTI line 6 Internal Trigger

LL_USART_EXTI_LINE9_TRG

USART EXTI line 9 Internal Trigger

LL_USART_LPTIM1_OUT_TRG

USART LPTIM1 out Internal Trigger

LL_USART_LPTIM2_OUT_TRG

USART LPTIM2 out Internal Trigger

LL_USART_COMP1_OUT_TRG

USART COMP1 out Internal Trigger

LL_USART_COMP2_OUT_TRG

USART COMP2 out Internal Trigger

LL_USART_RTC_ALRA_TRG

USART RTC alarm Internal Trigger

LL_USART_RTC_WUT_TRG

USART RTC wakeup Internal Trigger

Binary Data Inversion

LL_USART_BINARY_LOGIC_POSITIVE

Logical data from the data register are send/received in positive/direct logic. (1=H, 0=L)

LL_USART_BINARY_LOGIC_NEGATIVE

Logical data from the data register are send/received in negative/inverse logic. (1=L, 0=H). The parity bit is also inverted.

Bit Order

LL_USART_BITORDER_LSBFIRST

data is transmitted/received with data bit 0 first, following the start bit

LL_USART_BITORDER_MSBFIRST

data is transmitted/received with the MSB first, following the start bit

Clear Flags Defines

LL_USART_ICR_PECF

Parity error clear flag

LL_USART_ICR_FECF

Framing error clear flag

LL_USART_ICR_NECF

Noise error detected clear flag

LL_USART_ICR_ORECF

Overrun error clear flag

LL_USART_ICR_IDLECF

Idle line detected clear flag

LL_USART_ICR_TXFECF

TX FIFO Empty clear flag

LL_USART_ICR_TCCF

Transmission complete clear flag

LL_USART_ICR_TCBGTCF

Transmission completed before guard time clear flag

LL_USART_ICR_LBDCF

LIN break detection clear flag

LL_USART_ICR_CTSCF

CTS clear flag

LL_USART_ICR_RTOCF

Receiver timeout clear flag

LL_USART_ICR_EOBCF

End of block clear flag

LL_USART_ICR_UDRCF

SPI Slave Underrun clear flag

LL_USART_ICR_CMCF

Character match clear flag

Clock Signal

LL_USART_CLOCK_DISABLE

Clock signal not provided

LL_USART_CLOCK_ENABLE

Clock signal provided

Datawidth

LL_USART_DATAWIDTH_7B

7 bits word length : Start bit, 7 data bits, n stop bits

LL_USART_DATAWIDTH_8B

8 bits word length : Start bit, 8 data bits, n stop bits

LL_USART_DATAWIDTH_9B

9 bits word length : Start bit, 9 data bits, n stop bits

Driver Enable Polarity

LL_USART_DE_POLARITY_HIGH

DE signal is active high

LL_USART_DE_POLARITY_LOW

DE signal is active low

Communication Direction

LL_USART_DIRECTION_NONE

Transmitter and Receiver are disabled

LL_USART_DIRECTION_RX

Transmitter is disabled and Receiver is enabled

LL_USART_DIRECTION_TX

Transmitter is enabled and Receiver is disabled

LL_USART_DIRECTION_TX_RX

Transmitter and Receiver are enabled

DMA Register Data

LL_USART_DMA_REG_DATA_TRANSMIT

Get address of data register used for transmission

LL_USART_DMA_REG_DATA_RECEIVE

Get address of data register used for reception

FIFO Threshold

LL_USART_FIFOTHRESHOLD_1_8

FIFO reaches 1/8 of its depth

LL_USART_FIFOTHRESHOLD_1_4

FIFO reaches 1/4 of its depth

LL_USART_FIFOTHRESHOLD_1_2

FIFO reaches 1/2 of its depth

LL_USART_FIFOTHRESHOLD_3_4

FIFO reaches 3/4 of its depth

LL_USART_FIFOTHRESHOLD_7_8

FIFO reaches 7/8 of its depth

LL_USART_FIFOTHRESHOLD_8_8

FIFO becomes empty for TX and full for RX

Get Flags Defines

LL_USART_ISR_PE

Parity error flag

LL_USART_ISR_FE

Framing error flag

LL_USART_ISR_NE

Noise detected flag

LL_USART_ISR_ORE

Overrun error flag

LL_USART_ISR_IDLE

Idle line detected flag

LL_USART_ISR_RXNE_RXFNE

Read data register or RX FIFO not empty flag

LL_USART_ISR_TC

Transmission complete flag

LL_USART_ISR_TXE_TXFNF

Transmit data register empty or TX FIFO Not Full flag

LL_USART_ISR_LBDF

LIN break detection flag

LL_USART_ISR_CTSIF

CTS interrupt flag

LL_USART_ISR_CTS

CTS flag

LL_USART_ISR_RTOF

Receiver timeout flag

LL_USART_ISR_EOBF

End of block flag

LL_USART_ISR_UDR

SPI Slave underrun error flag

LL_USART_ISR_ABRE

Auto baud rate error flag

LL_USART_ISR_ABRF

Auto baud rate flag

LL_USART_ISR_BUSY

Busy flag

LL_USART_ISR_CMF

Character match flag

LL_USART_ISR_SBKF

Send break flag

LL_USART_ISR_RWU

Receiver wakeup from Mute mode flag

LL_USART_ISR_TEACK

Transmit enable acknowledge flag

LL_USART_ISR_REACK

Receive enable acknowledge flag

LL_USART_ISR_TXFE

TX FIFO empty flag

LL_USART_ISR_RXFF

RX FIFO full flag

LL_USART_ISR_TCBGT

Transmission complete before guard time completion flag

LL_USART_ISR_RXFT

RX FIFO threshold flag

LL_USART_ISR_TXFT

TX FIFO threshold flag

Hardware Control

LL_USART_HWCONTROL_NONE

CTS and RTS hardware flow control disabled

LL_USART_HWCONTROL_RTS

RTS output enabled, data is only requested when there is space in the receive buffer

LL_USART_HWCONTROL_CTS

CTS mode enabled, data is only transmitted when the nCTS input is asserted (tied to 0)

LL_USART_HWCONTROL_RTS_CTS

CTS and RTS hardware flow control enabled

IrDA Power

LL_USART_IRDA_POWER_NORMAL

IrDA normal power mode

LL_USART_IRDA_POWER_LOW

IrDA low power mode

IT Defines

LL_USART_CR1_IDLEIE

IDLE interrupt enable

LL_USART_CR1_RXNEIE_RXFNEIE

Read data register and RXFIFO not empty interrupt enable

LL_USART_CR1_TCIE

Transmission complete interrupt enable

LL_USART_CR1_TXEIE_TXFNFIE

Transmit data register empty and TX FIFO not full interrupt enable

LL_USART_CR1_PEIE

Parity error

LL_USART_CR1_CMIE

Character match interrupt enable

LL_USART_CR1_RTOIE

Receiver timeout interrupt enable

LL_USART_CR1_EOBIE

End of Block interrupt enable

LL_USART_CR1_TXFEIE

TX FIFO empty interrupt enable

LL_USART_CR1_RXFFIE

RX FIFO full interrupt enable

LL_USART_CR2_LBDIE

LIN break detection interrupt enable

LL_USART_CR3_EIE

Error interrupt enable

LL_USART_CR3_CTSIE

CTS interrupt enable

LL_USART_CR3_TXFTIE

TX FIFO threshold interrupt enable

LL_USART_CR3_TCBGTIE

Transmission complete before guard time interrupt enable

LL_USART_CR3_RXFTIE

RX FIFO threshold interrupt enable

Last Clock Pulse

LL_USART_LASTCLKPULSE_NO_OUTPUT

The clock pulse of the last data bit is not output to the SCLK pin

LL_USART_LASTCLKPULSE_OUTPUT

The clock pulse of the last data bit is output to the SCLK pin

LIN Break Detection Length

LL_USART_LINBREAK_DETECT_10B

10-bit break detection method selected

LL_USART_LINBREAK_DETECT_11B

11-bit break detection method selected

Oversampling

LL_USART_OVERSAMPLING_16

Oversampling by 16

LL_USART_OVERSAMPLING_8

Oversampling by 8

Parity Control

LL_USART_PARITY_NONE

Parity control disabled

LL_USART_PARITY_EVEN

Parity control enabled and Even Parity is selected

LL_USART_PARITY_ODD

Parity control enabled and Odd Parity is selected

Clock Phase

LL_USART_PHASE_1EDGE

The first clock transition is the first data capture edge

LL_USART_PHASE_2EDGE

The second clock transition is the first data capture edge

Clock Polarity

LL_USART_POLARITY_LOW

Steady low value on SCLK pin outside transmission window

LL_USART_POLARITY_HIGH

Steady high value on SCLK pin outside transmission window

Clock Source Prescaler

LL_USART_PRESCALER_DIV1

Input clock not divided

LL_USART_PRESCALER_DIV2

Input clock divided by 2

LL_USART_PRESCALER_DIV4

Input clock divided by 4

LL_USART_PRESCALER_DIV6

Input clock divided by 6

LL_USART_PRESCALER_DIV8

Input clock divided by 8

LL_USART_PRESCALER_DIV10

Input clock divided by 10

LL_USART_PRESCALER_DIV12

Input clock divided by 12

LL_USART_PRESCALER_DIV16

Input clock divided by 16

LL_USART_PRESCALER_DIV32

Input clock divided by 32

LL_USART_PRESCALER_DIV64

Input clock divided by 64

LL_USART_PRESCALER_DIV128

Input clock divided by 128

LL_USART_PRESCALER_DIV256

Input clock divided by 256

RX Pin Active Level Inversion

LL_USART_RXPIN_LEVEL_STANDARD

RX pin signal works using the standard logic levels

LL_USART_RXPIN_LEVEL_INVERTED

RX pin signal values are inverted.

Stop Bits

LL_USART_STOPBITS_0_5

0.5 stop bit

LL_USART_STOPBITS_1

1 stop bit

LL_USART_STOPBITS_1_5

1.5 stop bits

LL_USART_STOPBITS_2

2 stop bits

TX Pin Active Level Inversion

LL_USART_TXPIN_LEVEL_STANDARD

TX pin signal works using the standard logic levels

LL_USART_TXPIN_LEVEL_INVERTED

TX pin signal values are inverted.

TX RX Pins Swap

LL_USART_TXRX_STANDARD

TX/RX pins are used as defined in standard pinout

LL_USART_TXRX_SWAPPED

TX and RX pins functions are swapped.

Wakeup

LL_USART_WAKEUP_IDLELINE

USART wake up from Mute mode on Idle Line

LL_USART_WAKEUP_ADDRESSMARK

USART wake up from Mute mode on Address Mark

FLAG_Management

LL_USART_IsActiveFlag_RXNE

LL_USART_IsActiveFlag_TXE

IT_Management

LL_USART_EnableIT_RXNE

LL_USART_EnableIT_TXE

LL_USART_DisableIT_RXNE

LL_USART_DisableIT_TXE

LL_USART_IsEnabledIT_RXNE

LL_USART_IsEnabledIT_TXE

Exported_Macros_Helper

__LL_USART_DIV_SAMPLING8

Description:

- Compute USARTDIV value according to Peripheral Clock and expected Baud Rate in 8 bits sampling mode (32 bits value of USARTDIV is returned)

Parameters:

- __PERIPHCLK__: Peripheral Clock frequency used for USART instance
- __PRESCALER__: This parameter can be one of the following values:
  - LL_USART_PRESCALER_DIV1
  - LL_USART_PRESCALER_DIV2
  - LL_USART_PRESCALER_DIV4
  - LL_USART_PRESCALER_DIV6
  - LL_USART_PRESCALER_DIV8
  - LL_USART_PRESCALER_DIV10
  - LL_USART_PRESCALER_DIV12
  - LL_USART_PRESCALER_DIV16
  - LL_USART_PRESCALER_DIV32
  - LL_USART_PRESCALER_DIV64
  - LL_USART_PRESCALER_DIV128
  - LL_USART_PRESCALER_DIV256
- __BAUDRATE__: Baud rate value to achieve

Return value:

- USARTDIV: value to be used for BRR register filling in OverSampling_8 case

__LL_USART_DIV_SAMPLING16

Description:

- Compute USARTDIV value according to Peripheral Clock and expected Baud Rate in 16 bits sampling mode (32 bits value of USARTDIV is returned)

Parameters:

- __PERIPHCLK__: Peripheral Clock frequency used for USART instance
- __PRESCALER__: This parameter can be one of the following values:
  - LL_USART_PRESCALER_DIV1
  - LL_USART_PRESCALER_DIV2
  - LL_USART_PRESCALER_DIV4
  - LL_USART_PRESCALER_DIV6
  - LL_USART_PRESCALER_DIV8
  - LL_USART_PRESCALER_DIV10
  - LL_USART_PRESCALER_DIV12
  - LL_USART_PRESCALER_DIV16
  - LL_USART_PRESCALER_DIV32
  - LL_USART_PRESCALER_DIV64
  - LL_USART_PRESCALER_DIV128
  - LL_USART_PRESCALER_DIV256
- __BAUDRATE__: Baud rate value to achieve

Return value:

- USARTDIV: value to be used for BRR register filling in OverSampling_16 case

Common Write and read registers Macros

LL_USART_WriteReg

Description:

- Write a value in USART register.

Parameters:

- __INSTANCE__: USART Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_USART_ReadReg

Description:

- Read a value in USART register.

Parameters:

- __INSTANCE__: USART Instance
- __REG__: Register to be read

Return value:

- Register: value

101 LL UTILS Generic Driver

101.1 UTILS Firmware driver registers structures

101.1.1 LL_UTILS_ClkInitTypeDef

LL_UTILS_ClkInitTypeDef is defined in the stm32u3xx_ll_utils.h

Data Fields

- ***uint32_t AHBCLKDivider***
- ***uint32_t APB1CLKDivider***
- ***uint32_t APB2CLKDivider***
- ***uint32_t APB3CLKDivider***

Field Documentation

- ***uint32_t LL_UTILS_ClkInitTypeDef::AHBCLKDivider***
  The AHB clock (HCLK) divider. This clock is derived from the system clock (SYSCLK). This parameter can be a value of ***RCC_LL_EC_SYSCLK_DIV***This feature can be modified afterwards using unitary function **LL_RCC_SetAHBPrescaler()**.
- ***uint32_t LL_UTILS_ClkInitTypeDef::APB1CLKDivider***
  The APB1 clock (PCLK1) divider. This clock is derived from the AHB clock (HCLK). This parameter can be a value of ***RCC_LL_EC_APB1_DIV***This feature can be modified afterwards using unitary function **LL_RCC_SetAPB1Prescaler()**.
- ***uint32_t LL_UTILS_ClkInitTypeDef::APB2CLKDivider***
  The APB2 clock (PCLK2) divider. This clock is derived from the AHB clock (HCLK). This parameter can be a value of ***RCC_LL_EC_APB2_DIV***This feature can be modified afterwards using unitary function **LL_RCC_SetAPB2Prescaler()**.
- ***uint32_t LL_UTILS_ClkInitTypeDef::APB3CLKDivider***
  The APB3 clock (PCLK3) divider. This clock is derived from the AHB clock (HCLK). This parameter can be a value of ***RCC_LL_EC_APB3_DIV***This feature can be modified afterwards using unitary function **LL_RCC_SetAPB3Prescaler()**.

101.2 UTILS Firmware driver API description

The following section lists the various functions of the UTILS library.

101.2.1 System Configuration functions

System, AHB and APB buses clocks configuration

- The maximum frequency of the SYSCLK, HCLK, PCLK1 and PCLK2, PCLK7 is 100000000 Hz.

This section contains the following APIs:

- ***LL_SetSystemCoreClock()***
- ***LL_ConfigSystemClock_HSI16()***
- ***LL_ConfigSystemClock_HSE()***
- ***LL_SetFlashLatency()***

101.2.2 Detailed description of functions

LL_GetUID_Word0

Function name

__STATIC_INLINE uint32_t LL_GetUID_Word0 (void)

Function description

Get Word0 of the unique device identifier (UID based on 96 bits)

Return values

- **UID[31:0]:** X and Y coordinates on the wafer expressed in BCD format

LL_GetUID_Word1

Function name

__STATIC_INLINE uint32_t LL_GetUID_Word1 (void)

Function description

Get Word1 of the unique device identifier (UID based on 96 bits)

Return values

- **UID[63:32]:** Wafer number (UID[39:32]) & LOT_NUM[23:0] (UID[63:40])

LL_GetUID_Word2

Function name

__STATIC_INLINE uint32_t LL_GetUID_Word2 (void)

Function description

Get Word2 of the unique device identifier (UID based on 96 bits)

Return values

- **UID[95:64]:** Lot number (ASCII encoded) - LOT_NUM[55:24]

LL_GetFlashSize

Function name

__STATIC_INLINE uint32_t LL_GetFlashSize (void)

Function description

Get Flash memory size.

Return values

- **FLASH_SIZE[15:0]:** Flash memory size in Kbytes

Notes

- This bitfield indicates the size of the device Flash memory expressed in Kbytes. As an example, 0x040 corresponds to 64 Kbytes.

LL_GetPackageType

Function name

__STATIC_INLINE uint32_t LL_GetPackageType (void)

Function description

Get Package type.

Return values

- **Returned:** value can be one of the following values:
  - LL_UTILS_PACKAGETYPE_UQFN32
  - LL_UTILS_PACKAGETYPE_UQFN48
  - LL_UTILS_PACKAGETYPE_BGA59
  - LL_UTILS_PACKAGETYPE_UQFN32_SMPS
  - LL_UTILS_PACKAGETYPE_UQFN48_SMPS
  - LL_UTILS_PACKAGETYPE_BGA59_SMPS

LL_InitTick

Function name

__STATIC_INLINE void LL_InitTick (uint32_t HCLKFrequency, uint32_t Ticks)

Function description

This function configures the Cortex-M SysTick source of the time base.

Parameters

- **HCLKFrequency:** HCLK frequency in Hz (can be calculated thanks to RCC helper macro)
- **Ticks:** Number of ticks

Return values

- **None:**

Notes

- When a RTOS is used, it is recommended to avoid changing the SysTick configuration by calling this function, for a delay use rather osDelay RTOS service.

LL_Init1msTick

Function name

void LL_Init1msTick (uint32_t HCLKFrequency)

Function description

This function configures the Cortex-M SysTick source to have 1ms time base with HCLK as SysTick clock source.

Parameters

- **HCLKFrequency:** HCLK frequency in Hz

Return values

- **None:**

Notes

- When a RTOS is used, it is recommended to avoid changing the Systick configuration by calling this function, for a delay use rather osDelay RTOS service.
- HCLK frequency can be calculated thanks to RCC helper macro or function LL_RCC_GetSystemClocksFreq

LL_Init1msTick_HCLK_Div8

Function name

void LL_Init1msTick_HCLK_Div8 (uint32_t HCLKFrequency)

Function description

This function configures the Cortex-M SysTick source to have 1ms time base with HCLK/8 as SysTick clock source.

Parameters

- **HCLKFrequency:** HCLK frequency in Hz

Return values

- **None:**

Notes

- When a RTOS is used, it is recommended to avoid changing the Systick configuration by calling this function, for a delay use rather osDelay RTOS service.

LL_Init1msTick_LSE

Function name

void LL_Init1msTick_LSE (void)

Function description

This function configures the Cortex-M SysTick source to have 1ms time base with LSE as SysTick clock source.

Return values

- **None:**

Notes

- When a RTOS is used, it is recommended to avoid changing the Systick configuration by calling this function, for a delay use rather osDelay RTOS service.

LL_Init1msTick_LSI

Function name

void LL_Init1msTick_LSI (void)

Function description

This function configures the Cortex-M SysTick source to have 1ms time base with LSI as SysTick clock source.

Return values

- **None:**

Notes

- When a RTOS is used, it is recommended to avoid changing the Systick configuration by calling this function, for a delay use rather osDelay RTOS service.

LL_mDelay

Function name

void LL_mDelay (uint32_t Delay)

Function description

This function provides minimum delay (in milliseconds) based on SysTick counter flag.

Parameters

- **Delay:** specifies the minimum delay time length, in milliseconds.

Return values

- **None:**

Notes

- When a RTOS is used, it is recommended to avoid using blocking delay and use rather osDelay service.
- To respect 1ms timebase, user should call LL_Init1msTick function which will configure Systick to 1ms

LL_SetSystemCoreClock

Function name

void LL_SetSystemCoreClock (uint32_t HCLKFrequency)

Function description

This function sets directly SystemCoreClock CMSIS variable.

Parameters

- **HCLKFrequency:** HCLK frequency in Hz (can be calculated thanks to RCC helper macro)

Return values

- **None:**

Notes

- Variable can be calculated also through SystemCoreClockUpdate function.

LL_ConfigSystemClock_HSI16

Function name

ErrorStatus LL_ConfigSystemClock_HSI16 (LL_UTILS_ClkInitTypeDef * UTILS_ClkInitStruct)

Function description

This function configures system clock at maximum frequency with HSI as clock source.

Parameters

- **UTILS_ClkInitStruct:** pointer to a LL_UTILS_ClkInitTypeDef structure that contains the configuration information for the BUS prescalers.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: Max frequency configuration done
  - ERROR: Max frequency configuration not done

LL_ConfigSystemClock_HSE

Function name

ErrorStatus LL_ConfigSystemClock_HSE (uint32_t HSEFrequency, LL_UTILS_ClkInitTypeDef * UTILS_ClkInitStruct)

Function description

This function configures system clock with HSE as clock source.

Parameters

- **HSEFrequency:** Value at 32000000
- **UTILS_ClkInitStruct:** pointer to a LL_UTILS_ClkInitTypeDef structure that contains the configuration information for the BUS prescalers.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: Max frequency configuration done
  - ERROR: Max frequency configuration not done

LL_SetFlashLatency

Function name

ErrorStatus LL_SetFlashLatency (uint32_t HCLK_Frequency)

Function description

Update number of Flash wait states in line with new frequency and current voltage range.

Parameters

- **HCLK_Frequency:** HCLK frequency

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: Latency has been modified
  - ERROR: Latency cannot be modified

101.3 UTILS Firmware driver defines

The following section lists the various define and macros of the module.

101.3.1 UTILS

UTILS

PACKAGE TYPE

LL_UTILS_PACKAGETYPE_UQFN32

UQFN32 package type

LL_UTILS_PACKAGETYPE_UQFN48

UQFN48 package type

LL_UTILS_PACKAGETYPE_BGA59

BGA59 package type

LL_UTILS_PACKAGETYPE_UQFN32_SMPS

UQFN32 with internal SMPS package type

LL_UTILS_PACKAGETYPE_UQFN48_SMPS

UQFN48 with internal SMPS package type

LL_UTILS_PACKAGETYPE_BGA59_SMPS

BGA59 with internal SMPS package type

102 LL WWDG Generic Driver

102.1 WWDG Firmware driver API description

The following section lists the various functions of the WWDG library.

102.1.1 Detailed description of functions

LL_WWDG_Enable

Function name

__STATIC_INLINE void LL_WWDG_Enable (WWDG_TypeDef * WWDGx)

Function description

Enable Window Watchdog.

Parameters

- **WWDGx:** WWDG Instance

Return values

- **None:**

Notes

- It is enabled by setting the WDGA bit in the WWDG_CR register, then it cannot be disabled again except by a reset. This bit is set by software and only cleared by hardware after a reset. When WDGA = 1, the watchdog can generate a reset.

Reference Manual to LL API cross reference:

- CR WDGA LL_WWDG_Enable

LL_WWDG_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_WWDG_IsEnabled (const WWDG_TypeDef * WWDGx)

Function description

Checks if Window Watchdog is enabled.

Parameters

- **WWDGx:** WWDG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR WDGA LL_WWDG_IsEnabled

LL_WWDG_SetCounter

Function name

__STATIC_INLINE void LL_WWDG_SetCounter (WWDG_TypeDef * WWDGx, uint32_t Counter)

Function description

Set the Watchdog counter value to provided value (7-bits T[6:0])

Parameters

- **WWDGx:** WWDG Instance
- **Counter:** 0..0x7F (7 bit counter value)

Return values

- **None:**

Notes

- When writing to the WWDG_CR register, always write 1 in the MSB b6 to avoid generating an immediate reset This counter is decremented every (4096 x 2expWDGTB) PCLK cycles A reset is produced when it rolls over from 0x40 to 0x3F (bit T6 becomes cleared) Setting the counter lower then 0x40 causes an immediate reset (if WWDG enabled)

Reference Manual to LL API cross reference:

- CR T LL_WWDG_SetCounter

LL_WWDG_GetCounter

Function name

__STATIC_INLINE uint32_t LL_WWDG_GetCounter (const WWDG_TypeDef * WWDGx)

Function description

Return current Watchdog Counter Value (7 bits counter value)

Parameters

- **WWDGx:** WWDG Instance

Return values

- **7:** bit Watchdog Counter value

Reference Manual to LL API cross reference:

- CR T LL_WWDG_GetCounter

LL_WWDG_SetPrescaler

Function name

__STATIC_INLINE void LL_WWDG_SetPrescaler (WWDG_TypeDef * WWDGx, uint32_t Prescaler)

Function description

Set the time base of the prescaler (WDGTB).

Parameters

- **WWDGx:** WWDG Instance
- **Prescaler:** This parameter can be one of the following values:
  - LL_WWDG_PRESCALER_1
  - LL_WWDG_PRESCALER_2
  - LL_WWDG_PRESCALER_4
  - LL_WWDG_PRESCALER_8
  - LL_WWDG_PRESCALER_16
  - LL_WWDG_PRESCALER_32
  - LL_WWDG_PRESCALER_64
  - LL_WWDG_PRESCALER_128

Return values

- **None:**

Notes

- Prescaler is used to apply ratio on PCLK clock, so that Watchdog counter is decremented every (4096 x 2expWDGTB) PCLK cycles

Reference Manual to LL API cross reference:

- CFR WDGTB LL_WWDG_SetPrescaler

LL_WWDG_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_WWDG_GetPrescaler (const WWDG_TypeDef * WWDGx)

Function description

Return current Watchdog Prescaler Value.

Parameters

- **WWDGx:** WWDG Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_WWDG_PRESCALER_1
  - LL_WWDG_PRESCALER_2
  - LL_WWDG_PRESCALER_4
  - LL_WWDG_PRESCALER_8
  - LL_WWDG_PRESCALER_16
  - LL_WWDG_PRESCALER_32
  - LL_WWDG_PRESCALER_64
  - LL_WWDG_PRESCALER_128

Reference Manual to LL API cross reference:

- CFR WDGTB LL_WWDG_GetPrescaler

LL_WWDG_SetWindow

Function name

__STATIC_INLINE void LL_WWDG_SetWindow (WWDG_TypeDef * WWDGx, uint32_t Window)

Function description

Set the Watchdog Window value to be compared to the downcounter (7-bits W[6:0]).

Parameters

- **WWDGx:** WWDG Instance
- **Window:** 0x00..0x7F (7 bit Window value)

Return values

- **None:**

Notes

- This window value defines when write in the WWDG_CR register to program Watchdog counter is allowed. Watchdog counter value update must occur only when the counter value is lower than the Watchdog window register value. Otherwise, a MCU reset is generated if the 7-bit Watchdog counter value (in the control register) is refreshed before the downcounter has reached the watchdog window register value. Physically is possible to set the Window lower then 0x40 but it is not recommended. To generate an immediate reset, it is possible to set the Counter lower than 0x40.

Reference Manual to LL API cross reference:

- CFR W LL_WWDG_SetWindow

LL_WWDG_GetWindow

Function name

__STATIC_INLINE uint32_t LL_WWDG_GetWindow (const WWDG_TypeDef * WWDGx)

Function description

Return current Watchdog Window Value (7 bits value)

Parameters

- **WWDGx:** WWDG Instance

Return values

- **7:** bit Watchdog Window value

Reference Manual to LL API cross reference:

- CFR W LL_WWDG_GetWindow

LL_WWDG_IsActiveFlag_EWKUP

Function name

__STATIC_INLINE uint32_t LL_WWDG_IsActiveFlag_EWKUP (const WWDG_TypeDef * WWDGx)

Function description

Indicates if the WWDG Early Wakeup Interrupt Flag is set or not.

Parameters

- **WWDGx:** WWDG Instance

Return values

- **State:** of bit (1 or 0).

Notes

- This bit is set by hardware when the counter has reached the value 0x40. It must be cleared by software by writing 0. A write of 1 has no effect. This bit is also set if the interrupt is not enabled.

Reference Manual to LL API cross reference:

- SR EWIF LL_WWDG_IsActiveFlag_EWKUP

LL_WWDG_ClearFlag_EWKUP

Function name

__STATIC_INLINE void LL_WWDG_ClearFlag_EWKUP (WWDG_TypeDef * WWDGx)

Function description

Clear WWDG Early Wakeup Interrupt Flag (EWIF)

Parameters

- **WWDGx:** WWDG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR EWIF LL_WWDG_ClearFlag_EWKUP

LL_WWDG_EnableIT_EWKUP

Function name

__STATIC_INLINE void LL_WWDG_EnableIT_EWKUP (WWDG_TypeDef * WWDGx)

Function description

Enable the Early Wakeup Interrupt.

Parameters

- **WWDGx:** WWDG Instance

Return values

- **None:**

Notes

- When set, an interrupt occurs whenever the counter reaches value 0x40. This interrupt is only cleared by hardware after a reset

Reference Manual to LL API cross reference:

- CFR EWI LL_WWDG_EnableIT_EWKUP

LL_WWDG_IsEnabledIT_EWKUP

Function name

__STATIC_INLINE uint32_t LL_WWDG_IsEnabledIT_EWKUP (const WWDG_TypeDef * WWDGx)

Function description

Check if Early Wakeup Interrupt is enabled.

Parameters

- **WWDGx:** WWDG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CFR EWI LL_WWDG_IsEnabledIT_EWKUP

102.2 WWDG Firmware driver defines

The following section lists the various define and macros of the module.

102.2.1 WWDG

WWDG

IT Defines

LL_WWDG_CFR_EWI

PRESCALER

LL_WWDG_PRESCALER_1

WWDG counter clock = (PCLK1/4096)/1

LL_WWDG_PRESCALER_2

WWDG counter clock = (PCLK1/4096)/2

LL_WWDG_PRESCALER_4

WWDG counter clock = (PCLK1/4096)/4

WWDG counter clock = (PCLK1/4096)/16

LL_WWDG_PRESCALER_32

WWDG counter clock = (PCLK1/4096)/32

LL_WWDG_PRESCALER_64

WWDG counter clock = (PCLK1/4096)/64

LL_WWDG_PRESCALER_128

WWDG counter clock = (PCLK1/4096)/128

Common Write and read registers macros

LL_WWDG_WriteReg

Description:

- Write a value in WWDG register.

Parameters:

- __INSTANCE__: WWDG Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_WWDG_ReadReg

Description:

- Read a value in WWDG register.

Parameters:

- __INSTANCE__: WWDG Instance
- __REG__: Register to be read

Return value:

- Register: value

103 Correspondence between API registers and API low-layer driver functions

This appendix contains the correspondence table between the register or bit name, as mentioned inside the reference manual of the component, and the name of the LL functions to modify or read this register or bit.

103.1 ADC

Table 25. Correspondence between ADC registers and ADC low-layer driver functions

Register	Field	Function
AWD1HTR	AWDFILT	LL_ADC_GetAWDFilteringConfiguration

104 FAQs

General subjects

Why should I use the HAL drivers?

There are many advantages in using the HAL drivers:

- Ease of use: you can use the HAL drivers to configure and control any peripheral embedded within your STM32 MCU without prior in-depth knowledge of the product.
- HAL drivers provide intuitive and ready-to-use APIs to configure the peripherals and support polling, interrupt and DMA programming model to accommodate all application requirements, thus allowing the end-user to build a complete application by calling a few APIs.
- Higher level of abstraction than a standard peripheral library allowing to transparently manage:
  - Data transfers and processing using blocking mode (polling) or non-blocking mode (interrupt or DMA)
  - Error management through peripheral error detection and timeout mechanism.
- Generic architecture speeding up initialization and porting, thus allowing customers to focus on innovation.
- Generic set of APIs with full compatibility across the STM32 Series/lines, to ease the porting task between STM32 MCUs.
- The APIs provided within the HAL drivers are feature-oriented and do not require in-depth knowledge of peripheral operation.
- The APIs provided are modular. They include initialization, IO operation and control functions. The end-user has to call init function, then start the process by calling one IO operation functions (write, read, transmit, receive, …). Most of the peripherals have the same architecture.
- The number of functions required to build a complete and useful application is very reduced. As an example, to build a UART communication process, the user only has to call HAL_UART_Init() then HAL_UART_Transmit() or HAL_UART_Receive().

Which devices are supported by the HAL drivers?

The HAL drivers are developed to support all STM32U3 devices. To ensure compatibility between all devices and portability with others Series and lines, the API is split into the generic and the extension APIs . For more details, please refer to *section* ***Devices supported by the HAL drivers***.

What is the cost of using HAL drivers in term of code size and performance?

Like generic architecture drivers, the HAL drivers may induce firmware overhead.

This is due to the high abstraction level and ready-to-use APIs which allow data transfers, errors management and offloads the user application from implementation details.

Architecture

How many files should I modify to configure the HAL drivers?

Only one file needs to be modified: stm32u3xxxx_hal_conf.h. You can modify this file by disabling unused modules, or adjusting some parameters (i.e. HSE value, System configuration…)

A template is provided in the HAL drivers folders (stm32u3xxxx_hal_conf_template.c).

Which header files should I include in my application to use the HAL drivers?

Only stm32u3xxxx_hal.h file has to be included.

What is the difference between xx_hal_ppp.c/.h and xx_hal_ppp_ *ex* .c/.h?

The HAL driver architecture supports common features across STM32 Series/lines. To support specific features, the drivers are split into two groups.

- The generic APIs (stm32u3xxxx_hal_ppp.c): It includes the common set of APIs across all the STM32 product lines
- The extension APIs (stm32u3xxxx_hal_ppp_ex.c): It includes the specific APIs for specific device part number or family.

Initialization and I/O operation functions

How do I configure the system clock?

Unlike the standard library, the system clock configuration is not performed in CMSIS drivers file (system_stm32u3xxxx.c) but in the main user application by calling the two main functions, HAL_RCC_OscConfig() and HAL_RCC_ClockConfig(). It can be modified in any user application section.

What is the purpose of the *PPP_HandleTypeDef *pHandle* structure located in each driver in addition to the Initialization structure

PPP_HandleTypeDef *pHandle is the main structure implemented in the HAL drivers. It handles the peripheral configuration and registers, and embeds all the structures and variables required to follow the peripheral device flow (pointer to buffer, Error code, State,...)

However, this structure is not required to service peripherals such as GPIO, SYSTICK, PWR, and RCC.

What is the purpose of HAL_PPP_MspInit() and HAL_PPP_MspDeInit() functions?

These function are called within HAL_PPP_Init() and HAL_PPP_DeInit(), respectively. They are used to perform the low level Initialization/de-initialization related to the additional hardware resources (RCC, GPIO, NVIC and DMA).

These functions are declared in stm32u3xxxx_hal_msp.c. A template is provided in the HAL driver folders (stm32u3xxxx_hal_msp_template.c).

When and how should I use callbacks functions (functions declared with the attribute *__weak*)?

Use callback functions for the I/O operations used in DMA or interrupt mode. The PPP process complete callbacks are called to inform the user about process completion in real-time event mode (interrupts).

The Errors callbacks are called when a processing error occurs in DMA or interrupt mode. These callbacks are customized by the user to add user proprietary code. They can be declared in the application. Note that the same process completion callbacks are used for DMA and interrupt mode.

Is it mandatory to use HAL_Init() function at the beginning of the user application?

It is mandatory to use HAL_Init() function to enable the system configuration (Prefetch, Data instruction cache,…), configure the systTick and the NVIC priority grouping and the hardware low level initialization.

The SysTick configuration shall be adjusted by calling ***HAL_RCC_ClockConfig()*** function, to obtain 1 ms whatever the system clock.

Why do I need to configure the SysTick timer to use the HAL drivers?

The SysTick timer is configured to be used to generate variable increments by calling *HAL_IncTick()* function in SysTick ISR and retrieve the value of this variable by calling *HAL_GetTick()* function.

The call HAL_GetTick() function is mandatory when using HAL drivers with Polling Process or when using HAL_Delay().

Why is the SysTick timer configured to have 1 ms?

This is mandatory to ensure correct IO operation in particular for polling mode operation where the 1 ms is required as timebase.

Could HAL_Delay() function block my application under certain conditions?

Care must be taken when using HAL_Delay() since this function provides accurate delay based on a variable incremented in SysTick ISR. This implies that if HAL_Delay() is called from a peripheral ISR process, then the SysTick interrupt must have higher priority (numerically lower) than the peripheral interrupt, otherwise the caller ISR process will be blocked. Use HAL_NVIC_SetPriority() function to change the SysTick interrupt priority.

What programming model sequence should I follow to use HAL drivers ?

Follow the sequence below to use the APIs provided in the HAL drivers:

1. Call HAL_Init() function to initialize the system (data cache, NVIC priority,…).

2. Initialize the system clock by calling HAL_RCC_OscConfig() followed by HAL_RCC_ClockConfig().
3. Add HAL_IncTick() function under SysTick_Handler() ISR function to enable polling process when using HAL_Delay() function
4. Start initializing your peripheral by calling HAL_PPP_Init().
5. Implement the hardware low level initialization (Peripheral clock, GPIO, DMA,..) by calling HAL_PPP_MspInit() in stm32u3xxxx_hal_msp.c
6. Start your process operation by calling IO operation functions.

What is the purpose of HAL_PPP_IRQHandler() function and when should I use it?

HAL_PPP_IRQHandler() is used to handle interrupt process. It is called under PPP_IRQHandler() function in stm32u3xxxx_it.c. In this case, the end-user has to implement only the callbacks functions (prefixed by __weak) to perform the appropriate action when an interrupt is detected. Advanced users can implement their own code in PPP_IRQHandler() without calling HAL_PPP_IRQHandler().

Can I use directly the macros defined in xx_hal_ppp.h ?

Yes, you can: a set of macros is provided with the APIs. They allow accessing directly some specific features using peripheral flags.

Where must PPP_HandleTypedef structure peripheral handler be declared?

PPP_HandleTypedef structure peripheral handler must be declared as a global variable, so that all the structure fields are set to 0 by default. In this way, the peripheral handler default state are set to HAL_PPP_STATE_RESET, which is the default state for each peripheral after a system reset.

When should I use HAL versus LL drivers?

HAL drivers offer high-level and function-oriented APIs, with a high level of portability. Product/IPs complexity is hidden for end users. LL drivers offer low-level APIs at registers level, with a better optimization but less portability. They require a deep knowledge of product/IPs specifications.

How can I include LL drivers in my environment? Is there any LL configuration file as for HAL?

There is no configuration file. Source code shall directly include the necessary stm32u3xxxx_ll_ppp.h file(s).

Can I use HAL and LL drivers together? If yes, what are the constraints?

It is possible to use both HAL and LL drivers. One can handle the IP initialization phase with HAL and then manage the I/O operations with LL drivers. The major difference between HAL and LL is that HAL drivers require to create and use handles for operation management while LL drivers operates directly on peripheral registers. Mixing HAL and LL is illustrated in Examples_MIX example.

Is there any LL APIs which are not available with HAL?

Yes, there are. A few Cortex® APIs have been added in stm32u3xxxx_ll_cortex.h e.g. for accessing SCB or SysTick registers.

Why are SysTick interrupts not enabled on LL drivers?

When using LL drivers in standalone mode, you do not need to enable SysTick interrupts because they are not used in LL APIs, while HAL functions requires SysTick interrupts to manage timeouts.

20.2.3 EXTI attributes functions . . . 288
20.2.4 Configuration functions . . . 288
20.2.5 Detailed description of functions . . . 288
20.3 EXTI Firmware driver defines . . . 292
20.3.1 EXTI . . . 292
21 HAL FDCAN Generic Driver . . . 295
21.1 FDCAN Firmware driver registers structures . . . 295
21.1.1 FDCAN_InitTypeDef . . . 295
21.1.2 FDCAN_FilterTypeDef . . . 296
21.1.3 FDCAN_TxHeaderTypeDef . . . 296
21.1.4 FDCAN_RxHeaderTypeDef . . . 297
21.1.5 FDCAN_TxEventFifoTypeDef . . . 298
21.1.6 FDCAN_HpMsgStatusTypeDef . . . 299
21.1.7 FDCAN_ProtocolStatusTypeDef . . . 299
21.1.8 FDCAN_ErrorCountersTypeDef . . . 300
21.1.9 FDCAN_MsgRamAddressTypeDef . . . 301
21.1.10 __FDCAN_HandleTypeDef . . . 301
21.2 FDCAN Firmware driver API description . . . 303
21.2.1 How to use this driver . . . 303
21.2.2 Initialization and de-initialization functions . . . 304
21.2.3 Configuration functions . . . 304
21.2.4 Control functions . . . 305
21.2.5 Interrupts management . . . 306
21.2.6 Callback functions . . . 306
21.2.7 Peripheral State functions . . . 307
21.2.8 Detailed description of functions . . . 307
21.3 FDCAN Firmware driver defines . . . 329
21.3.1 FDCAN . . . 329
22 HAL FLASH Generic Driver . . . 342
22.1 FLASH Firmware driver registers structures . . . 342
22.1.1 FLASH_EraseInitTypeDef . . . 342
22.1.2 FLASH_OBProgramInitTypeDef . . . 342
22.1.3 FLASH_ProcessTypeDef . . . 344

22.2 FLASH Firmware driver API description . . . 344
22.2.1 Flash peripheral features . . . 344
22.2.2 How to use this driver . . . 344
22.2.3 Programming operation functions . . . 345
22.2.4 Peripheral Control functions . . . 345
22.2.5 Peripheral Errors functions . . . 345
22.2.6 Detailed description of functions . . . 346
22.3 FLASH Firmware driver defines . . . 349
22.3.1 FLASH . . . 349
23 HAL FLASH Extension Driver . . . 364
23.1 FLASHEx Firmware driver registers structures . . . 364
23.1.1 FLASH_BBAttributesTypeDef . . . 364
23.1.2 FLASH_HDPExtensionTypeDef . . . 364
23.1.3 FLASH_OperationTypeDef . . . 364
23.1.4 FLASH_EccInfoTypeDef . . . 364
23.2 FLASHEx Firmware driver API description . . . 365
23.2.1 Flash Extended features . . . 365
23.2.2 How to use this driver . . . 365
23.2.3 Extended programming operation functions . . . 366
23.2.4 Extended Peripheral Control functions . . . 366
23.2.5 Extended ECC operation functions . . . 366
23.2.6 Detailed description of functions . . . 367
23.3 FLASHEx Firmware driver defines . . . 374
23.3.1 FLASHEx . . . 375
24 HAL GPIO Generic Driver . . . 377
24.1 GPIO Firmware driver registers structures . . . 377
24.1.1 GPIO_InitTypeDef . . . 377
24.2 GPIO Firmware driver API description . . . 377
24.2.1 GPIO Peripheral features . . . 377
24.2.2 How to use this driver . . . 378
24.2.3 IO attributes functions . . . 378
24.2.4 Initialization and de-initialization functions . . . 378
24.2.5 Detailed description of functions . . . 378
24.3 GPIO Firmware driver defines . . . 383
24.3.1 GPIO . . . 383
25 HAL GPIO Extension Driver . . . 388
25.1 GPIOEx Firmware driver defines . . . 388

25.1.1 GPIOEx. . . . 388
26 HAL GTZC Generic Driver . . . 392
26.1 GTZC Firmware driver registers structures . . . 392
26.1.1 MPCBB_Attribute_ConfigTypeDef. . . . 392
26.1.2 MPCBB_ConfigTypeDef . . . 392
26.2 GTZC Firmware driver API description . . . 392
26.2.1 GTZC main features . . . 392
26.2.2 How to use this driver . . . 393
26.2.3 Detailed description of functions . . . 393
26.3 GTZC Firmware driver defines . . . 399
26.3.1 GTZC . . . 399
27 HAL HASH Generic Driver . . . 404
27.1 HASH Firmware driver registers structures . . . 404
27.1.1 HASH_ConfigTypeDef . . . 404
27.1.2 __HASH_HandleTypeDef . . . 404
27.2 HASH Firmware driver API description . . . 405
27.2.1 How to use this driver . . . 405
27.2.2 Initialization and de-initialization functions . . . 406
27.2.3 HASH processing functions . . . 407
27.2.4 HMAC processing functions . . . 407
27.2.5 HASH IRQ handler management . . . 408
27.2.6 Detailed description of functions . . . 408
27.3 HASH Firmware driver defines . . . 418
27.3.1 HASH . . . 418
28 HAL HCD Generic Driver . . . 423
28.1 HCD Firmware driver registers structures . . . 423
28.1.1 __HCD_HandleTypeDef . . . 423
28.2 HCD Firmware driver API description . . . 424
28.2.1 How to use this driver . . . 424
28.2.2 Initialization and de-initialization functions . . . 424
28.2.3 IO operation functions . . . 425
28.2.4 Peripheral Control functions . . . 425
28.2.5 Peripheral State functions . . . 425
28.2.6 Detailed description of functions . . . 426
28.3 HCD Firmware driver defines . . . 437
28.3.1 HCD . . . 437
29 HAL I2C Generic Driver . . . 439

29.1 I2C Firmware driver registers structures . . . 439
29.1.1 I2C_InitTypeDef . . . 439
29.1.2 __I2C_HandleTypeDef . . . 439
29.2 I2C Firmware driver API description . . . 441
29.2.1 How to use this driver . . . 441
29.2.2 Initialization and de-initialization functions . . . 446
29.2.3 IO operation functions . . . 447
29.2.4 Peripheral State, Mode and Error functions . . . 448
29.2.5 Detailed description of functions . . . 449
29.3 I2C Firmware driver defines . . . 467
29.3.1 I2C . . . 467
30 HAL I2C Extension Driver . . . 474
30.1 I2CEx Firmware driver registers structures . . . 474
30.1.1 I2C_AutonomousModeConfTypeDef . . . 474
30.2 I2CEx Firmware driver API description . . . 474
30.2.1 I2C peripheral Extended features . . . 474
30.2.2 How to use this driver . . . 474
30.2.3 Filter Mode Functions . . . 474
30.2.4 WakeUp Mode Functions . . . 475
30.2.5 Fast Mode Plus Functions . . . 475
30.2.6 Autonomous Mode functions . . . 475
30.2.7 Detailed description of functions . . . 475
30.3 I2CEx Firmware driver defines . . . 477
30.3.1 I2CEx . . . 477
31 HAL I3C Generic Driver . . . 480
31.1 I3C Firmware driver registers structures . . . 480
31.1.1 I3C_InitTypeDef . . . 480
31.1.2 I3C_FifoConfTypeDef . . . 480
31.1.3 I3C_CtrlConfTypeDef . . . 480
31.1.4 I3C_TgtConfTypeDef . . . 481
31.1.5 I3C_DeviceConfTypeDef . . . 483
31.1.6 I3C_CCCInfoTypeDef . . . 483
31.1.7 I3C_ControlTypeDef . . . 484
31.1.8 I3C_DataTypeDef . . . 484
31.1.9 I3C_CCCTypeDef . . . 484
31.1.10 I3C_BCRTypeDef . . . 485
31.1.11 I3C_PIDTypeDef . . . 485

31.1.12 I3C_ENTDAAPayloadTypeDef . . . 486
31.1.13 I3C_PrivateTypeDef . . . 486
31.1.14 I3C_XferTypeDef . . . 486
31.1.15 I3C_AutonomousModeConfTypeDef . . . 486
31.1.16 __I3C_HandleTypeDef . . . 487
31.2 I3C Firmware driver API description . . . 489
31.2.1 How to use this driver . . . 489
31.2.2 Initialization and de-initialization functions . . . 493
31.2.3 Interrupt and callback functions . . . 494
31.2.4 Configuration functions . . . 495
31.2.5 FIFO Management functions . . . 496
31.2.6 Controller operational functions . . . 496
31.2.7 Target operational functions . . . 497
31.2.8 Generic and Common functions . . . 498
31.2.9 Autonomous Mode functions . . . 498
31.2.10 Detailed description of functions . . . 499
31.3 I3C Firmware driver defines . . . 528
31.3.1 I3C . . . 528
32 HAL ICACHE Generic Driver . . . 542
32.1 ICACHE Firmware driver registers structures . . . 542
32.1.1 ICACHE_RegionConfigTypeDef . . . 542
32.2 ICACHE Firmware driver API description . . . 542
32.2.1 ICACHE main features . . . 542
32.2.2 How to use this driver . . . 542
32.2.3 Initialization and control functions . . . 543
32.2.4 IRQ and callback functions . . . 543
32.2.5 Memory remapped regions functions . . . 543
32.2.6 Detailed description of functions . . . 543
32.3 ICACHE Firmware driver defines . . . 548
32.3.1 ICACHE . . . 548
33 HAL IRDA Generic Driver . . . 552
33.1 IRDA Firmware driver registers structures . . . 552
33.1.1 IRDA_InitTypeDef . . . 552
33.1.2 __IRDA_HandleTypeDef . . . 552
33.2 IRDA Firmware driver API description . . . 554
33.2.1 How to use this driver . . . 554
33.2.2 Callback registration . . . 555

33.2.3 Initialization and Configuration functions . . . 556
33.2.4 IO operation functions . . . 557
33.2.5 Peripheral State and Error functions . . . 558
33.2.6 Detailed description of functions . . . 558
33.3 IRDA Firmware driver defines . . . 569
33.3.1 IRDA . . . 569
34 HAL IRDA Extension Driver . . . 580
34.1 IRDAEx Firmware driver defines . . . 580
34.1.1 IRDAEx . . . 580
35 HAL IWDG Generic Driver . . . 581
35.1 IWDG Firmware driver registers structures . . . 581
35.1.1 IWDG_InitTypeDef . . . 581
35.1.2 __IWDG_HandleTypeDef . . . 581
35.2 IWDG Firmware driver API description . . . 581
35.2.1 IWDG Generic features . . . 581
35.2.2 How to use this driver . . . 582
35.2.3 Initialization and Start functions . . . 582
35.2.4 IO operation functions . . . 583
35.2.5 Detailed description of functions . . . 583
35.3 IWDG Firmware driver defines . . . 585
35.3.1 IWDG . . . 585
36 HAL LPTIM Generic Driver . . . 588
36.1 LPTIM Firmware driver registers structures . . . 588
36.1.1 LPTIM_ClockConfigTypeDef . . . 588
36.1.2 LPTIM_ULPClockConfigTypeDef . . . 588
36.1.3 LPTIM_TriggerConfigTypeDef . . . 588
36.1.4 LPTIM_InitTypeDef . . . 588
36.1.5 LPTIM_OC_ConfigTypeDef . . . 589
36.1.6 LPTIM_IC_ConfigTypeDef . . . 589
36.1.7 __LPTIM_HandleTypeDef . . . 590
36.2 LPTIM Firmware driver API description . . . 591
36.2.1 How to use this driver . . . 591
36.2.2 Initialization and de-initialization functions . . . 593
36.2.3 LPTIM Start Stop operation functions . . . 593
36.2.4 LPTIM Read operation functions . . . 594
36.2.5 LPTIM Config function . . . 594
36.2.6 Peripheral State functions . . . 595

36.2.7 Detailed description of functions . . . 595
36.3 LPTIM Firmware driver defines . . . 613
36.3.1 LPTIM . . . 613
37 HAL MDF Generic Driver . . . 625
37.1 MDF Firmware driver registers structures . . . 625
37.1.1 MDF_ClockTriggerTypeDef . . . 625
37.1.2 MDF_OutputClockTypeDef . . . 625
37.1.3 MDF_CommonParamTypeDef . . . 625
37.1.4 MDF_SerialInterfaceTypeDef . . . 625
37.1.5 MDF_InitTypeDef . . . 626
37.1.6 __MDF_HandleTypeDef . . . 626
37.1.7 MDF_ReshapeFilterTypeDef . . . 627
37.1.8 MDF_HighPassFilterTypeDef . . . 627
37.1.9 MDF_SoundActivityTypeDef . . . 627
37.1.10 MDF_FilterTriggerTypeDef . . . 628
37.1.11 MDF_FilterConfigTypeDef . . . 628
37.1.12 MDF_DmaConfigTypeDef . . . 629
37.2 MDF Firmware driver API description . . . 630
37.2.1 How to use this driver . . . 630
37.2.2 Initialization and de-initialization functions . . . 631
37.2.3 Acquisition functions . . . 632
37.2.4 Clock absence detection functions . . . 632
37.2.5 Generic functions . . . 633
37.2.6 Detailed description of functions . . . 633
37.3 MDF Firmware driver defines . . . 642
37.3.1 MDF . . . 642
38 HAL MMC Generic Driver . . . 649
38.1 MMC Firmware driver registers structures . . . 649
38.1.1 HAL_MMC_CardInfoTypeDef . . . 649
38.1.2 __MMC_HandleTypeDef . . . 649
38.1.3 HAL_MMC_CardCSDTypeDef . . . 650
38.1.4 HAL_MMC_CardCIDTypeDef . . . 653
38.2 MMC Firmware driver API description . . . 653
38.2.1 How to use this driver . . . 653
38.2.2 Initialization and de-initialization functions . . . 657
38.2.3 IO operation functions . . . 657
38.2.4 Peripheral Control functions . . . 657

38.2.5 Detailed description of functions . . . 658
38.3 MMC Firmware driver defines . . . 672
38.3.1 MMC . . . 672
39 HAL MMC Extension Driver . . . 684
39.1 MMCEx Firmware driver API description . . . 684
39.1.1 How to use this driver . . . 684
39.1.2 Linked List management functions . . . 684
39.1.3 Detailed description of functions . . . 684
39.2 MMCEx Firmware driver defines . . . 687
39.2.1 MMCEx . . . 687
40 HAL OPAMP Generic Driver . . . 688
40.1 OPAMP Firmware driver registers structures . . . 688
40.1.1 OPAMP_InitTypeDef . . . 688
40.1.2 __OPAMP_HandleTypeDef . . . 689
40.2 OPAMP Firmware driver API description . . . 689
40.2.1 OPAMP Peripheral Features . . . 689
40.2.2 How to use this driver . . . 690
40.2.3 Initialization and de-initialization functions . . . 691
40.2.4 IO operation functions . . . 691
40.2.5 Peripheral Control functions . . . 691
40.2.6 Peripheral State functions . . . 691
40.2.7 Peripheral Callback functions . . . 691
40.2.8 Extended IO operation functions . . . 692
40.2.9 Detailed description of functions . . . 692
40.3 OPAMP Firmware driver defines . . . 695
40.3.1 OPAMP . . . 695
41 HAL OPAMP Extension Driver . . . 698
41.1 OPAMPEx Firmware driver API description . . . 698
41.1.1 Initialization and de-initialization functions . . . 698
41.1.2 IO operation functions . . . 698
41.1.3 Peripheral Control functions . . . 698
41.1.4 Peripheral State functions . . . 698
41.1.5 Peripheral Callback functions . . . 698
41.1.6 Extended IO operation functions . . . 698
41.1.7 Detailed description of functions . . . 698
42 HAL PCD Generic Driver . . . 700
42.1 PCD Firmware driver registers structures . . . 700

42.1.1 __PCD_HandleTypeDef . . . 700
42.2 PCD Firmware driver API description . . . 701
42.2.1 How to use this driver . . . 702
42.2.2 Initialization and de-initialization functions . . . 702
42.2.3 IO operation functions . . . 702
42.2.4 Peripheral Control functions . . . 703
42.2.5 Peripheral State functions . . . 703
42.2.6 Detailed description of functions . . . 703
42.3 PCD Firmware driver defines . . . 717
42.3.1 PCD . . . 717
43 HAL PCD Extension Driver . . . 719
43.1 PCDEx Firmware driver API description . . . 719
43.1.1 Extended features functions . . . 719
43.1.2 Detailed description of functions . . . 719
44 HAL PKA Generic Driver . . . 722
44.1 PKA Firmware driver registers structures . . . 722
44.1.1 __PKA_HandleTypeDef . . . 722
44.1.2 PKA_ECCMulInTypeDef . . . 722
44.1.3 PKA_ECCMulExInTypeDef . . . 723
44.1.4 PKA_PointCheckInTypeDef . . . 724
44.1.5 PKA_RSACRTExpInTypeDef . . . 724
44.1.6 PKA_ECDSAVerifInTypeDef . . . 725
44.1.7 PKA_ECDSASignInTypeDef . . . 726
44.1.8 PKA_ECDSASignOutTypeDef . . . 726
44.1.9 PKA_ECDSASignOutExtParamTypeDef . . . 727
44.1.10 PKA_ECCCompleteAdditionOutTypeDef . . . 727
44.1.11 PKA_ModExpInTypeDef . . . 727
44.1.12 PKA_ModExpProtectModeInTypeDef . . . 727
44.1.13 PKA_ModExpFastModeInTypeDef . . . 728
44.1.14 PKA_MontgomeryParamInTypeDef . . . 728
44.1.15 PKA_AddInTypeDef . . . 728
44.1.16 PKA_ModInvInTypeDef . . . 729
44.1.17 PKA_ModRedInTypeDef . . . 729
44.1.18 PKA_ModAddInTypeDef . . . 729
44.1.19 PKA_ECCDoubleBaseLadderInTypeDef . . . 730
44.1.20 PKA_ECCProjective2AffineInTypeDef . . . 730
44.1.21 PKA_ECCCompleteAdditionInTypeDef . . . 731
44.2 PKA Firmware driver API description . . . 732

44.2.1 How to use this driver . . . 732
44.2.2 Initialization and de-initialization functions . . . 735
44.2.3 IO operation functions . . . 735
44.2.4 Peripheral State and Error functions . . . 738
44.2.5 Detailed description of functions . . . 739
44.3 PKA Firmware driver defines . . . 758
44.3.1 PKA . . . 758
45 HAL PWR Generic Driver . . . 763
45.1 PWR Firmware driver registers structures . . . 763
45.1.1 PWR_PVDTypeDef . . . 763
45.1.2 PWR_PVMTypeDef . . . 763
45.2 PWR Firmware driver API description . . . 763
45.2.1 PWR peripheral overview . . . 763
45.2.2 How to use this driver . . . 763
45.2.3 Initialization and De-Initialization Functions . . . 764
45.2.4 Peripheral Control functions . . . 765
45.2.5 PWR Attributes Functions . . . 766
45.2.6 Detailed description of functions . . . 767
45.3 PWR Firmware driver defines . . . 780
45.3.1 PWR . . . 780
46 HAL PWR Extension Driver . . . 798
46.1 PWREx Firmware driver API description . . . 798
46.1.1 How to use this driver . . . 798
46.1.2 Power supply control functions . . . 799
46.1.3 Memories Retention Functions . . . 800
46.1.4 IOs configuration functions . . . 800
46.1.5 I3C Pull-Up Configuration functions . . . 800
46.1.6 Detailed description of functions . . . 801
46.2 PWREx Firmware driver defines . . . 813
46.2.1 PWREx . . . 813
47 HAL RAMCFG Generic Driver . . . 818
47.1 RAMCFG Firmware driver registers structures . . . 818
47.1.1 __RAMCFG_HandleTypeDef . . . 818
47.2 RAMCFG Firmware driver API description . . . 818
47.2.1 RAMCFG Peripheral features . . . 818
47.2.2 How to use this driver . . . 819
47.2.3 Initialization and de-initialization Functions . . . 820

47.2.4 (Parity Error Detection) PED Operations Functions . . . 820
47.2.5 Write Protection Functions . . . 820
47.2.6 Erase Operation Functions . . . 820
47.2.7 Handle Interrupt and Callbacks Functions . . . 821
47.2.8 State and Error Functions . . . 821
47.2.9 Detailed description of functions . . . 821
47.3 RAMCFG Firmware driver defines . . . 827
47.3.1 RAMCFG . . . 827
48 HAL RCC Generic Driver . . . 830
48.1 RCC Firmware driver registers structures . . . 830
48.1.1 RCC_OscInitTypeDef . . . 830
48.1.2 RCC_ClkInitTypeDef . . . 831
48.2 RCC Firmware driver API description . . . 831
48.2.1 RCC specific features . . . 831
48.2.2 Initialization and de-initialization functions . . . 831
48.2.3 Peripheral Control functions . . . 833
48.2.4 RCC attributes functions . . . 833
48.2.5 Detailed description of functions . . . 833
48.3 RCC Firmware driver defines . . . 840
48.3.1 RCC . . . 840
49 HAL RCC Extension Driver . . . 885
49.1 RCCEx Firmware driver registers structures . . . 885
49.1.1 RCC_PeriphCLKInitTypeDef . . . 885
49.1.2 RCC_MSIRCxPLLTypeDef . . . 886
49.1.3 RCC_CRSInitTypeDef . . . 887
49.1.4 RCC_CRSSynchroInfoTypeDef . . . 887
49.2 RCCEx Firmware driver API description . . . 888
49.2.1 Extended Peripheral Control functions . . . 888
49.2.2 Extended clock management functions . . . 888
49.2.3 Extended Clock Recovery System Control functions . . . 889
49.2.4 Detailed description of functions . . . 890
49.3 RCCEx Firmware driver defines . . . 899
49.3.1 RCCEx . . . 899
50 HAL RNG Generic Driver . . . 923
50.1 RNG Firmware driver registers structures . . . 923
50.1.1 RNG_InitTypeDef . . . 923
50.1.2 __RNG_HandleTypeDef . . . 923

50.2 RNG Firmware driver API description . . . 923
50.2.1 How to use this driver . . . 924
50.2.2 Callback registration . . . 924
50.2.3 Initialization and configuration functions . . . 924
50.2.4 Peripheral Control functions . . . 925
50.2.5 Peripheral State functions . . . 925
50.2.6 Detailed description of functions . . . 925
50.3 RNG Firmware driver defines . . . 930
50.3.1 RNG . . . 930
51 HAL RNG Extension Driver . . . 934
51.1 RNGEx Firmware driver registers structures . . . 934
51.1.1 RNG_ConfigTypeDef . . . 934
51.2 RNGEx Firmware driver API description . . . 934
51.2.1 Configuration and lock functions . . . 934
51.2.2 Recover from seed error function . . . 934
51.2.3 Detailed description of functions . . . 935
51.3 RNGEx Firmware driver defines . . . 936
51.3.1 RNGEx . . . 936
52 HAL RTC Generic Driver . . . 938
52.1 RTC Firmware driver registers structures . . . 938
52.1.1 RTC_InitTypeDef . . . 938
52.1.2 RTC_TimeTypeDef . . . 938
52.1.3 RTC_DateTypeDef . . . 939
52.1.4 RTC_AlarmTypeDef . . . 939
52.1.5 __RTC_HandleTypeDef . . . 940
52.2 RTC Firmware driver API description . . . 942
52.2.1 RTC Operating Condition . . . 942
52.2.2 Backup Domain Reset . . . 942
52.2.3 Backup Domain Access . . . 942
52.2.4 How to use RTC Driver . . . 942
52.2.5 RTC and low power modes . . . 942
52.2.6 Initialization and de-initialization functions . . . 943
52.2.7 RTC Time and Date functions . . . 943
52.2.8 RTC Alarm functions . . . 943
52.2.9 Peripheral Control functions . . . 944
52.2.10 Peripheral State functions . . . 944
52.2.11 Detailed description of functions . . . 944

52.3 RTC Firmware driver defines . . . 954
52.3.1 RTC . . . 954
53 HAL RTC Extension Driver . . . 964
53.1 RTCEx Firmware driver registers structures . . . 964
53.1.1 RTC_TamperTypeDef . . . 964
53.1.2 RTC_InternalTamperTypeDef . . . 964
53.1.3 RTC_SecureStateTypeDef . . . 965
53.1.4 RTC_PrivilegeStateTypeDef . . . 965
53.2 RTCEx Firmware driver API description . . . 966
53.2.1 How to use this driver . . . 966
53.2.2 RTC TimeStamp and Tamper functions . . . 968
53.2.3 RTC Wake-up functions . . . 968
53.2.4 Extended Peripheral Control functions . . . 968
53.2.5 Extended features functions . . . 969
53.2.6 Tamper functions . . . 969
53.2.7 Extended RTC Backup register functions . . . 970
53.2.8 Extended RTC security functions . . . 970
53.2.9 Extended RTC privilege functions . . . 970
53.2.10 Detailed description of functions . . . 970
53.3 RTCEx Firmware driver defines . . . 990
53.3.1 RTCEx . . . 990
54 HAL SAI Generic Driver . . . 1017
54.1 SAI Firmware driver registers structures . . . 1017
54.1.1 SAI_PdmInitTypeDef . . . 1017
54.1.2 SAI_InitTypeDef . . . 1017
54.1.3 SAI_FrameInitTypeDef . . . 1018
54.1.4 SAI_SlotInitTypeDef . . . 1019
54.1.5 __SAI_HandleTypeDef . . . 1019
54.2 SAI Firmware driver API description . . . 1021
54.2.1 How to use this driver . . . 1021
54.2.2 Initialization and de-initialization functions . . . 1023
54.2.3 IO operation functions . . . 1024
54.2.4 Peripheral State and Errors functions . . . 1024
54.2.5 Detailed description of functions . . . 1025
54.3 SAI Firmware driver defines . . . 1033
54.3.1 SAI . . . 1033
55 HAL SAI Extension Driver . . . 1042

55.1 SAIEx Firmware driver registers structures . . . 1042
55.1.1 SAIEx_PdmMicDelayParamTypeDef . . . 1042
55.2 SAIEx Firmware driver API description . . . 1042
55.2.1 Extended features functions . . . 1042
55.2.2 Detailed description of functions . . . 1042
56 HAL SDIO Generic Driver . . . 1043
56.1 SDIO Firmware driver registers structures . . . 1043
56.1.1 HAL_SDIO_CCCR_TypeDef . . . 1043
56.1.2 HAL_SDIO_FBR_t . . . 1043
56.1.3 HAL_SDIO_DirectCmd_TypeDef . . . 1043
56.1.4 HAL_SDIO_ExtendedCmd_TypeDef . . . 1044
56.1.5 __SDIO_HandleTypeDef . . . 1044
56.2 SDIO Firmware driver API description . . . 1045
56.2.1 How to use this driver . . . 1045
56.2.2 Detailed description of functions . . . 1048
56.3 SDIO Firmware driver defines . . . 1052
56.3.1 SDIO . . . 1052
57 HAL SD Generic Driver . . . 1057
57.1 SD Firmware driver registers structures . . . 1057
57.1.1 HAL_SD_CardInfoTypeDef . . . 1057
57.1.2 __SD_HandleTypeDef . . . 1057
57.1.3 HAL_SD_CardCSDTypeDef . . . 1058
57.1.4 HAL_SD_CardCIDTypeDef . . . 1061
57.1.5 HAL_SD_CardStatusTypeDef . . . 1061
57.2 SD Firmware driver API description . . . 1062
57.2.1 How to use this driver . . . 1062
57.2.2 Initialization and de-initialization functions . . . 1065
57.2.3 IO operation functions . . . 1065
57.2.4 Peripheral Control functions . . . 1065
57.2.5 Detailed description of functions . . . 1066
57.3 SD Firmware driver defines . . . 1075
57.3.1 SD . . . 1075
58 HAL SD Extension Driver . . . 1086
58.1 SDEx Firmware driver API description . . . 1086
58.1.1 How to use this driver . . . 1086
58.1.2 Linked List management functions . . . 1086
58.1.3 Detailed description of functions . . . 1086

58.2 SDEx Firmware driver defines . . . 1089
58.2.1 SDEx . . . 1089
59 HAL SMARTCARD Generic Driver . . . 1090
59.1 SMARTCARD Firmware driver registers structures . . . 1090
59.1.1 SMARTCARD_InitTypeDef . . . 1090
59.1.2 SMARTCARD_AdvFeatureInitTypeDef . . . 1091
59.1.3 __SMARTCARD_HandleTypeDef . . . 1092
59.2 SMARTCARD Firmware driver API description . . . 1094
59.2.1 How to use this driver . . . 1094
59.2.2 Callback registration . . . 1095
59.2.3 Initialization and Configuration functions . . . 1096
59.2.4 IO operation functions . . . 1097
59.2.5 Peripheral State and Errors functions . . . 1098
59.2.6 Detailed description of functions . . . 1098
59.3 SMARTCARD Firmware driver defines . . . 1108
59.3.1 SMARTCARD . . . 1108
60 HAL SMARTCARD Extension Driver . . . 1121
60.1 SMARTCARDEx Firmware driver API description . . . 1121
60.1.1 SMARTCARD peripheral extended features . . . 1121
60.1.2 Peripheral Control functions . . . 1121
60.1.3 IO operation functions . . . 1121
60.1.4 Peripheral FIFO Control functions . . . 1121
60.1.5 Detailed description of functions . . . 1122
60.2 SMARTCARDEx Firmware driver defines . . . 1125
60.2.1 SMARTCARDEx . . . 1125
61 HAL SMBUS Generic Driver . . . 1130
61.1 SMBUS Firmware driver registers structures . . . 1130
61.1.1 SMBUS_InitTypeDef . . . 1130
61.1.2 __SMBUS_HandleTypeDef . . . 1131
61.2 SMBUS Firmware driver API description . . . 1132
61.2.1 How to use this driver . . . 1132
61.2.2 Initialization and de-initialization functions . . . 1134
61.2.3 IO operation functions . . . 1135
61.2.4 Peripheral State and Errors functions . . . 1135
61.2.5 Detailed description of functions . . . 1136
61.3 SMBUS Firmware driver defines . . . 1145
61.3.1 SMBUS . . . 1145

62 HAL SMBUS Extension Driver . . . 1153
62.1 SMBUSEx Firmware driver registers structures . . . 1153
62.1.1 SMBUS_AutonomousModeConfTypeDef . . . 1153
62.2 SMBUSEx Firmware driver API description . . . 1153
62.2.1 SMBUS peripheral Extended features . . . 1153
62.2.2 How to use this driver . . . 1153
62.2.3 WakeUp Mode Functions . . . 1153
62.2.4 Fast Mode Plus Functions . . . 1153
62.2.5 Autonomous Mode functions . . . 1153
62.2.6 Detailed description of functions . . . 1154
62.3 SMBUSEx Firmware driver defines . . . 1155
62.3.1 SMBUSEx . . . 1155
63 HAL SPI Generic Driver . . . 1158
63.1 SPI Firmware driver registers structures . . . 1158
63.1.1 SPI_InitTypeDef . . . 1158
63.1.2 __SPI_HandleTypeDef . . . 1159
63.2 SPI Firmware driver API description . . . 1161
63.2.1 How to use this driver . . . 1161
63.2.2 Initialization and de-initialization functions . . . 1163
63.2.3 IO operation functions . . . 1163
63.2.4 Peripheral State and Errors functions . . . 1164
63.2.5 Detailed description of functions . . . 1164
63.3 SPI Firmware driver defines . . . 1174
63.3.1 SPI . . . 1174
64 HAL SPI Extension Driver . . . 1188
64.1 SPIEx Firmware driver registers structures . . . 1188
64.1.1 SPI_AutonomousModeConfTypeDef . . . 1188
64.2 SPIEx Firmware driver API description . . . 1188
64.2.1 IO operation functions . . . 1188
64.2.2 Detailed description of functions . . . 1188
64.3 SPIEx Firmware driver defines . . . 1190
64.3.1 SPIEx . . . 1190
65 HAL TIM Generic Driver . . . 1191
65.1 TIM Firmware driver registers structures . . . 1191
65.1.1 TIM_Base_InitTypeDef . . . 1191
65.1.2 TIM_OC_InitTypeDef . . . 1191
65.1.3 TIM_OnePulse_InitTypeDef . . . 1192

65.1.4 TIM_IC_InitTypeDef . . . 1193
65.1.5 TIM_Encoder_InitTypeDef . . . 1193
65.1.6 TIM_ClockConfigTypeDef . . . 1194
65.1.7 TIM_ClearInputConfigTypeDef . . . 1194
65.1.8 TIM_MasterConfigTypeDef . . . 1195
65.1.9 TIM_SlaveConfigTypeDef . . . 1195
65.1.10 TIM_BreakDeadTimeConfigTypeDef . . . 1195
65.1.11 __TIM_HandleTypeDef . . . 1196
65.2 TIM Firmware driver API description . . . 1199
65.2.1 TIMER Generic features . . . 1199
65.2.2 How to use this driver . . . 1199
65.2.3 Time Base functions . . . 1201
65.2.4 TIM Output Compare functions . . . 1201
65.2.5 TIM PWM functions . . . 1202
65.2.6 TIM Input Capture functions . . . 1202
65.2.7 TIM One Pulse functions . . . 1203
65.2.8 TIM Encoder functions . . . 1203
65.2.9 TIM Callbacks functions . . . 1204
65.2.10 Detailed description of functions . . . 1204
65.3 TIM Firmware driver defines . . . 1246
65.3.1 TIM . . . 1246
66 HAL TIM Extension Driver . . . 1276
66.1 TIMEx Firmware driver registers structures . . . 1276
66.1.1 TIM_HallSensor_InitTypeDef . . . 1276
66.1.2 TIMEx_BreakInputConfigTypeDef . . . 1276
66.1.3 TIMEx_EncoderIndexConfigTypeDef . . . 1276
66.2 TIMEx Firmware driver API description . . . 1277
66.2.1 TIMER Extended features . . . 1277
66.2.2 How to use this driver . . . 1277
66.2.3 Timer Hall Sensor functions . . . 1278
66.2.4 Timer Complementary Output Compare functions . . . 1278
66.2.5 Timer Complementary PWM functions . . . 1279
66.2.6 Timer Complementary One Pulse functions . . . 1279
66.2.7 Peripheral Control functions . . . 1279
66.2.8 Extended Callbacks functions . . . 1280
66.2.9 Extended Peripheral State functions . . . 1280
66.2.10 Detailed description of functions . . . 1280
66.3 TIMEx Firmware driver defines . . . 1306

66.3.1 TIMEx . . . 1306
67 HAL TSC Generic Driver . . . 1316
67.1 TSC Firmware driver registers structures . . . 1316
67.1.1 TSC_InitTypeDef . . . 1316
67.1.2 TSC_IOConfigTypeDef . . . 1317
67.1.3 __TSC_HandleTypeDef . . . 1317
67.2 TSC Firmware driver API description . . . 1317
67.2.1 TSC specific features . . . 1317
67.2.2 How to use this driver . . . 1318
67.2.3 Initialization and de-initialization functions . . . 1319
67.2.4 IO Operation functions . . . 1319
67.2.5 Peripheral Control functions . . . 1319
67.2.6 State and Errors functions . . . 1320
67.2.7 Detailed description of functions . . . 1320
67.3 TSC Firmware driver defines . . . 1325
67.3.1 TSC . . . 1325
68 HAL UART Generic Driver . . . 1336
68.1 UART Firmware driver registers structures . . . 1336
68.1.1 UART_InitTypeDef . . . 1336
68.1.2 UART_AdvFeatureInitTypeDef . . . 1337
68.1.3 __UART_HandleTypeDef . . . 1337
68.2 UART Firmware driver API description . . . 1339
68.2.1 How to use this driver . . . 1340
68.2.2 Callback registration . . . 1340
68.2.3 Initialization and Configuration functions . . . 1341
68.2.4 IO operation functions . . . 1342
68.2.5 Peripheral Control functions . . . 1343
68.2.6 Peripheral State and Error functions . . . 1343
68.2.7 Detailed description of functions . . . 1343
68.3 UART Firmware driver defines . . . 1360
68.3.1 UART . . . 1360
69 HAL UART Extension Driver . . . 1381
69.1 UARTEx Firmware driver registers structures . . . 1381
69.1.1 UART_WakeUpTypeDef . . . 1381
69.1.2 UART_AutonomousModeConfTypeDef . . . 1381
69.2 UARTEx Firmware driver API description . . . 1381
69.2.1 UART peripheral extended features . . . 1381

69.2.2 Initialization and Configuration functions . . . 1381
69.2.3 IO operation functions . . . 1382
69.2.4 Peripheral Control functions . . . 1382
69.2.5 Detailed description of functions . . . 1383
69.3 UARTEx Firmware driver defines . . . 1390
69.3.1 UARTEx . . . 1390
70 HAL USART Generic Driver . . . 1394
70.1 USART Firmware driver registers structures . . . 1394
70.1.1 USART_InitTypeDef . . . 1394
70.1.2 __USART_HandleTypeDef . . . 1394
70.2 USART Firmware driver API description . . . 1396
70.2.1 How to use this driver . . . 1396
70.2.2 Callback registration . . . 1397
70.2.3 Initialization and Configuration functions . . . 1398
70.2.4 IO operation functions . . . 1398
70.2.5 Peripheral State and Error functions . . . 1400
70.2.6 Detailed description of functions . . . 1400
70.3 USART Firmware driver defines . . . 1410
70.3.1 USART . . . 1410
71 HAL USART Extension Driver . . . 1422
71.1 USARTEx Firmware driver registers structures . . . 1422
71.1.1 USART_AutonomousModeConfTypeDef . . . 1422
71.2 USARTEx Firmware driver API description . . . 1422
71.2.1 USART peripheral extended features . . . 1422
71.2.2 IO operation functions . . . 1422
71.2.3 Peripheral Control functions . . . 1422
71.2.4 Detailed description of functions . . . 1423
71.3 USARTEx Firmware driver defines . . . 1427
71.3.1 USARTEx . . . 1427
72 HAL WWDG Generic Driver . . . 1430
72.1 WWDG Firmware driver registers structures . . . 1430
72.1.1 WWDG_InitTypeDef . . . 1430
72.1.2 __WWDG_HandleTypeDef . . . 1430
72.2 WWDG Firmware driver API description . . . 1430
72.2.1 WWDG Specific features . . . 1430
72.2.2 How to use this driver . . . 1431
72.2.3 Initialization and Configuration functions . . . 1432

72.2.4 IO operation functions . . . 1432
72.2.5 Detailed description of functions . . . 1432
72.3 WWDG Firmware driver defines . . . 1434
72.3.1 WWDG . . . 1434
73 HAL XSPI Generic Driver . . . 1438
73.1 XSPI Firmware driver registers structures . . . 1438
73.1.1 XSPI_InitTypeDef . . . 1438
73.1.2 __XSPI_HandleTypeDef . . . 1439
73.1.3 XSPI_RegularCmdTypeDef . . . 1440
73.1.4 XSPI_HyperbusCfgTypeDef . . . 1441
73.1.5 XSPI_HyperbusCmdTypeDef . . . 1442
73.1.6 XSPI_AutoPollingTypeDef . . . 1442
73.1.7 XSPI_MemoryMappedTypeDef . . . 1443
73.2 XSPI Firmware driver API description . . . 1443
73.2.1 How to use this driver . . . 1443
73.2.2 Initialization and Configuration functions . . . 1446
73.2.3 IO operation functions . . . 1446
73.2.4 Peripheral Control and State functions . . . 1447
73.2.5 Delay Block function . . . 1447
73.2.6 Detailed description of functions . . . 1448
73.3 XSPI Firmware driver defines . . . 1460
73.3.1 XSPI . . . 1460
74 LL ADC Generic Driver . . . 1474
74.1 ADC Firmware driver registers structures . . . 1474
74.1.1 LL_ADC_CommonInitTypeDef . . . 1474
74.1.2 LL_ADC_InitTypeDef . . . 1474
74.1.3 LL_ADC_REG_InitTypeDef . . . 1474
74.1.4 LL_ADC_INJ_InitTypeDef . . . 1475
74.2 ADC Firmware driver API description . . . 1476
74.2.1 Detailed description of functions . . . 1476
74.3 ADC Firmware driver defines . . . 1591
74.3.1 ADC . . . 1592
75 LL BUS Generic Driver . . . 1631
75.1 BUS Firmware driver API description . . . 1631
75.1.1 Detailed description of functions . . . 1631
75.2 BUS Firmware driver defines . . . 1690
75.2.1 BUS . . . 1690

76 LL COMP Generic Driver 1694
76.1 COMP Firmware driver registers structures 1694
76.1.1 LL_COMP_InitTypeDef 1694
76.2 COMP Firmware driver API description 1694
76.2.1 Detailed description of functions 1694
76.3 COMP Firmware driver defines 1706
76.3.1 COMP 1706
77 LL CORTEX Generic Driver 1710
77.1 CORTEX Firmware driver API description 1710
77.1.1 Detailed description of functions 1710
77.2 CORTEX Firmware driver defines 1732
77.2.1 CORTEX 1732
78 LL CRC Generic Driver 1736
78.1 CRC Firmware driver API description 1736
78.1.1 Detailed description of functions 1736
78.2 CRC Firmware driver defines 1745
78.2.1 CRC 1745
79 LL CRS Generic Driver 1748
79.1 CRS Firmware driver API description 1748
79.1.1 Detailed description of functions 1748
79.2 CRS Firmware driver defines 1761
79.2.1 CRS 1761
80 LL DAC Generic Driver 1764
80.1 DAC Firmware driver registers structures 1764
80.1.1 LL_DAC_InitTypeDef 1764
80.2 DAC Firmware driver API description 1764
80.2.1 Detailed description of functions 1765
80.3 DAC Firmware driver defines 1797
80.3.1 DAC 1797
81 LL DLYB Generic Driver 1805
81.1 DLYB Firmware driver registers structures 1805
81.1.1 LL_DLYB_CfgTypeDef 1805
81.2 DLYB Firmware driver API description 1805
81.2.1 DelayBlock peripheral features 1805
81.2.2 How to use this driver 1805
81.2.3 Detailed description of functions 1805

81.3 DLYB Firmware driver defines . . . 1807
81.3.1 DLYB . . . 1807
82 LL DMA Generic Driver . . . 1808
82.1 DMA Firmware driver registers structures . . . 1808
82.1.1 LL_DMA_InitTypeDef . . . 1808
82.1.2 LL_DMA_InitLinkedListTypeDef . . . 1811
82.1.3 LL_DMA_InitNodeTypeDef . . . 1812
82.1.4 LL_DMA_LinkNodeTypeDef . . . 1814
82.2 DMA Firmware driver API description . . . 1814
82.2.1 LL DMA driver acronyms . . . 1814
82.2.2 Detailed description of functions . . . 1815
82.3 DMA Firmware driver defines . . . 1940
82.3.1 DMA . . . 1940
83 LL EXTI Generic Driver . . . 1954
83.1 EXTI Firmware driver registers structures . . . 1954
83.1.1 LL_EXTI_InitTypeDef . . . 1954
83.2 EXTI Firmware driver API description . . . 1954
83.2.1 Detailed description of functions . . . 1954
83.3 EXTI Firmware driver defines . . . 1982
83.3.1 EXTI . . . 1983
84 LL GPIO Generic Driver . . . 1986
84.1 GPIO Firmware driver registers structures . . . 1986
84.1.1 LL_GPIO_InitTypeDef . . . 1986
84.2 GPIO Firmware driver API description . . . 1986
84.2.1 Detailed description of functions . . . 1986
84.3 GPIO Firmware driver defines . . . 2012
84.3.1 GPIO . . . 2012
85 LL I2C Generic Driver . . . 2016
85.1 I2C Firmware driver registers structures . . . 2016
85.1.1 LL_I2C_InitTypeDef . . . 2016
85.2 I2C Firmware driver API description . . . 2016
85.2.1 Detailed description of functions . . . 2016
85.3 I2C Firmware driver defines . . . 2071
85.3.1 I2C . . . 2071
86 LL I3C Generic Driver . . . 2079
86.1 I3C Firmware driver registers structures . . . 2079
86.1.1 LL_I3C_CtrlBusConfTypeDef . . . 2079

86.1.2 LL_I3C_TgtBusConfTypeDef . . . 2079
86.1.3 LL_I3C_InitTypeDef . . . 2080
86.2 I3C Firmware driver API description . . . 2080
86.2.1 Detailed description of functions . . . 2080
86.3 I3C Firmware driver defines . . . 2191
86.3.1 I3C . . . 2191
87 LL ICACHE Generic Driver . . . 2202
87.1 ICACHE Firmware driver registers structures . . . 2202
87.1.1 LL_ICACHE_RegionTypeDef . . . 2202
87.2 ICACHE Firmware driver API description . . . 2202
87.2.1 Detailed description of functions . . . 2202
87.3 ICACHE Firmware driver defines . . . 2215
87.3.1 ICACHE . . . 2215
88 LL IWDG Generic Driver . . . 2218
88.1 IWDG Firmware driver API description . . . 2218
88.1.1 Detailed description of functions . . . 2218
88.2 IWDG Firmware driver defines . . . 2225
88.2.1 IWDG . . . 2225
89 LL LPTIM Generic Driver . . . 2227
89.1 LPTIM Firmware driver registers structures . . . 2227
89.1.1 LL_LPTIM_InitTypeDef . . . 2227
89.2 LPTIM Firmware driver API description . . . 2227
89.2.1 Detailed description of functions . . . 2227
89.3 LPTIM Firmware driver defines . . . 2276
89.3.1 LPTIM . . . 2276
90 LL LPUART Generic Driver . . . 2285
90.1 LPUART Firmware driver registers structures . . . 2285
90.1.1 LL_LPUART_InitTypeDef . . . 2285
90.2 LPUART Firmware driver API description . . . 2285
90.2.1 Detailed description of functions . . . 2285
90.3 LPUART Firmware driver defines . . . 2343
90.3.1 LPUART . . . 2343
91 LL OPAMP Generic Driver . . . 2351
91.1 OPAMP Firmware driver registers structures . . . 2351
91.1.1 LL_OPAMP_InitTypeDef . . . 2351
91.2 OPAMP Firmware driver API description . . . 2351

91.2.1 Detailed description of functions . . . 2351
91.3 OPAMP Firmware driver defines . . . 2363
91.3.1 OPAMP . . . 2363
92 LL PKA Generic Driver . . . 2366
92.1 PKA Firmware driver registers structures . . . 2366
92.1.1 LL_PKA_InitTypeDef . . . 2366
92.2 PKA Firmware driver API description . . . 2366
92.2.1 Detailed description of functions . . . 2366
92.3 PKA Firmware driver defines . . . 2376
92.3.1 PKA . . . 2377
93 LL PWR Generic Driver . . . 2380
93.1 PWR Firmware driver API description . . . 2380
93.1.1 Detailed description of functions . . . 2380
93.2 PWR Firmware driver defines . . . 2426
93.2.1 PWR . . . 2427
94 LL RCC Generic Driver . . . 2437
94.1 RCC Firmware driver registers structures . . . 2437
94.1.1 LL_RCC_ClocksTypeDef . . . 2437
94.2 RCC Firmware driver API description . . . 2437
94.2.1 Detailed description of functions . . . 2437
94.3 RCC Firmware driver defines . . . 2526
94.3.1 RCC . . . 2526
95 LL RNG Generic Driver . . . 2547
95.1 RNG Firmware driver registers structures . . . 2547
95.1.1 LL_RNG_InitTypeDef . . . 2547
95.2 RNG Firmware driver API description . . . 2547
95.2.1 Detailed description of functions . . . 2547
95.3 RNG Firmware driver defines . . . 2560
95.3.1 RNG . . . 2560
96 LL RTC Generic Driver . . . 2563
96.1 RTC Firmware driver registers structures . . . 2563
96.1.1 LL_RTC_InitTypeDef . . . 2563
96.1.2 LL_RTC_TimeTypeDef . . . 2563
96.1.3 LL_RTC_DateTypeDef . . . 2563
96.1.4 LL_RTC_AlarmTypeDef . . . 2564
96.2 RTC Firmware driver API description . . . 2564
96.2.1 Detailed description of functions . . . 2564

96.3 RTC Firmware driver defines . . . 2684
96.3.1 RTC . . . 2684
97 LL SPI Generic Driver . . . 2701
97.1 SPI Firmware driver registers structures . . . 2701
97.1.1 LL_SPI_InitTypeDef . . . 2701
97.2 SPI Firmware driver API description . . . 2702
97.2.1 Detailed description of functions . . . 2702
97.3 SPI Firmware driver defines . . . 2757
97.3.1 SPI . . . 2757
98 LL SYSTEM Generic Driver . . . 2775
98.1 SYSTEM Firmware driver API description . . . 2775
98.1.1 Detailed description of functions . . . 2775
98.2 SYSTEM Firmware driver defines . . . 2804
98.2.1 SYSTEM . . . 2804
99 LL TIM Generic Driver . . . 2811
99.1 TIM Firmware driver registers structures . . . 2811
99.1.1 LL_TIM_InitTypeDef . . . 2811
99.1.2 LL_TIM_OC_InitTypeDef . . . 2811
99.1.3 LL_TIM_IC_InitTypeDef . . . 2812
99.1.4 LL_TIM_ENCODER_InitTypeDef . . . 2812
99.1.5 LL_TIM_HALLSENSOR_InitTypeDef . . . 2813
99.1.6 LL_TIM_BDTR_InitTypeDef . . . 2814
99.2 TIM Firmware driver API description . . . 2815
99.2.1 Detailed description of functions . . . 2816
99.3 TIM Firmware driver defines . . . 2933
99.3.1 TIM . . . 2933
100 LL USART Generic Driver . . . 2961
100.1 USART Firmware driver registers structures . . . 2961
100.1.1 LL_USART_InitTypeDef . . . 2961
100.1.2 LL_USART_ClockInitTypeDef . . . 2961
100.2 USART Firmware driver API description . . . 2962
100.2.1 Detailed description of functions . . . 2962
100.3 USART Firmware driver defines . . . 3059
100.3.1 USART . . . 3059
101 LL UTILS Generic Driver . . . 3071
101.1 UTILS Firmware driver registers structures . . . 3071
101.1.1 LL_UTILS_ClkInitTypeDef . . . 3071

101.2 UTILS Firmware driver API description 3071
101.2.1 System Configuration functions 3071
101.2.2 Detailed description of functions 3071
101.3 UTILS Firmware driver defines 3076
101.3.1 UTILS 3076
102 LL WWDG Generic Driver 3077
102.1 WWDG Firmware driver API description 3077
102.1.1 Detailed description of functions 3077
102.2 WWDG Firmware driver defines 3081
102.2.1 WWDG 3081
103 Correspondence between API registers and API low-layer driver functions 3083
103.1 ADC 3083
103.2 BUS 3092
103.3 COMP 3109
103.4 CORTEX 3109
103.5 CRC 3112
103.6 CRS 3113
103.7 DAC 3114
103.8 DMA 3117
103.9 EXTI 3122
103.10 GPIO 3124
103.11 I2C 3125
103.12 I3C 3129
103.13 ICACHE 3138
103.14 IWDG 3139
103.15 LPTIM 3139
103.16 LPUART 3143
103.17 OPAMP 3148
103.18 PKA 3148
103.19 PWR 3149
103.20 RCC 3154
103.21 RNG 3161
103.22 RTC 3162
103.23 SPI 3173
103.24 SYSTEM 3177
103.25 TIM 3179
